

TELECONFERENCED MEETING

CITY COUNCIL REGULAR MEETING – 6:00 PM

JUNE 16, 2020

[Pursuant to Governor Executive Order N-29-20]

There Will Not Be a Physical Location for Attending the Meeting

The Public May Observe the Meeting and Offer Public Comment As Follows:

STEP 1

Install the Free Zoom App or Visit the Free Zoom Website at [<https://zoom.us/>](https://zoom.us/)

STEP 2

Get Meeting ID Number and Password by emailing zoom@moval.org or calling (951) 413-3001, no later than 5:00 p.m. on Tuesday, June 16, 2020

STEP 3

Select Audio Source

Computer Speakers/Microphone

or

Telephone

STEP 3

Public Comments May be Made Via Zoom

During the Meeting, the Mayor Will Explain the Process for Submitting Public Comments

ALTERNATIVE

If you do not wish to make public comments, you can view the meeting on Channel MVTV-3, the City's website at www.moval.org or YouTube

AGENDA
CITY COUNCIL OF THE CITY OF MORENO VALLEY
MORENO VALLEY COMMUNITY SERVICES DISTRICT
CITY AS SUCCESSOR AGENCY FOR THE
COMMUNITY REDEVELOPMENT AGENCY OF
THE CITY OF MORENO VALLEY
MORENO VALLEY HOUSING AUTHORITY
MORENO VALLEY PUBLIC FINANCING AUTHORITY
BOARD OF LIBRARY TRUSTEES

June 16, 2020

REGULAR MEETING – 6:00 PM

City Council Study Sessions

Second Tuesday of each month – 6:00 p.m.

City Council Meetings

Special Presentations – 5:30 P.M.

First & Third Tuesday of each month – 6:00 p.m.

City Council Closed Sessions

Will be scheduled as needed at 4:30 p.m.

City Hall Council Chamber – 14177 Frederick Street

JUNE 16, 2020**

CALL TO ORDER

Joint Meeting of the City Council, Community Services District, City as Successor Agency for the Community Redevelopment Agency, Housing Authority and the Board of Library Trustees - actions taken at the Joint Meeting are those of the Agency indicated on each Agenda item.

ROLL CALL

INTRODUCTIONS

1. PUBLIC HEARINGS

Questions or comments from the public on a Public Hearing matter are limited to five minutes per individual and must pertain to the subject under consideration.

Those wishing to speak should follow the teleconference procedures.

IF YOU ARE ABSENT AT THE TIME YOUR NAME IS CALLED, YOU WILL FORFEIT THE OPPORTUNITY TO SPEAK ON THE ITEMS.

- 1.A. APPEAL OF TENTATIVE PARCEL MAP FOR FINANCE AND CONVEYANCE PURPOSES ONLY; APPEAL OF CERTIFICATION OF THE REVISED FINAL ENVIRONMENTAL IMPACT REPORT; AND CONSIDERATION OF WORLD LOGISTIC CENTER PROJECT DEVELOPMENT AGREEMENT (Report of: Community Development)

Recommendations:

1. ADOPT RESOLUTION 2020-____, DENYING APPEAL OF PLANNING COMMISSION'S CERTIFICATION OF THE REVISED FINAL EIR AND AFFIRMING PLANNING COMMISSION RESOLUTION NO. 2020-20:

- (A) APPROVING AND ADOPTING the Mitigation Monitoring and Reporting Program and the Findings Contained Therein, for the Revised Final EIR; and
 - (B) APPROVING AND ADOPTING the Statement of Overriding Considerations and the Findings Contained Therein, for the Final Revised EIR; and
 - (C) CERTIFYING that the Revised Final Environmental Impact Report PEN18-0050 for the World Logistics Center on file with the Community Development Department, incorporated herein by this reference, has been completed in compliance with the California Environmental Quality Act and the CEQA Guidelines, and that the Planning Commission and City Council reviewed and considered the information in the Final EIR that reflects the City’s independent judgement and analysis; and
2. ADOPT RESOLUTION 2020-_____, DENYING APPEAL OF PLANNING COMMISSION’S APPROVAL OF THE TENTATIVE PARCEL MAP AND AFFIRMING PLANNING COMMISSION RESOLUTION NO. 2020-21:
- (A) APPROVING PEN20-0017 Tentative Parcel Map 36457 for Finance and Conveyance Purposes Only, subject to the Tentative Parcel Map 36457 and Conditions of Approval; and,
3. INTRODUCE AND ADOPT ORDINANCE 2020-_____ :
- (A) APPROVING the Development Agreement by and between the City Of Moreno Valley and HF Properties, a California general partnership, Sunnymead Properties, a Delaware general partnership, Theodore Properties Partners, a Delaware general partnership, 13451 Theodore, LLC, a California limited liability company, and HL Property Partners, a Delaware general partnership (collectively “HF”) (PEN20-0018).
- 1.B. PUBLIC HEARING TO ADOPT THE FISCAL YEAR 2019/2020 CARES ACT AMENDMENT AND CITIZEN PARTICIPATION PLAN AMENDMENT AND AWARD CONSULTING CONTRACT TO WILLDAN FINANCIAL FOR CARES ACT GRANT ADMINISTRATION (Report of: Financial & Management Services)

Recommendations: That the City Council:

- 1. Conduct a Public Hearing to allow public comment on the proposed CARES Act Amendment to the 2019-2020 Annual Action Plan and proposed amendment to the Citizen Participation Plan reflecting CARES Act waivers.

2. Review and adopt the proposed CARES Act Amendment to the 2019-2020 Annual Action Plan
 3. Review and adopt the FY 2019-2020 Citizen's Participation Plan (as Amended for the CARES Act).
 4. Authorize a budget amendment as set forth in the fiscal impact section and authorize the Chief Financial Officer to allocate grant funds between HUD-approved grant activities.
 5. Award consulting agreement to Willdan Financial for CARES ACT Grant Administration Services.
1. C. PUBLIC HEARING ESTABLISHING APPROPRIATIONS ("GANN") LIMIT FOR FISCAL YEAR 2020/21 (Report of: Financial & Management Services)

Recommendations: That the City Council and CSD:

1. Conduct a Public Hearing to receive public comments on the City of Moreno Valley General Fund appropriations limit for Fiscal Year 2020/21.
2. Adopt Resolution No. 2020-XX, a resolution of the City Council of the City of Moreno Valley, California, establishing the appropriations limit for Fiscal Year 2020/21.
3. Conduct a Public Hearing to receive public comments on the Moreno Valley Community Services District's appropriations limit for Fiscal Year 2020/21.
4. Adopt Resolution No. CSD 2020-XX, a resolution of the Moreno Valley Community Services District establishing the appropriations limit for Fiscal Year 2020/21.

PUBLIC COMMENTS ON ANY SUBJECT ON THE AGENDA AND NOT ON THE AGENDA UNDER THE JURISDICTION OF THE CITY COUNCIL

Any person wishing to address the Mayor and City Council on any matter, either under the Public Comments section of the Agenda or scheduled items or public hearings, must follow the procedures set forth above and wait to be identified to speak by the Mayor.

IF YOU ARE ABSENT AT THE TIME YOUR NAME IS CALLED, YOU WILL FORFEIT THE OPPORTUNITY TO SPEAK.

Members of the public may be limited to three minutes per person or the allowed time set by the Mayor, except for the applicant. The Mayor may establish an overall time limit for comments on a particular Agenda item. Members of the public must direct their questions to the Mayor and not to other members of the City Council, the applicant, the Staff, or the audience.

JOINT CONSENT CALENDARS (SECTIONS A-E)

All items listed under the Consent Calendars, Sections A, B, C, D, and E are considered to be routine and non-controversial, and may be enacted by one motion unless a member of the City Council, Community Services District, City as Successor Agency for the Community Redevelopment Agency, Housing Authority or the Board of Library Trustees requests that an item be removed for separate action. The motion to adopt the Consent Calendars is deemed to be a separate motion by each Agency and shall be so recorded by the City Clerk. Items withdrawn for report or discussion will be heard after public hearing items.

A. CONSENT CALENDAR-CITY COUNCIL

- A.1. ORDINANCES - READING BY TITLE ONLY - THE MOTION TO ADOPT AN ORDINANCE LISTED ON THE CONSENT CALENDAR INCLUDES WAIVER OF FULL READING OF THE ORDINANCE.

Recommendation: Waive reading of all Ordinances.

- A.2. MINUTES - CITY COUNCIL - REGULAR MEETING - JUN 2, 2020 6:00 PM

Recommendation: Approve as submitted.

- A.3. MINUTES - CITY COUNCIL - STUDY SESSION - JUN 9, 2020 6:00 PM

Recommendation: Approve as submitted.

- A.4. 2020 CITY COUNCIL COMMISSION, BOARD, AND SUBCOMMITTEE APPOINTMENTS (Report of: City Clerk)

Recommendation: That the City Council:

1. Ratify the appointments to the various committees and subcommittees as noted on the 2020 Council Committee Participation List – terms end on December 31, 2020.

- A.5. PAYMENT REGISTER - APRIL 2020 (Report of: Financial & Management Services)

Recommendation:

1. Receive and file the Payment Register.

- A.6. AUTHORIZATION TO AWARD PROFESSIONAL CONSULTANT SERVICES TO WILLDAN ENGINEERING FOR PROJECT MANAGEMENT SERVICES OF THE COURTYARDS AT COTTONWOOD PROJECT AND NSP CLOSE OUT (Report of: Financial & Management Services)

Recommendations:

1. Award a professional consultant services agreement to Willdan Engineering to provide project management services for The Courtyards at Cottonwood Project, funded by HOME Investment Partnerships Program (HOME) and Neighborhood Stabilization Program (NSP), and closeout management of the NSP programs.
2. Authorize the City Manager to execute the Agreement, subject to approval as to form by the City Attorney, and subsequent amendments to the Agreement, including the authority to approve purchase orders in accordance with the terms of the Agreement, provided sufficient funding appropriations have been approved by the City Council.

- A.7. LIST OF PERSONNEL CHANGES (Report of: Financial & Management Services)

Recommendation:

1. Ratify the list of personnel changes as described.

- A.8. APPROVE BID AWARD TO ONE SOURCE DISTRIBUTORS FOR THE PURCHASE OF EMERGENCY STOCK FOR MORENO VALLEY UTILITY (MVU) (Report of: Financial & Management Services)

Recommendations:

1. Approve bid award to OneSource Distributors for the purchase of Emergency Stock for Moreno Valley Utility.
2. Authorize the purchase of emergency stock as needed in an amount not to exceed a total of \$1,325,000 for Fiscal Year 2020-2021 through Fiscal Year 2024/2025.
3. Authorize the Assistant City Manager/Chief Financial Officer to execute any subsequent related minor change orders up to his signature authority.

A.9. AUTHORIZATION TO AWARD A PROFESSIONAL CONSULTANT SERVICES AGREEMENT TO KOA CORPORATION FOR THE JUAN BAUTISTA DE ANZA MULTI-USE TRAIL ATP-4 PROJECT NO. 801 0086 (Report of: Public Works)

Recommendations:

1. Award an Agreement for Professional Consultant Services to KOA Corporation, 3190 Shelby Street, Bldg C, Ontario, CA 91764 to complete preliminary engineering, design, and right-of-way services for the Juan Bautista de Anza Multi-Use Trail from Moreno Valley Mall to Iris Avenue;
2. Authorize the issuance of a Purchase Order to KOA Corporation, in the amount of \$482,824 when the contract has been signed by all parties. The Project is fully funded by ATP Grant Cycle 4 (Fund 2301);
3. Authorize the City Manager to execute the contract with KOA Corporation, subject to the approval by the City Attorney; and
4. Authorize the Public Works Director to execute any subsequent related amendments to the Agreement for Professional Consultant Services with KOA Corporation, not to exceed the Purchase Order amount, subject to the approval by the City Attorney.

B. CONSENT CALENDAR-COMMUNITY SERVICES DISTRICT

- B.1. ORDINANCES - READING BY TITLE ONLY - THE MOTION TO ADOPT AN ORDINANCE LISTED ON THE CONSENT CALENDAR INCLUDES WAIVER OF FULL READING OF THE ORDINANCE.

Recommendation: Waive reading of all Ordinances.

- B.2. MINUTES - CITY COUNCIL - REGULAR MEETING - JUN 2, 2020 6:00 PM (See A.2)

Recommendation: Approve as submitted.

- B.3. MINUTES - CITY COUNCIL - STUDY SESSION - JUN 9, 2020 6:00 PM

Recommendation: Approve as submitted.

C. CONSENT CALENDAR - HOUSING AUTHORITY

- C.1. ORDINANCES - READING BY TITLE ONLY - THE MOTION TO ADOPT AN ORDINANCE LISTED ON THE CONSENT CALENDAR INCLUDES WAIVER OF FULL READING OF THE ORDINANCE.

Recommendation: Waive reading of all Ordinances.

C.2. MINUTES - CITY COUNCIL - REGULAR MEETING - JUN 2, 2020 6:00 PM
(See A.2)

Recommendation: Approve as submitted.

C.3. MINUTES - CITY COUNCIL - STUDY SESSION - JUN 9, 2020 6:00 PM

Recommendation: Approve as submitted.

D. CONSENT CALENDAR - BOARD OF LIBRARY TRUSTEES

D.1. ORDINANCES - READING BY TITLE ONLY - THE MOTION TO ADOPT AN ORDINANCE LISTED ON THE CONSENT CALENDAR INCLUDES WAIVER OF FULL READING OF THE ORDINANCE.

Recommendation: Waive reading of all Ordinances.

D.2. MINUTES - CITY COUNCIL - REGULAR MEETING - JUN 2, 2020 6:00 PM
(See A.2)

Recommendation: Approve as submitted.

D.3. MINUTES - CITY COUNCIL - STUDY SESSION - JUN 9, 2020 6:00 PM

Recommendation: Approve as submitted.

E. CONSENT CALENDAR - PUBLIC FINANCING AUTHORITY

E.1. ORDINANCES - READING BY TITLE ONLY - THE MOTION TO ADOPT AN ORDINANCE LISTED ON THE CONSENT CALENDAR INCLUDES WAIVER OF FULL READING OF THE ORDINANCE.

Recommendation: Waive reading of all Ordinances.

E.2. MINUTES - CITY COUNCIL - REGULAR MEETING - JUN 2, 2020 6:00 PM
(See A.2)

Recommendation: Approve as submitted.

E.3. MINUTES - CITY COUNCIL - STUDY SESSION - JUN 9, 2020 6:00 PM

Recommendation: Approve as submitted.

F. PUBLIC HEARINGS – ITEMS WERE MOVED TO THE BEGINNING OF THE AGENDA AS ITEMS 1A, 1B AND 1C

G. GENERAL BUSINESS

- G.1. CONSIDERATION OF A RESOLUTION CREATING THE MORENO VALLEY CITIZENS PUBLIC SAFETY COMMITTEE (Report of: Financial & Management Services)

Recommendations:

1. Approve Resolution No. 2020-_____, a Resolution of the City Council of the City of Moreno Valley, California, establishing the Moreno Valley Citizens Public Safety Committee
2. Ratify Mayor's appoint of Mayor Pro Tem Victoria Baca to serve as the Ad Hoc Committee Chairperson and Council Member Dr. Carla Thornton to serve as the Vice Chairperson. These positions shall be tasked with working with community stakeholders to guide the development of the Moreno Valley Citizens Public Safety Committee.
3. Direct the City Clerk to seek applications for the review and potential appointment by the Mayor to the Committee.

H. ITEMS REMOVED FROM CONSENT CALENDARS FOR DISCUSSION OR SEPARATE ACTION

I. REPORTS

I.1. CITY COUNCIL REPORTS

(Informational Oral Presentation - not for Council action)

March Joint Powers Commission (JPC)

Riverside County Habitat Conservation Agency (RCHCA)

Riverside County Transportation Commission (RCTC)

Riverside Transit Agency (RTA)

Western Riverside Council of Governments (WRCOG)

Western Riverside County Regional Conservation Authority (RCA)

School District/City Joint Task Force

I.2. CITY MANAGER'S REPORT

(Informational Oral Presentation - not for Council action)

I.3. CITY ATTORNEY'S REPORT

(Informational Oral Presentation - not for Council action)

CLOSING COMMENTS AND/OR REPORTS OF THE CITY COUNCIL, COMMUNITY SERVICES DISTRICT, CITY AS SUCCESSOR AGENCY FOR THE COMMUNITY REDEVELOPMENT AGENCY, HOUSING AUTHORITY, PUBLIC FINANCING AUTHORITY, AND THE BOARD OF LIBRARY TRUSTEES.

ADJOURNMENT

PUBLIC INSPECTION

The contents of the agenda packet are available for public inspection on the City's website at www.moval.org and in the City Clerk's office at 14177 Frederick Street during normal business hours.

Any written information related to an open session agenda item that is known by the City to have been distributed to all or a majority of the City Council less than 72 hours prior to this meeting will be made available for public inspection on the City's website at www.moval.org and in the City Clerk's office at 14177 Frederick Street during normal business hours.

CERTIFICATION

I, Pat Jacquez-Nares, City Clerk of the City of Moreno Valley, California, certify that 72 hours prior to this Regular Meeting, the City Council Agenda was posted on the City's website at: www.moval.org and in the following three public places pursuant to City of Moreno Valley Resolution No. 2007-40:

City Hall, City of Moreno Valley
14177 Frederick Street

Moreno Valley Library
25480 Alessandro Boulevard
Moreno Valley Senior/Community Center
25075 Fir Avenue

Pat Jacquez-Nares, CMC & CERA
City Clerk

Date Posted: June 11, 2020

Report to City Council

TO: Mayor and City Council

FROM: Manuel A. Mancha, Community Development Director

AGENDA DATE: June 16, 2020

TITLE: APPEAL OF TENTATIVE PARCEL MAP FOR FINANCE AND CONVEYANCE PURPOSES ONLY; APPEAL OF CERTIFICATION OF THE REVISED FINAL ENVIRONMENTAL IMPACT REPORT; AND CONSIDERATION OF WORLD LOGISTIC CENTER PROJECT DEVELOPMENT AGREEMENT

RECOMMENDED ACTION

Recommendations:

1. **ADOPT RESOLUTION 2020-____, DENYING APPEAL OF PLANNING COMMISSION'S CERTIFICATION OF THE REVISED FINAL EIR AND AFFIRMING PLANNING COMMISSION RESOLUTION NO. 2020-20:**
 - (A) **APPROVING AND ADOPTING** the Mitigation Monitoring and Reporting Program and the Findings Contained Therein, for the Revised Final EIR; and
 - (B) **APPROVING AND ADOPTING** the Statement of Overriding Considerations and the Findings Contained Therein, for the Final Revised EIR; and
 - (C) **CERTIFYING** that the Revised Final Environmental Impact Report PEN18-0050 for the World Logistics Center on file with the Community Development Department, incorporated herein by this reference, has been completed in compliance with the California Environmental Quality Act and the CEQA Guidelines, and that the Planning Commission and City Council reviewed and considered the information in the Final EIR that reflects the City's independent judgement and analysis; and

2. **ADOPT RESOLUTION 2020-____, DENYING APPEAL OF PLANNING COMMISSION'S APPROVAL OF THE TENTATIVE PARCEL MAP AND AFFIRMING PLANNING COMMISSION RESOLUTION NO. 2020-21:**

- (A) **APPROVING** PEN20-0017 Tentative Parcel Map 36457 for Finance and Conveyance Purposes Only, subject to the Tentative Parcel Map 36457 and Conditions of Approval; and,

3. **INTRODUCE AND ADOPT ORDINANCE 2020-_____ :**

- (A) **APPROVING** the Development Agreement by and between the City Of Moreno Valley and HF Properties, a California general partnership, Sunnymead Properties, a Delaware general partnership, Theodore Properties Partners, a Delaware general partnership, 13451 Theodore, LLC, a California limited liability company, and HL Property Partners, a Delaware general partnership (collectively “HF”) (PEN20-0018).

BACKGROUND

The WLC Project will include a mixture of industrial, logistics, warehouse and support uses on the land situated within the WLC Specific Plan, which was unanimously approved by the City Council on November 15, 2015, via the City Council’s adoption of the WLC Land Use and Zoning Entitlements Initiative, also known as the “Moreno Valley Jobs Initiative.” The other WLC Project entitlements approved in November 2015 under the Jobs Initiative include various amendments to the City’s General Plan and Zoning Map, and certain WLC Project Conditions of Development that incorporated the Mitigation Measures set forth in the WLC Project’s Program Environmental Impact Report previously certified by the City Council on August 19, 2015. The adoption of the Jobs Initiative also repealed the former Moreno Highlands Specific Plan.

In addition to the above, the City Council, acting in its capacity of Moreno Valley Community Services District Board of Directors, unanimously approved the “WLC Land Benefit Initiative” to request that the Riverside County Local Agency Formation Commission (“LAFCO”) initiate the process for the Moreno Valley Community Services District to annex an 85-acre parcel along Gilman Springs Road, which is a part of the WLC Project. This also remains legally valid and in effect.

The aforementioned entitlements remain legally valid and in effect since they were neither vacated nor invalidated by any of the court proceedings, rulings or opinions issued as a result of the former litigation (described below). Further, as such, these specific entitlements cannot now be challenged in court since the applicable statutes of limitations have long expired. In light of the foregoing, the WLC Project’s Specific Plan, General Plan Amendment, Zoning Map Amendment and Conditions of Development, and proposed Annexation are not within the scope of review of this City Council Public Hearing.

WLC Project Community Benefits

The WLC Project is projected to generate millions of dollars annually for schools, police, fire, parks and other public and city services. The broader economic base will boost the local economy. Some benefits include:

- 20,000 permanent jobs in the community
- 13,000 construction jobs
- \$2.5 billion of annual economic benefit to the City and region
- \$3 billion in construction dollars, spent locally
- \$22 million for public education annually
- \$20 million paid to the local school districts
- \$7 million provided by the developer for education and workforce training
- \$5.7 million annually to the City's General Fund

WLC Project – Entitlements Approved in August 2015

Prior to the City Council's November 2015 unanimous approval of the Jobs Initiative that approved the WLC Project's Specific Plan, General Plan Amendment, Zoning Map Amendment and Conditions of Development, the City Council had approved the substantially same entitlements on August 19, 2015, at a duly noticed Public Hearing. At the conclusion of the August 2015 Public Hearing, the City Council approved General Plan Amendments for the WLC Project that changed the land use designations within the WLC Project's Specific Plan Area to Business Park/Light Industrial (BP) and Open Space (OS), and changed the land use designations of certain areas outside the boundaries of the WLC Project's Specific Plan to Open Space (OS). The City Council's August 2015 approvals also included amendments to the relevant Text and/or Maps contained in the General Plan's Goals and Objectives and the following General Plan Elements: (1) Community Development; (2) Circulation; (3) Parks, Recreation and Open Space; (4) Safety; and (5) Conservation.

In August 2015, the City Council also introduced an ordinance that: (1) approved and adopted the WLC Specific Plan; (2) approved a Change of Zone; (3) approved a Pre-Zoning/Annexation for the WLC Project; and (4) repealed the former Moreno Highlands Specific Plan. The Pre-Zoning/Annexation pertained to the proposed annexation of 85 acres at northwest corner of Gilman Springs Road and Alessandro Boulevard that was pre-zoned to Logistics Development (LD), Light Logistics (LL) and Open Space (OS) for areas within the WLC Specific Plan and Open Space (OS) for those areas situated southerly beyond WLC Project's Specific Plan boundaries. In connection with the proposed annexation, the City Council and the City Council acting in its capacity as the Moreno Valley Community Services District Board of Directors adopted resolutions requesting that the Riverside Local Agency Formation Commission ("LAFCO") initiate the necessary proceedings to annex the 85 acres into the City and the Community Services District, respectively.

A Tentative Parcel Map to establish twenty-six (26) parcels within the WLC Specific Plan was also approved by the City Council at the August 19, 2015, Public Hearing for Financing and Conveyance Purposes Only – not for development purposes.

Finally, at the August 19, 2015 Public Hearing, the City Council: (1) introduced an ordinance approving a Development Agreement for the WLC Project, that was consistent with all the aforementioned entitlements and approvals; (2) approved and adopted a Mitigation Monitoring and Reporting Program for the WLC Project; (3) approved and adopted Findings and a Statement of Overriding Considerations for the WLC Project; and (4) certified the 2015 Final Environmental Impact Report for WLC Project.

August 2015 WLC Project Entitlement Approvals – Legal Challenges

The August 2015 WLC Project Entitlement Approvals, as described above, were challenged by one individual and the following entities and organizations:

- Albert Thomas Paulk
- California Clean Energy Committee
- Center for Biological Diversity
- Center for Community Action and Environmental Justice
- Coalition for Clean Air
- Friends of the Northern San Jacinto Valley
- Laborers International Union of North America, Local Union No. 1184
- Residents for a Livable Moreno Valley
- Riverside County
- Riverside County Transportation Commission
- San Bernardino Valley Audubon Society
- Sierra Club
- SoCal Environmental Justice Alliance
- South Coast Air Quality Management District

Settlements were reached with some of the above petitioners, an agreement to pay approximately \$26,000,000 to the South Coast Air Quality Management District to be used to improve air quality with a priority for projects that will be especially beneficial to the areas surrounding the World Logistics Center most impacted by its construction and operation, i.e., the City, and an agreement to pay Riverside County and the Riverside County Transportation Commission several million dollars for road improvements in and near the City, the end result of the litigation was that the Judge vacated all of the August 2015 WLC Project Entitlement Approvals, except for the Development Agreement, which was set aside in separate litigation, discussed below, but found that despite the numerous legal challenges targeted at the 2015 Final Environmental Impact Report, there were **only five areas** that required further environmental analysis in order to bring the 2015 Final EIR into compliance under the California Environmental Quality Act (“CEQA”). Those five areas included:

- I. Energy Impacts: The FEIR must provide a comparison of feasible, cost-effective renewable energy technologies in the Energy Impacts analysis.
- II. Biological Impacts: The FEIR should remove all references to and consideration of the 910 acres of San Jacinto Wilderness Area (“SJWA”) and Multiple

Species Habitat Conservation Plan (“MSHCP”) lands as a “buffer zone” or California Department of Fish and Wildlife (“CDFW”) Conservation Buffer Area in the Biological Resources and Habitat Impact analysis.

- III. Noise Impacts: The FEIR must provide an analysis of construction noise over ambient levels; provide adequate analysis on construction noise impacts on nearby homes; address the inadequacy of mitigation measures, which fail to include performance standards or ways to reduce construction noise.
- IV. Agricultural Impacts: The FEIR and the resolution certifying the FEIR require clarification as to whether loss of locally important farmlands will have a significant direct or cumulative impact on agriculture and, if significant, the FEIR must either explain how proposed mitigation will reduce the impact or why other mitigation is not feasible.
- V. Cumulative Impacts: The FEIR should include consideration of recently constructed and proposed large warehouse WLC Projects in the summary-of-WLC Projections method, and should analyze whether individually insignificant impacts may be cumulatively significant.

WLC Project – Entitlements Approved in November 2015

On September 14 and 15, 2015, three Project-related initiative petitions were filed with the City Clerk on behalf of Robert D. Harris, the proponent of each initiative. The initiatives were known as follows:

- WLC Land Use and Zoning Entitlements Initiative, also known as the Moreno Valley Jobs Initiative;
- WLC Development Agreement Initiative; and
- WLC Land Benefit Initiative

The three initiatives sought to replace the August 2015 WLC Project Entitlement Approvals with a set of substantially identical WLC Project Entitlement Approvals through the initiative process.

As discussed above, the Jobs Initiative included: (1) the adoption of WLC Specific Plan; (2) approval of various amendments to the City’s General Plan and Zoning Map; (3) the adoption of certain WLC Project Conditions of Development, which mirrored the Mitigation Measures set forth in the 2015 Final EIR; and (4) the repeal of the former Moreno Highlands Specific Plan.

In addition to the above, the City Council, acting in its capacity of Moreno Valley Community Services District Board of Directors, unanimously approved the “WLC Land Benefit Initiative” to request that LAFCO initiate the process for the Moreno Valley Community Services District to annex an 85-acre parcel along Gilman Springs Road, which is a part of the WLC Project.

Finally, the WLC Development Agreement Initiative included the approval of a statutory Development Agreement for the WLC Project, substantially identical to the WLC Development Agreement approved previously by the City Council in August 2015, and which included provisions consistent with the WLC Project's Entitlement Approvals as proposed in the Jobs Initiative and the WLC Land Benefit Initiative.

Pursuant to state law, once the City Clerk determined that the petitions, on their face ("prima facie review"), complied with all statutory (state law) requirements and contained the sufficient number of signatures, the City Clerk was required to present each of the initiative petitions to the City Council for its consideration. Under applicable law, the City Council had very limited alternatives. Basically, the City Council's options were either: (1) adopt the initiatives, or (2) place them on the ballot for the voters to decide whether to approve them. The City Council exercised the first option and unanimously approved the adoption all three initiatives.

November 2015 WLC Project Entitlement Approvals – Legal Challenges

After the City Council approved the three initiatives in November 2015, another set of lawsuits were filed against the City by the following entities and organizations:

- Center for Biological Diversity
- Center for Community Action and Environmental Justice
- Coalition for Clean Air
- Riverside County
- Riverside County Transportation Commission
- San Bernardino Valley Audubon Society
- Sierra Club
- SoCal Environmental Justice Alliance
- South Coast Air Quality Management District

At the conclusion of the above litigation, although the City Council's approval of the three initiatives were upheld as legally valid and effective by the Superior Court, the only action invalidated on appeal by the California Court of Appeal was the City Council's approval of the WLC Development Agreement Initiative, which included the following "Public Benefits":

- The WLC Project will result in 85 acres of land being annexed to the City and the Community Services District;
- Developer's payment of Development Impact Fees will cover costs associated with City Police Facilities, City Hall Facilities, the City's Corporate Yard Facilities and Maintenance Equipment;
- Developer's right to sell, transfer, or assign certain parts of the WLC Project will be subject to the City's prior written approval;
- Developer will be required to pay for all development services provided by the City once the City designates a WLC Coordinator;
- Any costs associated with using qualified private entities or persons will be the responsibility of Developer;

- Developer will be responsible for paying for or constructing all traffic circulation-related improvements, except for those that are paid by fees imposed on other developers for their fair share of the cost of particular improvements needed to accommodate their respective projects;
- Developer will be required, at its own cost, to provide a fully constructed, fully equipped fire station and fire station site, including fire trucks, as specified by the City's Fire Chief;
- Developer will establish a WLC Local Hiring Program, at Developer's cost to identify, align and facilitate educational interests and programs with workforce development programs that facilitate the hiring of Moreno Valley residents for job opportunities at the WLC Project, and associated jobs in industries that support the WLC Project;
- Developer will require its contractors, suppliers and tenants to be active participants in Moreno Valley Employment Resource Center ("ERC") programs including, but not limited to, utilizing the ERC's job opportunity announcements program;
- Developer will actively participate in the Hire MoVal Incentive Program;
- Developer will contribute up to \$6,993,000, to be used by the City to provide and enhance educational and workforce development training in the logistics industries; and
- Developer will contribute up to \$500,000 to develop freeway related landscaping, bridge architectural concepts, engineering and freeway signage regulations.

Unless the Development Agreement is resurrected through re-adoption by the City Council, in connection the certification of the Revised Final EIR, there is no guarantee that the above public benefits will materialize, if the WLC Project is developed solely on the basis of the currently valid WLC Project Entitlements that survived the litigation pertaining to the initiatives.

WLC Project Entitlement Approvals – Post Litigation Status

The following WLC Project Entitlement Approvals, as more particularly described in the WLC Land Use and Zoning Entitlements Initiative, also known as the "Moreno Valley Jobs Initiative" and "WLC Land Benefit Initiative," currently remain valid and effective:

1. Repeal of the former Moreno Highlands Specific Plan
2. Adoption of WLC Specific Plan
3. Amendments to the City's General Plan
4. Amendments to the City's Zoning Map
5. Approval of WLC Project Conditions of Development
6. Request that LAFCO commence proceeding to annex 85 acres into City and Community Services District

The only remaining entitlements that need to be approved for the WLC Project, other than Plot Plan approvals and subdivision maps, to permit the City to commence issuing necessary ministerial permits such as grading and building permits, so that construction and development of the WLC Project can finally begin, are the following:

1. Revised Final EIR
 - a. Mitigation Monitoring and Reporting Program
 - b. Statement of Overriding Considerations
2. Tentative Parcel Map 36457 for Finance and Conveyance Purposes Only
3. Development Agreement

Planning Commission Public Hearing

At the May 14, 2020, regular meeting of the Planning Commission, after a noticed public hearing conducted by the Planning Commission, the Planning Commission on a 6-0-1 vote (with Commissioner Harris recusing himself due to the appearance of bias): (1) approved and certified the Revised Final Environmental Impact Report (“Revised Final EIR”) that included the approval and adoption of both a Mitigation Monitoring and Reporting Program and a Statement of Overriding Conditions; (2) approved Tentative Parcel Map 36457 for Finance and Conveyance Purposes Only; and (3) recommended that the City Council approve the statutory Development Agreement. All of the above-referenced items are directly related/applicable to the World Logistics Center Project. (See attached Planning Commission Staff Report, dated February 14, 2020, which is incorporated by reference as though set forth at length herein.)

Appeals Filed

A total of three Appeal applications were filed by two appellants. Two of the Appeal applications (PAA20-0001 and PPA20-0002) challenge the Planning Commission’s May 14 decision to approve and certify the Revised Final EIR. One Appeal application PAA20-0003 challenges the Planning Commission’s May 14 decision to approve Tentative Parcel Map 36457 for Finance and Conveyance Purposes Only.

Revised Final EIR - Appeals

On or about May 26, 2020, an appeal was filed by Adriano L. Martinez on behalf of the Center for Biological Diversity, Center for Community Action & Environmental Justice, Coalition for Clean Air, San Bernardino Valley Audubon Society, and Sierra Club, challenging the Planning Commission’s May 14 decision to approve and certify the Revised Final EIR. (PAA20-0002)

On or about May 28, 2020, another appeal was filed by Angel Lopez-Ramirez challenging only the Planning Commission’s May 14 decision to approve and certify the Revised Final EIR. (PAA20-0001).

Tentative Parcel Map for Financing and Conveyance Purposes Only - Appeal

Adriano L. Martinez also filed an appeal on behalf of the Center for Biological Diversity, Center for Community Action & Environmental Justice, Coalition for Clean Air, San Bernardino Valley Audubon Society, and Sierra Club, challenging the Planning

Commission's May 14 decision to approve Tentative Parcel Map 36457 for Finance and Conveyance Purposes Only ("Tentative Parcel Map"). (PAA20-0003).

WLC Development Agreement - Review and Consideration

The final decision on the approval of the WLC Development Agreement vests with the City Council.

Pursuant to the Section 9.02.110 (Development Agreements) of Chapter 9.02 (Permits and Approvals), the WLC Development Agreement was reviewed by the Planning Commission in the context of the noticed May 14 Public Hearing. After the Planning Commission's Public Hearing, it adopted Resolution 2020-22 recommending that the City Council adopt the requisite ordinance to approve the WLC Development Agreement. The Planning Commission decision was based on, but not limited to, the following findings, as required by Section 9.02.110 (Development Agreements):

- (a) The WLC Development Agreement is consistent with the goals, objectives, policies, general land uses and programs specified in the general plan and any applicable specific plan;
- (b) The WLC Development Agreement is compatible with the uses authorized in, and the regulations prescribed for, the land use district in which the real property is located;
- (c) The WLC Development Agreement is in conformity with public convenience, general welfare and good land use practice;
- (d) The WLC Development Agreement will not be detrimental to the public health, safety and general welfare; and
- (e) The WLC Development Agreement will not adversely affect the orderly development or the preservation of property values for the subject property or any other property.

After the Planning Commission Public Hearing, the City Council is required to conduct a noticed Public Hearing to consider the Planning Commission's recommendation. After the City Council completes the Public Hearing, it may accept, modify or disapprove the recommendation of the Planning Commission. The WLC Development Agreement, however, may only be approved by ordinance and it shall not be approved unless the City Council makes or approves the Planning Commission's findings as described above.

Administrative Record of the Proceedings

The Planning Commission's actions on the Revised Final EIR, Tentative Parcel Map and the WLC Development Agreement were based on various findings derived from the following body of evidence, which amounts to the Administrative Record of the Proceedings. This Administrative Record is vast, broad and very comprehensive and consists of the following:

- (a) Moreno Valley General Plan and all other relevant provisions contained therein;
- (b) Title 9 (“Planning and Zoning”) of the Moreno Valley Municipal Code and all other relevant provisions referenced therein;
- (c) Draft EIR, Recirculated Portions of the Final EIR (RSFEIR), Draft Recirculated RSFEIR and all studies, reports, public comments and responses thereto;
- (d) Final EIR and the Revised Final EIR and all studies, reports, public comments and responses thereto;
- (e) Draft Development Agreement by and between the City and Developer, its application and all documents, records and references contained therein;
- (f) World Logistics Center Land Use and Zoning Entitlements Initiative, also known as the “Moreno Valley Jobs initiative,” that was unanimously approved by the City Council in November 24, 2015;
- (g) Amendments to the Moreno Valley General Plan as described in the World Logistics Center Land Use and Zoning Entitlements Initiative which were approved by the City Council through the City Council’s adoption of the Logistics Center Land Use and Zoning Entitlements Initiative on November 24, 2015;
- (h) Amendments to the City of Moreno Valley Zoning Map as described in the World Logistics Center Land Use and Zoning Entitlements Initiative which were approved through the City Council’s adoption of the Logistics Center Land Use and Zoning Entitlements Initiative on November 24, 2015;
- (i) Moreno Highlands Specific Plan as described in the World Logistics Center Land Use and Zoning Entitlements Initiative which was repealed through the City Council’s adoption of the Logistics Center Land Use and Zoning Entitlements Initiative on November 24, 2015;
- (j) World Logistics Center Specific Plan as described in the World Logistics Center Land Use and Zoning Entitlements Initiative which was adopted through the City Council’s adoption of the Logistics Center Land Use and Zoning Entitlements Initiative on November 24, 2015;
- (k) Project Conditions of Development as described in the World Logistics Center Land Use and Zoning Entitlements Initiative which were imposed through the City Council’s adoption of the Logistics Center Land Use and Zoning Entitlements Initiative on November 24, 2015;
- (l) WLC Land Benefit Initiative, requesting that the Riverside County Local Agency Formation Commission initiate the process for the Moreno Valley Community Services District to annex an 85-acre parcel along Gilman Springs Road, unanimously approved by the Moreno Valley Community Services District Board of Directors on November 24, 2015;
- (m) Tentative Parcel Map No. 36457 for Finance and Conveyance Purposes only, subject to subsequent processing and recordation of a future map for development purposes and all documents, records and references related thereto;
- (n) Planning Commission Staff Report and Staff Presentation and all documents, records and references related thereto;

- (o) Testimony and/or comments from Developer and its representatives during the Planning Commission Public Hearing;
- (p) Testimony and/or comments from all persons that was provided in written format or correspondence, at, or prior to, the Planning Commission Public Hearing;
- (q) Riverside County Superior Court's Ruling on Peremptory Writ of Mandate, filed February 8, 2018;
- (r) Riverside County Superior Court's Judgment Granting Petitions for a Peremptory Writ of Mandate, filed June 7, 2018; and
- (s) Court of Appeal Opinion, Center for Community Action & Environmental Justice v. City of Moreno Valley (2018) 26 CA5th 689.

In addition to the above, the City Council has the benefit of considering the following additional evidence:

- (a) City Council Staff Report and Staff Presentation and all documents, records and references related thereto;
- (b) Testimony and/or comments from Developer and its representatives during the City Council Public Hearing;
- (c) Testimony and/or comments from all persons that was provided in written format or correspondence, at, or prior to, the City Council Public Hearing;
- (d) The findings set forth in Planning Commission Resolution 2020-20 Approving and Adopting a Mitigation Monitoring Reporting Program and Statement of Overriding Considerations and Certifying the Revised Final EIR;
- (e) The findings set forth in Planning Commission Resolution 2020-21 Approving Tentative Parcel Map No. 36457 for Finance and Conveyance Purposes;
- (f) The findings set forth in Planning Commission Resolution 2020-22 Recommending that the City Council Adopt the Requisite Ordinance Approving the WLC Development Agreement;
- (g) Any and all written responses, prepared by staff, the applicant and/or applicant's representatives to comments submitted to the City prior to or at the Planning Commission Public Hearing and any and all responses to comments submitted to the City prior to or at the City Council Public Hearing; and
- (h) Tentative Court of Appeal Opinion, Albert Paulek, et al., v. City of Moreno Valley (May 2019), Case No. E071184.

Moreover, subsequent to the distribution of the Final Response to Comments and Revised Final EIR and prior to and during the Planning Commission hearing on May 14, 2020, comment letters on the Revised Final EIR were submitted to the City. Formal responses to those comments are not required pursuant to State CEQA Guidelines Section 15088. However, written responses have been prepared and are included herein by this reference as though set forth at length herein. HF's environmental and planning consultants, Environmental Science Associates ("ESA"), provided the responses for the benefit of the City Council and for completeness of the record. Staff

has reviewed and approved the responses. It is important to note that none of the responses provide any significant new information that would require recirculation of the Revised Final EIR.

Substantial Evidence

The general rule is that any findings made in regard to any of the three items be based on “substantial evidence” contained in the administrative record of the proceedings. Substantial evidence is not synonymous with any evidence. However, substantial evidence in some cases may include the testimony of a single witness provided that the conclusions and assumptions of the witness is supported by substantial evidence in light of the whole record.

“Substantial evidence” can be described as **enough relevant information and reasonable inferences from the information that a fair argument can be made to support a conclusion**, even though other conclusions might also be reached. Substantial evidence may include facts, reasonable assumptions predicated upon facts, and expert opinion supported by facts. Substantial evidence may also include relevant evidence that a reasonable mind might accept as adequate to support a conclusion. Substantial evidence may also include evidence of ponderable legal significance that is reasonable in nature, credible, and of solid value.

In light of the foregoing, it is important that all findings made in relation to the Revised Final EIR, the Tentative Parcel Map and even to some extent the WLC Development Agreement, be supported by substantial evidence in light of the whole record.

Revised Final EIR - Scope of Review

The Scope of Review of the Revised Final EIR should remain focused on the specific reasons for the appeal, as described in the two appeal letters. Since Section 9.02.240 (Appeals) requires the appellant to state the specific reasons for the appeal, it follows that the City Council is not conducting a de novo review of the Revised Final EIR, meaning the City Council for due process reasons should refrain from hearing the appeal as if the item on appeal (Revised Final EIR) is being heard for the first time.

If the City Council denies the appeal, the Resolution denying the appeal will reflect that it also formally repeals and sets aside Resolution No. 2015-56 which certified the previous Final EIR and adopted findings, the MMRP and the Statement of Overriding Considerations, which was vacated by Hon. Judge Waters in the Peremptory Writ of Mande issued June 7, 2018. (Case No: RIC 1510967 [MF])

Mandatory Recusals – Reason for Appeal

One of the appellants (Lopez) argues that that several members of the Planning Commission should have recused themselves and that even members of the City Council should recuse themselves, for a variety of reasons, none of which require mandatory recusals.

Common Law Bias

Appellant Lopez claims that four of the Planning Commissioners were “prejudiced” and “biased,” and should have recused themselves. This particular appellant bases his conclusions on statements such as: “perceived connections,” “leaning toward one side of a cause,” “turning her head directly toward Iddo Benzeevie of Highland Fairview,” “clear and convincing evidence for a ‘conflict of interest’ with prejudice and bias,” “prejudice and bias with grounds of a one-side partisan point of view,” “ex-parte,” “political influence” and “campaign contributions,” none of which are supported by any “clear and convincing evidence” as purported by this particular appellant.

The common law doctrine against conflicts of interest is the judicial expression of the public policy against public officials using their official positions for private benefit. See *Terry v Bender* (1956) 143 CA2d 198, 206. This doctrine has been primarily applied to require a public official to abstain from participation in cases when the public official's private financial interest may conflict with his or her official duties. 64 Ops Cal Atty Gen 795, 797 (1981). **However, a more recent court decision (cited by one of the appellants) actually indicates a reluctance to find a violation of the common law doctrine against conflicts of interest when statutory conflict of interest laws are not violated.** See *BreakZone Billiards v City of Torrance* (2000) 81 CA4th 1205, 1233.

Due process also requires in a quasi-judicial proceeding that the decision-maker be fair and impartial. A personal interest or involvement in the outcome of a matter, or with any participant, that is unrelated to the merits requires disqualification. See *City of Fairfield v Superior Court* (1975) 14 C3d 768. See also *Mennig v City Council* (1978) 86 CA3d 341. **This rule does not preclude holding opinions, philosophies, or strong feelings about issues or specific projects; it also does not proscribe expression of views about matters of importance in the community, particularly during an election campaign.** See *City of Fairfield v Superior Court* (1975) 14 C3d 768.

Moreover, **a council member who receives campaign contributions from an applicant** that seeks a quasi-judicial land use decision from the city or who is the appellant that brings the matter before the city council for review **is not automatically disqualified from participating due to bias or prejudgment of adjudicative facts.** See *BreakZone Billiards v City of Torrance* (2000) 81 CA4th 1205, 1235. See also *All Towing Servs. LLC v City of Orange* (2013) 220 CA4th 946, 955 (**under Political Reform Act, campaign contributions do not constitute gifts or income and thus do not create a conflict of interest**).

Legally Required Participation

Interestingly, even if four Planning Commissioners decided to recuse themselves from the proceedings, for whatever reasons, based on the vote of the Planning Commission, the outcome would have remained the same. This is because the Political Reform Act does not prevent any public official from making or participating in a governmental decision to the extent the official's participation is “legally required” for the action or

decision to be made. Govt C §87101. See also 2 Cal Code Regs §18705. The exception applies only if there is no reasonable alternative manner of decision-making, and the public official involved must act in order for a decision to be made. 2 Cal Code Regs §18705(a). See Brown v Fair Political Practices Comm'n (2000) 84 CA4th 137. A quorum for "legally required participation" is the minimum number of members needed to approve the item of business, and a random means of selection may be used to select the officials needed for the quorum. 2 Cal Code Regs §18705(c) (3), (d). Once selected, an official remains selected for the duration of the proceedings in all related matters until his or her participation is no longer legally required. 2 Cal Code Regs §18705(c)(3).

In light of the foregoing, if four members of the Planning Commission had recused themselves for any reason whatsoever, the Planning Commission would have been left without a quorum to act upon the Revised Final EIR, Tentative Parcel Map, and the WLC Development Agreement. Under such circumstances, the law would have required that at least one of the self-recused Planning Commissioners be selected by random draw to participate in the proceedings since a quorum is needed to take action on the three items. In other words, if recusals eliminate a quorum, this does not mean the item on the agenda automatically fails or is rejected by operation of law.

Letters from Attorney General Xavier Becerra and the California Air Resources Board and the State of California Department of Fish and Wildlife

Appellant Lopez attached copies of a joint letter submitted by Attorney General Xavier Becerra, in his independent capacity and the California Air Resources Board (CARB), dated May 14, 2020, and a letter from the State of California Department of Fish and Wildlife, dated May 13, 2020. Assuming the appellant is incorporating each issue raised in the above letters, separate supplemental information will be provided that responds to the issues raised in each of the above letters.

Mitigation Measures, Impacts Analysis, Recirculation, etc.

The other appellant attached several copies of correspondence from other members of the public, which he relies on for the reasons for his appeal. These appellants also raise issues over the adequacy of a multitude of mitigation measures, recirculation, impact analysis, etc. The responses to the reasons for both appeals are attached hereto.

Tentative Parcel Map – Scope of Review

The basis of the appeal of the Planning Commission's approval of the Tentative Parcel Map is the alleged inadequacy of the Revised Final EIR. This means that the review of the Tentative Parcel Map should not be focused on the nature the map nor the findings supporting its approval, other than those related to CEQA.

If the City Council denies the appeal, the Resolution denying the appeal will reflect that it also formally repeals and sets aside Resolution No. 2015-58 which approved the

former parcel map which was vacated by Hon. Judge Waters in the Peremptory Writ of Mandate issued June 7, 2018. (Case No: RIC 1510967 [MF])

WLC Development Agreement - Review and Consideration

The WLC Development Agreement approved by the City Council on August 19, 2015, was vacated by the Court Ruling and an identical version that was subsequently unanimously adopted by the City Council on November 14, 2015, was invalidated by the Court of Appeal, both for reasons unrelated to the content of the respective Development Agreements. The former was vacated based on an inadequate EIR and the latter based on a legal determination that the initiative process cannot be used as a mechanism to approve a statutory Development Agreement.

In light of the foregoing, since the WLC Project entitlements that the City Council had promised to process under the Development Agreement were not invalidated by the Court of Appeal, and which remain valid and in effect, this has provided the Developer with the benefit of the bargain under the Development Agreement, but leaving the City in jeopardy with respect to the “Public Benefits” that Developer was otherwise legally obligated to provide to the City had the Development Agreement remained in effect.

The numerous benefits that will be provided to the City if the Development Agreement is approved by the City Council are set forth in detail on pages 3 and 6-7 of this report.

Upon certification of the Revised Final EIR, which remedies the five deficiencies of the 2015 Final EIR, and the adoption of the 2020 Development Agreement through the City’s normal legislative process consistent with the State’s Development Agreement Law, as set forth in the California Government Code commencing with section 65864 (the “Development Agreement Law and the City’s “Development Agreement Ordinance” as set forth in Title 9, Section 9.02.110 of the Municipal Code), the City will be reassured that it will receive the “Public Benefits” from the development for the WLC Project set forth on pages 6 and 7 of this report.

Again, it is imperative to recognize that review of the scope of the Development Agreement must be focused on the “Public Benefits” specifically set forth in the Development Agreement, since all the underlying project entitlements have already been approved and remain valid and effective. In other words, the sole purpose of adopting the Development Agreement is to ensure that City retains its “benefit of the bargain” when the City Council unanimously approved the WLC Project Entitlements in August 2015 and subsequently by initiative in November 2015. Without the benefit of the Development Agreement, the City runs the risk that the Developer will be able to develop the WLC Project pursuant to the approved land use, planning and zoning entitlements without being obligated to provide the City and its residents with the Public Benefits set described herein and in the Development Agreement.

Since the underlying WLC Project Entitlements are in place, adoption of the Development Agreement will be consistent with the permitted uses, density and

intensity of the subject property, maximum height and size of proposed buildings permitted on the subject property, and the goals, objectives, policies, general land uses and programs specified in the City's General Plan and the already-approved WLC Specific Plan. In summary, the adoption of the Development Agreement will assure that subject property will be developed in an orderly manner that preserves and/or enhances property values while ensuring that the Public Benefits promised to the City and its residents by the Developer remain intact and enforceable.

In light of the foregoing, the Planning Commission recommended that the City Council approve and adopt the Development Agreement to preserve the Public Benefits that the Developer will be legally obligated and bound to provide to the City and its residents as part and parcel of the development of the WLC Project.

If the City Council approves the Development Agreement, the Ordinance approving the Development Agreement will also formally repeal and set aside Ordinance No. 901 which approved the former WLC Development Agreement in 2015, which was vacated by Hon. Judge Waters in the Peremptory Writ of Mandate issued June 7, 2018. (Case No: RIC 1510967 [MF])

SUMMARY AND CONCLUSION

Since the underlying land use, planning and zoning entitlements for the WLC Project have been approved unanimously by the City Council in November 2015, and remain valid and effective, despite the numerous lawsuits challenging the WLC project, it is imperative that the City Council approve the Development Agreement along with denying the appeals of the Revised Final EIR and affirming the Planning Commission's certification of the Revised Final EIR which includes the approval and adoption of the proposed MMRP and Statement of Overriding Considerations; and deny the appeal of the Tentative Parcel Map and affirm the Planning Commission's approval of the Tentative Parcel Map for Financing and Conveyance Purposes Only.

The recommended actions are critical for ensuring that the WLC Project is developed in a manner that is consistent with the approved entitlements, consistent with the City's approved amended General Plan Policies and Land Use Maps, consistent with the approved WLC Specific Plan, and safe for the environment. The recommended actions will also ensure that the specific economic and social benefits of the WLC Project which outweigh the unavoidable significant adverse impacts described in the Revised Final EIR come to fruition, which include, but are not limited to producing: (a) 20,000 permanent jobs in the community, (b) 13,000 construction jobs, (c) \$2.5 billion of annual economic benefit to the City and region, (d) \$3 billion in construction dollars, spent locally, (e) \$22 million for public education annually, (f) \$20 million paid to the local school districts, (g) \$7 million provided by Developer for education and workforce training, and (h) \$5.7 million annually to the City's General Fund.

ALTERNATIVES

1. Conduct a public hearing on this appeal and take an action to deny the Appeal of Planning Commission's Certification of the Revised Final EIR (PEN18-0050) and affirm Planning Commission Resolution No. 2020-20, deny the Appeal of Planning Commission's approval of the Tentative Parcel Map 3647 (PEN20-00017) and affirm Planning Commission Resolution No. 2020-21, and introduce an Ordinance to adopt the Development Agreement (PEN20-0018). Staff recommends this alternative.
2. Conduct a public hearing on this appeal and take an action to approve the appeal requests (PAA20-0001, PAA20-0002, and PAA20-0003) and deny the Certification of the Revised Final EIR (PEN18-0050), deny Tentative Parcel Map 36457 (PEN20-0017), and deny Development Agreement (PEN20-0018). This action requires directing staff to return with a proper resolution to deny the Certification of the Revised Final EIR (PEN18-0050), Tentative Parcel Map 36457 (PEN20-0017), and Development Agreement (PEN20-0018). Staff does not recommend this alternative.

CITY COUNCIL GOALS

Positive Environment. Create a positive environment for the development of Moreno Valley's future.

Community Image, Neighborhood Pride and Cleanliness. Promote a sense of community pride and foster an excellent image about our City by developing and executing programs which will result in quality development, enhanced neighborhood preservation efforts, including home rehabilitation and neighborhood restoration.

CITY COUNCIL STRATEGIC PRIORITIES

1. Economic Development
2. Public Safety
3. Library
4. Infrastructure
5. Beautification, Community Engagement, and Quality of Life
6. Youth Programs

Objective 1.1: Proactively attract high-quality businesses.

Objective 1.2: Market all the opportunities for quality industrial development in Moreno Valley by promoting all high-profile industrial and business projects that set the City apart from others.

Objective 1.3: Promote local hiring through the expansion of local, quality, high paying jobs, and workforce development efforts.

Objective 1.5: Showcase Moreno Valley’s unique assets.

Objective 1.6: Establish Moreno Valley as the worldwide model in logistics development.

Objective 2.5: Develop partnerships with local businesses and warehouse operators to reduce traffic related issues.

Objective 4.5: Explore green/renewable innovations and technologies for new developments such as the World Logistics Center.

Objective 4.7: Demonstrate innovative and industry leading transportation systems.

RESOLUTION NO. 2020-

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, DENYING APPEALS (PAA20-0001 AND PAA20-0002) OF THE PLANNING COMMISSION'S CERTIFICATION OF THE REVISED FINAL EIR AND AFFIRMING PLANNING COMMISSION RESOLUTION 2020-20

WHEREAS, the City of Moreno Valley is a general law city and a municipal corporation of the State of California; and;

WHEREAS, HF Properties, a California general partnership, Sunnymead Properties, a Delaware general partnership, Theodore Properties Partners, a Delaware general partnership, 13451 Theodore, LLC, a California limited liability company, and HL Property Partners, a Delaware general partnership (collectively "HF") have legal and equitable interests in approximately two thousand, two hundred sixty three (2263) acres of real property located in the region commonly referenced as the Rancho Belago area of the City of Moreno Valley, as described in the legal description set forth in Exhibit "A-1" and as illustrated in the depiction set forth in Exhibit "A-2" (the "Subject Property") of the proposed 2020 World Logistics Center Development Agreement; and

WHEREAS, on November 24, 2015, the City Council unanimously approved the World Logistics Center Land Use and Zoning Entitlements Initiative, also known as the "Moreno Valley Jobs Initiative," which amended the General Plan of the City of Moreno Valley, amended the City of Moreno Valley Zoning Map, repealed the Moreno Highlands Specific Plan, and adopted the World Logistics Center Specific Plan, and imposed certain Project Conditions of Development; and

WHEREAS, the World Logistics Center Specific Plan allows the development of approximately forty million, six hundred thousand (40,600,000) square feet of industrial, logistics, warehouse and support uses on the land subject to the World Logistics Center Specific Plan; and

WHEREAS, on November 24, 2015, the Moreno Valley Community Services District Board of Directors also unanimously approved the "WLC Land Benefit Initiative" to request that the Riverside County Local Agency Formation Commission initiate the process for the Moreno Valley Community Services District to annex an 85-acre parcel along Gilman Springs Road; and

WHEREAS, HF submitted Tentative Parcel Map No. 36457 for Finance and Conveyance Purposes Only, which was approved by the City Council on August 19, 2015, after certification of the World Logistics Center Final Programmatic Environmental Impact Report ("FEIR"); and

Attachment: 2020-XX Resolution Revised FEIR Appeal [Revision 1] (4074 : World Logistics Center)

WHEREAS, the certification of the FEIR and the approval of the Tentative Parcel Map were ordered set aside by a judgment of the Riverside Superior Court in June, 2018; and

WHEREAS, a Revised Final Environmental Impact Report (“Revised Final EIR”) has been prepared for the “Project,” as collectively described and depicted in the World Logistics Center Land Use and Zoning Entitlements Initiative, WLC Land Benefit Initiative, Tentative Parcel Map No. 36457 for Finance and Conveyance Purposes Only and the proposed 2020 World Logistics Center Development Agreement; and

WHEREAS, the Revised Final EIR contains the information required by CEQA Guidelines Section 15132, including without limitation the FEIR and all revisions and additions thereto; comments and recommendations received on the Revised Sections of the FEIR (“RSFEIR”) and the Draft Recirculated RSFEIR; list of persons, organizations, and public agencies commenting on the RSFEIR and the Draft Recirculated RSFEIR; and the City’s responses to significant environmental points raised in the review and consultation process on RSEIR and the Draft Recirculated RSFEIR; and

WHEREAS, the Revised Final EIR finds and concludes that all potentially significant environmental impacts from implementation of the Project have been identified in the Revised Final EIR and, with the implementation of the mitigation measures defined and set forth in the Mitigation Monitoring and Reporting Program, will be mitigated to a less-than-significant level, except for those certain impacts identified in the Revised Final EIR as being significant and unavoidable; and

WHEREAS, the Revised Final EIR finds and concludes that the Project will have certain significant environmental effects which would remain significant even after implementation of all feasible mitigation measures identified in the Revised Final EIR, including the reasonable range of alternatives identified in the Revised Final EIR, as more particularly described in the Statement of Overriding Considerations; and

WHEREAS, CEQA Guidelines Section 15093 (Statement of Overriding Considerations) provides that CEQA requires the decision-making entity to balance the economic, legal, social, technological or other benefits, including region or state-wide environmental benefits (collectively, “Project Benefits”), of a proposed project against its unavoidable environmental risks when determining whether to approve the project, and if the Project Benefits of a proposed project outweigh the unavoidable and adverse environmental effects, the adverse environmental effects may be considered “acceptable;” and

WHEREAS, when the lead agency approves a project which will result in the occurrence of significant effects which are identified in the final EIR but are not avoided or substantially lessened, the agency shall state in writing the specific reasons to support its action based on the final EIR and/or other information in the records and that a Statement of Overriding Considerations be supported by substantial evidence in the record; and

WHEREAS, the Planning Commission conducted a noticed Public Hearing on May 14-15, 2020, to consider the Revised Final EIR, the proposed 2020 World Logistics Center Development Agreement and Tentative Parcel Map No. 36457 for Finance and Conveyance Purposes Only; and

WHEREAS, at the conclusion of the May 14-15, 2020 Public Hearing, the Planning Commission adopted Resolution 2020-20 approving and adopting the Mitigation Monitoring and Reporting Program (MMRP) and the findings contained therein for the Revised Final EIR; approving and adopting the Statement of Overriding Considerations and the findings contained therein for the Revised Final EIR; and certifying the Revised Final EIR (PEN18-0050) for the World Logistics Center on file with the Community Development Department; and

WHEREAS, the Planning Commission found and concluded that the Revised Final EIR was completed in compliance with the California Environmental Quality Act and the CEQA Guidelines, and that the Planning Commission reviewed and considered the information in the Revised Final EIR that reflects the City’s independent judgement and analysis; and

WHEREAS, on or about May 26, 2020, Adriano L. Martinez filed an appeal on behalf of the Center for Biological Diversity, Center for Community Action & Environmental Justice, Coalition for Clean Air, San Bernardino Valley Audubon Society, and Sierra Club, challenging the Planning Commission’s May 14-15 decision to certify Revised Final EIR for the World Logistics Center (PEN18-0050) on file with the Community Development Department (PAA20-0002); and

WHEREAS, on or about May 28, 2020, an appeal was filed by Angel Lopez-Ramirez also challenging he Planning Commission’s May 14-15 decision to certify the Revised Final EIR for the World Logistics Center (PEN18-0050) on file with the Community Development Department (PAA20-0001); and

WHEREAS, on June 16, 2020, the City Council conducted a noticed Public Hearing to consider the appeals filed by Mr. Lopez-Ramirez and Mr. Martinez on behalf of the Center for Biological Diversity, Center for Community Action & Environmental Justice, Coalition for Clean Air, San Bernardino Valley Audubon Society and Sierra Club.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:

Section 1. RECITALS AND EXHIBITS

That the foregoing Recitals and attached Exhibits are true and correct and are hereby incorporated by this reference.

Section 2. EVIDENCE AND ADMINISTRATIVE RECORD

Attachment: 2020-XX Resolution Revised FEIR Appeal [Revision 1] (4074 : World Logistics Center)

That the City Council has considered all of the evidence submitted into the administrative record related to the appeal of the Planning Commission's adoption of Resolution 2020-20 certifying the Revised Final Environmental Impact Report (PEN18-0050) for the World Logistics Center on file with the Community Development Department which includes a Mitigation Monitoring and Reporting Program (MMRP) and the findings contained therein and a Statement of Overriding Considerations and the findings contained therein, including, but not limited to, the following:

- (a) Moreno Valley General Plan and all other relevant provisions contained therein;
- (b) Title 9 ("Planning and Zoning") of the Moreno Valley Municipal Code and all other relevant provisions referenced therein;
- (c) Draft EIR, the Revised Sections of the FEIR (FSEIR), the Draft Recirculated FSEIR and all studies, reports, public comments and responses thereto;
- (d) Final EIR and the Revised Final EIR and all studies, reports, public comments and responses thereto;
- (e) Draft Development Agreement by and between the City and Developer, its application and all documents, records and references contained therein;
- (f) World Logistics Center Land Use and Zoning Entitlements Initiative, also known as the "Moreno Valley Jobs initiative," that was unanimously approved by the City Council in November 24, 2015;
- (g) Amendments to the Moreno Valley General Plan as described in the World Logistics Center Land Use and Zoning Entitlements Initiative which were approved by the City Council through the City Council's adoption of the Logistics Center Land Use and Zoning Entitlements Initiative on November 24, 2015;
- (h) Amendments to the City of Moreno Valley Zoning Map as described in the World Logistics Center Land Use and Zoning Entitlements Initiative which were approved through the City Council's adoption of the Logistics Center Land Use and Zoning Entitlements Initiative on November 24, 2015;
- (i) Moreno Highlands Specific Plan as described in the World Logistics Center Land Use and Zoning Entitlements Initiative which was repealed through the City Council's adoption of the Logistics Center Land Use and Zoning Entitlements Initiative on November 24, 2015;
- (j) World Logistics Center Specific Plan as described in the World Logistics Center Land Use and Zoning Entitlements Initiative which was adopted through the City Council's adoption of the Logistics Center Land Use and Zoning Entitlements Initiative on November 24, 2015;
- (k) Project Conditions of Development as described in the World Logistics Center Land Use and Zoning Entitlements Initiative which were imposed through the City Council's adoption of the Logistics Center Land Use and Zoning Entitlements Initiative on November 24, 2015;
- (l) WLC Land Benefit Initiative, requesting that the Riverside County Local Agency Formation Commission initiate the process for the Moreno Valley Community Services District to annex an 85-acre parcel along Gilman Springs Road, unanimously

approved by the Moreno Valley Community Services District Board of Directors on November 24, 2015;

(m) Tentative Parcel Map No. 36457 for Finance and Conveyance Purposes only, subject to subsequent processing and recordation of a future map for development purposes and all documents, records and references related thereto, including without limitation, the application and reports and written statements regarding the proposed method of control of storm water, including data as to amount of runoff, and the approximate grade and dimensions of the proposed facilities, unless waived;

(n) Written waiver requests submitted by Applicant and approval of said waivers;

(o) Planning Commission Staff Report and Staff Presentation and all documents, records and references related thereto;

(p) Testimony and/or comments from Developer and its representatives during the Planning Commission Public Hearing;

(q) Testimony and/or comments from all persons that was provided in written format or correspondence, at, or prior to, the Planning Commission Public Hearing;

(r) Riverside County Superior Court's Ruling on Peremptory Writ of Mandate, filed February 8, 2018, in Paulek v. City of Moreno Valley, Case No. RIC 1510967;

(s) Riverside County Superior Court's Judgment Granting Petitions for a Peremptory Writ of Mandate, filed June 7, 2018, and Peremptory Writ of Mandate dated June 12, 2018; and

(t) Court of Appeal Opinion, Center for Community Action & Environmental Justice v. City of Moreno Valley (2018) 26 CA5th 689;

(u) City Council Staff Report and Staff Presentation and all documents, records and references related thereto;

(v) Testimony and/or comments from Developer and its representatives during the City Council Public Hearing;

(w) Testimony and/or comments from all persons that was provided in written format or correspondence, at, or prior to, the City Council Public Hearing;

(x) The findings set forth in Planning Commission Resolution 2020-20 approving and adopting a Mitigation Monitoring Reporting Program and Statement of Overriding Considerations and Certifying the Revised Final EIR;

(y) The findings set forth in Planning Commission Resolution 2020-21 Approving Tentative Parcel Map No. 36457 for Finance and Conveyance Purposes;

(z) The findings set forth in Planning Commission Resolution 2020-22 Recommending that the City Council Adopt the Requisite Ordinance Approving the WLC Development Agreement;

(aa) Any and all written responses, prepared by staff, the applicant and/or applicant's representatives to comments submitted to the City after the Planning Commission Public Hearing and any and all responses to comments submitted to the City prior to or at the City Council Public Hearing and after the Planning Commission Public Hearing; and

(bb) Tentative Court of Appeal Opinion, Albert Paulek, et al., v. City of Moreno Valley (May 2019), Case No. E071184.

Section 3. Final Decision on Appeal

That based on the foregoing Recitals, Administrative Record and Findings, the City Council hereby denies the appeals filed by Adriano L. Martinez filed on behalf of the Center for Biological Diversity, Center for Community Action & Environmental Justice, Coalition for Clean Air, San Bernardino Valley Audubon Society, and Sierra Club (PAA20-0002), and Angel Lopez-Ramirez (PAA20-0001) challenging the Planning Commission’s May 14-15 decision to certify the Revised Final EIR for the World Logistics Center (PEN18-0050) on file with the Community Development Department and affirms Planning Commission Resolution 2020-20 approving and adopting the Mitigation Monitoring and Reporting Program and the findings contained therein for the Revised Final EIR; and approving and adopting the Statement of Overriding Considerations and the findings contained therein for the Final Revised EIR; and certifying that the Revised Final EIR (PEN18-0050) for the World Logistics Center on file with the Community Development Department and affirms Planning Commission Resolution 2020-20.

Section 4. CEQA COMPLIANCE

That the Revised Final EIR was prepared in compliance with CEQA and the CEQA Guidelines and that the Planning Commission has complied with CEQA’s procedural and substantive requirements.

Section 5. NO NEW INFORMATION

That no new significant information as defined by CEQA Guidelines Section 15088.5, has been received by the City Council after the circulation of the RSFEIR and the Draft Recirculated RSFEIR that would require further recirculation and that all of the information added to the Revised Final EIR and/or Mitigation Monitoring and Reporting Program merely clarifies, amplifies or makes insignificant modifications to an already adequate FEIR, RSFEIR and Draft Recirculated RSFEIR pursuant to CEQA Guidelines Section 15088.5(b).

Section 6. APPROVAL AND CERTIFICATION OF REVISED FINAL ENVIRONMENTAL IMPACT REPORT

That based on substantial evidence in the Recitals, Exhibits and Evidence contained in the Administrative Record, as set forth and described hereinabove, the Mitigation Monitoring and Reporting Program and findings set forth therein, and the Statement of Overriding Considerations and findings set forth therein, supporting evidence contained therein, the City Council hereby approves and certifies the Revised Final EIR as having been completed in compliance with CEQA and the CEQA Guidelines.

Section 7. INDEPENDENT JUDGMENT AND ANALYSIS

That the Revised Final EIR reflects the independent judgment and analysis of City of Moreno Valley as Lead Agency.

Attachment: 2020-XX Resolution Revised FEIR Appeal [Revision 1] (4074 : World Logistics Center)

Section 8. NOTICE OF DETERMINATION

That a Notice of Determination shall be filed and posted, as required by CEQA.

Section 9. REPEAL OF RESOLUTION NO. 2015-56

That Resolution No. 2015-56 which certified the previous Final EIR and adopted findings, the MMRP and the Statement of Overriding Considerations, is hereby repealed and set aside as ordered by Hon. Judge Waters in the Peremptory Writ of Mandate dated June 12, 2018. (Case No: RIC 1510967 [MF])

Section 10. EFFECTIVE DATE

That this Resolution shall take effect immediately upon its adoption.

Section 11. SEVERABILITY

That if any provision, section, paragraph, sentence or word of Resolution be rendered or declared invalid by any final court action in a court of competent jurisdiction or by reason of any preemptive legislation, the remaining provisions, sections, paragraphs, sentences or words as hereby adopted shall remain in full force and effect.

Section 12. CERTIFICATION.

That the City Clerk shall certify to the passage of this Resolution.

Section 13. REPEAL OF CONFLICTING PROVISIONS.

That Resolution No. 2015-56 and all provisions of any other resolution in effect prior to the effective date of this Resolution as adopted by the City Council that are in conflict with the provisions of this Resolution, are hereby repealed.

PASSED AND ADOPTED THIS 16th day of June, 2020.

APPROVED AND ADOPTED this _____ day of _____, _____.

Dr. Yxstian A. Gutierrez
Mayor
City of Moreno Valley

Attachment: 2020-XX Resolution Revised FEIR Appeal [Revision 1] (4074 : World Logistics Center)

EXHIBIT A
MITIGATION MONITORING AND REPORTING PROGRAM

World Logistics Center – Mitigation Monitoring and Reporting Program

Note to Reader: This MMRP lists the mitigation measures to be implemented by the Revised Final EIR. Changes to the MMRP from that adopted by the City Council in 2015 are shown in Attachment A. Changes to the MMRP from that submitted to the Planning Commission for consideration at the May 14, 2020 Planning Commission hearing are shown in Attachment B.

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing Verification	Method of Verification	Verified Date/Initials	Sanctions for Non-Compliance
4.1 AESTHETICS						
4.1.6.1A Each Plot Plan application for development along the western, southwestern, and eastern boundaries of the project (i.e., adjacent to existing or planned residential zoned uses) shall include a minimum 250-foot setback measured from the City/County zoning boundary line and any building or truck parking/access area within the project. The setback area shall include landscaping, berms, and walls to provide visual screening between the new development and existing residential areas upon maturity of the landscaping materials. The existing olive trees along Redlands Blvd. shall remain in place as long as practical to help screen views of the project site. This measure shall be implemented to the satisfaction of the Planning Official.	City Planning Division	Once before permitting	Prior to Plot Plan Approval	Plot Plan Review		Withhold Building Permits
		Once before permitting	Prior to issuance of Building permit	Building Permit		Withhold Plot Plan Approval
		Once before issuance of certificate of occupancy	Prior to issuance of certificate of occupancy	On-site inspection		Withhold Certificate of Occupancy
4.1.6.1B Each Plot Plan application for development adjacent to Redlands Boulevard, Bay Avenue, or Merwin Street, shall include a plot plan, landscaping plan, and visual rendering(s) illustrating the appearance of the proposed development. The renderings shall demonstrate that views of proposed buildings and trucks can be reasonably screened from view from existing residents upon maturity of planned landscaping and to ensure consistency with the General Plan Objective 7.7. "Effective" screening shall mean that no more than the upper quarter (25%) of a building is visible from existing residences, which shall be achieved through a combination of landscaping, berms, fencing, etc. The location and number of view presentations shall be at the discretion of the Planning Division.	City Planning Division	Once before permitting	Prior to Plot Plan Approval	Plot Plan Review		Withhold Building Permits
		Once before issuance of certificate of occupancy	Prior to issuance of Building permit	Building Permit		Withhold Plot Plan Approval
		Once before issuance of certificate of occupancy	Prior to issuance of certificate of occupancy	On-site inspection		Withhold Certificate of Occupancy
4.1.6.1C Prior to the issuance of a certificate of occupancy for buildings adjacent to the western, southwestern, and eastern boundaries of the project (i.e., adjacent to existing residences at the time of application) the screening required in Mitigation Measure 4.1.6.1A shall be installed in substantial conformance	City Planning Division	Once before issuance of certificate of occupancy.	Prior to issuance of certificate of occupancy.	Review and Approval of Site Plans		Withhold Certificate of Occupancy

Attachment: 2020-XX Resolution Revised FEIR Appeal [Revision 1] (4074 : World Logistics Center)

World Logistics Center – Mitigation Monitoring and Reporting Program

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing Verification	Method of Verification	Verified Date/Initials	Sanctions for Non-Compliance
with the approved plans to the satisfaction of the Planning Official.						
4.1.6.1D Prior to the issuance of permits for any development activity adjacent to Planning Area 30 (74.3 acres in the southwest portion of the Specific plan), the entirety of Planning Area 30 shall be offered to the State of California for open space purposes. In the event that the State does not accept the dedication, the property shall be offered to Western Riverside County Regional Conservation Authority or an established non-profit land conservancy for open space purposes. In the event that none of these organizations accept the dedication, the property may be dedicated to a property owner’s association or may remain in private ownership and may be fenced and access prohibited.	City Planning Division	Once before permitting of any development activity adjacent to Planning Area 30.	Prior to issuance before of any discretionary permit.	Review and Approval of Site Plans.		Withhold Discretionary Permit
4.1.6.3A Each Plot Plan application for development shall include plans and visual rendering(s) illustrating any changes in views of Mount Russell and/or the Badlands, for travelers along SR-60, as determined necessary by the Planning Official. The plans and renderings shall illustrate typical views based on proposed project plans, with the location and number of view presentations to be determined by the Planning Official. These views shall be simulated from a height of six feet from the edge of the roadway travel lane closest to the visual resource. The renderings must demonstrate that the development will preserve at least the upper two thirds (67%) of the vertical view of Mt. Russell from SR-60.	City Planning Division	Once before plot plan review	Prior to issuance of building permit.	Review and Approval of Renderings		Withhold Plot Plan Approval

Attachment: 2020-XX Resolution Revised FEIR Appeal [Revision 1] (4074 : World Logistics Center)

World Logistics Center – Mitigation Monitoring and Reporting Program

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing Verification	Method of Verification	Verified Date/Initials	Sanctions for Non-Compliance
4.1.6.4A Each Plot Plan application for development adjacent to residential development shall include a photometric plot of all proposed exterior lighting demonstrating that the project is consistent with the requirements of Section 9.08.100 of the City Municipal Code. The lighting study shall indicate the expected increase in light levels at the property lines of adjacent residential uses. The study shall demonstrate that the proposed lighting fixtures and/or visual screening meet or exceed City standards regarding light impacts.	City Planning Division	Once during plot plan review	Prior to plot plan approval.	Review and Approval of Lighting Study		Withhold Building Permit Approval
4.1.6.4B Each Plot Plan application for development shall include an analysis of all proposed solar panels demonstrating that glare from panels will not negatively affect adjacent residential uses or negatively affect motorists along perimeter roadways. Design details to meet these requirements shall be implemented to the satisfaction of the Planning Official.	City Planning Division	Once during plot plan review	Prior to plot plan approval.	Review and Approval of Plot Plan		Withhold Plot Plan Approval
4.2 AGRICULTURE						
6.2.1 (Cumulative Impacts) Prior to the issuance of any grading permit affecting land designated as “Farmland of Local importance” (Figure 4.2.2 in the World Logistics Center Environmental Impact Report), an Agricultural Conservation Easement shall be recorded over land of equivalent or better agricultural economic productivity of the offsite easement property compared to the World Logistics Center property. The analysis will include a comparison of the project’s “Farmland of Local Significance” considering its relative economic potential as the best measure of productivity (i.e., net profitability per acre or potential net rental income per acre). It will include a consideration of various important physical factors including location and accessibility, soils and topography, micro and macro climatic conditions, water availability and quality, as well as local practices, good farm management and cultural (growing) costs. The form and content of this easement, as well as the estimates of agricultural productivity, shall be reviewed and approved in advance by the Planning Official.	City Planning Division	Once before issuance of grading permits on lands that contain farmland of local importance	Prior to issuance of any grading permits.	City review of form and content of agricultural easement proposed by the developer. And City receives written verification of an agricultural easement.		Withhold Grading Permit

4.3 Air Quality						
<p>4.3.6.2A Construction equipment maintenance records (including the emission control tier of the equipment) shall be kept on-site during construction and shall be available for inspection by the City of Moreno Valley.</p> <p>a) Off-road diesel-powered construction equipment greater than 50 horsepower shall meet United States Environmental Protection Agency Tier 4 off-road emissions standards. A copy of each unit’s certified tier specification shall be available for inspection by the City at the time of mobilization of each applicable unit of equipment.</p> <p>b) During all construction activities, off-road diesel-powered equipment may be in the “on” position not more than 10 hours per day.</p> <p>c) Construction equipment shall be properly maintained according to manufacturer specifications.</p> <p>d) All diesel-powered construction equipment, delivery vehicles, and delivery trucks shall be turned off when not in use. On-site idling shall be limited to three minutes in any one hour.</p> <p>e) Electrical hook ups to the power grid shall be provided for electric construction tools including saws, drills and compressors, where feasible, to reduce the need for diesel-powered electric generators. Where feasible and available, electric tools shall be used.</p> <p>f) The project shall demonstrate compliance with South Coast Air Quality Management District Rule 403 concerning fugitive dust and provide appropriate documentation to the City of Moreno Valley.</p> <p>g) All construction contractors shall be provided information on the South Coast Air Quality Management District Surplus Off-road Opt-In “SOON” funds which provides funds to accelerate cleanup of off-road diesel vehicles.</p> <p>h) Construction on-road haul trucks shall be model year 2010 or newer if diesel-fueled.</p> <p>i) Information on ridesharing programs shall be made available to construction employees.</p>	Land Development Division and Building and Safety Division	As needed during construction	During construction	On-site Inspection of construction maintenance records and data sheets.		Issuance of Stop Work Order

World Logistics Center – Mitigation Monitoring and Reporting Program

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing Verification	Method of Verification	Verified Date/Initials	Sanctions for Non-Compliance
j) During construction, lunch options shall be provided onsite. k) A publicly visible sign shall be posted with the telephone number and person to contact regarding dust complaints per AQMD Standards. l) Off-site construction shall be limited to the hours between 6 a.m. to 8 p.m. on weekdays only. Construction during City holidays shall not be permitted.						
4.3.6.2B Prior to issuance of any grading permits, a traffic control plan shall be submitted to and approved by the City of Moreno Valley that describes in detail the location of equipment staging areas, stockpiling/storage areas, construction parking areas, safe detours around the project construction site, as well as provide temporary traffic control (e.g., flag person) during construction-related truck hauling activities. Construction trucks shall be rerouted away from sensitive receptor areas. Trucks shall use State Route 60 using World Logistics Center Parkway (formerly Theodore Street), Redlands Boulevard (north of Eucalyptus Avenue), and Gilman Springs Road. In addition to its traffic safety purpose, the Construction Staging Plan can minimize traffic congestion and delays that increase idling emissions. A copy of the approved Traffic Control Plan shall be retained on site in the construction trailer.	Transportation Division	Once prior to issuance of grading permits	Prior to issuance of any grading permits	Review and Approval of Traffic Control Plan.		Withhold Grading Permit
4.3.6.2C The following measures shall be applied during construction of the project to reduce volatile organic compounds (VOC): a) Non-VOC containing paints, sealants, adhesives, solvents, asphalt primer, and architectural coatings (where used), or pre-fabricated architectural panels shall be used in the construction of the project to the maximum extent practicable. If such products are not commercially available, products with a VOC content of 100 grams per Liter or lower for both interior and exterior surfaces shall be used. b) Leftover paint shall be taken to a designated hazardous waste center. c) Paint containers shall be closed when not in use. d) Low VOC cleaning solvents shall be used to clean paint application equipment.	Land Development, Building and Safety Division and Planning Division	Throughout construction	During Construction	On-site inspection		Issuance of a Stop Work Order

e) Paint and solvent-laden rags shall be kept in sealed containers.						
4.3.6.2D No grading shall occur on days with an Air Quality Index forecast greater than 150 for particulates or ozone as forecasted for the project area (Source Receptor Area 24).	City Land Development Division/Public Works	As needed during construction	During construction	Review of Construction Documentation and On-site Inspection		Issuance of a Stop Work Order
4.3.6.2E The project shall comply with the SCAQMD proposed Indirect Source Rule for any warehouses that are constructed after the rule goes into effect. This rule is expected to reduce NOX and PM10 emissions during construction and operation. Emission reductions resulting from this rule were not included in the project analysis.	SCAQMD	Per ISR Rule	Ongoing	Per ISR Rule		Per ISR Rule and SCAQMD Settlement Agreement
4.3.6.3A Prior to issuance of occupancy permits for each warehouse building within the WLCSP, the developer shall demonstrate to the City that vehicles can access the building using paved roads and parking lots and that access on unpaved roads is prohibited.	City Planning Division	Once Before issuing Certificate of Occupancy	Prior to issuance or occupancy permits for each warehouse	Review and Approval of building plans.		Withhold Occupancy Permit
4.3.6.3B The following shall be implemented as indicated: Prior to Issuance of a Certificate of Occupancy a) Signs shall be prominently displayed informing truck drivers about the California Air Resources Board diesel idling regulations and the prohibition of parking in residential areas. b) Signs shall be prominently displayed in all dock and delivery areas advising of the following: engines shall be turned off when not in use; trucks shall not idle for more than three consecutive minutes; telephone numbers of the building facilities manager and the California Air Resources Board to report air quality violations. c) Signs shall be installed at each exit driveway providing directional information to the City’s truck route. Text on the sign shall read “To Truck Route” with a directional arrow. Truck routes shall be clearly marked per the City Municipal Code. On an Ongoing Basis d) Tenants shall maintain records on fleet equipment and	City Planning Division and Building and Safety Public Works Inspector	Once before issuance of any certificate of Occupancy and ongoing basis On an ongoing basis	Prior to issuance of Certificate of Occupancy During on-site inspections	On-site inspections Collection of VIN data will be identified as the primary method of verifying truck compliance for future project-specific approvals, On-site Inspections Collection of VIN data will be identified as the primary method of verifying truck compliance for future project-		Withhold Certificate of Occupancy Pursuant to City Municipal Code

Attachment: 2020-XX Resolution Revised FEIR Appeal [Revision 1] (4074 : World Logistics Center)

World Logistics Center – Mitigation Monitoring and Reporting Program

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing Verification	Method of Verification	Verified Date/Initials	Sanctions for Non-Compliance
be provided with any warehouse plot plan proposing refrigerated space. Any such proposal shall include electrical hookups at dock doors to provide power for vehicles equipped with Transportation Refrigeration Units (TRUs).						
4.3.6.3F The project shall comply with the SCAQMD proposed Indirect Source Rule for any warehouses that are constructed after the rule goes into effect. This rule is expected to reduce NOX and PM10 emissions during construction and operation. Emission reductions resulting from this rule were not included in the project analysis.	SCAQMD	Per ISR Rule	Ongoing	Per ISR Rule		Per ISR Rule and SCAQMD Settlement Agreement
4.3.6.4A The following measures shall be incorporated as conditions to any Plot Plan approval within the Specific Plan: a) All tenants shall be required to participate in Riverside County’s Rideshare Program. b) Storage lockers shall be provided in each building for a minimum of three percent of the full-time equivalent employees based on a ratio of 0.50 employees per 1,000 square feet of building area. Lockers shall be located in proximity to required bicycle storage facilities. c) Class II bike lanes shall be incorporated into the design for all project streets. d) The project shall incorporate pedestrian pathways between on-site uses. e) Site design and building placement shall provide pedestrian connections between internal and external facilities. f) The project shall provide pedestrian connections to residential uses within 0.25 mile from the project site. g) A minimum of two electric vehicle-charging stations for automobiles or light-duty trucks shall be provided at each building. In addition, parking facilities with 200 parking spaces or more shall be designed and constructed so that at least six percent of the total parking spaces are capable of supporting future electric vehicle supply equipment (EVSE) charging locations. Sizing of conduit and service capacity at the time of construction shall be sufficient to install Level 2 Electric Vehicle Supply Equipment (EVSE) or greater.	City Building and Safety, City Planning Division, and Transportation Engineering Division/Public Works	Once before plot plan approval for any building.	Prior to plot plan approval	Review and approval of plot plans		Withhold plot plan approval

developer shall work with each owner to ensure the air filtration system is properly installed within one year of acceptance.						
4.4 BIOLOGICAL RESOURCES						
4.4.5.2A (Previously included as 4.4.6.2A in the 2015 FEIR) Each Plot Plan application shall include a focused plant survey of the proposed development site prepared by a qualified biologist to identify if any of the following sensitive plants (i.e., Coulter’s goldfields, smooth tarplant, Plummer’s mariposa lily, or thread-leaved brodiaea) are present. If any of the listed plants are found, the City will consult with the California Department of Fish and Wildlife (CDFW) and the U.S. Fish and Wildlife Service (USFWS). If translocation of the species is deemed appropriate by CDFW and/or USFWS a translocation plan shall be developed and submitted to CDFW and USFWS for review. They may be relocated to the 250-foot setback area outlined in the Specific Plan and discussed in Mitigation Measure 4.4.6.1A. Alternatively, at the applicant’s discretion, an impact fee may be paid to the Western Riverside County Regional Conservation Authority (RCA) or other appropriate conservation organizations to offset for the loss of these species. This measure shall be implemented to the satisfaction of the Planning Official.	City Planning Division	Once upon submittal of plot plan application	Prior to approval of Plot Plan	Review and Approval of biological assessment		Withhold Approval of Plot Plan
4.4.5.2B (Previously included as 4.4.6.2B in the 2015 FEIR) Prior to the approval of any tentative maps for development including or adjacent to any Criteria Cells identified in the Western Riverside County Multiple Species Habitat Conservation Plan, the applicant shall prepare and process a Joint Project Review (JPR) with the Riverside County Regional Conservation Authority (RCA). All criteria cells shall be identified on all such tentative maps. This measure shall be implemented to the satisfaction of the City Planning Division and Riverside County Regional Conservation Authority (“RCA”).	City Planning Division, Riverside County RCA	Once upon submittal of tentative maps.	Prior to issuance of any tentative maps including or adjacent to MHSCP criteria cells.	Review JPR		Withhold approval of tentative maps
4.4.6.1A All Plot Plan applications within Planning Areas 10 and 12 (i.e., adjacent to the San Jacinto Wildlife Area as shown in Final EIR Volume 2 Figure 4.1.6B) shall provide a 250-foot setback from the southerly property line. Permitted uses within this setback area include landscaping, drainage and water quality facilities,	City Planning Division	Once before plot plan approval	Prior to plot plan approval	Plan check and review of setback area		Withhold Plot Plan approval.

World Logistics Center – Mitigation Monitoring and Reporting Program

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing Verification	Method of Verification	Verified Date/Initials	Sanctions for Non-Compliance
<p>4.4.6.1B Each Plot Plan application in Planning Areas 10 and 12 shall provide runoff management and water quality facilities adequate to minimize downstream erosion, maintain water quality standards and retain pre-development flows in a manner meeting the approval of the Moreno Valley and RWQCB requirements. All drainage improvements shall be designed to minimize runoff and erosional impacts on adjacent property. This measure shall be implemented to the satisfaction of the Land Development Division Manager of Public Works.</p>	<p>City Engineering Division and City Land Development Division Manager</p>	<p>Once upon submittal of plot plan application</p>	<p>Prior to approval of plot plan</p>	<p>Review and approval of plot plans within Planning Areas 10 and 12</p>		<p>Withhold approval of plot plan</p>
<p>4.4.6.2A (Previously included as 4.4.6.3A in the 2015 FEIR) Prior to the issuance of grading permits the applicant shall secure a jurisdictional determination from the United States Army Corps of Engineers (USACE) and confirm with the Regional Water Quality Control Board (RWQCB) and California Department of Fish and Wildlife (CDFW) if drainage features mapped on the property to be developed are subject to jurisdictional authority. If the features are subject to regulatory protection, the applicant shall secure permit approvals with the appropriate agencies prior to initiation of construction. Compensatory riparian habitat mitigation shall be provided at a minimum ratio of 1: 1 (replacement riparian habitat to impacted riparian habitat) to ensure no net loss of riparian habitat or aquatic resources. It should be noted that this is a minimum recommended ratio but the actual permitting ratio may be higher. These detention basins shall be oversized to accommodate the provision of areas of riparian habitat. Maintenance of the basins shall be limited to that necessary to ensure their drainage and water quality functions while encouraging habitat growth. Riparian habitat mitigation shall be provided concurrent to or prior to impacts. A Compensatory Mitigation Plan shall be prepared for all unavoidable impacts and shall be consistent with the United States Army Corps of Engineers (USACE) / United States Environmental Protection Agency's Compensatory Mitigation for Losses of Aquatic Resources: Final Rule and the United States Army Corps of Engineers Standard Operating Procedure for Determination of Mitigation Ratios.</p> <p>The applicant shall consult with United States Army Corps of Engineers, California Department of Fish and Wildlife, and</p>	<p>City Planning Division and Land Development Division Manager</p>	<p>Once prior to issuance of grading permits</p>	<p>Prior to the issuance of grading permits</p>	<p>Written verification of USACE approval of jurisdictional determination and Clean Water Act Section 404 permit.</p>		<p>Withhold grading permit</p>

<p>Regional Water Quality Control Board to establish the need for permits based on the results of a recent jurisdictional delineation and final design plans for each of the proposed facilities. Consultation with the three agencies shall take place and appropriate permits obtained for project-level development. Compensation for losses associated with the altering of drainages on site shall be in agreement with the permit conditions and in coordination with compensation outlined below.</p> <p>Mitigation shall consist of onsite creation, offsite creation, or purchase of mitigation credits from an approved mitigation bank. As outlined in the WLC programmatic DBESP report, onsite riparian habitat shall be created at a minimum 1: 1 ratio due to the poor quality of onsite habitat. New habitat shall be created within the onsite detention/infiltration basins to the extent allowed by the resource agencies to reduce storm flows, improve water quality, and reduce sediment transport. Habitat creation shall include the installation of mule fat scrub or similar riparian scrub habitat to promote higher quality riparian habitat, but still maintain the basins for their primary role as detention facilities. The use of these areas as conservation areas would require consent from CDFW and the City of Moreno Valley (MM BIO-2b and MM DBESP 1 through 3).</p>						
<p>4.4.6.2B (Previously included as 4.4.6.3B in the 2015 FEIR) As required by the Regional Conservation Authority (RCA), a program-level Determination of a Biological Equivalent or Superior Preservation (DBESP) for impacts to Riverine/Riparian habitat has been prepared and shall be approved by the Regional Conservation Authority prior to project grading permit approval. The Determination of a Biological Equivalent or Superior Preservation includes a general discussion of mitigation options for impacts to riverine/riparian areas as well as general location and size of the mitigation area and includes a monitoring program.</p> <p>If impacts to riparian habitat within the WLC site cannot be avoided at the time of specific development, then a separate project level Determination of Biologically Equivalent or Superior Preservation (DBESP) shall be prepared to identify project-</p>	City Planning Division	Once upon submittal of grading permit	Prior to the approval of any grading permit	Review and approval of site-specific DBESP and review and approval of plot plans. necessary to establish or enhance habitat areas (DBESP MM 6, 7, 9, and 10)						
4.4.6.3H (Previously included as 4.4.6.4H in the 2015 FEIR) As outlined in Mitigation Measure 4.4.6.1A, development adjacent to the 250-foot open space setback shall have a six-foot chain link fence or similar barrier to help separate human activity and the setback area. Any chain link fencing installed on any properties adjacent to the 250-foot setback area shall have metal mesh installed below and above ground level to prevent animals from accessing new development areas.	City Planning Division	Once before building permits	Prior to issuance of certificate of occupancy	Review and approval of fencing		Withhold plot plan approval Withhold grading permits
4.4.6.3I (Previously included as 4.4.6.4I in the 2015 FEIR) The individual property owner and/or Property Owners Association (POA) as appropriate shall be responsible for maintaining the various onsite landscaped areas, open improved or natural drainage channels, and detention or flood control basins in a manner that provide for fuel management and vector control pursuant to standards maintained by the City Fire Marshall and County Department of Environmental Health – Vector Control Group. This measure requires the individual owner or Property Owners Association (POA) to manage vegetation in and around these areas or improvements so as to not represent a fire hazard as defined by the City Fire Department through the substantial buildup of combustible materials. This measure also requires the individual owner or Property Owners Association to manage vegetation and standing water in drainage channels and basins such that they do not encourage or allow vectors to occur (primarily rats and mosquitoes). Runoff shall not be allowed to stand in channels or basins for more than 72hours without treatment or maintenance to prevent establishment of mosquitoes per published County vector control guidelines and “Best Management Practices for Mosquito Control on California State Properties” which is available from the California West Nile Virus website at http://www.westnile.ca.gov/resources . This measure shall be implemented by the Project Owners Association in consultation with City Fire Department and Riverside County Department of Environmental Health – Vector Control Group	City Fire Department; Land Development Division; and Stormwater Management Section of Public Works	As needed basis	Onsite Inspections during operations	Onsite Inspections		Issuance of Code Enforcement Citations

World Logistics Center – Mitigation Monitoring and Reporting Program

4.5 CULTURAL RESOURCES						
<p>4.5.6.1A Prior to the approval of any grading permit for any of the "Light Logistics" parcels, the parcels shall be evaluated for significance by a qualified archaeologist. A Phase 1 Cultural Resources Assessment shall be conducted by the project archaeologist and an appropriate tribal representative(s) on each of the "Light Logistics" parcel to determine if significant archaeological or historical resources are present.</p> <p>A Phase 2 significance evaluation shall be completed for any of these sites in order to determine if they contain significant archaeological or historical resources. Cultural resources include but are not limited to stone artifacts, bone, wood, shell, or features, including hearths, structural remains, or historic dumpsites. All resources determined to be prehistoric or historic shall be documented using DPR523 forms for archival research/storage in the Eastern Information Center (EIC). If the particular resource is determined to be not significant, no further documentation is required. If prehistoric resources are determined to be significant, they shall be considered for relocation or archival documentation. If any resource is determined to be significant, a Phase 3 recovery study shall be conducted to recover remaining significant cultural artifacts. If prehistoric archaeological/cultural resources are discovered during the Phase 1 survey and it is determined that they cannot be avoided through site design, they shall be subject to a Phase 2 testing program. The project archaeologist in consultation with appropriate tribal group(s) shall determine the significance of the resource(s) and determine the most appropriate disposition of the resource(s) in accordance with applicable laws, regulations and professional practices (per Cultural Report MM CR-1, MM CR-2, MM CR-7 Table 3, pg. 74).</p>	<p>Planning Division and Land Development Division/Public Works</p>	<p>Once Before Permitting</p>	<p>Prior to the approval of any grading permit for any of the "Light Logistics"</p>	<p>Review and Approval of Phase I Cultural Resources Assessment</p>		<p>Withhold grading permit approval</p> <p>Issue stop work order if cultural resources are found</p>

Attachment: 2020-XX Resolution Revised FEIR Appeal [Revision 1] (4074 : World Logistics Center)

World Logistics Center – Mitigation Monitoring and Reporting Program

<p>4.5.6.1B Prior to the issuance of any grading or ground-disturbing permit for construction of off-site improvements a qualified archaeologist shall be retained to prepare a Phase I cultural resource assessment (CRA) of the project site if an up to date Phase I cultural resource assessment is not available for the site at the time of development per Cultural Report MM CR-5, Table 3, pg. 74).</p> <p>Appropriate tribal representatives as identified by the City shall be invited by the Project Archeologist to participate in this assessment.</p> <p>If archaeological resources are discovered during construction activities, no further excavation or disturbance of the area where the resources were found shall occur until a qualified archaeologist evaluates the find. If the find is determined to be a unique archaeological resource, appropriate action shall be taken to (a) plan construction to avoid the archeological sites (the preferred alternative); (b) cap or cover archeological sites with a layer of soil before building on the affected project location; or (c) excavate the site to adequately recover the scientifically consequential information from and about the resource. At the discretion of the project archaeologist, work may continue on other parts of the project site while the unique archaeological resource mitigation takes place. This measure shall be implemented to the satisfaction of the Planning Official.</p> <p>If the project archaeologist, in consultation with the monitoring Tribe(s), determines that the find is a unique archaeological resource, the resource site shall be evaluated and recorded in accordance with requirements of the State Office of Historic Preservation (OHP). If the resource is determined to be significant, data shall be collected by the qualified archaeologist and the findings of the report shall be submitted to the City. If the find is determined to be not significant no mitigation is necessary.</p> <p>Should a future project-level analysis show that cultural resource site CA-RIV-3346 will be directly or partially impacted by project-level construction, an Addendum cultural resource report must be prepared and include an analysis of the alternatives associated with mitigation for impacts to this resource following CEQA Guidelines Section 15126.4(b)(3). This information must be</p>	<p>City Planning Division</p>	<p>Once before issuance of grading permits for off-site improvements and as Needed During Construction</p>	<p>Prior to the approval of any grading or ground-disturbing permit</p>	<p>Review and Approval of Phase I Cultural Resources Assessment</p> <p>Provide evidence to the City that a qualified archaeological monitor has been retained to oversee all ground altering activities</p>		<p>Withhold Grading Permit or Issuance of Stop Work Order</p>

Attachment: 2020-XX Resolution Revised FEIR Appeal [Revision 1] (4074 : World Logistics Center)

World Logistics Center – Mitigation Monitoring and Reporting Program

<p>4.5.6.1C Prior to the issuance of any grading permits a qualified archaeologist shall be retained to monitor all grading and shall invite tribal groups to participate in the monitoring. Project-related archaeological monitoring shall include the following requirements per Cultural Report MM CR-6, MM CR-8, Table 3, pg.74):</p> <ol style="list-style-type: none"> 1. All earthmoving shall be monitored to a depth of ten (10) feet below grade by the Project Archaeologist or his/her designated representative. Once all areas of the development project that have been cut to ten (10) feet below existing grade have been inspected by the monitor. the Project Archaeologist may, at his or her discretion, terminate monitoring if and only if no buried cultural resources have been detected; 2. If buried cultural resources are detected, monitoring shall continue until 100 percent of virgin earth within the specific project area has been disturbed and inspected by the Project Archaeologist or his/her designated representative. 3. Grading shall cease in the area of a cultural artifact or potential cultural artifact as delineated by the Project Archaeologist or his/her designated representative. A buffer of at a minimum 25 feet around the cultural item shall be established to allow for assessment of the resource. Grading may continue in other areas of the site while the particular find are investigated; and 4. If prehistoric cultural resources are uncovered during grading, they shall be Phase 2 tested by the Project Archaeologist, and evaluated for significance in accordance with §15064.5(f) of the CEQA Guidelines. Appropriate actions for significant resources as determined by the Phase 2 testing include but are not limited to avoidance or capping, incorporation of the site in green space. parks, or delineation into open space. If such measures are not feasible, Phase 3 data recovery of the significant resource will be required, and curation of recovered artifacts and/or reburial, shall be required. A report associated 	<p>City Planning Division</p>	<p>Once before issuance of grading permits and As Needed During Construction</p>	<p>Prior to the issuance of grading permits</p>	<p>Provide evidence to the City that a qualified archaeological monitor has been retained to oversee all ground altering activities</p>	<p>Withhold Grading Permit</p>

World Logistics Center – Mitigation Monitoring and Reporting Program

<p>with Phase 2 testing or Phase 3 data recovery must be delivered to the City and, if necessary, the museum where any recovered artifacts have been curated.</p> <p>5. No further grading shall occur in the area of the discovery until the City approves specific actions to protect identified resources. Any archaeological artifacts recovered as a result of mitigation shall be donated to a qualified scientific institution approved by the City where they would be afforded long-term preservation to allow future scientific study.</p> <p>6. The developer shall make reasonable efforts to avoid, minimize, or mitigate significant adverse impacts on cultural resources. The State Historic Preservation Office (SHPO) and local Native American tribes will be consulted and the Advisory Council on Historic Preservation will be notified within 48 hours of the find in compliance with 36 CFR 800.13(b)(3). This measure shall be implemented to the satisfaction of the Planning Official.</p>						
<p>4.5.6.1D Prior to the issuance of any grading permit the project archaeologist shall invite interested Tribal Group(s) representatives to monitor grading activities. Qualified representatives of the Tribal Group(s) shall be granted access to the project site to monitor grading as long as they provide 48-hour notice to the developer of their desire to monitor, so the developer can make appropriate safety arrangements on the site. This measure shall be implemented to the satisfaction of the Planning Official.</p>	<p>City Planning Division</p>	<p>Once before issuance of grading permits and As Needed During Construction</p>	<p>Prior to the issuance of any grading permit within 3,750 feet of the southwest corner</p>	<p>Evidence of invitation to Tribal Group Representatives</p>		<p>Withhold Grading Permit</p>
<p>4.5.6.1E It is possible that ground-disturbing activities during construction may uncover previously unknown, buried cultural resources (archaeological or historical). In the event that buried cultural resources are discovered during grading and no Project Archaeologist or Historian is present, grading operations shall stop in the immediate vicinity of the find and a qualified archaeologist shall be retained to determine the most appropriate course of action regarding the resource. The Archeologist shall make recommendations to the City on the actions that shall be implemented to protect the discovered resources, including but not limited to excavation of the finds and</p>	<p>Grading Contractor, Land Development Division/Public Works, and Planning Division</p>	<p>As Needed During Construction</p>	<p>During Grading and/or ground disturbing activities</p>	<p>Verification to the City a qualified archaeologist been retained</p>		<p>Issuance a Stop Work Order</p>

World Logistics Center – Mitigation Monitoring and Reporting Program

<p>evaluation of the finds in accordance with §15064.5 of the <i>CEQA Guidelines</i>. Cultural resources could consist of, but are not limited to, stone artifacts, bone, wood, shell, or features, including hearths, structural remains, or historic dumpsites. Any previously undiscovered resources found during construction within the project area shall be recorded on appropriate California Department of Parks and Recreation forms and evaluated for significance in terms of CEQA criteria. If the resources are determined to be unique historic resources as defined under §15064.5 of the <i>CEQA Guidelines</i>, appropriate protective actions for significant resources such as avoidance or capping, incorporation of the site in green space, parks, or open space, or data recovery excavations of the finds shall be implemented by the project archaeologist and the City.</p> <p>No further grading shall occur in the area of the discovery until the City and Project Archaeologist approve the measures to address these resources. Any archaeological artifacts recovered as a result of mitigation shall be donated to a qualified scientific institution approved by the City where they would be afforded long-term preservation to allow future scientific study.</p>						
<p>4.5.6.2A If any historic resources are found during implementation of Mitigation Measure 4.5.6.1A, the Project Archaeologist or Historian (as appropriate) shall offer any artifacts or resources to the Moreno Valley Historical Society (MVHS) or the Eastern Information Center/County Museum or the Western Science Center in Hemet as appropriate for archival storage. From the time any artifacts are turned over to the Moreno Valley Historical Society or other appropriate historical group, the developer shall have no further responsibility for their management or maintenance.</p>	<p>City Planning Division</p>	<p>As Needed During Construction</p>	<p>During grading</p>	<p>A qualified archaeologist or historian(s) shall be retained by the applicant. A report of findings shall be submitted to the City after the finalization of construction</p>		<p>Issuance of a Stop Work Order</p>
<p>4.5.6.2B As part of construction of the trail segment connecting Redlands Boulevard to the California Department of Fish and Wildlife property, the developer shall contribute \$5,000 to the City for the installation of a historical marker acknowledging the passing of Juan Bautista de Anza through this area during his exploration of California. This measure shall be incorporated into trail plans for this segment which will be subject to review and approval by the City Park and Recreation Department in consultation with the Moreno Valley Historical Society.</p>	<p>City Park and Recreation Department</p>	<p>Once</p>	<p>Prior to approval of trail plans</p>	<p>Review and Approval of Trail Plans Written verification the \$5,000 has been paid</p>		<p>Withhold Approval of Trail Plans</p>

World Logistics Center – Mitigation Monitoring and Reporting Program

<p>enforceable, as those terms are defined in 17 California Code of Regulations § 95802(a), and have been retired, the developer shall provide the City’s Planning Official with (i) the protocol used to develop those credits, (ii) the third-party verification report concerning those credits, and (iii) the unique serial numbers of those credits showing that they have been retired.</p> <p>b) Timing: The developer shall provide proof to the City that offset carbon credits equal to the amount of GHG emissions resulting from the grading, construction and operation of facilities within the WLC have been purchased and retired as follows: (i) The purchase and retirement of offset carbon credits required to mitigate the GHG emissions resulting from grading shall be a condition of the issuance of a grading permit. (ii) The purchase and retirement of offset carbon credits required to mitigate the GHG emissions resulting from the construction of a facility shall be a condition of the issuance of a building permit for the facility. (iii) The purchase and retirement of offset carbon credits required to mitigate the GHG emissions resulting from the operation of a facility shall be a condition of the issuance of a certificate of occupancy, temporary or permanent, for the facility. The developer shall also have the right, at any time, to purchase and retire offset carbon credits for some or all of the grading, construction and operation of facilities in the WLC Project in advance of the issuance of grading or construction permits or certificates of occupancy, temporary or permanent.</p>			<p>occupancy permits</p>			
<p>4.8 HAZARDS AND HAZARDOUS MATERIALS</p>						
<p>4.8.6.1A Prior to demolition of any existing structures on the project site, a qualified contractor shall be retained to determine if asbestos-containing materials (ACMs) and/or lead-based paint (LBP) are present. If asbestos-containing materials and/or lead-based paint are present, prior to commencement of demolition, these materials shall be removed and transported to an appropriate landfill by a licensed contractor. In addition, onsite soils shall be tested for contamination by agricultural chemicals. If present, these materials shall be removed and transported to an appropriate landfill by a licensed contractor. This measure</p>	<p>City Building Division</p>	<p>Once Before Permitting and as Needed During Construction</p>	<p>Prior to demolition of any existing rural residences or associated structures</p>	<p>Evidence of qualified contractor provided</p>		<p>Withhold Demolition Permits</p>

World Logistics Center – Mitigation Monitoring and Reporting Program

shall be implemented to the satisfaction of the Building Division including written documentation of the disposal of any asbestos-containing materials, lead-based paint, or agricultural chemical residue in conformance with all applicable regulations.						
4.8.6.1B Prior to the issuance of any discretionary permits associated with the proposed fueling facility (“logistic support” site in the LD zone), a risk assessment or safety study that identifies the potential public health and safety risks from accidents at the facility (e.g., fire, tank rupture, boiling liquid, or expanding vapor explosion) shall be submitted to the City for review and approval. This study shall be prepared to industry standards and demonstrate that the facility will not create any significant public health or safety impacts or risks, to the satisfaction of the City Building and Safety Division and the Fire Prevention Bureau.	Fire Prevention Bureau and Building and Safety Division Planning Division	Once Before Permitting	Prior to issuance of Any discretionary Permits associated with natural gas fueling facility	Review and Approval of Risk Assessment or Safety Study		Withhold Discretionary Permit
4.8.6.1C Prior to grading for any discretionary permits for development in Planning Areas 9-12 adjacent to the natural gas compressor plant, the applicant shall prepare a risk assessment report analyzing safety conditions relative to the existing compressor plant and planned development. The report must be based on appropriate industry standards and identify the potential hazards from the compressor plant (e.g., fire, explosion) and determine that the distance from the plant to the closest planned buildings in Planning Areas 9-12 is sufficient to protect the safety of workers from accidents that could occur (see Final EIR Volume 2 Figure 4.1.6B) at the compressor plant. This measure shall be implemented to the satisfaction of the City Building and Safety Division and the Fire Prevention Bureau.	Building Official and Fire Marshal Planning Division	Once before issuance of discretionary permits for development within Planning Areas 9-12	Prior to issuance of Discretionary permits for Development within Planning Areas 9-12	Review and approval of a risk assessment		Withhold Discretionary Permit
4.8.6.1D Prior to the issuance of any grading permit, the developer shall inform the City of any existing solid waste materials within the development area. In conjunction with grading activities, all solid waste matter within the development area shall be removed by a licensed contractor and disposed of in an approved landfill. A record of the removal and disposal of any waste materials, in compliance with applicable laws and regulations, shall be submitted to the City prior to the issuance of any building permits.	Building and Safety Recycling Coordinator/ Public Works	Once before issuance of grading permits	Prior to issuance of grading permits	Applicant will inform the City in writing of any existing solid waste materials within the development area		Withold building permit until receipt of record of removal and disposal of waste materials Pursuant to City Municipal Code

Attachment: 2020-XX Resolution Revised FEIR Appeal [Revision 1] (4074 : World Logistics Center)

World Logistics Center – Mitigation Monitoring and Reporting Program

4.9 HYDROLOGY AND WATER QUALITY						
<p>4.9.6.1A Prior to issuance of any building permit within the Specific Plan area, the developer shall construct storm drain pipes and conveyances, as well as, combined detention and infiltration basin(s), bioretention area(s), and spreading area(s) within each proposed watershed, as outlined in the project hydrology plan, to mitigate the impacts of increased peak flow rate, velocity, flow volume and reduce the time of concentration by storing and infiltrating increased runoff for a limited period of time and release the outflow at a rate that does not exceed the pre-development peak flows and velocities for the 2, 5, 10, 25, and 100-year storms and volumes as assessed in the water balance model for historical conditions. For the purpose of this mitigation measure, the term “construct” shall mean to substantially complete construction so as to function for its intended purpose during construction with complete construction prior to occupancy. Field investigations will be conducted to determine the infiltration rate of soils underlying the proposed locations of bioretention areas and detention basins. The infiltration rate of the underlying soils will be used to properly size the bioretention areas and detention basins/infiltration basins to ensure that adequate volumes of runoff, in cumulative total for all bioretention areas and detention basins, are captured and infiltrated. The water balance model will be updated and rerun for the site-specific conditions encountered to confirm the water balance. This measure shall be implemented to the satisfaction of the City Engineer. Energy dissipaters shall be used as the spillways of basins to reduce the runoff velocity and dissipate the flow energy. Drainage weir structures shall be constructed at the downstream end of the watersheds flowing to the San Jacinto Wildlife Area to control the runoff and spread the flow such that the flows exiting the project boundary will return to the sheet flow pattern similar to the existing condition. Detention basins and spreading areas shall be designed to account for the amount of the sediment transported through the project boundary so that the existing sediment carrying capacity is maintained.</p>	<p>Land Development/ Public Works</p>	<p>Prior to Occupancy</p>	<p>Prior to issuance of any development permit</p>	<p>Review and approval of construction documents Field Inspection</p>		<p>Withhold Building Permit</p>
<p>4.9.6.1B The bioretention areas and detention/infiltration basins shall be designed to assure infiltrations rates. The monitoring plan will follow the guidelines presented by the California Storm Water Quality Association (CASQA) in the California Storm Water Best</p>	<p>City Engineer</p>	<p>Once before issuance of grading permits</p>	<p>Prior to issuance of grading permits</p>	<p>Review and approval of a monitoring plan for the detention/ infiltration basins</p>		<p>Withhold Grading Permit</p>

World Logistics Center – Mitigation Monitoring and Reporting Program

<p>Management Program (BMP) Handbook, Municipal, January 2003 Section 4, Treatment Control Best Management Programs Fact Sheets TC-11 Infiltration Basin and TC-30 Vegetated Swale)</p> <p>For the Bioretention areas, as needed maintenance activities shall be conducted to remove accumulated sediment that may obstruct flow through the swale. Bioretention areas shall be monitored at the beginning and end of each wet season to assess any degradation in infiltration rates. The maintenance activities should occur when sediment on channels and culverts builds up to more than 3 inches (CASQA 2003). The swales will need to be cultivated or rototilled if drawdown takes more than 72 hours.</p> <p>For the Detention/infiltration Basins, a 3-5 year maintenance program shall be implemented mainly to keep infiltration rates close to original values since sediment accumulation could reduce original infiltration rate by 25-50%. Infiltration rates in detention basins will be monitored at the beginning and end of each wet season to assess any degradation in infiltration rates. If cumulative infiltration rates of all detention basins drops below the minimum required rates, then the detention basins will be reconditioned to improve infiltration capacity by scraping the bottom of the detention basin, seed or sod to restore groundcover, aerate bottom and dethatch basin bottom (CASQA 2003).</p>	<p>Land development/Public Works</p>	<p>Ongoing during occupancy</p>	<p>Ongoing during occupancy</p>	<p>On-site Inspection</p>		<p>Citation, City Maintenance, Lien and Foreclosure Pursuant to City Municipal Code</p>
<p>4.9.6.2A Prior to issuance of any grading permit for development in the World Logistics Center Specific Plan, the project developer shall file a Notice of Intent (NOI) with the Santa Ana Regional Water Quality Control Board to be covered under the National Pollutant Discharge Elimination System (NPDES) General Construction Permit for discharge of storm water associated with construction activities. The project developer shall submit to the City the Waste Discharge Identification Number issued by the State Water Quality Control Board (SWQCB) as proof that the project's Notice of Intent is to be covered by the General Construction Permit has been filed with the State Water Quality Control Board. This measure shall be implemented to the satisfaction of the City Engineer</p>	<p>City Engineer. Attachment: 2020-XX Resolution Revised FEIR Appeal [Revision 1] (4074 : World Logistics Center)

World Logistics Center – Mitigation Monitoring and Reporting Program

<p>project-specific Storm Water Pollution Prevention Plan (SWPPP). The Storm Water Pollution Prevention Plan shall include a surface water control plan and erosion control plan citing specific measures to control on-site and off-site erosion during the entire grading and construction period. In addition, the Storm Water Pollution Prevention Plan shall emphasize structural and nonstructural best management practices (BMPs) to control sediment and non-visible discharges from the site. Best Management Practices to be implemented may include (but shall not be limited to) the following:</p> <ul style="list-style-type: none"> • Sediment discharges from the site may be controlled by the following: sandbags, silt fences, straw wattles and temporary debris basins (if deemed necessary), and other discharge control devices. The construction and condition of the Best Management Practices are to be periodically inspected by the Regional Water Quality Control Board during construction, and repairs would be made as required. • Materials that have the potential to contribute non-visible pollutants to storm water must not be placed in drainage ways and must be placed in temporary storage containment areas. • All loose soil, silt, clay, sand, debris, and other earthen material shall be controlled to eliminate discharge from the site. Temporary soil stabilization measures to be considered include: covering disturbed areas with mulch, temporary seeding, soil stabilizing binders, fiber rolls or blankets, temporary vegetation, and permanent seeding. Stockpiles shall be surrounded by silt fences and covered with plastic tarps. • The Storm Water Pollution Prevention Plan shall include inspection forms for routine monitoring of the site during the construction phase. • Additional required Best Management Practices and erosion control measures shall be documented in the Storm Water Pollution Prevention Plan. • The Storm Water Pollution Prevention Plan would be kept on-site for the duration of project construction and shall be available to the local Regional Water Quality Control Board for inspection at any time. 	<p>Quality Control Board and Land Development/ Public Works</p>	<p>any grading permit And Ongoing as part of routine site inspections</p>	<p>Ongoing</p>	<p>Site inspection</p>		<p>Pursuant to City Municipal Code</p>

Attachment: 2020-XX Resolution Revised FEIR Appeal [Revision 1] (4074 : World Logistics Center)

World Logistics Center – Mitigation Monitoring and Reporting Program

<p>The developer and/or construction contractor for each development area shall be responsible for performing and documenting the application of Best Management Practices identified in the project-specific Storm Water Pollution Prevention Plan. Regular inspections shall be performed on sediment control measures called for in the Storm Water Pollution Prevention Plan. Monthly reports shall be maintained and available for City inspection. An inspection log shall be maintained for the project and shall be available at the site for review by the City of Moreno Valley and the Regional Water Quality Control Board.</p>					
<p>4.9.6.3A Prior to discretionary permit approval for individual plot plans, a site-specific Water Quality Management Plan (WQMP) shall be submitted to the City Land Development Division for review and approval. The Water Quality Management Plan shall specifically identify site design, source control, and treatment control Best Management Practices that shall be used on-site to control pollutant runoff and to reduce impacts to water quality to the maximum extent practicable. The Water Quality Management Plan shall be consistent with the Water Quality Management Plan approved for the overall World Logistics Center Specific Plan project. At a minimum, the site developer shall implement the following site design, source control, and treatment control Best Management Practices as appropriate:</p> <p>Site Design Best Management Practices</p> <ul style="list-style-type: none"> a) Minimize urban runoff. b) Maximize the permeable area. c) Incorporate landscaped buffer areas between sidewalks and streets. d) Maximize canopy interception and water conservation by planting native or drought-tolerant trees and large shrubs. e) Use natural drainage systems. f) Where soil conditions are suitable, use perforated pipe or gravel filtration pits for low flow infiltration. g) Construct on-site ponding areas or retention facilities to increase opportunities for infiltration consistent with vector control objectives. 	<p>City Land Development Division</p>	<p>Once before issuance of any grading or building permits</p> <p>And</p> <p>Ongoing as part of routine site inspections</p>	<p>Prior to issuance of discretionary permit approval for individual plot plans</p> <p>Ongoing</p>	<p>Review and Approval of WQMP</p> <p>Site inspection</p>	<p>Withhold Grading or Building Permit</p> <p>Pursuant to City Municipal Code</p>

Attachment: 2020-XX Resolution Revised FEIR Appeal [Revision 1] (4074 : World Logistics Center)

World Logistics Center – Mitigation Monitoring and Reporting Program

<p>h) Minimize impervious footprint.</p> <p>i) Construct streets, sidewalks and parking lot aisles to the minimum widths necessary, provided that public safety and a walkable environment for pedestrians are not compromised.</p> <p>j) Reduce widths of street where off-street parking is available.</p> <p>k) Minimize the use of impervious surfaces such as decorative concrete, in the landscape design.</p> <p>l) Conserve natural areas.</p> <p>m) Minimize Directly Connected Impervious Areas (DCIAs).</p> <p>n) Runoff from impervious areas will sheet flow or be directed to treatment control Best Management Practices.</p> <p>o) Streets, sidewalks, and parking lots will sheet flow to landscaping/bioretention areas that are planted with native or drought-tolerant trees and large shrubs.</p> <p>Source Control Best Management Practices</p> <p>Source control Best Management Practices are implemented to eliminate the presence of pollutants through prevention. Such measures can be both nonstructural and structural.</p> <p>Non-structural source control Best Management Practices include:</p> <p>a) Education for property owners, operator, tenants, occupants, or employees;</p> <p>b) Activity restrictions;</p> <p>c) Irrigation system and landscape maintenance;</p> <p>d) Common area litter control;</p> <p>e) Street sweeping private streets and parking lots; and</p> <p>f) Drainage facility inspection and maintenance.</p> <p>Structural source control Best Management Practices include:</p> <p>g) MS4 stenciling and signage;</p> <p>h) Landscape and irrigation system design;</p> <p>i) Protect slopes and channels; and</p> <p>j) Properly design fueling areas, trash storage areas, loading docks, and outdoor material storage areas.</p> <p>Treatment Control Best Management Practices</p>						
--	--	--	--	--	--	--

Attachment: 2020-XX Resolution Revised FEIR Appeal [Revision 1] (4074 : World Logistics Center)

World Logistics Center – Mitigation Monitoring and Reporting Program

<p>Treatment control Best Management Practices supplement the pollution prevention and source control measures by treating the water to remove pollutants before it is released from the project site. The treatment control Best Management Practice strategy for the project is to select Low Impact Development (LID) Best Management Practices that promote infiltration and evapotranspiration, including the construction of infiltration basins, bioretention facilities, and extended detention basins. Where infiltration Best Management Practices are not appropriate, bioretention and/or biotreatment Best Management Practices (including extended detention basins, bioswales, and constructed wetlands) that provide opportunity for evapotranspiration and incidental infiltration may be utilized. Harvest and Reuse Best Management Practice will be used to store runoff for later non-potable uses.</p> <p>Site-specific Water Quality Management Plans have not been prepared at this time as no site-specific development project has been submitted to the City for approval. When specific projects within the project are developed, Best Management Practices will be implemented consistent with the goals contained in the Master Water Quality Management Plan. All development within the project will be required to incorporate on-site water quality features to meet or exceed the approved Master Water Quality Management Plan's water quality requirements identified previously.</p>						
<p>4.9.6.3B The Property Owners Association (POA) and all property owners shall be responsible to maintain all onsite water quality basins according to requirements in the guidance Water Quality Management Plan and/or subsequent site-specific Water Quality Management Plans, and established guidelines of the Regional Water Quality Control Board. Failure to properly maintain such basins shall be grounds for suspension or revocation of discretionary operating permits, and/or referral to the Regional Water Quality Control Board for review and possible action. This measure shall be implemented to the satisfaction of the City Land Development Division, in consultation with the City Engineer, and Regional Water Quality Control Board.</p>	<p>City Land Development Division</p>	<p>As Needed</p>	<p>Ongoing</p>	<p>Onsite inspections</p>		<p>Revocation of Discretionary or Operating Permits</p>

Attachment: 2020-XX Resolution Revised FEIR Appeal [Revision 1] (4074 : World Logistics Center)

World Logistics Center – Mitigation Monitoring and Reporting Program

<p>4.9.6.3C Prior to issuance of future discretionary permits for any development along the southern boundary of the World Logistics Center Specific Plan (WLCSP), the project developer of such sites, in cooperation with the Property Owners Association (POA), shall establish and annually fund a Water Quality Mitigation Monitoring Plan (WQMMP) to confirm that project runoff will not have deleterious effects on the adjacent San Jacinto Wildlife Area (SJWA). This program shall include at least quarterly sampling along the southern boundary of the site (i.e., at the identified outlet structures of the project detention basins) during wet season flows and/or when water is present, as well as sampling of any dry-season flows that are observed entering the San Jacinto Wildlife Area property from the project property, including Drainage 9, which is planned to convey only clean off-site flows from north of the World Logistics Center Specific Plan site across Gilman Springs Road. The program shall also include at least twice yearly sampling after completion of construction, and a pre-construction survey must be completed to determine general water quality baseline conditions prior to and during development of the southern portion of the World Logistics Center Specific Plan. This sampling shall be consistent with and/or comply with the requirements of applicable Storm Water Pollution Prevention Plans (SWPPPs) for the development site.</p> <p>The project developer of sites along the southern border of the World Logistics Center Specific Plan shall be responsible for preventing or eliminating any toxic pollutant (not including sediment) found to exceed applicable established public health standards. In addition, the discharge from the project shall not cause or contribute to an exceedance of Receiving Water Quality Objectives for the potential pollutants associated with the project as identified in Table 4.9.J. Once development is complete, the developer shall retain qualified personnel to conduct regular (i.e., at least quarterly) water sampling/testing of any basins and their outfalls to ensure the San Jacinto Wildlife Area will not be affected by water pollution from the project site. This measure shall be implemented to the satisfaction of the City Land Development Division Manager based on consultation with the project developer, Eastern Municipal Water District, the Regional</p>	<p>Land Development Division</p>	<p>Annually And Ongoing as part of routine site inspections</p>	<p>Prior to issuance of discretionary permits for any development along the southern boundary of the WLCSP Ongoing</p>	<p>Evidence of Annual Water Quality Monitoring Plan fund Site inspection</p>		<p>Withhold Discretionary Permit Pursuant to City Municipal Code</p>

<p>be used. If sound blankets are used, they must have a Sound Transmission Class (STC) rating of 27 or greater.</p> <ul style="list-style-type: none"> • Distribute to the potentially affected residences and other sensitive receptors within 500 feet of project construction boundary a “hotline” telephone number, which shall be attended during active construction working hours, for use by the public to register complaints. The distribution shall identify a noise disturbance coordinator who would be responsible for responding to any local complaints about construction noise. The disturbance coordinator would determine the cause of the noise complaints and institute feasible actions warranted to correct the problem. All complaints shall be logged noting date, time, complainant’s name, nature of complaint, and any corrective action taken. The distribution shall also notify residents adjacent to the project site of the construction schedule. Records of any complaints and corrective action shall be stored at the site and available to the City upon request. • Prior to issuance of any discretionary project approvals, a Noise Reduction Compliance Plan (NRCP) shall be submitted to and approved by the City. The Noise Reduction Compliance Plan shall show the limits of nighttime construction in relation to any then-occupied residential dwellings and shall be in conformance with City standards. Conditions shall be added to any discretionary projects requiring that the limits of nighttime grading be shown on the Noise Reduction Compliance Plan and all grading plans submitted to the City (per Noise Study MM N-2, pg. 51). 						
<p>4.12.6.2A When processing future individual buildings under the World Logistics Center Specific Plan, as part of the City’s approval process, the City shall require the Applicant to take the following three actions for each building prior to approval of discretionary permits for individual plot plans for the requested development:</p> <p>Action 1: Perform a building-specific noise study to ensure that the assumptions set forth in the the Revised Sections of the FEIR remain valid. These procedures used to conduct these noise analyses shall be consistent with the noise analysis conducted in the Revised Sections of the FEIR and shall be used to impose building-specific mitigation on the individually proposed buildings.</p>	<p>City Planning Division</p>	<p>Once before issuance of a certificate of occupancy</p>	<p>Prior to issuance of Discretionary permits for Action 1. Prior to issuance of certificate of occupancy for actions 2 and 3</p>	<p>Review and approval of a noise study</p>		<p>Withhold discretionary approvals</p>

Attachment: 2020-XX Resolution Revised FEIR Appeal [Revision 1] (4074 : World Logistics Center)

World Logistics Center – Mitigation Monitoring and Reporting Program

<p>Action 2: If the building-specific analyses identify that the proposed development triggers the need for mitigation from the proposed building, including all preceding developments in the World Logistics Center site, the Applicant shall implement the mitigation identified in the Revised Sections of the FEIR to reduce the identified impacts to comply with the Moreno Valley Municipal Code, which sets maximum sound levels reaching residential uses at 60 dBA during the daytime hours (8:00 a.m. – 10:00 p.m.) and 55 dBA during nighttime hours (10:01 p.m. – 7:59 a.m.). Prior to implementing the mitigation, the Applicant shall send letters by registered mail to all property owners and non-owner occupants of properties that would benefit from the proposed mitigation asking them to provide a position either in favor of or in opposition to the proposed mitigation asking them to provide a position either in favor of or in opposition to the proposed noise abatement mitigation within 45 days. Each property shall be entitled to one vote on behalf of owners and one vote per dwelling on behalf of non-owner occupants.</p> <p>If more than 50% of the votes from responding benefited receptors oppose the abatement, the abatement will not be considered reasonable. Additionally, for noise abatement to be located on private property, 100% of owners of property upon which the abatement is to be placed must support the proposed abatement. In the case of proposed noise abatement on private property, no response from a property owner, after three attempts by registered mail, is considered a <i>no</i> vote.</p> <p>At the completion of the vote at the end of the 45-day period, the Applicant shall provide the tentative results of the vote to all property owners by registered mail. During the next 15 calendar days following the date of the mailing, property owners may change their vote. Following the 15-day period, the results of the vote will be finalized and made public.</p> <p>Action 3: Upon consent from benefited receptors and property owners, the Applicant shall post a bond for the cost of the construction of the necessary mitigation as estimated by the City Engineer to ensure completion of the mitigation. The certificate of occupancy permits shall be issued upon posting of the bond or demonstration that 50% of the votes from responding benefited</p>

World Logistics Center – Mitigation Monitoring and Reporting Program

receptors oppose the abatement or, if the abatement is located on private property, any property owners oppose the abatement.						
4.12.6.2B Prior to issuance/approval of any building permits, the centerline of Cactus Avenue Extension will be located no closer than 11449 feet to the residential property lines along Merwin Street. An alternative is to locate the roadway closer to the residences and provide a soundwall along Cactus Avenue Extension. The soundwall location and height should be determined by a Registered Engineer, and the soundwall shall be designed to reduce noise levels to less than 65 CNEL at the residences. The Engineer shall provide calculations and supporting information in a report that will be required to be submitted to and approved by the City prior to issuing permits to construct the road.	City Planning Division	Prior to the approval of a Building permit	Prior to the issuance of building permits	Review and Approval of Building permits		Withhold Building Permits
4.12.6.2C Prior to the approval of any discretionary permits, cumulative impact areas shown in the WLC EIR Noise Study shall be included in the soundwall mitigation program outlined in Mitigation Measures 4.12.6.2A and 4.12.6.2D.	City Planning Division	Once before issuance of building permits	Prior to issuance of building permits	Review and approval of soundwall mitigation program		Withhold discretionary permits
4.12.6.2D Prior to issuance of a building permit, the applicant shall demonstrate that the development maintains a buffer with soundwall for noise attenuation at residential/warehousing interface (i.e., western and southwestern boundaries of the project site). To keep the noise levels at nearby residential areas less than typical ambient conditions, the warehousing property line shall be located a minimum of 250 feet from the residential zone boundary, and a 12-foot noise barrier shall be located along the perimeter of the property that faces any residential areas. The 12 foot noise barrier may be a soundwall, berm, or combination of the two. The height shall be measured relative to the pad of the warehouse. This requirement shall be implemented anytime residential areas are within 600 feet of the warehousing property line to insure that a noise level of 45 dBA (Leq) will not be exceeded at the residential zone. This requirement is consistent with Item 10 of Municipal Code Section 9.16.160 Business park/industrial that states, "All manufacturing and industrial uses adjacent to residential land uses shall include a buffer zone and/or noise attenuation wall to reduce outside noise levels".	City Planning Division	Once before issuance of building permits	Prior to issuance of building permits	Review and approval of building plans		Withhold Building Permit

World Logistics Center – Mitigation Monitoring and Reporting Program

<p>4.12.6.4A Prior to the issuance of building permits for projects within 1,300 feet of the Southern California Gas Company (SCGC) and San Diego Gas and Electric (SDG&E) blowdown facilities, documentation shall be submitted to the City confirming that sound attenuation devices and/or improvements for the blow-down facilities providing at least a 40 dB reduction in noise levels during blow-down events are available and will be installed for all planned blow-down events. It shall be the responsibility of the developer to fund all sound attenuation improvements to the blow-down facilities required by this measure. It shall also be the responsibility of the developer to coordinate with San Diego Gas and Electric and/or Southern California Gas Company regarding the installation of any sound attenuation devices or improvements on the blow-down facilities at either the San Diego Gas and Electric compressor station or the Southern California Gas Company pipelines. This measure shall be implemented to the satisfaction of the City Land Management Division</p>	<p>City Land Development Division City Planning Division</p>	<p>Once before Permitting</p>	<p>Prior to the issuance of Building permits for projects within 1,300 feet of the SCGC and SDG&E facilities</p>	<p>Review and Approval of Documentation confirming sound attenuation device</p>		<p>Withhold Building Permits</p>
<p>4.13 POPULATION, HOUSING, AND EMPLOYMENT</p>						
<p>NOT APPLICABLE</p>						
<p>4.14 PUBLIC SERVICES AND FACILITIES</p>						
<p>NOT APPLICABLE</p>						
<p>4.15 TRAFFIC AND CIRCULATION</p>						
<p>4.15.7.4A A traffic impact analysis (“TIA”) conforming to the guidelines for TIAs adopted by the City shall be submitted in conjunction with each Plot Plan application within the WLCSP. Prior to the approval of the Plot Plans, the City shall review the Revised TIA to determine if any of the traffic improvements listed in the above tables need to be implemented as part of the plot plan. The TIA prepared for the Revised Sections of the FEIR are required to be completed prior to the issuance of a certificate of occupancy for each building. If the City determines that any of the improvements within Moreno Valley are required to be constructed in order to ensure that the traffic impacts which will result from the construction and operation of the building will be mitigated into insignificance, then the completion of construction of the improvements prior to the issuance of a Certificate of Occupancy for the building shall be made a Condition of Approval</p>	<p>City Engineer</p>	<p>Once before plot plan approval Once prior to Certificate of Occupancy</p>	<p>Prior to plot plan approval Prior to Certificate of Occupancy</p>	<p>Review and Approval of site-specific TIAs Review and Approval of site-specific TIAs</p>		<p>Withhold Plot Plan approval Withhold Certificate of Occupancy</p>

World Logistics Center – Mitigation Monitoring and Reporting Program

<p>of the Plot Plan. Construction of improvements within the City shall be subject to reimbursement agreement for those costs that exceed the fair share contribution determined for the specific Plot Plan application. If the City determines that any of the improvements outside Moreno Valley are required to be constructed in order to ensure that the traffic impacts which will result from the construction and operation of the building will be mitigated to a less than significant level, then the payment of any necessary fair share contribution as prescribed in Mitigation Measure 4.15.7.4E prior to the issuance of a Certificate of Occupancy for the building shall be made a Condition of Approval of the Plot Plan. If the City determines that the traffic impacts which will result from the construction or operation of a building will be significantly more adverse than those shown in the Revised TIA, further environmental review shall be conducted prior to the approval of the Plot Plan pursuant to Public Resources Code § 21166 and CEQA Guidelines §15162 to determine what additional mitigation measures, if any, will be required in order to maintain the appropriate levels of service.</p>						
<p>4.15.7.4B As a condition of approval for individual development permits processed in the future under the World Logistics Center Specific Plan, the City shall require the dedication of appropriate right-of-way, where feasible, consistent with the Subdivision Map Act for frontage street improvements contained within the World Logistics Center Specific Plan Circulation Map. Required dedications shall be made prior to the issuance of occupancy permits for the requested development.</p>	<p>City Engineer</p>	<p>Once before issuance of occupancy permits</p>	<p>Prior to issuance of occupancy permits</p>	<p>Evidence of dedication of right of- way in compliance with Subdivision Map Act</p>		<p>Withhold Occupancy Permits</p>
<p>4.15.7.4C As a condition of approval for individual development permits processed in the future under the World Logistics Center Specific Plan, the City shall require the Applicant to construct or to fully fund the transportation measures identified in the development’s TIA (see MM4.15.7.4A) as needed to mitigate the transportation impacts within the city of the Plot Plan development. The payment or construction shall be made prior to the issuance of occupancy permits for the requested development. This condition shall apply only to mitigation measures where a mechanism has been established to collect funds from the project and any other funds to needed to complete the improvements.</p>	<p>City Engineer</p>	<p>Once before to issuance of occupancy permits</p>	<p>Prior to issuance of occupancy permits</p>	<p>Written verification of payment into adopted fair share programs</p>		<p>Withhold Occupancy Permits</p>

Attachment: 2020-XX Resolution Revised FEIR Appeal [Revision 1] (4074 : World Logistics Center)

World Logistics Center – Mitigation Monitoring and Reporting Program

<p>4.15.7.4D As a condition of approval for individual development permits processed in the future under the World Logistics Center Specific Plan, the City shall require each project to pay the requisite Transportation Uniform Mitigation Fee (TUMF) as set forth in Municipal Code Chapter 3.44. Required TUMF payments shall be made prior to the issuance of occupancy permits for the requested development.</p>	<p>City Engineer City Planning Division</p>	<p>Once before to issuance of occupancy permits</p>	<p>Prior to issuance of occupancy permits</p>	<p>Written verification of payment of TUMF</p>		<p>Withhold Occupancy Permits</p>
<p>4.15.7.4E In order to ensure that all of the Project’s traffic impacts are mitigated to the greatest extent feasible, the Applicant shall contribute its fair share of the cost of the needed traffic improvements that are not within the City as identified in the Revised Traffic Impact Analysis (i.e., under the jurisdiction of other cities, the County of Riverside or Caltrans, pursuant to Mitigation Measure 4.15.7.4F). As used in this mitigation measure, the Applicant’s “fair share” has been determined in compliance with the requirements of the Fee Mitigation Act, Government Code § 66000 et seq., and, pursuant to § 66001(g), does not require that the Applicant be responsible for making up for any existing deficiencies. The fair share mitigation is summarized in Tables 72 through 77 of the TIA located in Appendix F of the RSFEIR.</p>	<p>City Engineer</p>	<p>Once before to issuance of occupancy permits</p>	<p>Prior to issuance of occupancy Permits</p>	<p>Written verification of payment into adopted fair share programs</p>		<p>Withhold Occupancy Permits</p>
<p>4.15.7.4F The Applicant shall pay its portion of the fair share of the cost of traffic improvements identified in the Transportation Impact Analysis for those significantly impacted road segments and intersections for each warehouse building within the World Logistics Center if the impacted jurisdiction has established a fair share contribution program prior to the approval of a building-specific plot plan. The City shall determine whether a fair share program exists in the impacted jurisdiction and, if one does exist, require that the appropriate fees are paid by the Applicant, consistent with the requirements below, prior to the issuance of a certificate of occupancy for the building in question. If no fair share program exists or if the existing programs are not consistent with the requirements below, then no payment of fees shall be required. The impacts are to be determined on a road segment or intersection basis. Nothing in this condition requires the payment of a traffic impact fee imposed by another jurisdiction which covers improvement to facilities where the Project does not have a significant impact. Fair-share</p>	<p>City Engineer</p>	<p>Once prior to issuance of building permits for individual buildings.</p>	<p>Prior to issuance of occupancy Permits</p>	<p>Written verification of payment into adopted fair-share programs</p>		<p>Withhold Occupancy Permits</p>

Attachment: 2020-XX Resolution Revised FEIR Appeal [Revision 1] (4074 : World Logistics Center)

World Logistics Center – Mitigation Monitoring and Reporting Program

contributions will be determined on a building-by-building basis as a share of the impact of the Project as a whole (for each segment or intersection where the WLC project as a whole has a significant impact identified in the Revised Sections of the FEIR) as determined by the Revised Traffic Impact Analysis and will be due as each certificate of occupancy is issued. The fair share payments for the significantly impacted road segments and intersections identified in the Revised Sections of the FEIR will be required even though the impact resulting from a specific building does not, by itself, cause a significant impact.

For example, the intersection of Martin Luther King Blvd. and the I-215 northbound ramps (Intersection 85) in the City of Riverside was identified as a place where the World Logistic Center contributes to cumulatively significant impacts, and where the fair share contribution of the World Logistic Center project as a whole was computed to be 6.2%. If the City of Riverside establishes a fair share contribution program consistent with this Mitigation Measure 4.15.7.4F to improve that intersection, then when a certificate of occupancy is to be issued for a 2-million square feet high-cube warehouse in the World Logistic Center (approximately 5% of the entire World Logistic Center project) the amount of the fair share payment due from the Applicant to the City of Riverside would be computed as follows:

Amount Due	=	Total cost of Improvement	X	Total World Logistics Center fair share (6.2%) as determined by Traffic Impact Analysis	X	% Attributable to the building that is subject to the certificate of occupancy (5%)
A x B x C = D						
A = % attributable to the building that is subject to the certificate of occupancy (%5)						
B = Total World Logistics Center fair share (6.2%) as determined by Traffic Impact Analysis						
C = Total cost of Improvement						
D = Amount Due						

A similar calculation would be done for each subsequent building, with payments for each due at the time of issuance of the

Attachment: 2020-XX Resolution Revised FEIR Appeal [Revision 1] (4074 : World Logistics Center)

World Logistics Center – Mitigation Monitoring and Reporting Program

<p>certificate of occupancy. As a result, while each building individually would not produce a significant impact, and therefore would not be required to pay any mitigation fees if considered by itself, the total amount of the payments for all of the buildings would be equal to the fair share payment for the entire World Logistic Center to the extent that the responsible jurisdiction has chosen to adopt a fair share contribution funding program consistent with Mitigation Measure 4.15.7.4F.</p>						
<p>4.15.7.4G City shall work directly with WRCOG to request that TUMF funding priorities be shifted to align with the needs of the City, including improvements identified in the TIA. Toward this end, City shall meet regularly with WRCOG.</p>	<p>City Engineer</p>	<p>On-going</p>	<p>Yearly starting with project up and ending with project buildout.</p>	<p>City Engineer provides quarterly updates to the City Council regarding TUMF funding priorities as it relates to the improvements identified in the traffic impact analysis.</p>		<p>None</p>
4.16 UTILITIES AND SERVICE SYSTEMS						
<p>4.16.1.6.1A Prior to approval of a precise grading permit for each plot plan for development within the World Logistics Center Specific Plan (WLCSF), the developer shall submit landscape plans that demonstrate compliance with the World Logistics Center Specific Plan, the State of California Model Water Efficient Landscape Ordinance (AB 1881), and Conservation in Landscaping Act (AB 325). This measure shall be implemented to the satisfaction of the Planning Division. Said landscape plans shall incorporate the following:</p> <ul style="list-style-type: none"> • Use of xeriscape, drought-tolerant, and water-conserving landscape plant materials wherever feasible and as outlined in Section 6.0 of the World Logistics Center Specific Plan; • Use of vacuums, sweepers, and other “dry” cleaning equipment to reduce the use of water for wash down of exterior areas; • Weather-based automatic irrigation controllers for outdoor irrigation (i.e., use moisture sensors); • Use of irrigation systems primarily at night or early morning, when evaporation rates are lowest; 	<p>City Planning Division</p>	<p>Once</p>	<p>Prior to issuance of precise grading permit for each plot plan.</p>	<p>Review and Approval of landscape plans</p>		<p>Withhold precise grading permit.</p>

Attachment: 2020-XX Resolution Revised FEIR Appeal [Revision 1] (4074 : World Logistics Center)

World Logistics Center – Mitigation Monitoring and Reporting Program

<ul style="list-style-type: none"> • Use of recirculation systems in any outdoor water features, fountains, etc.; • Use of low-flow sprinkler heads in irrigation system; • Provide information to the public in conspicuous places regarding outdoor water conservation; and • Use of reclaimed water for irrigation if it becomes available. 					
<p>4.16.1.6.1B All buildings shall include water-efficient design features outlined in Section 4.0 of the World Logistics Center Specific Plan. This measure shall be implemented to the satisfaction of the Land Development Division/Public Works. These design features shall include, but not be limited to the following:</p> <ul style="list-style-type: none"> • Instantaneous (flash) or solar water heaters; • Automatic on and off water faucets; • Water-efficient appliances; • Low-flow fittings, fixtures and equipment; • Use of high-efficiency toilets (1.28 gallons per flush [gpf] or less); • Use of waterless or very low water use urinals (0.0 gpf to 0.25 gpf); • Use of self-closing valves for drinking fountains; • Infrared sensors on drinking fountains, sinks, toilets and urinals; • Low-flow showerheads; • Water-efficient ice machines, dishwashers, clothes washers, and other water-using appliances; • Cooling tower recirculating system where applicable; • Provide information to the public in conspicuous places regarding indoor water conservation; and • Use of reclaimed water for wash down if it becomes available. 	<p>Building and Safety Division Planning Division</p>	<p>Once</p>	<p>Prior to issuance of any building permits.</p>	<p>Review and Approval building plans</p>	<p>Withhold building permit.</p>
<p>4.16.1.6.1C Prior to approval of a precise grading permit for each plot plan, irrigation plans shall be submitted to and approved by the City demonstrating that the development will have separate irrigation lines for recycled water. All irrigation systems shall be designed so that they will function properly with recycled water if it becomes available. This measure shall be implemented to the satisfaction of the City Planning Division and Land Development Division/Public Works.</p>	<p>City Planning Division, Land Development Division/Public Works</p>	<p>Once</p>	<p>Prior to issuance of precise grading permits.</p>	<p>Review irrigation plans</p>	<p>Withhold precise grading permit.</p>

World Logistics Center – Mitigation Monitoring and Reporting Program

<p>4.16.1.6.2A Each Plot Plan application for development shall include a concept grading and drainage plan, with supporting engineering calculations. The plans shall be designed such that the existing sediment carrying capacity of the drainage courses exiting the project area is similar to the existing condition. The runoff leaving the project site shall be comparable to the sheet flow of the existing condition to maintain the sediment carrying capacity and amount of available sediment for transport so that no increased erosion will occur downstream. This measure shall be implemented to the satisfaction of the City Land Development Division/Public Works.</p>	<p>Land Development Division/Public Works</p>	<p>Once Concurrent with Plot Plan review and approval.</p>	<p>Prior to issuance of grading permit.</p>	<p>Review and Approval of Grading and Drainage Plans</p>		<p>Withhold Plot Plan Approval</p>

I. INTRODUCTION

The City Council of the City of Moreno Valley (this “Council”), in certifying the Revised Final Environmental Report (“Revised Final EIR”) for the World Logistics Center (WLC) Project (the “Project”) for the construction of up to approximately 40.4 million square feet of warehouse distribution uses classified as Logistics Development (LD) and 200,000 square feet of warehousing-related uses classified as “Light Logistics” (LL) on 2,535 acres within the WLC Specific Plan area, makes the Findings described below and adopts the Statement of Overriding Considerations presented at the end of the Findings. The Revised Final EIR was prepared by the City of Moreno Valley (“City”) acting as lead agency pursuant to the California Environmental Quality Act (“CEQA”). Hereafter, unless specifically identified, the Notice of Preparation (“NOP”), Notice of Availability & Completion (“NOA/NOC”), Draft EIR (“DEIR”), Technical Studies, Final EIR containing Responses to Comments and textual revisions to the Draft EIR (“FEIR”), the Revised Sections of the Final EIR (“RSFEIR”), the Draft Recirculated Sections of the RSFEIR (“Recirculated Sections”), the Revised Final EIR which contains Responses to Comments, and Errata will be referred to collectively herein as the “EIR” These Findings are based on the entire record before this Council, including the above-referenced documents, in addition to Resolution Exhibit B, Mitigation Monitoring and Reporting Program (MMRP), Section VI, Statement of Overriding Considerations, and other information presented to the Council and part of the administrative record. This Council adopts the facts and analyses in the Revised Final EIR, which are summarized below for convenience. The omission of some detail or aspect of the Revised Final EIR does not mean that it has been rejected by this Council.

II. PROJECT SUMMARY

A. PROJECT DESCRIPTION

1. Site Location

The Project is located in the eastern portion of the City of Moreno Valley (also referred to as the “Rancho Belago” portion of the City), in northwestern Riverside County, within the World Logistics Center (WLC) Specific Plan area. The Project site is immediately south of State Route 60 (SR-60), between Redlands Boulevard and Gilman Springs Road (the easterly City limit), extending to the northern boundary of the San Jacinto Wildlife Area. The major roads that currently provide access to the Project site are Redlands Boulevard, World Logistics Center Parkway, Alessandro Boulevard, and Gilman Springs Road.

The WLC Project area is located in portions of Sections 1, 12, and 13 of Township 3 South, Range 3 West; and portions of Sections 6, 7, 8, 9, 16, 17, 18, 19, 20, and 21 of Township 3 South, Range 2 West, as depicted on the U.S. Geological Survey (USGS) 7.5-minute series Sunnymead and El Casco, California quadrangles.

2. Project Description

The World Logistics Center (WLC) project is located on 2,610 acres in the Rancho Belago area at the eastern end of Moreno Valley, south of SR-60, east of Redlands Boulevard, west of Gilman Springs Road and north of the San Jacinto Wildlife Area. The site currently has a General Plan designation of Business

Park/Light Industrial and zoning designations of WLCSP-LD (World Logistics Center Specific Plan – Logistics Development) and WLCSP-LL (World Logistics Center Specific Plan – Light Logistics). The site is subject to the adopted World Logistics Center Specific Plan (WLC Specific Plan) which authorizes the construction and operation of 40,600,000 square feet of logistics facilities and associated infrastructure and 74.3 acres of open space.

The land use entitlements for the WLC project that are in place include the General Plan and zoning designations, the WLC Specific Plan, and a request for annexation of 85 acres of unincorporated land in Riverside County into the City – the annexation pre-zoning having been adopted in November 2015, through the initiative process. The discretionary approvals that will be considered by the City as part of the current approval process consist of a development agreement and Parcel Map 36457.

3. Actions Covered by the EIR

The Revised Final EIR provides information to allow a reasoned decision concerning the following discretionary and non-discretionary approvals:

- Implementation of the World Logistics Center Specific Plan.
- Approval of the Development Agreement between the Project applicants, collectively Highland Fairview, and the City of Moreno Valley, in order to provide certainty for the future development of the Project for those parcels owned by Highland Fairview.
- Approval of a Tentative Parcel Map, subdividing a portion of the Project site into large parcels. This map is for financing purposes only and does not create any development rights for the subdivided properties. Subsequent subdivision applications will be required prior to the development of any buildings on the site.
- Approval of grading plans, plot plans, building plans, infrastructure plans and related approvals for construction and operation of individual buildings within each development area.

Approvals and permits required by other agencies include:

a. County of Riverside

- Local Agency Formation Commission (LAFCO): Annexation of 85-acre parcel.
- Flood Control and Water Conservation District: Amend Storm Drain Master Plan.

b. Other Affected Agencies

- Western Riverside Council of Governments: Transportation Uniform Mitigation Fee (TUMF) Contributions.
- Eastern Municipal Water District: Water Service Agreements.
- Developer will make “fair share” contributions to development impact fee programs if established by the cities of Riverside, Perris, and Redlands for local road and intersection improvements identified in the programmatic Traffic Impact Assessment (TIA) included with the RSFEIR (Revised Final EIR Part 3, Appendix F). This item is subject to review and approval by the City Transportation Division.

c. State of California

- Regional Water Quality Control Board: Water Quality Permitting.
- Department of Transportation (Caltrans): Encroachment Permits for SR-60. Developer will make “fair share” contributions to a development impact free program if established by Caltrans for future development of improvements to State Route 60 as identified in the programmatic Traffic Impact Assessment (TIA) included with the RSFEIR (Revised Final EIR Part 3, Appendix F).
- California Department of Fish and Wildlife: Streambed Alteration Agreements.

d. Federal Agencies

- U.S. Army Corps of Engineers: Clean Water Act Permitting and associated federal agency consultation.

B. PROJECT OBJECTIVES

The Project Objectives include the following:

- Create substantial employment opportunities for the citizens of Moreno Valley and surrounding communities.
- Provide the infrastructure plan necessary to meet current market demands and to support the City’s Economic Development Action Plan.
- Create a major logistics center with good regional and freeway access.
- Implement design standards and development guidelines to ensure a consistent and attractive appearance throughout the entire Project.
- Implement a master plan for the entire Project area to ensure that the Project is efficient and business-friendly to accommodate the next-generation of logistics buildings.
- Provide a major logistics center to accommodate a portion of the ever-expanding trade volumes at the Ports of Los Angeles and Long Beach
- Create a Project that will provide a balanced approach to the City’s fiscal viability, economic expansion, and environmental integrity.
- Provide the infrastructure improvements required to meet Project needs in an efficient and cost-effective manner.
- Encourage new development consistent with regional and municipal service capabilities.
- Significantly improve the City’s jobs/housing balance and help reduce unemployment within the City.
- Provide thousands of construction job opportunities during the Project’s buildout phase.
- Provide appropriate transitions between on-site and off-site uses.

III. ENVIRONMENTAL REVIEW AND PUBLIC PARTICIPATION

The City has conducted an extensive review of this Project which included the DEIR, FEIR, RSFEIR, Recirculated Sections and supporting technical studies, along with public review and comment period first during the circulation of the Notice of Preparation, then through the circulation of the DEIR, circulation of the FEIR, and circulation of the RSFEIR and Recirculated Sections for public review and comment. The following is a summary of the environmental review of this Project:

- On February 25, 2012, the City circulated a Notice of Preparation (“NOP”) that identified the environmental issues that the City anticipated would be analyzed in the Project’s DEIR to the State Clearinghouse, responsible agencies, and other interested parties.
- On March 12, 2012, the City conducted a public scoping meeting to allow members of the public to provide comments and input regarding the scope and content of the DEIR.
- The NOP public review period ran for 30 days, from February 25, 2012 to March 26, 2012. Written comments on the NOP were received from 27 different agencies, organizations, and individuals. The scope of the issues identified in the comments expressing concern included potential impacts associated with:
 - Aesthetics
 - Air Quality
 - Alternatives
 - Biological Resources
 - Cultural Resources
 - Greenhouse Gases
 - Geology & Soils
 - Hazards
 - Hydrology
 - Land Use
 - Noise
 - Population & Housing
 - Public Services
 - Traffic
 - Utilities

Based on the comments received pursuant to the NOP, it was determined that all environmental issues needed to be addressed in depth in the DEIR.

- As required by the California Environmental Quality Act (CEQA) Guidelines Section 15087, a Notice of Completion (NOC) of the DEIR State Clearinghouse No. 2012021045 for the WLC Project was filed with the State Clearinghouse on July 17, 2012, and the Notice of Availability (NOA) of the DEIR was filed with the Riverside County Clerk on July 18, 2012.
- The DEIR was circulated for public review for a period of 63 days, from February 4, 2013 to April 8, 2013. Copies of the DEIR were distributed to all Responsible Agencies and to the State Clearinghouse in addition to various public agencies, citizen groups, and interested individuals. Copies of the DEIR were also made available for public review at the City Planning Department, at one area library, and on the internet. A total of one-hundred and forty-four (144) comment letters were received during the public review period commenting on the DEIR and WLC Project. Twenty-three (23) of the comment letters received were from Federal, State, regional, or local agencies. Fifteen (15) comment letters were received from private organizations or conservation groups, and one-hundred and six (106) letters were received from individuals. In addition, several letters/emails from individuals and one letter from the City of Redlands were received well after the close of the public review period. The

Attachment: 2020-XX Resolution Revised FEIR Appeal [Revision 1] (4074 : World Logistics Center)

City prepared specific responses to all comments. The responses to comments are included in FEIR, Revised Final EIR Part 4 Volume 1.

- On May 1, 2015 in accordance with *Public Resources Code* Section 21092.5, the City provided written responses to public agencies that commented on the DEIR.
- On August 2015, the City Council held a public hearing to consider the Project and staff recommendations. The Council, after considering written comments and oral testimony on the FEIR, determined that no new information was presented that would require recirculation of the FEIR. Following public testimony, submission of additional written comments, and staff recommendations, the Council certified the FEIR as having been completed in compliance with CEQA, adopted Facts, Findings and the Statement of Overriding Considerations, and the further recommendations in the Staff Report, and approved the Project.
- In September 2015, a number of lawsuits were filed challenging the City Council certification of the FEIR and the approvals granted for the construction and operation of the WLC.
- In November 2015, the City Council, in response to initiative petitions submitted to it for the GPA, Zone Change, the WLC Specific Plan and the Development Agreement, adopted ordinances which vacated approvals for those entitlements granted in August, and then reapproved the GPA, the Zone Change, the WLC Specific Plan and the Development Agreement. *The WLC, through the WLC Specific Plan, is entitled for 40.6 million square feet of logistics and associated land uses and infrastructure on the 2,610-acre Project site.*
- In February 2016, lawsuits were filed challenging the use of the initiative process to adopt the Development Agreement. The trial judgement rejected the challenges (later overturned on appeal).
- On February 8, 2018, the Honorable Sharon Waters, Judge of the Riverside Superior Court, found five deficiencies in the FEIR. The key findings from Judge Waters' ruling are quoted below:

Energy Impacts: “The FEIR must provide a comparison of feasible, cost-effective renewable energy technologies in the Energy Impacts analysis”.

Biological Impacts: “The FEIR should remove all references to and consideration of the 910 acres of SJWA and MSHCP lands as “buffer zone” or “CDFW Conservation Buffer Area” in the Biological Resources and Habitat Impacts analysis”.

Noise Impacts: “The FEIR must provide an analysis of construction noise over ambient levels; provide adequate analysis on construction noise impacts on nearby homes; address the inadequacy of mitigation measures, which fail to include performance standards or ways to reduce construction noise”.

Agricultural Impacts: “The FEIR and the resolution certifying the FEIR require clarification as to whether loss of locally important farmland will have a significant direct or cumulative impact on agriculture and, if significant, the FEIR must either explain how proposed mitigation will reduce the impact or why other mitigation is not feasible”.

Cumulative Impacts: “The FEIR should include consideration of recently constructed and proposed large warehouse projects in the summary of projections method and should analyze

whether individually significant impacts may be cumulative considerable”.

- In June 2018, a judgement was entered, and a writ issued which ordered the City to set aside the certification of the FEIR. The Revised Sections of the FEIR (RSFEIR), was prepared to correct the deficiencies identified in the February 2018 ruling.
- In July 2018, the RSFEIR was circulated to the public for review and comment.
- In August 2018, the Court of Appeal, Fourth Appellate District, Division One, reversed the trial court judgment in the lawsuits attacking the use of the initiative process to approve the Development Agreement, holding that the initiative process could not be used to approve the Development Agreement, and directed the trial court to issue a writ of mandate ordering the City to vacate its November 2015 approval of the Development Agreement. The Court of Appeal’s decision did not affect the validity of the WLC Specific Plan, the GPA, the rezoning or the request for annexation adopted through the initiative process, all of which are still in effect.
- On August 15, 2019, the U.S. Environmental Protection Agency’s approval of the use of the California EMFAC2017 air quality analysis model resulted in requiring revisions to portions of the RSFEIR. Because the RSFEIR utilized EMFAC2014 for the Project and cumulative analyses for air quality, greenhouse gas, and energy evaluations, these portions of the RSFEIR using EMFAC2014 were addressed in Draft Recirculated Sections of the RSFEIR (“Recirculated Sections”) using EMFAC2017.
- In December 2019, the Recirculated Sections were circulated to the public for review and comment (Revised Final EIR Part 2).
- On April 30, 2020 in accordance with *Public Resources Code* Section 21092.5, the City provided written responses to public agencies that commented on the Recirculated Sections (Revised Final EIR Part 2) and RSFEIR (Revised Final EIR Part 3).
- On May 2, 2020, the Final Responses to Comments and Errata was published, providing written responses to all comments received on the RSFEIR and the Recirculated Sections (Revised Final EIR Part 1a).
- On May 14, 2020, the Planning Commission held a public hearing to consider the Project and staff recommendations. The Commission, after considering written comments and oral testimony on the Revised Final EIR, determined that no new information was presented that would require recirculation of the Revised Final EIR. Following public testimony, submission of additional written comments, and staff recommendations, the Commission certified the Revised Final EIR as having been completed in compliance with CEQA, adopted Facts, Findings and the Statement of Overriding Considerations, and the further recommendations in the Staff Report, and approved the Parcel Map and recommended that the City Council approve the Development Agreement.
- On May 26, 2020, the Planning Commission’s Project approval and Revised Final EIR certification was appealed to the City Council hearing of June 16, 2020.

- On June 16, 2020, the City Council held a public hearing to consider the Development Agreement, as well as the appeal of the Planning Commission’s May 14 certification of the Revised Final EIR and approval of the Tentative Parcel Map. The Council, after considering written comments and oral testimony on the Revised Final EIR, determined that no new information was presented that would require recirculation of the Revised Final EIR. Following public testimony, submission of additional written comments, and staff recommendations, the Council certified the Revised Final EIR as having been completed in compliance with CEQA, adopted Facts, Findings and the Statement of Overriding Considerations, and the further recommendations in the Staff Report, and approved the Parcel Map and the Development Agreement.
- The Revised Final EIR serves to evaluate the environmental effects of the construction and operation of the World Logistics Center project.

IV. INDEPENDENT JUDGMENT FINDING

The Applicant originally retained the independent consulting firm of LSA Associates, Inc. (“LSA”) to prepare the FEIR for the Project. LSA prepared the FEIR under the supervision, direction and review of the City with the assistance of an independent peer review by Dr. Timothy Krantz, University of Redlands, and Fehr & Peers for the Traffic Impact Analysis. Environmental Science Associates (ESA) was later retained to prepare the RSFEIR and Recirculated Sections. The Applicant retained Kimley-Horn and Associates to assist in reviewing the RSFEIR, Recirculated Sections, and Responses to Comments. The City of Moreno Valley is the Lead Agency for the preparation of the Revised Final EIR, as defined by CEQA, Public Resources Code Section 21067. This Council has received and reviewed the Revised Final EIR prior to certifying the Revised Final EIR and prior to making any decision to approve or disapprove the Parcel Map.

Finding: Consistent with Public resources Code Section 21082.1 CEQA and Section 15084 of the CEQA Guidelines, the City has conducted its own independent review and analyses of the Revised Final EIR, and circulated draft and proposed final documents, including the responses to comments and the Errata. The Revised Final EIR reflects the City’s independent judgment.

A. GENERAL FINDING ON MITIGATION MEASURES

In preparing for the consideration of the Parcel Map, part of the Project, City staff incorporated the mitigation measures set forth in the Revised Final EIR as applicable to that approval for the Project. In the event that the approvals do not use the exact wording of the mitigation measures recommended in the Revised Final EIR, in each such instance, the adopted mitigation measures incorporated into approvals are intended to be identical or substantially similar to the mitigation measure set forth in the MMRP (Exhibit B to the Resolution). Any minor revisions were made for the purpose of improving clarity or to better define the intended purpose.

Finding: Sections 4.8 and 4.9 of the Development Agreement require the developer of the Project to construct or pay for all necessary traffic improvements and a fire station, all as needed, as a result of the development of the Project. In return, section 1.5, 4.8, and 4.9 of the Development Agreement exempts the Project from the payment of development impact fees ordinarily imposed under Municipal Code sections 3.42.030, 040, and 060. These exemptions shall remain in effect only as long as the Development Agreement, is in effect. If the Development Agreement is approved but does not become effective or if it is approved and does become effective and is terminated for any reason, the requirements that the Project pay development impact fees under Municipal Code sections 3.42.030, .040, .050, and .060 shall become effective.

Unless specifically stated to the contrary in these findings, it is this Council’s intent to adopt all mitigation measures recommended in the Revised Final EIR which are applicable to the Project. If a measure has, through error, been omitted from the Approvals or from these Findings, and that measure is not specifically reflected in these Findings, that measure shall be deemed to be adopted pursuant to this paragraph. In addition, unless specifically stated to the contrary in these Findings, all Approvals repeating, or rewording mitigation measures recommended in the Revised Final EIR are intended to be substantially similar to the

mitigation measures identified in the Revised Final EIR and as shown in the MMRP (Resolution Exhibit B) and are found to be equally effective in avoiding or lessening the identified environmental impact. In each instance, the Approvals contain the final wording for the mitigation measures.

V. ENVIRONMENTAL IMPACTS AND FINDINGS

City staff reports, the Revised Final EIR, written and oral testimony at public meetings or hearings, these facts, findings, and statement of overriding considerations, and other information in the administrative record, serve as the basis for the City's environmental determination.

The detailed analysis of environmental impacts defined as potentially significant by CEQA and mitigation measures for the Project is presented in the Revised Final EIR Parts 2, 3 and 4. Responses to comments on the DEIR, along with copies of the comments, are provided in the Revised Final EIR Part 4 Volume 1 (regarding comments on the 2015 DEIR) and Revised Final EIR Part 1 (regarding comments on the 2018 RSFEIR and the 2019 Recirculated Sections).

The DEIR evaluated fourteen major environmental categories for potential impacts including Aesthetics, Agricultural Resources, Air Quality, Biological Resources, Cultural Resources, Hazards and Hazardous Materials, Hydrology and Water Quality, Land Use, Noise, Population and Housing, Public Services and Facilities (including Recreation), Transportation, Utilities and Service Systems, and Greenhouse Gases and Global Climate Change. Both Project-specific and cumulative impacts were evaluated. In addition, the analysis of potentially significant environmental impacts and mitigation measures were further evaluated and/or updated within the RSFEIR and Recirculated Sections, and associated Responses to Comments and Errata, in response to the February 2018 court ruling noted above, and described in detail within the Revised Final EIR Part 1, Topical Response C.

Of these fourteen major environmental categories, the Council concurred with the conclusions in the Revised Final EIR that the issues and sub issues discussed in Sections V.A and V.B below were either less-than-significant without mitigation or could be mitigated below a level of significance. For the remaining potential environmental impacts that could not feasibly be mitigated below a level of significance discussed in Section V.C, the authority to impose a feasible mitigation measure is vested in another jurisdiction and overriding considerations exist which made these potential impacts acceptable to the Council. Based on the entire record and having considered the unavoidable adverse impacts of the Project, the City hereby determines that all feasible mitigation has been adopted to reduce or avoid the potentially significant impacts identified in the Revised Final EIR and that no additional feasible mitigation is available to further reduce significant impacts.

A. LESS-THAN-SIGNIFICANT ENVIRONMENTAL IMPACTS NOT REQUIRING MITIGATION

The Moreno Valley City Council hereby finds that the following potential environmental impacts of the Project are less-than-significant and therefore do not require the imposition of mitigation measures.

1. Agricultural and Forestry Resources

a. Forest Land Zoning

Potential Significant Impact: Whether the Project would conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g)).

Findings: Potential impacts of the Project related to forest land zoning were analyzed in detail in Section 4.2 of the Revised Final EIR Part 3. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to forest land and timberland; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.2 of the Revised Final EIR Part 3 and the California Department of Forestry and Fire Protection, there are no areas designated as forest land or timberland on the Project site. Therefore, no significant impacts would occur from the implementation of the Project. (Revised Final EIR Part 3 pg. 4.2-8).

b. Loss or Conversion of Forest Land

Potential Significant Impact: Whether the Project would result in the loss of forest land or conversion of forest land to non-forest use.

Findings: Potential impacts of the Project related to the loss or conversion of forest land are discussed in detail in Section 4.2 of the Revised Final EIR Part 3. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to the loss or conversion of forest land; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.2 of the Revised Final EIR Part 3 and the California Department of Forestry and Fire Protection, there are no areas of forest land on the Project site. Therefore, no significant impacts would occur from the implementation of the Project (Revised Final EIR Part 3, pg. 4.2-8).

c. Existing Zoning and Williamson Act

Potential Significant Impact: Whether the Project would conflict with existing zoning for agricultural use or a Williamson Act contract.

Findings: Potential impacts of the Project related to conflicts with existing zoning for agricultural uses or Williamson Act properties are discussed in detail in Section 4.2 of the Revised Final EIR Part 3. Based on the

entire record before us, this Council finds that development of the Project will not result in conflicts with existing agricultural zoning or an existing Williamson Act contract; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.2 of the Revised Final EIR Part 3, while some portions of the 2,610-acre Project site are currently used for agriculture, there were no Williamson Act contracts on either the Project site or any adjacent properties. According to Section 4.2 of the Revised Final EIR Part 3, agriculture is allowed in most areas of the City as an interim land use until it is replaced by development (Revised Final EIR Part 3, pg. 4.2-9). Currently, the City's updated 2019 General Plan Land Use Map shows that there are no agricultural zones identified on the Project site or on any of the surrounding properties. In addition, the Moreno Valley Map Viewer¹ that provides geographic and parcel information via Geographic Information System (GIS) data does not identify the Project site's zoning for agricultural uses. Because the Project would not conflict with any Williamson Act contracts and is consistent with the General Plan's land use and zoning designations, the impacts related to this issue would be less than significant and no mitigation is required. (Revised Final EIR Part 3, pg. 4.2-9).

d. Farmland Conversion

Potential Significant Impact: Whether the Project would result in the conversion of Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural land use.

Findings: Potential loss of Farmland (Prime Farmland, Unique Farmland or Farmland of Statewide Importance) is discussed in the Revised Final EIR Part 3, Section 4.2. Based on the entire record before us, this Council finds that development of the Project will not result in the loss of any Farmland; therefore, no mitigation is required.

Facts in Support of the Finding: According to Section 4.2 of the Revised Final EIR Part 3, while portions of the Project site are currently used for agriculture, there is no land currently designated as Farmland, on the 2,610-acre Project site or in the 104-acre off-site improvement area. Because the Project would not convert any on-site or off-site land designated as Farmland the Project's impacts related to this issue would be less than significant, and no mitigation is required (Revised Final EIR, Part 3, pgs. 4.2-9 and 4.2-10).

¹ Accessed February 2, 2020. Retrieved from: https://moval.geocortex.com/Html5Viewer/index.html?viewer=comv_hv

e. **Conversion of Farmland to Non-Agricultural Uses**

Potential Significant Impact: Whether the Project would involve other changes in the existing environment which, due to their location or nature, could result in conversion of farmland to non-agricultural use, or conversion of forest land to non-forest use.

Finding: The current agricultural status of the Project site and potential impacts of the Project related to conversion of the Project site to non-agricultural uses are discussed in detail in Section 4.2 of the Revised Final EIR Part 3. The 25 acres of Unique Farmland identified in the FEIR were determined to be Farmland of Local Importance in 2017. The Project would convert approximately 2,361 acres that are designated as Farmland of Local Importance, approximately 2,200 acres of which are being farmed, to nonagricultural uses (Revised Final EIR, Part 3 pg. 4.2-10). However, results of the California Land Evaluation and Site Assessment (LESA) Model indicated a less than significant impact and therefore the conversion of the currently farmed land does not require mitigation. Based on the entire record before us, this Council finds that potentially significant impacts related to conversion of farmland to non-agricultural use would be a less than significant level without implementation of mitigation.

Facts in Support of the Finding: In addition to the California Department of Conservation's Farmland Mapping and Monitoring Program (FMMP) designations, Riverside County has established a program through which it classifies various land within the County as Locally Important Farmland. The state uses the County's determination to identify Farmland of Local Importance for its FMMP designations. The factors used by Riverside County to define Locally Important Farmland are provided in Section 4.2.1.1 of the Revised Final EIR, Part 3.

The LESA Model. The California LESA Model was developed to provide lead agencies with an optional methodology to ensure that potentially significant effects on the environment from agricultural land conversions are quantitatively and consistently considered in the environmental review process (Public Resources Code Section 21095), including in CEQA reviews. The California LESA Model evaluates measures of soil resource quality, a given project's size, water resource availability, surrounding agricultural lands, and surrounding protected resource lands. For a given project, the factors are rated, weighted, and combined, resulting in a single numeric score. The project score becomes the basis for making a determination of a project's potential significance.

To assess potential agricultural resource impacts that may result from development of the World Logistics Center site, the LESA model was run by WSP for the 2,610-acre project area. The total LESA score for the Project is 60.4, which is considered significant unless either the Land Evaluation (LE) sub-score or the Site Assessment (SA) sub-score is less than 20. The LE sub-score is 40.9 and the SA sub-score is 19.5, indicating a less than significant impact and therefore does not require mitigation (Revised Final EIR Part 3, pg. 4.2-11).

An independent analysis was conducted on the potential agricultural resource impacts that may result from development of the World Logistics Center site. The LESA model was run by the Agribusiness, Natural Resources & Energy Practice Group of Cushman & Wakefield Western, Inc. (C&WW) for the 2,610-acre Project area. The total LESA score for the project is 58.9, which is considered significant only if the LE and

SA sub-scores are each greater than 20. The LE sub-score is 40.9 and the SA sub-score is 18.0, indicating a less than significant impact and therefore does not require mitigation (Revised Final EIR Part 3, pg. 4.2-11).

The majority of the World Logistics Center Project site is currently designated as Farmland of Local Importance by the state's FMMP as determined by the County. The County's maps do not reflect the City's General Plan Land Use Map, which shows no agricultural designations in the City (Revised Final EIR Part 3, pg. 4.2-12).

Implementation of the Project would result in the permanent conversion of approximately 2,200 acres currently used for dry farming to non-agricultural uses and would result in the permanent conversion of approximately 2,361 acres of land designated as Farmland of Local Importance. While this could have an effect on accelerating the loss of other existing agricultural land, portions of the state-owned lands to the south likely will continue in agricultural production. Likewise, there is no other agricultural use in the Zone of Influence (term used in the State LESA Model) and a majority of the land in that zone is vacant (i.e., in the Badlands to the east and portions of the San Jacinto Wildlife Area and the Lake Perris State Recreation Area to the south). The conversion of agricultural lands to urban uses is supported by the City's General Plan policies, as discussed in Section 4.2 of the Revised Final EIR Part 3. The entire Project site and adjacent lands have been designated for urban uses for nearly 20 years by the City, and the area designated Farmland of Local Importance within the Specific Plan area has been permanently converted to nonagricultural urban uses. Therefore, Project implementation will result in less than significant impacts to conversion of Farmland of Local Importance. No mitigation is required.

2. Air Quality

a. Odors

Potential Significant Impact: Whether the Project would create objectionable odors affecting a substantial number of people.

Findings: Potential impacts of the Project related to odors are discussed in detail in Section 4.3 of the Revised Final EIR Part 4 Volume 3. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to objectionable odors; therefore, no mitigation is required.

Facts in Support of the Findings: As stated in Section 4.3.5.1 of the Revised Final EIR Part 4 Volume 3, diesel exhaust and volatile organic compounds (VOCs) would be emitted during construction of the Project, which are objectionable to some; however, emissions would disperse rapidly from the Project site and therefore should not reach an objectionable level at the nearest sensitive receptors. Diesel exhaust would also be emitted during operation of the Project from the long-haul trucks that would visit the Project site. However, the concentrations would not be at a level to result in a negative odor response at nearby sensitive or worker receptors. In addition, modern emission control systems on diesel vehicles since 2007 virtually eliminate diesel's characteristic odor. Further, Project mitigation requires that 2010 or newer diesel vehicles be used during construction.

During blow-down maintenance activities, natural gas odors will be present around the SDG&E Compressor Plant located adjacent to the Project site. When the southernmost portion of the WLC Specific Plan area is

developed, these odors will occasionally be detectable from the industrial warehouse properties adjacent to the SDG&E facility. These odors will be infrequent and odorized natural gas will not be present in high concentrations. Therefore, potential odor impacts from the adjacent natural gas operations are considered to be less than significant and do not require mitigation.

South Coast Air Quality Management District (SCAQMD) Rule 402 dictates that air pollutants discharged from any source shall not cause injury, nuisance, or annoyance to the health, safety, or comfort of the public. While the application of architectural coatings and installation of asphalt may generate odors, these odors are temporary and not likely to be noticeable beyond the Project boundaries. SCAQMD Rules 1108 and 1113 identify standards regarding the application of asphalt and architectural coatings, respectively.

SCAQMD Rule 1108 sets limitations on ROG (reactive organic gases), which are similar to and interchangeable with VOCs content in asphalt. This rule is applicable to any person who supplies, sells, offers for sale, or manufactures any asphalt materials for use in the South Coast Air Basin. Rule 1113 of the SCAQMD deals with the selling and application of architectural coatings. Rule 1113 is applicable to any person who supplies, sells, offers for sale, or manufactures any architectural coating for use in the Basin that is intended to be applied to buildings, pavements, or curbs. This rule is also applicable to any person who applies or solicits the application of any architectural coating within the Basin. Rule 1113 sets limits on the amount of VOC emissions allowed for all types of architectural coatings, along with a time table for tightening the emissions standards in the future. Compliance with Rule 1113 means that architectural coatings used during construction would have VOC emissions that comply with these limits.

Adherence to applicable provisions of these rules is standard for all development within the Basin. In addition, conditions for the design of waste storage areas on the site would be established through the permit process to ensure enclosures are appropriately designed and maintained to prevent the proliferation of odors. Solid waste generated by the on-site uses will be collected by a contracted waste hauler, ensuring that any odors resulting from on-site uses would be adequately managed.

b. Long-Term Microscale (CO Hot Spot) Emissions

Potential Significant Impact: Whether the Project would violate any air quality standard or contribute substantially to an existing or projected air quality violation.

For carbon monoxide (CO), the applicable thresholds are:

- California State one-hour CO standard of 20.0 ppm; and
- California State eight-hour CO standard of 9.0 ppm.²

Findings: Potential impacts of the Project related to long-term microscale (CO Hot Spot) emissions are discussed in detail in Section 4.3 of the Revised Final EIR Part 2. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to long-term microscale (CO Hot Spot) emissions; therefore, no mitigation is required.

² The California standards for CO are equal to, or more stringent than, federal standards.

Facts in Support of the Findings: According to Section 4.3 of the Revised Final EIR Part 2, vehicular trips associated with the development of the World Logistics Center Project could contribute to congestion at intersections and along roadway segments in the Project vicinity resulting in potential local CO “hot spot” impacts. The primary mobile source pollutant of local concern is CO, which is a direct function of vehicle travel speeds and idling time and, thus, traffic flow conditions. CO transport is extremely limited; it disperses rapidly with distance from the source under normal meteorological conditions. However, under certain extreme meteorological conditions, CO concentrations proximate to a congested roadway or intersection may reach unhealthful levels affecting local sensitive receptors (residents, schoolchildren, etc.). High CO concentrations are typically associated with roadways or intersections operating at unacceptable levels of service or with very high traffic volumes. In areas with high ambient background CO concentrations, modeling is recommended to determine a project’s effect on local CO levels.

For this Project analysis, the intersections with the highest traffic volumes and the LOS E or F before mitigation were identified for 2025 using information from the table in the Traffic Impact Assessment (TIA) “Intersection LOS under 2025 Plus Project Phase 1 Conditions.” The intersections with the greatest LOS before mitigation were also identified for buildout using information from the table in the TIA “Intersection LOS under 2040 Plus Build-out Conditions.”

The CO concentrations were estimated using the CALINE4 model using 2025 and 2035 emission factors. The emission factors are for “all” vehicle classes and are not adjusted for a project-specific fleet to provide a worst-case scenario. In addition, the emission factors do not take into account the Project mitigation reductions from requiring that all diesel trucks are model year 2010 or newer (Revised Final EIR Part 2, pg. 4.3-35).

As shown in Revised Final EIR Part 2 Table 4.3-6: *Carbon Monoxide Concentrations at Intersections, 2025* and Table 4.3-7: *Carbon Monoxide Concentrations at Intersections, 2035*, the estimated 1-hour and 8-hour average CO concentrations from Project-generated and cumulative traffic plus the background concentrations are below the State and Federal standards (Revised Final EIR Part 2, pgs. 4.3-35 to 4.3-36). No CO hot spots are anticipated because of traffic-generated emissions by the Project in combination with other anticipated development in the area. Therefore, the mobile emissions of CO from the Project are not anticipated to contribute substantially to an existing or projected air quality violation of CO. Therefore, according to this criterion, air pollutant emissions during operation would result in a less than significant impact. No mitigation is required (Revised Final EIR Part 2, pgs. 4.3-34 to 4.3-35).

c. Acute and Chronic Non-Cancer Health Risk Emission Impacts

Potential Significant Impact: Whether the Project would have the potential to result in impacts to sensitive receptors with regards to acute and chronic non-cancer health risk impacts. For non-cancer health risk hazard index (HI); the applicable threshold is a cumulative increase for any target organ system exceeding 1.0 at any receptor location.

Findings: Potential impacts of the Project related to acute and chronic non-cancer health risk emission impacts are discussed in detail in Section 4.3 of the Revised Final EIR Part 2. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to acute and chronic non-cancer health risks related to Project emissions; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.3 of the Revised Final EIR Part 2, the construction and operation of the Project would not emit any toxic chemicals in any significant quantity other than vehicle exhaust. While there may be other toxic substances in use on-site, risk would be negligible due to intermittent use (i.e., chemicals from periodic maintenance), dispersion of chemicals throughout the Project site, and compliance with State and Federal handling regulations.

Exposure to diesel exhaust can have immediate (acute) health effects, such as irritation of the eyes, nose, throat, and lungs, and can cause coughs, headaches, lightheadedness, and nausea. In studies with human volunteers, diesel exhaust particles made people with allergies more susceptible to the materials to which they are allergic, such as dust and pollen. Exposure to diesel exhaust also causes inflammation in the lungs, which may aggravate chronic respiratory symptoms and increase the frequency or intensity of asthma attacks. However, according to the rulemaking on *Identifying Particulate Emissions from Diesel-Fueled Engines as a Toxic Air Contaminant* (California Air Resources Board (CARB) 1998), the available data from studies of humans exposed to diesel exhaust are not sufficient for deriving an acute non-cancer Reference Exposure Level (REL).

The analysis, however, does derive an estimate of acute non-cancer risks by examining the acute health effects of the various toxic components that comprise diesel and gasoline emissions. There is specific guidance for estimating the acute non-cancer hazards from these toxic components based on chemical profiles established by the CARB which was used in the revised analysis to determine the Project's acute non-cancer hazards.

To determine the Project's *chronic* non-cancer hazard impact, the highest annual emissions concentrations were determined covering the years 2020 (the commencement of Project construction) to 2035 (the full build-out of the Project). In this regard, the highest annual average concentrations prior to mitigation determined through air dispersion modeling occurred at an existing residence located within the Project boundaries. This concentration was due to the impacts of emissions from the off-road construction equipment and operation equipment. This level of impact results in a chronic non-cancer HI of 0.14. This HI is less than the SCAQMD's significance level of 1.0, and is, therefore, less than significant. The estimation of the *acute* non-cancer HI requires the estimation of the maximum 1-hour impacts of toxic air contaminants (TAC) components in organic gases and particulate matters (PM) emissions. For Project construction, estimates of the maximum 1-hour reactive organic gases (ROG) and PM exhaust emissions were derived from the Project's peak daily construction equipment emissions; for Project operation, estimates of the Project's maximum 1-hour ROG and PM emissions were derived from the Project's peak hour traffic data along the nearly 230 roadway segments contained within the study area and then speciated or broken down into the various TAC components by fuel type, gasoline and diesel, and emission type (i.e., exhaust, evaporative, brake wear and tire wear). The acute non-cancer HI was determined by using the highest annual emissions concentrations assuming that the project would be constructed between 2020 and 2034 and full operation starts in 2035. Based on this information, the maximum acute non-cancer HI found at any receptor within the model domain prior to mitigation was 0.07 during any year of project construction and operation, which is less than the SCAQMD's non-cancer HI of 1.0, and, therefore, is less than significant without mitigation. Therefore, the potential for short-term acute and chronic exposure from TAC emissions are considered to be less than significant and no mitigation is required. (Revised Final EIR Part 2, pgs. 4.3-64 to 4.3-65).

d. Odors - Cumulative

Potential Significant Impact: Whether the Project’s contribution to cumulative objectionable odors would be cumulatively considerable.

Findings: Potential cumulative impacts related to odors are discussed in detail in Section 6.3 of the Revised Final EIR Part 2, pg. 6.3-34 to 6.3-35. Based on the entire record before us, this Council finds that there will be no cumulative impacts related to objectionable odors; therefore, no mitigation is required.

Facts in Support of the Findings: Section 6.3 of the Revised Final EIR Part 2 examined the environmental documents of cumulative projects to determine whether respective projects would result in excessive nuisance odors, as defined under the California Code of Regulations and Section 41700 of the California Health and Safety Code. Of the 173 environmental documents that were evaluated (173 environmental documents were available for the 359 cumulative projects), all found that the respective projects would not create objectionable odors that will affect a substantial number of people and many projects were found to have a less than significant impact or no impact at all. None of the projects were of the type described by the SCAQMD as being associated with substantial odors such as agricultural uses, wastewater treatment plants, chemical plants, composting, refineries, landfills, dairies, and fiberglass molding. Furthermore, Project-specific impacts would be less than significant and would not exceed the AQMD’s significance threshold for odors. Therefore, impacts associated with this issue would be considered cumulatively less than significant and no mitigation is required. (Revised Final EIR Part 2 pgs. 6.3-34 to 6.3-35)

e. Cumulative CO Hot Spot Impacts

Potential Significant Impact: Whether the Project’s contribution to cumulative impacts associated with the violation of any air quality standard would be cumulatively considerable.

Findings: Potential impacts of the Project related to cumulative CO hot spot impacts are discussed in detail in Section 6.3 of the Revised Final EIR Part 2. Based on the entire record before us, this Council finds that no significant cumulative impacts related to CO hot spot impacts will occur as a result of development of the Project; therefore, no mitigation is required.

Facts in Support of the Findings: As identified in Section 4.3.5.2 of the Revised Final EIR Part 2, no significant CO hot spot impacts would occur as a result of the Project. The SCAQMD anticipates that CO emissions in the future will decrease with advances in technology. As previously identified, background concentrations in future years are anticipated to continue to decrease as the concerted effort to improve regional air quality progresses. Therefore, ambient CO concentrations, from cumulative projects, in the future years would generally be lower than existing conditions.

Of the 173 environmental documents (173 environmental documents were available for the 359 cumulative projects) that were reviewed, all projects found that no hot spot impacts would occur with their respective projects. Similar to the Project, intersections within the highest traffic volumes and worst LOS were identified and evaluated. No exceedances of significance thresholds were estimated. The traffic volumes utilized in the analysis include other past, present, and reasonably foreseeable projects expected to be constructed by the time Project Phase 1 and buildout is to occur (Revised Final EIR Part 3, Appendix F, pg. 1). Furthermore, Project-

specific impacts would be less than significant and would not exceed the AQMD’s significance threshold for CO hot spot emissions. Based on the analysis and SCAQMD methodology, it is reasonable to assume that a less than significant cumulative CO impact would occur. No mitigation is required. (Revised Final EIR Part 2 pgs. 6.3-35 and 6.3-36).

f. Cumulative Non-Cancer Hazard Index

Potential Significant Impact: Whether the Project’s contribution to the cumulative exposure of substantial pollutant concentrations on sensitive receptors would be cumulatively considerable with regard to non-cancer hazard index (HI)..

Findings: Potential impacts of the Project related to cumulative non-cancer hazard index are discussed in detail in Section 6.3 of the Revised Final EIR Part 2. Based on the entire record before us, this Council finds that no significant cumulative impacts related to non-cancer acute and chronic hazard impacts will occur as a result of development of the Project; therefore, no mitigation is required.

Facts in Support of the Findings: The SCAQMD uses the same significance thresholds for project-specific and cumulative health risk impacts. The only case where the significance thresholds for project-specific and cumulative impacts differ is the Hazard Index (HI) significance threshold for TAC emissions. The project-specific (project increment) significance threshold is HI > 1.0 while the cumulative (facility-wide) is HI > 3.0. Because the cumulative HRA included emissions from both the Project and the 359 cumulative projects, the cancer risks and chronic HIs calculated are the cumulative health risk values that will be compared to the selected cumulative HRA threshold. In terms of non-cancer thresholds, the non-cancer HI value at each of the modeled receptor locations is less than SCAQMD cumulative threshold of 3.0. Therefore, the Project is expected to have a less than significant cumulative impact (Revised Final EIR Part 2, pg. 6.3-48 through pg. 6.3-49).

3. Biological Resources

a. Adopted Policies and Ordinances

Potential Significant Impact: Whether the Project would conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.

Findings: Potential impacts of the Project related to adopted policies and ordinances are discussed in detail in Revised Final EIR Part 3. Based on the entire record before us, this Council finds that development of the Project will not result in conflict with local policies or ordinances and, therefore, no mitigation is required.

Facts in Support of the Findings: As detailed in Section 4.4 of the Revised Final EIR Part 3, City policies or ordinances identified in the General Plan protecting biological resources are summarized in Table 4.4-5: General Plan and Municipal Code Biological Resource Policies (Revised Final EIR Part 3, pg. 4.4-59 to 4.4-60) As detailed in Table 4.4-5, the Project is consistent with local policies and ordinances protecting biological resources that apply to the Project area. Compliance with State and Federal regulations to ensure protection and preservation of significant biological resources, and the implementation of the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) are the applicable policies/ programs that the Project

Attachment: 2020-XX Resolution Revised FEIR Appeal [Revision 1] (4074 : World Logistics Center)

must implement. As there are no other local policies or ordinances regarding the protection of biological resources identified by the City or other local jurisdiction applicable to the Project site, no impact would occur, and no mitigation is required. (Revised Final EIR Part 3, pgs. 4.4-59 to 4.4-60).

b. Habitat Fragmentation/Wildlife Movement

Potential Significant Impact: Whether the Project would interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors or impede the use of native wildlife nursery sites.

Findings: Potential impacts of the Project related to habitat fragmentation/wildlife movement are discussed in detail in Section 4.4 of the Revised Final EIR Part 3. Based on the entire record before us, this Council finds that development of the Project will not result in habitat fragmentation or interfere with wildlife movement; therefore, no mitigation is required.

Facts in Support of the Findings: Habitat fragmentation occurs when a single, contiguous habitat area is divided into two or more areas, or where an action isolates two or more new areas from each other. Isolation of habitat occurs when wildlife cannot move freely from one portion of the habitat to another or to/from one habitat type to another. Habitat fragmentation may occur when a portion of one or more habitats is converted into another habitat, as when scrub habitats are converted into annual grassland habitat because of frequent burning. Wildlife movement includes seasonal migration along corridors, as well as daily movements for foraging. Examples of migration corridors may include areas of unobstructed movement for deer, riparian corridors providing cover for migrating birds, routes between breeding waters and upland habitat for amphibians, and between roosting and feeding areas for birds (Revised Final EIR Part 3, pg. 4.4-64).

According to Section 4.4 of the Revised Final EIR Part 3, the Project area contains no significant cover of native plant communities and currently experiences heavy disturbance associated with agricultural activities. Additionally, the Project area is adjacent to State Route 60 (SR-60) and Gilman Springs Road on the north and east and is bordered by urban development on the west. The nearest linkage area as identified under the MSHCP is Proposed Linkage 5 and is located approximately 3 miles north of the Project. Proposed Constrained Link 20 is approximately 3.6 miles south of the Project. . The development of the Project area will not impede the movement of any wildlife; therefore, the Project will not affect any wildlife movement corridor.

The San Jacinto Wildlife Area (SJWA) currently provides foraging habitat for various resident and migratory wildlife species. The southern portion of the Project site adjacent to the SJWA lands has been actively farmed for decades and is regularly disked. The northern portion of the SJWA is designated as open space and no development is proposed for this area.

Although the Project area does not contain any designated wildlife movement corridors or MSHCP linkages (i.e., MSHCP, City General Plan, etc.) it is likely that wildlife moves through adjacent properties such as the SJWA and the Mystic Lake area to the south, the Badlands area to the east and the Lake Perris State Recreation Area to the southwest. The MBA original Project biological report concluded, updated in 2018 by ESA's surveys, that development of the Project as proposed would not directly have any significant impact on wildlife movement in the area and would not fragment habitat or adversely affect wildlife movement through the

surrounding areas because the Project site contains limited vegetation cover and minimal resource value for wildlife moving between habitat blocks (Revised Final EIR Part 4, Appendix E).

The biological report also determined that the WLC site would not impede or minimize any significant wildlife corridor for the target species associated within the Reche Canyon/Badlands Area plan, which include Bell's sage sparrow (*Amphispiza belli belli*), cactus wren (*Campylorhynchus brunneicapillus sandiegensis*), loggerhead shrike (*Lanius ludovicianus*), southern California rufous-crowned sparrow (*Aimophila ruficeps canescens*), bobcat (*Lynx rufus*), Los Angeles pocket mouse (*Perognathus longimembris brevinasus*), mountain lion (*Puma concolor*), San Bernardino kangaroo rat (*Dipodomys merriami parvus*), Stephens' kangaroo rat (*Dipodomys stephensi*), and Nevin's barberry (*Berberis nevinii*). In addition, although not required, Drainage 9, comprising the most suitable habitat in the eastern portion of the Project site, is being retained to allow for wildlife movement between the Badlands and the SJWA (e.g., relatively natural channel conditions with 50-foot setbacks on either side of the channel through the Project site property). Therefore, impacts related to wildlife movement are less than significant, and no mitigation is needed. (Revised Final EIR Part 3, pg. 4.4-64).

4. Cultural Resources

a. Human Remains

Potential Significant Impact: Whether the Project would disturb any human remains, including those interred outside of formal cemeteries.

Findings: Potential impacts of the Project related to human remains are discussed in detail in Section 4.5 of the Revised Final EIR Part 4 Volume 3. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts to human remains; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.5 of the Revised Final EIR Part 4 Volume 3, the Project site is currently undeveloped. No evidence suggesting the Project site has been utilized in the past for human burials has been identified. In the unlikely event that human remains are discovered during grading or construction activities within the Project site, compliance with State law (Health and Safety Code §7050.5) (HSC §7050.5) would be required. State law requires that no further disturbance shall occur until the County Coroner has made determination of the origin and disposition pursuant to Public Resources Code §5097.98. Because adherence to provisions of HSC §7050.5 is required of all development projects, and because adherence to the requirements in State law sufficiently mitigates for potential impacts to human remains, no significant impact related to this issue will occur. Because potential impacts associated with this issue are less than significant, no mitigation is required. (Revised Final EIR Part 4 Volume 3, pgs. 4.5-16 to 4.5-17).

b. Cumulative Cultural Resources Impacts – Human Remains

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would disturb any human remains, including those interred outside of formal cemeteries.

Findings: Potential cumulative impacts to Project-related cultural resources are discussed in detail in Section 6.5 of the Revised Final EIR Part 3. Based on the entire record before us, this Council finds that development

of the Project will not result in significant cumulative impacts related to human remains; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 6.5 of the Revised Final EIR Part 3, cumulative ground disturbance in Western Riverside County could disturb human burials. Potentially cumulative projects would be subject to the State laws that protect human remains such as Health and Safety Code Section 7050.5 and Public Resources Code Section 5097.98. Because these State laws have been adopted to protect human remains, compliance with them would assure that cumulative impacts related to the disturbance of human remains would be less than significant. Because there is no evidence of human burials on the Project site and ground disturbing activities on the Project site would be subject to the State laws cited above, the Project's less-than-significant incremental contribution to potential cumulative impacts on human burials would not cause or contribute to a significant cumulative effect. (Revised Final EIR Part 3, pg. 6.5-2 to 6.5-21).

5. Geology and Soils

a. Landslides and Rockfalls

Potential Significant Impact: Whether the Project would expose persons or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving landslides.

Findings: Potential impacts of the Project related to landslides and rockslides are discussed in detail in Section 4.6 of the Revised Final EIR Part 4 Volume 3. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to landslides and rockslides that may result in loss, injury or death; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.6 of the Revised Final EIR Part 4 Volume 3, a large older landslide has been mapped primarily off-site on the northeasterly flanks of Mount Russell, near the southwest portion of the Project site. The landslide appears to have originated on the higher slopes off-site, and moved northeast, partially onto the Project site. The Specific Plan designates 74.3 acres in the southwestern portion of the Project site as open space. This 74.3 acres includes the steepest slopes on-site (i.e., the Mount Russell foothills), which will reduce the potential for significant landslide or rockfall impacts on the Project site to less than significant levels; therefore, no mitigation is required. (Revised Final EIR Part 4 Volume 3, pg. 4.6-12).

b. Soil Erosion or Loss of Top Soil

Potential Significant Impact: Whether the Project would result in substantial soil erosion or the loss of topsoil.

Findings: Potential impacts of the Project related to soil erosion or loss of topsoil are discussed in detail in Section 4.6 of the Revised Final EIR Part 4 Volume 3. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts due to soil erosion or loss of topsoil; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.6 of the Revised Final EIR Part 4 Volume 3, development of the Project site would require the movement of on-site soils. Portions of the site have been and

are being used for dry farming, and several rural residences are present. Prior to the issuance of grading permits, the Project proponent will be required to prepare and submit detailed grading plans as each phase is developed. These plans will be prepared in conformance with applicable standards of the City's Grading Ordinance. Construction of off-site utility and roadway improvements will also result in the movement of soil. Plans are not available at this time for off-site improvements, but that construction will be subject to the same permitting and plan checking processes.

Development of the Project site and related off-site improvements would involve the disturbance of more than one acre; therefore, the Project is required to obtain a National Pollutant Discharge Elimination System (NPDES) permit. A Storm Water Pollution Prevention Plan (SWPPP) will also be required to address erosion and discharge impacts associated with the proposed on-site grading. Compliance with storm water regulations include minimizing storm water contact with potential pollutants by providing covers and secondary containment for construction materials, designating areas away from storm drain systems for storing equipment and materials and implementing good housekeeping practices at the construction site.

Additionally, a preliminary Water Quality Management Plan (WQMP) was prepared for the WLC Specific Plan and contains the post-construction measures, which will help reduce potential impacts to soil erosion to less than significant levels and identifies measures to treat and/or limit the entry of contaminants into the storm drain system. The WQMP is incorporated by reference and/or attached to the Project's SWPPP as the Post-Construction Management Plan.

As soils covering the Project site have a slight-to-high erosion hazard potential and because the Project would be required to adhere to the City's Grading Ordinance, obtain an NPDES Permit, and prepare an SWPPP and a WQMP, construction and operational impacts associated with soil erosion hazards are considered to be less than significant, and no mitigation is required.

Grading for off-site improvements would require subsequent grading permits or related approvals from both the City and County of Riverside, depending on the improvement and its location. Most roadway and intersection improvements will occur within existing rights-of-way or on land that has been previously disturbed. The SWPPP and the WQMP establish performance standards for future development, and implementation the identified measures in those plans will reduce potential erosion impacts to less than significant levels. (Revised Final EIR Part 4 Volume 3, pgs. 4.6-13 to 4.6-15).

c. Septic Tanks

Potential Significant Impact: Whether the Project would have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater.

Findings: Potential impacts of the Project related to septic tanks are discussed in detail in Section 4.6 of the Revised Final EIR Part 4 Volume 3. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to soils that may be incapable of supporting septic tanks or alternative wastewater disposal systems; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.6 of the Revised Final EIR Part 4 Volume 3, all buildings within the Project will be connected to existing wastewater facilities (sewers) owned and operated by the Eastern Municipal Water District. Septic tanks will not be used anywhere within the Project; therefore, no mitigation is required. (Revised Final EIR Part 4 Volume 3, pg. 4.6-15).

d. Seismic-Related Ground Failure

Potential Significant Impact: Whether the Project would expose persons or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving seismic ground failure.

Findings: Potential impacts of the Project related to seismic-related ground failure are discussed in detail in Section 4.6 of the Revised Final EIR Part 4 Volume 3. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to seismic-related ground failure; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.6 of the Revised Final EIR Part 4 Volume 3, the Project site is located within Seismic Zone 4 as defined by the Uniform Building Code (UBC). Exhibit S4 of the Safety Element of the City's General Plan indicates that the Project site is not located in an area susceptible to landslides or slope instability. The Project site lies on relatively flat terrain ($\pm 2\%$ grade) and no landslide areas or mass movement were observed on-site. The only steep topographical features are located in the southwest corner of the Project area. This area is designated for Open Space uses and is not proposed for development.

The Project does not propose any activity known to cause damage by subsidence (e.g., oil, gas, or groundwater extraction). Settlement generally occurs within areas of loose, granular soils with relatively low density. The Project site is underlain by relatively dense alluvial and dense sedimentary bedrock materials at depth and the potential for settlement is considered low. Because the Project site does not exhibit characteristics of a high potential for subsidence or settlement, impacts are considered less than significant. No mitigation is required.

The potential for liquefaction generally occurs during strong ground shaking within relatively cohesionless loose sediments where the groundwater is typically less than 50 feet below the surface. Because the Project site does not exhibit characteristics of a high potential for liquefaction induced settlement (i.e., relatively dense soils with groundwater levels in excess of 100 feet), impacts are considered less than significant. No mitigation is required. (Revised Final EIR Part 4 Volume 3, pg. 4.6-16).

e. Cumulative Geology Impacts – Landslides and Rockfalls

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would expose persons or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving landslides.

Findings: Potential cumulative impacts to geologic resources are discussed in detail in Section 6.6 of the Revised Final EIR Part 3. Based on the entire record before us, this Council finds that development of the Project will not result in significant cumulative impacts related to landslides or rockfalls; therefore, no mitigation is required.

Facts in Support of the Findings: The Project site includes one area that encompasses the lower slopes of Mount Russell. The Project designates these slope areas as Open Space, which would reduce the potential for landslide or rockfalls to less than significant.

Because projects in the cumulative scenario would not expose people or structures to landslides or rockfall impacts, the Project's incremental less-than-significant contribution to potential cumulative effects would not alone cause or create a significant cumulative effect relating to the exposure of people and structures to landslide or rockfall impacts. As a result, the cumulative projects in conjunction with the World Logistics Center project do not constitute a cumulatively considerable effect on exposure of persons or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving landslides (Revised Final EIR Part 3, pg. 6.6-13 through pg. 6.6-14).

c. Cumulative Geology Impacts – Soil Erosion or Loss of Topsoil

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would have a cumulative significant impact on substantial soil erosion or the loss of topsoil.

Findings: Potential cumulative impacts to geologic resources are discussed in detail in Section 6.6 of the Revised Final EIR Part 3. Based on the entire record before us, this Council finds that development of the Project will not result in significant cumulative impacts with respect to soil erosion or loss of topsoil; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 6.6 of the Revised Final EIR Part 3, projects in the cumulative scenario have the potential to result in short-term erosion of surface soils; however, as appropriate, the cumulative projects include the implementation of erosion control features that comply with National Pollutant Discharge Elimination System (NPDES) and SCAQMD Rule 403 (fugitive dust) requirements and would reduce erosion to less than significant. In addition, those projects include improvements that would not increase long-term erosion of on-site soils and therefore, would result in less than significant impacts.

The implementation of the proposed Project includes specific components to reduce potential impacts of soil erosion or loss of topsoil during construction activities. These components are identified in Section 4.6.5.2 of the Revised Final EIR Part 4 Volume 3. With the implementation of these construction measures/ components, the Project would result in a less than significant soil erosion or loss of topsoil impact. In assessing the cumulative projects in conjunction with the Project, the implementation of erosion control features that would be required to obtain grading permits would reduce the cumulative soil erosion or loss of topsoil impact to less than significant. Further, the Project's incremental less-than-significant contribution to potential cumulative impacts associated with soil erosion or the loss of topsoil alone would not cause a significant cumulative impact. Thus, cumulative erosion and topsoil impacts would not be cumulatively considerable during construction.

Long-term operations of projects in the cumulative scenario have the potential to cause soil erosion or loss of topsoil if soil stabilization measures are not incorporated into ongoing operations. However, based on review of the environmental documentation for the cumulative related projects, each project identifies that the implementation of the urban uses on the project site would result in less than significant soil erosion impacts,

or each project would incorporate soil stabilization measures to reduce soil erosion impacts to less than significant. In assessing the cumulative related projects in conjunction with the Project, the implementation of soil stabilization measures for those projects that require those measures such as the WLC Project, the potential cumulative long-term soil erosion impact would be less than significant. Because the Project includes various detention/retention, treatment and soil stabilization measures to reduce potential long-term soil erosion or the loss of topsoil with the measures identified in Section 4.6.5.2 of the Revised Final EIR Part 4 Volume 3, the Project would not cause a significant cumulative impact. Thus, cumulative erosion and topsoil impacts would not be cumulatively considerable during operation (Revised Final EIR Part 3, pg. 6.6-13 through pg. 6.4-14).

d. Cumulative Geology Impacts – Seismic-Related Ground Failure

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would expose persons or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving seismic ground failure.

Findings: Potential cumulative impacts to geologic resources are discussed in detail in Section 6.6 of the Revised Final EIR Part 3. Based on the entire record before us, this Council finds that development of the Project will not result in significant cumulative impacts related to seismic ground failure; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 6.6 of the Revised Final EIR Part 3, persons or structures associated with projects in the cumulative scenario could be exposed to geologic conditions that cause ground failure during seismic events. These potential geologic conditions include landslides, settlement, subsidence, or liquefaction, and potential ground failure that could expose people or structures to these effects. The exposure to these impacts could result in significant impacts; however, each of the cumulative projects would be subject to the City of Moreno Valley’s grading requirements and building codes. Compliance with these requirements would reduce potential effects to less than significant.

The Project site is located in an area of the City that is not subject to settlement, subsidence or liquefaction. In addition, the majority of the Project site lies on relatively flat terrain. There is one portion of the site that includes steep topographic features that could be subject to landslides; however, the Project designates this area for Open Space (Planning Area 30). In considering the implementation of the Project in combination with the cumulative related projects, no significant cumulative effect of exposing persons and structures to potential seismic ground failure would result. Therefore, impacts would be less than cumulatively considerable (Revised Final EIR Part 3, pg. 6.6-15).

6. Hazards and Hazardous Materials

a. Within Two Miles of a Public Airport or Within an Airport Land Use Plan or Within Two Miles of a Private Airport

Potential Significant Impact: Whether the Project would result in a safety hazard for people residing or working in the Project area or be located within an airport land use plan or where such a plan has not been adopted within two miles of a public airport or public use airport, resulting in a safety hazard for people residing or working in the Project area.

Findings: Potential impacts of the Project related to safety hazards associated with proximity to public and private airports are discussed in detail in Section 4.8 of the Revised Final EIR Part 4 Volume 3. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to airport safety hazards; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.8 of the Revised Final EIR Part 4 Volume 3, the nearest airport to the Project area is March Air Reserve Base (MARB), approximately 5.5 miles to the southwest. The airfield is operated by two entities, MARB (military) and March Inland Port Airport Authority (quasi- governmental/private). In addition, Perris Valley Airport is located approximate 15 miles southwest of the Project area. Perris Valley Airport is a private airport that is open to the public and is utilized for skydiving and ballooning activities. The WLC Project area is not located within the Airport Influence Area for either airport. Given the distance of the WLC Project area to both airports in the vicinity, the development of the WLC Project area as proposed would not result in private airport safety hazards for people residing or working in the WLC Project area. No impacts associated with this issue would occur and no mitigation is required. (Revised Final EIR Part 4 Volume 3, pg. 4.8-15).

e. Existing or Proposed Schools

Potential Significant Impact: Whether the Project would emit hazardous emissions or handle acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school.

Findings: Potential impacts of the Project related to existing or proposed schools are discussed in detail in Section 4.8 of the Revised Final EIR Part 4 Volume 3. Based on the entire record before us, this Council finds that development of the Project will not result in significant hazardous materials impacts related to existing or proposed schools; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.8 of the Revised Final EIR Part 4 Volume 3, there are no existing school facilities within one-quarter of a mile of the Project area. The nearest existing school is Calvary Chapel Christian School which is located approximately 1.17 miles northwest of the Project. There is one proposed elementary school site that is located within one-quarter mile of the WLC Project area. The site for proposed Wilmot Elementary School is located on Bay Avenue at Wilmot Street, approximately 0.25-mile west of the Project area.

The amount and type of materials that would be used during Project construction (building and infrastructure) or stored in the high-cube logistics distribution center after construction is unknown at this time. While the warehouse facilities themselves are not expected to utilize acutely hazardous materials, the possibility exists that such materials could be stored or transported to and from the Project site. For the purposes of this analysis, it is assumed that the Project will handle substances that may be acutely hazardous. The handling of hazardous materials or emission of hazardous substances in accordance with the Hazardous Materials Business Emergency Plan (HMBEP) as required by applicable local, State, and Federal standards, ordinances, and regulations will ensure that impacts associated with environmental and health hazards related to an accidental release of hazardous materials or emissions of hazardous substance near existing or proposed schools are less than significant and no mitigation is required. (Revised Final EIR Part 4 Volume 3, pgs. 4.8-15 through 4.8-16).

f. Routine Transport, Use, or Disposal of Hazardous Materials, Reasonably Foreseeable Upset and Accident Conditions

Potential Significant Impact: Whether the Project would create a significant hazard to the public through the routine transport, use, or disposal of hazardous materials, or create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment.

Findings: Potential impacts of the Project related to the routine transport, use, or disposal of hazardous materials and reasonably foreseeable upset and accident conditions are discussed in detail in Section 4.8 of the Revised Final EIR Part 4 Volume 3. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to the routine transport, use, or disposal of hazardous materials and reasonably foreseeable upset and accident conditions; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.8 of the Revised Final EIR Part 4 Volume 3, exposure to hazardous materials during the operation of the on-site uses may result from (1) the improper handling or use of hazardous substances; (2) transportation accidents; or (3) an unforeseen event (e.g., fire, flood, or earthquake). The severity of any such exposure is dependent upon the type and amount of the hazardous material involved; the timing, location, and nature of the event; and the sensitivity of the individual or environment affected.

Truck-Related Risks. The regulation of the transport of hazardous materials on State highways is governed by the United States Department of Transportation (USDOT), as described in Title 49 of the Code of Federal Regulations and by Title 13 of the California Code of Regulations. Appropriate documentation for all hazardous waste that is transported in connection with Project site activities would be provided as required by hazardous materials regulations. Hazardous waste produced on-site is subject to requirements associated with accumulation time limits, proper storage locations and containers, and proper labeling. Additionally, for removal of hazardous waste from the site, hazardous waste generators are required to use a certified hazardous waste transportation company, which must ship hazardous waste to a permitted facility for treatment, storage, recycling, or disposal. Compliance with applicable regulations would reduce impacts associated with the use, transport, storage, and sale of hazardous materials. The enforcement of applicable local, State, and Federal standards, ordinances, and regulations will ensure that potential impacts associated with environmental and health hazards related to an accidental release of hazardous materials are less than significant and no mitigation is required.

Freeway Accident Risks. According to the California Department of Transportation's Traffic Accident Surveillance and Analysis System (TASAS) report, there are approximately 105 accidents per year along a 3.75-mile stretch of SR-60 between Nason Street and Gilman Springs Road in the general vicinity of the Project area. The data were derived for the three-year span of January 1, 2008, to December 31, 2010.³ During this period, there were 316 accidents (average of 105 per year) along SR-60 (both westbound and eastbound). Of the 316 accidents, approximately 15.8 percent involved trucks (tractor/trailer). There were 127 eastbound accidents (19 or 15% involving trucks) and 189 westbound accidents (31 or 16.4% involving trucks). It is

³ California Department of Transportation, TSAR – Accident Summary 1/1/08-12/31/10

possible that congestion on the freeway might result in some WLC - related trucks exiting the freeway at off-ramps other than World Logistics Center Parkway or attempting to enter the freeway at on-ramps if the drivers see or hear on their radios that the freeway is congested. In most instances, drivers will use the shortest route indicated on GPS system maps or the route(s) they have used previously, regardless of traffic conditions at the time. In addition, due to the type of uses planned within the WLC Specific Plan area, much of the Project-related traffic will be accessing the WLC site during off-peak times, so the chances of congestion or accidents occurring during the time they are accessing the site would be reduced. The accident database contains no information on whether the truck was the cause of a particular accident or the time of day, the vehicles involved, if hazmat spills occurred, if trucks or other vehicles detoured off the freeway, etc. Without these data, it is overly speculative to extrapolate any particular conclusions. Despite the lack of specific evidence regarding freeway accidents, it is reasonable to conclude that potential environmental impacts in this regard will be less than significant given the regulation of truck traffic on freeways according to State and Federal laws, and truck restrictions on local streets according to the City's Municipal Code (i.e., truck route enforcement) and no mitigation is necessary.

Land Use-Related Hazmat Risks. Both the Federal Government and the State of California require all businesses that handle more than a specified amount of hazardous materials or extremely hazardous materials, to submit a Hazardous Materials Business Emergency Plan (HMBEP) to the local Certified Unified Program Agency (CUPA). The CUPA with responsibility for the City of Moreno Valley is the County of Riverside Community Health Agency, Department of Environmental Health. The HMBEP must include an inventory of the hazardous materials used in the facility, and emergency response plans and procedures to be used in the event of a significant or threatened significant release of a hazardous material. The HMBEP must also include the Material Safety Data Sheet for each hazardous and potentially hazardous substance used. The Material Safety Data Sheets summarize the physical and chemical properties of the substances and their health impacts. The plan also requires immediate notification to all appropriate agencies and personnel of a release, identification of local emergency medical assistance appropriate for potential accident scenarios, contact information of all company emergency coordinators of the business, a listing and location of emergency equipment at the business, an evacuation plan, and a training program for business personnel.

HMBEPs are designed to be used by responding agencies, such as the Moreno Valley Fire Department, to allow for a quick and accurate evaluation of each situation for an appropriate response. HMBEPs are also used during a fire to quickly assess the types of chemical hazards that firefighting personnel may have to deal with, and to make decisions as to whether or not the surrounding areas need to be evacuated. Compliance with existing law will ensure that no significant impacts pertaining to the creation of hazards affecting the public will occur. The handling of hazardous materials in accordance with the HMBEP as required by applicable local, State, and Federal standards, ordinances, and regulations will ensure that impacts associated with environmental and health hazards related to an accidental release of hazardous materials are less than significant and no mitigation is required.

Though the uses in the Project area are not expected to utilize acutely hazardous materials in their daily operation, a potential for an accidental release of hazardous materials into the environment is present at the Project site as it is at any commercial, retail, or industrial site. Compliance with the identified State and Federal

transportation safety standards will govern the handling of hazardous materials during truck and freight transfer operations. These standards include procedures to contain, report, and remediate any accidental spill or release of hazardous materials. The handling of hazardous materials in accordance with all applicable local, State, and Federal standards, ordinances, and regulations will ensure that impacts associated with environmental and health hazards related to an accidental release of hazardous materials at the Project site will be less than significant and no mitigation is required.

Hazardous On-site Facilities. The Project site is adjacent to a regional natural gas compressor station operated by San Diego Gas & Electric (SDG&E). At present, the plant occupies a 19-acre site, surrounded by 174 acres of SDG&E-owned open space. There is additional open space around the plant, consisting of land owned by the California Department of Fish and Wildlife (CDFW) as part of the SJWA. There are no plans to expand or otherwise modify the plant and/or its open space zone, which is considered adequate at this time to protect public health and safety, including users of the SJWA and new employees and users of the new warehouses associated with the WLC.

There will be sufficient setback from the plant to future warehouse uses (e.g., 1,000 feet). No development or change in operation has been announced for the property within the SJWA. Existing safety conditions will continue relative to the gas facility as it relates to the SJWA. Compliance with established safety laws and regulations regarding the natural gas facilities will reduce the potential impact to a less than significant level and no mitigation is required.

The Southern California Gas Company (SCGC) operates a natural gas metering station on a one-acre site located one-quarter mile north of the SDG&E Compressor Plant. Future warehouses will be set back at least 1,000 feet from the SCGC station. These setbacks appear sufficient to protect future uses/users within the WLC Specific Plan area if upset conditions were to occur at this station. Compliance with established safety laws and regulations regarding natural gas plants is expected to reduce this potential impact to a less than significant level and no mitigation is required. The Project site also contains two natural gas lines that cross the central and southern portions of the site in an east-west direction. They range in size from 16 to 36 inches in diameter and carry natural gas under medium and high pressure. As development occurs in areas with buried natural gas lines, the Project proponent will be required to negotiate with the involved utility provider as to whether these pipelines can be relocated or need to be protected in place. Future development is required to maintain clearance for pipelines depending on their contents and size, in consultation with the serving utility provider. As long as these design restrictions are implemented during the site design and construction process, no significant impacts are expected. However, if a catastrophic accident were to occur involving one or more natural gas lines on-site, there could be property damage and loss of life. While the chance of occurrence is low, there are potential safety risks, mainly to Project employees, if such an accident were to occur. Compliance with established safety laws and regulations regarding pipelines is expected to reduce this potential impact to a less than significant level and no mitigation is required.

Off-site Improvements. A number of off-site improvements will be needed to serve the Project, including three reservoirs, various water, sewer, and drainage improvements within existing rights-of-way, and the SR-60/World Logistics Center Parkway interchange. None of these facilities is expected to create significant hazards or risks to public health or safety. These facilities will require standard improvement plan approvals

through the City of Moreno Valley and/or County of Riverside. Based on these plan reviews, no significant hazard-related impacts are expected, and no mitigation is required.

Hunting Accidents. Immediately south of the Project area is the SJWA, where limited hunting is permitted. Hunting in these areas requires a hunting license issued by the State. The Fish and Game Code provides strict regulations on hunting, including limits on hours, time of year, quantity, and firearms.

Hunting on State lands, such as the SJWA, can only be done with shotguns that are smaller in size (higher in gauge) than 10-gauge shotguns. In addition, Federal law allows no more than three shells in the chamber of the shotgun at any given time during hunting. The SJWA is patrolled by CDFW wardens to ensure that all hunting rules and regulations are followed. The private hunt clubs are also governed by similar rules and regulations to ensure the safety of their members and the general public.

Given the proximity of the Project area to the nearby hunting areas, it is appropriate to consider the possibility of stray gunfire as a possible risk to future employees, visitors, and facilities on the Project site. Accident conditions that could arise from the nearby hunting activities are expected to be less than significant for the following reasons: the most intensive operations at the high-cube logistics center would be during off-peak hours when there is no hunting; the hunting on the adjacent areas to the south of the WLC Project area is in accordance with all applicable local, State, and Federal standards and regulations; and the range for the allowed firearms (shotguns smaller than 10-gauge) would be 60 yards or less providing a safe distance for development to occur in the WLC Project area, which would be a safe distance from the actual hunting areas. It should also be noted that the Specific Plan provides for a minimum 250-foot setback along the southern boundary of the Specific Plan property, which is greater than the minimum safe distance described above. Impacts are less than significant, and no mitigation is required.

Valley Fever. During processing of the Highland Fairview Corporate Park EIR, a local resident expressed concern regarding Valley Fever (*Coccidiomycosis*), a disease caused by fungus spores (*Coccidioides immitis*). The WLC Specific Plan site is adjacent to the Highland Fairview Corporate Park site. These fungal spores most typically lie dormant in relatively undisturbed soil with native vegetation cover in the Central Valley of California.

The likelihood of these spores to occur at this site is remote. The soil at the Project site is not undisturbed and has little, if any, native vegetation cover. The site consists primarily of disturbed agricultural soils (i.e., regularly tilled and occasionally irrigated) and had virtually no native vegetative cover. The local soils will be extensively disturbed during grading and would be regularly watered to control dust. Erosion control measures will be implemented immediately following grading. Under these conditions, it is unlikely that *Coccidioides immitis* spores would survive in the soil. This potential impact appears minimal and no mitigation is required. (Revised Final EIR Part 4 Volume 3, pgs. 4.8-16 to 4.8-20).

g. Located on a List of Hazardous Materials Sites

Potential Significant Impact: Whether the Project would be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would create a significant hazard to the public or the environment.

Findings: Potential impacts of the Project related to being located on a hazardous materials site is discussed in detail in Section 4.8 of the Revised Final EIR Part 4 Volume 3. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to development occurring on a hazardous materials site; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.8 of the Revised Final EIR Part 4 Volume 3, the Project area is not listed in any of the searched regulatory databases provided by Environmental Data Resources (EDR). This included a review of Federal, State, and local environmental databases for information pertaining to documented and/or suspected contaminated sites, known handlers or generators of hazardous waste, waste disposal facilities, releases of regulated hazardous substances and/or petroleum products within specified search distances. Analysis of soil samples obtained during the limited site characterizations conducted as part of the Phase I Environmental Site Assessments (ESAs) indicated there were trace concentrations of pesticides present in near surface soils at some of the sample locations. However, the pesticide concentrations were below the EPA’s Preliminary Remediation Goals, for residential properties. No further sampling was deemed necessary and unrestricted use of the property is warranted. Since neither the Project site nor areas in the vicinity of the Project site are listed on any of the hazardous materials sites as defined by Government Code Section 65962.5, there would be a less than significant impact and no mitigation is required. (Revised Final EIR Part 4 Volume 3, pg. 4.8-20).

e. Conflict with Emergency Response Plans

Potential Significant Impact: Whether the Project would impair the implementation of or physically interfere with an adopted emergency response plan or emergency evacuation

Findings: Potential impacts of the Project related to emergency response plan conflicts are discussed in detail in Section 4.8 of the Revised Final EIR Part 4 Volume 3. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to emergency response plan conflicts; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.8 of the Revised Final EIR Part 4 Volume 3, the City of Moreno Valley adopted its Local Hazard Mitigation Plan (LHMP) on October 4, 2011. This document identifies known hazards throughout the community and identifies strategies for which to prepare for and respond to these hazards if and when it is necessary. Figure 12-2 of the LHMP maps primary and alternative evacuations routes out of Moreno Valley. There are three (3) routes that either run through or along the Project area that are identified as primary evacuation routes: Redlands Boulevard, World Logistics Center Parkway, and Alessandro Boulevard. The Project will be designed, constructed, and maintained in accordance with applicable standards associated with vehicular access, ensuring that adequate emergency access and evacuation will be provided. Construction activities that may temporarily restrict vehicular traffic would be required to implement appropriate measures to facilitate the passage of persons and vehicles through/around any required road closures. Compliance with existing regulations for emergency access and evacuation will ensure that impacts related to this issue are less than significant and no mitigation is required. (Revised Final EIR Part 4 Volume 3, pg. 4.8-20).

f. Wildland Fire Risk

Potential Significant Impact: Whether the Project would expose people or structures to a significant risk or loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands.

Findings: Potential impacts of the Project related to wildland fire risk are discussed in detail in Section 4.8 of the Revised Final EIR Part 4 Volume 3. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to wildland fire risk; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.8 of the Revised Final EIR Part 4 Volume 3, the City of Moreno Valley is subject to both wildland and urban fires. Wildfires in particular pose a threat to the northern and eastern portions of the City, near the WLC Project area. Moreno Valley's LHMP documents that three wildland fires have occurred within the WLC Project area since 2003. Although the Project area is not within a mapped fire hazard area, the Badlands directly east of the Project area are considered a High Fire Hazard Area. Development of the eastern portion of the Project could expose persons or property to wildland fire risks given the proximity of the Project area adjacent to a High Fire Hazard Area. Regardless of this proximity, all new structures in the Project area must be constructed in compliance with Title 24 of the California Code of Regulations to safeguard life and property from fire hazards, including the installation of automated fire suppression systems. Compliance with these standards would be enforced during building permit review and the construction inspection period. In addition, no development will be allowed within the San Jacinto Fault Zone, which runs parallel and just west of Gilman Springs Road; this area of limited development will provide a fuel or fire break to help protect future occupied uses within the WLC Specific Plan.

Six fire stations presently serve the City of Moreno Valley and a seventh will be built on the Project site. Station No. 58, the Moreno Beach station, is the closest station to the Project area (approximately a quarter of a mile directly west). Given the proximity of Station No. 58, the construction of the on-site fire station and with all new structures constructed in compliance with Fire and Building Code regulations, the susceptibility and exposure of the Project to wildland fires would be limited and no mitigation is required. (Revised Final EIR Part 4 Volume 3, pg. 4.8-21).

g. Cumulative Hazards and Hazardous Materials Impacts

1. Within Two Miles of a Public Airport or Within an Airport Land Use Plan or Within Two Miles of a Private Airport

Potential Significant Impact: Whether the Project would result in a significant cumulative impacts related to safety hazards for people residing or working in the Project area or be located within an airport land use plan or where such a plan has not been adopted within two miles of a public airport or public use airport, resulting in a safety hazard for people residing or working in the Project area.

Findings: Potential cumulative impacts of the Project related to safety hazards associated with proximity to public and private airports are discussed in detail in Section 4.8 of the Revised Final EIR Part 4, Volume 3.

Based on the entire record before us, this City Council finds that development of the Project will not result in significant cumulative impacts related to airport safety hazards; therefore, no mitigation is required.

Facts in Support of the Findings: The WLC Project area is not located within the Airport Influence Area for either airport. Given the distance of the WLC Project area to both airports in the vicinity, the development of the WLC Project area as proposed would not result in private airport safety hazards for people residing or working in the WLC Project area. No impacts associated with this issue would occur and no mitigation is required. (Revised Final EIR Part 4 Volume 3, pg. 4.8-15).

2. **Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school**

Potential Significant Impact: Whether the Project would create a significant cumulative impact related to emitting hazardous emissions or handle acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school.

Findings: Potential impacts of the Project related to safety hazards associated with the emission or handling of hazardous materials are discussed in detail in Section 6.8 of the Revised Final EIR Part 3. Based on the entire record before us, this City Council finds that development of the Project will not result in cumulative significant impacts related to hazardous materials within an existing or proposed school; therefore, no mitigation is required.

Facts in Support of the Findings: The handling of hazardous materials or emission of hazardous substances in accordance with the Hazardous Materials Business Emergency Plan (HMBEP) as required by applicable local, State, and Federal standards, ordinances, and regulations would ensure that impacts associated with environmental and health hazards related to an accidental release of hazardous materials or emissions of hazardous substance near existing or proposed schools would be less than significant. The project would not contribute to cumulative safety hazards for school-age children within ¼-mile of the project because the nearest existing school is 1.17 miles from the Project site, and the nearest proposed school site is the Wilmot Elementary School, located on Bay Avenue at Wilmot Street, approximately 0.25 mile west of the Project area. Therefore, the Project would not cause or contribute to any potential significant cumulative impacts to existing or proposed schools located within 0.25 miles from the Project.

Many of the cumulative projects would use, handle, store, and/or transport hazardous materials or require demolition of structures containing such materials within ¼-mile of a proposed school. Some of the cumulative projects may be on a list of hazardous material sites compiled pursuant to Government Code Section 65962.5. However, each cumulative project would be required to comply with existing Federal, State, and local regulations related to hazardous material sites, including cleanup sites, and hazardous materials generators. As such, cumulative development would account for clean-up of many existing hazardous conditions and would not result in significant cumulative impacts related to the exposure of students to hazardous emissions within 0.25-mile of a proposed school (Revised Final EIR Part 3, pg. 6.8-14).

3. **Create a significant hazard to the public through the routine transport, use, or disposal of hazardous materials, Reasonably Foreseeable Upset and Accident Conditions**

Potential Significant Impact: Whether the Project would create a significant cumulative hazard to the public through the routine transport, use, or disposal of hazardous materials? Would the project create a significant cumulative hazard to the public or the environment through reasonably foreseeable upset and accident?

Findings: Potential impacts of the Project related to safety hazards associated with routine transport, use, or disposal of hazardous materials are discussed in detail in Section 6.8 of the Revised Final EIR Part 3. Based on the entire record before us, this City Council finds that development of the Project will not result in significant cumulative impacts related to airport safety hazards; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 6.8 of the Revised Final EIR Part 3, the Project's incremental less than significant contribution, in combination with the impacts of other cumulative projects, could create a significant impact related to this issue. For example, the substantial increase in trucks in and around the WLC site would incrementally increase the risks of accidents involving truck-related fuels (e.g., fire or explosion). However, the number of trucks containing hazardous materials on the road in a given area at any given time would be difficult if not impossible to calculate, and it would be likewise difficult to estimate the number and/or location of accidental spills and leaks, which, by their nature, are accidental or unplanned occurrences, it would be impossible to predict the specific occurrence of such events on the project site. Despite these uncertainties, it is reasonable to assume that with an increase in vehicles transporting hazardous materials would incrementally increase the potential for accidents on a regional basis. However, the enforcement of applicable local, State, and Federal standards, ordinances, and regulations will ensure that potential cumulative impacts associated with environmental and health hazards related to an accidental release of hazardous materials would be less than significant (Revised Final EIR Part 3, pg. 6.8-15)

4. **Be located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would create a significant hazard to the public or the environment;**

Potential Significant Impact: Whether the Project is located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would create a significant cumulative hazard to the public or the environment?

Findings: Potential impacts of the Project related to sites included on a hazardous materials sites are discussed in detail in Section 6.8 of the Revised Final EIR Part 3. Based on the entire record before us, this City Council finds the Project is not located on a site compiled pursuant to Government Code Section 65962.5, therefore, no mitigation is required.

Facts in Support of the Findings: Several cumulative projects could be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would create a significant hazard to the public or the environment. However, these projects would be required to comply with existing Federal, State, and local regulations related to hazardous material sites, including

cleanup sites, and hazardous materials generators. As such, cumulative development would account for clean-up of many existing hazardous conditions and would not result in cumulatively significant impacts.

The Project site is not located on a site compiled pursuant to Government Code Section 65962.5. As a result, the Project's contribution to potential cumulative impacts related to development on a hazardous materials site would not cause or contribute to a significant cumulative effect (Revised Final EIR Part 3, pg. 6.8-16).

5. **Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation;**

Potential Significant Impact: Whether the Project would cumulatively impair the implementation of or physically interfere with an adopted emergency response plan or emergency evacuation.

Findings: Potential impacts of the Project cumulatively-related impairment of an adopted emergency response plan are discussed in detail in Section 6.8 of the Revised Final EIR Part 3. Based on the entire record before us, this City Council finds that development of the Project would not contribute a significant impact to an adopted emergency response plan or emergency evacuation and would not cause or contribute to a significant cumulative effect; therefore, no mitigation is required.

Facts in Support of the Findings: It is anticipated that cumulative projects would request the appropriate approvals and be in conformance with applicable codes and regulations. Therefore, cumulative development would not impair the implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan. Cumulative impacts involving wildfires consists of future development adjacent to a High Fire Hazard Area. The risk to each future project is based on the location and interface between urbanized area and wildland areas. The risks associated with development in these areas can only be reduced through conformance with Fire and Building Code regulations, it is anticipated that cumulative development would not create a significant and cumulative impact associated with wildland fire hazards. As a result, the Project's incremental impact is less than significant and its contribution to any potential impacts related to emergency response and evacuation would not cause or contribute to a significant cumulative impact.

6. **Expose people or structures to a significant risk or loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?**

Potential Significant Impact: Whether the Project would expose people or structures to a significant cumulative risk or loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands.

Findings: Potential impacts of the Project related to wildland fire risks are discussed in detail in Section 6.8 of the Revised Final EIR Part 3. Based on the entire record before us, this City Council finds that development of the Project would not create significant contribution to cumulative human and structural risks associated with wildland fires; therefore, no mitigation is required.

Facts in Support of the Findings: Development of the eastern portion of the Project site could expose persons or property to wildland fire risks given the proximity of the Project area adjacent to a High Fire Hazard Area.

Regardless of this proximity, all new structures in the Project area must be constructed in compliance with Title 24 of the California Code of Regulations to safeguard life and property from fire hazards, including the installation of automated fire suppression systems. Compliance with these standards would be enforced during building permit review and the construction inspection period. In addition, no development would be allowed within the San Jacinto Fault Zone, which runs parallel to, and west of Gilman Springs Road; this area of limited development would serve as a fuel or fire break to help protect future occupied uses within the Project area. Compliance with existing standards, codes and regulations for fire safety would ensure that cumulative impacts related to this issue would be less than significant. The Project's incremental less-than-significant contribution, in combination with the impacts of other cumulative projects, would not cause or contribute to significant cumulative impacts related to risks from wildland fires (Revised Final EIR Part 3, pg. 6.8-17).

7. Hydrology, Drainage, and Water Quality

a. Seismic Flooding-Related Impacts

Potential Significant Impact: Whether the Project would expose people or structure to a significant risk of loss, injury, or death involving flooding, including flooding as a result of the failure of a levee or dam.

Findings: Potential impacts of the Project related to seismic flooding-related impacts are discussed in detail in Section 4.9 of the Revised Final EIR Part 4 Volume 3. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to seismic flooding-related impacts; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.9 of the Revised Final EIR Part 4 Volume 3, because neither the Project site nor the Project's off-site improvement areas are not identified as being located within the City's mapped dam inundation area; therefore, the Project would not result in the exposure of people or structures to risk of loss, injury, or death involving flooding as a result of failure of either the Poorman Reservoir (Pigeon Pass Dam) or Lake Perris Dam. Impacts related to this issue would be less than significant, and no mitigation is required. (Revised Final EIR Part 4 Volume 3, pg. 4. 9-26 to 4.9-28)

h. Seismic-Related Impacts

Potential Significant Impact: Whether the Project would expose people or structure to a significant risk of loss, injury, or death involving inundation by seiche, tsunami, or mudflow.

Findings: Potential impacts of the Project related to seismic-related impacts are discussed in detail in Section 4.9 of the Revised Final EIR Part 4 Volume 3. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to loss, injury, or death involving inundation by seiche, tsunami, or mudflow; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.9 of the Revised Final EIR Part 4 Volume 3, the Project area is not at risk of inundation by a tsunami as it is located approximately 56 miles from the Pacific Ocean. The Project area is located approximately 2.5 miles northeast of Lake Perris. Lake Perris is an enclosed body of water and could be subject to a seiche during a seismic event. However, a seiche event would not affect the Project area because water levels in the lake are not high enough to overtop the Perris Dam in the

event of a seiche.¹ The Perris Dam has been designed to prevent seiche phenomena due to the region's high seismicity. In addition, the topography between the Specific Plan area and Lake Perris has multiple hills and valleys. Given these factors, impacts associated with seiche events are less than significant for the WLC Project.

Except for the far southwest corner, the Project site is located in a gently sloping area where landslides and mudslides would not occur. No development is proposed on the steep slopes of Mount Russell in the southwesterly portion of the property, which is included in the 74.3 acres of open space designated within the WLC Specific Plan. Therefore, a less than significant impact associated with exposure of people or structure to a significant risk of loss, injury, or death involving inundation by seiche, tsunami, or mudflow would occur, and no mitigation is required. (Revised Final EIR Part 4 Volume 3, pgs. 4.9-27).

c. Groundwater

Potential Significant Impact: Whether the Project would substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that the Project may impede sustainable groundwater management of the basin and there would be a net deficit in aquifer volume or a lowering of the local groundwater table level.

Findings: Potential impacts of the Project related to groundwater impacts are discussed in detail in Section 4.9 of the Revised Final EIR Part 4 Volume 3. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to interference with groundwater recharge such that the Project may impede sustainable groundwater management of the basin; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.9 of the Revised Final EIR Part 4 Volume 3, based on the Water Supply Assessment (WSA) prepared for the Project by the Eastern Municipal Water District (EMWD), water demand for the proposed on-site uses would total approximately 1,991.25 acre-feet per year (AFY).⁴ The EMWD considers this a worst-case estimate based on the total acres and amount of square footage of logistics uses proposed by the Project. This estimate does not take into account the Project landscaping design with xeriscape drought-tolerant landscaping and on-site collection of runoff and channeling it to landscaped areas to minimize irrigation on the interior of the Project site. The Project will obtain water service from the EMWD. It is anticipated that the Project would primarily utilize imported water purchased from Metropolitan Water District of Southern California (MWDSC). In the event that the supply of imported water is reduced, it would be supplemented with new local supply projects during multiple dry years, if needed. The WSA prepared for the Project indicates that development of the Project will not include groundwater for water supply. Rather, this Project, as well as other new developments in the EMWD's service area, will be supplied exclusively with imported water provided by MWDSC. The imported water may be treated by MWDSC as untreated water and subsequently treated by the EMWD or recharged into the basin for later withdrawal.

The Project will not substantially interfere with groundwater recharge due to the Project implementation of bioretention areas and detention basins with infiltration capacity that mitigates the impact of reduced pervious

⁴ *Water Supply Assessment Report for the World Logistics Center Specific Plan in Moreno Valley*, Eastern Municipal Water District, March 21, 2012.

areas. Bioretention areas and detention basins will be implemented in addition to the remaining impervious areas. The only use of groundwater may be to support continued agriculture on portions of the WLC Specific Plan property that have not yet been developed. The EMWD developed the West San Jacinto Groundwater Basin Management Plan (Plan) to help ensure that local groundwater resources are conserved, and groundwater overdraft does not occur, based on projections of future growth and expected water supply conditions. The Plan projects the water consumption demands of existing and future development based on rates of growth assumed by regional planning organizations (i.e., Southern California Association of Governments (SCAG) and Western Riverside County Council of Governments (WRCOG0) and estimates water demand versus available supply under different water supply scenarios (e.g., multiple dry years).

Based on the State Water Supply analysis provided in the Revised Final EIR, the WLC Project is not expected to interfere with groundwater recharge activities or groundwater supplies. Impacts associated with this issue are less than significant, and no mitigation is required. (Revised Final EIR Part 4 Volume 3, pg. 4.9-28 to 4.9-30).

d. 100-Year Flooding Impacts

Potential Significant Impact: Whether the Project would place within a 100-year flood hazard area structures that would impede or redirect flood flows or place housing within a 100-year flood hazard area as mapped on a Federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map.

Findings: Potential impacts of the Project related to 100-year flood events are discussed in detail in Section 4.9 of the Revised Final EIR Part 4 Volume 3. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to 100-year flooding events; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.9 of the Revised Final EIR Part 4 Volume 3, the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRMs) identify areas subject to flooding during the 100-year storm.⁵ Based on these FIRM maps, the Project site does not fall within a 100-year flood zone.⁶ Because the Project site does not lie within a 100-year floodplain impacts related to this issue are less than significant. No mitigation is required. (Revised Final EIR Part 4 Volume 3, pg. 4.9-30 to 4.9-32).

e. Hydrology and Water Quality Cumulative Impacts

1. **Would the Project expose people or structure to a significant risk of loss, injury, or death involving flooding, including flooding as a result of the failure of a levee or dam?**

⁵ The term “100-year” is a measure of the size of the flood, not how often it occurs. The “100-year flood” is a flooding event that has a one percent chance of occurring in any given year.

⁶ FEMA DFIRM Data, 2008.

Potential Significant Impact: Whether the Project would expose people or structure to a significant cumulative risk of loss, injury, or death involving flooding, including flooding as a result of the failure of a levee or dam.

Findings: Potential cumulative impacts of the Project related to flooding, including flooding as a result of the failure of a levee or dam are discussed in detail in Section 6.9 of the Revised Final EIR Part 3. Based on the entire record before us, this City Council finds that development of the Project would not cause or contribute to a significant cumulative effect associated with the exposure of people or structures to potential flooding from the failure of a levee or dam; therefore, no mitigation is required.

Facts in Support of the Findings: Cumulative development within the watershed that encompasses the Project site and off-site improvement areas could be subject to potential flooding due to a failure of the nearest dam. The nearest dams to the Project site are Pigeon Pass Dam at Poorman’s Reservoir located approximately five miles northwest of the Project site and Lake Perris Dam located approximately four miles southwest of the Project site. Although cumulative development could be exposed to inundation flooding, the Project is not within anticipated inundation areas of either dam or any other dam as mapped within the City of Moreno Valley General Plan Final Program EIR. Therefore, the implementation of the Project would not contribute to the exposure of people or structures to risk of loss, injury, or death involving flooding as a result of failure of either the Poorman Reservoir (Pigeon Pass Dam) or Lake Perris Dam. Therefore, the Project would not cause or contribute to any cumulative effect associated with the exposure of people or structures to flooding (Revised Final EIR Part 3, pg. 6.9-25 through 6.9-26).

2. **Would the Project expose people or structure to a significant risk of loss, injury, or death involving inundation by seiche, tsunami, or mudflow?**

Potential Significant Impact: Whether the project would expose people or structure to a significant cumulative risk of loss, injury, or death involving inundation by seiche, tsunami, or mudflow.

Findings: Potential cumulative impacts of the Project related to safety hazards associated with significant risk of loss, injury, or death involving inundation by seiche, tsunami, or mudflow are discussed in detail in Section 6.9 of the Revised Final EIR Part 3. Based on the entire record before us, this City Council finds that development of the Project would not cause or contribute to a significant cumulative impact relating to the exposure of people or structures to potential significant cumulative inundation impacts from seiche, tsunami, or mudflow; therefore, no mitigation is required.

Facts in Support of the Findings: Cumulative development within the watershed that encompasses the Project site and off-site improvement areas would not be subject to potential inundation by seiche or tsunami. As described in Section 4.9.5.2, the nearest enclosed body of water that could be subjected to seiche conditions is Lake Perris, but the Perris Dam has been designed to prevent seiche phenomena. The watershed is not located near the Pacific Ocean which is where tsunami risks occur. Therefore, cumulative development would not expose people or structures to inundation flooding due to seiche or tsunamis. As a result, the Project would not cause or contribute to any significant cumulative seiche or tsunami inundation impacts. Cumulative development within the watershed could expose people and structures to mudflow inundation due to the presence of steep slopes within the watershed. This exposure could result in significant cumulative impacts.

However, because the Project site as well as off-site improvement areas do not have steep slopes, the Project's contribution to potential cumulative mudflow inundation impacts would not be cumulatively considerable (Revised Final EIR Part 3, pg. 6.9-26).

3. **Would the Project substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level?**

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would have significant cumulative impacts relating to the depletion of groundwater supplies or interference with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level.

Findings: Potential cumulative impacts of the Project related to the depletion of groundwater supplies or interference with of groundwater recharge are discussed in detail in Section 6.9 of the Revised Final EIR Part 3. Based on the entire record before us, this City Council finds that development of the Project would not cause or contribute to a significant cumulative depletion of groundwater supplies or the interference with groundwater recharge; therefore, no mitigation is required.

Facts in Support of the Findings: Cumulative development within the Eastern Municipal Water District (EMWD) service area is planned to be supplied exclusively with imported water provided by the Metropolitan Water District. Therefore, cumulative development would not deplete groundwater supplies from use of groundwater. As a result, the Project would not contribute to cumulative impacts to groundwater supplies. Cumulative development would reduce the amount of pervious surfaces within the EMWD service area. This reduction of potential groundwater infiltration areas could cause a significant impact on groundwater recharge. However, because the Project includes the implementation of bioretention areas and detention basins that would provide for infiltration opportunities, the Project's contribution to potential significant cumulative groundwater infiltration impacts would not be cumulatively considerable (Revised Final EIR Part 3, pg. 6.9-26 through 6.9-27).

4. **Would the Project place within a 100-year flood hazard area structures that would impede or redirect flood flows?**

Would the Project place housing within a 100-year flood hazard area as mapped on a Federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would have significant cumulative impacts relating to the placement of structures within a 100-year flood hazard area that would impede or redirect flood flows or the placement of housing within a 100-year flood hazard area as mapped on a Federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map.

Findings: Potential cumulative impacts of the Project related to the placement of structures on 100-year flood hazard areas are discussed in detail in Section 6.9 of the Revised Final EIR Part 3. Based on the entire record

before us, this City Council finds that development of the Project would not cause or contribute to significant cumulative impacts relating to the placement of structures within a 100-year flood hazard area that would impede or redirect flood flows; therefore, no mitigation is required.

Facts in Support of the Findings: Cumulative development within the watershed that encompasses the project site and off-site improvement areas include areas subject to 100-year storms according to the FEMA FIRM maps. Therefore, cumulative development could expose structures or housing to flood hazards and result in significant cumulative flood hazard impacts. However, because the Project site and off-site improvements are not located in any areas subject to flooding during a 100-year storm, the implementation of the Project would not cause or contribute to any potential significant cumulative flood hazard to structures or housing (Revised Final EIR Part 3, pg. 6.9-27).

5. **Would the Project substantially alter the existing local drainage patterns of the site and substantially increase the rate or amount of surface runoff in a manner which would result in substantial erosion, siltation, or flooding on-site or off-site?**

Would the Project create or contribute runoff water which would exceed the capacity of existing or planned storm water drainage systems or provide substantial additional sources of polluted runoff?

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would have significant cumulative impacts relating to existing local drainage patterns of the site and substantially increasing the rate or amount of surface runoff in a manner which would result in substantial erosion, siltation, or flooding on-site or off-site or create or contribute runoff water which would exceed the capacity of existing or planned storm water drainage systems or provide substantial additional sources of polluted runoff.

Findings: Potential impacts of the Project related to the alteration of existing local drainage patterns and creation of runoff water are discussed in detail in Section 6.9 of the Revised Final EIR Part 3. Based on the entire record before us, this City Council finds that development of the Project would not cause or contribute to significant cumulative impacts to erosion, siltation, or flooding due to alterations of existing drainages or exceedance of drainage capacities or the addition of pollutant runoff; therefore, no mitigation is required.

Facts in Support of the Findings: Cumulative development within the watershed will result in an increase in impervious surfaces in addition to changes in land use and associated pollutant runoff characteristics. Increased impervious surfaces are likely to alter existing hydrology by potentially increasing surface water runoff and increase potential pollutant loads. Following are the evaluations of cumulative hydrology and cumulative erosion, siltation and flooding impacts.

Hydrology

The proposed Project is located in the San Jacinto River watershed and is tributary to two separate sub-watershed areas, the Perris Valley Storm Drain (PVSD) Watershed and the SJWA watershed, prior to flows reaching the San Jacinto River. For the area to the west, the PVSD is the most downstream drainage facility that the WLC Project is tributary to before flows reach the San Jacinto River. It is necessary to consider the

downstream drainage areas and their facilities when evaluating cumulative impacts for hydrology. The PVSD is a major drainage facility draining a large area including the City of Moreno Valley and any flow impacts to the facility would be important to analyze the effects. For this reason, on the west side, the area tributary to the PVSD was selected as the geographic area for the cumulative impacts analysis. On the east side, flows drain to the SJWA before reaching the San Jacinto River. The SJWA is an important habitat and water feature within the watershed and it is necessary to analyze any potential flow impacts to the area. For this reason, for flows draining to the east, the area tributary to the SJWA was chosen as the geographic area for considering potential cumulative effects. This area includes the upstream portion of the San Jacinto Watershed as the SJWA extends to the south side of the San Jacinto River.

As discussed in Section 4.9 of the Revised Final EIR, runoff from the western portion of the Project site flows west toward the Perris Valley Storm Drain (PVSD), while runoff from the eastern portion of the Project site flows south into Mystic Lake, and (during times of high storm flow), reaches the San Jacinto River south of the San Jacinto Wildlife Area. Table 6.9-1 identifies the cumulative projects that are located in each watershed (Revised Final EIR Part 3, pg. 6.9-28).

PVSD Watershed Area

The volume of runoff after the Project is constructed would be less than the existing volume of runoff and the amount of infiltration and groundwater recharge would increase by a small amount, which would provide a net benefit to groundwater recharge. The proposed Project's drainage improvements would be designed to have sufficient capacity to accommodate and convey storm water runoff flows generated by the Project as well as expected future storm water runoff flows associated with buildout of the Moreno Master Drainage Plan (MDP) area. All of the cumulative projects in the Moreno MDP and Sunnymead MDP areas would be required to mitigate flows to equal to or less than existing and/or demonstrate that storm drain capacity is available to service their anticipated flows and that their project is consistent with the MDPs. The Project's compliance with the Moreno MDP meets this requirement. In addition, there would be zero hydrologic impact on downstream drainage facilities due to the Project; therefore, the Project would not contribute to any cumulative impacts. As such, cumulative impacts would be less than significant (Revised Final EIR Part 3, pg. 6.9-28 through 6.9-29).

SJWA Watershed Area

The portion of the Project site located east of the topographic divide drains to the SJWA. In addition to the Project, one current and one potential project are tributary to the SJWA. They are the Badlands Landfill Improvements Project located north of the Project site and the Quail Ranch Specific Plan project located southeast of the Project site. Runoff from the Badlands Landfill flows through the Project site. The hydrologic study for the Project considered flows from the Badlands Landfill. The Badlands Landfill Improvement project does not change the pervious cover of the site. As such, flows from the Landfill Improvements Project would not increase above existing and would be consistent with the existing flows north of the Project.

Downstream of the Project site, the Quail Ranch Specific Plan Project is proposed. This cumulative Project consists of a planned residential community. Currently, there are no specific details on this cumulative project. Stormwater flows generated by the cumulative project site could increase. However, the developer would be

required to alleviate any increase in flows leaving the site and demonstrate that the cumulative Project does not increase storm flows such as peak flow, velocities, and volume for each of the 2, 5, 10, 25, and 100-year storms. The cumulative Project would be required to demonstrate that storm drain capacity is available to service the anticipated flows and that the Project is consistent with the MDPs. As such, cumulative downstream capacity impacts within the SJWA watershed area would be less than significant. Because the Project would reduce storm flows leaving the Project site so that they do not exceed existing flows, the Project's contribution to potential cumulative erosion and siltation impacts within the SJWA watershed area would be less than significant (Revised Final EIR Part 3, pg. 6.9-29).

8. Land Use and Planning

a. Conflict with Any Applicable Habitat or Natural Community Conservation Plan

Potential Significant Impact: Whether the Project would conflict with any applicable habitat conservation plan or natural community conservation plan.

Findings: Potential impacts of the Project related to the conflict with any applicable habitat conservation plan are discussed in detail in Section 4.10 of the Revised Final EIR Part 4 Volume 3. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts due to a conflict with any applicable habitat or natural community conservation plan; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.10 in the Revised Final EIR Part 4 Volume 3, the Project site is located within the MSHCP area, Mead Valley and Reche Canyon/Badlands Plan Area. Portions of the Project area occur in 14 criteria cells of the MSHCP. The Project site is not located within any special linkage areas identified by the MSHCP. The Project applicant, the City, and the County are required to use the Joint Project Review (JPR) process established in the MSHCP to identify and acquire habitat as part of the development review process. The JPR process involves negotiations between a landowner and the Western Riverside County Regional Conservation Authority (RCA) so the County can acquire land with important habitat or other biological resources while providing fair compensation and/or reasonable development opportunities on the remaining land for the landowner.

The Project site is located within areas requiring burrowing owl surveys, within the MSHCP Criteria Area Species Survey Area (CASSA), and Narrow Endemic Plant Species Survey Area (NEPSSA). Because the Project site is within an MSHCP CASSA and is considered to be a covered activity, the Project is subject to provisions of the MSHCP. In particular, the Project proponent will be required to provide payment of mitigation fees and adhere to the BMPs found in Appendix C of the MSHCP. Pursuant to agreements with the U.S. Fish and Wildlife Service (USFWS) and the CDFW, the payment of the mitigation fees and compliance provisions of the MSHCP provides full mitigation under CEQA, the Federal Endangered Species Act (FESA), and the California Endangered Species Act (CESA) for impacts to the species and habitats covered by the MSHCP. Since the City has adopted the MSHCP and its requirements and provisions, and since the Project is within Moreno Valley, the WLC Project would be required to adhere to applicable MSHCP requirements and fees. Therefore, the WLC Project was determined to be consistent with the MSHCP. (Revised Final EIR Part 4 Volume 3, pgs. 4.10-11 to 4.10-12).

b. Conflict with Land Use Plans, Policies, or Regulations (Regional)

Potential Significant Impact: Whether the Project would conflict with any applicable regional land use plan, policy, or regulation of any agency with jurisdiction over the Project (including but not limited to, the General Plan, Specific Plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect.

Findings: Potential impacts of the Project related to the conflict with any applicable land use plans, policies, or regulations are discussed in detail in Section 4.10 of the Revised Final EIR Part 4 Volume 3. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts due to a conflict with any applicable regional land use plan, policies, or regulations; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.10 in the Revised Final EIR Part 4 Volume 3, pursuant to *CEQA Guidelines* Section 15125 (d), the Project’s Revised Final EIR includes an evaluation of the consistency of the WLC Project with pertinent goals and policies of relevant adopted local and regional plans. The analysis evaluates the Project against all the applicable regional planning documents and processes which include: airport regulations associated with MARB and Riverside County Airports; Southern California Council of Governments’ (SCAG) 2008 Regional Comprehensive Plan (RCP), Regional Transportation Plan (RTP), and Compass Growth Vision; SCAG’s 2012 RTP and Sustainable Communities Plan, Santa Ana Water Quality Control Plan (Basin Plan); Riverside County Drainage Area Management Plan (DAMP); and EMWD’s Urban Water Management Plan (UWMP).

The analysis in the Revised Final EIR demonstrates that the Project is generally consistent with the goals of SCAG’s Regional Comprehensive Plan, Compass Plan and Regional Transportation Plan in that it seeks to add employment in an area that has historically been “jobs poor,” which will help reduce worker commute trips from Moreno Valley over the long term. The Project is generally consistent with these plans because the Project will generate fewer emissions than the previously approved Moreno Highland Specific Plan, and it will provide for a better balance of jobs versus housing in Moreno Valley, which will incrementally improve regional commuting directions and distances by providing almost 24,000 new jobs (direct, indirect and induced) in an area previously planned for housing. No other conflicts with the applicable plans were identified. (Revised Final EIR Part 4 Volume 3, pgs. 4.10-12 to 4.10-26).

c. Conflict with Applicable Land Use Plans, Policies, or Regulations (Local)

Potential Significant Impact: Whether the Project would conflict with any applicable local land use plan, policy, or regulation of any agency with jurisdiction over the Project (including but not limited to, the General Plan, Specific Plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect.

Findings: Potential impacts of the Project related to the conflict with any applicable land use plans, policies, or regulations are discussed in detail in Section 4.10 of the Revised Final EIR Part 4 Volume 3. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts due to a conflict with any applicable local land use plan, policies, or regulations; therefore, no mitigation is required.

NOTE: As discussed in Section I, Introduction, the Project's Specific Plan has been adopted and therefore, the Project is consistent with the General Plan and zoning which currently show the site as the World Logistics Center.

Potential impacts of the Project related to the conflict with any applicable local land use plans, policies, or regulations are discussed in detail in Section 4.10 of the Revised Final EIR Parts 3 and 4 Volume 3. The Project is consistent with the City's General Plan, which shows the site as World Logistics Center Specific Plan, and its goals and policies. It will add significant employment opportunities, facilitate significant economic growth, establish well-planned attractive new development, establish a broader and more stable tax base for the City, expand recreational trail systems, increase permanent open space, provide for alternative forms of transportation, implement extensive sustainable design features and advance the progress of the City's annexation program. These are specifically identified and discussed in Section VI of this document including statements about how the Project helps the City to achieve these goals, objectives and policies.

Facts in Support of the Findings: The Project is consistent with the goals, objectives, and policies of the City of Moreno Valley General Plan. According to the Figure 2-2, *Land Use Map*⁷ updated in October 2019, the land is currently planned for Business Park (BP), and zoning land use designations of WLCSP-LD (World Logistics Center Specific Plan – Logistics Development) and WLCSP – LL (World Logistics Center Specific Plan – Light Logistics). This would allow the development of the WLC Project which will introduce 40.6 million square feet of logistics warehousing onto existing agricultural land that is adjacent to existing residential uses to the west and the San Jacinto Wildlife Area to the south.

Housing Element. During the NOP period, several group representatives expressed concern that the WLC Specific Plan would eliminate 7,700 housing units in the Moreno Highlands Specific Plan that would have to be replaced elsewhere in the City. The City adopted an updated Housing Element in February 2011 identifying the Moreno Highlands area as a potential location for future jobs-producing land uses rather than housing (affordable or otherwise).

The 2011 Housing Element update indicated the Moreno Highlands area would likely be rezoned to support employment-generating uses rather than housing. It also stated that “pursuing any land use changes with the Moreno Highlands Specific Plan area will not hinder the City's ability to meet its Regional Housing Needs Allocation (RHNA) obligations.” The term RHNA refers to the Regional Housing Needs Allocation (affordable housing allocations) from the SCAG. The State Department of Housing and Community Development (HCD) certified the City's Housing Element on May 31, 2011.

In April 2011 and April 2013, the City adopted its Economic Development Action Plan, which also identified the eastern part of the City as a potential area for major job-producing land uses. The *Fiscal and Economic Impact Study World Logistics Center Moreno Valley, California* (“Study”) prepared by David Taussig & Associates, Inc., in 2014 concluded that the WLC Project would generate 24,000 jobs/ employees to the area,

⁷ City of Moreno Valley. (2019). *Moreno Valley General Plan; Figure 2-2: Land Use Map*. Figure accessed from: http://www.moreno-valley.ca.us/city_hall/general-plan/landuse-map.pdf

which includes the creation of direct, indirect, and induced jobs/employees to the City. (Revised Final EIR Part 4 Volume 3, Appendix O)

The City's 2006 Housing Element identified the Moreno Highlands Specific Plan as a potential source of vacant land that could accommodate possible future residential growth in the City. However, in 2011 the City updated its Housing Element and (i) anticipated possible land use changes from mixed-use and residential to jobs producing warehouses in the eastern part of the City, and (ii) concluded that redesignating the entire land east of Redlands Boulevard to the eastern City border for warehouse uses would not impede the City's Housing Element Objectives. The HCD certified the City's Housing Element as compliant with State law on May 31, 2011. In February 2014, the Housing Element was updated again, however this update did not include any changes relating to the Moreno Highlands property.

Therefore, because the land use and zoning designations for the Project site are in full compliance with all applicable plans, policies, and regulations and would not impede the City's housing goals as set forth in its Housing Element, no mitigation is required. (Revised Final EIR Part 4 Volume 3, pg. 4.10-26-34).

d. Cumulative Land Use Impacts

1. Would the proposed WLC Project conflict with any applicable habitat conservation plan or natural community conservation plan?

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would have significant cumulative impacts relating to conflicts with any applicable habitat conservation plan or natural community conservation plan.

Findings: Potential cumulative impacts of the Project related to the conflict with any applicable habitat conservation plan or natural community conservation plan are discussed in detail in Section 6.10 of the Revised Final EIR Part 3. Based on the entire record before us, this City Council finds that development of the Project would not contribute to a significant cumulative effect relating to conflicts with a habitat or natural community conservation plan; therefore, no mitigation is required.

Facts in Support of the Findings: Cumulative projects are located within the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) and the Stephens' Kangaroo Rat (SKR) Habitat Conservation Plan (HCP) areas. Based on a review of each of the potentially cumulative projects, each that would be subject to the MSHCP and/or SKR HCP would be required to pay a fee to sustain the plant and wildlife populations within the MSHCP and the species population in the SKR HCP areas.

Projects subject to the MSHCP are required to pay a fee that will eventually result in an MSHCP Conservation Area in excess of 500,000 acres and focuses on conservation of 146 species including amphibians, reptiles, birds, mammals, invertebrates, and plants. Certain species require additional measures to ensure that the population of the species is sustained. Because each of the cumulative projects within the MSHCP area is required to comply with the provisions of the MSHCP, no significant cumulative impact would result. In addition, since the Project also would be required to comply with the MSHCP, the Project's incremental impact on the species within the MSHCP would not combine with the incremental impacts of the other cumulative projects to cause or contribute to a significant cumulative impact.

Projects subject to the SKR HCP are required to pay a fee so that the funds can be used to acquire and permanently conserve, maintain and fund the conservation, preservation, restoration and enhancement of SKR occupied habitat. The implementation of the HCP has demonstrated the acquisition of habitat and sustaining the population of the SKR. Therefore, implementation of the cumulative projects would not result in a significant cumulative impact. In addition, because the Project also would be subject to the SKR HCP, including the requirement to pay a conservation fee, the Project’s incremental impact on the SKR program would not combine with the incremental impacts of the other cumulative projects to cause or contribute to a significant cumulative impact (Revised Final EIR Part 3, pg. 6.10-14).

2. **Would the Project conflict with any applicable regional land use plan, policy, or regulation of an agency with jurisdiction over the Project (including, but not limited to, the General Plan, Specific Plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect? (Regional)**

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would have significant cumulative impacts relating to conflicts with any applicable regional land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to, the General Plan, Specific Plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect.

Findings: Potential cumulative impacts of the Project related to the conflict with any applicable regional land use plan, policy, or regulation of an agency with jurisdiction are discussed in detail in Section 6.10 of the Revised Final EIR Part 3. Based on the entire record before us, this City Council finds that development of the Project would not contribute to potential significant cumulative impacts related to conflicts with regional plans or policies; therefore, no mitigation is required.

Facts in Support of the Findings: The Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) includes policies that provide a strong commitment to reduce emissions from traffic and transportation. The RTP/SCS provides a blueprint for improving quality of life for residents by providing more choices for where they will live, work, play, and how they will move around. Many of the cumulative projects include the development of residential uses within the City of Moreno Valley. These projects are expected to be consistent with some of the policies identified in the RTP/SCS; however, cumulatively, the cumulative projects are not assisting in reducing potential commute traffic emissions. Therefore, development of the cumulative projects could result in significant cumulative impacts. With the implementation of the Project, approximately 25,000 new jobs would be eventually created, which would nearly double the number of jobs within the City. This increase in jobs would positively affect commute patterns for residents within the City as well as within the region by reducing commuter trips. The Project is consistent with the applicable policies of the RTP/SCS. Because the Project would be consistent with the applicable RTP/SCS policies, the project would not contribute to any adverse cumulative conflicts associated with the RTP/SCS.

SCAGs Regional Comprehensive Plan’s (RCP) overall goal is to reinvigorate the region’s economy, avoid social and economic inequities and the geographical dislocation of communities, and to maintain the region’s quality of life. Because the applicability of the RCP is to projects of “regional significance,” the cumulative

projects that include warehousing would be applicable. These warehousing projects would result in the creation of employment opportunities that would assist the City in balancing the current housing rich condition. These cumulative projects could modify commuting patterns to reduce overall vehicle miles travelled. These projects of “regional significance” would be consistent with the RCP and therefore would be less than cumulatively significant. The Project is also considered a project of “regional significance.” The Project’s anticipated increase of approximately 25,000 new employment opportunities would also modify commuting patterns so that overall vehicle miles travelled could be reduced. Because the Project would be consistent with the policies of the RCP, the Project would not contribute to potential adverse cumulative impacts to the implementation of the RCP.

Overall, the Project would not contribute to potential adverse cumulative impacts related to the implementation of the policies of the applicable regional plans (Revised FEIR Part 3, pg. 6.10-15).

3. **Would the Project conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the Project (including, but not limited to, the General Plan, Specific Plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect? (Local)**

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would have significant cumulative impacts conflicts with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to, the General Plan, Specific Plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect.

Findings: Potential cumulative impacts of the Project related to the conflict of any applicable land use plan, policy, or regulation of an agency with jurisdiction are discussed in detail in Section 6.10 of the Revised Final EIR Part 3. Based on the entire record before us, this City Council finds that development of the Project would not contribute to potential significant cumulative conflicts with the City of Moreno Valley General Plan; therefore, no mitigation is required.

Facts in Support of the Findings: Cumulative projects (including MV 4 and MV 24, for example) were consistent with the City’s General Plan as they were proposed; others required amendments to the City’s General Plan to become compliant. Based on a review of the available environmental documents for the cumulative projects that included an amendment, the amended land uses were still consistent with the goals, policies and objectives of the City’s General Plan. The cumulative projects resulted in less than significant environmental effects related to the City’s General Plan land use goals, policies and objectives.

As stated in Section 4.10.5.3 of the Final EIR, the Project originally sought amendments to the General Plan; however, in November 2015, the City Council approved the proposed amendments through the initiative process. Even prior to the adoption, the FEIR identified that the Project was consistent with the goals, policies and objectives of the General Plan. Therefore, the Project would not contribute to any potential cumulative impacts relating to consistency with the City of Moreno Valley General Plan (Revised Final EIR Part 3, pg. 6.10-16).

9. Mineral Resources

a. Loss of Statewide, Regional, or Locally Important Mineral Resources

Potential Significant Impacts: Whether the Project would result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the State or result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plans.

Findings: Potential impacts of the Project relating to mineral resources are discussed in detail in Section 4.11 of the Revised Final EIR Part 4 Volume 3. Based on the entire record before us, this Council finds that no significant impacts related to mineral resources will occur as a result of development of the Project; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.11 of the Revised Final EIR Part 4, Volume 3, lands within the City of Moreno Valley and its Sphere of Influence are designated Mineral Resources Zone-3 (MRZ-3) and MRZ-4, which are not defined as significant mineral resource areas. No sites have been designated as locally-important mineral resource recovery sites on any local plan.⁷ In addition, Figure OS-5 of the Riverside County General Plan shows that the Project area is also located within MRZ-3. The development of the Project site would not result in the loss of identified regional or local mineral resources, conversion of an identified mineral resource use, or conflict with existing mineral resource extraction activities. Therefore, the development of the Project site would not result in a loss of statewide, regional, or locally important mineral resources. No impacts associated with this issue would occur and no mitigation is required. (Revised Final EIR Part 4 Volume 3 pg. 4.11-3).

b. Cumulative Mineral Resource Impacts

Potential Significant Impact: Whether the Project in connection with past, current, and foreseeable future projects would have significant cumulative impacts related to mineral resources.

Findings: Potential cumulative impacts of the Project related to mineral resource are discussed in detail in Section 4.11 of the Revised Final EIR Part 4 Volume 3 and Section 6.11 of the Revised Final EIR Part 3. Based on the entire record before us, this Council finds that development of the Project will not result in significant cumulative impacts related to mineral resources; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.11 of the Revised Final EIR Part 4 Volume 3, the cumulative area for mineral resources is the City of Moreno Valley and part of western Riverside County. As population levels increase in the region, greater demand for aggregate and other mineral materials will be placed on mineral resources, especially sand and gravel. Similarly, development pressures in areas where these materials are known or expected to occur would result in the loss of availability of these mineral resources. However, because the Project site is not identified as a significant source of sand/gravel deposits and development subsequent to the adoption of the land use actions on any of the sites would not decrease the local or regional availability of mineral resources, potential future development of any of the sites would have no significant cumulative mineral resources impact. (Revised Final EIR Part 4 Volume 3, pg. 4.11-3 and 4.11-4). Further, because the Project would result in no impact related to the loss of availability of a known mineral

resource that would be of valued to the region and the residents of the state or of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan, it could not cause or contribute to any potential cumulative impact. (Revised FEIR Part 3, pg. 6.11-1.)

10. Noise

a. Groundborne Vibration or Groundborne Noise Impacts

Potentially Significant Impact: Whether the Project would result in exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels.⁸

Findings: Potential impacts of the Project relating to groundborne vibration and groundborne noise is discussed in detail in Section 4.12 of Revised Final EIR Part 4, Volume 3. Based on the entire record before use, this Council finds that no significant impacts related to groundborne vibration and groundborne noise will occur as a result of development of the Project; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.12 of the Revised Final EIR Part 4, Volume 3, roadways in the vicinity of the Project area are either paved or would be paved as the area develops and would not result in Project traffic driving over rough or dirt roads. Well maintained roads typically do not result in substantial vibration levels. Even roads with irregularities typically only generate substantial levels of vibration very near, less than 50 feet from the irregularity. Construction activities that would occur within the WLC Specific Plan area are not anticipated to require blasting or pile driving. Roadway vibrations are typically not perceptible more than 50 feet from the roadway except in very unusual circumstances. Generally, the interface between the soft tire of a truck or automobile will not generate significant vibration unless the road is in poor shape (e.g., potholes or pavement joints). Therefore, impacts associated with this issue are anticipated to be less than significant, and no mitigation is required (Revised Final EIR Part 4, Volume 3, pg. 4.12-34).

b. Airport Noise

Potentially Significant Impact: Whether a Project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would result in exposure of people residing or working in the Project area to excessive noise levels or if a Project within the vicinity of a private airstrip, would expose people residing or working in the Project area to excessive noise levels.

Findings: Potential impacts of the Project relating to airport noise are discussed in detail in Section 4.12 of Revised FEIR Part 4, Volume 3. Based on the entire record before use, this Council finds that no significant impacts related to airport noise will occur as a result of development of the Project; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.12 of the Revised FEIR Part 4, Volume 3, the Project area is located approximately 5.5 miles northeast of the March Airfield (MAF) and is not located within two miles of a private airstrip. The MAF is a joint-use airport, used for both military and civilian purposes. The March Air Reserve Base (MARB) is the military operator of the MAF and March Inland Port (MIP) is the

⁸ “Groundbourne noise” is the noise radiating from structures as a result of groundbourne vibrations. It is absent when groundbourne vibrations are small.

civilian operator of the airport. This facility is anticipated to play an increasingly important role in the transportation of goods and cargo for the Southern California region. Existing flight patterns affect a large portion of the City of Moreno Valley, along a path that affects the western portion of the City in a northwest/southeast alignment. Aircraft operations from the airport currently contribute intermittent single-event noise.

There is potential for single-event noise exposure levels from MAF activity to affect the Project. The exposure levels will vary dependent upon the type of aircraft and flight track flown for each operation at MAF. However, the Project is not identified as being within the noise or safety contours delineated for the MAF. In addition, the Project is not considered to contain sensitive receptors and, therefore, the impacts from these single-event noise levels are considered to be below the level of significance. The City's exterior noise standard for industrial uses is 70 dBA CNEL. MAF noise levels are less than 60 dB CNEL within the Project area. Therefore, the Project would not have the potential to expose people to excessive noise levels from airport operations. Therefore, no significant noise impacts would occur regarding these issues from implementation of the Project, and no mitigation is required (Revised Final EIR Part 4, Volume 3, pg. 4.12-35).

c. Cumulative Groundborne Vibration

Potentially Significant Impact: Whether the Project's contribution to the cumulative exposure of persons to or generation of excessive groundborne vibration levels would be cumulatively considerable.

Findings: Potential impacts of the Project relating to groundborne vibration is discussed in detail in Section 4.12 of Revised Final EIR Part 4 and potential cumulative impacts are discussed in Section 6.12 of the Revised Final EIR Part 3. Based on the entire record before use, this Council finds that there is no potential for cumulative impacts with respect to groundborne vibration; therefore, no mitigation is required.

Facts in Support of the Findings: As discussed in Section 6.12 of the Revised Final EIR Part 3, two cumulative projects are located at distances that could undergo construction activities during the project's construction period: P06-158/Gascon and MV-6: Highland Fairview Corporate Park, and MV-126: TTM 33222. Due to the rapid attenuation characteristics of ground-borne vibration and distance from each of the Related Projects to the Project site, there is no potential for cumulative construction impacts with respect to ground-borne vibration. Therefore, cumulative impacts would be less than significant (Revised Final EIR Part 3, pg. 6.12-23).

The Project's operations would include typical commercial-grade stationary mechanical and electrical equipment, such as air handling units, condenser units, and exhaust fans, which would produce vibration. In addition, the primary sources of transient vibration would include truck circulation within the proposed parking areas and internal drive aisles. Ground-borne vibration generated by each of the above-mentioned activities would generate up to approximately 0.005 in/sec at 50 feet from the source. The potential vibration levels from all Project operational sources at the closest existing sensitive receptor locations would be less than the significance threshold of 0.5 in/sec peak particle velocity (PPV) significance threshold for potential residential building damage and 0.1 in/sec PPV significance threshold for human annoyance. As such, vibration impacts associated with operation of the Project would be below the significance threshold and would not be cumulatively considerable (Revised Final EIR Part 3, pg. 6.12-23).

d. Cumulative Airport Noise

Potentially Significant Impact: Whether the Project in connection with past, current, and probable future projects would have significant cumulative impacts related to exposure of people to excessive airport noise levels.

Findings: Potential cumulative impacts of the Project relating to airport noise are discussed in detail in Section 6.12 of Revised Final EIR Part 3. Based on the entire record before use, this Council finds that no significant cumulative impacts related to airport noise will occur as a result of development of the Project; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 6.12 of the Revised Final EIR Part 3, the Project area is located approximately 5.5 miles northeast of the March Airfield (MAF) and is not located within two miles of a private airstrip. The MAF is a joint-use airport, used for both military and civilian purposes. The March Air Reserve Base (MARB) is the military operator of the MAF and March Inland Port (MIP) is the civilian operator of the airport. This facility is anticipated to play an increasingly important role in the transportation of goods and cargo for the Southern California region. Existing flight patterns affect a large portion of the City of Moreno Valley, along a path that affects the western portion of the City in a northwest/southeast alignment. Aircraft operations from the airport currently contribute intermittent single-event noise.

There is potential for single-event noise exposure levels from MAF activity to affect the Project. The exposure levels will vary dependent upon the type of aircraft and flight track flown for each operation at MAF. However, the Project is not identified as being within the noise or safety contours delineated for the MAF. In addition, the Project is not considered to contain sensitive receptors and, therefore, the impacts from these single-event noise levels are considered to be below the level of significance. The City's exterior noise standard for industrial uses is 70 dBA CNEL. MAF noise levels are less than 60 dB CNEL within the Project area. Therefore, the Project would not have the potential to expose people to excessive noise levels from airport operations in the cumulative setting. Therefore, no cumulative significant noise impacts would occur regarding these issues from implementation of the Project, and no mitigation is required (Revised Final EIR Part 3, pg. 6.12-24).

e. Cumulative Long-Term Utility Noise

Potential Significant Impact: Whether the Project's contribution to long-term utility noise impacts in excess of City standards is less than cumulatively considerable.

Findings: Potential cumulative impacts related to long-term utility noise impacts are discussed in detail in Section 6.12 of the Revised Final EIR Part 3. Based on the entire record before use, this Council finds that there is no potential for cumulative impacts with respect to long-term utility noise; therefore, no mitigation is required.

Facts in Support of the Findings: There is one existing SDG&E compressor station and two existing SCGC facilities located adjacent to the WLC Specific Plan area.

The L_{eq} noise level generated by the compressor station does not exceed 60 dBA L_{eq} beyond the property lines of the facility. For SCGC blow-down events, noise generated could reach as high as 130 dBA just outside the fence line of the southern facility and in excess of 135 dB just outside the fence line of the northern facility. People within approximately 250 feet of the blow-down points would be exposed to noise levels greater than 115 dBA. No sensitive receptors are located such that noise levels from the compressor station and on-site project activity would result in cumulatively considerable impacts. Therefore, noise impacts associated with the operation of the compressor station in conjunction with Project operations would not be cumulative considerable and would be less than significant. (Revised Final EIR Part 3 pg. 6.12-31)

SCGC blow-down events also have the potential to produce groundborne vibration. However, the effect of the blow-down groundborne vibration would be limited to within 100 feet of the equipment and would not be perceived beyond the facility fence line, resulting in a less than significant impact and no mitigation is required. (Revised Final EIR Part 3 pg. 6.12-31)

11. Population and Housing

a. Population Growth

Potential Significant Impact: Whether the Project would induce substantial unplanned population growth in an area, either directly (e.g., new homes and businesses) or indirectly (e.g., extension of roads and infrastructure).

Findings: Potential impacts of the Project related to population growth are discussed in detail in Section 4.13 of the Revised Final EIR Part 4 Volume 3. Based on the entire record before us, this Council finds that no significant impacts related to population growth will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.13 of the Revised Final EIR Part 4 Volume 3, population projections developed by SCAG estimate the City's population will reach approximately 213,700 persons by the year 2020 and approximately 255,200 persons by the year 2035. The extent to which the new jobs created by a Project are filled by existing residents is a factor that tends to reduce the growth-inducing effect of a Project. Construction of the WLC Project will create short-term construction jobs. These short-term positions are anticipated to be filled by workers who, for the most part, reside in the Project area; therefore, construction of the WLC Project will not generate a permanent increase in population within the Project area.

An economic study of the Project prepared by DTA concluded that the WLC Project could generate up to 20,307 new direct on-site jobs within the City.⁹ In addition to the projected on-site job creation, the DTA study estimates the WLC Project could generate new off-site jobs (i.e., indirect/induced employment) in all industries of the economy. The DTA study also estimated that an additional 7,386 indirect/induced jobs could be created in the County, of which 3,693 jobs were projected to be within the City as a result of Project implementation. While the specific location of the potential additional indirect/induced jobs created within the County cannot be specifically determined, it is reasonable to assume that some percentage of these jobs will be support service jobs and are likely to be located in the WLC Project vicinity, and therefore the City.

The WLC Project does not include a residential component. The WLC Project is located within an area that is currently largely vacant and previously planned for a mix of residential, commercial, business park, and open space land uses.

The WLC Specific Plan supplanted the approved Moreno Highlands Specific Plan (MHSP) Project that did have a residential component. The EIR for that project indicated it would have increased the City's population by 17,019 persons over 15 years (7,736 units × 2.2 persons/unit). However, because the City is considered housing rich (and jobs poor) by SCAG, the loss of that projected population growth is not considered a significant impact and, in fact, a number of State policies (e.g., SB 375) encourage the creation and development of jobs-producing development in areas with poor jobs/housing numbers such as that which exists in the City.

Currently, there are six occupied single-family homes in various locations on the Property along with associated ranch/farm buildings. Streets, water and sewer utilities, and municipal services would be extended to serve the WLC Project. The WLC Project may benefit other development projects in the Project area by the installation of infrastructure (e.g., roads and utilities), but is not expected to induce substantial population growth into the area since there would be no large areas of vacant land left in the east end of the City (south of SR-60) that could be developed with residential uses.

It should be understood that the actual eventual number of employees generated by the Project will vary depending on a variety of economic factors (e.g., actual companies that relocate and current hiring conditions). The projected employment estimate also does not take into account relocation of existing employees from other jurisdictions as a result of existing businesses relocating into the WLC Project. However, these would be counted as "new" employees for the City of Moreno Valley. For the purposes of this analysis, the Revised Final EIR used 20,307 direct employees working at the WLC or one employee per 2,000 square feet as a conservative estimate (in terms of environmental impacts) for future employment growth from the Project's development.

The new employment opportunities resulting from development of the high-cube logistics warehouse and general warehouse uses will raise the City's current jobs-to-housing ratio by providing additional jobs to local residents. While the place of residence of the persons accepting employment provided by the proposed uses is uncertain, due to the City's projected jobs/housing ratio, it is reasonable to assume and therefore expect that some percentage of these jobs would be filled by persons already living within the City or near the Project area. Therefore, no significant increase in population of the City would result from the development or operation of the WLC Project, resulting in a less than significant impact associated with growth inducement and no mitigation is required.

Indirect City Population Impacts Related to Fiscal and Economic Changes. If the WLC Project is not built, it could be argued that the City may experience a financial impact from the loss of higher property tax, sales tax, and other revenues related to growth and development.

Potential economic impacts that may occur with Project implementation include permanent employment (direct on-site and indirect/induced), permanent output (gross receipts; total direct output plus output produced by suppliers and employee spending), and construction jobs over 15 years.

The DTA study indicates that the creation of new jobs will lead to more consumer spending by employees in existing retail establishments within the City, as well as new retail development that will be attracted to the City as a result of this spending. Job creation also results in increased tax revenues to the City through increased property taxes and sales taxes associated with development of the WLC Project. However, it is important to note that because of the difference in timing of the development of the various phases of the WLC Project, the number of employees summarized above will not be realized all at once.

Development of the WLC Project is projected to create approximately 16,521 construction-related full-time equivalent (FTE) jobs within the City. Similar to recurring employment (i.e., permanent), it is likely that some percentage of these jobs will be associated with support services and are likely to be located in the vicinity of the WLC Project and therefore within the City.

The WLC Project does not include a residential component, so it would not directly generate additional new housing. Employees of the Project that choose to live in the City would likely utilize the existing supply of housing within the City.

Based on the potential increase in jobs (additional 20,307 direct jobs) within the City and no substantial increase in population as a result of the Project, the City's jobs-to-housing ratio would improve from the 2011 ratio of 0.47 to 0.91, thus achieving a greater jobs-to-housing balance within the City. Similarly, the potential new County employees that may be generated by the WLC Project would increase the total County employment to 571,799 from 551,492 resulting in an increase of the ratio to 0.74 from 0.69.

As development of the WLC Project is expected to occur over the course of many years, the jobs-to-housing ratio will not significantly change immediately. The City's current jobs-to-housing ratio is exceptionally low when compared to SCAG standards; therefore, the need for employment is immediate. A balance between jobs and housing within the City would have a positive impact by decreasing costs associated with commuting and traffic congestion. It also provides savings to consumers in the operation and maintenance of automobiles and saving to local public agencies in terms of the need to construct and maintain new road improvements.

Based on the foregoing discussion, implementation of the WLC Project would not result in a deficit in the City's General Fund even after City costs to provide public services to the development are considered. The estimated surplus is approximately \$5.7 million annually, which is about two times the projected annual City General Fund costs. Additionally, the WLC Project is expected to generate sizeable, substantial, and lasting employment, wages, output, and revenues for the City and region. Therefore, potential fiscal and economic changes that could affect the City's population or housing are considered to be less than significant, and no mitigation is required. (Revised Final EIR Part 4 Volume 3, pgs. 4.13-11 to 4.13-17).

b. Displace Substantial Housing/People

Potential Significant Impact: Whether the Project would displace substantial numbers of people or existing housing, necessitating the construction of replacement housing elsewhere.

Findings: Potential impacts of the Project related to displacement of housing or people are discussed in detail in Section 4.13 of the Revised Final EIR Part 4 Volume 3. Based on the entire record before us, this Council

finds that no significant impacts related to displacement of housing or people will occur as a result of development of the Project; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.13 of the Revised Final EIR Part 4 Volume 3, the WLC Project site currently contains six occupied rural residences. At the Planning Commission meeting on May 22, 2012, some of the existing residents stated that they did not want to be included in the Specific Plan. After deliberation, the Commission decided to include the rural properties in the Specific Plan in the interest of comprehensive land planning for the WLC property. These properties continue as non-conforming uses, and the WLC Specific Plan designates these properties as “Light Logistics” (LL), which allows for future industrial-related uses (vehicle storage, light assembly, etc.). In this way, the WLC Specific Plan does not remove or displace any of the existing residents or residences from the Project site. As large warehouse buildings are developed near or adjacent to these residences, it may become less desirable to reside within the WLC Specific Plan area; however, the Project itself does not cause housing displacement.

Therefore, impacts to the six occupied on-site residences would not be considered a significant housing impact. For these reasons, the WLC Specific Plan will not have significant population or housing impacts related to displacing substantial numbers of people or existing housing.

The *Fiscal and Economic Impact Study World Logistics Center Moreno Valley, California* (“Study”) prepared by DTA in 2014 concluded that the WLC Project would generate 20,307 direct jobs/employees to the City. Section 4.13.5.3 of the 2015 FEIR determined that the WLC Project is consistent with the 2011 Housing Element, and it will not displace substantial numbers of existing housing or necessitate the construction of replacement housing elsewhere. Therefore, no significant displacement impacts relative to people or housing are expected to occur, and no mitigation is required. (Revised Final EIR Part 4 Volume 3, pgs. 4.13-18 to 4.13-19).

c. Cumulative Population and Housing Impacts

Potential Significant Impact: Whether the Project could cause an increase in population and housing that is substantial in relation to the past, current, and probable future projects.

Findings: Potential impacts of the Project related to cumulative impacts of the Project on housing or population are discussed in detail in Section 4.13 of the Revised Final EIR Part 4 Volume 3 and Section 6.13 of the Revised Final EIR Part 3. Based on the entire record before us, this Council finds that no significant impacts related to cumulative impacts on housing or population will occur as a result of development of the Project and, therefore, no mitigation is required.

Fact Supporting the Findings: The cumulative area for the discussion of population and housing impacts is the City of Moreno Valley. The development of the WLC Project site is governed by the existing WLC Specific Plan. The Project would not contribute to substantial population growth and therefore would not result in an increased demand on the current or future housing in the region. In addition, the Moreno Valley area is considered housing rich and jobs poor by the Southern California Association of Governments, so the loss of population (and planned housing) would actually be a regional benefit according to its Regional Transportation Plan. The Project may result in an influx of new workers who would need to locate temporarily or permanently

in the area, but the City has an overabundance of existing housing stock due to current market conditions. Implementation of the WLC Project would actually benefit population and housing conditions relative to employment and jobs/housing ratio and, therefore, not result in cumulatively adverse impacts to population or housing. The WLC Project would also not significantly induce growth into areas where growth was not previously anticipated since the WLC Project area represents the last largest remaining vacant land in the City of Moreno Valley. (Revised Final EIR Part 4 Volume 3, pg. 6.13-1 to 6.13-10).

12. Public Services and Facilities

a. Law Enforcement Services and Facilities

Potential Significant Impact: Whether the Project would result in substantial adverse physical impacts associated with the provision of new or physically altered law enforcement facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for police services.

Findings: Potential impacts of the Project related to law enforcement services and facilities are discussed in detail in Section 4.14 of the Revised Final EIR Part 4 Volume 3. Based on the entire record before us, this Council finds that no significant impacts related to law enforcement services or facilities will occur as a result of development of the Project; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.14 of the Revised Final EIR Part 4 Volume 3, the WLC Specific Plan requires building and site design characteristics that specifically support police services by encouraging buildings that are safe and can be secured by design, fencing, security services, etc. The WLC Specific Plan design guidelines are consistent with the goals of the General Plan relative to police protection and site design. In addition, future development within the WLC Specific Plan will be required to comply with the City's Development Impact Fee (DIF) requirements as new development is constructed. It is anticipated that DIF revenues will help fund additional equipment needs and increased property taxes would help fund increased service or staffing needs. Therefore, the Project will have less than significant impacts relative to police service, and no mitigation is required. (Revised Final EIR Part 4 Volume 3, pgs. 4.14-4 to 4.14-7).

b. Fire Protection Services and Facilities

Potential Significant Impact: Whether the Project would result in substantial adverse physical impacts associated with the provision of new or physically altered fire-fighting facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for police services.

Findings: Potential impacts of the Project related to fire-fighting services and facilities are discussed in detail in Section 4.14 of the Revised Final EIR Part 4 Volume 3. Based on the entire record before us, this Council finds that no significant impacts related to fire protection or facilities will occur as a result of development of the Project; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.14 of the Revised Final EIR Part 4 Volume 3, the WLC Specific Plan will dedicate a new 1.5-acre urban fire station site within its boundaries to allow for expansion of fire protection services as the Project develops (see WLC Specific Plan Section 2.2.6). The WLC

Specific Plan indicates the new fire station will be at the north end of Planning Area 11. The WLC Specific Plan also requires building and site design characteristics that specifically support fire services by encouraging buildings that are safe and can be secured by design, fencing, security services, etc. The WLC Specific Plan design guidelines are consistent with the goals of the General Plan relative to fire protection and site design. Finally, future development within the WLC Specific Plan area will be required to comply with the City's DIF requirements as new development is constructed. Therefore, the Project will have less than significant impacts relative to fire protection service, and no mitigation is required. (Revised Final EIR Part 4 Volume 3, pgs. 4.14-10 to 4.14-13).

c. School Facilities

Potential Significant Impact: Whether the Project would result in substantial adverse physical impacts associated with the provision of new or physically altered school facilities, the construction of which could cause significant environmental impacts.

Findings: Potential impacts of the Project related to school facilities are discussed in detail in Section of the Revised Final EIR Part 4 Volume 3. Based on the entire record before us, this Council finds that no significant impacts related to school facilities will occur as a result of development of the Project; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.14 of the Revised Final EIR Part 4 Volume 3, the Project contains no residential development, so it would not cause a significant increase in the local population that would increase the number of students attending local schools. Since payment of the school impact fees is required of all projects within Moreno Valley Unified School District and San Jacinto Unified School District boundaries, impacts to school services and facilities would not occur. The WLC Project is also consistent with the applicable General Plan policies as it will assist in the provision of adequate school facilities by providing legally required development impact fees. Accordingly, impacts to the environment resulting from new or expanded school facilities would not occur, resulting in a less than significant impact and no mitigation is required. (Revised Final EIR Part 4 Volume 3, pg. 4.14-15 to 4.14-17).

d. Parks, Recreation, and Trails

Potential Significant Impact: Whether the Project would result in increased use of existing neighborhood and regional parks or other recreational facilities (e.g., trails) where substantial physical deterioration would occur or be accelerated or result in construction or expansion of recreational facilities that would have an adverse physical effect on the environment.

Findings: Potential impacts of the Project related to parks, recreation, and trails are discussed in detail in Section 4.14 of the Revised Final EIR Part 4 Volume 3. Based on the entire record before us, this Council finds that no significant impacts related to parks, recreation, or trails will occur as a result of development of the Project; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.14 of the Revised Final EIR Part 4 Volume 3, there is a potential for the Project to indirectly generate new residents in the City, although predicting the exact

number would be too speculative. Increases in the City’s population from future residential development will help fund new parks and trails through dedications of land and the payment of Development Impact Fees.

In November 2015, the City Council approved a General Plan Amendment to the Master Plan of Trails to reduce the extent of trail systems in the area to reflect the change from a residential neighborhood (Moreno Highlands) to a non-residential neighborhood (World Logistics Center). Trail linkages are provided in the WLC Project to extend existing trail routes from the western edge of the Project to the east, providing for future linkages to Gilman Springs Road, to the Lake Perris State Recreation Area, and to the San Jacinto Wildlife Area.

Implementation of these new trails and the General Plan Amendment (i.e., revised Master Plan of Trails) will allow the Project to be consistent with the General Plan policies relative to trails. The Project is consistent with the City General Plan policies relative to parks, recreation, and trails.

The WLC Specific Plan provides connections to existing trails to the west and southwest, and a connection to and trailhead for a future planned trail in the San Jacinto Wildlife Area south of the site, as outlined in Section 3.4.2, *Multi-Use Trails*, and as shown on Figure 3-17 of the Specific Plan. In addition, future development within the WLC Specific Plan area will pay applicable DIFs to offset any potential impacts to parks or recreational services. Based on this, the Project will not create significant impacts on parks, recreation, or trails.

The Project does not include the construction or expansion of a recreational facility since it would not create any substantial demands on recreational facilities. The Project would have a less than significant impact on population or housing; therefore, no new demand on existing park facilities would occur, and no expansion of existing parks or the construction of new parks would be required. (Revised Final EIR Part 4 Volume 3, pgs. 4.14-17 to 4.14.25).

e. **Cumulative Public Services and Facilities and Parks, Recreation, and Trails Impacts**

Law Enforcement Services and Facilities

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would have significant cumulative impacts associated with the provision of new or physically altered law enforcement facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for police services.

Findings: Potential cumulative impacts of the Project related to law enforcement services and facilities are discussed in detail in Section 6.14 of the Revised Final EIR Part 3. Based on the entire record before us, this Planning Commission finds that the Project contribution to significant environmental effects from new or altered law enforcement facilities would be less than cumulatively considerable; therefore, no mitigation is required.

Facts in Support of the Findings: The cumulative impact geographic area for police protection services is the City of Moreno Valley. Police protection services for the City, including the project and cumulative

development, is provided by the City of Moreno Valley Police Department (MVPD), which contracts police services from the Riverside County Sheriff's Department (RCSD).

In general, impacts to the MVPD services and facilities during the construction of cumulative development would be addressed as part of each cumulative project's development review process conducted by the City. During construction of cumulative development, equipment and building materials could be temporarily stored on the cumulative project sites, which could result in theft, graffiti, and vandalism. Many cumulative project sites are located in areas of moderate to high vehicular activity from nearby streets. In addition, the construction sites of the cumulative projects would be fenced along the perimeters, when applicable, with the height and fence materials subject to review and approval by the City. Temporary lane closures may be required for right-of-way frontage improvements and utility construction. However, these closures would be temporary in nature and in the event of partial lane closures, both directions of travel on area roadways and access to the cumulative project sites would be maintained. Due to their proximity to the Project site, should project construction occur concurrently with the construction of cumulative projects MV-4, MV-5, MV-6, and MV-126, coordination with these construction sites would be implemented through each cumulative project's respective construction traffic management plan, if applicable, which would ensure emergency access and traffic flow are maintained on adjacent right-of-ways. In addition, construction-related traffic generated by the cumulative development would not significantly impact the MVPD responses within the vicinities of the cumulative projects as emergency vehicles normally have a variety of options for avoiding traffic, such as using sirens to clear a path of travel or driving in the lanes of opposing traffic.

According to the MVPD, there are no planned improvements for the MVPD facilities. If expanded police facilities were determined warranted by the MVPD, and were foreseeable, the impacts of the construction and operation of such a station would be analyzed at that time under CEQA as a project independent of the cumulative development. Moreover, the expansion of any police station would likely be on an infill lot potentially less than an acre in size. Generally, development associated with typical police stations is unlikely to result in significant unavoidable impacts, and projects involving the construction or expansion of a police station are typically anticipated to be addressed pursuant to CEQA through the use of a Class 32 categorical infill exemptions (CEQA Guidelines Section 15332) or (mitigated) negative declarations since they are likely relatively small structures on infill parcels. Accordingly, the need for additional police protection services as part of an unplanned or expanded police station at this time is not an environmental impact of a project or one that a project is required to be mitigated.

It is expected that the cumulative projects (particularly those of a larger nature) would be subject to discretionary review by the MVPD on a project-by-project basis to ensure that sufficient security measures are implemented to reduce potential impacts to police protection services. Many of the cumulative projects would also be expected, when applicable, to provide on-site security, personnel and/or design features for their residents and patrons per standard development practices for the given uses. Further, the City would collect development impact fees from the cumulative projects that would be used to fund the MVPD expenditures as necessary to offset any cumulative incremental impact from each cumulative project on police protection services. The protection of public safety is the first responsibility of local government, and local officials have

an obligation to give priority to the provision of adequate public safety services, which are typically financed through the City general funds.

With regard to emergency response times, cumulative projects would introduce new uses which would generate additional traffic in the vicinity of the cumulative development. Traffic from the cumulative development could have the potential to affect emergency vehicle response times to the cumulative project sites and surrounding properties due to travel time delays caused by the additional traffic. Emergency vehicles would access the cumulative project sites directly from the surrounding roadways. The drivers of emergency vehicles have a variety of options for avoiding traffic, such as using sirens to clear a path of travel or driving in the lanes of opposing traffic. As such, emergency access to the vicinity of cumulative development would be maintained at all times, and the increase in cumulative traffic generated by cumulative development would not significantly impact emergency vehicle response times. Further, consistent with the *City of Hayward v. Trustees of California State University*, 242 Cal.App.4th 833 (2015), potential impacts on emergency response times are not an environmental impact that CEQA requires a project to mitigate.

The Project is located in an area of high vehicular activity and would provide construction fencing and private security during construction. As such, the Project would not cause a significant impact to police protection services during construction. Therefore, the Project's contribution to cumulative impacts during construction on the MVPD's emergency response would not be cumulatively considerable.

The Project would be designed and operated per applicable standards required by the City for new development in regard to public safety. The Project would be required to pay the applicable development impact fees to the City. Similar to cumulative development, the drivers of emergency vehicles would have a variety of options for avoiding traffic, such as using sirens to clear a path of travel or driving in the lanes of opposing traffic. Therefore, the Project's contribution to cumulative impacts to MVPD facilities would not be cumulatively considerable. Therefore, the Project would result in a less than cumulatively considerable contribution to the need for the construction of new, or expanded police facilities and, as such, cumulative impacts on police protection services would be less than significant. (Revised Final EIR Part 3, pg. 6.14-19 through 6.14-20).

Fire Protection

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would have significant cumulative impacts associated with the provision of new or physically altered fire protection facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for fire protection.

Findings: Potential cumulative impacts of the Project related to fire protection services and facilities are discussed in detail in Section 6.14 of the Revised Final EIR Part 3. Based on the entire record before us, this City Council finds that no significant cumulative impacts related to fire protection services or facilities will occur as a result of development of the project; therefore, no mitigation is required.

Facts in Support of the Findings: The cumulative impact geographic area for fire protection is the City of Moreno Valley. Fire protection for the City, including the Project and cumulative development, is provided by

the City of Moreno Valley Fire Department (MVFD), which contracts with the Riverside County Fire Department (RCFD).

In general, impacts to the MVFD services and facilities during the construction of cumulative development would be addressed as part of each cumulative project's development review process conducted by the City. Construction activities associated with cumulative development may temporarily increase the demand for fire protection and emergency medical services, and may cause the occasional exposure of combustible materials, such as wood, plastics, sawdust, covering and coatings, to heat sources including machinery and equipment sparking, exposed electrical lines, welding activities, and chemical reactions in combustible materials and coatings. However, in compliance with the requirements of the California Occupational Safety and Health Administration (OSHA), all construction managers and personnel of cumulative development would be trained in fire prevention and emergency response. Further, fire suppression equipment specific to construction of the cumulative development would be maintained on the cumulative project sites. As applicable, all cumulative construction activities would be required to comply with the 2013 California Building Code (CBC); the 2013 California Fire Code (CFD); and the City's Fire Code.

Construction activities may involve temporary lane closures of right-of-way frontage improvements and utility construction. However, these closures would be temporary in nature and in the event of partial lane closures, both directions of travel on area roadways and access to the cumulative project sites would be maintained. Due to their proximity to the Project site, should project construction occur concurrently with the construction of cumulative projects MV-4, MV-5, MV-6, and MV-126, coordination with these construction sites would be implemented through each cumulative project's respective construction traffic management plan, if applicable, which would ensure emergency access and traffic flow are maintained on adjacent right-of-ways. In addition, construction-related traffic generated by the cumulative development would not significantly impact MVFD response within the vicinities of the cumulative projects as emergency vehicles normally have a variety of options for avoiding traffic, such using sirens to clear a path of travel or driving in the lanes of opposing traffic.

During operation, although the cumulative demand on MVFD services would increase, cumulative impacts on fire protection and emergency medical services would be reduced through each cumulative project's regulatory compliance and site-specific design and safety features. Each cumulative project would be subject to the required review by the MVFD for compliance with Fire Code and Building Code regulations related to emergency response, emergency access, fire flow, and fire safety that would reduce potential cumulative impacts to fire protection and emergency services. Further, the City would collect development impact fees from cumulative projects that would be used to fund MVFD expenditures as necessary to offset any cumulative incremental impact from each cumulative project on fire protection services. The protection of public safety is the first responsibility of local government, and local officials have an obligation to give priority to the provision of adequate public safety services, which are typically financed through the City general funds.

Cumulative project sites which are located in Very High Fire Severity Zone (VHFSZ) and susceptible to wildland fire hazards would adhere to the special construction features set forth in Chapter 7A of the CBC. Further, any significant risk of loss, injury, or death involving wildland fires, would be minimized to the maximum extent feasible through implementation of cumulative project-specific fuel modification plans, if applicable, that would be subject to review and approval by the MVFD.

The Project would be subject to the required review of the MVFD for compliance with the Fire Code and Building Code regulations related to emergency response, emergency access, fire flow, and fire safety that would reduce potential impacts to fire protection and emergency services. The Project includes a future 1.5-acre urban fire station within its boundaries to be dedicated to the City to help offset increased fire service needs. The new fire station will be located at the north end of Planning Area 11 and is required to be built during Phase I. Placement of the new fire station is subject to review and approval by the Fire Chief. As portions of the Project site are located within a State-designated VHFSZ, the Project would comply with Chapter 7A of the CBC. Further, the Project would be required to pay the applicable development impact fees to the City. Compliance with payment of fees could further offset the cumulative impact from the cumulative projects on the Project's proposed fire station. Therefore, the Project would result in a less than cumulatively considerable contribution to the need for the construction of new, or expanded fire facilities and, as such, cumulative impacts on fire protection services would be less than significant (Revised Final EIR Part 3, 6.14-21 through 6.14-22).

Schools

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would have significant cumulative impacts associated with the provision of new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for schools.

Findings: Potential cumulative impacts of the Project related to school facilities are discussed in detail in Section 6.14 of the Revised Final EIR Part 3. Based on the entire record before us, this City Council finds that the Project's contribution to significant environmental effects from new or altered school facilities would be less than cumulatively considerable; therefore, no mitigation is required.

Facts in Support of the Findings: Construction of the cumulative development would require the participation of construction employees who would be hired from a mobile regional construction work force that moves from project to project. Typically, construction workers pass through various development projects on an intermittent basis as their particular trades are required. Given the mobility and short durations of work at a particular site, and a large construction labor pool that can be drawn upon in the region, construction employees would not be expected to relocate their residences within this region or move from other regions as a result of their work on the cumulative development. Accordingly, construction of cumulative development is not anticipated to generate new students needing to attend local schools within the MVUSD or SJUSD.

The MVUSD and SJUSD monitors enrollment numbers at all schools within their districts. Seating shortages can be addressed through changes in attendance boundaries and new/expanded school facilities. Nonetheless, cumulative development is expected to generate students that would attend local schools within the MVUSD and SJUSD. As such, this cumulative development could require new or expanded school facilities. The cumulative projects would be required to pay development fees for schools to the MVUSD or SJUSD prior to the issuance of grading permits pursuant to SB 50. Pursuant to Government Code Section 65995, the payment of developer fees would be considered full and complete mitigation of schools impacts by cumulative development.

Construction of the Project is not anticipated to generate new students needing to attend local school within the MVUSD or SJUSD. The project does not include residential uses but is expected to generate approximately 15,000 to 25,000 new jobs in the City. According to Section 4.14.3.5 of the Revised Final EIR Part 4 Volume 3, it is speculative to estimate how many workers would actually live within the City and how many would commute from the surrounding area. Although the exact number is speculative, any increase is not expected to be substantial and would not generate significant new demands related to the need for new or altered schools. Further, the Project would be required to pay development fees pursuant to SB 50. Therefore, the Project's contribution to cumulative impacts to school facilities would be less than cumulatively considerable (Revised Final EIR Part 3, pg. 6.14-23).

Parks, Recreation, and Trails.

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would have significant cumulative impacts associated with the provision of new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for parks, recreation, and trails.

Findings: Potential cumulative impacts of the Project related to parks, recreation, and trails are discussed in detail in Section 6.14 of the Revised Final EIR Part 3. Based on the entire record before us, this City Council finds that the Project's contribution to the deterioration of existing park, recreation and trail facilities would be less than cumulatively considerable; therefore, no mitigation is required.

Facts in Support of the Findings: Most park visits originate from residential uses. Typically, employees are engaged in their work during the day and do not contribute substantial demand for parks. If employees use the parks, such usage would occur during the week rather the weekend. Construction workers may visit a park to eat lunch or for recreation after a day of work. Cumulative development would increase the residential and visitor population which could create new demand on parks and recreation space in the vicinities of the cumulative projects. Some cumulative projects could include recreational facilities and open space features that would serve cumulative project residents and guests and would thereby reduce cumulative demand on public parks. Pursuant to the Quimby Act, the City would require the dedication of land, or the payment of fees for park and/or recreational facilities from the cumulative projects to offset any cumulative incremental impact from each cumulative project on parks, recreation, and trails. Therefore, with the dedication of land, or the payment of development fees, cumulative development would not substantially deteriorate or accelerate the deterioration of recreational facilities or resources.

The Project includes the development of a master-planned logistics center; no residential development is proposed. There is a potential for the Project to indirectly generate new residents in the City, although predicting the exact number would be too speculative. Trail linkages are provided as part of the Project for future linkages to Gilman Springs Road, to the Lake Perris State Recreation Area, and to the San Jacinto Wildlife Area. Future development within the Project site will pay the applicable development impact fees for parks or recreational services. Therefore, the Project's contribution to cumulative impacts to parks, recreation, and trails would be less than cumulatively considerable.

The Project would result in less than cumulatively considerable contribution to increased use of existing neighborhood and regional parks or other recreational facilities where substantial physical deterioration would occur or be accelerated. As such, cumulative impacts on parks, recreation, and trails would be less than significant (Revised Final EIR Part 3, pg. 6.14-24).

13. Transportation

Introduction

As discussed in Section 1, Introduction, the Revised Final EIR reflects information found in the 2015 FEIR, the July 2018 RSFEIR and the responses to comments on both. The Revised Final EIR Part 3 found the discussion of transportation impacts to be in compliance with CEQA. The FEIR and the RSFEIR relied upon the then governing CEQA Guidelines, including Appendix G for applicable thresholds of significance, using the Level of Service (LOS), a measure of delay,

In 2013 (effective January 1, 2014), the Legislature adopted SB 743, a new CEQA provision with respect to the criteria for determining the significance of transportation impacts of projects, mandating the preparation of revisions to the CEQA Guidelines, including the potential use of “vehicles miles traveled” (VMT) or other metrics to evaluate transportation impacts. (Cal. Publ. Res. Code § 21099.) In response to Section 21099, the 2018 revisions to the CEQA Guidelines included Section 15064.3, entitled “Determining the Significance of Transportation Impacts” which defines VMT as “the amount and distance of automobile travel attributable to a project. (Section 15064.3(a).) Importantly, under Section 21099, with the certification of the new Guidelines, “automobile delay, as described solely by level of service or similar measures of vehicular capacity or traffic congestion, shall not be considered a significant impact on the environment” under CEQA. Thus, as of December 2018, “automobile delay” is not to be considered a significant impact on the environment under CEQA. (See *Citizens for Positive Growth & Preservation v. City of Sacramento*, 43 Cal.App.5th 609, 626 (2019) (court applied Section 21099 or “existing law,” holding that impacts on LOS or “automobile delay” cannot constitute a significant environmental impact under CEQA.)

CEQA Guidelines. Section 15007(b) states:

“Amendments to the Guidelines apply prospectively only. New requirements in amendments will apply to steps in the CEQA process not yet undertaken by the date when agencies must comply with the amendments.”

Section 15007(c) clarifies the timing for implementing Guideline amendments with respect to documents sent out for public review prior to the effective date of the amendments, but proposed for certification after the effective date of the amendments:

“If a document meets the content requirements in effect when the document is sent out for public review, the document shall not need to be revised to conform to any new content requirements in Guideline amendments taking effect before the document is finally approved.”

On April 23, 2020, the City of Moreno Valley Planning Commission adopted Resolution No. 2020-18 and recommended that specified VMT thresholds be adopted by the City Council, pursuant to SB743. However, the City’s new VMT thresholds are not yet in effect, until such time as they are adopted by the City Council.

These Findings consider Section 21099 and the proposed City’s new VMT thresholds. When the FEIR, Revised Final EIR Part 4 Volume 3 was certified in 2015 and when the RSFEIR, Revised Final EIR Part 3 was circulated for public review in July 2018, the use of “Level of Service” criteria was an accepted threshold of significance for the evaluation of transportation impacts and LOS criteria were relied upon in those documents. In addition, although the transportation section was updated in the July 2018 RSFEIR, the transportation section of the 2015 FEIR, Revised Final EIR Part 4, Volume 3 was upheld by the Superior Court (see Topical Response C to the December 2019 Recirculated Draft RSFEIR). Accordingly, for consistency with those prior CEQA documents and in conformance with the Superior Court’s decision, these Findings consider “Level of Service” criteria for purposes of evaluating the significance of transportation impacts. In addition, however, these Findings also consider transportation impacts based on the City’s proposed VMT thresholds. However, because the RSFEIR and the Draft Recirculated RSFEIR were sent out for public review before the effective date of CEQA Guidelines Section 15064.3, VMT is not considered to be a significant impact under CEQA. Therefore, the analysis of the Project’s VMT impact is provided for information purposes only.

Qualitative Considerations Regarding VMT

Internal Trip Capture. The 2018 TIA does not assume any internal trip capture, as a conservative estimate of total daily trips, and therefore provides a conservative estimate of VMT. The Project is a master-planned logistics campus with forward-thinking provisions to take advantage of modern technology, logistics and telecommunications. Based on other similar logistics campuses in the United States and globally, it is anticipated that a number of its larger tenants will seek to minimize external truck traffic (and therefore reducing VMT) by collaborating on tenant to tenant supply needs, some of which will be met through transferring supplies between tenants within WLC, without leaving the campus. In addition, it is WLC anticipated that industry clusters will form, where several similar industries would co-locate to provide added efficiencies in logistics, including allowing for internal fulfillment of material shipping needs, again avoiding external trips and associated VMT. The net effect of this VMT reduction through internal trip capture is difficult to estimate and was therefore not factored into the VMT analysis. However, there is reasonably foreseeable certainty that some level of internal trip capture will occur.

Efficiencies in Logistics Operations. In addition to internal trip capture, it is reasonably foreseeable that some WLC tenants will coordinate inbound and outbound truck shipments to combine loads, minimize empty inbound and outbound trucks, and collaborate in other ways to maximize logistics efficiencies and minimize shipping costs, in part by minimizing the frequency of truck shipments, thereby reducing truck trips and associated VMT. As with internal trip capture, although this is difficult to estimate and therefore was not factored into the EIR, it is reasonable to expect some level of truck trip and VMT reduction due to efficiencies in logistics operations with a large master-planned campus such as WLC.

Employee commute trips. Most often an important strategy for reducing VMT in a community is to improve the local jobs/housing balance by increasing the number of employment opportunities. As such, it is reasonable to expect that increasing local employment opportunities will reduce the average commuter trip lengths of residents, resulting in a net decrease to regional net VMT. This is discussed at length within the Revised Final EIR Part 3 (pages 4.15-50 through page 4.15-51), as well as in Response to Comment 2-F1-15 and Response to Comment 2-F1-46 (addressing The Sustainable Freight Action Plan) of the Responses to Comments to the

2019 Recirculated Sections, Revised Final EIR Part 2, and the supplemental VMT memo provided as Attachment A to these Findings.

Truck trips related to shipping activities. Page 4 of the Office of Planning and Research (OPR) concerning VMT analysis guidance indicates that, although heavy vehicle traffic can be included for analysis convenience, the provided analysis requirements are specific to passenger-vehicles and light duty trucks.⁹ While it may be appropriate to consider heavy vehicle traffic if directed by the lead agency, it is generally understood that Interstate commerce and related heavy vehicle traffic are regulated by the federal government as it relates to commerce. Irrespective of this and considering that the end-users are unknown at this time (so the nature of the business enterprise and its probable origins and destinations are unknown), it is reasonable to assume that the ultimate end users will select this location, at least in part, as to how it affects their transportation costs. Most often businesses which have shipping as a significant part of their operations are sensitive to transportation costs and their relative proximity to customers and suppliers. Accordingly, it is reasonable to assume that warehouses are often located in a manner to reduce VMT given that it is the interest of the business.

Discussion of Transportation Findings

a. Air Traffic Patterns

Potential Significant Impact: Whether the Project would result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks.

Findings: Potential impacts of the Project related to air traffic patterns are discussed in detail in Section 4.15 of the Revised Final EIR Part 3. Based on the information contained in the Revised Final EIR, the Project is allowed to occur within Airport Influence III of the March Inland Port (MIP) and this City Council finds that no significant impacts related to air traffic patterns will occur as a result of development of the Project; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.15 of the Revised Final EIR Part 3, airport facilities within the vicinity of the Project site include the March Air Field (MAF), which is part of the March Air Reserve Base (MARB). The MARB Redevelopment Project Area includes the entire 6,500-acre former active duty base area, and approximately 450 acres adjacent to the base in the industrial area of the City of Moreno Valley. To implement the MARB Redevelopment Project Area and to facilitate the transition of a portion of the MARB from military to civilian uses, the March Joint Powers Authority, (March JPA) consisting of the County of Riverside and the Cities of Moreno Valley, Perris, and Riverside, was formed. The March JPA along with the U.S. Air Force pursued the establishment of March Air Field as a joint use airport.

The Department of the Defense (Air Force) completed an Air Installation Compatible Use Zone (AICUZ) study for MARB in 1998 (updated in 2005). The AICUZ study was designed and is intended to aid in the development of compatible land uses in non-government areas surrounding military airfields to protect public safety and health. The study established three zones based on potential crash patterns: a Clear Zone and two Accident Potential Zones (APZs). The Clear Zone reaches from along the extended runway centerline to a distance of 3,000 feet, APZ 1 extends from 3,000 feet to 8,000 feet, and APZ II extends from 8,000 feet to

⁹ http://opr.ca.gov/docs/20190122-743_Technical_Advisory.pdf (accessed March 31, 2020).

15,000 feet. According to the AICUZ, outside of the Clear Zone and APZs “the risk of aircraft accidents is not significant enough to warrant special consideration in land use planning.” The Project site is not located within a Clear Zone, APZ 1, or APZ 2 for MAF as designated by the Air Force 2005 AICUZ Study. In addition to the AICUZ, Airport Influence Area boundaries around MAF have been adopted by County of Riverside Airport Land Use Commission (ALUC) in its Airport Land Use Plan (ALUP). Portions of the Project within the foothills are located within the High Terrain Area of Influence.

The Project site is approximately 5.5 miles east of MAF. A portion of the Project is in the foothills to the south of where Brodiaea Avenue ends, over to World Logistics Center Parkway, and is located within the High Terrain Influence Area. As part of the standard process for development within High Terrain Influence Areas for MAF, Projects are required to be reviewed by the ALUC for consistency with the ALUP when objects are higher than 35 feet. As a standard condition imposed during ALUC reviews, development located within the boundaries of the High Terrain Influence Area are required to provide navigation easements. Development that is allowed to occur within the High Terrain Airport Influence Area would not include any features that would alter air traffic patterns or the level of air traffic; therefore, a less than significant air safety impact would occur, and no mitigation is required. (Revised Final EIR Part 3, pp. 4.15-47 to 4.15-48).

b. Design Features or Incompatible Uses

Potential Significant Impact: Whether the Project would substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment).

Findings: Potential impacts of the Project related to design features or incompatible uses are discussed in detail in Section 4.15 of the Revised Final EIR Part 3. Based on the entire record before us, this City Council finds that no significant impacts related to design features or incompatible uses will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.15 of the Revised Final EIR Part 3, the design of roadways must provide adequate sight distance and traffic control measures. This provision is normally realized through roadway design to facilitate roadway traffic flows. Roadway improvements in and around the Project site would be designed and constructed to satisfy all City and Caltrans requirements for street widths, corner radii, intersection control as well as incorporate design standards tailored specifically to Project access requirements. Adherence to applicable City requirements would ensure the Project would not include any sharp curves or dangerous intersections.

Temporary impacts associated with the construction of infrastructure improvements included as a part this Project may temporarily restrict vehicular traffic or cause temporary hazards. The construction of infrastructure would coincide with roadway improvements, which would include road or lane closures as well as the presence of construction workers and equipment on public roads. Construction operations would be required to implement adequate measures to facilitate the passage of people and vehicles through/around any required road or lane closures. Site-specific activities, such as temporary construction activities, are finalized on a project-by-project basis by the City and are required to ensure adequate traffic flow. At the time of approval of any site-specific plans required for the construction of infrastructure as a part of typical conditions of

approval, the Project would be required to implement measures that would maintain traffic flow and access. In the absence of a roadway design hazard, no impact would occur; therefore, no mitigation is required.

As identified in the Project TIA, the Project would not produce a significant safety risk and appropriate safety features are already present on roads near local schools. Other than Perris Boulevard, which would experience a small number of Project trucks (22 and 25 medium and heavy-duty trucks in the a.m. and p.m. peak hours, respectively), none of the other truck routes would result in Project trucks traveling near local schools. The safety impact of Project-related passenger cars along streets near local schools was also evaluated by reviewing existing pedestrian facilities and collecting pedestrian counts at the intersections along Project truck routes. All pedestrian crossings at signalized intersections near schools are protected. Crosswalks near schools are striped in yellow (per the California Manual on Traffic Control Devices page 1,282). In most cases, sidewalks exist along roadways and lead to the striped, protected crosswalks at the intersections. Intersection and roadway features along Project truck routes were reviewed and it was determined that adequate pedestrian amenities already exist in the form of protected crossings, crosswalks, curb ramps, and pedestrian signals. For these reasons, Project passenger cars and trucks would not create unsafe conflicts with pedestrians. (Revised Final EIR Part 3 pgs. 4.15-48 to 4.15-49). Therefore, project implementation would cause a less than significant impact due to design hazard features.

c. Inadequate Emergency Access

Potential Significant Impact: Whether the Project would result in inadequate emergency access.

Findings: Potential impacts of the Project related to emergency access are discussed in detail in Section 4.15 of the Revised Final EIR Part 3. Based on the entire record before us, this City Council finds that no significant impacts related to emergency access will occur as a result of development of the Project; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.15 of the Revised Final EIR Part 3, construction activities that may temporarily restrict vehicular traffic would be required to implement adequate measures to facilitate the passage of people and vehicles through/around any required road closures. Site- specific activities such as temporary construction activities are finalized on a project-by-project basis by the City and are required to ensure adequate emergency access.

The roadway improvements that will take place as a part of this Project will improve the traffic circulation in the area. For example, emergency vehicles that currently pass through the site using either World Logistics Parkway or Alessandro Boulevard would continue to have those routes available to them, and these roads will be upgraded to arterial standards within the Project limits. Access to Alessandro Boulevard would be provided by a connection to Redlands Boulevard at Cactus Avenue instead of a direct extension to Alessandro Boulevard. The change would not lengthen the distance between Gilman Springs Road and the Riverside Community Regional Medical Center on Cactus Avenue or the route to and from the Kaiser Moreno Valley Community Hospital on Iris Avenue. The extension of Eucalyptus Avenue through the Project area would improve access between the Project site and the nearest existing fire station (the Moreno Beach fire station). As a condition of approval, the Project will also be required to construct a fire station on site.

These roadway improvements of the Project would enhance the ability of emergency vehicles to access the Project as well as the surrounding properties. Access to the Project site is designed to accommodate large trucks with trailers used for the distribution of goods to and from the warehouses. This would provide ample vehicular access for emergency vehicles. During the operational phase of the Project, on-site access would be required to comply with standards established by the City Public Works Department. The size and location of fire suppression facilities (e.g., hydrants) and fire access routes would be required to conform to Fire Department standards. As required of all development in the City, the operation of the Project would conform to applicable Uniform Fire Code standards. The submittal of such plans would be considered a condition of approval, which would be part of the permitting process initiated by the applicant and approved by the City in accordance with City standards. As with any development, access to and through the Project would be required to comply with the required street widths, as determined in the California Building Code (CBC), Master Plan of Streets, and the Uniform Fire Code. Therefore, implementation of the Project would not significantly impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan; therefore, no mitigation is required. (Revised Final EIR Part 3 pp. 4.15-49)

d. Alternative Transportation

Potential Significant Impact: Whether the Project would conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities.

Findings: Potential impacts of the Project related to alternative transportation are discussed in detail in Section 4.15 of the Revised Final EIR Part 3. Based on the entire record before us, this City Council finds that no significant impacts related to alternative transportation will occur as a result of development of the Project; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.15 of the Revised Final EIR Part 3, the Project would result in the development of employment opportunities and would therefore reduce vehicle miles traveled for the region. The provision of additional employment options in proximity to existing residential development in the City will help reduce local vehicle miles traveled as the employment generated by the Project slowly improves the City's job/housing ratio, and more local jobs are created for City residents.

Although there is currently no transit service in the Project area, the proposed Project would be designed to accommodate bus access on all Project streets. Bus turnouts and shelters would be provided at all active bus stops. It is expected that transit service would be provided once the Project reaches a transit-supportable level of operations. Candidate streets for future bus routes within the project limits are Eucalyptus Avenue, Street C, Street E, and Street F as shown in WLC Specific Plan Figure 3-14 of the Revised Final EIR Part 3. Therefore, the proposed project is consistent with City policies encouraging alternative transportation.

The WLC Specific Plan provides for connections to existing trails to the west along Redlands Boulevard, and to the southwest along Cactus Avenue. In addition, the WLC Specific Plan provides for a new trail connection from the southwest corner of the site around the land designated as open space under the WLC Specific Plan, to connect to a future planned "trailhead" at the northwest corner of the state-owned property to the south. The WLC Specific Plan also includes a "loop" trail segment through the WLC Specific Plan along Street F to

Eucalyptus Avenue and back to Redlands Boulevard (see Revised Final EIR Part 4 Volume 3 Figure 3-12, Non-Vehicular Circulation). In addition, the Project will be conditioned to provide sidewalks and landscaping treatments to allow for pedestrian access throughout the site. With these planned improvements, the Project will have less than significant impacts regarding non-vehicular circulation and no mitigation is required. Refer to discussion above for additional discussion regarding VMT and the Project's relationship to SB743.

e. Freeway Impacts from Truck Trips to the Ports of Los Angeles and Long Beach.

Potential Significant Impact: Whether the Project could cause an increase in traffic that is substantial in relation to the existing traffic load and capacity of the freeway system.

Findings: Potential impacts of the Project related to the increase in traffic volumes are discussed in detail in Section 4.15 and Appendix F of the Revised Final EIR Part 3. Based on the entire record before us, this City Council finds that the Project would result in a less than significant impact for freeways segments from truck trips to the Ports of Los Angeles and Long Beach and no mitigation is required.

Facts in Support of the Findings: The potential for traffic impacts along the SR-60 and SR-91 corridors was assessed by manually adding the forecasts for WLC trucks under 2040 buildout conditions to and from the port to the No-Project condition from the SCAG model. Because the ports and the freeways leading to them are in Los Angeles County, the threshold of significance for the analysis was taken from the Los Angeles County Congestion Management Program (CMP). The CMP states that a significant impact would be deemed to occur if the project increased demand on a highway by at least 2 percent causing LOS F or, if the highway facility already operates at LOS F, then a significant impact would be deemed to occur if the project increases traffic demand by 2 percent or more of capacity.

The Revised Final EIR Section 4.15.6.5 included an analysis of the Project's impacts to each section of the SR-60 and SR-91 corridors and in each direction, for both the a.m. and p.m. peak periods, for the 2018, 2025, and 2040 scenarios. The addition of the WLC traffic would increase freeway traffic volume ranging from 0.03 percent to 0.48 percent of non-project traffic, and therefore would not cause a significant impact on any segment of these freeways.

14. Utilities and Service Systems

a. Construction or Expansion of Water Treatment Facility

Potential Significant Impact: Whether the Project would require the construction of new water treatment facilities or expansion of existing facilities, the construction of which would cause significant environmental effects.

Findings: Potential impacts of the Project related to construction or expansion of water treatment facilities are discussed in detail in Section 4.16 of the Revised Final EIR Part 4 Volume 3. Based on the entire record before us, this Council finds that no significant impacts that would cause the construction or expansion of water treatment facilities will occur as a result of development of the Project; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.16 of the Revised Final EIR Part 4 Volume 3, the Metropolitan Water District has analyzed the reliability of water delivery through the State Water Project

(SWP) and the Colorado River Aqueduct. Metropolitan’s Integrated Resources Plan and 2010 and 2015 Regional Urban Water Management Plan conclude that, with the storage and transfer programs developed by Metropolitan, there will be a reliable source of water to serve its member agencies’ needs through 2040. ¹⁰

All necessary water distribution facilities would be installed simultaneously with required roadway frontage improvements for each phase of development of the WLC Project. Therefore, the connection to the existing water delivery system would not result in substantial disturbance of existing roadways or water facilities. As previously identified, the potable water demand that would be required for the WLC Project would total 1,991.25 acre-feet per year (AFY). The amount of water demand would be within the existing available supply even with a reduction in deliveries from the State Water Project (SWP). Imported sources of water will be supplemented by an increase in desalination of brackish groundwater, recycled water use, and water use efficiency, and implementation of aggressive conservation measures by the EMWD. The WLC Project would not require the construction of new water treatment facilities or expansion of existing facilities, which could cause significant environmental effects. (Revised Final EIR Part 4 Volume 3, pgs. 4.16-13 to 4.16-15).

b. Wastewater Treatment Requirements

Potential Significant Impact: Whether the Project would exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board (RWQCB).

Findings: Potential impacts of the Project related to construction or expansion of water treatment facilities are discussed in detail in Section 4.16 of the Revised Final EIR Part 4 Volume 3. Based on the entire record before us, this Council finds that no significant impacts that would exceed wastewater treatment requirements of the applicable RWQCB as a result of development of the Project; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.16 of the Revised Final EIR Part 4 Volume 3, The WLC Project would result in a connection to the sewer line underlying Redlands Boulevard in the vicinity of the intersection of Redlands Boulevard and Brodiaea Avenue. It is anticipated that all wastewater generated by the WLC Project would be routed to and treated by the Moreno Valley Regional Water Reclamation Facility (MVRWRF). The MVRWRF is a publicly owned treatment works (POTW), so operational discharge flows treated at the MVRWRF would be required to comply with waste discharge requirements contained within the waste discharge requirements for that facility. Compliance with condition or permit requirements established by the City, and waste discharge requirements at the MVRWRF would ensure that discharges into the wastewater treatment facility system from the operation of the WLC Project would not exceed applicable Santa Ana RWQCB wastewater treatment requirements. Expected wastewater flows from the WLC Project will not exceed the capabilities of the serving treatment plant, so no significant impact related to this issue would occur and no mitigation would be required. (Revised Final EIR Part 4 Volume 3, pgs. 4.16-28).

c. Wastewater Treatment Capacity and/or New or Expanded Wastewater Treatment Facilities

¹⁰ Metropolitan Water District of Southern California. 2015 Urban Water Management Plan. Available online: https://wuedata.water.ca.gov/public/uwmp_attachments/9284070670/Metropolitan%20Water%20District%20of%20Southern%20California%202015%20UWMP.pdf. [Accessed April 2020]

Potential Significant Impact: Whether the Project would result in a determination by the wastewater treatment provider, which serves or may serve the Project, that it lacks adequate capacity to serve the Project's projected demand in addition to the provider's existing commitments or require the construction of new wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects.

Findings: Potential impacts of the Project related to adequate water supply are discussed in detail in Section 4.16 of the Revised Final EIR Part 4 Volume 3. Based on the entire record before us, this Council finds that no significant impacts related to wastewater treatment capacity or need for new or expanded wastewater treatment facilities will occur as a result of development of the Project; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.16 of the Revised Final EIR Part 4 Volume 3, the WLC Project would connect to the existing sewer pipeline underlying Redlands Boulevard in the vicinity of the intersection of Redlands Boulevard and Brodiaea Avenue. Wastewater flows from the WLC Project site would be handled by the EMWD and would be conveyed to the MVRWRF located in the southwestern portion of the City, southwest of the WLC Project site. Current capacity at this facility is 16 million gallons per day (mgd)¹¹ with an existing average inflow of approximately 11.2 mgd.¹² Under current conditions, the average daily surplus treatment capacity is approximately 4.5 mgd. Generally, water use, and wastewater flows are related in that wastewater is generated from indoor water uses.

Based on a square footage of 40.6 million, the wastewater generated from the logistics uses on the site is 812,000 gallons per day (gpd). An additional 5,100 gpd of flow was added to account for the in-Project fueling station. Thus, the total wastewater generated from the site is 817,100 (0.82 mgd). The additional wastewater treatment demand of 0.82 mgd resulting from development of the WLC Project totals approximately 18.2 percent of current surplus treatment capacity. The previous treatment capacity at the MVRWRF was 16 mgd. Improvements to this facility have increased capacity at this facility to 21 mgd. Ultimate expansion of this facility is expected to be 41 mgd (Revised Final EIR Part 3, pg. 6.16-45). Impacts associated with wastewater facilities would be less than significant because the amount of wastewater generated by the Project would be within the existing surplus treatment capacity at the MVRWRF. The WLC Project would not require the construction of new wastewater treatment facilities or expansion of existing facilities, which could cause significant environmental effects. Therefore, impacts associated with wastewater facilities would be less than significant and no mitigation is required. (Revised Final EIR Part 4 Volume 3, pgs. 4.16-29).

d. Solid Waste Facilities

Potential Significant Impact: Whether the Project would be served by a landfill with insufficient permitted capacity to accommodate the Project's solid waste disposal needs.

¹¹ 5.13 *Public Services and Utilities*, City of Moreno Valley General Plan Final EIR, July 2006.

¹² Eastern Municipal Water District Moreno Valley Regional Water Reclamation Facility, <http://www.emwd.org/modules/showdocument.aspx?documentid=1423>, website accessed April May 4, 2020. .

Findings: Potential impacts of the Project related to solid waste facilities are discussed in detail in Section 4.16 of the Revised Final EIR Part 4 Volume 3. Based on the entire record before us, this Council finds that no significant impacts related to solid waste facilities will occur as a result of development of the Project; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.16 of the Revised Final EIR Part 4 Volume 3, the WLC Project is anticipated to generate approximately 104.6 tons of solid waste per day (38,164 tons/year).¹³ Solid waste from the WLC Project would be hauled by Waste Management of Inland Valley and transferred to the Badlands Sanitary Landfill, located in Moreno Valley. The Badlands Sanitary Landfill has a daily permitted throughput of 4,800 tons per day, a remaining capacity of 15,748,799 cubic yards, and an estimated closure date of 2022.¹⁴

The volume of solid waste generated by the WLC Project per day represents 2.6 percent of the current permitted throughput and 4.5 percent of the current surplus capacity at the Badlands Sanitary Landfill. As adequate daily surplus capacity exists at the receiving landfill, development of the WLC Project would not significantly affect current operations or the expected lifetime of the landfill serving the Project area. No significant solid waste disposal impact would occur, and no mitigation is required. (Revised Final EIR Part 4 Volume 3, pgs. 4.16-32 to 4.16-33).

e. Solid Waste Reduction

Potential Significant Impact: Whether the Project would fail to comply with applicable Federal, State, and local statutes and regulations related to solid waste.

Findings: Potential impacts of the Project related to solid waste reduction are discussed in detail in Section 4.16 of the Revised Final EIR Part 4 Volume 3. Based on the entire record before us, this Council finds that no significant impacts related to solid waste reduction will occur as a result of development of the Project; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.16 of the Revised Final EIR Part 4 Volume 3, the City of Moreno Valley is responsible for meeting the requirements of AB 939 and SB 1016, which includes a 50 percent reduction in disposal by the start of 2000 and preparation of a solid waste reduction plan to help reduce the amount of solid waste disposed of at the landfills. Various programs are implemented by the City of Moreno Valley to satisfy the mandated reduction in solid waste.

The WLC Project would be required to coordinate with the waste hauler to develop collection of recyclable materials for the Project on a common schedule as set forth in applicable local, regional, and State programs. Recyclable materials that would be recycled by the Project include paper products, glass, aluminum, and plastic. Additionally, the Project would be required to comply with applicable elements of AB 1327, Chapter

¹³ South Coast Air Quality Management District. CalEEMod Manual, Appendix D, Table 10.1, Solid Waste Disposal Rate for Unrefrigerated Warehouse. <http://www.aqmd.gov/calmod/user's-guide>. Calculation: 0.94 tons/thousand square feet/year × 40,600 thousand square feet = 38,164 tons per year.

¹⁴ *Badlands Sanitary Landfill Facility/Site Summary Details*, CalRecycle website, <https://www2.calrecycle.ca.gov/swfacilities/Directory/33-AA-0006>, website accessed April 2020.

18 (California Solid Waste Reuse and Recycling Access Act of 1991) and other applicable local, State, and Federal solid waste disposal standards, thereby ensuring that the solid waste stream to the Badlands Sanitary Landfill is reduced in accordance with existing regulations. Impacts are considered less than significant and require no mitigation. (Revised Final EIR Part 4 Volume 3, pg. 4.16-33 to 4.16-34).

f. Cumulative Impacts – Public Services

Water Supply

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would have significant cumulative impacts associated with the construction of new water treatment facilities or expansion of existing facilities, the construction of which would cause significant environmental effects.

Findings: Potential cumulative impacts related to new or expanded water treatment facilities are discussed in detail in Section 6.16 of the Revised Final EIR Part 3. Based on the entire record before us, this Council finds that the Project's incremental contribution to environmental effects associated with the construction of new water treatment facilities or expansion of existing facilities would not cause or contribute to a significant cumulative effect; therefore, no mitigation is required.

Facts in Support of the Findings: According to Revised Final EIR Part 4 Volume 3 Section 4.16, the Project would require the construction of new water reservoirs to serve each of three water pressure zones (1967, 1860, and 1764). All three reservoir sites are located outside of the Specific Plan boundary. As development proceeds within the Project area, new waterlines, ranging in size from 12 to 24 inches, will be constructed in the existing and future street rights-of-way to connect the future water tanks to the development area. The water system will require a new pump station at the 1764 reservoir and an upgrade to the existing EMWD pump station near Cottonwood Avenue and Redlands Boulevard. All water facilities for the Project would be constructed to EMWD standards and would be subject to a Plan of Service approval by EMWD (Specific Plan Section 3.5.1). Potential significant environmental impacts associated with such construction include air quality, traffic, biological resources, cultural resources, noise, hydrology, water quality, and other impacts and were analyzed in Chapters 4.0, 5.0 and 6.0 of the Revised Final EIR Part 3. None of those sections identified construction or operation of the Project's new or expanded water facilities as resulting in significant impacts

Annually, a 5-year Capital Improvement Plan (CIP) is prepared by the EMWD. The EMWD's CIP outlines specific projects and their funding sources. Each project is also submitted individually to the Board for authorization and approval. This allows the EMWD to match needed facilities with development trends accurately. Funding for the EMWD's microfiltration plants, distribution pipes, and the recharge and recovery program is listed in the most recent EMWD CIP. Development and construction of the cumulative scenario would be included in the most recent EMWD CIP. Each applicant also would have to fund the costs of the water-related infrastructure needed to serve a particular site. All new facilities proposed or necessitated by projects in the cumulative scenario would be subject to applicable CEQA review and would be required to comply with all applicable laws and regulations protecting environmental resources. Cumulative project CEQA documents within the district boundary have been reviewed and the findings have been incorporated into this analysis.

Overall, the impacts of the Project would not combine with other projects in the cumulative scenario to cause or contribute to a significant cumulative impact to water treatment facilities (Revised Final EIR Part 3, pg. 6.16-33).

Adequate Water Supply

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would have significant cumulative impacts related to sufficient water supplies from existing entitlements and resources or are new or expanded entitlements needed.

Findings: Potential cumulative impacts of the Project related to sufficient water supplies are discussed in detail in Section 6.16 of the Revised Final EIR Part 3. Based on the entire record before us, this City Council finds that the Project’s incremental contribution to cumulative demand on water supplies requiring the need for new or expanded entitlements would not cause or contribute to a significant cumulative effect; therefore, no mitigation is required.

Facts in Support of the Findings: The WSA prepared for the project by the EMWD concluded that the water demand for the proposed on-site uses would be approximately 1,991.25 AFY. The EMWD considers this a “worst-case” estimate based on the total acres and amount of square footage of warehousing proposed by the Project. Taking into account the proposed water xeriscape landscaping plan, it is likely that actual water use for development within the WLC Specific Plan would be substantially less than the worst-case EMWD estimate. As identified in Table 4.16.A of the Revised Final EIR Part 4 Volume 3, anticipated water supplies in the EMWD total 213,900 and 302,200 AFY in 2015 and 2035, respectively. The water demand required for the proposed Project would total 0.93 and 0.66 percent of the EMWD’s 2015 and 2035 supplies under worst-case conditions. The demand estimated for this Project is substantially less and therefore still within the limit of growth projected in the 2015 UWMP.

Existing and future development within the EMWD’s service area would demand additional quantities of water. The Project, along with any projects in the cumulative scenario, would be required to provide availability and commitment letters demonstrating sufficient water resources and access to available water facilities prior to building permit issuance. The 2015 UWMP addresses the water supply sources, projected demand, and supply reliability for Eastern EMWD service area. The 2015 UWMP estimates population within the EMWD service area to increase to 1,111,729 persons by the year 2035. Increases in population, square footage, and intensity of uses would contribute to increases in the overall regional water demand. The anticipated conversion of water-intensive uses (e.g., agriculture) and the implementation of existing water conservation measures and recycling programs would reduce the need for increased water supply. Demand projections for EMWD were developed using information about planned development and land use (UWMP 2015) and would include the water demand for the cumulative projects listed in Table 6.16-1. CEQA documents for projects in the cumulative scenario have been reviewed and the findings have been incorporated into the cumulative impact analysis.

Based on the information provided in the 2015 UWMP, EMWD has the ability to meet current and projected water demand through 2040 during normal, historic single-dry and historic multiple-dry year periods using imported water from MWD with existing supply resources. Planned local supplies will supplement imported

supplies and improve reliability for EMWD and the region. In addition, adherence to regulations would ensure that cumulative projects would not result in a demand for water that exceeds existing entitlements and resources, or any new or expanded water-related infrastructure would be funded by the respective applicant. Therefore, projects in the cumulative scenario, together with the Project, would not cause significant cumulative impacts associated with adequate water service and supplies (Revised Final EIR Part 3, pg. 6.16-33 through 6.16.-34).

Storm Water Drainage Requirements

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would have significant cumulative impacts from the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects.

Findings: Potential cumulative impacts of the Project related storm water drainage requirements are discussed in detail in Section 6.16 of the Revised Final EIR Part 3. Based on the entire record before us, the City Council finds that the Project's incremental contribution to environmental effects from the construction of new storm water drainage facilities or expansion of existing facilities would not cause or contribute to a significant cumulative effect; therefore, no mitigation is required.

Facts in Support of the Findings: The cumulative impact geographic area for storm water drainage facilities is the watershed the project site is located in. The Revised Final EIR Part 4 Volume 3, Section 4.16, analyzes the storm water drainage facilities necessary to serve the Project site. To reduce flows to below or equal to pre-development conditions, the on-site storm water flows would be routed to a series of on-site detention and infiltration basins by phase before flows are routed off site. While the increase in impervious surfaces attributable to the proposed WLC project would contribute to a greater volume and higher velocity of storm water flows, the proposed WLC project's detention and infiltration basins would accept and accommodate runoff that would result from Project construction at pre-project conditions.

Potential significant environmental impacts associated with such construction include air quality, traffic, biological resources, cultural resources, noise, hydrology, water quality, and other impacts as identified were analyzed in Chapters 4.0, 5.0 and 6.0 of the Revised Final EIR Part 4 Volume 3. None of those sections identified construction or operation of the Project's new storm water drainage facilities as resulting in significant impacts. All new storm water drainage facilities proposed or necessitated by cumulative projects would be subject to applicable CEQA review and would be required to comply with all applicable laws and regulations protecting environmental resources. CEQA documents prepared for projects in the cumulative scenario have been reviewed and the findings have been incorporated into this analysis.

The impacts of the Project would not combine with the impacts of other projects in the cumulative scenario to cause or contribute to significant cumulative impacts resulting from construction of storm water drainage facilities. As such, cumulative impacts to stormwater drainage facilities would be less than significant.

Wastewater Treatment Requirements

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would have significant cumulative impacts resulting from exceedances of wastewater treatment requirements of the applicable Regional Water Quality Control Board.

Findings: Potential cumulative impacts of the Project related wastewater treatment requirements are discussed in detail in Section 6.16 of the Revised Final EIR Part 3. Based on the entire record before us, this City Council finds that the Project's incremental contribution would not cause or contribute to any significant cumulative impact resulting from exceedance of wastewater treatment requirements of the Santa Ana Regional Water Quality Control Board; therefore, no mitigation is required.

Facts in Support of the Findings: The cumulative area for wastewater-related issues is the MVRWRF service area. Cumulative population increases and development within the area serviced by the MVRWRF would increase the overall regional demand for wastewater treatment service. The previous treatment capacity at the MVRWRF was 16 mgd. Improvements to this facility have increased capacity at this facility to 21 mgd. Ultimate expansion of this facility is expected to be 41 mgd. The MVRWRF is expected to have adequate capacity to service the City's wastewater needs through 2030. Any proposed changes to capacity of the MVRWRF or any facility maintained by EMWD are reviewed throughout the year. EMWD has a funding and construction mechanism in place that ensures improvements to EMWD facilities occurs in a timely manner. This funding mechanism is referred to as EMWD's Sewer Financial Participation Charge Program. For all new development within the EMWD service area, the Sewer Financial Participation Charge is allocated to assist in the financing of any future collection and disposal facilities and any future sewer treatment plant facilities. Cumulative development would not exceed the capacity of the wastewater treatment system because the MVRWRF would expand as growth occurred. CEQA documents for other projects in the cumulative scenario have been reviewed and the findings have been incorporated into this analysis.

The proposed Project would not require the expansion of existing wastewater infrastructure: only connections to existing infrastructure would be required by the Project. By adhering to the wastewater treatment requirements established by the Santa Ana RWQCB through the NPDES permit, wastewater from the Project site that is processed through the MVRWRF would meet established standards. As the wastewater from all development within the service area of the MVRWRF would be similarly treated under the NPDES, no cumulatively significant exceedance of wastewater treatment requirements would occur (Revised Final EIR Part 3, pg. 6.16-36).

Wastewater Treatment Capacity and/or New or Expanded Wastewater Treatment Facilities

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would have significant cumulative impacts based on a determination by the wastewater treatment provider, which serves or may serve the cumulative projects, that it lacks adequate capacity to serve the cumulative demand in addition to the provider's existing commitments; or

Whether the Project in connection with past, current, and probable future projects would have significant cumulative impacts related to the construction of new wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects.

Findings: Potential cumulative impacts of the Project related wastewater treatment capacity and/or new or expanded wastewater treatment facilities are discussed in detail in Section 6.16 of the Revised Final EIR Part 3. Based on the entire record before us, this City Council finds that the Project’s incremental contribution to impacts on wastewater treatment capacity would not cause or contribute to a significant cumulative effect. Additionally, the project’s contribution to environmental effects from the construction of new wastewater treatment facilities or expansion of existing facilities would be less than cumulatively considerable; therefore, no mitigation is required.

Facts in Support of the Findings: The cumulative area for wastewater-related issues is the MVRWRF service area. Cumulative population increases and development within the area serviced by the MVRWRF would increase the overall regional demand for wastewater treatment service. The previous treatment capacity at the MVRWRF was 16 mgd. Improvements to this facility have increased capacity at this facility to 21 mgd. Ultimate expansion of this facility is expected to be 41 mgd. The MVRWRF is expected to have adequate capacity to service the City’s wastewater needs through 2030. Any proposed changes to capacity of the MVRWRF or any facility maintained by EMWD are reviewed throughout the year. EMWD has a funding and construction mechanism in place that ensures improvements to EMWD facilities occurs in a timely manner. This funding mechanism is referred to as EMWD’s Sewer Financial Participation Charge Program. For all new development within the EMWD service area, the Sewer Financial Participation Charge is allocated to assist in the financing of any future collection and disposal facilities and any future sewer treatment plant facilities. Cumulative development would not exceed the capacity of the wastewater treatment system because the MVRWRF would expand as growth occurred.

The proposed Project would not cause or contribute to a cumulatively significant impact on wastewater infrastructure because the proposed Project would not combine with the demands of other projects in the cumulative scenario to require the expansion of existing infrastructure. The Project would require only connections to existing infrastructure. Potential significant environmental impacts associated with such construction include air quality, traffic, biological resources, cultural resources, noise, hydrology, water quality, and other impacts as identified were analyzed in Chapters 4.0 and 6.0 of the Revised Final EIR Part 4 Volume 3. None of those sections identified construction or operation of the Project’s new or expanded wastewater infrastructure as resulting in significant impacts. CEQA documents for other projects in the cumulative scenario have been reviewed and the findings have been considered in this analysis.

By adhering to the wastewater treatment requirements established by the Santa Ana RWQCB through the NPDES permit, wastewater from the Project site that is processed through the MVRWRF would meet established standards. As the wastewater from all development within the service area of the MVRWRF would be similarly treated under the NPDES, no cumulatively significant exceedance of Santa Ana RWQCB wastewater treatment requirements would occur. As such, cumulative impacts to wastewater treatment facilities would be less than significant (Revised Final EIR Part 3, pg. 6.16-37).

g. Solid Waste Facilities

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would have significant cumulative impacts related to insufficient permitted landfill capacity to accommodate the project's solid waste disposal needs.

Findings: Potential cumulative impacts of the Project related to solid waste facilities are discussed in detail in Section 6.16 of the Revised Final EIR Part 3. Based on the entire record before us, this City Council finds that the Project's incremental contribution to landfill impacts would not cause or contribute to a significant cumulative effect; therefore, no mitigation is required.

Facts in Support of the Findings: The cumulative impact geographic area for solid waste services is the City of Moreno Valley. Solid waste disposal and recycling services for the proposed project site would be provided by Waste Management of the Inland Empire. Waste Management of the Inland Empire separates and markets recyclable materials collected within its service area. The project, in combination with other cumulative projects, would increase the amount of solid waste being transferred to landfills within the City. The volume of solid waste generated by the proposed WLC project per day represents 2.6 percent of the current permitted throughput and 4.5 percent of the current surplus capacity at the Badlands Sanitary Landfill. As adequate daily surplus capacity exists at the receiving landfill, development of the proposed project would not significantly affect current operations or the expected lifetime of the landfill serving the project area. CEQA documents for other projects in the cumulative scenario have been reviewed and the findings have been considered in this analysis.

AB 939 mandates the reduction of solid waste disposal in landfills. While the Badlands Sanitary Landfill has an estimated closure date of 2022, as previously identified, the City's waste hauler will also use other County landfills in the area (e.g., Lamb Canyon Landfill and El Sobrante Landfill). The estimated closure date of the Lamb Canyon Landfill is 2023 and the estimated closure date of the El Sobrante Landfill is 2030. With planned expansion activities of landfills in the Project vicinity and projected growth rates contained in the City's General Plan EIR, sufficient landfill capacity would exist to accommodate future disposal needs through City buildout in 2030. Buildout of the City General Plan would not create demands for solid waste services that would exceed the capabilities of the County's waste management system. Therefore, although the Project and cumulative projects would result in an increase in the amount of solid waste sent to landfills, compliance with state and local waste diversion requirements would contribute to the longevity of existing and proposed landfills that would serve the projects and ensure that cumulative impacts would be less than significant (Revised Final EIR Part 3, pg. 6.16-37 through 6.16-38).

h. Solid Waste Reduction

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would have significant cumulative impacts related to compliance with applicable federal, state, and local statutes and regulations related to solid waste.

Findings: Potential cumulative impacts of the Project related to solid waste reductions are discussed in detail in Section 6.16 of the Revised Final EIR Part 3. Based on the entire record before us, this City Council finds that the Project’s incremental contribution to cumulative solid waste regulation impacts would not cause or contribute to a significant cumulative impact; therefore, no mitigation is required.

Facts in Support of the Findings: The Project, in combination with other cumulative projects, would increase the amount of solid waste being transferred to landfills within the City. Federal, State and local governments have enacted a variety of laws and established programs to deal with the transport, use, storage, and disposal of hazardous materials to reduce the risks to public health and the environment. AB 939 and SB 1016 mandates the reduction of solid waste disposal in landfills. While the Badlands Sanitary Landfill has an estimated closure date of 2022, as previously identified, the City’s waste hauler will also use other County landfills in the area (e.g., Lamb Canyon Landfill and El Sobrante Landfill). Additionally, the proposed project would be required to comply with applicable elements of AB 1327, Chapter 18 (California Solid Waste Reuse and Recycling Access Act of 1991) and other applicable local, State, and Federal solid waste disposal standards. CEQA documents for other projects in the cumulative scenario have been reviewed and the findings have been considered in this analysis. The estimated closure date of the Lamb Canyon Landfill is 2023 and the estimated closure date of the El Sobrante Landfill is 2030. With planned expansion activities of landfills in the project vicinity and projected growth rates contained in the City’s General Plan EIR, sufficient landfill capacity would exist to accommodate future disposal needs through City buildout in 2030. Buildout of the City General Plan would not create demands for solid waste services that would exceed the capabilities of the County’s waste management system. Therefore, although the Project and cumulative projects would result in an increase in the amount of solid waste sent to landfills, compliance with state and local waste diversion requirements would contribute to the longevity of existing and proposed landfills that would serve the projects and ensure that cumulative impacts would be less than significant (Revised Final EIR Part 3, pg. 6.16-38).

i. Cumulative Impacts to Water Supply Services

Potential Significant Impact: Whether the Project could result in cumulative impacts to the water supply.

Findings: Potential impacts of the Project related to cumulative impacts to water supply impacts are discussed in detail in Section 6.16 of the Revised Final EIR Part 3. Based on the entire record before us, this Council finds that no significant impacts related to cumulative water supply services will occur as a result of development of the Project; therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 6.16 of the Revised Final EIR Part 3, the cumulative impact geographic area for water supply is the EMWD service area. Cumulative projects also could result in potential water supply impacts, and incrementally increase the long-term demand for water service.

The WSA prepared for the Project by the EMWD concluded that the water demand for the proposed on-site uses would be approximately 1,991.25 AFY. The EMWD considers this a “worst-case” estimate based on the total acres and amount of square footage of warehousing proposed by the Project. Taking into account the proposed water xeriscape landscaping plan, it is likely that actual water use for development within the WLC Specific Plan would be substantially less than the worst-case EMWD estimate. Anticipated water supplies in the EMWD total 213,900 and 302,200 AFY in 2015 and 2035, respectively. The water demand required for

the proposed Project would total 0.93 and 0.66 percent of the EMWD's 2015 and 2035 supplies under worst-case conditions. The demand estimated for this Project is substantially less and therefore still within the limit of growth projected in the 2015 UWMP.

Existing and future development within the EMWD's service area would demand additional quantities of water. The 2015 UWMP addresses the water supply sources, projected demand, and supply reliability for Eastern EMWD service area. The 2015 UWMP estimates population within the EMWD service area to increase to 1,111,729 persons by the year 2035. Increases in population, square footage, and intensity of uses would contribute to increases in the overall regional water demand. The anticipated conversion of water-intensive uses (e.g., agriculture) and the implementation of existing water conservation measures and recycling programs would reduce the need for increased water supply. Demand projections for EMWD were developed using information about planned development and land use (UWMP 2015) and would include the water demand for the cumulative projects. CEQA documents for projects in the cumulative scenario have been reviewed and the findings have been incorporated into the cumulative impact analysis.

Based on the information provided in the 2015 UWMP, EMWD has the ability to meet current and projected water demand through 2040 during normal, historic single-dry and historic multiple-dry year periods using imported water from MWD with existing supply resources. Planned local supplies will supplement imported supplies and improve reliability for EMWD and the region. In addition, adherence to regulations would ensure that cumulative projects would not result in a demand for water that exceeds existing entitlements and resources, or any new or expanded water-related infrastructure would be funded by the respective applicant. Therefore, projects in the cumulative scenario, together with the Project, would not cause significant cumulative impacts associated with adequate water service and supplies. No mitigation measures are required.

15. Cumulative Energy

a. Cumulative Energy Consumption – Electricity

Potential Significant Impact: Whether the Project would contribute to cumulative environmental impacts related to electricity consumption, supply, energy standards and expansion of facilities.

Findings: Potential cumulative impacts of the Project regarding energy consumption are discussed in detail in Section 6.17 of the Revised Final EIR Part 2. Based on the entire record before us, this Council finds that no significant cumulative impacts to electricity consumption, supply, energy standards and expansion of facilities will occur as a result of development of the Project; therefore, no mitigation is required.

Fact Supporting the Findings: The geographic context for the cumulative analysis of electricity is Moreno Valley Utility's (MVU) service area. Electricity demand for all cumulative projects located within the MVU's service area has been estimated. Growth within this geography is anticipated to increase the demand for electricity and the need for infrastructure, such as new or expanded facilities.

The cumulative projects would require electricity for water conveyance during ground-moving activities which would require a relatively large amount of water to cover the affected construction areas. Electrical consumption due to the conveyance of water used for dust control is presented in Table 6.17-2 (Revised Final EIR Part 2, as revised by Section 4, Errata, of the Revised Final EIR Part 1, pg. 821 to 823).

Buildout of the Project, the cumulative projects, and additional growth forecasted to occur in the City would increase electricity consumption during Project construction and operation and may cumulatively increase the need for electricity supplies. Estimated electrical use for the cumulative projects do not take into account electricity use from electric vehicle (EV) charging stations as the specifics of EV stations are not known for the cumulative projects.

Water use related to dust control is regulated under SCAQMD's Rule 402 and 403 and is required to limit fugitive particulate matter generated by construction activities. The Project would be in compliance with Rules 402 and 403 and would require a relatively large amount of water to cover the entire acreage of the Project site. The expected electricity consumption associated with water use during construction equates to only 0.43 percent of MVU's forecasted sales for 2020 (expected starting year of construction).

MVU forecasts that its peak demand in 2037, the latest available forecast from the Integrated Resource Plan (IRP), would be approximately 231,555 MWh/year. The Project's estimated net new electrical consumption would account for between 74 to 113 percent of MVU's projected electricity sales in 2024 depending on the electric vehicle (EV) penetration scenario. Total energy consumption from all cumulative projects is estimated at 565,690 MWh annually and is 161 percent of MVU's forecasted sales in 2037 (Section 4, Errata, of the Revised Final EIR Part 1, pg. 819). Nonetheless, as the utility provider for the Project and cumulative projects, MVU has determined that the increased electricity demand would be minor compared to existing supply and infrastructure within its service area and would be consistent with growth expectations for its service area. MVU's 2018 IRP predicts an increase in electricity demand over a 10-year period that is planned to be met by increasing solar, wind, and geothermal power, and supplementing with natural gas as needed. MVU's IRP specifically mentions the World Logistics Center and states that, "a portion of the anticipated demand [of the Project] is incorporated in MVU's load forecast. MVU will monitor development progress at the World Logistics Center and other local projects to determine potential impacts to customer energy requirements".¹⁵ MVU forecasts projected growth in the region and with its 2018 IRP already has plans in place that account for future development including the Project and cumulative projects.

Furthermore, like the Project, other future development projects would be expected to incorporate energy conservation features, comply with applicable regulations including CALGreen and State energy standards under Title 24, and incorporate mitigation measures, as necessary. As discussed above and based on evidence from MVU, the Project would not have a cumulatively considerable impact on existing energy resources either individually or incrementally when considering the anticipated growth in the service area. Accordingly, the impacts related to electricity consumption would not be cumulatively considerable, and thus would be less than significant and no mitigation is required.

b. Cumulative Energy Consumption – Natural Gas

Potential Significant Impact: Whether the Project would contribute to cumulative environmental impacts related to natural gas consumption, supply, energy standards and expansion of facilities.

¹⁵ Moreno Valley Utility, Integrated Resource Plan (2015).

Findings: Potential cumulative impacts of energy consumption are discussed in detail in Section 6.17 of the Revised FEIR Part 2. Based on the entire record before us, this Council finds that no significant cumulative impacts to natural gas consumption, supply, energy standards and expansion of facilities will occur as a result of development of the Project; therefore, no mitigation is required.

Fact Supporting the Findings: The geographic context for the cumulative analysis of natural gas is Southern California Gas’s (So Cal Gas) service area. All of the cumulative projects identified by the traffic impact analysis (TIA) are in So Cal Gas’ service area. Growth within this geography is not anticipated to increase the demand for natural gas and the need for infrastructure, such as new or expanded facilities.

Buildout of the Project, the cumulative projects, and additional growth forecasted to occur in the City could increase natural gas consumption during Project construction and operation and may cumulatively increase the need for natural gas supplies.

Though electricity usage is predicted to rise, natural gas demand is expected to decline overall from 2016-2035 accounting for population and economic growth as well as efficiency improvements and the State’s transition away from fossil fuel-generated electricity to increased renewable energy. SoCalGas predicts a decline in every sector (residential, industrial, commercial, electricity generation, and vehicular), with the exception of wholesale and international gas sales to Mexico. The 2016 California Gas Report states, “SoCalGas projects total gas demand to decline at an annual rate of 0.6% from 2016 to 2035. The decline in throughput demand is due to modest economic growth, CPUC-mandated energy efficiency (EE) standards and programs, renewable electricity goals, the decline in commercial and industrial demand, and conservation savings linked to Advanced Metering Infrastructure (AMI).”¹⁶ Buildout of the Project and cumulative projects in the Statewide service area is not expected to increase natural gas consumption and the need for natural gas supplies from building energy.

Natural gas consumption from the Project was compared to Statewide natural gas fuel consumption since natural gas as a fuel can be procured from anywhere and is not limited to the service provider’s resources. The Project would not generate any natural gas use for building operations, as shown in Table 6.17-3 (in Section 6.17 of the Revised Final EIR Part 2, as revised by Section 4, Errata, of the Revised Final EIR Part 1, pg. 827 to 830). Natural gas consumption would primarily be from operation of on-site equipment and the planned CNG/LNG fueling station which will be publicly accessible and are included as transportation fuels. From a cumulative standpoint, natural gas consumption from all cumulative projects (including the Project) would be 3,239,659 MMBtu or 0.37 percent of the SoCalGas’s total natural gas use (Section 4, Errata, of the Revised Final EIR Part 1, pg. 830).

Although future development projects would result in use of nonrenewable natural gas resources which could limit future availability, the use of such resources would be on a relatively small scale and would be consistent with regional and local growth expectations for SoCal Gas’s service area and would not strain Statewide natural gas resources. Further, like the Project, other future development projects would be expected to incorporate energy conservation features, comply with applicable regulations including CALGreen and State

¹⁶ California Gas and Electric Utilities, *2016 California Gas Report*.
<https://www.socalgas.com/regulatory/documents/cgr/2016-cgr.pdf>. Accessed May 2018.

energy standards in Title 24, and incorporate mitigation measures, as necessary. While initially the Project and cumulative projects could result in increased natural gas demand compared to existing uses on each specific project site, the overall demand for natural gas over time is expected to decline due to increases in regional natural gas efficiencies and the transition to renewable energy on a statewide basis displacing fossil fuels including natural gas. Therefore, the Project would not have a cumulatively considerable impact related to natural gas consumption, and impacts would be less than significant, and no mitigation is required.

c. Cumulative Energy Consumption – Transportation Energy

Potential Significant Impact: Whether the Project would contribute to cumulative environmental impacts related to transportation energy consumption, supply, energy standards and expansion of facilities.

Findings: Potential cumulative impacts of energy consumption are discussed in detail in Section 6.17 of the Revised Final EIR Part 2. Based on the entire record before us, this Council finds that no significant cumulative impacts to transportation energy consumption, supply, energy standards and expansion of facilities will occur as a result of development of the Project; therefore, no mitigation is required.

Fact Supporting the Findings: Buildout of the Project, the cumulative projects, and additional growth forecasted to occur in the City could increase gasoline, diesel, and natural gas consumption during Project construction and operation, and may cumulatively increase the need for supplies.

As stated in the traffic impact analysis (TIA) (Revised Final EIR Part 3, Appendix F, pg. 93), approximately 80 percent of the vehicles entering or leaving warehouse sites are passenger cars, mostly used for commute trips by employees of the warehouses. The WLC would create much needed local jobs, which would affect commute patterns in the area by reducing VMT because people would work closer to where they live. Thus, the TIA demonstrates that regional VMT is reduced due to the net effect the Project has on regional automobile travel. Nonetheless, buildout of the Project and cumulative projects in the region would be expected to increase overall VMT; however, the effect on transportation fuel demand would be minimized by future improvements to vehicle fuel economy pursuant to federal and state regulations. By 2025, vehicles are required to achieve 54.5 mpg (based on USEPA measurements), which is a 54 percent increase from the 2012-2016 standard of 35.5 mpg. As discussed in detail in Section 4.07, *Greenhouse Gas Emissions*, the Project would be consistent with the 2016 RTP/SCS for the region. Cumulative projects would need to demonstrate consistency with the goals in the 2016 RTP/SCS and incorporate project design features or mitigation measures as required under CEQA, which would also ensure cumulative projects contribute to transportation energy efficiency.

According to the USEIA's International Energy Outlook 2016, the global supply of crude oil, other liquid hydrocarbons, and biofuels is expected to be adequate to meet the world's demand for liquid fuels through 2040.¹⁷ CARB's analyses and the State's 2017 Climate Change Scoping Plan show a 45 percent decrease in fossil fuel demand by 2030.¹⁸ The State's Mobile Source Strategy aims to displace fossil fuel reliant vehicles

¹⁷ EIA, International Energy Outlook 2016, [https://www.eia.gov/outlooks/ieo/pdf/0484\(2016\).pdf](https://www.eia.gov/outlooks/ieo/pdf/0484(2016).pdf); Accessed April 2018.

¹⁸ CARB, *California's 2017 Climate Change Scoping Plan: The strategy for achieving California's 2030 greenhouse gas target*, November, 2017, https://www.arb.ca.gov/cc/scopingplan/scoping_plan_2017.pdf; Accessed May 2018.

with 1.5 million zero emission vehicles (ZEVs) by 2025 and 4.2 million ZEVs by 2030.¹⁹ Considering the State’s goals of displacing transportation fuels, overall fossil fuel use will decrease and the current refining capacity would be sufficient to support the demand of the Project and cumulative projects (Revised FEIR Part 2, Section 6.17, pg. 6.17-22).

The Project’s annual gas and diesel consumption from construction would represent approximately 0.57 percent of County diesel sales and 0.005 percent of County gasoline sales in 2018.²⁰ Cumulative construction consumption for diesel and gasoline would result in 25 million gallons of diesel and 15 million gallons of gasoline representing approximately 9 percent of County diesel and 1 percent of County gasoline respectively (Section 6.17, Revised Final EIR Part 2, pg. 6.17-22). The Project’s annual gas and diesel consumption from operational activities would represent approximately 0.02 percent of County diesel sales and 0.003 percent of County gasoline sales in 2018.²¹ Cumulative construction and operational consumption for diesel and gasoline would result in 80 million gallons of diesel and 147 million gallons of gasoline representing approximately 29 percent of County diesel and 14 percent of County gasoline respectively (Section 4, Errata, of the Revised Final EIR Part 1, pg. 853). The Project’s transportation fuel consumption from construction and operations consists of 7 percent of the total overall cumulative consumption of projects (total consumption of cumulative projects plus the proposed Project). Therefore, as the Project would incorporate land use characteristics consistent with state goals for reducing VMT and would represent a small fraction of transportation sales, the Project would not have a cumulatively considerable impact related to transportation energy, and impacts would be less than significant.

B. ENVIRONMENTAL IMPACTS MITIGATED TO A LEVEL OF LESS-THAN-SIGNIFICANT

Public Resources Code Section 21081 states that no public agency shall approve or carry out a project for which an EIR has been completed which identifies one or more significant effects unless the public agency makes one or more of the following findings:

- I. Changes or alterations have been required in, or incorporated into, the project which mitigate or avoid the significant effects on the environment. (Finding 1).
- II. Those changes or alterations are within the responsibility and jurisdiction of another public agency and have been, or can and should be, adopted by that other agency. (Finding 2).
- III. Specific economic, legal, social, technological, or other considerations make infeasible the mitigation measures or alternatives identified in the EIR, and overriding economic, legal, social, technological, or other benefits of the project outweigh the significant effects on the environment. (Finding 3).

Available at: https://ww2.energy.ca.gov/almanac/transportation_data/gasoline/piira_retail_survey.html. Accessed September 2019. Diesel is adjusted to account for retail (52%) and non-retail (48%) diesel sales.

Certain of the following issues from the environmental categories analyzed in the Revised Final EIR, including aesthetics, air quality (cancer risk), biological resources, cultural and paleontological resources, hazards and hazardous materials, hydrology, drainage, water quality, noise (short-term construction during the night), transportation (local intersections), utilities, and global climate change (individually and cumulatively) were found to be potentially significant, but can be mitigated to a less-than-significant level with the imposition of mitigation measures. This City Council hereby finds pursuant to *Public Resources Code* Section 21081 that all potentially significant impacts listed below can and will be mitigated to below a level of significance by imposition of the mitigation measures in the Revised Final EIR; and that these mitigation measures are included as Conditions of Approval and set forth in the Mitigation Monitoring and Reporting Program (MMRP) adopted by this City Council. Specific findings of the Council for each category of such impacts are set forth in detail below.

1. Cumulative Agricultural Impacts

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use, or conversion of forest land to non-forest use.

Findings: Potential impacts of the Project related to cumulative agricultural impacts are discussed in detail in Section 6.2.3 of the Revised Final EIR Part 3. Based on the entire record before us, this Council finds that potentially significant impacts related to the cumulative loss of farmland would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment (Finding 1). Each mitigation measure is adopted by the City Council and is set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Findings: According to Section 6.2 of the Revised Final EIR Part 3, implementation of the Project would result in the permanent conversion of approximately 2,200 acres currently used for dry farming to non-agricultural uses and would result in the permanent loss of approximately 2,361 acres of land designated as Farmland of Local Importance.

Implementation of the cumulative related projects includes farmlands that are proposed to be converted to a non-agricultural use with two resulting in potential impacts that would remain significant and unavoidable subsequent to mitigation. Many of the remaining cumulative projects within the cumulative geographic area for agriculture include residential or commercial type projects, and the associated environmental documents found the impacts to be less than significant. Because there are cumulative related projects that would result in significant farmland conversion impacts, the cumulative related projects would result in significant cumulative impacts due to the conversion of an agricultural use to a non-agricultural use.

The implementation of **Mitigation Measure 6.2.1** however would conserve agricultural land that is as productive as the onsite designated Farmland of Local Importance. This measure would conserve land located off-site that has equivalent or better agricultural economic productivity compared to the agricultural economic productivity of the Project site. Although cumulative related projects would cause a significant and unavoidable impact, the implementation of this measure would reduce the Project's contribution to the

cumulative impact on land designated as Farmland of Local Importance to less than cumulatively considerable.

2. Aesthetics

a. Light and Glare

Potentially Significant Impact: Whether the Project has the potential to introduce a significant new source of light and glare into the Project area.

Finding: Potential impacts of the Project related to light and glare impacts are discussed in detail in Section 4.1 of the Revised Final EIR Part 4, Volume 3. Based on the entire record before us, this City Council finds that potentially significant impacts related to light and glare would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment (Finding 1). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Finding: According to Section 4.1 of the Revised Final EIR Part 4 Volume 3, development of the Project site would introduce numerous new sources of light and glare into the area in the form of street lighting, parking lots, and security lighting for the buildings and nighttime traffic.

The WLC Specific Plan requires that all site lighting be oriented downward so as to not project direct light rays upward into the sky or onto adjacent properties. The development of the Project will cause a significant increase in light and glare in the area. This new lighting will incrementally affect nighttime conditions in the area.

Exterior surfaces of the concrete tilt-up structure would be finished with a combination of architectural coatings, trim, and/or other building materials such as concrete and brushed metal. The Project will incrementally increase the amount of daytime glare in the Project area by introducing windows and metal fixtures into the area. All development in the City, which includes light generated from warehouse buildings and parking lots, is required to adhere to lighting requirements contained in the City's Municipal Code (Section 9.08.100 Lighting), which states that any outdoor lighting associated with nonresidential uses shall be shielded and directed away from the surrounding residential uses. Such lighting shall not exceed one-quarter (0.25) foot-candle at property lines and shall not blink, flash, oscillate, or be of unusually high intensity or brightness. Lighting in parking areas and drive aisles must be at least 1.0-foot candle and cannot exceed a maximum of 8.0-foot candles.

Adherence to the City's Zoning Code would help reduce potential building or parking lighting impacts, but the location of industrial uses adjacent to residential uses would not reduce potential lighting impacts on adjacent residential uses to less than significant levels prior to the implementation of mitigation measures.

The WLC Specific Plan also requires the installation of roof-mounted solar panels on future warehouse buildings and these panels may produce unintended glare to the southeast, south, and southwest of the site, depending on the angle of the sun, the number and location of panels, and the degree to which the building

parapet blocks views of the panels from surrounding land uses. Without additional information, this impact is determined to be potentially significant and requires mitigation.

Light and glare impacts of the Project can be reduced to less than significant levels by compliance with the lighting requirements of the City Municipal Code and implementation of **Mitigation Measures 4.1.6.4A** and **4.1.6.4B**. (Revised Final EIR Part 4 Volume 3 pgs. 4.1-80 to 4.1-82).

b. Cumulative Aesthetics – Light and Glare

Potential Significant Impact: Whether the Project could result in cumulative impacts in connection with past, present, and probable future projects create a new source of substantial light or glare that would adversely affect daytime or nighttime views in the area.

Findings: Potential cumulative impacts of the Project-related aesthetics are discussed in detail in Section 6.1 Revised Final EIR Part 2. Based on the entire record before us, this Council finds that potentially significant impacts related to cumulative aesthetics would be reduced to a less than significant level, with implementation of Mitigation Measures Mitigation Measures 4.1.6.1A, 4.1.6.1B, 4.1.6.4A, and 4.1.6.4B. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment (Finding 1). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program.

Fact Supporting the Findings: The Project in conjunction with the cumulative development of other projects could significantly degrade the existing visual character (including light and glare) of the area, including both daytime glare and nighttime lighting. Development of cumulative projects within the eastern Moreno Valley area would result in the conversion of open space/vacant land to urbanized land uses. The environmental document for MV-3 identified existing visual character/light and glare, and surroundings as being a significant and unavoidable impact. Because MV-3 identified significant and unavoidable impacts to the existing visual character, cumulative development within the cumulative geographic areas for aesthetics would result in a significant cumulative impact associated with visual character.

Development of the Project would substantially alter the existing character and create light and glare impacts from conversions of the Project site from open space to an urbanized setting with many large logistics buildings. Because the Project would result in a significant impact on the visual character and light and glare from development of the area and cumulative development will also result in a significant impact on visual character, the Project's contribution to cumulative impacts to/ the existing visual character and surroundings would be cumulatively considerable, prior to the application of mitigation.

The Project will be required to comply with the City's General Plan, the City's Municipal Code (Section 9.08.100, Lighting) and the WLC Specific Plan's development guidelines for lighting and building materials. Mitigation Measures 4.1.6.1A and 4.1.6.1B would help reduce related visual impacts. Mitigation Measures 4.1.6.4A and 4.1.6.4B will help reduce light and glare associated with the new buildings near the San Jacinto Wildlife Area to the south. Mitigation Measure 4.1.6.4A requires a photometric plot of all proposed exterior lighting demonstrating that the Project is consistent with the requirements of Section 9.08.100 of the Municipal Code. The lighting study will be required to indicate the expected increase in light levels at the property lines

of the adjacent residential uses. Mitigation Measure 4.1.6.4B requires an analysis of proposed solar panels demonstrating the glare from the panels will not negatively affect adjacent residential uses or motorists along perimeter roadways. Therefore, with compliance with the City's General Plan, the City's Municipal Code, and implementation of the mitigation measures, the Project's contribution to cumulative light and glare impacts would be less than cumulatively considerable. (Revised Final EIR Part 2, pg. 6.1-9 to pg. 6.1-10)

3. Air Quality

a. Cancer Risk and Cancer Burden

Potential Significant Impact Whether the Project would expose residential receptors to substantial pollutant concentrations resulting in cancer risk impacts.

Finding: Potential impacts of the Project related to cancer risk and cancer burden impacts are discussed in detail in Section 4.3 of the Revised Final EIR Part 2. Based on the entire record before us, this Council finds that potentially significant impacts related to cancer risk impacts would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Each mitigation measure is adopted by the City Council set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Finding: As set forth in Section 4.3 of the Revised Final EIR Part 2, adverse health effects related to cancer would exist, in the absence of mitigation, as a result of the construction and operation of the Project.

As noted in Section 4.3.3, Methodology, the Project Health Risk Assessment (HRA) examined the following condition for impacts to both sensitive/residential and worker receptors: Project Development condition which evaluates the impacts of Project-related construction and operational traffic diesel PM emissions as if the Project were built out in accordance with its proposed phased construction and operational buildout schedule commencing with the construction of Phase 1 in 2020 and the full build-out in 2035. This HRA has been provided to allow decision-makers to see the cancer-related impacts of the World Logistics Center project based on in the assumption that new technology diesel exhaust causes cancer, contrary to what was found by the HEI study. The mitigation conditions require that all diesel-fueled haul trucks during construction be 2010 or newer, that diesel trucks accessing the Project during operation be model year 2010 or newer, and that all on-site equipment greater than 50 horsepower be Tier 4 (see MM 4.3.6.2A[h] and MM 4.3.6.2A[a], respectively), and that the installation of air filtration system meeting ASHRAE Standard 52.2 MERV-13 standards are installed for specified residential units (MM 4.3.6.5A) (Revised Final EIR Part 2,pg. 4.3-72).

For reference, a risk level of 1 in a million implies a likelihood that up to one person, out of one million equally exposed people would contract cancer if exposed continuously (24 hours per day) to the specific concentration of TAC emissions over the duration of the exposure. This risk would be an excess cancer risk that is in addition to any cancer risk borne by a person not exposed to these air toxics (USEPA, 2017).

Table 4.3-26 presents the estimated unmitigated cancer risks for the 30-year exposure scenario that starts from the beginning of Project construction (Construction + Operation HRA), which uses updated construction and operational emissions values. The results are provided separately for Project construction emissions,

operational emissions, and the total project emissions prior to the application of emission mitigation. Table 4.3-27 shows the estimated unmitigated cancer risk for the 30-year residential exposure scenario that starts from the beginning of Project full operation in 2035 (Operational HRA), which used the 2035 emission levels to represent the emissions for 2035 to 2064.

On the basis of the results shown in Table 4.3-26, the overlap of Project construction and operation would exceed the SCAQMD's cancer risk significance threshold of an incremental increase of 10 in a million prior to the application of mitigation and would represent a significant impact. Table 4.3-27 shows that during full Project operation, the estimated maximum cancer risk would exceed the 10 in a million threshold within and outside of the Project boundary and would represent a significant impact. Overall, without mitigation, the Project is expected to have a significant impact mainly due to diesel PM emissions from construction and heavy-duty diesel truck activities. Figures 4.4-3 and 4.3-4 show the incremental cancer risks for the Project location. The figures show the results prior to the application of mitigation (Revised Final EIR Part 2, pg. 4-3-65 to 4.3-68).

The mitigation measures previously identified under other impact sections are required (**Mitigation Measures 4.1.6.1A, 4.3.6.2A, 4.3.6.2B, 4.3.6.2D, 4.3.6.3A, 4.3.6.3B, 4.3.6.3C, 4.3.6.3D, and 4.3.6.3E**) to reduce construction and operational emissions of criteria pollutants and would reduce the estimated cancer risks associated with the Project. Additionally, Mitigation Measure 4.3.6.5A is required to ensure that a significant health risk does not occur at on-site residential receptors during 30 years of full Project operations. Therefore, with mitigation measures implemented, impacts regarding cancer risks and cancer burdens will be mitigated to less to significant (Revised Final EIR Part 2, pg. 4.3-72 to 4.3-79).

b. Cancer Risks – On-site and Off-site Workers (25-year)

Potential Significant Impact: Whether the Project would expose on-site and off-site workers including school staff to substantial pollutant concentrations resulting in cancer risk impacts.

Findings: Potential impacts of the Project related to cancer risk impacts on on-site and off-site workers are discussed in detail in Section 4.3 of the Revised Final EIR Part 2. Based on the entire record before us, this Council finds that potentially significant impacts related to cancer risk to on-site and off-site workers would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Findings: As described in Section 4.3.3, Methodology, a multi-pollutant Health Risk Assessment (HRA) was conducted for the Project. The HRA examined the following condition for impacts to both sensitive/residential and worker receptors:

Project Development condition which evaluates the impacts of Project-related construction and operational traffic emissions as if the Project were built out in accordance with its proposed phased construction and operational buildout schedule commencing with the construction of Phase 1 in 2020 and the full build-out in 2035 (Revised Final EIR Part 2, pg 4.3-23).

The HRA has been provided to allow decision makers and the public to see the cancer-related impacts of the World Logistics Center project based on the assumption that new technology diesel exhaust causes cancer, contrary to what was found by the HEI study. The mitigation conditions require that all diesel-fueled haul trucks during construction be 2010 or newer, diesel trucks accessing the Project during operation be model year 2010 or newer, and that all on-site equipment greater than 50 horsepower be Tier 4 (see MM 4.3.6.2A[h] and MM 4.3.6.2A[a], respectively).

To be conservative, the HRA relied on EMFAC2017 to determine the breakdown of vehicle types and fuel types and did not consider the potential reductions in TACs emissions and health risks from increased penetration of zero-emission vehicles (ZEVs). The increased penetration of ZEVs is speculative, but likely given rapid technology advancement and more stringent legislation. For example, the HRA assumed that the 2035 heavy-duty truck fleet would be made up of 89 percent diesel, 9 percent gasoline, 3 percent natural gas, and 0 percent electric. According to the WLC Transportation Energy Technical Report (Revised Final EIR Part 2, Appendix E pg. 11 to 14)), a Medium electric vehicle (EV) Penetration scenario projects that the heavy-duty truck fleet could consist of 22 percent electric and a High EV Penetration scenario projects that the heavy-duty truck fleet could consist of 30 percent electric by 2035. Therefore, accounting for the High EV Penetration scenario would result in a greatly reduced health risk impact than what has been calculated in this analysis set forth in the Revised Final EIR.

Estimates of worker exposures were prepared based on the assumption of a 25-year exposure duration for 250 days per year and 8 hours per day. Note that the Office of Environmental Health Hazards Assessment (OEHHA) early-in-life age factors do not apply to worker receptors. The highest worker cancer risk estimates prior to the application of mitigation is approximately 10.9 in one million for the construction + operational scenario and 3.8 in one million for the full operational scenario, both at one on-site location. Therefore, cancer risk for worker receptors anywhere in the HRA's study area is greater than the 10 in one million significance thresholds. Projected impacts are potentially significant without mitigation.

The mitigation measures identified under other air quality impact sections are required (Mitigation Measures 4.1.6.1A, 4.3.6.2A, 4.3.6.2B, 4.3.6.2D, 4.3.6.3A, 4.3.6.3B, 4.3.6.3C, 4.3.6.3D, and 4.3.6.3E) in addition to Mitigation Measure 4.3.6.5A to reduce construction and operational emissions of criteria pollutants and reduce the estimated cancer risks associated with the Project.

Table 4.3-28 and Figure 4.3-5 of the Revised Final EIR Part 2 show the estimated cancer risks for workers for the construction and operation HRA, with mitigation, and Tables 4.3-29 and 4.3-30, and Figure 4.3-6 show the cancer risks for the full operation HRA after application of mitigation. As noted, the cancer risks are substantially lower after mitigation, and the SCAQMD cancer risk significance threshold would not be exceeded at any of the on-site or off-site receptors within the study area. The highest worker cancer risk estimates after the application of mitigation is approximately 1.8 in one million for the construction + operational scenario and 1.6 in one million for the full operational scenario. Therefore, cancer risk for worker receptors anywhere in the HRA's study area is less than the 10 in one million significance threshold with the implementation of mitigation and are less than significant. (Revised Final EIR Part 2, pgs. 4.3-66 to 4.3-78).

c. Cancer Risks – Schools

Potential Significant Impact: Whether the Project would expose schools (students) to substantial pollutant concentrations resulting in cancer risk impacts.

Findings: Potential impacts of the Project related to cancer risk impacts on school children are discussed in detail in Section 4.3 of the Revised Final EIR Part 2. Based on the entire record before us, this Council finds that potentially significant impacts related to cancer risk to schools would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Findings: Refer to “Facts in Support of Findings” for “Cancer Risks – On-site and Off-site Workers” for a background discussion in regard to the HRA. Cancer risk estimates at school sites in the area were prepared assuming a 9-year exposure during construction and operation as well as operation at full buildout. Prior to the application of the mitigation, the maximum cancer risk is at Ridgecrest Elementary School for the construction + operational scenario and would be approximately 12.6 in a million. Similarly, the maximum cancer risk for the full operational scenario is 3.54 in one million is at Bear Valley Elementary School. Therefore, maximum impacts at schools are greater than the 10 in one million significance threshold prior to mitigation and are potentially significant without mitigation.

With the implementation of the mitigation measures previously identified above (**Mitigation Measures 4.1.6.1A, 4.3.6.2A, 4.3.6.2B, 4.3.6.2D, 4.3.6.3A, 4.3.6.3B, 4.3.6.3C, 4.3.6.3D, and 4.3.6.3E**) the maximum cancer risk would be approximately 3.0 in one million at the Ridgecrest Elementary School for both the construction + operational scenario and the full operational scenario and maximum cancer risk would be reduced to 1.8 in one million for the construction + operational scenario and 0.54 in one million for the full operational scenario at the Bear Valley Elementary School. Therefore, maximum impacts at schools are less than the 10 in one million significance threshold with the implementation of mitigation and are less than significant (Revised Final EIR Part 2, pgs. 4.3- 66 to 4.3-78).

4. Biological Resources

a. Endangered and Threatened Species

Potential Significant Impact: Whether the Project would have a substantial adverse effect, either directly or through habitat modifications, on any species identified as endangered or threatened in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service.

Finding: Potential impacts of the Project related to endangered and threatened species are discussed in detail in Section 4.4 of the Revised Final EIR Part 3. Based on the entire record before us, this Council finds that potentially significant impacts related to endangered and threatened species would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment (Finding 1). Each mitigation measure is adopted by the City Council and is set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Finding: According to Section 4.4 of the Revised Final EIR Part 3, of the special-status plant and animal species that have the potential to occur within the general vicinity of the Project area,

17 plant and animal species are designated as endangered or threatened by State and/or Federal authorities (Table 4.4-6 of Revised Final EIR Part 3, pg. 4.4-65). The Coastal California gnatcatcher was observed but no other species are believed to be present on the Project site. However, it is possible the listed birds may utilize the SJWA on a seasonal basis.

Coastal California gnatcatcher is a Covered Species in the MSHCP and is considered Adequately Conserved. Consistent with the MSHCP requirements, **Mitigation Measure 4.4.6.3A** prevents suitable habitat from disturbance during the breeding season. Active bird nests are protected by both the Migratory Bird Treaty Act (MBTA) and sections of the California Fish and Game Code.

The potential for occurrence determination was based on the results of focused biological resource surveys, and/or the lack of suitable habitat within the Project site for the referenced species. No Federal or State endangered/threatened species besides the Coastal California gnatcatcher were detected on the Project site during the focused biological resource surveys. However, to err on the side of caution, it is reasonable to conclude that, at a minimum, indirect impacts to listed species may be significant, and mitigation is required. The 250-foot setback identified in **Mitigation Measure 4.4.6.1A** with an additional 400-foot building setback from the southerly property line, for logistics buildings within Planning Areas 10 and 12 will effectively mitigate potential indirect impacts of air pollutants, including diesel particulate matter, on wildlife within the SJWA. Furthermore, according to the Revised Final EIR Part 3 Section 4.4, pgs. 4.4-66 to 4.4-68, operational and construction noise would not require additional mitigation due to the increased setback and would not exceed 60 dB within the SJWA.

In terms of invasive species, the WLC Specific Plan landscaping palette does not include any of the invasive plant species listed in Section 6.1.4 of the MSHCP (Table 6-2), and **Mitigation Measure 4.4.6.3G** will ensure that no on-site landscaping along the southern boundary of the Project site conflicts with MSHCP invasive plant guidelines.

Future development within the WLC site will have to comply with the off-site lighting restrictions outlined in Section 4.3 of the WLC Specific Plan, including the requirement that direct light rays from all lighting fixtures be directed downward, illuminate only the building or space intended, and do not spill onto adjacent properties (Section 9.08.100 Lighting 5.5.2.1). This will also apply to Project-related development in Planning Areas 10 and 12, which will help minimize lighting impacts on biological species in the adjacent SJWA land. All on-site lighting will also have to comply with the new night lighting guidelines in Section 9.08.100 of the City's Municipal Code, which limits off-site impacts to 0.25 foot-candles. As development occurs within the Project, adherence to these design guidelines and restrictions will help ensure that night lighting increases will not result in significant indirect lighting impacts on native wildlife within the SJWA.

For example, the Specific Plan requires that streetlights, parking lot lighting, and other project-related illumination sources be positioned, directed, and shielded to avoid "direct light spill" into MSHCP conservation areas including those contained within Existing Core H to the south of the WLC site, and Proposed Core 3 (Section 6.1.1, Proposed Core 3) to the east of the WLC site. Lighting installed according to the WLC Specific Plan will be consistent with MSHCP guidelines. The Project will also have to comply with

the City's new Dark Sky Lighting Ordinance, which reduces spillover light to 0.25 foot-candles at five feet from the adjacent property lines.

In addition to night lighting issues associated with construction and operation, the proposed facilities are to include roof-mounted photovoltaic panels to provide electricity for the facilities and aid in the sustainability of the Project and reduce additional GHG emissions. There is a potential for glare from these panels to confuse migratory birds into attempting to land in the area of the panels. However, the Project design calls for the use of low glare and high solar transmission films to increase solar capacity and prevent unnecessary glare, so this impact would be less than significant (Revised Final EIR Part 3, pgs. 4.4-68 to 4.4-69). Deteriorated water quality can result in impacts to endangered and threatened species. The implementation of water quality BMPs summarized here and detailed in Sections 4.9.6.1 and 4.9.6.2 (Revised Final EIR Part 4) will reduce impacts to biological resources. Toxics Water Quality Development plans for the WLC project will include Water Quality Best Management Practices (BMPs) such as vegetated earthen channels, storm drain stenciling, street sweeping, and education, and Detention basins will be designed to filter potential toxics from storm water. Section 4.9.6.2, Operational Water Quality Impacts (Revised Final EIR Part 4), also requires the regular removal of any contaminated materials from the detention basins to protect downstream water quality. These BMPs will be implemented as part of the storm water pollution prevention measures for the Project, in accordance with all appropriate NPDES requirements. Development of the WLC project will result in the additional use of hazardous materials in limited quantities associated with normal logistics use such as janitorial and cleaning products, solvents, herbicides, and insecticides. However, compliance with regulations, standards, and guidelines established by the Environmental Protection Agency (EPA), State, County, and local agencies relating to the storage, use, and disposal of hazardous waste will reduce the potential risk of hazardous materials exposure to downstream water and reduce the potential risk to endangered and threatened species (Revised Final EIR Part 3, pgs. 4.4-69 to 4.4-70).

Local wildlife (i.e., within the SJWA) may be exposed to vehicular exhaust and diesel particulates and toxic air contaminants from truck exhaust as the WLC project builds out. New development will produce significant amounts of diesel-related air pollutants that will be released into the atmosphere, including gases and particles of various sizes. Diesel emissions contain thousands of pollutant species, and the composition depends on the fuel, vehicle, and driving conditions. The main public health concerns are from fine and ultrafine particulate matter, black or elemental carbon, polycyclic aromatic hydrocarbons (PAHs) like phenanthrene, metallic ashes, gases like nitrogen dioxide, aldehydes like acetaldehyde, acrolein, and crotonaldehyde, volatile organic compounds like benzene and 1,3-butadiene, etc. One of the research limitations is that some health effects from these pollutants take a long time, in some cases even a lifetime, to exhibit themselves.

These pollutant species can also be emitted from other sources, so in complex urban environments, it can be difficult to trace individual sources of air pollution. In this case, air quality is relatively good, and the only major activity is agriculture, so the increase in most of these pollutant species would predominantly be the result of new warehouse uses within the Project. Research suggests that wildlife may be more susceptible to air pollutant impacts than humans, due to their smaller size, higher respiration rates, smaller lung capacities, ingestion of local plant materials that have also been exposed, higher metabolic rates, etc., although some factors like shorter lifespans would reduce the length of exposure over time. For these reasons and for the

purposes of the analysis in the Revised Final EIR, it was assumed that animals within the SJWA would be at least as susceptible to health effects from air pollution, including diesel exhaust, as humans.

In 2002, the EPA compiled a wide range of scientific studies on the health effects of diesel exhaust, including non-carcinogenic effects of diesel exhaust on laboratory animals. Studies found that diesel particulate matter (diesel PM) had a limited effect on the survival and growth of rats and mice when exposed to diesel PM for short periods of time. However, rats, mice and hamsters all experienced increased lung to body-weight ratios when exposed to 1.5 mg/m³ diesel PM concentrations for extended periods of time. Several studies looked at behavior effects in animals and found that juvenile rats exposed to diesel emissions (DE) exhibited a decreased ability to move around on their own, and negatively affected their learning in adulthood.

Extended exposure to diesel emissions caused negative effects on the pulmonary functions of rats, hamsters, cats and monkeys. Depending on the species, DE levels of 1.5–11.7 mg/m³ affected lung mechanical properties, diffusing capacity, lung volumes, and ventilator performance of the subject animal. The ability of rats to clear their airways was also severely impaired by diesel PM concentrations of 1 mg/m³ or greater. Data on the effect of diesel PM on airway clearance in other animals were limited, but the pathological effects of diesel PM seemed to be dependent on the relative rates of pulmonary deposition and clearance (rate of breathing) of the subject animal. The studies also showed that diesel PM can reduce an animal's resistance to respiratory infections. Diesel PM can begin to impair an animal's immune system in as little as 2–6 hours with exposures of 5–8 mg/m³ of diesel PM. The testing data also suggested that diesel PM may be a factor in increased allergic reactions in animals.

When comparing filtered versus non-filtered DE, studies found that diesel particulates are the main cause of noncancerous health effects. However, they could not determine if diesel PM acts additively with the gas, or whether it combines with the gases to create different effects. The studies also found that other airborne contaminants (e.g., criteria pollutants) can be altered by diesel PM when absorbed by the diesel particles and increase the physical health effects caused by the diesel PM and other contaminants. These increased health risks were only found in laboratory settings. There was no evidence for DE interacting with other contaminants in normal urban atmospheric settings except for the impaired ability of animals to resist respiratory tract infections. No other noncancerous effects were found in any of the studies.

Chapter 7 of the EPA document includes studies that concluded diesel emissions also have carcinogenic effects on animals. Studies indicated that DE and/or diesel PM did result in increased cases of cancer in laboratory animals as well as humans. Rats experienced a trend of increased tumor growth when exposed to concentrations of DE exceeding 1×10^4 mg \times hr/m³. Because tumors were induced at high concentrations it is believed that they are caused by the lungs experiencing particle overload. The studies also examined the effect of filtered exhaust and discovered that it did not cause tumors. They concluded that filtered exhaust either was not a carcinogenic or had low cancer potency (Revised Final EIR Part 3, pgs. 4.4-70 to 4.4-72).

As a result of the advances in emission control technology, USEPA, CARB, and other government and industry stakeholders commissioned a series of studies called the Advanced Collaborative Emissions Study (ACES). Phase 3 of ACES evaluated whether emissions from new technology diesel engines cause cancer or other health effects. Specifically, it evaluated the health impacts of a 2007-compliant engine equipped with a diesel

particulate filter. HEI found chronic exposure to NTDE did not induce tumors or pre-cancerous changes in the lung and did not increase tumors that were considered to be related to NTDE in any other tissue in laboratory rats. The study also confirmed that the concentrations of particulate matter and toxic air pollutants emitted from NTDE are more than 90 percent lower than emissions from traditional older diesel engine. Rats are the most sensitive laboratory animal species for evaluation of older technology diesel engines (pre-model year 2007), because of their sensitivity to high concentrations of particles (present in older technology diesel engines), compared with other species (including humans) (Revised Final EIR Part 2, pg. 4.3-18 to 4.3-19).

Based upon the previously described information, the 250-foot setback identified in **Mitigation Measure 4.4.6.1A**, will effectively mitigate potential indirect impacts of air pollutants, including diesel particulate matter, on wildlife within the SJWA. Compliance with the off-site lighting guidelines of the Specific Plan, compliance with the night lighting standards in Section 9.08.100 of the City Municipal Code, and implementation of Aesthetics **Mitigation Measure 4.1.6.4A** will help reduce lighting impacts on the SJWA to less than significant levels. In addition, **Mitigation Measure 4.4.5.2A** (as revised [Additional Errata to the Revised Final EIR dated May 14, 2020]), **4.4.6.1B** and **4.4.6.3G** will help assure that potential impacts to listed or sensitive plant species remain at less than significant levels.

b. Adopted Habitat Conservation Plans

Potential Significant Impact: Whether the proposed Project would conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.

Finding: Potential impacts of the Project related to compliance with the Stephens' Kangaroo Rat Habitat Conservation Plan (SKR HCP) and the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) are discussed in detail in Section 4.4 of the Revised Final EIR Part 3. Based on the entire record before us, this Council finds that potentially significant impacts with the species protected by these Plans would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Each mitigation measure is adopted by the City Council and is set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Finding: According to Section 4.4 of the Revised Final EIR Part 3, the Project site is within the SKR HCP Fee Area. The SKR is relatively widespread throughout the SKR HCP Fee Area, but the main blocks of occupied habitat are concentrated in several Core Areas that must be conserved. The Project site is not within an SKR Core Area. The long-term SKR HCP provides Take Authorization for the SKR within its boundaries. The core reserves established by the SKR HCP will be managed as part of the MSHCP Conservation Area consistent with the provisions of the SKR HCP. Focused surveys for SKR will not be required for this Project because the Project lies within the SKR Fee Area; therefore, no requirements under the SKR HCP other than payment of a local mitigation fee are required.

The Project area is located within the Reche Canyon/Badlands Area of the MSHCP. Development of the Project area would not conflict with the conservation goals established by the MSHCP for Cell Group X or

Cell Group E. In addition, no conflict from development would occur in relation to the Reche Canyon/Badlands Area Plan, the Area Plan Subunit 4, the Area Plan Subunit 3, Proposed Core 3, or Existing Core H.

The WLC site is adjacent to Cell Group D and Proposed Core 3, however, it is not near any Linkages identified in the MSHCP. It is adjacent to the SJWA and, therefore, is subject to the Project guidelines provided in MSHCP Section 6.1.4 (Guidelines Pertaining to the Urban/Wildlands Interface). The Project is also required to adhere to the Best Management Practices (BMPs) found in Appendix C of the MSHCP.

The WLC project does not propose to alter land use in any way that would adversely affect Cores, Linkages, or Reserve Assembly within the Reche Canyon/Badlands Area Plan. The WLC project is not located within any Amphibian, Mammalian, or Special Linkage Areas identified by the MSHCP. The Project is in an area requiring burrowing owl surveys, is within the MSHCP Criteria Area Species Survey Area (CASSA) and is within the Narrow Endemic Plant Species Survey Area (NEPSSA).

The MSHCP and its Implementation Agreement contain a fee mitigation program pursuant to which local agencies collect development impact fees and remit such fees to the Western Riverside County Regional Conservation Authority (RCA). These fees are in turn used to acquire lands that are suitable for habitat preservation for species covered by the MSHCP. Payment of the local MSHCP mitigation fee will be required of the Project prior to the issuance of building permits. The MSHCP provides that payment of the fee completely mitigates a project's environmental impacts.

From available information, potential indirect impacts to avian and other biological resources within the SJWA will be reduced to less than significant levels by the creation of a 250-foot on-site setback in **Mitigation Measure 4.4.6.1A**. Project design features and associated setbacks previously described will reduce Project impacts to adjacent biological resources to less than significant levels. As required by the October 17, 2014 Joint Project Review with the RCA, the WLC Project must implement the guidelines contained in MSHCP Section 6.1.4 related to controlling adverse effects for development adjacent to the MSHCP Conservation Area, of which there are seven specific conditions. Therefore, the WLC project would have a less than significant impact in regard to the MSHCP.

Participation in the MSHCP and payment of the MSHCP fee provides compensation for the loss of raptor foraging habitat due to approved projects. A project proponent is required to participate as outlined in the MSHCP, so that loss of raptor foraging habitat is considered to be less than significant and no mitigation is required.

Narrow Endemic Plant Species. No Narrow Endemic plant species are anticipated to occur in the WLC site, but compliance with **Mitigation Measure 4.4.5.2A**, as revised (Additional Errata to the Revised Final EIR dated May 14, 2020) will assure there will be no significant impacts to these plant species.

Criteria Area Plant Species. No Criteria Area plant species are anticipated to occur on the WLC site, but compliance with **Mitigation Measure 4.4.5.2A**, as revised (Additional Errata to the Revised Final EIR dated May 14, 2020) will assure there will be no significant impacts to these plant species.

Riparian/Riverine Areas and Vernal Pools. Drainage Features 7, 8, 9, 12, and 15 contain riparian/riverine areas, as designated by the MSHCP. The Project area does not contain habitat suitable for covered riparian species, such as least Bell’s vireo, southwestern willow flycatcher, and western yellow-billed cuckoo. No vernal pools or ephemeral ponds were observed on the Project site area and no suitable habitat for any fairy shrimp species was identified on-site. No additional mitigation regarding vernal pools or vernal pool species is required. A programmatic-level Determination of Biologically Equivalent or Superior Preservation (DBESP) was prepared by MBA in 2013 to outline specific requirements for Project-related impacts to these features in the future. A building-specific DBESP will be required in connection with the development of each building within the WLC.

Specific Plan Design Features. The Project is consistent with the major MSHCP requirements relative to core areas, criteria cells, threatened and endangered species. In addition, the Project complies with the MSHCP guidelines for urban/wildland interface, riparian/riverine areas, or related setback (with implementation of **Mitigation Measure 4.4.6.1A**). In addition, future development will be required to demonstrate that it is also consistent with all MSHCP requirements, including indirect impacts such as lighting, noise, and air pollution effects.

Regulatory Compliance. Stephens’ kangaroo rats have a low potential to occur within the study area. While the study area is not within the SKR Core Reserve Area, the SKR HCP Implementing Agreement requires payment for loss of habitat within defined areas. The entire Project site lies within the fee area. An assessment of individual actions for development within the WLC Specific Plan area would be required prior to any implementation. The number of acres of disturbance associated with the development and any off-site improvements shall require payment to comply with the SKR HCP. In addition, prior to issuance of a grading permit for the development of each building within the WLC, the applicants will be required to pay the mandatory MSHCP mitigation fee. The mitigation fee is a per-acre fee for commercial or industrial development. **Mitigation Measures 4.4.6.1A** and **4.4.6.1B** will also help reduce potential direct and indirect impacts to biological resources covered by the MSHCP.

With implementation of **Mitigation Measures 4.4.6.1A, 4.4.6.1B, 4.4.6.2B, 4.4.5.2A** (as revised [Additional Errata to the Revised Final EIR dated May 14, 2020]), and **4.4.5.2B** (as revised [Additional Errata to the Revised Final EIR dated June 9, 2020]), potential impacts related to the species protected by the MSHCP will be reduced to less than significant levels. (Revised Final EIR Part 3, pgs. 4.4-60 to 4.4-63).

c. Jurisdictional Delineation, Riparian Habitat or Other Sensitive Natural Communities

Potential Significant Impact: Whether a Project would have a substantial adverse effect on federally protected waters or wetlands as defined by Section 404 of the Clean Water Act (CWA) (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means. Whether the proposed Project would have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife (CSFW) or U.S. Fish and Wildlife Service.

Finding: Potential impacts of the Project related to jurisdictional land, riparian habitat, and sensitive natural communities’ impacts are discussed in detail in Section 4.4 of the Revised Final EIR Parts 3. Based on the

entire record before us, this Council finds that potentially significant impacts related to jurisdictional land, riparian habitat, and sensitive natural communities' impacts would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Each mitigation measure is adopted by the City Council and set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Findings: According to Section 4.4 of the Revised Final EIR Part 3, drainages in the WLC site were investigated and delineated by MBA in March 2012 and updated in 2013. A total of 15 primary drainage features, sub-drainages or tributaries were identified and evaluated for jurisdiction under Section 404 and 401 of the CWA as administered by the United States Army Corps of Engineers (USACE) and the Regional Water Quality Control Board (RWQCB), respectively; Porter Colonne as administered by the RWQCB; and Section 1600 of the Fish and Game Code as administered by the CDFW.

The MBA 2013 report concludes that two of the drainages on the Project site are under the jurisdiction of the USACE (Drainages 12 and 15), and several additional drainages are under the jurisdiction of the CDFW and RWQCB (Drainages 7, 8, 9, 12, and 15).

Drainage Feature 12 and 15 are likely subject to USACE jurisdiction. However, if any portion of Drainage Features 12 and 15 are affected by WLC Project construction activities or flood control improvements in the future, then regulatory permitting may be required (Revised Final EIR Part 3, pgs. 4.4-74 to 4.4-75).

Drainage Feature 7, 8, 9, 12, and 15 within the WLC Project are considered riparian/riverine areas, as defined by MSHCP. If impacts to any of these areas cannot be avoided, a DBESP report and relevant mitigation will be required by the RCA.

The Project area does not contain habitat suitable for sensitive riparian species, such as least Bell's vireo, southwestern willow flycatcher, and western yellow-billed cuckoo. Additionally, no vernal pools or ephemeral ponds were observed on the Project area and no suitable habitat for any fairy shrimp species was identified on-site.

Raptor Foraging Habitat. The WLC Specific Plan area and off-site facilities contain flat, open areas with sparse vegetation, which could be considered foraging habitat for some raptor species. Due to the regular, heavy disturbance associated with the various agricultural activities in the WLC Specific Plan area and off-site facilities resulting in a rather limited prey base, and the limited size of the site in relation to the expansive foraging habitat in the near vicinity including both the CDFW Conservation Area and the SJWA, Lake Perris State Recreational Area and the extensive Badlands to the east, the foraging habitat on-site is considered marginally suitable and an adverse but not significant impact to raptor foraging habitat is anticipated.

Several drainages on the Project site are under the jurisdiction of the USACE, CDFW, or RWQCB. Therefore, **Mitigation Measures 4.4.6.2A through 4.4.6.2C** (as revised [Additional Errata to the Revised Final EIR dated May 14, 2020]) will help ensure there will be no significant impacts to riparian areas associated with Waters of the U.S. or Waters of the State as a result of future development within the Project.

With implementation of **Mitigation Measures 4.4.6.1A, 4.4.6.1B and 4.4.6.2A** through **4.4.6.2C** (as revised [Additional Errata to the Revised Final EIR dated May 14, 2020]), potential impacts to riparian habitat or other sensitive natural communities, including on-site drainages, will be reduced to less than significant levels. (Revised Final EIR Part 3, pgs. 4.4-75 to 4.4-77).

d. Candidate, Non-listed Sensitive, or Other Special Status Species

Potential Significant Impact: Whether the Project would have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service.

Finding: Potential impacts of the Project related to candidate, non-listed sensitive, or other special status species impacts are discussed in detail in Section 4.4 of the Revised Final EIR Parts 3. Based on the entire record before us, this Council finds that potentially significant impacts related to candidate, non-listed sensitive, or other special status species impacts would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Each mitigation measure identified below is adopted by the City Council and set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Finding: According to Section 4.4 of the Revised Final EIR Part 3, no USFWS designated Critical Habitat for any species is located within the Project area; therefore, no further action with regard to Critical Habitat is necessary.

Los Angeles Pocket Mouse. Focused surveys for the Los Angeles Pocket Mouse (LAPM) were conducted in August 2005, June 2010, June 2012, July 2013, and May 2018. Suitable habitat was found within Drainage Feature 9, one of the main drainage features located in the eastern end of the WLC site. In its MSHCP Consistency Report, MBA concluded that LAPM is absent from the WLC site, which is substantiated by the ESA May 2018 surveys (Revised Final EIR Part 3, Appendix B). However, the WLC Specific Plan indicates this drainage will remain in its present natural condition, except for the southern end as it becomes the Street H channel and outlets to the SJWA land to the south. Extensive surveys were completed in 2005, 2010, 2012, 2013, and 2018, which concluded that the LAPM was not present. In addition, there is no suitable habitat between the known occurrence of the LAPM and the WLC SITE. The known populations of the LAPM are located within the southern portion of the SJWA, which is more than 2 miles from the southern WLC site boundary. The area between the known recorded occurrences of the LAPM and the WLC site have been actively disked farmland in the past and a 500-foot wide area along the southern WLC site boundary continues to be actively disked. Therefore, there is no habitat connectivity between the known occurrences of the LAPM and the WLC site. However, to ensure that no impacts occur, **Mitigation Measure 4.4.6.3E** (as revised [Additional Errata to the Revised Final EIR dated May 14, 2020]) is included in the MMRP.

Migratory or Nesting Birds. The 2013 MBA report found the extensive agriculture plant communities in the WLC Specific Plan area and off-site facilities provide suitable nesting habitat for ground-nesting avian species such as western meadowlark (*Sturnella neglecta*) and burrowing owl. Suitable habitat for shrub and tree nesting species such as red-tailed hawk, black phoebe (*Sayornis nigricans*), and house finch occur along the

edges of existing development surrounding the WLC Specific Plan area and off-site facilities as well as isolated, remnant patches of vegetation in undisturbed portions of the WLC Specific Plan area and off-site facilities. Therefore, portions of the WLC Specific Plan area and off-site facilities and immediately adjacent to the WLC Specific Plan area and off-site facilities provide suitable nesting habitat for migratory birds protected under the MBTA and California Fish and Game Code.

The Project area contains suitable nesting habitat for several tree-, shrub-, and ground-nesting avian species. Therefore, MBA recommended construction activities avoid the avian nesting season, from February to August, if possible. If construction activity must take place during the nesting season, a pre-construction nesting bird survey will be conducted prior to any ground disturbance activities. The survey can be conducted in conjunction with the pre-construction survey for burrowing owl.

If passerine birds are found to be nesting or if there is evidence of nesting behavior within 250 feet of the impact area, a 250-foot setback will be required around the nest where no vegetation disturbance will be permitted. For raptor species such as hawks and owls, this setback should be expanded to 500 feet. A qualified biologist will be required to closely monitor nests until it is determined that they are no longer active, at which time construction activity in the vicinity of nests could continue. Construction activity may proceed within the buffer area at the discretion of the biological monitor. **Mitigation Measures 4.4.6.3A through 4.4.6.3C** will ensure that impacts are less than significant.

Burrowing Owl. For those species that are not covered by the take and incidental take provisions of the MSHCP (e.g., burrowing owl), the MSHCP requirements dictate that further protective action be taken. While no burrowing owls were identified within the Project's area of disturbance, because suitable habitat is present within the Project area for the burrowing owl and because the species is highly mobile, a potential exists that, at some future date prior to Project development, this species may occupy the development sites. This is a potentially significant impact requiring mitigation. **Mitigation Measure 4.4.6.3D**, as revised (Additional Errata to the Revised Final EIR dated May 14, 2020), will ensure that impacts are less than significant.

All burrowing owl observations within the Project site prior to 2018 are associated with artificially created berms. The recorded sightings have been within a bank of an existing drainage feature, a berm within the recently constructed detention basin associated with the Skechers Building (Drainage 3), and a roadside berm just south of Alessandro Boulevard. Burrowing owl was observed in 2018 in the eastern drainage within the proposed 250-foot setback area. The proposed detention basins will be constructed with similar manufactured berms. Based on historic observations of burrowing owl within the WLC site, it is reasonable to assume that construction of similar berms will continue to provide optimum burrow habitat for resident burrowing owls.

In addition, since there have been no recorded occurrences of burrowing owl in the northern portion of the SJWA there is no concern for competition with other burrowing owls. It is reasonable to assume that the created detention basins will provide more than a sufficient amount of foraging habitat to support a single pair of burrowing owls. The southern 250-feet of the WLC site will not contain any building development and construction activities will be restricted to detention basins and associated access roads. Mitigation Measure 4.4.6.1A discusses the 250-foot setback required for areas developed adjacent to the San Jacinto Wildlife Area. (Revised Final EIR Part 3 pgs. 4.4-78 to 4.4-79).

Plant Survey Areas. The Project limits are within MSHCP Survey Area 10 of the Narrow Endemic Plant Species' Survey Areas (NEPSSA) and MSHCP Survey Area 9 of the Criteria Area Sensitive Plant Species' Survey Areas (CASSA) for plant species. The MSHCP requires that a habitat site assessment (HSA) be conducted for all proposed developments within NEPSSAs and CASSAs. The HSA for most NEPSSA and CASSA plants must be done during a normal rainfall year and/rainy season. If it is determined during the HSA that suitable soils and/or growing conditions are present on-site to support identified NEPSSA species, a focused plant survey is required during the plant species blooming period.

Habitat suitability of the site for NEPSSA and CASSA species is detailed in the General Biological Resources and MSHCP Compliance Report (Final EIR, Volume 3 Appendix E). None of the species analyzed in the NEPSSA or CASSA is anticipated to occur on the WLC Project site. The implementation of the WLC Project would not affect the habitat or result in a direct impact for any special status plant species. **Mitigation Measure 4.4.5.2A**, as revised (Additional Errata to the Revised Final EIR dated May 14, 2020), will ensure that impacts are less than significant.

WLC Specific Plan design features: The WLC Specific Plan does not contain any design features relative to sensitive species or birds, other than the landscape palette that contains all native and/or drought-tolerant plants that may be utilized by birds tolerant of human activity.

In summary, implementation of **Mitigation Measures 4.4.5.2A** (as revised [Additional Errata to the Revised Final EIR dated May 14, 2020]), **4.4.6.1A**, and **4.4.6.4A** through **4.4.6.4K** would reduce impacts to burrowing owl, migratory bird species, and Los Angeles pocket mouse to less than significant levels. (Revised Final EIR Part 3, pgs. 4.4-77 to 4.4-79).

e. Cumulative Biological Impact – Adversely Affect Endangered or Threatened Species.

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would have a substantial adverse effect, either directly or indirectly or through habitat modifications, on any species identified as endangered or threatened in local or regional plans, policies, or regulations, or by the CDFW or USFWS.

Findings: Potential impacts of the Project related to cumulative biological impacts are discussed in detail in Section 6.4 of the Revised Final EIR Part 3. Based on the entire record before us, this Council finds that potentially significant impacts related to threatened or endangered species would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Each mitigation measure is adopted by the City Council and set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Findings: There are 17 plant and animal species that are designated as endangered or threatened by State and/or Federal authorities that have the potential to occur within the general vicinity of the Project area (Table 4.4-6) and the MSHCP area. Only the coastal California gnatcatcher has been observed within the Project site. Coastal California gnatcatcher is a Covered Species in the MSHCP and is considered Adequately Conserved. Consistent with the MSHCP requirements, **Mitigation Measure 4.4.6.4A** prevents suitable habitat from disturbance during the breeding season.

Consistency with the MSHCP would provide assurance that the Project would be in compliance with the provisions of the federal Endangered Species Act, the California Endangered Species Act, and the Natural Community Conservation Planning Act; and would adequately provide for the conservation and protection of the covered species adequately conserved and their habitats in the MSHCP Plan Area.

The Project site and off-site facilities are located within the fee area of the SKR HCP. The SKR HCP is managed as part of the MSHCP Conservation Area and significant cumulative impacts to SKR are addressed through adherence to the Stephens' kangaroo rat HCP's Implementing Agreement and payment of the County's per-acre mitigation fee.

Cumulative projects that would occur on previously undeveloped land supporting endangered or threatened species would be required to identify and mitigate any potentially significant impacts to those biological resources. Cumulative projects within the MSHCP Plan Area would be subject to consistency with the MSHCP as well as subject to consistency for any relevant HCPs. The combined construction of projects within the vicinity of the Project could deprive some species of a significant amount of habitable space. Related projects that would potentially affect threatened or endangered species would also be subject to the same regulatory requirements as the Project. These determinations would be made on a case-by-case basis, and the effects of cumulative development on sensitive species would be mitigated to the extent feasible in accordance with CEQA and other applicable legal requirements. Therefore, cumulative adverse effects on threatened and endangered species would be less than significant.

The CEQA documents identified in Tables 6.4-1 and 6.4-2 have been reviewed to determine if the identified cumulative projects in conjunction with the Project could result in cumulatively considerable effect on biological resources. All cumulative projects are required to comply with the MSHCP and pay applicable MSHCP fees which are in turn utilized by the RCA to implement programs and habitat acquisition to minimize cumulative impacts to biological resources. As a result, the cumulative projects in conjunction with the World Logistics Center Project do not constitute a cumulatively considerable effect on the SJWA.

Implementation of **Mitigation Measures 4.4.6.4A, 4.4.6.1A and 4.4.6.1B** would reduce potential impacts to listed endangered and threatened species. Mitigation Measures 4.4.6.1A and 4.4.6.1B includes development setbacks from the SJWA northern boundary and water quality and erosion control facilities to minimize downstream impacts. Mitigation Measures 4.4.6.4A requires avoidance of impacts to nesting birds, including the Federally Threatened coastal California gnatcatcher. Through the implementation of mitigation stated above, the Project contribution to potential cumulative impacts would be less than cumulatively considerable (Revised Final EIR Part 3, pg. 6.4-34 through pg. 6.4-36).

f. Cumulative Biological Impact – Adversely Affect Candidate, Non-listed Sensitive, or Special-Status Species.

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would have a substantial adverse effect, either directly or indirectly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the CDFW or USFWS.

Findings: Potential impacts of the Project related to cumulative biological impacts are discussed in detail in Section 6.4 of the Revised Final EIR Part 3. Based on the entire record before us, this Council finds that potentially significant impacts related to a candidate, sensitive, or special status species would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Each mitigation measure identified below is adopted by the City Council and set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Findings: The WLC Specific Plan area overlaps with the MSHCP Survey Areas for Narrow Endemic Plant Species as well as Criteria Area Sensitive Plant Species. Focused surveys for these species did not produce positive findings within the Project site and these species are not anticipated to occur. The implementation of the WLC Project would not affect the habitat or result in a direct impact for any special status plant species.

Focused surveys for Los Angeles pocket mouse did not find this species within the Project site and the closest known location for the species is in the southern portion of the SJWA for which there is no suitable habitat connection. However, **Mitigation Measure 4.4.6.4E** is recommended to prevent impacts to the species from occurring with the implementation of the Specific Plan as suitable habitat was identified within Drainage Feature 9 on the Project site.

Burrowing owl has been observed within the WLC site on several occasions, most recently in 2018. The MSHCP requires specific protective action for this species; as such, **Mitigation Measure 4.4.6.4D** provides for pre-construction surveys and the preparation of a relocation plan if burrowing owl is found. In addition, the construction of berms around detention basins where burrowing owls have been observed to use will provide nesting opportunities and the conservation of 74.3 acres within the Specific Plan area will provide the potential to construct artificial burrows for use in the relocation plan.

Migratory and nesting birds are known from the Project site because suitable nesting habitat is available for several bird species. **Mitigation measure 4.4.6.4A** is recommended to minimize potential impacts to nesting birds.

Raptor foraging habitat will be lost through the construction of the WLC and cumulative projects. The MSHCP incorporates suitable raptor foraging habitat within the MSHCP conservation areas. As a result of conservation planning within the MSHCP area enabled through the contribution of fees required for approved development, cumulative impacts to raptor foraging habitat will not be considerable.

The combined construction of projects within the vicinity of the Project could deprive some species of a significant amount of habitable space. Related projects that would potentially affect local or regional candidate, sensitive, or special status species subject to the same regulatory requirements as the Project. Therefore, cumulative adverse effects on local or regional candidate, sensitive, or special status species would be less than significant.

The CEQA documents identified in Tables 6.4-1 and 6.4-2 have been reviewed to determine if the identified cumulative projects in conjunction with the Project could result in cumulatively considerable effect on

biological resources. All cumulative projects are required to comply with the MSHCP and pay applicable MSHCP fees which are in turn utilized by the RCA to implement programs and habitat acquisition to minimize cumulative impacts to biological resources. As a result, the cumulative projects in conjunction with the World Logistics Center Project do not constitute a cumulatively considerable effect on the SJWA.

Implementation of **Mitigation Measures 4.4.6.4A through 4.4.6.4K** would reduce potential impacts to candidate, non-listed sensitive, or special-status species. **Mitigation Measures 4.4.6.4A through 4.4.6.4K** includes protection for nesting birds, including burrowing owl, development of a resource management plan, landscape buffer adjacent to the SJWA, and payment of impact fee to the MSHCP. Through the implementation of mitigation stated above, the Project contribution to potential cumulative impacts would be less than cumulatively considerable (Revised Final EIR Part 3, pg. 6.4-36 through pg. 6.4-38).

g. Cumulative Biological Impact – Adversely Affect Riparian Habitat or Other Sensitive Natural Communities

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations, or by the CDFW or USFWS.

Findings: Potential impacts of the Project related to cumulative biological impacts are discussed in detail in Section 6.4 of the Revised Final EIR Part 3. Based on the entire record before us, this Council finds that potentially significant cumulative impacts related to riparian habitat or other sensitive natural community would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Each mitigation measure identified below is adopted by the City Council and set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Findings: Riparian or riverine areas are lands that contain habitat dominated by trees, shrubs, and persistent emergent plants, which occur close to or depend upon soil moisture from a nearby water source; or areas with fresh water flowing during all or a portion of the year. Drainage Feature 7, 8, 9, 12, and 15 within the WLC Project are considered riparian/riverine areas, as defined by MSHCP. If impacts to any of these areas cannot be avoided, a Determination of Biologically Equivalent or Superior Preservation (DBESP) report and relevant mitigation will be required.

Mitigation Measure 4.4.6.3A will help ensure there will be no significant impacts to riparian areas associated with Waters of the State as a result of future development within the Project. In addition, **Mitigation Measure 4.4.6.3B** will provide mitigation in the form of on-site preservation of riparian areas and/or a combination of compensation through purchase and placement of lands with riparian/riverine habitat into permanent conservation through a conservation easement and/or restoration or enhancement efforts at off-site or on-site locations. The intent of the regulatory permitting for Waters of State is a no net loss of these resources and cumulative impacts would be less than considerable.

Cumulative projects that would potentially affect habitat would also be subject to the same requirements of CEQA as the Project. These determinations would be made on a case-by-case basis, and the effects of

cumulative development on riparian habitat or other sensitive natural communities would be mitigated to the extent feasible in accordance with CEQA and other applicable legal requirements. With the implementation of the MSHCP Conservation Areas, sustainable populations for covered species within conserved habitats would result and cumulative impacts would be less than considerable. Therefore, for the reasons described above, cumulative adverse effects on sensitive habitat would be less than significant.

The CEQA documents identified in Tables 6.4-1 and 6.4-2 have been reviewed to determine if the identified cumulative projects in conjunction with the Project could result in cumulatively considerable effect on biological resources. All cumulative projects are required to comply with the MSHCP and pay applicable MSHCP fees which are in turn utilized by the RCA to implement programs and habitat acquisition to minimize cumulative impacts to biological resources. As a result, the cumulative projects in conjunction with the World Logistics Center Project do not constitute a cumulatively considerable effect on the SJWA.

Implementation of **Mitigation Measures 4.4.6.3A through 4.4.6.3C** would reduce potential impacts to riparian habitat or other sensitive natural communities. **Mitigation Measures 4.4.6.3A through 4.4.6.3C** includes the requirement to obtain regulatory jurisdictional permits, creation or enhancement of riparian resources, development of a resource management plan, and demonstration that the mitigation resources are equivalent or better than the jurisdictional resources impacted. Through the implementation of mitigation stated above, the Project contribution to potential cumulative impacts would be less than cumulatively considerable (Revised Final EIR Part 3, pg. 6.4-38 through pg. 6.4-39).

h. Cumulative Biological Impact – Adversely Affect Federally Protected Wetlands or Waters of the U.S.

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would have a substantial adverse effect on federally protected wetlands or waters of the U.S. as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means.

Findings: Potential impacts of the Project related to cumulative biological impacts are discussed in detail in Section 6.4 of the Revised Final EIR Part 3. Based on the entire record before us, this Council finds that potentially significant impacts related to federally protected wetlands or waters of the U.S. would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Each mitigation measure identified below is adopted by the City Council and set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Findings: A total of 15 primary drainage features were identified during this survey and a number of sub-drainages or tributaries were also identified. Jurisdiction for each drainage and/or sub-drainage or tributary was evaluated for jurisdiction under Section 404 and 401 of the Clean Water Act (CWA) as administered by USACE and RWQCB, respectively. Two of the 15 features are subject to the jurisdiction of the USACE and/or RWQCB. In addition, no jurisdictional wetlands or isolated wetlands were identified within the Project site. **Mitigation Measure 4.4.6.3A** will help ensure there will be no significant impacts to

riparian areas associated with Waters of the U.S. as a result of future development within the Project. In addition, there would be no net loss of riparian resources.

Related projects that would potentially affect wetlands would also be subject to the same requirements of the Project with respect to the MSHCP. These determinations would be made on a case-by-case basis, and the effects of cumulative development on wetlands would be mitigated to the extent feasible in accordance with CEQA and other applicable legal requirements. Therefore, cumulative adverse effects on wetlands would be less than significant.

The CEQA documents identified in Tables 6.4-1 and 6.4-2 have been reviewed to determine if the identified cumulative projects in conjunction with the Project could result in cumulatively considerable effect on biological resources. All cumulative projects are required to comply with the MSHCP and pay applicable MSHCP fees which are in turn utilized by the RCA to implement programs and habitat acquisition to minimize cumulative impacts to biological resources. As a result, the cumulative projects in conjunction with the World Logistics Center Project do not constitute a cumulatively considerable effect on Federally protected wetlands or Waters of the United States.

Implementation of **Mitigation Measures 4.4.6.3A through 4.4.6.3C** would reduce impacts to federally protected wetlands or waters of the U.S. **Mitigation Measures 4.4.6.3A through 4.4.6.3C** includes the requirement to obtain regulatory jurisdictional permits, creation or enhancement of riparian resources, development of a resource management plan, and demonstration that the mitigation resources are equivalent or better than the jurisdictional resources impacted. Through the implementation of mitigation stated above, the Project contribution to potential cumulative impacts would be less than cumulatively considerable (Revised Final EIR Part 3, pg. 6.4-39 through pg. 6.4-40).

i. Cumulative Biological Impact – Interfere with Wildlife Movement.

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native or resident migratory wildlife corridors or impede the use of native wildlife nursery sites.

Findings: Potential impacts of the Project related to cumulative biological impacts are discussed in detail in Section 6.4 of the Revised Final EIR Part 3. Based on the entire record before us, this Council finds that potentially significant impacts related to wildlife movement would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Each mitigation measure identified below is adopted by the City Council and set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Findings: The Project area contains no significant cover of native plant communities and currently experiences heavy disturbance associated with agricultural activities. Additionally, the Project area is adjacent to SR-60 and Gilman Springs Road on the north and east and is bordered by urban development on the west. The nearest linkage area as identified under the MSHCP is Proposed Linkage 5 and is located approximately 3 miles north of the Project. The Proposed Constrained Link 20 is approximately 3.6 miles

south of the Project. . Development of the Project would not directly have any significant impact on wildlife movement in the area and would not fragment habitat or adversely affect wildlife movement through the surrounding areas. It is determined that the Project would not impede or minimize any significant wildlife corridor for the target species associated within the Reche Canyon/Badlands Area plan. None of the cumulative projects would interfere with wildlife movement in the region.

Direct and indirect impacts of the Project on the MSHCP and SJWA would be less than significant with mitigation, and the regional (cumulative) implications of the Project can be addressed through the fee payment program of the MSHCP because it provides a regional and comprehensive approach to conservation planning. Through the implementation of the stated mitigation for Project-specific impacts, and the payment of required MSHCP mitigation fees, no significant cumulative effect on biological resources would result from the development of the proposed uses with implementation of the identified program mitigation measures.

Related projects that would potentially affect wildlife movement would be subject to the same requirements of CEQA as the Project. These determinations would be made on a case-by-case basis, and the effects of cumulative development on wildlife movement would be mitigated to the extent feasible in accordance with CEQA and other applicable legal requirements. Therefore, for the reasons described above, cumulative adverse effects on wildlife movement would be less than significant.

The CEQA documents identified in Tables 6.4-1 and 6.4-2 have been reviewed to determine if the identified cumulative projects in conjunction with the Project could result in cumulatively considerable effect on biological resources. All cumulative projects are required to comply with the MSHCP and pay applicable MSHCP fees which are in turn utilized by the RCA to implement programs and habitat acquisition to minimize cumulative impacts to biological resources.

Implementation of Mitigation Measures 4.4.6.1A, 4.4.6.1B, 4.4.6.2A through 4.4.6.2C (as revised [Additional Errata to the Revised Final EIR dated May 14, 2020]), and 4.4.6.3A through 4.4.6.3K would reduce conflicts with adopted habitat conservation plans and impacts to biological resources. Through the implementation of the above mitigation measures, the Project contribution to potential cumulative impacts would be less than cumulatively considerable. (Revised Final EIR Part 3, pg. 6.4-40 through pg. 6.4-41).

j. Cumulative Biological Impact – Conflict with Adopted Policies, Ordinances or Habitat Conservation Plans

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance; or conflict with the provisions of an adopted habitat conservation plan, natural community conservation plan, or other approved local, regional, or state habitat conservation plan.

Findings: Potential impacts of the Project related to cumulative biological impacts are discussed in detail in Section 6.4 of the Revised Final EIR Part 3. Based on the entire record before us, this Council finds that potentially significant impacts related to consistency with adopted policies, ordinances or habitat conservation plans would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1).

Each mitigation measure identified below is adopted by the City Council and set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Findings: The Project site is located within the Reche Canyon/Badlands Area of the MSHCP. Development of the Project site would not conflict with the conservation goals established by the MSHCP for Cell Group X or Cell Group E. In addition, no conflict from development would occur in relation to the Reche Canyon/Badlands Area Plan, the Area Plan Subunit 4, the Area Plan Subunit 3, Proposed Core 3, or Existing Core H.

No development is proposed within the portion of the Project site that lies adjacent to Cell Group D and the SJWA. Development that will be adjacent to the SJWA property may cause significant indirect impacts to species within the SJWA. The Project site is not adjacent to any Cores or Linkages identified in the MSHCP. However, it is adjacent to the SJWA and is subject to the project guidelines provided in MSHCP Section 6.1.4 (Guidelines Pertaining to the Urban/Wildlands Interface). The Project is also required to adhere to the Best Management Practices (BMPs) found in Appendix C of the MSHCP.

The Project is not located within any Amphibian, Mammalian, or Special Linkage Areas identified by the MSHCP. The Project is in an area requiring burrowing owl surveys, is within the MSHCP Criteria Area Species Survey Area (CASSA) and is within the Narrow Endemic Plant Species Survey Area (NEPSSA). Surveys the CASSA and NEPSSA resulted in the lack of observation of these species. Burrowing owl has been observed within the Project site.

The WLC Project site is located within the Stephen's Kangaroo Rat (SKR) Habitat Conservation Plan (HCP). Core Areas have been designated for the conservation of this species; however, the Project site is not located within an SKR Core Area.

The effects of the Project, in combination with other cumulative projects in the geographic area, could combine to cause or contribute to significant cumulative effects to biological resources. In particular, identified cumulative projects that are located within or near the northern portion of the San Jacinto Wildlife Area could have significant effects on special status species, sensitive vegetation communities, and wildlife movement documented in the MSHCP and the San Jacinto Wildlife Area Management Plan. It should be noted that cumulative projects are required to adhere to and be consistent with the goals and objectives established in the MSHCP, including the payment of MSHCP fees. Therefore, cumulative adverse effects on resource protection policies would be less than significant.

The CEQA documents identified in Tables 6.4-1 and 6.4-2 have been reviewed to determine if the identified cumulative projects in conjunction with the Project could result in cumulatively considerable effect on biological resources. All cumulative projects are required to comply with the MSHCP and pay applicable MSHCP fees which are in turn utilized by the RCA to implement programs and habitat acquisition to minimize cumulative impacts to biological resources. As a result, the cumulative projects in conjunction with the World Logistics Center Project do not constitute a cumulatively considerable effect on adopted policies, ordinances or habitat conservation plans.

Implementation of **Mitigation Measures 4.4.6.2A and 4.4.6.2B** (as revised [Additional Errata to the Revised Final EIR dated June 9, 2020]) would reduce conflicts with adopted habitat conservation plans that the Project is subject to. **Mitigation Measures 4.4.6.2A and 4.4.6.2B** includes the requirement to conduct a focused plant survey, and demonstration to the Western Riverside County Regional Conservation Authority compliance with the provisions of the MSHCP. Through the implementation of the above mitigation measures, the Project's contribution to potential cumulative impacts would be less than cumulatively considerable (Revised Final EIR Part 3, pg. 6.4-41 through pg. 6.4-42).

5. Cultural Resources

a. Prehistoric Cultural Resources

Potential Significant Impact: Whether the Project could have an adverse effect on significant archaeological resource pursuant to CEQA Guidelines Section 15064.5.

Finding: Potential impacts of the Project related to archaeological resource impacts are discussed in detail in Section 4.5 of the Revised Final EIR Part 4 Volume 3. Based on the entire record before us, this Council finds that potentially significant impacts related to archaeological resources would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment (Finding 1). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Finding: Based on Section 4.5 of the Revised Final EIR Part 4 Volume 3, a reconnaissance pedestrian-survey for the Project site was conducted in November 2007. Although the Project site is located within the Moreno Hills Complex, no archaeological resources were identified on the Project site during the field survey, and the cultural resource assessment concluded the Project would have no significant impacts; however, there is a potential for Project grading to disturb previously undiscovered cultural resources. While there is no recorded or surface evidence that archaeological resources are present on-site, the Project is located in an area with a high potential of containing prehistoric archaeological resources. Therefore, a potential exists that excavation and construction activities may uncover previously undetected prehistoric or historic cultural resources. Adherence to **Mitigation Measures 4.5.6.1A through 4.5.6.1E** would reduce potential impacts to archaeological resources to a less than significant level. (Revised Final EIR Part 4 Volume 3 pgs. 4.5-17 to 4.5-21)

b. Historic Resources

Potential Significant Impact: Whether the Project could have a significant adverse effect on historic resources.

Findings: Potential impacts of the Project related to historic resource impacts are discussed in detail in Section 4.5 of the Revised Final EIR Part 4 Volume 3. Based on the entire record before us, this Council finds that potentially significant impacts related to historic resources would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Findings: According to Section 4.5 of the Revised Final EIR Part 4 Volume 3, the Project site contains two previously identified historic sites: CA-RIV-4201H and CA-RIV-4210H. Both of these are historic-era homesteads and previously contained farm buildings and related out-buildings. They were located in the eastern portion of the Specific Plan area, but MBA could find no remains of these facilities or related artifacts. The MBA report concludes the buildings were demolished and/or their materials removed for disposal or reuse at some point in the past.

There are six occupied rural residential structures and associated out-buildings currently present on the project site, and one (APN 478-220-009) near Redlands Boulevard contains a farm building that was built around 1900 and may be one of the oldest surviving buildings of the historic Moreno community.²² No other evidence of past structures or unique features was identified; however, access to the six occupied rural residential properties was not available at the time of survey, and it appears from general observations, historical aerial photographs, and historical records that one or more of these buildings may be older than 40 years. Without more information, there is a possibility that removal of these buildings could represent a significant impact to historic structures, features, or resources, and mitigation is required.

In addition, historical evidence indicates Juan Bautista de Anza traveled through the project area (i.e., along the base of Mt. Russell from south to northwest), which should be acknowledged as part of the trail proposed within the Specific Plan.

Alessandro Boulevard was designated as a City Landmark in 1988 (Resolution CPAB 88-2). Resolution CPAB 88-2 was designed to assure the maintenance, enhancement, or protection of a street of historical significance. Over the years various portions of Alessandro Boulevard have been modernized to enhance traffic flow throughout the City, but the original routing has remained unchanged. Alessandro Boulevard within the WLC Specific Plan area would retain its original alignment but the roadway would be enhanced to serve modern traffic needs. This has been done in multiple areas along Alessandro Boulevard in the past to better serve the needs of the community. These changes have not impacted the integrity of the landmark status, as the significance of the Landmark status is associated with the original location of the boulevard since 1890 and the retention of the original name of the boulevard across the City. These aspects would remain, and the impacts would not be considered significant since the California Register requires that a resource possess integrity, which is defined as “the authenticity of a historical resource’s physical identity evidenced by the survival of characteristics that existed during the resource’s period of significance” (California Office of Historic Preservation 1999). To retain integrity, a resource should have its original location, design, setting, materials, workmanship, feeling, and association. Which of these factors is most important depends on the particular criterion under which the resource is considered eligible for listing (California Office of Historic Preservation 1999). Alessandro Boulevard integrity is retained in the original location, however, design, setting, materials feeling have changed over time through modifications to the road throughout the City and thus the impacts are not significant.

²² ¹⁸ *Cultural Resources Assessment*, Michael Brandman Associates, Inc., September 2014.

Approximately 1,350 feet of Alessandro Boulevard east of Merwin Street would be closed to through traffic to keep trucks from using Alessandro Boulevard through the residential neighborhood between Merwin Street and Wilmot Street. The loss of this portion of Alessandro Boulevard would not have a significant impact on the landmark status of the road, as the name would continue to be employed and the original routing would be retained throughout. These are the two key characters of the landmark status. This portion of road would be open to hikers and bikers and the closure will be designed to keep access open to non-vehicular users. Both the original route and name would be retained in keeping with the main aspects of the landmark designation.

Implementation of **Mitigation Measures 4.5.6.1A, 4.5.6.2A, and 4.5.6.2B**, will help reduce potential impacts to historical resources to less than significant levels. (Revised Final EIR Part 4 Volume 3 pgs. 4.5-21 to 4.5-26).

c. Paleontological Resources

Potential Significant Impact: Whether the Project could have an adverse effect on significant paleontological resource or site or unique geologic feature.

Findings: Potential impacts of the Project related to paleontological resource impacts are discussed in detail in Section 4.5 of the Revised Final EIR Part 4, Volume 3. Based on the entire record before us, this Council finds that potentially significant impacts related to paleontological resources would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program. Implementation of **Mitigation Measures 4.5.6.3A and 4.5.6.3B** will reduce the impact to unique paleontological resource or unique geologic feature to less than significant.

Facts in Support of the Findings: According to Section 4.5 of the Revised Final EIR Part 4 Volume 3, the Project site is located within an area that has a high potential to contain near-surface Pleistocene fossils.²³ The paleontological literature search indicated that there is potential for significant, nonrenewable resources that to encountered during on-site construction activities. Therefore, a paleontological resources impact mitigation program (PRIMP), including excavation monitoring by a qualified paleontologist, is required for earthmoving activities in Pleistocene sediments on the Project site with potential to contain significant, nonrenewable paleontological resources. Although no paleontological resources were identified on-site during the field survey, because of the location of the Project site and associated sensitivity for paleontological resources, the potential exists that paleontological resources maybe uncovered during construction. Adherence to the **Mitigation Measures 4.5.6.3A and 4.5.6.3B** will reduce potential impacts to paleontological resources to a less than significant level. (Revised Final EIR Part 4 Volume 3 pgs. 4.5- 26 to 4.5-27).

d. Cumulative Cultural Resources Impacts – Archaeological Resources

²³ *Ibid.*

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would cause a substantial adverse change in the significance of an archaeological resource pursuant to CEQA Guidelines Section 15064.5.

Findings: Potential cumulative impacts of the Project-related cultural resources are discussed in detail in Section 6.5 of the Revised Final EIR Part 3. Based on the entire record before us, this Council finds that potentially significant impacts related to archaeological resources would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Each mitigation measure identified below is adopted by the City Council and set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Findings: According to Section 6.5 of the Revised Final EIR Part 3, cumulative projects within Western Riverside County would involve ground disturbance that could result in a significant impact to archaeological resources. Some of the cumulative projects have incorporated design features to avoid potential effects to known archaeological resources; however, potential significant cumulative impacts could occur to unknown archaeological resources. Although no known resources are located within the Project area, ground disturbing activities could result in a significant impact to unknown archaeological resources. Therefore, the Project's contribution to potential significant cumulative impacts would be cumulatively considerable.

Typical mitigation measures implemented by the cumulative projects to reduce potential impacts to unknown archaeological resources include archeological monitoring, Native American tribal representation during monitoring, and protocols for treatment of discovered resources. These measures typically reduce potential impacts to unknown archaeological resources to less than significant.

Implementation of the recommended mitigation measures reduces potential impacts to archaeological resources. Mitigation Measures 4.5.6.1A and 4.5.6.1B includes Phase 1 cultural resources assessments of parcels that have not been assessed, significance evaluation of any resources encountered, and development of appropriate treatment or mitigation. Mitigation measures 4.5.6.1C and 4.5.6.1D include the retention of an archaeological monitor to observe all grading activities, with invitation of a Native American tribal representative to participate in monitoring. Mitigation measure 4.5.6.1E includes protocols to be followed should resources be discovered, including resource evaluation and appropriate treatment for significant resources. Through the implementation of the above mitigation measures, the Project's incremental contribution to potential significant cumulative impacts would be less than cumulatively considerable (Revised Final EIR Part 3, pg. 6.5-21 to 6.5-22).

e. Cumulative Cultural Resources Impacts – Historic Resources

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would cause a substantial adverse change in the significance of a historical resource pursuant to CEQA Guidelines Section 15064.5.

Findings: Potential cumulative impacts of the Project-related cultural resources are discussed in detail in Section 6.5 of the Revised Final EIR Part 3. Based on the entire record before us, this Council finds that

potentially significant impacts related to historic resources would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Each mitigation measure identified below is adopted by the City Council and set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Findings: According to Section 6.5 of the Revised Final EIR Part 3, cumulative related projects within Western Riverside County would involve ground disturbance that could impact above-ground structures that are of historic-age and meet the criteria of historic resources. Ground disturbance could also result in impacts to unknown historic resources that are located below ground. The construction activities associated with cumulative development could result in a potential significant cumulative impact. Typical mitigation measures implemented by projects in the cumulative scenario to reduce potential impacts to historical resources include proper curation and recordation of the recovered historic resources. These measures typically reduce potential impacts to historical resources to less than significant.

The implementation of the Project would contribute to potential cumulative impacts to historic resources. Because the Project includes the removal of six occupied rural residential structures and associated out-buildings that may be of historic-age, impacts on these structures, features or resources could be significant. In addition, the Project also includes effects on other structures of historic-age such as two previously identified historic sites containing farm buildings and related out-buildings as well as Alessandro Boulevard which was constructed across the site in the 1890s. The Project's incremental contribution to cumulative historic impacts would be cumulatively considerable.

Implementation of the recommended mitigation measures reduces the Project's contribution to historic cumulative impacts. The implementation of **Mitigation Measure 4.5.6.2A** would include the proper curation of recovered historic resources. The implementation of **Mitigation Measure 4.5.6.2B** would include the installation of a historical marker along a historic trail. **Mitigation Measure 4.5.6.2C** includes an alignment of an on-site road along the historical alignment of Alessandro Boulevard. With the implementation of these mitigation measures, the Project's contribution to potentially significant cumulative historic impacts would be less than cumulatively considerable (Revised Final EIR Part 3, pg. 6.5-22 to 6.5-23).

f. Cumulative Cultural Resources Impacts – Paleontological Resources

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would directly or indirectly destroy a unique paleontological resource or site or unique geologic feature.

Findings: Potential cumulative impacts of the Project-related cultural resources are discussed in detail in Section 6.5 of the Revised Final EIR Part 3. Based on the entire record before us, this Council finds that potentially significant impacts related to paleontological resources would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Each mitigation measure identified below is adopted by the City Council and set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Findings: According to Section 6.5 of the Revised Final EIR Part 3, cumulative projects within Western Riverside County would involve ground disturbance that could cause adverse impacts to paleontological resources. Potential impacts from projects in the cumulative scenario that could impact the same fossil-bearing geologic units as the Project would be considered significant. These units include older Pleistocene alluvium and the San Timoteo formation, both of which have been assigned a moderate paleontological sensitivity because they have yielded paleontological resources in the past. Potential impacts from the implementation of projects in the cumulative scenario could result in significant cumulative impacts. The typical mitigation measures implemented by the cumulative related projects to reduce potential impacts to paleontological resources are paleontological monitoring and properly curating resources that are found. These measures typically reduce potential impacts to paleontological resources to less than significant.

Because the Project would result in ground disturbance that could affect paleontological resources within the Pleistocene alluvium and the San Timoteo formation, the Project's contribution to cumulative paleontological resources impacts would be cumulatively considerable.

Implementation of mitigation measures would reduce the Project's contribution to potential cumulative impacts to paleontological resources. The implementation of **Mitigation Measure 4.5.6.3A** includes the presence of a City-approved paleontologist to monitor excavation activities and salvage/collect fossils. **Mitigation Measure 4.5.6.3B** provides for the paleontological assessment of off-site improvements area and the implementation of monitoring protocols, where appropriate. Through the implementation of these mitigation measures, the Project's contribution to potential significant cumulative impacts to paleontological resources would not be cumulatively considerable (Revised Final EIR Part 3, pg. 6.5-23).

6. Geology and Soils

a. Fault Rupture

Potential Significant Impact: Whether the future development permitted by the Project would locate development in an area susceptible to fault rupture.

Findings: Potential impacts of the Project related to fault rupture impacts are discussed in detail in Section 4.6 of the Revised Final EIR Part 4 Volume 3. Based on the entire record before us, this Council finds that potentially significant impacts related to fault rupture would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Findings: According to Section 4.6 of the Revised Final EIR Part 4 Volume 3, the western portion of the site is crossed by the City of Moreno Valley Seismic Zone, a postulated trace of the Casa Loma Fault and the Farm Road Strand. A detailed fault investigation was performed by Leighton for these projected faults. Although no active faulting was observed, some local discontinuous fracturing was observed and documented. Because of the potential for ground movements in this area, mitigation is required.

State law prohibits the construction and placement of habitable structures²⁴ over the trace of an active fault pursuant to the Alquist-Priolo Act. The A-P Earthquake Fault Zone is located on the eastern border of the project site. Trenching conducted by Leighton across the Claremont Segment of the San Jacinto Fault in the eastern area of the project site identified the location of a portion of the fault; however, the entire length of the fault through the Project site was not trenched. Although no habitable structure can be located on an active fault per State law, fault rupture hazard represents a potential significant seismic hazard on-site that would require mitigation.

Implementation of **Mitigation Measures 4.6.6.1A** through **4.6.6.1C** will ensure fault rupture hazards are reduced to a less than significant level. (Revised Final EIR Part 4 Volume 3 pgs. 4.6-17 to 4.6-20).

b. Ground Shaking

Potential Significant Impact: Whether the future development permitted by the Project would locate development in an area susceptible to ground shaking.

Findings: Potential impacts of the Project related to ground shaking impacts are discussed in detail in Section 4.6 of the Revised Final EIR Part 4 Volume 3. Based on the entire record before us, this Council finds that potentially significant impacts related to ground shaking would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Findings: According to Section 4.6 of the Revised Final EIR Part 4, Volume 3, Southern California is a seismically active area and, therefore, will continue to be subject to ground shaking resulting from seismic activity on regional faults. Ground shaking from earthquakes associated with nearby and more distant faults is expected to occur during the lifetime of the Project. The level of potential ground motion is considered moderate to high in the City of Moreno Valley and, therefore, in the project area.

In accordance with the City’s General Plan Safety Element (Objective 6.1),²⁵ Project development will require geological and geotechnical investigations by State-licensed professionals. The geotechnical investigations will provide design considerations and earthwork recommendations to ensure that ground shaking impacts are appropriately mitigated. In addition, California Code of Regulations (CCR), Title 24, also known as the California Building Standards Code (CBC), contains building design and construction requirements relating to fire and life safety, and structural safety. The CBC also includes standards designed to ensure that structures within California are built to withstand expected levels of seismic activity for each earthquake region throughout the State. Specifically, Part 2 of Title 24, including Chapters 4, 16-18, and Appendix J provide guidance regarding grading, soils, and construction techniques related to seismic protection. These codes are

²⁴ ²⁰ California Code of Regulations, Section 3601 states, “A structure for human occupancy is any structure used or intended for supporting or sheltering any use or occupancy, which is expected to have a human occupancy rate of more than 2,000 person-hours per year.”

²⁵ Moreno Valley General Plan, Chapter 9 Goals and Objectives, pg. 9-30.

provided to protect public safety and ensure that all structures built in the State can withstand anticipated seismic ground shaking and other related geotechnical and soils constraints. Implementation of **Mitigation Measure 4.6.6.2A** will ensure ground shaking impacts caused by earthquakes are reduced to a less than significant level. (Revised Final EIR Part 4 Volume 3 pgs. 4.6-20 to 4.6-21).

c. Unstable Soils

Potential Significant Impact: Whether the future development permitted by the Project would locate development in an area susceptible to unstable soils.

Findings: Potential impacts of the Project related to unstable soil impacts are discussed in detail in Section 4.6 of the Revised Final EIR Part 4, Volume 3. Based on the entire record before us, this Council finds that potentially significant impacts related to unstable soils would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Findings: According to Section 4.6 of the Revised Final EIR Part 4, Volume 3, expansive soils generally have a substantial amount of clay particles, which can give up water (shrink) or absorb water (swell). The change in the volume exerts stress on buildings and other loads placed on these soils. The extent or range of the shrink/swell is influenced by the amount and kind of clay present in the soil. Expansive soils can be widely dispersed, and they can occur in hillside areas as well as low-lying alluvial basins. On-site soils (Dv and Wb soils) are identified as having a moderate to low shrink-swell potential. Because the potential exists to locate development on moderately expansive soils, impacts are considered significant and mitigation is required. In accordance with the City's General Plan Safety Element (Implementation Measure I.E.1) and as indicated previously, development of the Project will require geological and geotechnical investigations by State-licensed professionals. To ensure impacts from expansive soils are addressed for specific development sites, adherence to **Mitigation Measures 4.6.6.3A** through **4.6.6.3C** is required to reduce impacts from unstable soils to less than significant. (Revised Final EIR Part 4, Volume 3 pg. 4.6-21 to 4.6-23)

d. Cumulative Geology Impacts – Fault Rupture

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would expose persons or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zone Maps issued by the State Geologist for the area or based on other substantial evidence of a known fault.

Findings: Potential cumulative impacts related to geologic resources are discussed in detail in Section 6.6 of the Revised Final EIR Part 3. Based on the entire record before us, this Council finds that potentially significant cumulative impacts related to fault rupture would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Each mitigation measure is adopted by the City Council and set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Findings: According to Section 6.6 of the Revised Final EIR Part 3, the San Jacinto Fault Zone and its associated fault segments are located within the eastern portion of the City of Moreno Valley. According to the City of Moreno Valley General Plan EIR, no other active fault zone is located within the City. Based on a review of projects in the cumulative scenario, San Jacinto Wildlife Area Land Management Plan is the only related project that is located in the immediate vicinity of the San Jacinto Fault Zone. A portion of the Land Management Plan encompasses the area immediately south of the Project site and is located within the City of Moreno Valley. This portion of the Land Management Plan includes a potential for a water storage project that would involve construction of enclosed berms to hold water and an on-site pipeline. However, based on information from the San Jacinto Wildlife Area Land Management Plan EIR, the water storage project would not be located on any of the mapped earthquake fault zones and would thus be unlikely subject to fault rupture. Therefore, no significant cumulative effect would result relating to surface rupture impacts exposing persons and structures to significant effects and the Project's impacts would be less than cumulatively considerable.

Implementation of **Mitigation Measures 4.6.6.1A through 4.6.6.1C** will require subsurface evaluations to determine the implementation of structural setbacks, remedial earthwork and/or foundation recommendations if site-specific geotechnical investigations confirm the locations of the fault alignments in the areas of proposed land uses. The implementation of these mitigation measures would reduce the Project's potential fault rupture impacts to less than cumulatively considerable (Revised Final EIR Part 3, pg. 6.6-15 through pg. 6.6-16).

e. Cumulative Geology Impacts – Ground Shaking

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would expose persons or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving strong ground shaking.

Findings: Potential cumulative impacts related to geologic resources are discussed in detail in Section 6.6 of the Revised Final EIR Part 3. Based on the entire record before us, this Council finds that potentially significant cumulative impacts related to ground shaking would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Each mitigation measure is adopted by the City Council and set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Findings: According to Section 6.6 of the Revised Final EIR Part 3, projects in the cumulative scenario could be subject to ground shaking resulting from seismic activity on regional and local faults. The level of potential ground motion from faults is considered moderate to high in the City of Moreno Valley. Based on a review of the environmental documents prepared for the cumulative projects, the structures proposed by each project would be required to be designed in accordance with the California Building Code and the City of Moreno Valley Building Code to preclude adverse effects to the structures and persons associated with strong seismic ground-shaking. The amount of ground shaking would be dependent on the earthquake size, location and distance. Ground shaking would be greater with larger and closer earthquakes. Cumulative projects could expose persons and structures to significant cumulative seismic ground shaking impacts.

The implementation of the Project could also subject persons and structures to ground shaking from seismic activity on regional and local faults. Section 4.6.6.2 of Revised Final EIR Part 4 Volume 3 identifies that the exposure of the proposed structures and persons to seismic activity would be potentially significant. Therefore, the combination of impacts of the Project and other projects in the cumulative scenario would result in a cumulative significant impact. Given the size of the Project and the number of people and scope of structures it would include, the Project's contribution to the significant cumulative impact associated with exposing persons and structures to strong seismic ground shaking impacts could be cumulatively considerable.

Implementation of **Mitigation Measure 4.6.6.2A** requires structural design parameters for the proposed improvements in accordance with the California Building Code, including applicable City amendments as indicated based on site-specific geotechnical investigations. The implementation of this measure would reduce the Project's contribution to the potential significant cumulative exposure of persons and structures to seismic ground shaking impacts to less than cumulatively considerable (Revised Final EIR Part 3, pg. 6.6-16 through pg. 6.6-17).

f. Cumulative Geology Impacts – Unstable Soils

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would be located on expansive soil, creating substantial risks to life or property.

Findings: Potential cumulative impacts related to geologic resources are discussed in detail in Section 6.6 of the Revised Final EIR Part 3. Based on the entire record before us, this Council finds that potentially significant cumulative impacts related to unstable soils would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Each mitigation measure is adopted by the City Council and set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Findings: According to Section 6.6 of the Revised Final EIR Part 3, projects in the cumulative scenario would include structural development on soils that have a low to moderate shrink/swell potential that could result in unstable soils. Areas where soils have a moderate shrink/swell potential could result in expansive soil impacts that would be significant. However, based on a review of the cumulative projects, the implementation of special construction techniques and compliance with the California Building Code would reduce expansive soil impacts to less than significant.

The implementation of the Project could include structures on soils with moderate shrink/swell and cause potential significant impacts to persons and structures. Therefore, the combination of the Project's incremental impacts together with the impacts of other projects in the cumulative scenario would result in a cumulative significant expansive soil impact. Given the size of the Project and the number of people it would include, the Project's contribution to exposing persons and structures to expansive soil impacts would be cumulatively considerable.

Implementation of **Mitigation Measures 4.6.6.3A through 4.6.6.3C** require structural design parameters for the proposed improvements in accordance with the California Building Code, including applicable City amendments. These design parameters would be implemented based on site-specific geotechnical

investigations. The implementation of these measures would reduce the Project's contribution to the potential significant cumulative exposure of persons and structures to expansive soil impacts to less than cumulatively considerable (Revised Final EIR Part 3, pg. 6.6-17).

7. Greenhouse Gas Emissions, Climate Change, and Sustainability

a. Greenhouse Gas Emissions

Potential Significant Impact: Whether the Project could have a significant adverse effect due to the generation of greenhouse gas emissions (GHGs).

Findings: Potential impacts of the Project related to Greenhouse Gas Emissions impacts are discussed in detail in Section 4.7 of the Revised Final EIR Parts 2 and 3. Based on the entire record before us, this Council finds that potentially significant impacts related to Greenhouse Gas Emissions impacts would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Each mitigation measure is adopted by the City Council and set forth in the attached Mitigation Monitoring and Reporting Program

Facts in Support of the Findings: According to the Revised Final EIR Part 2 Section 4.7, future development that could occur on the Project site could generate GHG emissions during construction and operation activities. Based on a comparison of the Project to the South Coast Air Quality Management District tiered interim GHG significance criteria, the most applicable South Coast Air Quality Management District thresholds for the uncapped GHG emissions is the Industrial at 10,000 metric tons of carbon dioxide equivalents (MT CO₂e) per year.

As shown in Table 4.7-4 of the Revised Final EIR Part 2, GHG emissions at Buildout (2035) for the Project is 258,700 MT CO₂e per year and exceeds the SCAQMD threshold; therefore, the Project's GHG emissions are significant before mitigation. With implementation of mitigation measures, the Project's GHG emissions would be reduced to 230,792 MT CO₂e which is significant. In order to ensure that the Project complies with and would not conflict with or impede the implementation of reduction goals identifies in AB 32, the Governor's EO S-3-05 and other strategies to help reduce GHGs to the level proposed by the Governor, Mitigation Measures 4.3.6.2A, 4.3.6.3B, 4.3.6.4A, 4.7.6.1A, 4.7.6.1B, 4.7.6.1C, 4.7.6.1D, 4.16.1.6.1A, 4.16.1.6.1B, and 4.16.1.6.1C shall be implemented. (Revised Final EIR Part 2, pgs. 4.7-34-20 to 4.7-40)

In addition to the above Mitigations Measures, new Mitigation Measure 4.7.7.1, as revised, would mitigate "Project Emissions" from new Table 4.7-16 (Additional Errata to the Revised Final EIR dated June 9, 2020). With this new Mitigation Measure 4.7.7.1, as revised, the WLC Project's GHG emissions will be reduced to net zero without consideration of the cap-and-trade program on the analysis of GHG emissions for the construction and operation of the WLC Project. Therefore, Project emissions would not exceed the SCAQMD's significance threshold of 10,000 MT CO₂e per year and would not contribute to a significant cumulative impact. (Revised Final EIR Part 1, pg. 35).

b. Greenhouse Gas Plan, Policy, Regulation Consistency

Potential Significant Impact: Whether the Project could be inconsistent with greenhouse gas plans, policies and regulations.

Findings: Potential impacts of the Project related to greenhouse gas plan, policy, regulation consistency impacts are discussed in detail in Section 4.7 of the Revised Final EIR Parts 2 and 3. Based on the entire record before us, this Council finds that potentially significant impacts related to Greenhouse Gas Emissions impacts would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Each mitigation measure identified below is adopted by the City Council and set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Findings: According to the Revised Final EIR Part 2 Section 4.7, implementation of the Project could result in the development of an approximately 40.6 million square feet of logistics distribution facilities. The Project includes a variety of physical attributes and operational programs that would help reduce operational-source pollutant emissions from worker commuting, including GHG emissions. Similar to the discussion of cumulative air quality impacts, the Project may employ workers locally from the City. This has the benefit of improving the local jobs/housing balance leading to air quality benefits in terms of shorter trip lengths, which lead to lower GHG emissions than if the workforce was derived from distant locations.

Future development that would occur under the Project would be consistent with greenhouse gas emission reduction strategies and policies, including the City's Climate Change Strategy. The Project would implement the Mitigation Measures listed above to reduce its contribution to GHG emissions and to ensure it does not conflict with or impede implementation of reduction goals identified in AB 32, Governor's Executive Order S-3-05, and other strategies to help reduce GHGs to the level proposed by the Governor. In addition, the Project would also be subject to all applicable regulatory requirements, which would also reduce the GHG emissions of the project. Since the Project is consistent with these policies, including being required to mitigate its GHG emissions to net zero, the Project is consistent with greenhouse gas plans, policies, and regulations and impacts are less than significant after mitigation. (Revised Final EIR Part 2, pgs. 4.7-41 to 4.7-47)

c. Cumulative Greenhouse Gas Emissions Impacts

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would have a cumulative significant impact from greenhouse gas emissions.

Findings: Potential cumulative impacts of the Project-related greenhouse gas emissions (GHG) are discussed in detail in Section 6.7 Revised Final EIR Part 2. Based on the entire record before us, this Council finds that potentially significant impacts related to cumulative greenhouse gas emissions would be reduced to a less than significant level, with implementation of **Mitigation Measures 4.7.6.1A, 4.7.6.1B, 4.7.6.1C, 4.7.6.1D, 4.7.6.1E.1 or 4.7.6.1E.2, and 4.7.7.1**. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment (Finding 1). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Findings: Cumulative effects to greenhouse gas (GHG) emissions, climate change and sustainability are described in Section 6.7 of the Revised Final EIR Part 2. As part of the GHG cumulative analysis a review of available environmental documents for projects within the Project vicinity was conducted. Approximately 359 projects were identified in the vicinity of the Project and are listed in Table 6.7-1. Out of those 359 projects, approximately 173 environmental documents were available. All 173 were reviewed to

identify quantitative emissions for construction and operation of the respective projects; however, not all environmental documents contained emissions for construction and operation. Emissions from all of the identified cumulative projects were calculated based on available information and methodologies. Cumulative construction and operational emissions are provided in Table 6.7-2 in Section 6.7 of the Revised Final EIR Part 2.

During construction, the Project would emit GHGs mainly from direct sources such as combustion of fuels from worker, vendor and haul vehicles and construction equipment. Section 4.7.6.1 Greenhouse Gas Emissions of the Revised Final EIR Part 2 found that construction of the Project would contribute approximately 18,770 MT CO₂e in its first year of construction and up to approximately 23,511 mt CO₂e per year of construction during the 15-year construction period. Over the 15-year construction period the Project would emit a total of 221,727 MT CO₂e. The SCAQMD recommends that construction emissions be averaged over a 30-year period, so that GHG reduction measures will address construction GHG emissions as part of a project's overall GHG reduction strategies. In accordance with this methodology, the estimated construction GHG emissions have been amortized over a 30-year period and are included in the annualized operational GHG emissions. Averaged over a 30-year period results in approximately 7,391 MT CO₂e per year. In addition, out of the 359 cumulative projects that were evaluated during preparation of the Recirculated Sections, Revised Final EIR Part 2, 68 were found to be completed or currently undergoing construction as of November 2019. Therefore, 291 potentially cumulative projects could undergo construction activities during the Project's 15-year construction period.

Operational or long-term emissions occur over the life of the Project. CARB has designed a California cap-and-trade program that is enforceable and meets the requirements of AB 32 and SB 32. The program began on January 1, 2012, placing GHG emissions limits on capped sectors (e.g., electricity generation, petroleum refining, cement production, and large industrial facilities that emit more than 25,000 MT CO₂e per year), and enforcing compliance obligations beginning with 2013 emissions. Vehicle fuels were placed under the cap in 2015, and, with the passage of AB 398, the program was extended through 2030. The cap-and-trade program allocates emissions permits across covered entities in each sector. Without consideration of the cap-and-trade program on Project emissions, the Project's unmitigated emissions at full buildout in 2035 are approximately 258,700 MT CO₂e per year which are over the SCAQMD's significance threshold of 10,000 MT CO₂e per year (Section 4.7.6.1 Greenhouse Gas Emissions of the Revised Final EIR Part 2).

The quantitative analysis of operation and construction emissions utilized the SCAQMD's Interim CEQA GHG Significance Thresholds to determine the respective project's level of significance. Significance thresholds for each project were determined based on land use. The projects that were identified as either residential or commercial projects are considered part of the SCAQMD's draft threshold for residential/commercial projects and 3,000 MT CO₂e per year was used in each of the greenhouse assessments. The projects that were identified as industrial/warehouses were compared against a threshold of 10,000 MT CO₂e for industrial projects. Of the 359 projects analyzed, 94 projects exceeded their given threshold and 261 projects were below threshold. Given that the unmitigated Project and 94 of the cumulative projects are over threshold, impacts would be potentially significant and cumulatively considerable. (Revised Final EIR Part 2, pgs. 6.7-13 to 6.7-14)

In addition to the above Mitigations Measures, new Mitigation Measure 4.7.7.1, as revised, would mitigate “Project Emissions” from new Table 4.7-16 (Additional Errata to the Revised Final EIR date June 9, 2020). With this new Mitigation Measure 4.7.7.1, as revised, the WLC Project’s GHG emissions will be reduced to net zero without consideration of the cap-and-trade program for the construction and operation of the WLC Project. Therefore, Project emissions would not exceed the SCAQMD’s significance threshold of 10,000 MT CO₂e per year and would not contribute to a significant cumulative impact. (Revised Final EIR Part 1, pg. 35 of the Response to Comments document)

d. Cumulative Aesthetics – Light and Glare

Potential Significant Impact: Whether the Project could result in cumulative impacts in connection with past, present, and probable future projects to create a new source of substantial light or glare that would adversely affect daytime or nighttime views in the area.

Findings: Potential cumulative impacts of the Project with respect to light and glare aesthetics are discussed in detail in Section 6.1 of the Revised Final EIR Part 3. Based on the entire record before us, this Council finds that the Project’s potentially significant cumulative impacts related to light and glare aesthetics would be reduced to a less than significant level, with implementation of Mitigation Measures 4.1.6.1A, 4.1.6.1B, 4.1.6.4A, and 4.1.6.4B. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment (Finding 1). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program.

Fact Supporting the Findings: The Project in conjunction with the cumulative development could significantly degrade the existing visual character (including light and glare) of the area, including both daytime glare and nighttime lighting. Development of cumulative projects within the eastern Moreno Valley area would result in the conversion of open space/vacant land to urbanized land uses, including projects identified as MV-3 and MV-4, both large warehouse projects, both of which could contribute to cumulative aesthetic impacts. (Revised Final EIR Part 3, Table 6.1-1, pg. 6.1-4.). The environmental document for MV-3 identified existing visual character/light and glare, and surroundings as being a significant and unavoidable impact, and the visual change introduced by MV-4’s warehouse could contribute to cumulative aesthetic impacts. Accordingly, cumulative development within the cumulative geographic areas for aesthetics would result in a significant cumulative impact associated with visual character.

Development of the Project would substantially alter the existing character and create light and glare impacts from conversions of the Project site from open space to an urbanized setting with many large logistics buildings. Because the Project would result in a significant impact on the visual character and light and glare from development of the area and cumulative development will also result in a significant impact on visual character, the Project’s contribution to cumulative impacts to the existing visual character and surroundings would be cumulatively considerable, prior to the application of mitigation.

The Project will be required to comply with the City’s General Plan, the City’s Municipal Code (Section 9.08.100, Lighting) and the WLC Specific Plan’s development guidelines for lighting and building materials. Mitigation Measures 4.1.6.1A and 4.1.6.1B would help reduce related visual impacts. Mitigation Measures 4.1.6.4A and 4.1.6.4B will help reduce light and glare associated with the new buildings near the San Jacinto

Wildlife Area to the south. Mitigation Measure 4.1.6.4A requires a photometric plot of all proposed exterior lighting demonstrating that the Project is consistent with the requirements of Section 9.08.100 of the Municipal Code. The lighting study will be required to indicate the expected increase in light levels at the property lines of the adjacent residential uses. Mitigation Measure 4.1.6.4B requires an analysis of proposed solar panels demonstrating the glare from the panels will not negatively affect adjacent residential uses or motorists along perimeter roadways. Therefore, with compliance with the City's General Plan, the City's Municipal Code, and implementation of the mitigation measures, the Project's contribution to cumulative light and glare impacts would be less than cumulatively considerable and less than significant. (Revised Final EIR Part 2, pg. 6.1-9 to pg. 6.1-10)

8. Hazards and Hazardous Materials

a. On-site Conditions Involving Hazardous Materials

Potential Significant Impact: Whether the Project could through the demolition of the existing on-site rural residential structures involve hazardous materials (ACM and LBP) and possibly soil contamination from past agricultural chemical use and may involve hazardous materials (LNG/CNG).

Findings: Potential impacts of the Project related to on-site conditions involving hazardous materials are discussed in detail in Section 4.8 of the Revised Final EIR Part 4 Volume 3. Based on the entire record before us, this Council finds that potentially significant impacts related to on-site conditions involving hazardous materials would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Findings: According to Section 4.8 of the Revised Final EIR Part 4, Volume 3, due to the suspected age of the rural residential structures on the site, it is possible that demolition of these structures may involve asbestos-containing materials (ACMs) and/or lead-based paint (LBP). Demolition of these structures may need to be supervised or conducted by contractors certified to remove and dispose of ACMs and/or LBP.

Also, because the site was previously farmed the on-site soils may contain pesticides. Prior to grading, soil testing shall be performed to determine if in fact these areas contain any significant levels of agricultural chemicals in the soil, and, if so, they will be remediated by a licensed contractor.

In addition, the Specific Plan proposes a liquefied natural gas/compressed natural gas (LNG/CNG) fueling station to be constructed on approximately 3,000 square feet somewhere in the eastern portion of the Logistics Development (LD) land use area in the Specific Plan. This LNG/CNG facility is referred to as "logistics support" in the Specific Plan. It would provide natural gas to fuel heavy and light-duty trucks serving the Project. Since this facility would store natural gas under liquefied and compressed conditions, there is a potential for fire and/or explosion involving natural gas.

Implementation of **Mitigation Measures 4.8.6.1A** through **4.8.6.1D**, impacts associated with potential hazardous materials in existing rural residential structures or from the proposed natural gas fueling facility will be reduced to less than significant levels. (Revised Final EIR Part 4 Volume 3 pg. 4.8-22 to 4.8-23).

9. Hydrology, Drainage, and Water Quality

a. Drainage Pattern and Capacity-Related Impacts

Potential Significant Impact: Whether the Project may significantly increase off-site runoff.

Findings: Potential impacts of the Project related to off-site runoff impacts are discussed in detail in Section 4.9 of the Revised Final EIR Part 4, Volume 3. Based on the entire record before us, this Council finds that potentially significant impacts related to off-site runoff would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Findings: According to Section 4.9 of the Revised Final EIR Part 4 Volume 3, Due to the construction of impervious surfaces on the Project site, post-development flows will be higher than the pre-development flows. To avoid a significant impact to the existing drainage capacity, the post-development flows, volumes, and velocities coming from the Project site must be managed to be equal to or less than pre-development flows volumes, and velocities.²⁶ As required by **Mitigation Measure 4.9.6.1A**, flows will be reduced to below or equal to pre-development conditions by routing the on-site stormwater flows through a series of on-site detention and infiltration basins before flows are released off-site. The existing stormwater runoff discharge rate for the undeveloped project site is 7,720 cubic feet per second (cfs). With the installation of the on-site detention basins, culverts, and energy dissipaters included in the project, expected discharges would be at a rate of 6,835 cfs, which is less than the existing condition. With the installation of the storm drain system facilities outlined in CH2M Hill's hydrology reports (Appendix J, Revised Final EIR Part 4, Volume 3) and implementation of the **Mitigation Measure 4.9.6.1A**, the buildout of the project will convey storm flows safely through the region in accordance with Riverside County Flood Control requirements and will not result in flooding or additional erosion within the project area or any downstream areas, including the Perris Valley Storm Drain Channel. (Revised Final EIR Part 4, Volume 3, pg. 4.9-49)

Development of the WLC Project site will increase impervious surfaces on the Project site due to the construction of the Project's buildings, roadways, and associated improvements. While the resultant increase in impervious surfaces would contribute to a greater volume and higher velocities of storm flow, **Mitigation Measure 4.9.6.1A** requires the WLC Project site's drainage system be designed to accept and accommodate runoff that would result from the Project construction at or better than historic, or pre-development, conditions, as outlined in the Project's Master Plan of Drainage. **Mitigation Measure 4.9.6.1B** provides for the operation

²⁶ As part of the MS4 Permit issuance requirements, projects must identify any Hydrologic Conditions of Concern and demonstrate that changes to hydrology are minimized to ensure that post-development runoff rates and velocities from a site do not adversely impact downstream erosion, sedimentation or stream habitat.

and maintenance of these facilities to ensure that they will be maintained. (Revised Final EIR Part 4, Volume 3, pg. 4.9-32 to 4.9-51).

b. Construction-Related Water Quality Impacts

Potential Significant Impact: Whether the Project could violate water quality standards or waste discharge requirements during construction phases of the Project in form of increased soil erosion, sedimentation, or storm water discharges.

Findings: Potential impacts of the Project related to the violation of water quality standards or waste discharge requirements are discussed in detail in Section 4.9 of the Revised Final EIR Part 4, Volume 3. Based on the entire record before us, this Council finds that potentially significant impacts to construction-related water quality would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Findings: According to Section 4.9 of the Revised Final EIR Part 4, Volume 3, the construction and grading phases of the Project site would require the disturbance of surface soils and removal of existing orange groves and vegetative cover. During the construction period, grading and excavation activities would result in exposure of soil to storm runoff, potentially causing erosion and sediment in runoff. If not managed through Best Management Practices (BMPs), the runoff could cause erosion and increased sedimentation in local drainage ways such as the Quincy Channel. The potential for chemical releases is present at most construction sites in the form of fuels, solvents, glues, paints, and other building construction materials. However, implementation of construction practices and adherence to existing water quality regulations and **Mitigation Measures 4.9.6.2A** and **4.9.6.2B** would reduce these impacts to a less than significant level. (Revised Final EIR Part 4, Volume 3 pgs. 4.9-52 to 4.9-54).

c. Operational-Related Water Quality Impacts

Potential Significant Impact: Whether the Project could violate water quality standards or waste discharge requirements during the operational phases of the Project in the form of increased soil erosion, sedimentation, or urban runoff.

Findings: Potential impacts of the Project related to the violation of water quality standards or waste discharge requirements are discussed in detail in Section 4.9 of the Revised Final EIR Part 4 Volume 3. Based on the entire record before us, this Council finds that potentially significant impacts to operational-related water quality would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Findings: According to Section 4.9 of the Revised Final EIR Part 4 Volume 3, during the operational phase of any urban use, the major source of pollution in stormwater runoff will be contaminants that have accumulated on the land surface over which runoff passes. Storm runoff from the roadways, parking

lots, and commercial and industrial buildings can carry a variety of pollutants such as sediment, petroleum products, commonly utilized construction materials, landscaping chemicals, and (to a lesser extent) trace metals such as zinc, copper, lead, cadmium, and iron, which may lead to the degradation of storm water in downstream channels. Runoff from landscaped areas may contain elevated levels of phosphorus, nitrogen, and suspended solids. Oil and other hydrocarbons from vehicles are also expected in storm water runoff.

Pollutant concentrations in urban runoff are variable depending on storm intensity, land use, elapsed time since previous storms, and the volume of runoff generated in a given area that reaches receiving waters. Pollutant concentrations are typically highest during the first major rainfall event after the dry season, known as the “first-flush.” The Master Water Quality Management Plan (WQMP) prepared for the project identifies pollutants and hydrologic conditions of concern that may be associated with the implementation of the project.

Site-specific WQMPs have not been prepared at this time as no site-specific development project has been submitted to the City for approval. When specific projects within the Project are developed, BMPs will be implemented consistent with the goals contained in the Master WQMP. All development within the Project will be required to incorporate on-site water quality features to meet or exceed the approved Master WQMP’s water quality requirements identified previously. This would include the design based on the appropriate pollutant loads for the project from all sources including climate change.

The Project will comply with the *Water Quality Management Plan for the Santa Ana Region of Riverside County* (approved by the Santa Ana Regional Water Quality Control Board October 22, 2012), which requires the use of Low Impact Development (LID) BMPs that maximize infiltration, harvest and use, evapotranspiration and/or bio-treatment. Flows from the Project will be treated first by LID BMPs where the flow will be infiltrated, evapotranspired, or treated. As required by **Mitigation Measure 4.9.6.1A**, the treated flows will then be reduced to below or equal to pre-development conditions by routing the on-site storm water flows through a series of on-site detention and infiltration basins before flows are released off-site. These basins will provide incidental infiltration and secondary treatment downstream of the LID BMPs. All runoff from the site will be treated by LID BMPs and then routed through the detention and infiltration basins before it leaves the Project area and into Mystic Lake and the San Jacinto Wildlife Area.

The Project will comply with the Nutrient Total Maximum Daily Load (TMDL) for Lake Elsinore and Canyon Lake by implementing LID-based BMPs. According to the *Comprehensive Nutrient Reduction Plan for Lake Elsinore and Canyon Lake* (prepared for Riverside County Flood Control and Water Conservation District by CDM Smith, January 28, 2013 in compliance with Order No. R8-2010-0033, NPDES Permit No. CAS618033), “Post construction LID based BMPs required for new development and significant redevelopment projects are the only structural watershed based BMPs currently included in the Comprehensive Nutrient Reduction Plan (CNRP). The newly developed WQMP requirements ensure that a portion of the wet weather runoff will be contained on-site for all future development projects subject to WQMP requirements. Implementation of WQMP requirements over time coupled with the in-lake remediation projects are expected to provide sufficient mitigation of nutrients.”

The proposed Project incorporates on-site drainage control structures and programs sufficient to meet the applicable Federal, State, and local water quality requirements. Through the use of site design BMPs, source

control BMPs (e.g., street and parking lot sweeping and vacuuming), and treatment control BMPs (e.g., infiltration basins and pervious pavement), the resulting pollutant loads coming from the Project will be reduced, thereby reducing pollutants discharged from urban storm water runoff to surface water bodies. Compliance with the requirements of the NPDES permit, which include implementation of the BMPs outlined in the WQMP, will be enforced by the City during the ongoing operation of the Project. Implementation of **Mitigation Measures 4.9.6.3A** through **4.9.6.3C** will help to reduce potential water quality impacts resulting from storm water and urban runoff to less than significant levels. (Revised Final EIR Part 4 Volume 3, pgs. 4.9-55 to 4.9-64)

10. Noise

a. Short-Term Construction Noise – Nighttime Construction

Potential Significant Impact: Whether noise levels from grading and other construction activities for the Project may range up to 93 dBA at the closest residences southeast of the Project site for very limited times when construction occurs near the Project's boundary and whether construction-related noise impacts from the Project would be potentially significant.

Finding: Potential impacts of the Project related to short-term construction noise impacts are discussed in detail in Section 4.12 of the Revised Final EIR Part 3, pgs. 4.12-16 to 4.12-26. Based on the entire record before us, this Council finds that potentially significant impacts related to nighttime short-term construction noise impacts would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Each mitigation measure is adopted by the City Council and set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Finding: On-site construction activities are expected to occur outside of the allowed construction hours specified in the City of Moreno Valley Noise Ordinance. The operation of each piece of off-road equipment within the on-site construction areas (i.e., Plots 1 through 22) would not be constant throughout the day, as equipment would be turned off when not in use. Most of the time over a typical work day, the equipment would be operating at different locations within the various plots of the project site and would not likely be operating concurrently. However, for a more conservative approximation of construction noise levels to which the nearest sensitive receptor would be exposed, it is assumed that two of the loudest pieces of construction equipment would be operating at the same time and located within the Project Plots nearest to a sensitive receptor. The nearest sensitive receptors are the existing on-site residences, which would be located approximately 25 feet from construction activity of various Plots. As a worst-case scenario, it has been assumed that all existing on-site residences will remain on-site throughout construction.

Based on the list of the construction equipment that would be used at each of the Plots, it was assumed that the two loudest pieces of off-road equipment (a paver and scraper) would have a combined noise level of 85 dBA Leq from a distance of 50 feet (FHWA, 2006a). Using this reference noise level and a 7.5 dB per doubling of distance attenuation rate, the noise exposure level at representative locations around the Project site were calculated. In some cases, construction of various Plots occurring concurrently would expose sensitive receptors to noise levels that would exceed the City's 55 dBA Leq nighttime exterior noise standard.

Specifically, impacts would occur at existing residences located within and to the west of the project area. Affected receptors are all located within City of Moreno Valley boundaries.

Based on these projections, anticipated worst-case construction noise levels would regularly be exceeded at residences within and near the Project area. Based on an Leq noise level of 85 dBA Leq at 50 feet and an attenuation rate of 7.5 dB per doubling of distance, an observer would need to be at a distance of 500 feet from an active Project construction area to experience a noise level of 60 dBA Leq, or 800 feet for a noise level of 55 dBA Leq. Therefore, the on-site construction of the Project would result in the exposure of persons to or generation of noise levels in excess of standards established in the City of Moreno Valley Noise Ordinance and would result in a significant impact.

Implementation of Mitigation Measure 4.12.6.1A would reduce construction noise levels at nearby sensitive receptors through implementation of a Noise Reduction Compliance Plan (NRCP), which is expected to attenuate construction noise levels by a minimum of 10 dB. Table 4.12-8 shows mitigated construction noise levels at sensitive receptors in the vicinity of on-site construction areas. In addition, Mitigation Measure 4.12.6.1A prohibits construction activity within 800 feet of any sensitive receptor outside of the allowable hours of 7:00 a.m. to 8:00 p.m. As shown in table 4.12-8, at distances greater than 800 feet, construction noise would not exceed the City's nighttime exterior noise standard of 55 dBA Leq. Therefore, impacts would be less than significant with mitigation incorporated for nighttime construction.

b. Long-term Operational Noise

Potential Significant Impact: Whether the Project would cause exposure of persons to or generation of noise levels in excess of standards established in the City of Moreno Valley General Plan, Moreno Valley Municipal Code, or applicable standards of other agencies and whether long-term operational noise impacts from the Project would be potentially significant.

Finding: Potential impacts of the Project related to long-term operational noise impacts are discussed in detail in Section 4.12 of the Revised Final EIR Part 4, pg. 4.12-56 to 4.12-57. Based on the entire record before us, this Council finds that potentially significant impacts related to long-term operational noise impacts would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Each mitigation measure is adopted by the City Council and set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Findings: The City of Moreno Valley Noise Ordinance requires that noise levels remain below 55 dBA (Leq) during nighttime hours. To achieve this noise level, the warehouse property line would only need to be 100 feet from the nearest residential property and no soundwall would need to be present.

Another consideration is whether the proposed activity levels will be substantially higher than current ambient conditions. No matter what is developed in the Specific Plan area, ambient conditions would be higher in future years due to higher levels of traffic and activity. Ambient noise levels were measured at seven sites that could border the World Logistics Center (i.e., Measurement Sites 3 through 9). The nighttime ambient noise levels

(Leq) ranged from 35.8 to 61.8 dBA with an average for the sites of 46.6 dBA. To keep the noise levels at nearby residential areas less than typical ambient conditions, the logistics property line will be located a minimum distance of 250 feet and a 12-foot soundwall will be located along the perimeter of the Property that faces any residential areas. This would keep the logistic use noise to less than 45 dBA (Leq) at the residences. The implementation of this setback between logistics uses and noise sensitive uses has been included as **Mitigation Measure 4.12.6.1A**. (Revised Final EIR, Part 4 pgs. 4.12-56 to 4.12-57).

c. Long-Term Utility Noise

Potential Significant Impact: Whether the Project would cause exposure of persons to or generation of noise levels in excess of standards established in the City of Moreno Valley General Plan, Moreno Valley Municipal Code, or applicable standards of other agencies.

Finding: Potential impacts of the Project related to long-term utility noise impacts on the Project site are discussed in detail in Section 4.12 of the Revised Final EIR Part 4. Based on the entire record before us, this Council finds that potentially significant impacts related to long-term operational noise impacts would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which would lessen the significant effects on the environment (Finding 1). Each mitigation measure is adopted by this Council and set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Findings: There are no utility facilities located within the WLC Specific Plan area. There is one existing SDG&E compressor station and two existing SCGC facilities located adjacent to the WLC Specific Plan area.

The worst-case compressor station operational characteristics will result in a maximum noise level just above 65 CNEL within the Project area proposed for development (i.e., not open space). Typical commercial construction results in buildings that achieve at least a 20-dB reduction of outdoor noise levels. Therefore, an office use exposed to the highest noise level from the compressor station will be just above 45 CNEL and below the 50 CNEL limit prescribed by the City's General Plan, resulting in a less than significant impact and no mitigation is required. (Figure 4.12.3, Revised Final EIR Part 4, pg. 4.12-17).

The Leq noise level generated by the compressor station does not exceed 60 dBA Leq beyond the property lines of the facility. Therefore, the compressor station is not considered a noise disturbance based on City criteria. Operation of the compressor station would not result in any interior noise levels exceeding the limits established by the City in the General Plan. Therefore, noise impacts associated with the operation of the compressor station would be less than significant and no mitigation is required (Figure 4.12-4, Revised Final EIR Part 4, pg. 4.12-19).

The maximum noise level from a blow-down at the SDG&E compressor station within the WLC Specific Plan area proposed for development (i.e., the Logistics Development land use) is 100 dBA. A person would need to be exposed to this level for more than two hours in a day before permanent hearing loss would be expected. As discussed above, blow-down events at the SDG&E compressor station typically do not last longer than 90 seconds. Therefore, the SDG&E blow-down events will not result in a significant impact to the uses proposed

within the WLC Specific Plan area, and no mitigation is required (Figure 4.12-5, Revised Final EIR Part 4, pg 4.12-21).

For SCGC blow-down events, noise generated could reach as high as 130 dBA just outside the fence line of the southern facility and in excess of 135 dB just outside the fence line of the northern facility. People within approximately 250 feet of the blow-down points would be exposed to noise levels greater than 115 dBA, which would likely cause permanent hearing damage regardless of the exposure time. The SCGC blow-downs could last as long as 90 minutes. It is anticipated that people exposed to noise levels greater than 102 dBA, within approximately 1,300 feet from the blow-down point could experience permanent hearing loss based on this event duration. Noise generated by SCGC blow-down events has the potential to cause permanent hearing loss in persons in the developed area of the Project. This is a significant impact and mitigation is required (Revised Final EIR Part 4, pg. 4.12-57). Mitigation Measure 4.12.6.4A (Revised Final EIR Part 4, Volume 3, pg. 4.12-58) requires that a minimum 40 dB reduction in noise levels during blow-down events are available and will be installed prior to the issuance of building permits for projects within 1,300 feet of the SCGC and SDG&E blow-down facilities. With implementation of mitigation, SCGC blow-down events would not result in noise levels that could cause permanent hearing loss and people within the Project site would not be significantly affected by noise from the SCGC facilities, resulting in a less than significant impact.

SCGC blow-down events also have the potential to produce groundborne vibration. However, the effect of the blow-down groundborne vibration would be limited to within 100 feet of the equipment and would not be perceived beyond the facility fence line, resulting in a less than significant impact and no mitigation is required (Revised Final EIR Part 4, pg 4.12-57 to 4.12-59).

d. Cumulative Long-Term Operational Noise

Potential Significant Impact: Whether the Project's contribution to the cumulative exposure of persons to long-term operational noise would be cumulatively considerable.

Finding: The Project's cumulative contribution to long-term operational noise impacts are discussed in detail in Section 6.12 of the Revised Final EIR Part 3. Based on the entire record before us, this Council finds that potentially significant impacts related to long-term operational noise impacts would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Each mitigation measure is adopted by the City Council and set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Findings: On-site operational noises are individual noise occurrences and are not typically additive in nature. It is extremely unlikely that adjacent properties will generate noises that would be additive in nature because of two important reasons. First, the noise sources would have to be adjacent or in close proximity to one another in order for the noises to intermingle. Second, the sensitive receptor or receptors would also have to be adjacent to or in close proximity to the noise generators. Because the Project assumes 24-hour operations, it is conservatively assumed that the geographic limit for cumulative on-site operational noise would include the three cumulative projects located adjacent to the Project site. Cumulative project MV-126 consists of residential uses and would therefore not generate noise levels equivalent to the Project. Assuming that the remaining two cumulative projects (MV-5 and MV-6) would generate noise at the same

time as the Project and at distances and levels that would be additive in nature, a significant cumulative noise impact at sensitive receptors could occur.

As discussed in Section 4.12.6.3 of the Revised Final EIR Part 4 Volume 3 (pg. 4.12-56 to 4.12-57), on-site operational activity would include noise from truck delivery, loading/unloading activities at the loading areas, heating, ventilation, and air-conditioning equipment and other noise-producing activities within the parking lot. On-site activity would generate noise levels of up to 56.9 dBA L_{eq} at a distance of 50 feet. Related Projects MV-5 and MV-6 do not have CEQA documents in which on-site operational noise has been analyzed. Therefore, assuming that operation of Related Projects MV-5 and MV-6 would consist of similar on-site activity as the Project, Table 6.12-6 summarizes the potential cumulative noise level increases at this receptor (referred to as R5 in Section 4.12). As discussed in Section 6.12 of the Revised Final EIR Part 3 (pg. 6.12-30), cumulative on-site noise levels would not result in perceptible increases in ambient noise (3 dBA). Therefore, on-site Project operations would not result in cumulatively considerable on-site operational noise impacts.

With regard to on-site residential uses, the Project would result in significant impacts at on-site residential uses. However, the nearest on-site residence to cumulative projects MV-5 and MV-6 is located at a distance greater than 2,400 feet. At this distance on-site, operational noise at MV-5 and MV-6 would be negligible. Therefore, cumulative impacts would not occur. In addition, Section 4.12.6.3 of the Revised Final EIR Part 4, Volume 3 (pg. 4.12-56 to 4.12-57) determined that impacts to on-site residential uses would be less than significant with implementation of Mitigation Measure 4.12.6.2D.

Implementation of Mitigation Measure 4.12.6.2D would eliminate any noise impacts on off-site residential areas due to the operation of logistic activities. Through the provision of a 250-foot setback, berms, and/or soundwalls, noise levels at the nearest residences would be reduced to below the City's thresholds. Therefore, with adherence to the identified mitigation measure, off-site impacts associated with this issue would be less than significant and would be less than cumulatively considerable.

11. Transportation

These Findings consider Public Resources Code Section 21099 and the City's proposed new VMT thresholds. When the FEIR (Revised Final EIR Part 4, Volume 3), was certified in 2015 and when the RSFEIR (Revised Final EIR Part 3) was circulated for public review in 2018, the use of "Level of Service" (LOS) criteria was an accepted CEQA threshold of significance for the evaluation of transportation impacts and LOS criteria were relied upon in those documents. In addition, although the transportation section was updated in the RSFEIR, the transportation section of the FEIR was upheld by the Superior Court (see Topical Response C in the Revised Final EIR Part 1a). Accordingly, for consistency with those prior CEQA documents and in conformance with the Superior Court's decision, these Findings consider "Level of Service" criteria for purposes of evaluating the significance of transportation impacts. In addition, however, these revised Findings also consider transportation impacts based on the VMT thresholds as proposed by City staff for adoption of the City Council. As of this date, the City Council has not adopted VMT thresholds and such threshold are only required for consideration in CEQA analysis for draft environmental documents released after July 1, 2020.

a. Intersection and Roadway Level of Service (Within the City of Moreno Valley)

Potential Significant Impact: Whether the Project could cause an increase in traffic that is substantial in relation to the existing traffic load and capacity of the street system.

Findings: Potential impacts of the Project related to the increase in traffic volumes are discussed in detail in Section 4.15 and Appendix F of the Revised Final EIR Part 3. Based on the entire record before us, this City Council finds that many of the Project’s potentially significant impacts under existing traffic conditions would be reduced to a less than significant level for roadway segments and intersections located within the City of Moreno Valley. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Findings: The Traffic Impact Analysis (TIA, Revised Final EIR Part 3, Appendix F) discusses Project-related impacts to the intersection and roadway level of service (LOS) under the following development scenarios:

- 1) Existing baseline conditions (2018) plus Phase 1 of the Project
- 2) Existing baseline conditions (2018) plus Buildout of the Project
- 3) Existing baseline conditions plus other past, present, and reasonably foreseeable projects expected to be constructed by 2025 plus Phase 1 of the Project
- 4) Existing baseline conditions plus other past, present, and reasonably foreseeable projects expected to be constructed by 2040 plus Buildout of the Project

The study area for surface streets covered all intersections in Moreno Valley of collector or higher functional classification with another collector or higher classification street, at which the Project would add 50 or more peak hour trips, the standard generally used to determine if an impact is potentially significant. The study area also included the main routes between the Project and the neighboring communities of Riverside, Perris, Beaumont, San Jacinto, and Redlands. As discussed further below, all direct Project impacts to locations within the City of Moreno Valley are mitigated to less than significant levels.

Intersection LOS

Existing Baseline (Year 2018) Plus Project Phase 1. Existing baseline (Year 2018) plus Project Phase 1 levels of service for the study area intersections are summarized in Table 26 of the Revised Final EIR Part 3, Appendix F (pg. 123), showing that 19 intersections would operate at unacceptable LOS. Table 27 (pg. 129) shows there are 15 study intersections where Phase 1 of the Project would have a significant impact. Of those 15 study intersections, 3 are located within the City of Moreno Valley.

Existing Baseline (Year 2018) Plus Project Buildout. Existing baseline (Year 2018) plus Project Buildout levels of service for the study area intersections are summarized in Table 35 of the Revised Final EIR Part 3, Appendix F (pg. 161), showing that 25 intersections would operate at unacceptable LOS. Table 36 (pg. 167) shows there are 17 study intersections where buildout of the Project would have a significant impact. Of those 17 intersections, 5 are located within the City of Moreno Valley.

2025 Plus Project Phase 1. Year 2025 plus Project Phase 1 levels of service for the study area intersections are summarized in Table 49 of the Revised Final EIR Part 3, Appendix F (pg. 229), showing that 26

intersections would operate at unacceptable LOS. Table 50 (pg. 235) shows there are 13 study intersections where Phase 1 of the Project would have a significant impact. Of those 13 intersections, 3 are located within the City of Moreno Valley.

2040 Plus Project Buildout. Year 2040 plus Project Buildout levels of service for the study area intersections are summarized in Table 63 of the Revised Final EIR Part 3, Appendix F (pg. 300), showing that 72 intersections would operate at unacceptable LOS. Table 64 (pg. 306) shows there are 30 study intersections where buildout of the Project would have a significant impact. Of those 30 intersections, 17 are located within the City of Moreno Valley.

Roadway Segment LOS

Existing Baseline (Year 2018) Plus Project Phase 1. The roadway segment levels of service for the study area are summarized in Table 25 of the Revised Final EIR Part 3, Appendix F (pg. 104). Table 25 shows that 3 roadway segments would operate at unacceptable LOS and that the Project would worsen conditions, resulting in significant impacts at all 3 roadway segments. Of those 3 segments, one is located within the City of Moreno Valley.

Existing Baseline (Year 2018) Plus Project Buildout. The roadway segment levels of service for the study area are summarized in Table 34 of the Revised Final EIR Part 3, Appendix F (pg. 142). Table 34 shows that 3 roadway segments would operate at unacceptable LOS and that the Project would worsen conditions, resulting in significant impacts at all 3 roadway segments. Of those 3 segments, one is located within the City of Moreno Valley.

2025 Plus Project Phase 1. The roadway segment levels of service for the study area are summarized in table 48 of the Revised Final EIR Part 3, Appendix F (pg. 210). Table 48 shows that all study segments would operate at acceptable LOS, and no Project impacts would occur.

2040 Plus Project Buildout. The roadway segment levels of service for the study area are summarized in Table 62 of the Revised Final EIR Part 3, Appendix F (pg. 280). Table 62 shows that one roadway segment would operate at unacceptable LOS and that the Project would worsen conditions, resulting in a significant impact. This segment is not within the jurisdiction of the City of Moreno Valley.

Project- related and cumulative impacts to locations outside the City of Moreno Valley are discussed in the Unavoidable Significant Impacts section of these Findings.

Mitigation Measures

Implementation of **Mitigation Measures 4.15.7.4.A** through **4.15.7.4.C** require the applicant to construct or fund all required improvements to mitigate Project impacts to roadways and intersections within the City of Moreno Valley. With implementation of these mitigation measures, direct impacts on study area roadway segments and intersections located within the City of Moreno Valley would be reduced to less than significant.

b. Cumulative Transportation Impacts - Intersection Level of Service (Within the City of Moreno Valley)

Potential Significant Impact: Whether the Project could cause a cumulatively considerable increase in traffic on the street system within the City of Moreno Valley that is substantial in relation to the without Project (i.e., No-Project) scenario.

Findings: Potential cumulative impacts of the Project related to the increase in traffic volumes are discussed in detail in Section 6.15 and Appendix F of the Revised Final EIR Part 3. Based on the entire record before us, this City Council finds that the Project’s potentially significant cumulative impacts on the street system would be reduced to a less than significant level for intersections located within the City of Moreno Valley (Finding 1). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Findings: Section 6.15 of the Revised Final EIR Part 3 and the Traffic Impact Analysis (TIA) in Appendix F discuss cumulative impacts of the Project to the intersection level of service (LOS). The cumulative impacts of the Project were determined by comparing the LOS of the study facilities under the 2040 No-Project and 2040 Plus Project Build-out Scenarios.

The study area for surface streets covered all intersections in Moreno Valley of collector or higher functional classification with another collector or higher classification street, at which the Project would add 50 or more peak hour trips, the standard generally used to determine if impacts are potentially significant. The study area also included the main routes between the Project and the neighboring communities of Riverside, Perris, Beaumont, San Jacinto, and Redlands.

Intersection LOS

Project Cumulative Impacts Under the 2040 Plus Project Buildout Scenario. The cumulative impacts under the Year 2040 plus Project Buildout levels of service for the study area intersections are summarized in Table 6.15-3 in the Revised Final EIR Part 3 and in Table 76 on page 343 within the TIA, showing that 26 intersections would have unacceptable LOS and one roadway segment would have unacceptable LOS and resulting in significant cumulative impacts. Of the 26 intersections, 16 are located within the City of Moreno Valley.

Mitigation Measures

Implementation of **Mitigation Measures 4.15.7.4.A** through **4.15.7.4.C** requires the applicant to construct or fund all required mitigation for the Project’s cumulative impacts on intersections and roadways within the City of Moreno Valley as identified in Section 6.15 and Appendix F of the Revised Final EIR Part 3. With implementation of these mitigation measures, the Project’s cumulative impacts on intersections located within the City of Moreno Valley would be reduced to less than significant.

12. Utilities and Service Systems

a. Adequate Water Supply

Potential Significant Impact: Whether the Project could result in the lack of sufficient water supplies available to serve the Project from existing entitlements.

Findings: Potential impacts of the Project related to water supply are discussed in detail in Section 4.16 of the Revised Final EIR Part 4 Volume 3. Based on the entire record before us, this Council finds that potentially significant impacts related to adequate water supply would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Findings: According to Section 4.16 of the Revised Final EIR Part 4, Volume 3, the Eastern Municipal Water District (EMWD) has determined that it will be able to provide adequate water supply to meet the potable water demand for the Project in addition to existing and future users. The WSA prepared for the Project by the EMWD concluded that the water demand for the proposed on-site uses would be approximately 1,991.25 AFY.²⁷ The EMWD considers this a “worst-case” estimate based on the total acres and amount of square footage of warehousing proposed by the Project. This estimate does not take into account the Project landscaping design with xeriscape (drought-tolerant plants) and on-site collection of runoff and channeling it to landscaped areas to minimize irrigation on the interior of the project site. For example, the “Water Budget Technical Memorandum” prepared by CH2MHill (see EIR Appendix N) in September 2011 for the WLC Project indicates that actual water usage of on-site buildings, based on the specific development characteristics of the WLC Specific Plan, would be on the order of 450 AFY which is less than a quarter of the amount estimated by EMWD; however, this estimate does not include on-site irrigation of landscaping and could only be achieved if all on-site landscaping was irrigated by collection and distribution of on-site runoff from roofs and hardscape areas.

Taking into account the Project’s proposed water xeriscape landscaping plan, it is likely that actual water use for development within the WLC Specific Plan will be substantially less than the worst-case EMWD estimate. Therefore, for the purposes of analysis in this EIR, both the CH2MHill figure of 450 AFY and the EMWD’s worst-case estimate of 1,991 AFY figure were used relative to water consumption. Under either scenario, the anticipated water demand for the WLC Project is substantially less than what is identified above for the General Plan land uses and what was used in the formulation of the 2010 and 2015 UWMPs. Anticipated water supplies in the EMWD total 213,900 and 302,200 AFY in 2015 and 2035, respectively. The water demand required for the WLC Project would total 0.93 and 0.66 percent of the EMWD’s 2015 and 2035 supplies under worst-case conditions. The demand estimated for this project is substantially less and therefore still within the limit of growth projected in the 2010 and 2015 UWMPs.

Implementation of the **Mitigation Measures 4.16.1.6.1A** through **4.16.1.6.1C** will reduce impacts to water supply over the long term to less than significant levels. (Revised Final EIR Part 4, Volume 3, pgs. 4.16-15 through 4.16-22).

b. Storm Water Drainage Requirements

²⁷ *Water Supply Assessment Report for the World Logistics Center Specific Plan in Moreno Valley*, Eastern Municipal Water District, March 21, 2012.

Potential Significant Impact: Whether the Project could result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects.

Findings: Potential impacts of the Project related to new storm water drainage facilities are discussed in detail in Section 4.16 of the Revised Final EIR Part 4 Volume 3. Based on the entire record before us, this Council finds that potentially significant impacts related to the construction of storm water drainage systems would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Findings: According to Section 4.16 of the Revised Final EIR Part 4 Volume 3, the Project would route storm water flows from the Project site into existing storm drains to the west and the San Jacinto Wildlife Area to the south after flows are routed through a combination of water quality basins and sand filters. Due to the installation of impervious surfaces on the Project site, the post-development flows would be higher than the pre-development flows. To avoid a significant impact to the existing drainage capacity, the post-development flows coming from the Project site are required to be equal to or less than pre-development flows. To reduce flows to below or equal to pre-development conditions, the on-site storm water flows would be routed to the on-site detention basins²⁶ before flows are routed off-site. While the increase in impervious surfaces attributable to the Project would contribute to a greater volume and higher velocity of storm water flows, the Project's water quality basins would accept and accommodate runoff that would result from Project construction at pre-Project conditions.

As identified in the Preliminary Hydrology Calculations prepared for the Project, to adequately contain and store the greatest volume that would be generated, the Project site would require a minimum storage volume of 13.6 acre-feet. The proposed amount of storage area (20.3 acre-feet) is greater than the required amount of storage area. Based on this, it appears there is excess capacity of 6.7 acre-feet (20.3 acre-feet – 13.6 acre-feet = 6.7 acre-feet) of storage area available from the on-site detention basins; therefore, the Project appears to have adequate drainage capacity that would result in post-development flows being reduced to pre-development flows before leaving the Project site. However, to ensure that impacts associated with on-site drainage capacity are reduced to a less significant level, the **Mitigation Measures 4.9.6.1A and 4.9.6.1B and 4.16.1.6.2A** has been identified to reduce potential impacts to less than significant levels. (Revised Final EIR Part 4 Volume 3, pgs. 4.9-22 to 4.9-25).

13. Energy

a. Energy Consumption and Generation

Potential Significant Impact: Whether the Project would result in energy use and consumption that would cause wasteful, inefficient, and unnecessary consumption of energy.

Findings: Potential impacts of the Project related to energy consumption are discussed in Section 4.17 of the Revised Final EIR Part 2. Based on the entire record before us, this Council finds that the Project's potentially significant cumulative impacts related to energy consumption would be reduced to a less than significant level.

Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment (Finding 1). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Findings: During construction, electrical power would be consumed to construct the Project. Electricity would be supplied by the Moreno Valley Utility (MVU), with electrical service extended to specific construction sites from existing infrastructure throughout the WLC site area, as warranted. Specifically, construction offices and security lighting are expected to be powered by MVU-provided electricity. However, diesel-powered generators are expected to be used to power tools in remote portions of the construction sites (diesel use discussed below). The City’s Noise Ordinance generally restricts construction during nighttime hours (See Section 4.12.3, the City of Moreno Valley Noise Ordinance as well as Section 4.12, Noise, in the Revised Final EIR Part 3), which would minimize the need for nighttime lighting.

However, on-site construction activities are expected to occur outside of the allowed construction hours specified in the City of Moreno Valley Noise Ordinance. The operation of each piece of off-road equipment within the on-site construction areas (i.e., Plots 1 through 22) would not be constant throughout the day, as equipment would be turned off when not in use. Most of the time over a typical workday, the equipment would be operating at different locations within the various plots of the Project site and would be largely intermittent. Should 24-hour concrete pouring occur, the Project would use light carts powered by diesel to illuminate pouring areas. The light carts used for continuous pouring are included in the construction transportation energy analysis on Revised Final EIR Part 2, pg. 4.17-26.

The Project would require electricity for water conveyance during ground-moving activities. The Project site spans 2,600+ acres and would require a relatively large amount of water to cover the affected construction areas. Water use related to dust control is regulated under SCAQMD’s Rules 402 and 403 and is required to limit fugitive particulate matter generated by construction activities. The Project would be in compliance with Rules 402 and 403 and would require a relatively large amount of water to cover the entire acreage of the project site. However, the expected electricity consumption associated with water use equates to only 0.74 percent of MVU’s forecasted sales for 2020 (expected starting year of construction). The electrical demand would vary throughout the construction period based on the construction activities being conducted. Additionally, when not in use, electrical equipment would be powered off to avoid unnecessary energy consumption.

Therefore, since electricity from water conveyance represents a relatively negligible percentage of total electricity use, and night construction activities would be intermittent and would not require electricity, construction activities would not result in the wasteful, inefficient, and unnecessary consumption of electricity, and impacts would be less than significant. In addition, Natural gas is not expected to be consumed in any substantial quantities during construction of the WLC project. Therefore, related to the consumption of natural gas during construction, the Project would have no impact.

In terms of transportation energy, compliance with the anti-idling regulation and the use of cleaner, more energy efficiency construction equipment would reduce the project’s annual average diesel fuel usage. As discussed previously, construction of the Project would utilize fuel-efficient equipment consistent with state

and federal regulations and would comply with State measures to reduce the inefficient, wasteful, and unnecessary consumption of energy. While these regulations are intended to reduce construction emissions, compliance with them would also result in energy savings. In addition, the Project would implement a construction waste management plan to divert 50 percent of mixed construction and demolition debris to City certified construction and demolition waste processors, consistent with the AB 341. Implementation of the construction waste management plan will likely reduce truck trips to landfills and/or material recovery facilities and increase the amount recycling and reuse of materials.

Based on the available data, construction would utilize energy for necessary on-site activities and to transport construction materials and demolition debris to and from the Project site. As discussed above, idling restrictions and the use of cleaner, energy-efficient equipment would result in less fuel combustion and energy consumption and thus result in the efficient use of the Project's construction-related energy. Construction of the WLC project would benefit from California's Pavley/Advanced Clean Car (ACC) standards that are designed to result in more efficient use of transportation fuels, because they would affect the vehicles used by workers and any light-duty trucks used by vendors or haulers. These vehicle efficiency standards are the most stringent in the nation and among the most stringent in the world. In addition, the Project would reduce fuel use by requiring that construction equipment greater than 50 horsepower be USEPA Tier 4 emissions compliant and by limiting on-site idling of all diesel-powered construction equipment, delivery vehicles, and delivery trucks to three minutes in any one hour, as specified in **Mitigation Measure 4.3.6.2A**.

Transportation fuel usage during construction represents approximately 0.0051 percent of annual gasoline usage and 0.57 percent of annual diesel usage within Riverside County, respectively, representing a small fraction of the County's total fuel demand. In conjunction with California's stringent vehicle efficiency standards, the Project would not result in the wasteful, inefficient, and unnecessary consumption of energy.

During operations, the Project will implement commitments and strategies to lower electricity consumption needed for buildings (e.g., lighting, cooling, power equipment, and water conveyance). In 2025, electrical demand will be lowered with implementation of sustainability measures such as high-efficiency lighting and appliances, skylights, and motion sensors, etc. As discussed above, the Project would comply with and exceed the applicable provisions of Title 24 and the CALGreen Code in effect at the time of building permit issuance and buildings over 500,000 sf (representing more than 99 percent of total project square footage at buildout) will be LEED certified. Reliance on grid-supplied power is further offset by the generation of 12 MW of power through on-site rooftop solar photovoltaic (PV) panels. As discussed in the Revised Final EIR Part 1, pg. 48 through 52 (Topical Response E), current MVU rules impose limitations on solar PV capacity. Thus, the Project + Low Electric Vehicle (EV) Penetration (Scenario A) uses approximately 14 percent less electricity than the baseline demand scenario. In 2035, the Project + Low EV Penetration Scenario would use approximately 16 percent less electricity than the 2035 Baseline Scenario.

Although the Project + Medium EV Penetration Scenario would require more power than the Project + Low EV Penetration Scenario, the net electrical demand on MVU would still be 11 percent less than the Baseline Scenario for 2025 due to the energy conservation measures and on-site solar PV generation. For 2035, electricity use would be 12 percent more than the Baseline Scenario due to the much higher EV penetration rates for light-duty passenger cars and medium-duty vehicles consistent with the 2016 Mobile Source Strategy.

The feasibility of using medium and heavy-duty EVs for delivery of goods to or from the WLC is, to a great extent, dependent on the nature of the warehousing operations. For example, many warehouses implement the “drop and drag” procedure, where a truck will bring goods to the facility, and the trailer (or sea-going cargo container) will be disconnected and left on-site for the lengthy process of unloading. An empty trailer may be connected, and the truck quickly departs to return to its point of origin. Conversely, an out-bound truck is usually scheduled to retrieve a delivery load only once the container/trailer is full. Thus, trucks are not on-site or idle for long enough times to obtain a meaningful battery charge. Medium-duty and heavy-duty zero-emission trucks are in the very early stages of commercially market deployment and currently cost substantially more than conventionally fueled trucks, and current funding assistance programs do not fully offset that cost difference (ESA and CALSTART, 2018). Given that the future tenants of the WLC are not known and cannot be identified at this time, it would be speculative to assume the High EV Penetration Scenario would be practicable or feasible by 2025 or by 2035.

In regard to forecasting, such as done with EV penetration rates to generate the scenarios evaluated, the California Supreme Court commented that an agency is required to forecast only to the extent that an activity could be reasonably expected under the circumstances. The Court recognized that an agency cannot be expected to predict the future course of governmental regulation or exactly what information scientific advances may ultimately reveal. *Laurel Heights Improvement Association v. Regents of the University of California* (1988) 47 Cal. 3d 376. Therefore, in light of the changes to market and regulatory drivers that would have to occur to make medium and heavy-duty EVs widely implemented and feasible by 2025 or 2035 to the now unknown future tenants of the WLC, the potential for the electrical demand projected under the Project + High EV Penetration Scenario to materialize is highly speculative. CEQA Guidelines Section 15145 states “If, after thorough investigation, a Lead Agency finds that a particular impact is too speculative for evaluation, the agency should note its conclusion and terminate discussion of the impact.” Therefore, any effects to energy resources from achieving the Project + High EV Penetration Scenario would be highly speculative, and associated analyses are presented in the Revised Final EIR for informational purposes only.

MVU forecasts that its peak demand in 2025, would be approximately 231,555 MWh per year. This is approximately 25 percent higher than the 185,000 MWh that MVU sold to all customers in its area for the 2015-2016 fiscal year. As shown in Table 4.17-4, the WLC project’s estimated electrical consumption would account for between 74 and 113 percent of MVU’s projected electricity sales depending on the EV penetration scenario for Phase 1 (2025). However, MVU’s 2018 Integrated Resources Plan (IRP) anticipates growth in the region and specifically considers the electrical demand generated by energy-intensive account focused in the logistics industry. The IRP states that large energy-intensive projects like the WLC project are included in the projected growth. Therefore, it is reasonable to assume that MVU’s existing and planned electricity supplies could support the project’s electricity demand calculated for the Project + Low EV Penetration (Scenario A) and the Project + Medium EV Penetration (Scenario B) by 2025. Any determination of MVU’s need for additional capacity beyond what is planned would be speculative and depend on the cumulative demand within MVU’s service area.

MVU’s electrical generation is derived from a mix of non-renewable and renewable sources such as coal, natural gas, solar, geothermal, wind, and hydropower. MVU’s 2018 Power Integrated Resources Plan identifies

adequate resources to support future generation capacity, and a new 115 kV substation is proposed to be constructed within the WLC site. With regard to renewable energy sources, the Project would use electricity provided by MVU, which MVU is required to meet the 2050 Renewable Portfolio Standard. MVU's current source of renewable resources include wind, solar, and hydroelectric and account for 17 percent of MVU's overall energy mix for 2017 (the most current year data is available for). The Project itself is incorporating renewable energy sources with a minimum of 14.1 MW of rooftop solar at buildout to achieve a net-zero energy use for the estimated office demands. At full buildout WLC will feature the equivalent of twenty-seven 60,000 square-foot net-zero office buildings. To put this in context, the entire State of California has about 190 net-zero commercial buildings that are currently verified or designed as of 2017 (CPUC, 2017). This solar commitment would be within the solar PV limitations set by MVU.

In addition to the solar commitment the WLC project would implement energy performance improvement measures to exceed the current minimum Title 24 requirements after Phase 1 and full buildout. Although the Project would result in moderate increases in annual electrical demand compared to MVU's current supply, for the low and medium EV penetration scenarios, MVU is committed to meeting the Project's electricity demand through a future IRP update and planning process. Therefore, with the incorporation of these features, operation of the Project would not result in the wasteful, inefficient, or unnecessary consumption of electricity, would not cause a need for additional capacity regionally or locally, and would not affect electricity resources to the extent that electricity demand can reasonably be projected and assessed.

EMFAC2017 assumes that by 2025, natural gas-powered large trucks (Heavy Heavy Duty Trucks and Medium Heavy Duty Trucks) would represent 2.2 percent of all large trucks in the South Coast Air Basin region. By 2035, the natural gas-powered large truck population slightly increases to 2.5 percent. The natural gas vehicle population at the Project would remain constant for each EV penetration scenario. The WLC project (all scenarios) would also include regularly operating propane-powered yard trucks and CNG-powered forklifts that are typical of large warehouse facilities. Additionally, the Project would include a Compressed Natural Gas/Liquid Natural Gas (CNG/LNG) fueling station on-site that would be publicly available for refueling. As presented in Table 4.17-11, the natural gas use from operational vehicles and the CNG/LNG fueling station would represent approximately 0.037 percent of the statewide natural gas consumption. The analysis assumes a conservative estimate of 204 trucks completely refueling per day based on trip rates presented in the WLC project's traffic study. The traffic study bases trip rates on Institute of Transportation Engineer's code for a gas station with convenience store that has a relatively high trip rate. CNG fueling stations would likely have less daily visits than a traditional gas station, making the analysis even more conservative. The operational vehicles are also based on conservative assumptions of maximum operating hours of 7 hours for propane-powered yard trucks and 4 hours for CNG forklifts. Realistically, all of the yard trucks would not be operating simultaneously or continuously for 7 hours and forklifts would be used intermittently for the unloading and loading of warehousing goods. Furthermore, the analysis above represents additional natural gas use from vehicles and does not account for CNG/LNG trucks displacing diesel- or gasoline-powered vehicles. In actuality, the CNG/LNG trucks may displace fossil-fueled trucks on the Project site. Even with the conservative assumptions for trip rates, volumes, non-displacement, and operating hours, and without considering the potential benefit of offsetting other vehicle fuels, the natural gas use from operational vehicles and the CNG/LNG fueling station represent a negligible percent of the State's total natural gas use.

According to SoCal Gas data, natural gas sales have been relatively stable over the past three years with a slight increase from 287 billion cubic feet in 2014 to 294 billion cubic feet in 2016. Southern California’s natural gas supply is predominantly sourced from out of state with a small portion originating in California. Sources of natural gas are obtained from locations throughout the western United States as well as Canada. According to the US Energy Information Administration (EIA), the United States has approximately 85 years of natural gas reserves based on consumption in 2015. Statewide compliance with energy efficiency standards is expected to result in more efficient use of natural gas and therefore reduced consumption in future years. It is anticipated that SoCal Gas’ existing and planned natural gas supplies would be sufficient to support the project’s natural gas use and that the CNG/LNG fueling station would have a negligible effect on the natural gas supply.

Operation of the WLC project would benefit from California’s Pavley/ACC standards that are designed to result in more efficient use of transportation fuels. These vehicle efficiency standards are the most stringent in the nation and among the most stringent in the world. Operation of the Project would require very small amounts of natural gas to be consumed by vehicles at the site, and in conjunction with California’s stringent vehicle efficiency standards, would not result in the wasteful, inefficient, and unnecessary consumption of natural gas. Overall, construction and operations of the Project would not cause a significant waste, inefficient, nor unnecessary consumption of energy, therefore, impacts would be less than significant (Revised Final EIR Part 2, pp. 4.17-25 to pg. 4.17-37).

b. Construction or Expansion of Electrical and Natural Gas Facilities

Potential Significant Impact: Whether the Project could result in the construction or expansion of electrical and natural gas facilities, the construction of which could cause significant environmental effects.

Findings: Potential impacts of the Project related to construction or expansion of natural gas facilities impacts are discussed in detail in Section 4.17 of the Revised Final EIR Part 2. Based on the entire record before us, this Council finds that the Project’s potentially significant cumulative impacts related construction or expansion of electrical and natural gas facilities would be reduced to a less than significant level, with implementation of Mitigation Measures 4.3.6.2A, 4.3.6.3B, 4.3.6.4A, 4.16.1.6.1A, 4.16.1.6.1C, 4.7.6.1A, 4.7.6.1B, 4.7.6.1C, and 4.7.6.1D. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment (Finding 1). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Findings: According to Section 4.16 of the Revised Final EIR Part 4 Volume 3, the WLC Project would consume approximately 376,426 megawatt-hours (MWh) of electricity and almost 14.6 million cubic feet of natural gas per year. The estimated electrical demand assumes no on-site electrical generation by photovoltaic panels.

The WLC Specific Plan requires future installation of solar photovoltaic panels on the roof of each warehouse building to offset the energy demands of the office portion of the building. Utility improvements are based on a “worst-case” assumption that on-site solar electrical generation is not available and electrical service would have to be provided by Moreno Valley Utility (MVU). In addition, partial or complete connection to the existing electrical grid may be necessary even with roof-mounted solar photovoltaic panels so there is

redundancy (backup) in case of an emergency or during nighttime when no on-site power is being generated (i.e., some warehouses may operate 24/7). At this time, it is not anticipated that any uses will install sufficient on-site power generation and storage to be totally independent of the existing electrical grid.

A number of Southern California Edison (SCE) facilities would still require relocation and expansion of MVU facilities in order to provide network backup (i.e., if the solar generation equipment were to fail) and accommodate the potential increase in electrical demand no matter the contribution of project alternative energy generated. Power poles, guy poles, and guy anchors for the existing overhead 115 kV line along World Logistics Center Parkway and Gilman Springs Road will need to be relocated at the time these roadways are widened. The portion of the existing 115 kV line along Eucalyptus Avenue may also need to be relocated into the new Eucalyptus Avenue alignment between World Logistics Center Parkway and Gilman Springs Road at the time the roadway is constructed. The existing 115 kV line along Brodiaea Avenue may be able to be protected in place except for a few hundred feet where the transmission line intersects with the new Merwin Street, which will need to be relocated to accommodate street and storm drain channel improvements.

The existing 12 kV overhead power distribution lines along Redlands Boulevard will need to be undergrounded when the roadway is developed to its ultimate width. The existing 12 kV overhead power feeder lines located along World Logistics center Parkway and Alessandro Boulevard will need to be relocated and undergrounded as these roadway improvements take place during the development of the WLC project. The existing 12 kV overhead power feeder line running south along Virginia Street to the Moreno Compressor Station (planned as Open Space) will be protected in place. The existing overhead service lines from the World Logistics Center parkway 12 kV line along Dracaea Avenue to the east and along Cottonwood Avenue to the west can be abandoned when existing on-site residences served by these facilities are abandoned. Per SCE requirements, SCE 12 kV undergrounded lines cannot be in a common trench with MVU facilities and require a separate underground facility with a minimum 6 feet from other utility lines.

Based on the *Technical Memorandum – Dry Utilities World Logistics Center, Moreno Valley, CA*, (Revised Final EIR Appendix N Utility Specialists, September 2014) prepared for the WLC project, construction of the first three logistics buildings that would occur during the initial phase of construction can be served by the existing MVU substation at Cottonwood Avenue and Moreno Beach Drive, as long as capacity is still available at that station. Subsequent construction of buildings in Phase 1 will require the expansion of this substation. The expansion that would occur to meet this demand would be the addition of two new 28 MW transformer units which can be accommodated within the existing substation property. New 12 kV underground feeder circuits, including trenching, conduit, electrical vaults, and conductors will need to be installed from the substation to the WLC Project site. These improvements will occur along Cottonwood Avenue, along Moreno Beach Drive, and along Alessandro Boulevard, Brodiaea Avenue, and Cactus Avenue. These improvements are expected to take place concurrently with roadway construction.

To meet the WLC Project’s ultimate annual demand of 376,426 MW, a new 112 MW substation will be constructed within the Project site at a central location near one of SCE’s 115 kV transmission lines that will feed power to the substation. The *Dry Utilities* memo for the Project indicates two potential locations; the first adjacent to the SCE transmission lines along Gilman Springs Road, and the other adjacent to the SCE transmission lines along Brodiaea Avenue. Impacts of constructing the new station at either of these on-site

locations will be the same. All MVU primary distribution conductors within the Project will be installed within underground conduits and vaults within the public roadway rights-of-way or within easements as a joint trench with telephone, cable television, and natural gas. Since the installation or relocation of electrical facilities would take place concurrently with roadway construction and/or within dedicated easements, or protected in place, the construction of these facilities would not result in any additional significant environmental effects.

Relocation of natural gas transmission lines within the WLC site into public street rights-of-way and easements will be necessary to support site development and grading. These include 11,100 feet of the 30-inch gas pipeline in Cottonwood Avenue from Redlands Boulevard to World Logistics Center Parkway and then southeast to the Virginia Street and Alessandro Boulevard intersection; 1,900 feet of 30-inch gas line from Gilman Springs Road at Lisa Lane southwest to Alessandro Boulevard; 1,000 feet of 16-inch gas line owned by Questar from Gilman Springs Road southwest to Alessandro Boulevard and 4,000 feet of 16-inch gas line owned by Questar on the Maltby Avenue alignment from Merwin Street to World Logistics Center Parkway. The remaining transmission gas lines are anticipated to be protected in place within the proposed streets or easements between buildings. The regulator station located at the southeast corner of Gilman Springs Road and Laurene Lane east of the WLC project area will need to be relocated as part of the widening of this road. The gas facility on Alessandro Boulevard and Virginia Street will remain in place as the Project develops in this area. The SDG&E natural gas compression station on Virginia Street south of the Project site, known as the Moreno Compressor Station, along with a smaller facility on Virginia Street at Boadicea Avenue will be protected in place. Since the installation or relocation of natural gas facilities would take place concurrently with roadway construction and or within dedicated easements, or protected in place, the construction of these facilities would not result in any additional significant environmental effects (Revised Final EIR Part 2, pg. 4.17-37 to pg. 4.17-39).

c. Energy Standards, Policy, Regulation Consistency

Potential Significant Impact: Whether the Project would conflict with any applicable energy standards, policies, or regulations which may cause significant environmental effects.

Findings: Potential impacts of the Project related to energy regulations were analyzed in detail in Section 4.17 of the Revised Final EIR Part 2. Based on the entire record before us, this Council finds that the Project's potentially significant cumulative impacts related to energy standards, policy and regulation consistency would be reduced to a less than significant level, with implementation of Mitigation Measures 4.3.6.2A, 4.3.6.3B, 4.3.6.4A, 4.16.1.6.1A, 4.16.1.6.1C, 4.7.6.1A, 4.7.6.1B, 4.7.6.1C, and 4.7.6.1D. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment (Finding 1). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Findings: The Project would comply with applicable CARB regulations restricting the idling of heavy-duty diesel motor vehicles and governing the accelerated retrofitting, repowering, or replacement of heavy-duty diesel on- and off-road equipment. As discussed in Section 4.7, Greenhouse Gas Emissions, CARB has adopted an Airborne Toxic Control Measure to limit heavy-duty diesel motor vehicle idling in order to reduce public exposure to diesel particulate matter and other toxic air contaminants. The

measure prohibits diesel-fueled commercial vehicles greater than 10,000 pounds from idling for more than five minutes at any given time. While intended to reduce construction emissions, compliance with the above anti-idling and emissions regulations would also result in energy savings from the use of more fuel-efficient engines. According to the CARB staff report that was prepared at the time the anti-idling Airborne Toxic Control Measure was being proposed for adoption in late 2004/early 2005, the regulation was estimated to reduce non-essential idling and associated emissions of diesel particulate matter and nitrogen oxide (NOX) emissions by 64 and 78 percent respectively in analysis year 2009. These reductions in emissions are directly attributable to overall reduced idling times and the resultant reduced fuel consumption. Mitigation Measure 4.3.6.2A includes a stricter provision that would limit idling to no more than three minutes in any one hour. Therefore, fuel savings have the potential to be even more than those estimated from the Airborne Toxic Control Measure.

CARB has also adopted emission standards for off-road diesel construction equipment of greater than 25 hp. The emissions standards are referred to as “tiers,” with Tier 4 being the most stringent (i.e., least polluting). The requirements are phased in, with full implementation for large and medium fleets by 2023 and for small fleets by 2028. The Project would accelerate the use of cleaner construction equipment by using mobile off-road construction equipment greater than 50 horsepower (wheeled or tracked) that meets, at a minimum, the Tier 4 off-road emissions standards as specified in Mitigation Measure 4.3.6.2A. Field testing by construction equipment manufacturers has shown that higher tier equipment results in lower fuel consumption. For example, Tier 4 interim engines have shown a 5 percent reduced fuel consumption compared to a Tier 3 engine. Similar reductions in fuel consumption have been shown for Tier 3 engines compared to a Tier 2 engine.

The Project would comply with and exceed (through its project design features [PDFs] and mitigation measures) the applicable provisions of Title 24 and the CALGreen Code in effect at the time of building permit issuance and buildings over 500,000 square feet will be designed to be LEED-certified. According to the California Energy Commissions (CEC), buildings compliant with the Title 24 (2019) standards should use 5 percent less energy for lighting, heating, cooling, ventilation, and water heating than the prior Title 24 (2013) standards for nonresidential uses. As specified in the Project Design Features, the Project would include numerous energy and waste reduction features that would allow the project to comply with or exceed the Title 24 standards and achieve energy savings equal to or greater than what is required by state regulations.

With respect to operational transportation-related energy, the WLC project would support statewide efforts to improve transportation energy efficiency and reduce transportation fuel consumption with respect to private automobiles. In particular, the Project would provide the infrastructure for supporting a higher population of electric vehicles, in direct support of the state’s targets of 1.5 million Zero Emission Vehicles (ZEVs) by 2025 and 4.2 million ZEVs by 2040. WLC will accommodate ZEV technologies by planning for appropriate on-site charging infrastructure. To that end, the Project will construct the WLC parking areas with cable raceways for installing future EV charging stations, which will enable WLC to more readily and cost effectively provide this service to future tenants if and when demand dictates. The Project would also include the installation of electric vehicle supply equipment pursuant to Title 24, part 6 of the CALGreen Code. Thus, the Project would comply with existing energy standards (Revised Final EIR Part 2, pg. 4.17-38 to pg. 4.17-39).

14. Cumulative Energy

a. Energy Standards, Policy, Regulation Consistency

Potential Significant Impact: Whether the Project in connection with past, present, and probable future projects would conflict with any applicable standards, policies, or regulations which may cause significant environmental effects.

Findings: Potential cumulative impacts of the Project related to energy regulations were analyzed in detail in Section 6.17 of the Revised Final EIR Part 2. Based on the entire record before us, this City Council finds that potentially significant cumulative impacts related to consistency with energy standards, policy and regulations would be reduced to a less than significant level. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment (Finding 1). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program.

Facts in Support of the Findings: The Project would comply with applicable CARB regulations restricting the idling of heavy-duty diesel motor vehicles and governing the accelerated retrofitting, repowering, or replacement of heavy-duty diesel on- and off-road equipment. As discussed in Section 4.7, Greenhouse Gas Emissions, CARB has adopted an Airborne Toxic Control Measure to limit heavy-duty diesel motor vehicle idling in order to reduce public exposure to diesel particulate matter and other toxic air contaminants. The measure prohibits diesel-fueled commercial vehicles greater than 10,000 pounds from idling for more than five minutes at any given time. While intended to reduce construction emissions, compliance with the above anti-idling and emissions regulations would also result in energy savings from the use of more fuel-efficient engines. According to the CARB staff report that was prepared at the time the anti-idling Airborne Toxic Control Measure was being proposed for adoption in late 2004/early 2005, the regulation was estimated to reduce non-essential idling and associated emissions of diesel particulate matter and nitrogen oxide (NOX) emissions by 64 and 78 percent respectively in analysis year 2009. These reductions in emissions are directly attributable to overall reduced idling times and the resultant reduced fuel consumption. Mitigation Measure 4.3.6.2A includes a stricter provision that would limit idling to no more than three minutes in any one hour. Therefore, fuel savings have the potential to be even more than those estimated from the Airborne Toxic Control Measure.

CARB has also adopted emission standards for off-road diesel construction equipment of greater than 25 hp. The emissions standards are referred to as “tiers,” with Tier 4 being the most stringent (i.e., least polluting). The requirements are phased in, with full implementation for large and medium fleets by 2023 and for small fleets by 2028. The Project would accelerate the use of cleaner construction equipment by using mobile off-road construction equipment greater than 50 horsepower (wheeled or tracked) that meets, at a minimum, the Tier 4 off-road emissions standards as specified in Mitigation Measure 4.3.6.2A. Field testing by construction equipment manufacturers has shown that higher tier equipment results in lower fuel consumption. For example, Tier 4 interim engines have shown a 5 percent reduced fuel consumption compared to a Tier 3 engine. Similar reductions in fuel consumption have been shown for Tier 3 engines compared to a Tier 2 engine.

The Project would comply with and exceed (through its project design features and mitigation measures) the applicable provisions of Title 24 and the CALGreen Code in effect at the time of building permit issuance and buildings over 500,000 square feet will be designed to be LEED-certified. According to the California Energy

Commission, buildings compliant with the Title 24 (2019) standards should use 5 percent less energy for lighting, heating, cooling, ventilation, and water heating than the prior Title 24 (2016) standards for nonresidential uses. As specified in the Project's Design Features, the Project would include numerous energy and waste reduction features that would allow the project to comply with or exceed the Title 24 standards and achieve energy savings equal to or greater than what is required by state regulations.

With respect to operational transportation-related energy, the WLC project would support statewide efforts to improve transportation energy efficiency and reduce transportation fuel consumption with respect to private automobiles. In particular, the Project would provide the infrastructure for supporting a higher population of electric vehicles, in direct support of the state's targets of 1.5 million Zero Emission Vehicles (ZEVs) by 2025 and 4.2 million ZEVs by 2040. WLC will accommodate ZEV technologies by planning for appropriate onsite charging infrastructure. To that end, the Project will construct the WLC parking areas with cable raceways for installing future EV charging stations, which will enable WLC to more readily and cost effectively provide this service to future tenants if and when demand dictates. The Project would also include the installation of electric vehicle supply equipment pursuant to Title 24, part 6 of the CALGreen Code. Thus, the project would comply with existing energy standards (Revised Final EIR Part 2, pg. 4.17-38 to pg. 4.17-39).

C. ENVIRONMENTAL IMPACTS NOT FULLY MITIGATED TO A LEVEL OF LESS-THAN-SIGNIFICANT

The Moreno Valley City Council finds the following environmental impacts identified in the Revised Final EIR remain significant and unavoidable even after application of all feasible mitigation measures: aesthetics (individually and cumulative), air quality (individually and cumulative), land use and planning, noise, and transportation. In accordance with CEQA Guidelines Section 15092(b)(2), the City Council of the City of Moreno Valley cannot approve the Project unless it first finds (1) under *Public Resources Code* Section 21081(a)(3), and CEQA Guidelines Section 15091(a)(3), that specific economic, legal, social technological, or other considerations, including provisions of employment opportunities to highly trained workers, make infeasible the mitigation measures or Project alternatives identified in the Revised Final EIR; and (2) under CEQA Guidelines section 15092(b), that the remaining significant effects are acceptable due to overriding concerns described in the CEQA Guidelines Section 15093 and, therefore, a Statement of Overriding Considerations is included herein (refer to Section VI of these findings); or (3) that under Public Resources Code Section 21081(a)(2) and CEQA Guidelines Section 15091(a)(2) changes or alterations are within the responsibility and jurisdiction of other public agencies and not the City. Such changes can and should be adopted by other agencies.

1. Aesthetics (Individual and Cumulative Impacts)

a. Scenic Vistas

Significant Unavoidable Impact: The Revised Final EIR evaluated and concluded that the Project could have adverse effects on one or more scenic vistas, notably views of the Badlands, Mount Russell Range, and Mystic Lake/San Jacinto Wildlife Area.

Finding: Potential impacts of the Project related to light and glare impacts are discussed in detail in Section 4.1 of the Revised Final EIR Part 4, Volume 3. Changes or alterations have been required in, or incorporated

into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program. However, this Council finds that even with application of these mitigation measures, the Project will have a significant impact due to adverse effects on scenic vistas and therefore impacts are considered significant and unavoidable. Specific economic, legal, social, technological, or other considerations make the alternatives identified in the Revised Final EIR and additional mitigation measures infeasible, and overriding economic, legal, social, technological, or other benefits of the project outweigh the significant and unavoidable effects on the environment, which are set forth in Section VI, Statement of Overriding Considerations (Finding 3).

Facts in Support of the Finding: According to Section 4.1 of the Revised Final EIR Part 4 Volume 3, the nearest sensitive permanent visual receptors would be the existing single-family residences to the west and southwest along Redlands Boulevard. In addition, the views of the motoring public along SR-60, Gilman Springs Road, Redlands Boulevard, World Logistics Center Parkway, and Alessandro Boulevard would be significantly affected as well. At present, the Skechers building blocks views of the site for travelers on SR-60 who are immediately north of the Skechers building.

One of the development requirements of the Specific Plan is to have the heights of the buildings along the north, west and south perimeter of the Project site, including SR-60, be approximately the same height as the existing Skechers building (i.e., approximately 55 feet above a ground elevation of 1,740 feet above mean sea level (amsl)). This means, as the site elevation decreases to the south, taller buildings theoretically could be built as long as they do not exceed 1,795 feet elevation (i.e., height above sea level, not building height above ground). This would result in seeing only the buildings adjacent to the freeway for eastbound travelers on SR-60, but it would adversely affect views from other locations around the WLC Specific Plan site regardless of the height comparison to the Skechers building. The motoring public heading westbound on SR-60 would experience impacts to their views of Mount Russell.

Many of the views of the motoring public while on local roadways will fundamentally change instead of views of open agricultural land, these residents and motorists will view new logistics buildings and the associated parking areas, roadways, infrastructure, and landscaping. Therefore, the Project will have a significant visual impact. The degree to which these buildings may block views of major scenic resources (i.e., Mount Russell, the Badlands, and Mystic Lake) will depend on the location and heights of buildings.

This impact requires mitigation; however, this change in views, while substantial, is anticipated in the City's General Plan, which allows development within the Project area. The WLC Specific Plan would develop the site with logistics warehouse buildings (maximum height 60–80 feet), so this change in itself would represent a significant visual impact. In addition, the eventual change in views from existing (baseline) conditions is substantial and is considered a significant visual impact on scenic vistas. After implementation of the **Mitigation Measures 4.1.6.1A** through **4.1.6.1C**, adverse effects on scenic vistas would remain significant and unavoidable due to the fundamental change in public views for residents within and surrounding the Project site, for travelers on SR-60, Gilman Springs Road, Redlands Boulevard, World Logistics Center Parkway, and Alessandro Boulevard, and for users of the San Jacinto Wildlife Area. (Revised Final EIR Part 4 Volume 3, pgs. 4.1-61 to 4.1-73 and 4.1-82 to 4.1-83).

b. Scenic Resources and Scenic Highways

Significant Unavoidable Impact: The Revised Final EIR evaluated and concluded that the Project could have a significant impact on the views of scenic resources for motorists traveling on SR-60 and Gilman Springs Road.

Finding: Potential impacts of the Project related to scenic resources and scenic highways impacts are discussed in detail in Section 4.1 of the Revised Final EIR Part 4, Volume 3. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program. However, this Council finds that even with application of these mitigation measures, the Project-related impacts to scenic vistas and scenic highways will remain significant and unavoidable. Specific economic, legal, social, technological, or other considerations make the alternatives identified in the Revised Final EIR and additional mitigation measures infeasible, and overriding economic, legal, social, technological, or other benefits of the project outweigh the significant and unavoidable effects on the environment which are set forth in Section VI, Statement of Overriding Considerations (Finding 3).

Facts in Support of the Finding: According to Section 4.1 of the Revised Final EIR Part 4 Volume 3, the City of Moreno Valley identifies SR-60 and Gilman Springs Road as local scenic roads. According to the City's General Plan EIR, major scenic resources within the Moreno Valley study area are visible from SR-60, and Gilman Springs Road, both of which are City-designated local scenic roadways. Development of the Project would significantly alter the existing view by introducing large industrial buildings adjacent to the freeway. Existing eastbound and westbound views on SR-60 and Gilman Springs Road would be fundamentally altered with the future development of the Project.

The perimeter portions of the site will have buildings with heights up to 60 feet, and some of the buildings south of Street C (southeastern portion of the site but not adjacent to the San Jacinto Wildlife Area), would have heights of up to 80 feet. Since the Skechers building (roof height approximately 1,790 feet amsl) is already visible throughout the Project site and from off-site areas to the east, south, and southwest, it is likely that most new buildings will be visible from these areas or possibly even farther away, depending on building heights and locations. The use of light colors and reflective surfaces such as glass and polished metal near office entrances and building corners, such as required in the WLC Specific Plan design guidelines, will enhance the visibility of these buildings.

The proposed sound walls and ornamental landscaping would soften the visual impacts of future buildings, but the Project would likely result in at least a partial obstruction of a portion of the Mount Russell Range for motorists traveling on SR-60, so the proposed buildings may obstruct the view of a major scenic feature from a City-designated scenic route. The Project meets criteria in both the moderate and major visual intrusion categories. Therefore, it is anticipated that the WLC Specific Plan design guidelines may create a major visual intrusion (i.e., significant impact) for motorists traveling on SR-60 and Gilman Springs Road.

The WLC Specific Plan can preserve significant visual features, significant views, and vistas if the size and location of buildings developed under the WLC Specific Plan can be controlled so as to not substantially block views of Mount Russell, the Badlands, and Mystic Lake. The views from SR-60 and Gilman Springs Road

will fundamentally change, but their views of major scenic resources (i.e., Mount Russell, the Badlands, and Mystic Lake) may be preserved through careful limitations on the height and location of future buildings. The WLC Specific Plan outlines how future development along SR-60 and Gilman Springs Road will be made visually attractive and can maintain some view corridors of the surrounding mountains and Mystic Lake through careful limitations on the height and location of future buildings. These are considered significant visual impacts on local scenic roads that will require mitigation.

Construction of future logistics warehousing according to the development standards and design guidelines of the WLC Specific Plan will help soften building façades, and the installation of ornamental landscaping will help screen the visual appearance of the buildings from SR-60, but the obstruction of local views will still be significant. Implementation of **Mitigation Measures 4.1.6.1A through 4.1.6.1D, 4.1.6.3A, 4.1.6.4A, and 4.1.6.4B** will help reduce these impacts, but not to less than significant levels. (Revised Final EIR Part 4, Volume 3, pgs. 4.1-73 to 4.1-76).

c. Existing Visual Character and Surroundings

Significant Unavoidable Impact: The Revised Final EIR evaluated and concluded that the Project could significantly degrade the existing visual character of the Project site from open space to an urbanized setting by introducing large logistics warehouse buildings.

Finding: Potential impacts of the Project related to visual impacts are discussed in detail in Section 4.1 of the Revised Final EIR Part 4- Volume 3. Changes or alterations have been required in, or incorporated into, the project which mitigate or avoid the significant effects on the environment. (Finding 1). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program. However, the Council finds that even with application of this mitigation measure, the Project will have significant Project-related impacts to the existing visual character of the site and will remain significant and unavoidable. Specific economic, legal, social, technological, or other considerations make the alternatives identified in the Revised Final EIR and additional mitigation measures infeasible, and overriding economic, legal, social, technological, or other benefits of the project outweigh the significant and unavoidable effects on the environment which are set forth in Section VI, Statement of Overriding Considerations (Finding 3).

Facts in Support of the Finding: Visual impacts associated with changes to the general character of the Project site (e.g., loss of open space), the components of the visual settings (e.g., landscaping and architectural elements), and the visual compatibility between proposed site uses and adjacent land uses would occur. The significance of visual impacts is inherently subjective as individuals respond differently to changes in the visual characteristics of an area. According to Section 1.4 of the Revised Final EIR Part 4 Volume 3, the Project site is currently undeveloped with existing agricultural fields throughout the site. Development of the proposed industrial uses on the Project site would include approximately 40.6 million square feet of warehouse distribution uses with associated parking areas, ornamental landscaping, and roadway and infrastructure on approximately 2,535 acres. Maximum building heights will range from 60 to 80 feet depending on location within the Project and will substantially change the views of both nearby residents and motorists on adjacent roadways.

The Project would also change views for travelers on the adjacent portion of SR-60 and Gilman Springs Road by introducing large industrial buildings in place of vacant agricultural land. The proposed buildings closest to the freeway would most likely have an average height of approximately 55 to 60 feet, although the maximum height may be increased by 10 feet, which would exceed the existing height of the adjacent freeway by approximately 30 feet.

Development of the Project would substantially and fundamentally change the existing character of the Project site from open space to an urbanized setting with many large logistics buildings. The change in the character of the site would constitute a significant alteration of the existing visual character of the WLC Project site, regardless of the architectural treatment and landscaping of the site. These impacts would be especially significant for residents of the existing residences on the Project site, depending on the timing, location, and size of development in the future.

The WLC Specific Plan includes a variety of architectural elements including façade accents such as corner treatments and roof trim. The Specific Plan also provides variation in wall planes that serve to avoid an institutional appearance and break up the bulk of the buildings. This variation would create shadow lines at various times of the day.

The proposed setbacks, landscaping, berms, and walls outlined in the Specific Plan appear sufficient to provide adequate visual screening between proposed warehouse buildings and the existing residential uses. However, mitigation is required to ensure the actual design and appearance of setback areas will effectively screen new development from existing residences and neighboring roadways.

However, even with implementation of **Mitigation Measures 4.1.6.1A through 4.1.6.1D, 4.1.6.3A, 4.1.6.4A, and 4.1.6.4B** the substantial change in visual character of the Project site and surrounding area from development of the Project will cause aesthetic impacts to remain significant and unavoidable. (Revised Final EIR Part 4 Volume 3, pgs. 4.1-76 to 4.1-80).

d. Cumulative Aesthetics – Scenic Vistas, Scenic Resources, and Existing Visual Character

Significant Unavoidable Impact: The Revised Final EIR evaluated and concluded that the Project would in connection with past, present, and probable future projects result in cumulative impacts by adversely affecting one or more scenic vistas; scenic resources; and existing visual character.

Finding: Potential impacts of the Project related to cumulative aesthetics impacts are discussed in detail in Section 6.1 of the Revised Final EIR Part 2. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant cumulative effects on the environment. (Finding 1). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program. However, this Council finds that even with application of these mitigation measures, the Project will have a significant impact due to adverse effects on scenic vistas, scenic resources, and on existing visual character. Specific economic, legal, social, technological, or other considerations make the alternatives identified in the Revised Final EIR and additional mitigation measures infeasible, and overriding economic,

legal, social, technological, or other benefits of the project outweigh the significant and unavoidable effects on the environment, which are set forth in Section VI, Statement of Overriding Considerations (Finding 3).

Facts in Support of the Finding: The Project, in combination with other projects in the eastern portion of the City and along SR-60 and Gilman Springs Road, would have a cumulatively significant and unavoidable impact related to views, scenic resources, and existing character in this portion of the City.

The development of the Project would partially obstruct views of surrounding mountain vistas from various vantage points in and around the Project area. Scenic vistas adversely impacted by the project include views of Mount Russell and the foothills surrounding the Lake Perris State Recreation Area, the Badlands, the San Jacinto Wildlife Area and the valley floor. Views from Gilman Springs Road, and other local roadways could be altered by the development of the project in combination with some or all of the cumulative projects. Environmental documents for MV-3 and MV-4 both identified scenic vistas as being significant and unavoidable impacts and that both projects would have cumulative impacts. Both MV-3 or MV-4 identified that there were no feasible measures to reduce impacts on the scenic vistas. MV-3 and MV-4 are considered large warehouse projects with structures and uses that would be similar in character to the structures and uses of the project. Because there are cumulative projects that would result in significant and unavoidable impacts to scenic vistas, the cumulative development within the cumulative geographic areas for aesthetics would result in significant cumulative impacts associated with scenic vistas prior to mitigation.

The size, height, and location of buildings within the Project site are limited by the standards and guidelines contained in the WLC Specific Plan. Mitigation Measures 4.1.6.1A through 4.1.6.1D are recommended to reduce impacts related to the loss of public and private views. After implementation of the proposed mitigation measures, adverse effects on scenic vistas would remain significant and unavoidable due to the change in views for residents within and surrounding the project site, for travelers on SR-60, Gilman Springs Road, Theodore Street, and Redlands Boulevard. Therefore, the Project's contribution to cumulative impacts to scenic vistas would be considered cumulatively significant and unavoidable. (Revised Final EIR Part 2, pgs. 6.1-5 to 6.1-9)

2. Air Quality

a. Air Quality Management Plan Consistency

Significant Unavoidable Impact: The Revised Final EIR evaluated and concluded that the Project has the potential to conflict with implementation of the SCAQMD 2012 Air Quality Management Plan (AQMP).

Finding: Potential impacts of the Project related to Air Quality Management Plan Consistency impacts are discussed in detail in Section 4.3 of the Revised Final EIR Part 2. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Those changes or alterations that are within the responsibility and jurisdiction of another public agency and have been, or can and should be, adopted by that other agency (Finding 2). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program. However, this Council finds that even with application of these mitigation measures, the Project will have a significant impact due to inconsistencies with the SCAQMD 2012 Air Quality Management Plan and, therefore, impacts are considered significant and unavoidable. Specific economic, legal, social, technological, or other considerations

make alternatives identified in the Revised Final EIR and additional mitigation measures infeasible, and overriding economic, legal, social, technological, or other benefits of the Project outweigh the significant and unavoidable effects on the environment, which are set forth in Section VI, Statement of Overriding Considerations (Finding 3).

Facts in Support of the Finding: According to the 1993 SCAQMD Handbook, there are two key indicators of consistency with the Air Quality Management Plan (AQMP):

1. Indicator: Whether the Project would result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations or delay timely attainment of air quality standards or the interim emission reductions specified in the AQMP.
2. Indicator: The Project would conflict with the AQMP if it would exceed the assumptions in the AQMP in 2012 or increments based on the year of project buildout and phase. The Handbook indicates that key assumptions to use in this analysis are population number and location and a regional housing needs assessment. The parcel-based land use and growth assumptions and inputs used in the Regional Transportation Model run by the Southern California Association of Governments that generated the mobile inventory used by the SCAQMD for AQMP are not available and assumed not to include the Project; therefore, the SCAQMD's significance thresholds are used to determine if the Project exceeds the assumptions in the AQMP.

Considering the recommended criteria in the SCAQMD's 1993 Handbook, the analysis in the Revised Final EIR utilizes the following criteria to address this potential impact:

- Project's contribution to air quality violations (SCAQMD's first indicator, 1 as listed above);
- Assumptions in AQMP (SCAQMD's second indicator, 2, as listed above); and
- Compliance with applicable emission control measures in the AQMPs (2012 and 2016)

Project's Contribution to Air Quality Violations and Assumptions in AQMP. According to the SCAQMD, the Project is consistent with the AQMP if the Project would not result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations or delay timely attainment of air quality standards or the interim emission reductions specified in the AQMP (SCAQMD, 1993, page 12-3). As shown in analyses in Impacts 4.3.6.2, 4.3.6.3, and 4.3.6.4 of the Revised Final EIR Part 2, the Project could violate an air quality standard and therefore, could contribute substantially to an existing or projected air quality violation.

If a project's emissions exceed the SCAQMD regional thresholds for NOX, VOC, PM10, or PM2.5, it follows that the emissions could cumulatively contribute to an exceedance of a pollutant for which the Basin is in nonattainment (ozone, PM10, and PM2.5) at a monitoring station in the Basin. The thresholds are criteria for determining environmental significance and are discussed in the SCAQMD's 1993 Handbook for Air Quality Analysis. An exceedance of a nonattainment pollutant at a monitoring station would not be consistent with the goals of the AQMP—to achieve attainment of pollutants. The Project would exceed the regional emission significance thresholds for VOC, NOX, CO, PM10, and/or PM2.5 prior to mitigation. This means that Project emissions could combine with other sources and could result in an ozone, PM10, or PM2.5 exceedance at a

nearby monitoring station. The Basin in which the project is located is in nonattainment for these pollutants; therefore, according to this criterion, the Project would not be consistent with the AQMP. The regional emissions assume a zero baseline for existing emissions on the Project site and therefore assumes that the AQMP had no emissions for the Project site. The regional significance thresholds can be interpreted to mean that if Project emissions exceed the thresholds, then the Project would also not be consistent with the assumptions in the AQMP. Therefore, based on this criterion, the Project could contribute to air quality violations and would not be consistent with the AQMP (Revised Final EIR Part 2, pg. 4.3-37).

Compliance with Emission Control Measures. The second indicator of whether the Project could conflict with or obstruct implementation of the AQMP is by assessing the Project's compliance with the control measures in the AQMPs and the State Implementation Plan (SIP).

2012 AQMP: The Project would comply with all applicable rules and regulations enacted as part of the AQMP. In addition, the AQMP relies upon the SCAG regional transportation strategy, which is in its adopted 2012–2035 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) and 2011 Federal Transportation Improvement Plan (FTIP). Included in the RTP/SCS are transportation control measures including active transportation (non-motorized transportation, e.g., biking and walking); transportation demand management; transportation system management; transit; passenger and highspeed rail; goods movement; aviation and airport ground access; highways; arterials; and operations and maintenance.

2016 AQMP: The SCAQMD approved on March 3, 2017 the Final 2016 AQMP. Currently, the 2016 AQMP is being reviewed by the U.S. EPA and CARB. Until the approval of the EPA and CARB, the current regional air quality plan is the Final 2012 AQMP adopted by the SCAQMD on December 7, 2012. Therefore, consistency analysis with the 2016 AQMP has not been included. Nonetheless, the Project would comply with all applicable rules and regulations enacted as part of the 2016 AQMP, including transportation control measures from the 2016 RTP/SCS.

State Implementation Plans. Geographical areas in the State that exceed the Federal air quality standards are called nonattainment areas. The Project area is in nonattainment for ozone, PM10, and PM2.5. SIPs show how each area will attain the Federal standards. To do this, the SIPs identify the amount of pollutant emissions that must be reduced in each area to meet the standard and the emission controls needed to reduce the necessary emissions. On September 27, 2007, CARB adopted its State Strategy for the 2007 SIP. In 2009, the SIP was revised to account for emissions reductions from regulations adopted in 2007 and 2008 and clarifies CARB's legal commitment. Additional recent revisions to the SIP are as follows:

- In 2008, the EPA revised the lead national ambient air quality standard by reducing it to 0.15 µg/m³. On December 31, 2010, the Los Angeles County portion of the Basin was designated as nonattainment for the 2008 lead national standard as a result of exceedances measured near a large lead-acid battery recycling facility. The 2012 Lead SIP for Los Angeles County was prepared by the SCAQMD and addresses the recent revision to the lead national standard and outlines the strategy and pollution control activities that demonstrate attainment of the lead national standard before December 31, 2015. The 2012 Lead SIP was approved May 4, 2012.

- A SIP revision for the deferral nitrogen dioxide standard was prepared in 2012, to address the new 1-hour federal ambient air quality standard for nitrogen dioxide.
- The proposed California Infrastructure SIP revision was considered by CARB on January 23, 2014. The proposed infrastructure SIP revision is administrative in nature and covers the National Ambient Air Quality Standards (federal standards) for ozone (1997 and 2008), fine particulate matter (PM_{2.5}; 1997, 2006, and 2012), lead (2008), nitrogen dioxide (2010), and sulfur dioxide (2010). The proposed revision describes the infrastructure (authorities, resources, and programs) California has in place to implement, maintain, and enforce these federal standards. It does not contain any proposals for emission control measures.

The SIP takes into account CARB rules and regulations. The Project will comply with applicable rules and regulations as identified in the AQMPs and SIPs and therefore, complies with this criterion.

Although the Project would be consistent with the policies, rules, and regulations in the AQMPs and SIP, the Project must meet all the criteria listed above to be consistent with the AQMPs. The Project could impede AQMP attainment because its construction and operation emissions exceed the SCAQMD regional significance thresholds, and therefore, the Project is considered to be inconsistent with the AQMP.

Applicable SCAQMD regulatory requirements are restated in the mitigation measures identified in Sections 4.3.6.2 and 4.3.6.3 of the Revised Final EIR Part 2. These measures shall be incorporated in all Project plans, specifications, and contract documents. **Mitigation Measures 4.3.6.2A, 4.3.6.2B, 4.3.6.2C, 4.3.6.2D, 4.3.6.3A, 4.3.6.3B, 4.3.6.3C, 4.3.6.3D, and 4.3.6.4A** are required.

Overall, implementation of the World Logistics Center project would exceed applicable thresholds for all criteria pollutants, with the exception of SOX, as noted below. Despite the implementation of mitigation measures, emissions associated with the Project cannot be reduced below the applicable thresholds. Construction and operational emissions would be reduced to the extent feasible through implementation of mitigation measures listed above and described below. Construction emissions would be reduced through implementation of mitigation measures that require the use of Tier 4 construction equipment, reduced idling time, use of non-diesel equipment where feasible, low-VOC paints and cleaning solvents, and dust suppression measures. Operational emissions would be reduced through implementation of mitigation measures that require reduced vehicle idling, use of non-diesel on-site equipment, meeting or exceeding 2010 engine emission standards for all diesel trucks entering the site, electric vehicle charging stations, and prohibition of refrigerated warehouses. In the absence of further feasible mitigation to reduce the Project's emission of criteria pollutants to below SCAQMD thresholds, potential air quality impacts resulting from exhaust from construction equipment will remain significant and unavoidable (Revised Final EIR Part 2, pgs. 4.3-35 to 4.3-38).

b. Construction Emissions

Significant Unavoidable Impact: The Revised Final EIR evaluated and concluded that the Project would to exceed applicable daily thresholds that may affect sensitive receptors. For construction operations, the applicable daily thresholds are:

- 75 pounds per day of ROC/VOC;

- 100 pounds per day of NO_x;
- 550 pounds per day of CO;
- 150 pounds per day of PM₁₀;
- 150 pounds per day of SO_x; and
- 55 pounds per day of PM_{2.5}.

Finding: Potential impacts of the Project related to construction emission impacts are discussed in detail in Section 4.3 of the Revised Final EIR Part 2. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Those changes or alterations that are within the responsibility and jurisdiction of another public agency and have been, or can and should be, adopted by that other agency (Finding 2). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program. However, this Council finds that even with application of these mitigation measures, the Project will have a significant impact due to adverse effects on construction emission impacts and therefore are considered significant and unavoidable. Specific economic, legal, social, technological, or other considerations make the alternatives identified in the Revised Final EIR and additional mitigation measures infeasible, and overriding economic, legal, social, technological, or other benefits of the project outweigh the significant and unavoidable effects on the environment, which are set forth in Section VI, Statement of Overriding Considerations (Finding 3).

Facts in Support of the Finding: Grading and other construction activities produce combustion emissions from various sources such as site grading, utility engines, on-site heavy-duty construction vehicles, equipment hauling materials to and from the site, asphalt paving, and motor vehicles transporting the construction crew. The use of construction equipment on-site would result in localized exhaust emissions. Activity during peak grading days typically generates a greater amount of air pollutants than other Project construction activities.

While the actual details of the future construction schedule are not known, it is expected that Project construction would occur in two phases with the construction of Phase 1 occurring over five years and the construction of Phase 2 occurring over ten years. Appendix A.1 of the Revised Final EIR Part 2 includes details of the emission factors and other assumptions.

Table 4.3-8 (Revised Final EIR Part 2 pg. 4.3-40) identifies projected emissions resulting from grading and construction activities for the World Logistics Center project and shows the estimated maximum daily construction emissions over the course of Project construction prior to the application of mitigation.

The construction emissions estimates summarized in Table 4.3-8 are based on the assumed construction scenario described in Appendix A.1, of this Revised Final EIR Part 2. Using emission factors from the CalEEMod model for off-road sources and EMFAC2017 emission factors for on-road sources, Table 4.3-8 indicates that construction emissions of criteria pollutants would exceed the SCAQMD daily emission thresholds for all criteria pollutants (VOC, NO_x, CO, PM₁₀, and PM_{2.5}), with the exception of SO_x. This is a significant impact requiring mitigation.

Fugitive dust emissions are generally associated with land clearing and exposure of soils to the air and wind and cut-and-fill grading operations. Dust generated during construction varies substantially by project,

depending on the level of activity, the specific operations and equipment, local soils, and weather conditions at the time of construction. The World Logistics Center project will be required to comply with SCAQMD Rules 402 and 403 to control fugitive dust. There are a number of feasible control measures that can be reasonably implemented to significantly reduce PM10 emissions from construction.

As identified in Table 4.3-8, fugitive dust and exhaust emissions during the anticipated peak construction day for the World Logistics Center project would exceed SCAQMD daily construction thresholds. The percentage of dust and exhaust varies by year but for PM10 is an average of 85 percent dust and 15 percent exhaust. PM2.5 has an average of 54 percent dust and 46 percent exhaust.

Concrete pouring would likely occur during nighttime hours due to limitations high temperatures pose for concrete work during the day. On-site equipment used during concrete pouring would involve daytime preparation with actual concrete pouring occurring during the nighttime hours. On average, the total hours of operation for each piece of equipment during the concrete phase would be approximately 10 hours. Therefore, maximum daily emissions presented in Table 4.3-8 represent the average concrete pour day. However, under rare occurrences, extended concrete pour days may be required. Table 4.3-9 (Revised Final EIR Part 2, pg. 4.3-41) summarizes daily maximum emissions for each year of construction associated with 24-hour operation of on-site building concrete equipment. As shown in Table 4.3-9, maximum 24-hour concrete pour days would exceed SCAQMD thresholds for NOX. However, all maximum daily emissions are less than those for the worst-case construction day as summarized in Table 4.3-8. Therefore, rare 24-hour concrete pour days would be within the estimated worst-case construction day assumptions. No further analysis of 24-hour concrete pour days is required.

Similar to extended concrete pouring days, other phases of construction such as utility installation and building construction may require an occasional extended construction day based on the task at hand and schedule goals. Occasional extended construction hours would occur for specific tasks within specific planning areas as needed (determined on a day-to-day basis) and would not occur site-wide throughout the 15-year construction period. Therefore, it is anticipated that estimated yearly maximum construction day emissions, as summarized in table 4.3-8, represent the realistic worst-case regional construction emissions for the 15-year construction duration.

The World Logistics Center project is required to comply with regional rules that assist in reducing short-term air pollutant emissions. SCAQMD Rule 402 requires implementation of dust-suppression techniques to prevent fugitive dust from creating a nuisance off-site. SCAQMD Rule 403 requires that fugitive dust be controlled with best available control measures so that the presence of such dust does not remain visible in the atmosphere beyond the property line of the emission source. Applicable dust suppression techniques from Rule 403 are summarized below. Implementation of these dust suppression techniques can reduce the fugitive dust generation (and thus the PM10 component). Compliance with these rules would reduce impacts on nearby sensitive receptors. The applicable Rule 403 measures are as follows:

- All clearing, grading, earthmoving, or excavation activities shall cease when winds exceed 25 miles per hour per SCAQMD guidelines in order to limit fugitive dust emissions.
- The contractor shall ensure that all disturbed unpaved roads and disturbed areas within the

project are watered at least three times daily during dry weather. Watering, with complete coverage of disturbed areas, shall occur at least three times a day, preferably in the mid-morning, afternoon, and after work is done for the day.

- Cover all trucks hauling dirt, sand, soil, or other loose materials, or maintain at least 0.6 meter (2 feet) of freeboard (vertical space between the top of the load and top of the trailer) in accordance with the requirements of California Vehicular Code Section 23114.
- The contractor shall ensure that traffic speeds on unpaved roads and project site areas are 15 miles per hour or less to reduce fugitive dust haul road emissions.

SCAQMD Rule 1113 regulates the sale and application of architectural coatings. Rule 1113 is applicable to any person who applies or solicits the application of any architectural coating within the Basin. Rule 1113 sets limits on the amount of ROG or VOC emissions allowed for all types of architectural coatings. Compliance with Rule 1113 means that architectural coatings used during construction would have ROG or VOC emissions that comply with these limits.

Overall, as shown in Table 4.3-10 (Revised Final EIR Part 2, pg. 4.3-44), construction emissions are still significant after mitigation, with the exception of PM2.5 and SO2. The reduction in PM2.5 emissions is by a reduction in exhaust from the application of Tier 4 off-road equipment. PM10 emissions are still significant because emissions in 2022, 2023, 2024, and 2028 exceed the threshold; however, emissions of PM10 during all other years of construction are less than significant. Although mitigation reduces emissions of all pollutants (with the exception of CO due to how CalEEMod calculates Tier 4 emissions) during construction, potential air quality impacts resulting from exhaust from construction equipment and fugitive dust will remain significant and unavoidable.

c. Localized Construction and Operational Air Quality Impacts

Significant Unavoidable Impact. The Revised Final EIR evaluated and concluded that construction and operation of the Project would to exceed localized significance daily thresholds that may affect sensitive receptors.

Finding: Potential impacts of the Project related to localized construction and operational air quality impacts are discussed in detail in Section 4.3 of the Revised Final EIR Part 2. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Those changes or alterations that are within the responsibility and jurisdiction of another public agency and have been, or can and should be, adopted by that other agency (Finding 2). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program. However, this Council finds that even with application of these mitigation measures, the Project will have a significant impact due to adverse effects on localized construction and operational air quality impacts and therefore, are considered significant and unavoidable. Specific economic, legal, social, technological, or other considerations make alternatives identified in the Revised Final EIR and additional mitigation measures infeasible, and overriding economic, legal, social, technological, or other benefits of the project outweigh the significant and unavoidable effects on the environment, which are set forth in Section VI, Statement of Overriding Considerations (Finding 3).

Facts in Support of the Findings: The localized significance threshold (LST) analysis evaluated four conditions:

- Project Build Out (2020): this condition assumes that Phase 1 and Phase 2 of the Project are fully built out in 2020 as a worst-case scenario.
- 2022, the year when the Project emissions from both Project construction and operation are at their highest combined levels for several pollutants; and when construction activities would occur near the existing residences west of the Project boundary along Merwin Street;
- 2025, the earliest year Phase 1 is assumed to be fully operational. When the projected construction schedule would result in construction activities in the southern portion of the Project adjacent to Alessandro Boulevard and east of the existing residential areas along Merwin Street, and when all of Phase I operations would occur (approximately 57 percent of entire Project floor space); and
- 2035 when Phase 1 and Phase 2 of the Project are fully operational.

Project Full Build Out under 2020 conditions represents hypothetical worst-case conditions in that the Project physically could not be built-out in 2020 or, in fact, in any single year due to the size of the Project. These conditions have been included in this assessment to correspond to the analysis scenarios examined in the Project TIA. These conditions also do not account for the fact that vehicle emissions are expected to decline over time as vehicle emission control technologies improve. Thus, consideration of these conditions will significantly overestimate the Project's potential air quality impacts. The 2022, 2025, and 2035 conditions represent the logical and realistic development of the Project over a period of 15 years as represented by the Project applicant. The LST analysis is presented for each condition below.

Pursuant to the SCAQMD's LST methodology, only emissions generated from emission sources located within and along the Project boundaries are included in the LST assessment. These emission sources include vehicle travel on the roadway network within and along the borders of the Project and emissions from support equipment including forklifts, yard/hostler trucks, and emergency standby electric generators.

The Project Full Build Out (2020) LST Assessment

The localized assessment results for the Project Phase 1 and Phase 2 Full Build Out (2020) condition are provided in Table 4.3-11 (Revised Final EIR Part 2, pg. 4.3-46) for receptors located within the Project boundaries and in Table 4.3-12 (Revised Final EIR Part 2, pg. 4.3-47) for receptors located outside the Project's boundaries along with a comparison to the SCAQMD's localized significance thresholds. The significance thresholds for CO and nitrogen dioxide are derived from the measured ambient air quality data from the SCAQMD Riverside air monitoring station and serve as the measure of existing air quality.

As noted from Table 4.3-11, the Project would exceed the SCAQMD's significance thresholds for the annual PM10 threshold for receptors located within the Project's boundaries. As shown in Table 4.3-12, the significance thresholds would not be exceeded at any sensitive receptor located outside of the Project boundaries (Revised Final EIR Part 2, Pg. 4.3-46).

It is important to note the Project Phase 1 and Phase 2 Full Build Out (2020) condition assumes that the Project's emissions are at the levels that would occur in 2020. The majority of the Project's operational emissions are from on-road mobile sources, more particularly, heavy-duty trucks that contribute a disproportionate amount of emissions compared to passenger vehicles. Emissions from on-road mobile sources are regulated at the State and Federal levels and, therefore, are outside of the control of local agencies such as the City and the SCAQMD. For example, CARB is working closely with the USEPA, engine and vehicle manufacturers, and other interested parties to identify programs that will reduce emissions from heavy-duty diesel vehicles in California. Emission reductions arise from a combination of measures including the use of ultra-low sulfur diesel fuel, new emission standards for large diesel engines, restrictions on diesel engine idling, addition of post-combustion filter and catalyst equipment, and retrofits for business and government diesel truck fleets. The implementation of these emission reductions will also result in reductions of other pollutants such as NOX, VOC, and CO. As these emission reduction programs are implemented and there is a turnover in the use of older vehicles with newer and cleaner vehicles, the Project's operational emissions are expected to decline significantly in the future. Emission controls on mobile source vehicles already adopted by the CARB particularly dealing with NOX and PM10 controls on heavy-duty trucks will reduce truck emissions significantly over time. Thus, Project (2020) conditions represent highly conservative estimates, in terms of overestimating of the Project's operational impacts.

Project Development Schedule LST Assessment

The final localized threshold assessment condition examined potential local Project impacts considering the proposed construction and build-out schedule of the Project over a time period of 15 years from the commencement of construction in 2020 to the final build-out and occupation in 2035. This condition examined three specific time periods:

- The Project's on-site maximum daily and annual construction emissions were estimated using the CalEEMod land use emission model and the construction equipment inventory and activities provided by the applicant. The Project's on-site operational emissions, principally from the Project's mobile sources, were derived from detailed traffic volume data provided by the project's TIA that reflects a completely operational Phase 1. The TIA applied a comprehensive regional transportation model to develop daily and peak hour traffic volumes for 2025 and buildout from the Project's mobile sources.

Peak hour and daily Project traffic volumes were developed for each year from 2020 to buildout for roadway segments within and along the boundaries of the Project using the following assumptions:

- Project operational traffic volumes were assumed to be zero in 2020, the year that Project construction would commence.
- Traffic volumes for the years 2021 to 2024 (the completion year for Phase 1 operations) were interpolated from 2025 volumes provided in the TIA by applying the annual Project occupancy schedule to the 2025 traffic volumes.
- Traffic volumes for the years 2026 to 2034 were interpolated from the provided traffic volumes at buildout by applying the annual Project occupancy schedule.

Localized Impact Analysis, 2025. The localized impacts for the short-term construction and operational activities were analyzed using an air dispersion model (EPA AERMOD Model) to simulate the transport and dispersion of Project-related emissions through the air. These impacts were then compared to the applicable SCAQMD localized concentration thresholds.

The estimated maximum localized air quality impacts from the construction and operation of the Project at Phase 1 buildout are summarized in Table 4.3-13 for locations within the Project’s boundaries. These maximum impacts were found at the locations of the existing residences within the Project boundaries. Table 4.3-14 summarizes the highest air quality impacts for sensitive receptors located outside of the Project boundaries. These maximum impacts were found at the locations of the existing residences outside of the Project boundary located west of the Project boundary along Merwin Street. As noted from these two tables, Project impacts would exceed the significance thresholds for PM10 for locations within and outside the Project boundaries, thus represents a significant impact without mitigation (Revised Final EIR Part 2, pg. 4.3-48).

Localized Air Quality Impact Analysis, 2022. The year 2022 was selected for the LST Analysis for two principal reasons: 1) the year 2022 corresponds to the year with the highest combined total on-site construction and operational emissions for NOX and PM2.5, the second-highest on-site emissions for CO, and the fourth-highest on-site emissions of PM10; and 2) the location of the building construction in 2022 places the construction emissions nearest to the existing residences located west of the Project boundary along Merwin Street.

The Project’s maximum combined impacts from construction and operations during 2022 are shown in Table 4.3-15 for the existing sensitive receptors located within the Project boundaries along with the SCAQMD-recommended significance thresholds. Table 4.3-16 shows the maximum combined impacts for sensitive receptors located outside of the Project boundaries. Maximum impacts outside of the Project boundary were found within the residential areas located to the west of the Project boundary. As shown in these tables, the Project would exceed the SCAQMD’s significance thresholds for PM10 at locations within the Project boundary and outside of the Project boundary and NOX within the Project boundary (Revised Final EIR Part 2, pg. 4.3-49 to 4.3-51).

Localized Air Quality Impact Analysis, 2035. The year 2035 represents a long-term planning year when both phases of the Project would be fully in operation. Operational emissions during 2035 were estimated based on the Project’s trip generation and project-related travel along the local roadway network within and along the Project boundaries. Table 4.3-17 shows the maximum localized air quality impacts for 2035 relative to the background air quality levels at the existing sensitive receptors located within the Project boundaries. Table 4.3-18 identifies the highest localized impacts for sensitive receptors located outside of the Project boundaries. As shown in Table 4.3-17 and Table 4.3-18, the Project would exceed PM10 LSTs for receptors within and outside the Project boundary, and would, therefore, represent a significant impact without mitigation.

Overall the localized significance analysis demonstrates that without mitigation, the Project would exceed the localized significance thresholds for NOX and PM10 for one or more of the LST assessment years (2022, 2025, or 2035) analyzed. Therefore, according to this criterion, the air pollutant emissions would result in a

significant impact and could exceed or contribute to an exceedance of the national 1- hour NO₂ annual, as well as the 24-hour and annual PM₁₀ ambient air quality standards.

Mitigation measures identified under Impact 4.3.6.2 (**Mitigation Measures 4.3.6.2A, 4.3.6.2B, 4.3.6.2D and 4.3.6.2E**) to reduce construction emissions of criteria pollutants are required. The Project will also be required to comply with SCAQMD Rules 402 and 403. Additionally, mitigation measures 4.3.6.3A, 4.3.6.3B, 4.3.6.3C, 4.3.6.3D, 4.3.6.3E, and 4.3.6.3F are required to reduce emissions of criteria pollutants during Project operations. After application of mitigation, the Project would continue to exceed the localized significance thresholds at one or more of the existing residences located within and outside the Project boundaries for PM₁₀ (24-hour and/or annual) (Revised Final EIR Part 2, pgs. 4.3-45 to 4.3-55).

d. Long-Term Operational Emissions

Significant Unavoidable Impact: The Revised Final EIR evaluated and concluded that implementation of the Project would have the potential to exceed applicable daily thresholds for operational activities.

Finding: Potential impacts of the Project related to long-term operational emissions are discussed in detail in Section 4.3 of the Revised Final EIR Part 2. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Those changes or alterations that are within the responsibility and jurisdiction of another public agency and have been, or can and should be, adopted by that other agency (Finding 2). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program. However, this Council finds that even with application of these mitigation measures, the Project will have a significant impact due to adverse effects of long-term operational emissions and therefore, are considered significant and unavoidable. Specific economic, legal, social, technological, or other considerations make the alternatives identified in the Revised Final EIR and additional mitigation measures infeasible, and overriding economic, legal, social, technological, or other benefits of the project outweigh the significant and unavoidable effects on the environment, which are set forth in Section VI, Statement of Overriding Considerations (Finding 3).

Facts in Support of the Finding: Long-term air pollutant emission impacts that would result from the Project are those associated with stationary sources (generators, forklifts, etc.), area sources (landscaping and maintenance activities), and mobile sources (e.g., emissions from the use of motor vehicles by Project generated traffic). As discussed in Section 4.3.3.2 of the Revised Final EIR Part 2, the TIA provides Vehicle Miles Traveled (VMT) attributable to the project based on the net effect the Project would have on regional travel as well as Project VMT without consideration of a net effect. The emissions from the net effect on VMT, in conjunction with the proposed stationary and area sources, are shown in the Revised Final EIR Part 2 for determination of significance even though VMT does not represent a CEQA impact for the Project.

Worst-Case Scenario. Projected emissions resulting from operational activities of the Project under the worst-case scenario are identified in Table 4.3-20 on page 4.3-56 of the Revised Final EIR Part 2. As identified in Table 4.3-20, operational emissions for the Project would exceed SCAQMD daily operational thresholds for all criteria pollutants with the exception of SOX for the “worst-case” 2020 scenario.

There may be minor emissions of VOC from the fueling station, depending on what type of fuel is used. However, details regarding the fueling station are currently unknown so the emission source is not estimated. This is a worst-case analysis because it assumes that the entire Project would be built-out in 2020. The motor vehicle and truck emission factors are from 2020, which assumes a “dirtier” fleet than would be the case in later years. In addition, no reductions are taken for mitigation measures.

Operational Regional Emissions. Table 4.3-21 shows the detailed operational emission sources generated both on-site and off-site for Phase 1 and buildout. The table shows particulate matter (PM10 and PM2.5) divided into dust (roadway and tire and brake wear) and exhaust sources. As shown in the table, emissions of VOC, NOX, CO, PM10, and PM2.5 are significant after completion of Phase 1 and after full buildout.

Table 4.3-22 shows the operational emissions year by year using emission factors interpolated from 2025 and 2035 emission factors. The VOC, NOX, CO, PM10, and PM2.5 emissions would be over the SCAQMD’s significance thresholds for most years. The emissions demonstrate that although the number of vehicles and trucks would increase year by year, the emissions do not increase dramatically because the per vehicle emission factors decrease over time as cleaner vehicles enter the fleet.

Combined Construction and Operation. There would be overlapping of construction and operational emissions with Project implementation. The maximum daily operational emissions were added to the maximum daily construction emissions and are shown in Table 4.3-23, which shows all pollutants for all years exceed the SCAQMD thresholds, with the exception of SOX emissions. As identified in Section 4.3 of Revised Final EIR Part 2, Project-related air quality impacts for all criteria pollutants, with the exception of SOX, would be significant and mitigation measures are required.

Health Effects. Section 4.3.6.6 Summary of Health Effects of Air Quality Emissions, starting on page 4.3-79 of the Revised Final EIR Part 2, discusses the health effects from ozone and PM2.5 resulting from the Project. Tables 4.3-32 through 4.3-35 show the annual percent of background health incidence for PM2.5 and ozone health effects associated with the unmitigated and mitigated Project, respectively. The “background health incidence” is the actual incidence of health effects (based on available data) as estimated in the local population in the absence of additional emissions from the Project.²⁸ When taken in context, the small increase in incidences and the very small percent of the number of background incidences indicate that these health effects are minimal in a developed, urban environment. There are no relevant significance thresholds for health effects from criteria pollutants adopted by state, federal, or local agencies; thus, this information is provided for background understanding regarding the air quality emissions. Table 4.3-32 and Table 4.3-33 show the health effects, morbidity and mortality, of the unmitigated Project emissions across the southern California model domain for the Annual Mean PM2.5 and Annual Mean Ozone, respectively. Table 4.3-34 and Table 4.3-35 show the health effects, morbidity and mortality, of the mitigated Project emissions across the southern California model domain for the Annual Mean PM2.5 and Annual Mean Ozone, respectively. Potential PM2.5 Mitigated Project related health effects show an increase in asthma-related emergency room visits (0.0047%),

²⁸ Background health statistics were obtained from data included in the BenMAP model, and the sources are referenced in the BenMAP manual (USEPA, 2018). For example, EPA obtained mortality rates from the Centers for Disease Control (CDC) WONDER database, and hospital admissions rates from the Healthcare Cost and Utilization Project (HCUP).

asthma-related hospital admissions (0.0028%), all cardiovascular-related hospital admissions (not including myocardial infarctions (heart attacks)) (0.00059%), all respiratory-related hospital admissions (0.0015%), mortality (0.0044%), and nonfatal acute myocardial infarction (less 0.0020% for all age groups). Potential Project Mitigated Ozone-related health effects increased respiratory-related hospital admissions (0.00062%), mortality (0.00027%), and asthma-related emergency room visits for any age range (lower than 0.011% for all age groups). Because the health effects from ozone and PM2.5 are minimal, in light of background incidences, and health effects from other criteria pollutants would be even smaller, the health effects of those other criteria pollutants were not quantified. Because there are no established thresholds, this data was provided for informational purposes.

Mitigation Measures. The mitigation measures identified under Impact 4.3.6.3 (Mitigation Measures 4.3.6.3A through 4.3.6.3E) with the additional implementation of Mitigation Measure 4.3.6.4A would reduce operational emissions of criteria pollutants associated with the Project. It is important to note that, in addition to the operational activity mitigation measures identified previously, future development would need to incorporate physical attributes and operational programs that will act to generally reduce operational-source pollutant emissions including GHG emissions. These Project characteristics are identified in Section 4.7, Climate Change and Greenhouse Gas Emissions, and Section 4.17, Energy, of the Revised Final EIR Part 2 (pg. 4.3-61).

On October 21, 2016, the Project’s developers entered into a settlement agreement with the SCAQMD which requires the payment to the SCAQMD of an Air Quality Improvement Fee of 64 cents per square foot for each building as the Project is constructed (Revised Final EIR Part 1, pg. 29 to 30). The settlement agreement states:

“[T]he payment of the Air Quality Improvement Fee will adequately mitigate heavy-duty truck-related air quality impacts that may result from the construction and operation of the World Logistics Center as described in the EIR and that no additional charges will be imposed on the World Logistics Center to mitigate emissions, including NOX, described in the EIR from heavy-duty trucks.”

Funds may be used by SCAQMD for any purpose to improve air quality in the South Coast Air Basin although the SCAQMD has indicated that the funds will be used “to develop mitigation efforts focused on reducing emissions in the areas affected by the warehouse project.”²⁹ One possible use might be that individual or fleet truck owners servicing the Project could be offered a financial incentive to purchase a near-zero or zero-emission truck model, similar to the Carl Moyer Program. This type of program has been an effective tool for more than 19 years in speeding the transition of heavy-duty trucks and other equipment to cleaner models. In the 2017 Reporting Cycle for the Carl Moyer Program (Funding Years 8-19), \$87,373,480 was funded for “On-Road” vehicles by the SCAQMD for a reduction of 6,265 tons of NOX and ROG emissions, and a reduction of 145.3 tons of PM emissions, with an average cost-effectiveness of \$11,612.³⁰ Using those costs and resulting reductions in emissions, the \$26,000,000 Air Quality Improvement Fee could result in a reduction

²⁹ SCAQMD press release October 21, 2016, announcing the settlement.

³⁰ California Air Resources Board. Carl Moyer Program Status Reports. 2017 Reporting Cycle. Available online: <https://ww3.arb.ca.gov/msprog/moyer/status/status.htm>

of 1,864 tons of NOX and ROG emissions, and a PM reduction of 43 tons of PM emissions. Therefore, with the payment of the Air Quality Improvement Fee through the 2016 settlement, the Project’s net contribution to regional air quality would be further reduced. Because the use of the funds will be determined by the SCAQMD’s Governing Board and because it is not yet known how the SCAQMD will allocate the funds, no credit for emission reductions has been taken by the Project (Revised Final EIR Part 2, pg. 4.3-62).

Although implementation of **Mitigation Measures 4.3.6.3B** through **4.3.6.3F**, **4.3.6.4A**, and the payment of funds to SCAQMD may reduce impacts and vehicular trips associated with the Project, it is not possible to quantify the reduction in the amount of emissions that may occur. Considering the volume of emissions generated and current commuter habits, it is unlikely the implementation of vehicular management plans will result in a reduction of operational Project emissions to below existing SCAQMD thresholds. Application of Leadership in Energy and Environmental Design (LEED) standards and green building design principles could reduce emissions from building operations such as heating and cooling; however, such standards and principles would not reduce emissions of CO, ROG, NO_x, PM₁₀, and PM_{2.5} to below SCAQMD thresholds. No other feasible mitigation measures have been identified to reduce the operational emissions of CO, ROG, NO_x, PM₁₀, and PM_{2.5} to a less than significant level. Because the Project site is located in a nonattainment air basin for criteria pollutants, the addition of air pollutants resulting from operation of the Project would contribute to the continuation of nonattainment status in the Basin. In the absence of mitigation to reduce the Project’s emission of contribution of ozone, PM₁₀, and PM_{2.5} to below SCAQMD thresholds, long-term air quality impacts resulting from the operation of the Project would remain significant and unavoidable. (Revised Final EIR Part 2, pgs. 4.3-56 to 4.3-63).

e. Cumulative Air Quality Impacts - Construction

Significant Unavoidable Impact: The Revised Final EIR evaluated and concluded that the Project’s contribution to the cumulative exceedance of applicable daily thresholds that may affect sensitive receptors would be cumulatively considerable.

Finding: Potential impacts of the Project related cumulative air quality impacts are discussed in detail in Section 6.3 of the Revised Final EIR Part 2. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Those changes or alterations that are within the responsibility and jurisdiction of another public agency and have been, or can and should be, adopted by that other agency (Finding 2). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program. However, this Council finds that even with application of these mitigation measures, there will be a significant cumulative impact due to adverse effects from cumulative air quality impacts and the Project’s contribution would be cumulatively considerable; therefore, cumulative impacts are considered significant and unavoidable. Specific economic, legal, social, technological, or other considerations make the alternatives identified in the Revised Final EIR and additional mitigation measures infeasible, and overriding economic, legal, social, technological, or other benefits of the

Project outweigh the significant and unavoidable effects on the environment, which are set forth in Section VI, Statement of Overriding Considerations (Finding 3).

Facts in Support of the Finding: As set forth in Section 6.3 of the Revised Final EIR Part 2, out of the 359 cumulative projects that were evaluated, 67 were found to be completed or currently undergoing construction as of November 2019. Therefore, 289 potential cumulative projects could undergo construction activities during the Project's 15-year construction period. Construction emissions gathered from the environmental documents and modeling show that out of the 289 cumulative projects, 95 cumulative projects were identified as exceeding VOC significance thresholds, 22 projects were identified as exceeding NO_x thresholds, and 2 projects would exceed CO, PM_{2.5} and PM₁₀ thresholds. However, even if none of the 289 potential cumulative projects undergo construction while the Project is under construction, a cumulatively considerable impact will occur because projects that exceed the project-specific significance thresholds are considered by the SCAQMD to be cumulatively considerable. The Project-specific construction emissions presented in Section 4.3.6.2 exceed the applicable SCAQMD significance thresholds for VOC, NO_x, CO, PM₁₀, and PM_{2.5}; therefore, a cumulatively considerable impact will occur, despite any potential construction activity associated with another project.

f. Cumulative Air Quality Impacts – Localized Construction and Operational Air Quality Impacts

Significant Unavoidable Impact: The Revised Final EIR evaluated and concluded that the Project's contribution to the cumulative exceedance of localized thresholds that may affect sensitive receptors would be cumulatively considerable

Finding: Potential impacts of the Project related cumulative air quality impacts are discussed in detail in Section 6.3 of the Revised Final EIR Part 2. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Those changes or alterations that are within the responsibility and jurisdiction of another public agency and have been, or can and should be, adopted by that other agency (Finding 2). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program. However, this Council finds that even with application of these mitigation measures, there will be a significant cumulative impact due to adverse effects to cumulative air quality impacts and the Project's contribution will be cumulatively considerable; therefore, cumulative impacts are considered significant and unavoidable. Specific economic, legal, social, technological, or other considerations make the alternatives identified in the Revised Final EIR and additional mitigation measures infeasible, and overriding economic, legal, social, technological, or other benefits of the project outweigh the significant and unavoidable effects on the environment, which are set forth in Section VI, Statement of Overriding Considerations (Finding 3).

Facts in Support of the Finding: As set forth in Section 6.3 of the Revised Final EIR Part 2, out of the 359 cumulative projects that were identified, three cumulative projects (MV-5, MV-6, and MV-126) are located within 1,000 feet of the proposed Project boundary. The cumulative analysis focused on two cumulative scenarios: Construction start year (2020) and Full Build Out (2035).

The cumulative localized significance analysis demonstrates that without mitigation, the cumulative projects would exceed the localized significance thresholds for national 1-hour NO₂, annual PM₁₀, 24-hour PM₁₀, and 24-hour PM_{2.5} for one or more of the LST assessment years (2020 or 2035) analyzed. Therefore, according to this criterion, the air pollutant emissions would result in a significant impact and could exceed or contribute to an exceedance of the national 1-hour NO₂, annual PM₁₀, 24-hour PM₁₀, and 24-hour PM_{2.5} ambient air quality standards. Due to the findings of the Project's localized threshold analysis the air pollutant emissions from the Project would result in a significant cumulative impact and could exceed or contribute to an exceedance of the ambient air quality standards for NO₂, PM₁₀, and PM_{2.5}. Construction and operation of the cumulative projects along with the Project would result in cumulatively considerable significant and unavoidable localized impacts.

g. Cumulative Air Quality Impacts - Operations

Significant Unavoidable Impact: The Revised Final EIR evaluated and concluded that the Project's contribution to the exceedance of cumulative operational thresholds would be cumulatively considerable.

Finding: Potential impacts of the Project related cumulative air quality impacts are discussed in detail in Section 6.3 of the Revised Final EIR Part 2. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Those changes or alterations that are within the responsibility and jurisdiction of another public agency and have been, or can and should be, adopted by that other agency (Finding 2). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program. However, this Council finds that even with application of these mitigation measures, the Project will have a significant impact due to adverse effects to cumulative air quality impacts and therefore are considered significant and unavoidable. Specific economic, legal, social, technological, or other considerations make alternatives identified in the Revised Final EIR and additional mitigation measures infeasible, and overriding economic, legal, social, technological, or other benefits of the project outweigh the significant and unavoidable effects on the environment, which are set forth in Section VI, Statement of Overriding Considerations (Finding 3).

Facts in Support of the Finding: As set forth in Section 6.3 of the Revised Final EIR Part 2, operational emissions gathered from the environmental documents and modeling show that out of the 359 cumulative projects, 25 cumulative projects were identified as exceeding VOC significance thresholds, 59 projects were identified as exceeding NO_x thresholds, and 16 projects were identified as exceeding CO thresholds. None of the 359 projects would exceed the PM_{2.5} and PM₁₀ significance thresholds. However, because the Project-specific emissions exceed the SCAQMD significance thresholds, this Project is considered by the SCAQMD to be cumulatively considerable, despite the potential operation of any of the identified cumulative projects.

h. Cumulative Health Risk Impacts

Potentially Significant Impact. The Revised Final EIR evaluated and concluded that construction and operation of the Project would have a cumulatively considerable contribution cumulative significant cancer risk.

Finding: Potential impacts of the Project related to cumulative cancer risk and cancer burden impacts are discussed in detail in Section 4.3 of the Revised Final EIR Part 2. Changes or alterations have been required

in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment. (Finding 1). Those changes or alterations that are within the responsibility and jurisdiction of another public agency and have been, or can and should be, adopted by that other agency (Finding 2). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program. However, the Council finds that, even with application of these mitigation measures, the cancer risk to sensitive receptors and the cancer burden to the general population will be cumulatively significant and unavoidable, and that the Project's contribution will be cumulatively considerable. The Project will have a significant impact due to adverse effects on long-term operational emissions impacts and therefore are considered significant and unavoidable. Specific economic, legal, social, technological, or other considerations make the alternatives identified in the Revised Final EIR and additional mitigation measures infeasible, and overriding economic, legal, social, technological, or other benefits of the project outweigh the significant and unavoidable effects on the environment, which are set forth in Section VI, Statement of Overriding Considerations (Finding 3).

Facts in Support of the Finding: As set forth in Section 6.3 of Revised Final EIR Part 2, the cumulative HRA uses the same air dispersion modeling and health risk calculation methodologies used in the Project-level HRA; however, the operational AERMOD model was updated to include emissions sources from the 359 cumulative projects and an expanded receptor grid that covers most of the South Coast Air Basin.

Two sets of 30-year cancer risk calculations were performed for the identified cumulative projects, one includes the cancer risks from exposure to construction plus operation (Cumulative Construction & Operation HRA), and the other includes 30-year exposure to the full operation of the 359 cumulative projects in addition to the Project (Cumulative Operation HRA).

Thirty-year exposure to cumulative construction and operations results in a cancer risk of 139.8 in one million at the maximum exposed receptor and 30-year cumulative operations would result in a cancer risk of 171.5 in one million at the maximum exposed receptor. These impacts at the maximum exposed receptor are above the cumulative cancer threshold of 10 in one million. Therefore, the construction and operation of cumulative projects in addition to the Project is expected to have a significant and unavoidable cumulative impact. (Revised Final EIR Part 2 pg. 6.3-28). As discussed in Section 4.3 of Revised Final EIR Part 2, the Project impacts would be reduced to less-than-significant levels after implementation of mitigation. However, because the Project would result in an increase in cancer risk of 9.1 under construction + operations and 7.1 under 30-year operations, the Project would be cumulatively considerable.

3. Land Use and Planning

a. Physically Divide an Established Community

Significant Unavoidable Impact: The Revised Final EIR evaluated and concluded that the Project would physically divide an established community.

Finding: Potential impacts of the Project related to the existing rural residences on the Project site are discussed in detail in Section 4.10 of the Revised Final EIR Part 4, Volume 3. Changes or alterations have been required in, or incorporated into, the project which will mitigate or avoid the significant effects on the environment. (Finding 1). Each mitigation measure adopted by the City Council is set forth in the attached

Mitigation Monitoring and Reporting Program. However, the Council finds that even with installation of solid block walls around the warehouse building or the existing residences, the Project will have a significant impact due to adverse effects to existing residences and therefore are considered significant and unavoidable. Specific economic, legal, social, technological, or other considerations make the alternatives identified in the Revised Final EIR and additional mitigation measures infeasible, and overriding economic, legal, social, technological, or other benefits of the project outweigh the significant and unavoidable effects on the environment, which are set forth in Section VI, Statement of Overriding Considerations (Finding 3).

Facts in Support of the Finding: According to Section 4.10 of the Revised Final EIR Part 4, Volume 3, the adjacent properties surrounding the WLC Project are residential, light industrial, open space and undeveloped. Essentially, the Project site is located along the eastern urban boundary of the City of Moreno Valley with development only adjacent to the western boundary and northwest corner of the site. At present, there are six occupied residences on the Project site. These properties vary in size from 0.5 to 10 acres and are located on the east side of Redlands Boulevard and World Logistics Center Parkway. These properties represent less than 1.5% of entire WLC Specific Plan area. The WLC Specific Plan designates these properties as “Light Logistics” and allows various logistics-related uses. It is believed these properties are currently occupied. It is possible that, as development of the Project site occurs according to the WLC Specific Plan, large warehouse buildings may eventually be located in close proximity to the existing residences. It would be ineffective and inefficient to try to incorporate these residences into the WLC Specific Plan land plan of large logistics warehouses to accommodate these residences. In addition, logistics operations would cause significant air pollutant, noise, and lighting, impacts on residents living in these units if they were adjacent to operating warehouses.

The WLC Specific Plan currently shows a 250-foot setback along the western boundary of the site to separate existing residences neighboring the Project site from the proposed warehouse buildings. However, it would be ineffective and inefficient to try to incorporate similar setbacks, for the existing residences on the Project site, into the WLC Specific Plan land plan. Under CEQA, the question is whether a project will affect the environment or persons in general, not whether a project will affect particular persons. For instance, CEQA addresses how view sheds are impacted by a proposed project but would not address the specific view that an individual resident sees. Therefore, the effect on the estimated 13 people (six homes x 2.2 persons average occupancy) who live in the six houses does not constitute an impact and is insignificant. The Council has erred on the side of caution treating the impact as if it were significant.

Installation of solid block walls around the warehouse buildings or the existing residence would help reduce noise and lighting impacts, but they would not help reduce air pollutant impacts. Therefore, there is no effective mitigation available to protect or separate these existing residences from future warehousing buildings and operations. (Revised Final EIR Part 4 Volume 3, pgs. 4.10-36).

4. Noise

a. Off-Site Short-term Construction Impacts

Significant Unavoidable Impact: The Revised Final EIR evaluated and concluded that construction activities would adversely affect residences located adjacent to off-site construction projects because they would still be exposed to noise levels greater than 60 dBA (Leq).

Finding: Potential impacts of the Project related to off-site short-term construction impacts of the Project are discussed in detail in Section 4.12 of the Revised Final EIR Part 3. Changes or alterations have been required in, or incorporated into, the Project which would lessen the significant effects on the environment (Finding 1). Each mitigation measure is adopted by the Council and set forth in the attached Mitigation Monitoring and Reporting Program. However, as there is no effective mitigation available to protect existing residences adjacent to a construction area from significant noise levels, Project-related noise impacts during off-site construction on existing residences will remain significant and unavoidable. Specific economic, legal, social, technological, or other considerations make the alternatives identified in the Revised Final EIR and additional mitigation measures infeasible, and overriding economic, legal, social, technological, or other benefits of the project outweigh the significant and unavoidable effects on the environment, which are set forth in Section VI, Statement of Overriding Considerations (Finding 3).

Facts in Support of the Finding: Off-site construction activities would occur within the allowed construction hours identified in the City's Noise Ordinance and would be consistent with the City's code. The nearest receptors are located approximately 25 feet from off-site construction areas. Based on the operation of the two loudest pieces of equipment simultaneously at 25 feet, off-site construction could expose sensitive receptors to a noise level of 93 dBA Leq, which would exceed the City's allowable daytime exterior noise level of 60 dBA Leq. Implementation of Mitigation Measure 4.12.6.1A would reduce construction noise levels at nearby sensitive receptors through implementation of a NRCP, which is expected to attenuate construction noise levels by a minimum of 10 dB. However, even with implementation of this mitigation measure, noise levels experienced at residences adjacent to off-site construction activity would be above the City's threshold. Therefore, impacts would remain significant and unavoidable. (Revised Final EIR Part 4 Volume 3, pgs. 4.12-17 to 4.12-26).

b. Substantial Temporary and/or Periodic Increase in Ambient Noise Levels – Construction

Significant Unavoidable Impact: The Revised Final EIR evaluated and concluded that the Project would elevate the existing ambient noise level above the applicable 10 dB substantial temporary increase threshold.

Finding: Potential impacts of the Project related to an increase in ambient noise levels are discussed in detail in Section 4.12 of the Revised Final EIR Part 3. Changes or alterations have been required in, or incorporated into, the Project which would mitigate or avoid the significant effects on the environment (Finding 1). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program. However, as there is no effective mitigation available to reduce construction noise so that ambient levels would not be elevated above the applicable 10 dB substantial temporary increase threshold, impacts will remain significant and unavoidable. Specific economic, legal, social, technological, or other considerations make the alternatives identified in the Revised Final EIR and additional mitigation measures infeasible, and overriding economic, legal, social, technological, or other benefits of the project outweigh the

significant and unavoidable effects on the environment, which are set forth in Section VI, Statement of Overriding Considerations (Finding 3).

Facts in Support of the Finding: The Project has the potential of exposing sensitive receptors within the vicinity of on- and off-site construction areas to noise levels that could temporarily exceed the existing ambient noise level by more than the applicable 10 dB substantial temporary increase threshold. As discussed in Section 4.12.3 of the Revised Final EIR Part 3, the City of Moreno Valley Noise Ordinance and General Plan do not contain an incremental increase threshold for construction. Therefore, for purposes of analysis, it was considered a significant impact in cases where sensitive receptors are exposed to construction noise levels that increase ambient noise levels by 10 dB.

Construction activities within the Project area (i.e., Plots 1 through 22) would exceed existing ambient noise levels by as much as 50 dB. The existing sensitive receptors that would be most affected by on-site construction activities are located within, to the west, and to the southwest of the Project area. The Project-related construction activities could also have the potential to expose wildlife located within the undeveloped land located south of the Project area to construction noise levels that would exceed the existing ambient by more than the applicable 10 dB substantial temporary increase threshold. Transient construction noise consisting of worker trips and construction equipment and materials delivery would not occur along the southern boundary of the site, adjacent to the wildlife area. Therefore, noise generated during on-site construction activities would not result in a substantial temporary or periodic increase in ambient noise levels in the Project vicinity above levels existing without the Project with regard to the adjacent wildlife area. However, noise generated during on-site construction activities would result in a substantial temporary or periodic increase in ambient noise levels at residences within, to the west, and to the southwest of the Project areas and would result in a significant impact (Revised Final EIR, Part 3, pg. 4.12-26 and Revised Final EIR, Part 1, pg. 744). As shown in Table 4.12-10 (Revised Final EIR pg. 4.12-29 to 4.12-35), off-site construction (e.g., roadway improvements, drainage improvements, etc.) in some areas, would exceed existing ambient noise levels by as much as 45 dB. The existing sensitive receptors located adjacent to Redlands Boulevard, Cactus Avenue and near the intersections of World Logistics Center Parkway, South of SR 60/Highway 60 and Redlands Boulevard/Highway 60 would be most affected by off-site construction activities. Therefore, noise generated during off-site construction activities would result in a substantial temporary or periodic increase over ambient noise levels in the Project in the absence of Project and would result in a significant impact.

Implementation of Mitigation Measure 4.12.6.1A would reduce construction noise levels at nearby sensitive receptors through implementation of a NRCP, which is expected to attenuate construction noise levels by 10 dB and which will prohibit construction activities within 800 feet of residences during nighttime hours. As shown in Table 4.12-8 and Table 4.12-10, even with implementation of Mitigation Measure 4.12.6.1A, sensitive receptors located near on-site and off-site construction areas would be exposed to construction noise levels that would exceed the existing ambient noise levels by more than the applicable 10 dB substantial temporary increase threshold. Therefore, this would result in a significant and unavoidable impact with mitigation.

c. On-Site Short-term Construction Impacts - Daytime

Significant Unavoidable Impact: The Revised Final EIR evaluated and concluded that on-site Project construction activities would adversely affect residences located within 500 feet of a construction area as the residences would be exposed to noise levels greater than 60 dBA (Leq).

Finding: Potential impacts of the Project related to on-site short-term construction impacts on the Project site are discussed in detail in Section 4.12 of the Revised Final EIR Part 3. Changes or alterations have been required in, or incorporated into, the Project which would mitigate or avoid the significant effects on the environment (Finding 1). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program. However, as there is no effective mitigation available to protect existing residences within 500 feet of a construction area from significant Project-related daytime noise impacts during construction, impacts on existing residences will remain significant and unavoidable. Specific economic, legal, social, technological, or other considerations make the alternatives identified in the Revised Final EIR and additional mitigation measures infeasible, and overriding economic, legal, social, technological, or other benefits of the project outweigh the significant and unavoidable effects on the environment, which are set forth in Section VI, Statement of Overriding Considerations (Finding 3).

Facts in Support of the Finding: Construction noise levels in and around the Project area would fluctuate depending on the type, number, and duration of use of various pieces of construction equipment. Construction-related material haul trips would raise ambient noise levels along haul routes, depending on the number of haul trips made and types of vehicles used. In addition, certain types of construction equipment generate impulsive noises (such as pile driving or blasting), which can be particularly disruptive. Pile driving and blasting, however, is not proposed during Project construction. Table 4.12-7 shows typical noise levels produced by the types of construction equipment that would likely be used during Project construction.

The City of Moreno Valley Noise Ordinance prohibits construction from occurring outside of the hours of 8:00 p.m. to 7:00 a.m. that creates a noise disturbance. Construction occurring within the allowable hours of 7:00 a.m. and 8:00 p.m. would not result in the violation of the City's Noise Ordinance. Exposing residences to noise levels exceeding those identified in Table 4.12-5 during daytime or nighttime project construction would result in violation of the City's Noise Ordinance (Revised Final EIR Part 3, pg. 4.12-16)

Construction operations would occur in two general areas; on-site and off-site. The on-site construction activities will be more intense. Some phases of the on-site construction are expected to occur for 24- hours a day, 7-days per week. For the purpose of this analysis, construction is anticipated to begin in 2020, periodically, for a total of 15-years.

On-site construction activities are expected to occur outside of the allowed construction hours specified in the City of Moreno Valley Noise Ordinance. The operation of each piece of off-road equipment within the on-site construction areas (i.e., Plots 1 through 22) would not be constant throughout the day, as equipment would be turned off when not in use. Most of the time over a typical work day, the equipment would be operating at different locations within the various Plots of the Project site and would not likely be operating concurrently. However, for a more conservative approximation of construction noise levels to which the nearest sensitive receptor would be exposed, it is assumed that two of the loudest pieces of construction equipment would be operating at the same time and located within the Project Plots nearest to a sensitive receptor. The nearest

sensitive receptors are the existing on-site residences, which would be located approximately 25 feet from construction activity of various Plots. As a worst-case scenario, it has been assumed that all existing on-site residences will remain onsite throughout construction (Revised Final EIR Part 3, pg. 4.12-17).

Based on the list of the construction equipment that would be used at each of the Plots, it was assumed that the two loudest pieces of off-road equipment (a paver and scraper) would have a combined noise level of 85 dBA Leq from a distance of 50 feet (FHWA, 2006a). Using this reference noise level and a 7.5 dB per doubling of distance attenuation rate, the noise exposure level at representative locations around the Project site were calculated and presented in Table 4.12-8. The location of the modeled receptor locations is presented in Figure 4.12-3. As shown in Figure 4.12-3 and Table 4.12-8 of the Revised Final EIR Part 3, noise generated during construction on the Plots, in some cases construction of various Plots occurring concurrently, would expose sensitive receptors to noise levels that would exceed the City's 60 dBA Leq daytime exterior noise standard. Specifically, impacts would occur at existing residences located within and to the west of the Project area. Affected receptors are all located within City of Moreno Valley boundaries.

Based on these projections, anticipated worst-case construction noise levels would regularly be exceeded at residences within and near the Project area. Based on an Leq noise level of 85 dBA Leq at 50 feet and an attenuation rate of 7.5 dB per doubling of distance, an observer would need to be at a distance of 500 feet from an active Project construction area to experience a noise level of 60 dBA Leq, or 800 feet for a noise level of 55 dBA Leq. Therefore, the on-site construction of the Project would result in the exposure of persons to or generation of noise levels in excess of standards established in the City of Moreno Valley Noise Ordinance and would result in a significant impact.

Implementation of **Mitigation Measure 4.12.6.1A** (as revised [Additional Errata to the Revised Final EIR dated June 9, 2020]) would reduce construction noise levels at nearby sensitive receptors, except for those located within 500 feet from active construction areas, through implementation of a NRCPP, which is expected to attenuate construction noise levels by a minimum of 10 dB. Table 4.12-8 shows mitigated construction noise levels at sensitive receptors in the vicinity of on-site construction areas. With regard to daytime construction, sensitive receptors located within and to the west of the Project (within 500 feet of active construction areas) would continue to be exposed to construction noise levels that would exceed the City's daytime exterior noise standard of 60 dBA Leq even with implementation of mitigation. Additionally, with a 10-dB reduction, off-site construction activity would continue to expose the sensitive receptors at 25 feet to noise levels up to 83 dBA Leq. Therefore, this would result in a significant and unavoidable impact even with the implementation of mitigation.

d. Long-Term Traffic Noise Impacts

Significant Unavoidable Impact: The Revised Final EIR evaluated and concluded that the Project's long-term traffic would result in a substantial permanent increase in ambient noise levels in the vicinity of the WLC Specific Plan area exceeding the maximum noise level allowed under the City's Municipal Code.

Finding: Potential impacts of the Project related to long-term traffic noise impacts on the Project site are discussed in detail in Section 4.12 of the Revised Final EIR Part 3. Changes or alterations have been required in, or incorporated into, the Project which would mitigate or avoid the significant effects on the environment.

(Finding 1). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program. However, the Council finds that even with application of these mitigation measures, the Project will have a significant impact due to adverse effects to long-term traffic noise impacts and therefore, are considered significant and unavoidable. Specific economic, legal, social, technological, or other considerations make the alternatives identified in the Revised Final EIR and additional mitigation measures infeasible, and overriding economic, legal, social, technological, or other benefits of the project outweigh the significant and unavoidable effects on the environment, which are set forth in Section VI, Statement of Overriding Considerations (Finding 3).

Facts in Support of the Finding: The noise analysis for the World Logistics Center project is based on the traffic volume data contained in the revised Traffic Impact Analysis (TIA) prepared for the Project (contained in its entirety as Revised Final EIR Part 3 Appendix D). The TIA addressed the intersections of surface streets in Moreno Valley of a collector or higher classification street with another collector or higher classification street, at which the Project will add 50 or more peak hour trips. The study area also included the main travel routes between the Project and the nearby cities of Riverside, Perris, Beaumont, San Jacinto, and Redlands. The study area extended west to the nearest ramps on SR-91 and as far south as the I-215 ramps at Redlands Avenue in Perris. The study area for freeways was selected to encompass the freeway routes radiating from the Project site to the north, south, east, and west. The study area extended west to the nearest ramps on SR-91 and as far south as the I-215 ramps at Redlands Avenue in Perris. The study area for freeways was selected to encompass the freeway routes radiating from the project site to the north, south, east, and west. The traffic analysis covered SR-60 from I-10 in the east to SR-71 in the west, SR-91/I-215 from I-210 in the east to I-15 in the west, I-215 from Redlands Avenue in the north to the Scott Road interchange in the south, and I- 10 from SR-62 in the east to SR-60 in the west.

Three hundred and thirty-nine (339) roadway links and eighty-nine (89) freeway segments were analyzed in the noise analysis. The change in noise level was calculated for all 428 roadway and freeway links with and without the World Logistics Center project for the (2018)³¹, 2025, and 2040 buildout scenarios.³² Segments with noise increases less than 1.5 dB would not have a substantial noise increase and were not presented in the main body of the noise report (i.e., the tables). Similarly, any segments that do not have sensitive receptors (e.g., residential uses or schools) were also not presented in the main body of the noise report. Based on this filtering process, of the 428 segments analyzed, 21 segments have sensitive receptors and an increase of 1.5

³¹ The Project’s contribution to traffic noise in 2020 would represent a slightly smaller percentage given the increase in ambient traffic of roughly 2% per year. Using a 2018 buildout year therefore slightly overstates the increase in traffic noise attributable to the Project.

³² The traffic impact analysis (TIA) (Revised FEIR Part 3, Appendix F) analyzes full project buildout under existing conditions (year 2018) and full project buildout in 2040, which is the worst case for traffic analysis purposes as it accounts for greater regional growth in non-project traffic. For purposes of conservative air quality and greenhouse gas analyses in the Revised FEIR Part 2, it is assumed that full project operations would occur as early as 2035, resulting in the use of higher mobile emissions factors (dirtier engines). In addition, the public project buildout scenario under existing conditions assumed the year 2020 to align with the date of Part 2 of the Revised FEIR. The traffic utilized in the traffic noise analysis remain unchanged and references to the 2018 and 2040 build out years has been retained to maintain consistency with the TIA.

dB for at least one buildout scenario and were therefore addressed in the analysis (Revised Final EIR Part 3, pgs. 4.12-36 to 4.12-37).

The projected future traffic volumes (WSP USA, June 2018) for roadway segments in the World Logistics Center project vicinity found in the TIA were used in the traffic noise analysis. Modeled noise levels represent the worst-case scenario, which assumes that no shielding is provided between the traffic and the location where the noise contours are drawn. As previously identified, long-term impacts from the Project's traffic noise that affect existing sensitive land uses are considered to be substantial and, therefore, constitute a significant noise impact if the Project would:

- Increase noise levels by 5dB or more where the no Project noise level is less than 60 CNEL;
- Increase noise levels by 3dB or more where the no Project noise level is 60 CNEL to 65 CNEL; or
- Increase noise levels by 1.5 dB or more where the no Project noise level is greater than 65 CNEL.

Operation of development that could occur within the World Logistics Center Project area would generate traffic along roadways in the project vicinity. Table 4.12-11 of the Revised Final EIR Part 3 (pg. 4.12-37) identifies existing with Project roadway traffic noise levels. Build out of the proposed WLC project under 2018 conditions would result in substantial increases in traffic noise levels in the Existing plus Project Build Out scenario case. The largest Project-related increase in traffic noise would be along Cactus Avenue Extension and Street F where increases of greater than 65 dBA are predicted. However, the increases associated with these roadway segments are attributable to Cactus Avenue Extension and Street F being new roads that will be constructed by the Project. A total of 13 road or freeway segments would result in a substantial noise increase attributable to the Project, resulting in a significant impact requiring mitigation.

Year 2025 (Phase I) With and Without World Logistics Center project scenarios projected traffic volumes on roadway segments in the Project vicinity were used to conduct the traffic noise modeling. The projected traffic volumes in the area were taken from the TIA prepared for the Project. Table 4.12-12 of the Revised Final EIR Part 3 (pg. 4.12-38) identifies year 2025 Without Project and With Project traffic noise levels.

Increases in noise levels associated with Buildout Year (2040) traffic conditions on area roadways range up to 68.3 dBA. As identified in Table 4.12-13, the greatest increase in noise levels would be along Cactus Avenue Extension and Street F (east of World Logistics Center Parkway), where increases of 66.8 dBA and 68.3 dBA, respectively, are predicted for the Buildout Year 2040 With Project scenario over the Buildout Year 2040 Without Project scenario. However, the increases associated with these roadway segments are attributable to Cactus Avenue Extension and Street F being new roads that will be constructed by the Project. A total of eight road and freeway segments would result in a substantial noise increase attributable to the Project, resulting in a significant impact requiring mitigation (Revised Final EIR Part 3, pg. 4.12-39).

Areas within the World Logistics Center Site. Six occupied noise-sensitive uses within the World Logistics Center site include residences that may remain with the implementation of the Project. The land is currently zoned as WLC SP-LD with Industrial/Business Park general land uses, but it is anticipated that the residences

may remain for some time. The existing residences, as long as they remain, must be considered sensitive land uses.

- *Street A/ World Logistics Center Parkway, South of SR 60 (Street B/Eucalyptus Avenue to Street F)*. Three residences are located along Street A (World Logistics Center Parkway, South of SR 60) between the future Street B and Street F. These residences are anticipated to experience noise increases up to 18.5 dB due to the implementation of the Project. As a result, existing noise levels at these residences will be changed significantly. Therefore, this would be a significant impact requiring mitigation. The exact alignment of the roadway is to be determined, but the homes may be roughly 100 feet from the centerline on the roadway. Two residences front onto Street A (World Logistics Center Parkway), and the driveway access would make a soundwall ineffective. The other residence is on Street A (World Logistics Center Parkway) and it is difficult to determine where an outdoor living area is for this residence. However, since it is a single residence, a soundwall would have a limited effectiveness. Since mitigation is not feasible, impacts remain significant and unavoidable.
- *Street F/Dracaea Avenue (east of Street A/ World Logistics Center Parkway, South of SR 60)*. A single residence is located east of World Logistics Center Parkway, South of SR 60 along what is currently Dracaea Avenue (future Street F). Existing conditions identify low levels of traffic noise on Dracaea Avenue. With build out of the Project in year 2040, this residence would experience noise increases up to 69.2 CNEL during the 2018 buildout year. Therefore, this would be a significant impact requiring mitigation. Installation of a soundwall would not be effective in reducing noise levels due to the opening for the driveway. Since mitigation is not feasible, impacts remain significant and unavoidable.
- *Street E/Dracaea Avenue (east of Redlands Boulevard)*. Two residences are located along Dracaea Avenue east of Redlands Boulevard. These residences would be most affected by traffic along Redlands Boulevard between Eucalyptus Avenue and Cottonwood Avenue, where no significant noise increase has been identified. Additionally, although the alignment of future Street E is not yet known, it is not anticipated that the future Street E centerline would be located less than 100 feet from these residences. Therefore, impacts would be less than significant, and no mitigation is required.

Off-Site Areas Adjacent to the World Logistics Center Site. For areas adjacent to the World Logistics Center site, 13 segments would experience a noise increase that would be greater than significance criteria specified previously. These areas are described below.

- *Street D/Cactus Avenue Extension (Alessandro Boulevard to Cactus Avenue)*. Cactus Avenue Extension, as shown in the Specific Plan, will come down the western side of the World Logistics Center project parallel to Merwin Street. It then merges with Cactus Avenue traveling to the west until Redlands Boulevard. A specific alignment has not been determined for this roadway. There are approximately 14 homes that side-on to Merwin Street that could be affected by traffic on Cactus Avenue Extension. There are no soundwalls along these homes. These homes would experience noise level increases of up to 66.8 dB during the 2040 buildout year. Therefore, this would be a significant impact requiring mitigation.
- *Redlands Boulevard (from Eucalyptus Avenue to State Route 60)*. There are homes located at the northwestern corner of Redlands Boulevard and Eucalyptus Avenue. The 2018 buildout

scenario results in a significant noise increase of 2.8 dB. Therefore, this would be a significant impact requiring mitigation.

- *Cactus Avenue (west of Redlands Boulevard)*. Existing residences are located along Cactus Avenue with rear yards facing Cactus Avenue with soundwalls located along the rear yards of the residences. The 2018 and 2040 buildout scenarios result in significant noise increases of 2.1 dB and 3.9 dB, respectively. Therefore, this would be a significant impact requiring mitigation.
- *Ironwood Avenue (between Redlands Boulevard and Highland Boulevard)*. There are two single-family homes that front onto Ironwood Avenue. There are also two churches along this roadway. A significant noise increase of 5.5 dB is projected for 2018 with full Project build-out. Therefore, this would be a significant impact requiring mitigation.
- *Cactus Avenue (Redlands Boulevard to Cactus Avenue Extension)*. This area is occupied by a small group of single-family homes along Cactus Avenue between the future Street D/Cactus Avenue Extension and Redlands Boulevard. A significant noise increase is projected for all buildout scenarios. Currently, there is no soundwall along these homes. Therefore, this would be a significant impact requiring mitigation.
- *Locust Avenue (between Moreno Beach Drive and Smiley Boulevard)*. There are three single-family homes along this roadway and the front onto the roadway. The 2018 buildout scenario results in a significant noise increase for this area. In 2018, the project will increase noise levels by 5.1 dB. Therefore, this would be a significant impact requiring mitigation.
- *Locust Avenue (between Moreno Beach Drive and Redlands Boulevard)*. There are single-family homes along this roadway with front, rear, and side yards facing Locust Avenue. With Project buildout in 2018, the project will increase noise levels by 5.7 dB. Therefore, this would be a significant impact requiring mitigation.
- *Kitching Street (between Krameria Avenue and Lurin Avenue)*. There are single-family homes along this roadway with rear yards facing Kitching Street. Existing 6-foot high soundwalls are located along the residences and rear yard areas. Under the 2018 buildout scenario, the noise level is projected to increase by 3.2 dB. Therefore, this would be a significant impact requiring mitigation.
- *State Route 60 eastbound ramps (between SR-60 and Central Avenue)*. Single-family homes are located south of SR-60 eastbound ramps. Under the Project buildout scenario in year 2018, a noise level increase of 7.6 dB is anticipated. Therefore, this would be a significant impact requiring mitigation.
- *State Route 60 (from Perris Boulevard to Nason Street)*. All residential areas along this stretch of freeway have soundwalls in place. The 2018 buildout scenario results in a significant noise increase of 1.5 dB. Therefore, this would be a significant impact requiring mitigation.
- *State Route 60 (from Moreno Beach Drive to Redlands Boulevard)*. There are soundwalls in place for all residences in this area. The existing 2018 buildout scenario results in a significant noise increase of 2.4 dB. Therefore, this would be a significant impact requiring mitigation.
- *State Route 215 (from Mill Street to 2nd Street)*. There are four residential uses located to the west of SR-215 south of 2nd Street with no soundwalls. The residential uses are set back from the freeway and are located at a lower grade than the freeway. The 2040 buildout scenario

results in a significant noise increase of 1.9 dB. Therefore, this would be a significant impact requiring mitigation.

- *State Route 215 (from Baseline Road to Highland Avenue/SR-210)*. There are residential uses on the west and east sides of SR-215. There are soundwalls in place along this segment of the SR-215 alignment. The 2040 buildout scenario results in a significant noise increase of 1.7 dB. Therefore, this would be a significant impact requiring mitigation.

Specific Plan Design Features. The WLCSP indicates there will be a 250-foot setback from existing housing along Redlands Boulevard. No additional design features to attenuate noise impacts are planned as part of the WLCSP.

With the implementation of **Mitigation Measures 4.12.6.2A** through **4.12.6.2D**, two areas would experience noise increases that would be mitigated to a less than significant level. Those areas are as follows:

- Cactus Avenue from Redlands Boulevard to Cactus Avenue Extension; and
- Cactus Avenue Extension from Alessandro Boulevard to Cactus Avenue.

For the remaining noise impact locations adjacent to the World Logistics Center site for which significant noise impacts have been identified, mitigation measures are not feasible or will not fully reduce the impact to less than significant levels; therefore, aside from the two areas listed above, impacts would remain significant and unavoidable (Refer to Revised Final EIR Part 3, pgs. 4.12-44 to 4.12-45).

e. Cumulative Short-Term Construction Noise

Significant Unavoidable Impact: The Revised Final EIR evaluated and concluded that the Project's contribution to cumulative short-term construction noise levels in the project vicinity is cumulatively considerable.

Finding: Potential impacts of the Project related to short-term construction noise impacts are discussed in detail in Section 6.12 of the Revised Final EIR Part 3. Changes or alterations have been required in, or incorporated into, the Project which would mitigate or avoid the significant effects on the environment (Finding 1). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program. However, as there is no effective mitigation available to protect existing residences within 500 feet of a construction area from significant noise levels, Project-related noise cumulative impacts during construction on existing rural residences will remain significant and unavoidable. Specific economic, legal, social, technological, or other considerations make alternatives identified in the Revised Final EIR and additional mitigation measures infeasible, and overriding economic, legal, social, technological, or other benefits of the project outweigh the significant effects on the environment, which are set forth in Section VI, Statement of Overriding Considerations (Finding 3).

Facts in Support of the Finding: As discussed in Section 6.12 of the Revised Final EIR Part 3, construction crew commutes and the transport of construction equipment, and materials to the WLCSP area would incrementally increase noise levels on access roads leading to the site. Secondary sources of noise would include noise generated during excavation, grading, and building erection on the Project site. The net increase

in Project site noise levels generated by these activities and other sources has been quantitatively estimated and compared to the applicable noise standards and thresholds of significance. Three cumulative projects are located at distances that could undergo construction activities during the Project's 16-year construction period: MV-5: P06-158/Gascon, MV-6: Highland Fairview Corporate Park, and MV-126: TTM 33222. Construction of the western portion of the Project would result in significant and unavoidable impacts. Should any of these three cumulative projects undergo construction while the western portion of the Project is under construction, cumulative construction noise impacts would occur, potentially exposing sensitive receptors to cumulative construction noise greater than that experienced from Project construction alone. Therefore, Project construction would result in cumulatively considerable and potentially significant cumulative noise impacts.

The three cumulative construction projects do not have CEQA documents in which construction noise has been analyzed. Therefore, assuming that construction of Related Projects would consist of similar construction activity and equipment as the project, receptors located nearest both the Project and each of the related projects could potentially be exposed to noise level increase of 10.1 dBA Leq and 44.4 dBA Leq (Revised Final EIR Part 3 pg. 6.12-25).

Implementation of Mitigation Measure 4.12.6.1A would reduce construction noise levels at nearby sensitive receptors through implementation of a Noise Reduction Compliance Plan (NRCP), which is expected to attenuate construction noise levels by 10 dB and prohibit construction activities within 800 feet of residences during nighttime hours. As shown in Section 4.12, Table 4.12-8 and Table 4.12-9, even with implementation of Mitigation Measure 4.12.6.1A, sensitive receptors located near on-site and off-site construction areas would be exposed to construction noise levels that would exceed the existing ambient noise levels by more than the applicable 10 dB substantial temporary increase threshold. As shown in Table 6.12-3 (Revised Final EIR Part 3 pg. 6.12-26), with implementation of mitigation measures to Project construction noise levels, cumulative construction noise at sensitive receptors nearest Related Project MV-126 is expected to remain significant and unavoidable. Therefore, this would result in a significant and unavoidable cumulative impact with mitigation.

f. Cumulative Long-Term Traffic Noise Impacts

Significant Unavoidable Impact: The Revised Final EIR evaluated and concluded that the Project's contribution to cumulative long-term traffic noise levels in the project vicinity is cumulatively considerable.

Finding: Potential cumulative impacts of the Project related to cumulative long-term traffic noise impacts are discussed in detail in Section 6.12 of the Revised Final EIR Part 3. Changes or alterations have been required in, or incorporated into, the Project which would mitigate or avoid the significant effects on the environment (Finding 1). Each mitigation measure is adopted by the City Council and set forth in the attached Mitigation Monitoring and Reporting Program. However, the Council finds that even with application of these mitigation measures, the Project will have significant cumulative impacts due to adverse effects to long-term traffic noise impacts and therefore are considered significant and unavoidable. Specific economic, legal, social, technological, or other considerations make the alternatives identified in the Revised Final EIR and additional mitigation measures infeasible, and overriding economic, legal, social, technological, or other benefits of the project outweigh the significant and unavoidable effects on the environment, which are set forth in Section VI, Statement of Overriding Considerations (Finding 3).

Facts in Support of the Finding: The noise analysis for the World Logistics Center project is based on the traffic volume data contained in the revised Traffic Impact Analysis (TIA) prepared for the Project (contained in its entirety as Revised Sections of the Final EIR Appendix D). Cumulative traffic volumes contained in the TIA were developed for the Future Year 2025 and Buildout 2040 analysis time horizons. Traffic volumes for each time horizon were developed utilizing a combination of various future traffic growth methods as follows. For Future Year 2025, traffic volumes were developed by interpolating year 2040 traffic volume projections from the Riverside County Transportation and Analysis Model (RivTAM) to year 2025 plus traffic from a list of past, present, and reasonably foreseeable projects (see Table 6.12B). For Buildout Year 2040, traffic volumes were developed by utilizing the year 2040 traffic volume projections from the RivTAM plus traffic from a list of past, present, and reasonably foreseeable projects.

Three hundred and thirty-nine (339) roadway links and eighty-nine (89) freeway segments were analyzed in the noise analysis. The change in noise level was calculated for all 428 roadway and freeway links with and without the World Logistics Center project for the existing case (2018), 2025, and 2040 buildout scenarios. Segments with noise increases less than 1.5 dB would not have a substantial noise increase and were not presented in the main body of the noise report (i.e., the tables). Similarly, any segments that do not have sensitive receptors (e.g., residential uses or schools) were also not presented in the main body of the noise report. Based on this filtering process, of the 428 segments analyzed, 21 segments have sensitive receptors and an increase of 1.5 dB for at least one buildout scenario and were therefore addressed in the analysis (Revised Final EIR Part 3, pgs. 6.12-26).

Cumulative noise impacts associated with roadway noise have been addressed based on the cumulative traffic volumes, analyzing the difference between future plus project traffic noise and existing without Project traffic noise to account for cumulative projects as well as ambient growth as a worst-case scenario. As identified in Table 6.12-4 (Revised Final EIR Part 3 pg. 6.12-27), implementation of the proposed WLC project would contribute to cumulative changes in traffic noise levels in Year 2025 (Phase I). The largest Project-related increase in traffic noise would be along Street D/Cactus Avenue Extension (Alessandro Avenue to Cactus Avenue) and along Street F (east of World Logistics Center Parkway), where increases of 63.9 dBA and 58.1 dBA, respectively, are predicted for the 2025 With Project Phase 1 scenario over the 2018 Existing Conditions scenario. However, the increases associated with these roadway segments is attributable to Street D/Cactus Avenue Extension and Street F being new roads that will be constructed by the Project through open space areas that are currently vacant and don't contribute to the overall ambient noise environment. A total of eleven road segments would result in a substantial noise increase attributable to the Project, resulting in a significant cumulative impact requiring mitigation.

Increases in noise levels associated with Buildout Year traffic conditions on area roadways range up to 68.3 dBA. As identified in the Table 6.12-5 (Revised Final EIR Part 3, pg. 6.12-28), the greatest increase in noise levels would be along Street D/Cactus Avenue Extension (Alessandro Boulevard to Cactus Avenue) and along Street F (east of World Logistics Center Parkway), where increases of 66.8 dBA and 68.3 dBA, respectively, are predicted for the Buildout Year With Project scenario over the Existing Conditions scenario. However, the increases associated with these roadway segments is attributable to Cactus Avenue Extension and Street F, being new roads that will be constructed by the Project through open space areas that are currently vacant and

don't contribute to the overall ambient noise environment. A total of twenty-one road and freeway segments would result in a substantial noise increase attributable to the Project, resulting in a significant impact requiring mitigation.

The Project calls for improvements to several of the roadways around the project area in order to accommodate the projected increase in Project traffic volumes. The presence of residential uses occurs within the Project and nearby area. These roadway segments are analyzed against the thresholds for determining significant impacts defined previously in Section 4.12.6.2 (Revised Final

EIR Part 3 pg. 4.12-36 to 4.12-45). As described previously in Section 4.12.4 (Revised Final EIR Part 3, pg. 4.12-15 to 4.12-16), the Project's incremental contribution to a cumulative noise increase would be considered cumulatively considerable and significant when ambient noise levels affect noise-sensitive land uses and when the Project increases noise levels by 1 dB or more over pre-Project conditions and the predicted future cumulative with Project noise levels cause the following cumulative increases:

- Increase noise levels by 5 dB or more where the existing noise level is less than 60 CNEL;
- Increase noise levels by 3 dB or more where the existing noise level is 60 to 65 CNEL; or
- Increase noise levels by 1.5 dB or more where the existing noise level is greater than 65 CNEL.

Cumulative noise impacts associated with roadway noise have been addressed based on the 2025 and 2040-time horizons analyses for the roadway segments identified for analysis in Section 4.12 of the Revised Final EIR Part 3. Table 6.12-4 (Revised Final EIR Part 3, pg. 6.12-27) and Table 6.12-5 (Revised Final EIR Part 3, pg. 6.12-28) show the Future Year 2025 and Buildout 2040, respectively, CNEL values with the Project and if a substantial increase would be produced based on the cumulatively significant significance criteria identified above. Traffic noise level increases from the existing baseline condition and the future (2025 and 2040) time horizons are attributable to the intermingled effects of both the cumulative (i.e., past, present, and reasonably foreseeable projects) development projects in the Project vicinity and region as well as the Project.

As discussed in Section 4.12.6.2 (Revised Final EIR Part 3, pg. 4.12-36 to 4.12-45), there are numerous instances in which there is no feasible means to reduce roadway noise impacts because of the existing developed nature of the affected roadway segment and/or the scattered nature of the sensitive receptors (i.e., residences), which prohibits the effectiveness of a soundwall. For those segments at which there is a cumulatively considerable impact and there is no feasible means to provide mitigation, the significant cumulative impact will remain significant and unavoidable (Revised Final EIR Part 3, pg. 6.12-29).

5. Transportation

a. Intersection and Roadway Level of Service (Outside the Jurisdiction of the City of Moreno Valley)

Potential Significant Impact: Whether the Project could cause an increase in traffic that is substantial in relation to the existing traffic load and capacity of the street system.

Findings: Potential impacts of the Project related to the increase in traffic volumes are discussed in detail in Section 4.15 and Appendix F of the Revised Final EIR Part 3. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment (Finding 1). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program. However, the Council finds that even with mitigation measures, the Project will have significant impacts due to inability to control the mitigation, funding and timing for improvements located outside the City of Moreno Valley, and therefore are considered significant and unavoidable. Those changes or alterations that are within the responsibility and jurisdiction of another public agency and have been, or can and should be, adopted by that other agency (Finding 2). Specific economic, legal, social, technological, or other considerations make the alternatives identified in the Revised Final EIR and additional mitigation measures infeasible, and overriding economic, legal, social, technological, or other benefits of the project outweigh the significant and unavoidable effects on the environment, which are set forth in Section VI, Statement of Overriding Considerations (Finding 3).

Facts in Support of the Findings: The Traffic Impact Analysis (TIA, Revised Final EIR Part 3, Appendix F) discusses Project-related impacts to the intersection and roadway level of service (LOS) under the following development scenarios:

- 5) Existing baseline conditions (2018) plus Phase 1 of the Project
- 6) Existing baseline conditions (2018) plus Buildout of the Project
- 7) Existing baseline conditions plus other past, present, and reasonably foreseeable projects expected to be constructed by 2025 plus Phase 1 of the Project
- 8) Existing baseline conditions plus other past, present, and reasonably foreseeable projects expected to be constructed by 2040 plus Buildout of the Project

The study area for surface streets covered all intersections in Moreno Valley of collector or higher functional classification with another collector or higher classification street, at which the Project would add 50 or more peak hour trips, the standard generally used to determine if an impact is potentially significant. The study area also included the main routes between the Project and the neighboring communities of Riverside, Perris, Beaumont, San Jacinto, and Redlands. The study area also extended west to the nearest ramps to SR-91 and as far south as the I-215 ramps at Redlands Avenue in Perris. The study area for freeways was selected to encompass the freeway routes extended from the Project site to the north, south, east, and west. The analysis covered SR-60 from I-10 in the east to SR-71 in the west, SR-91/I-215 from I-210 in the east to I-15 in the west, I-215 from Redlands Avenue in the north to the Scott interchange in the south, and I-10 from SR-62 in the east to SR-60 in the west. In addition, any freeway ramp where the Project added 100 or more peak-hour trips was also studied.

Intersection LOS

Existing Baseline (Year 2018) Plus Project Phase 1. Existing baseline (Year 2018) plus Project Phase 1 levels of service for the study area intersections are summarized in Table 26 of the Revised Final EIR Part 3, Appendix F (pg. 123), showing that 19 intersections would operate at unacceptable LOS. Table 27 (pg. 129)

shows there are 15 study intersections where Phase 1 of the Project would have a significant impact. Of those 15 study intersections, 12 are located outside of the jurisdiction of the City of Moreno Valley.

Existing Baseline (Year 2018) Plus Project Buildout. Existing baseline (Year 2018) plus Project Buildout levels of service for the study area intersections are summarized in Table 35 of the Revised Final EIR Part 3, Appendix F (pg. 161), showing that 25 intersections would operate at unacceptable LOS. Table 36 (pg. 167) shows there are 17 study intersections where buildout of the Project would have a significant impact. Of those 17 study intersections, 12 are located outside of the jurisdiction of the City of Moreno Valley.

2025 Plus Project Phase 1. Year 2025 plus Project Phase 1 levels of service for the study area intersections are summarized in Table 49 of the Revised Final EIR Part 3, Appendix F (pg. 229), showing that 26 intersections would operate at unacceptable LOS. Table 50 (pg. 235) shows there are 13 study intersections where Phase 1 of the Project would have a significant impact. Of those 13 study intersections, 10 are located outside of the jurisdiction of the City of Moreno Valley.

2040 Plus Project Buildout. Year 2040 plus Project Buildout levels of service for the study area intersections are summarized in Table 63 of the Revised Final EIR Part 3, Appendix F (pg. 300), showing that 72 intersections would operate at unacceptable LOS. Table 64 (pg. 306) shows there are 30 study intersections where buildout of the Project would have a significant impact. Of those 30 study intersections, 13 are located outside of the jurisdiction of the City of Moreno Valley.

Roadway Segment LOS

Existing Baseline (Year 2018) Plus Project Phase 1. The roadway segment levels of service for the study area are summarized in Table 25 of the Revised Final EIR Part 3, Appendix F (pg. 104). Table 25 shows that 3 roadway segments would operate at unacceptable LOS and that the Project would worsen conditions, resulting in significant impacts at all 3 roadway segments. Of those 3 segments, 2 are located outside of the jurisdiction of the City of Moreno Valley.

Existing Baseline (Year 2018) Plus Project Buildout. The roadway segment levels of service for the study area are summarized in Table 34 of the Revised Final EIR Part 3, Appendix F (pg. 142). Table 34 shows that three roadway segments would operate at unacceptable LOS and that the Project would worsen conditions, resulting in significant impacts at all three roadway segments. Of those 3 segments, 2 are located outside of the jurisdiction of the City of Moreno Valley.

2025 Plus Project Phase 1. The roadway segment levels of service for the study area are summarized in table 48 of the Revised Final EIR Part 3, Appendix F (pg. 210). Table 48 shows that all study segments would operate at acceptable LOS, and no Project impacts would occur.

2040 Plus Project Buildout. The roadway segment levels of service for the study area are summarized in Table 62 of the Revised Final EIR Part 3, Appendix F (pg. 280). Table 62 shows that one roadway segment, located outside of the jurisdiction of the City of Moreno Valley, would operate at unacceptable LOS and that the Project would worsen conditions, resulting in a significant impact.

Freeway Segment LOS

Existing Baseline (Year 2018) Plus Project Phase 1. Existing baseline (Year 2018) plus Project Phase 1 levels of service for freeway segments are summarized in Table 28 of the Revised Final EIR Part 3, Appendix F (pg. 130), showing that 33 freeway segments would operate at unacceptable LOS. Table 29 (pg. 135) shows there are 24 freeway segments where Phase 1 of the Project would have a significant impact.

Existing Baseline (Year 2018) Plus Project Buildout. Existing baseline (Year 2018) plus Project Buildout levels of service for freeway segments are summarized in Table 37 of the Revised Final EIR Part 3, Appendix F (pg. 169), showing that 23 freeway segments would operate at unacceptable LOS. Table 38 (pg. 173) shows there are 24 freeway segments where buildout of the Project would have a significant impact.

2025 Plus Project Phase 1. Year 2025 plus Project Phase 1 levels of service for freeway segments are summarized in Table 51 of the Revised Final EIR Part 3, Appendix F (pg. 237), showing that 40 freeway segments would operate at unacceptable LOS. Table 52 (pg. 241) shows there are 34 freeway segments where Phase 1 of the Project would have a significant impact.

2040 Plus Project Buildout. Year 2040 plus Project Buildout levels of service for freeway segments are summarized in Table 65 of the Revised Final EIR Part 3, Appendix F (pg. 310), showing that 58 freeway segments would operate at unacceptable LOS. Table 66 (pg. 314) shows there are 42 freeway segments where buildout of the Project would have a significant impact.

Freeway Weaving LOS

Existing Baseline (Year 2018) Plus Project Phase 1. Existing baseline (Year 2018) plus Project Phase 1 levels of service for freeway weaving sections are summarized in Table 30 of the Revised Final EIR Part 3, Appendix F (pg. 137), showing that 5 freeway weaving sections would operate at unacceptable LOS. Table 31 (pg. 139) shows that Phase 1 of the Project would have a significant impact at all 5 freeway weaving sections.

Existing Baseline (Year 2018) Plus Project Buildout. Existing baseline (Year 2018) plus Project buildout levels of service for freeway weaving sections are summarized in Table 39 of the Revised Final EIR Part 3, Appendix F (pg. 175), showing that 5 freeway weaving sections would operate at unacceptable LOS. Table 40 (pg. 177) shows that buildout of the Project would have a significant impact at all 5 freeway weaving sections.

2025 Plus Project Phase 1. Year 2025 plus Project Phase 1 levels of service for freeway weaving sections are summarized in Table 54 of the Revised Final EIR Part 3, Appendix F (pg. 245), showing that 9 freeway weaving sections would operate at unacceptable LOS and that Phase 1 of the Project would have a significant impact at all 9 freeway weaving sections.

2040 Plus Project Buildout. Year 2040 plus Project buildout levels of service for freeway weaving sections are summarized in Table 68 of the Revised Final EIR Part 3, Appendix F (pg. 318), showing that 14 freeway weaving sections would operate at unacceptable LOS and that buildout of the Project would have a significant impact at all 14 freeway weaving sections.

Freeway Ramp LOS

Existing Baseline (Year 2018) Plus Project Phase 1. Existing baseline (Year 2018) plus Project Phase 1 levels of service for freeway ramps are summarized in Table 33 of the Revised Final EIR Part 3, Appendix F (pg. 140), showing that 1 freeway ramp would operate at unacceptable LOS and that Phase 1 of the Project would have a significant impact at that freeway ramp.

Existing Baseline (Year 2018) Plus Project Buildout. Existing baseline (Year 2018) plus Project buildout levels of service for freeway ramps are summarized in Table 42 of the Revised Final EIR Part 3, Appendix F (pg. 279), showing that 1 freeway ramp would operate at unacceptable LOS and that buildout of the Project would have a significant impact at that freeway ramp.

2025 Plus Project Phase 1. Year 2025 plus Project Phase 1 levels of service for freeway ramps are summarized in Table 47 of the Revised Final EIR Part 3, Appendix F (pg. 208), showing that 1 freeway ramp would operate at unacceptable LOS. Table 56 (pg. 247) shows that Phase 1 of the Project would have a significant impact at that freeway ramp.

2040 Plus Project Buildout. Year 2040 plus Project buildout levels of service for freeway ramps are summarized in Table 61 of the Revised Final EIR Part 3, Appendix F (pg. 278), showing that 3 freeway ramps would operate at unacceptable LOS. Table 70 (pg. 320) shows that buildout of the Project would have a significant impact at one of those freeway ramps.

Offsite Improvements to TUMF Facilities

As indicated in Section 4.15 of the Revised Final EIR Part 3, there are improvements and changes to the road system that are part of the TUMF Regional System of Highways and Arterials, some of which are under the jurisdiction of Moreno Valley and others of which are located in other jurisdictions. Mitigation Measure 4.15.7.4D requires the developer to pay TUMF fees applicable to a particular building prior to receiving a certificate of occupancy for the building. These payments shall constitute the developer's mitigation of Project impacts to this category of roads. Mitigation Measure 4.15.7.4G requires the City to work with the other member agencies of the Western Riverside Council of Governments, the agency overseeing the TUMF program, to program TUMF funds to implement the mitigation measures identified in the Revised Final EIR Part 3 (pg. 4.15-131) pertaining to TUMF facilities outside the jurisdiction of the City of Moreno Valley. To the extent that TUMF fees provided by the developer are used to implement the recommended improvements, the Project's impacts would be less-than-significant. However, because the City does not have direct control over TUMF funding, the City cannot ensure that the identified improvements would be made. Thus, at this point the Project's impacts on these facilities must be considered significant and unavoidable (Revised Final EIR, Part 3, pp. 4.15-132).

Off-Site Improvements to Roads Outside the Jurisdiction of the City and Not Part of the TUMF Program

At this time, the City does not have cooperative agreements with nearby jurisdictions that would serve as a fair share contribution program for collecting and distributing developer funds to cover the cost of cross jurisdictions mitigation measures, other than the TUMF program. The City will work with the Cities of Beaumont, Perris, Redlands and Riverside, and with Riverside County to collect fair share funds from the

developer and to implement the mitigations measures identified in the Revised Final EIR Part 3 (Tables. 4.15-40, 4.15-41 and 4.15-42) that are in these jurisdictions if fair share contribution programs have been established with the jurisdictions. To the extent that the City is able to establish such a program (as described in Mitigation Measures 4.15.7.4E and 4.15.7.4F) and the other jurisdiction constructs the recommended improvement, the Project’s impacts would be less-than-significant. However, because the City cannot guarantee that such a program will be established and does not have direct control over facilities outside of its jurisdiction, the City cannot ensure that the identified improvements would be made. Thus, at this point the Project’s impacts on these facilities must be considered significant and unavoidable.

Similarly, the City has not entered into an agreement with Caltrans for the collection of developer fair share payments for improvements to the state highway system other than freeway interchange improvements funded through the TUMF program. Nor has Caltrans established a fair share contribution program to collect fair-share contributions to freeway improvements such as those identified in Revised Final EIR Part 3 Tables 4.15-40 and 4.15-41. Instead, Caltrans has traditionally relied on other means to fund freeway improvements; means involving multiple stages of review and input from other agencies, with priorities and constraints applied at each stage, that preclude a direct connection between developer-provided fair-share funds and specific highway improvements.

The key feature of this system pertaining to the recommended freeway mitigation measures is that this system is outside the control of the City of Moreno Valley. The City shall work with Caltrans to establish a fair share contribution program for collecting fair share funds from developers for use in funding needed freeway improvements. However, since at the present time no such program exists that would ensure that WLC funds contributed to Caltrans or any other state agency would be used to implement specific improvements that mitigate WLC impacts, and because there is no mechanism by which the City can construct or guarantee the construction of any improvements to the freeway system by itself, the Project’s impacts on the state highway system must be considered significant and unavoidable (Revised Final EIR Part 3, pp. 4.15-131 to 4.15-135).

b. Cumulative Transportation Impacts

Potential Significant Impact: Whether the Project could cause a cumulatively considerable increase in traffic on the intersection, street and freeway system outside the jurisdiction of the City of Moreno Valley that is substantial in relation to the without Project (i.e., No-Project) scenario.

Findings: Potential cumulative impacts of the Project related to the increase in traffic volumes are discussed in detail in Section 6.15 and Appendix F of the Revised Final EIR Part 3. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment (Finding 1). Each mitigation measure adopted by the City Council is set forth in the attached Mitigation Monitoring and Reporting Program. However, the Council finds that even with mitigation measures, the Project will have significant impacts due to inability to control the mitigation, funding and timing for improvements located outside the City of Moreno Valley, and therefore are considered significant and unavoidable. Those changes or alterations that are within the responsibility and jurisdiction of other public agencies and have been, or can and should be, adopted by those other agencies (Finding 2). Specific economic, legal, social, technological, or other considerations make the alternatives identified in the Revised Final EIR

and additional mitigation measures infeasible, and overriding economic, legal, social, technological, or other benefits of the project outweigh the significant and unavoidable effects on the environment, which are set forth in Section VI, Statement of Overriding Considerations (Finding 3).

Facts in Support of the Findings: Section 6.15 of the Revised Final EIR Part 3 and the Traffic Impact Analysis (TIA) in Appendix F discuss cumulative impacts of the Project to the intersection level of service (LOS). The cumulative impacts of the Project were determined by comparing the LOS of the study facilities under the 2040 No-Project and 2040 Plus Project Build-out Scenarios.

The study area for surface streets covered all intersections in Moreno Valley of collector or higher functional classification with another collector or higher classification street, at which the Project would add 50 or more peak hour trips. The study area also included the main routes between the Project and the neighboring communities of Riverside, Perris, Beaumont, San Jacinto, and Redlands.

Intersection LOS

Project Cumulative Impacts Under the 2040 Plus Project Buildout Scenario. The cumulative impacts under the Year 2040 plus Project Buildout levels of service for the study area intersections are summarized in Table 6.15-3 in the Revised Final EIR Part 3 and in Table 76 on page 343 within the TIA, showing that 26 intersections would have unacceptable LOS and resulting in significant cumulative impacts. Of the 26 intersections, 10 are located outside of the City of Moreno Valley.

Roadway Segment LOS

Project Cumulative Impacts Under the 2040 Plus Project Buildout Scenario. The cumulative impacts under the Year 2040 plus Project Buildout levels of service for the study area roadway segments are summarized in Table 6.15-2 in the Revised Final EIR Part 3 and in Table 75 on page 341 within the TIA, showing that one roadway segment would have unacceptable LOS and result in significant cumulative impacts. The roadway segment is located outside of the City of Moreno Valley.

Freeway LOS

Project Cumulative Impacts Under the 2040 Plus Project Buildout Scenario. The cumulative impacts under the Year 2040 plus Project Buildout levels of service for the study area freeway facilities (mainline and weaving facilities) are summarized on pages 6.15-38 and 6.15-41 through 6.15-44 in the Revised Final EIR Part 3 as well as Table 77 and pages 346 through 354 of the TIA located in Appendix F of the Revised Final EIR Part 3. The Project would result in significant cumulative impacts to 21 mainline facilities and 11 freeway weaving sections as shown in Table 77 of the TIA.

Mitigation Measures

Implementation of **Mitigation Measures 4.15.7.4.A** through **4.15.7.4.G** requires the applicant to construct or fund all required mitigation for the Project's cumulative impacts for intersections and roadways within the City of Moreno Valley, and includes the payment of a Transportation Uniform Mitigation Fee (TUMF) as set forth in Moreno Valley Municipal Code Chapter 3.44 and paying a fair share contribution to jurisdictions that

have established such programs toward mitigating Project-related cumulative impacts in jurisdictions other than the City of Moreno Valley, as identified in Section 6.15 and Appendix F of the Revised Final EIR Part 3. With implementation of these mitigation measures, the Project's cumulative impacts on intersections located within the City of Moreno Valley could be reduced to less than significant. However, because the City cannot guarantee that such programs will be established and does not have direct control over the funding or construction of needed improvements outside of its jurisdiction, the City cannot ensure that the identified improvements would be made. Thus, at this point the Project's cumulative impacts on these facilities must be considered significant and unavoidable. A discussion of the two categories of improvements that would result in significant and unavoidable impacts is discussed below.

Offsite Improvements to TUMF Facilities

As indicated in Section 6.15 of the Revised Final EIR Part 3, there are improvements and changes to the road system that are part of the TUMF Regional System of Highways and Arterials, some of which are under the jurisdiction of Moreno Valley and others of which are located in other jurisdictions. Mitigation Measure 4.15.7.4D requires the developer to pay TUMF fees applicable to a particular building prior to receiving a certificate of occupancy for the building. These payments shall constitute the developer's mitigation of Project impacts to this category of roads. Mitigation Measure 4.15.7.4G requires the City to work with the other member agencies of the Western Riverside Council of Governments, the agency overseeing the TUMF program, to program TUMF funds to implement the mitigation measures identified in the Revised Final EIR Part 3 (pp. 6.15-39 to 6.15-40) pertaining to TUMF facilities outside the jurisdiction of the City of Moreno Valley. To the extent that TUMF fees provided by the developer are used to implement the recommended improvements, the Project's impacts would be less-than-significant. However, because the City does not have direct control over TUMF funding, the City cannot ensure that the identified improvements would be made. Thus, at this point the Project's cumulative impacts on these facilities must be considered significant and unavoidable (Revised Final EIR, Part 3, p. 6.15-41).

Off-Site Improvements to Roads Outside the Jurisdiction of the City and Not Part of the TUMF Program

At this time, the City does not have cooperative agreements with nearby jurisdictions that would serve as a fair share contribution program for collecting and distributing developer funds to cover the cost of cross jurisdictions mitigation measures, other than the TUMF program. The City will work with the Cities of Beaumont, Perris, Redlands and Riverside, and with Riverside County to collect fair share funds from the developer and to implement the signalization of the San Timoteo Road/Alessandro Road intersection and the San Timoteo Road and Live Oak Canyon intersection (respectively) if fair share contribution programs have been established with the jurisdictions. The City will work with the City of Riverside to collect a fair-share contribution from the developer to signalize the Martin Luther King Boulevard/I-215 northbound ramp intersection if fair share contribution program has been established with the City of Riverside. To the extent that the City is able to establish such programs (as described in Mitigation Measure 4.15.7.4F) and the other jurisdiction constructs the recommended improvement, the Project's impact would be less than significant. However, because the City cannot guarantee that such programs will be established and does not have direct control over facilities outside of its jurisdiction, the City cannot ensure that the identified improvements would

be made. Thus, at this point the Project's impacts on these facilities must be considered significant and unavoidable.

Similarly, the City has not entered into an agreement with Caltrans for the collection of developer fair share payments for improvements to the state highway system other than freeway interchange improvements funded through the TUMF program. Nor has Caltrans established a fair share contribution program to collect fair-share contributions to freeway improvements such as those identified in Table 77 of the TIA in the Revised Final EIR Part 3. Instead, Caltrans has traditionally relied on other means to fund freeway improvements; means involving multiple stages of review and input from other agencies, with priorities and constraints applied at each stage, that preclude a direct connection between developer-provided fair-share funds and specific highway improvements.

The key feature of this system pertaining to the recommended freeway mitigation measures is that this system is outside the control of the City of Moreno Valley. The City shall work with Caltrans to establish a fair share contribution program for collecting fair share funds from developers for use in funding needed freeway improvements. However, since at the present time no such program exists that would ensure that WLC funds contributed to Caltrans or any other state agency would be used to implement specific improvements that mitigate WLC impacts, and because there is no mechanism by which the City can construct or guarantee the construction of any improvements to the freeway system by itself, the Project's impacts on the state highway system must be considered significant and unavoidable (Revised Final EIR Part 3, pp. 4.15-41 to 4.15-43).

D. ADEQUACY OF THE RANGE OF PROJECT ALTERNATIVES

The Revised Final EIR Part 4 analyzed four alternatives to the Project as proposed, and also evaluated these alternatives for their ability to meet the Project's objectives as described in Section II.B above. CEQA requires the evaluation of a "No Project Alternative" to assess the maximum net change in the environment as a result of implementation of the Project. The No Project Alternative, referred to as the No Project/No Build, assumes no ground-disturbing activities would take place, nor would any form of structure or facility be erected. No Project/Existing General Plan Alternative, a Reduced Density Alternative, and two Mixed Use Alternatives were also selected for analysis. CEQA requires the evaluation of alternatives that can reduce the significance of identified impacts and "feasibly attain most of the basic objectives of the Project." Thus, in order to develop a range of reasonable alternatives, the Project Objectives must be considered when this Council is evaluating the alternatives.

1. No Project/No-Build Alternative

Description: Under the No-Build Alternative, no development would take place within the Project site. . No ground-disturbing activities would take place, nor would any form of structure or facility be erected. This alternative provides a baseline comparison to the Project. (Revised Final EIR Part 4, Volume 3, pg. 6-14 to 6-15).

Impacts: The No Project/No-Build Alternative, as referenced in Section 6.0 of the Revised Final EIR Part 4, Volume 3, would not result in any new physical environmental effects.

Objectives: Under the No Project/No Build Alternative, the Project site would not be developed and none of the twelve of the Project Objectives would be achieved.

Finding: Under the No-Build Alternative, no ground-disturbing activities would take place, nor would any form of structure or facility be erected. This Alternative would not result in the same significant and unavoidable impacts associated with agricultural resources, air quality, and traffic that have been identified within the Revised Final EIR Part 4, Volume 3 for the Project. In the absence of development, no impacts would occur, and this alternative would be the environmentally superior alternative. However, prohibiting development of the site, as suggested by this alternative, would not fulfill any of the primary objectives of the Project. Retention of the project site in its current condition would not create a logistics facility consisting of approximately 2,525 acres of warehouse uses and it would not expand employment opportunities within the City and surrounding area. This Alternative provides a baseline comparison to the Project. Because the No-Build Alternative does not meet any the Project objectives, the Council hereby rejects the No-Build Alternative.

2. No Project/Existing General Plan Alternative

Note: This alternative is moot, as the Project is now consistent with the City's General Plan and zoning, which reflects the site as World Logistics Center Specific Plan, in accordance with the City's November 2015 approvals and as remains in effect following the various court actions noted above.

3. Alternative 1 - Reduced Density Alternative

Description: As identified in Section 6.0 of the Revised Final EIR Part 4, Volume 3, the Reduced Density Alternative has been considered with the intent of avoiding or substantially reducing significant impacts, and in particular the significant impacts that cannot be reduced to a less than significant level through implementation of mitigation measures created by the Project's traffic, air quality, and noise impacts. This Alternative includes development of the project site with approximately 28 million square feet of logistics warehousing, a reduction of 12.6 million square feet, including 74.3 acres for open space. Under this alternative, the proposed logistics uses would represent a net decrease of approximately 31 percent as compared with the Project.

Because of the large area, approximately 2,535 acres, of the Project that is proposed for development, public facilities, or off-site improvements, a variety of reduced density alternatives could be considered that might substantially reduce or eliminate one or more of the significant and unavoidable impacts of the Project. For example, warehousing development on the site would have to be reduced to approximately one percent of the Project's 40,600,000 sq.ft, or 400,000 square feet, of the WLC Project's proposed logistics warehouse building area to eliminate significant and unavoidable impacts associated with air quality to less than applicable SCAQMD thresholds. The only way this could logically occur would be to develop a small portion of the site (i.e., less than one percent) and leave the rest of the site vacant. In addition, even this substantial reduction in the proposed logistics warehouse building area and/or developable area would not eliminate the Project's other significant and unavoidable impacts associated with aesthetics, air quality, noise, and transportation. Any of the viable alternatives that are examined in the Revised Final EIR would entail some

type of development on all or most of the Project site, rather than development of an illogically small portion of the site (i.e., one percent). (Revised Final EIR Part 4, Volume 3, pg. 6-23 to 6-24).

Impacts: As identified in Section 6.0 of the Revised Final EIR Part 4, Volume 3, the Reduced Density Alternative would result in similar impacts for the following nine environmental issues: Aesthetics; Agriculture and Forestry Resources; Biological Resources; Cultural Resources; Geology and Soils; Hazards and Hazardous Materials; Hydrology and Water Quality; Land Use and Planning; Mineral Resources; Recreation. Under the Reduced Density Alternative, development of the same logistics land uses, building heights and mass, but at a floor area level approximately 70 percent of the Project, would be constructed resulting in significant and unavoidable impacts associated with scenic vistas, local scenic roads, character of the site and surroundings, and on a cumulatively considerable basis in the same exact manner as the Project. Impacts related to short-term construction-related air quality would be the same as the Project, because the same amount of land would be disturbed and the same mix of equipment would be utilized. The Reduced Density Alternative would result in significant and unavoidable air quality impacts from CO, VOC, NO_x, and PM₁₀ emissions during project construction, in the same exact manner as the Project. Long-term operational-related air quality impacts would be incrementally reduced when compared to the Project, but the emissions cannot be mitigated to below SCAQMD thresholds and would remain significant and unavoidable. Similarly, impacts related to short-term construction-related noise cannot be mitigated to a less than significant level and would be significant and unavoidable. Although traffic-related noise would be reduced when compared to the Project, impacts would have a similar effect on local roadway segments and would remain significant and unavoidable as there are no feasible mitigation measures that would be able to reduce impacts to a less than significant level. Under this alternative, the volume of water required and the amount of wastewater and solid waste generated would be reduced in comparison to the Project and the decrease in the amount of logistics uses would result in a reduction of permanent jobs that would be created. Consequently, this Alternative would have incrementally reduced demand on public services, recreation, and water use. Similar to the Project, increased property tax revenues, the payment of fees, and adherence to City development and utility requirements would reduce these impacts to less than significant levels.

Because of the decrease in vehicle trips achieved under this alternative, impacts to the operation of local roadways and intersections would be proportionally reduced from those identified for the Project. However, under this Alternative, the future increases in traffic volumes would have a similar effect on freeways and interchanges, resulting in significant impacts similar to those identified for the Project. Since the City does not have control over when freeway improvements would occur, traffic impacts to freeways and interchanges would remain significant and unavoidable for impacts associated with freeway segments.

In summary, the Reduced Density Alternative would incrementally reduce almost all of the Project impacts by reducing the total square footage of development. However, all of the impacts identified as significant and unavoidable under the Project, including aesthetics, air quality, greenhouse gas emissions, noise, and traffic would still be significant and unavoidable under this alternative. (Revised Final EIR Part 4, Volume 3, pg. 6-24 to 6-29).

Objectives: Under this Alternative, some of the Project objectives are met, but not nearly to the same degree as the Project which includes creating substantial employment opportunities for the City's citizens; providing

the land use designations and infrastructure plans necessary to meet current market demands and to support the City's Economic Development Action Plan; creating a major logistics center with good regional and freeway access; providing a major logistics center to accommodate to some degree the ever- expanding volumes at the Ports of Los Angeles and Long Beach; creating a project that will provide a balanced approach to the City's fiscal viability, economic expansion, and environmental integrity; providing the infrastructure improvements required to meet project needs in an efficient and cost-effective manner; encouraging new development consistent with regional and municipal service capabilities; creating employment opportunities within the City to improve the City's jobs/housing balance and help reduce systemic unemployment within the City; providing thousands of construction job opportunities during the Project's buildout phase to improve the jobs/housing balance and help reduce systemic unemployment; and providing appropriate transitions or setbacks between on-site and off-site uses. (Revised Final EIR Part 4, Volume 3, Table 6.M: Comparison of Reduced Density Alternative to the Project Objectives, pg. 6-29).

Findings: Under the Reduced Density Alternative, development of the Project site with approximately 28 million square feet of logistics warehousing, including 74.3 acres for open space, would occur. This Alternative would have similar impacts that have been identified within the Revised Final EIR Part 4, Volume 3. However, the Reduced Density Alternative would result in a decrease in trip generation in comparison to the Project and would result in a decrease in the severity of the significant and unavoidable impacts to construction and operational air pollution emissions, and traffic. The Council finds that the Reduced Density Alternative would fulfill three of the 12 Project Objectives by establishing design standards and development guidelines to ensure a consistent and attractive appearance throughout the entire project; establishing a master plan for the entire project area to ensure that the Project is efficient and business-friendly, accommodating the next-generation of logistics buildings; and providing appropriate transitions or setbacks between on-site and off-site uses. Moreno Valley residents would also have more opportunities for employment. Because the Reduced Density Alternative will not fulfill nine of the twelve objectives of the Project and the severity of significant and unavoidable impacts would be not be reduced, this Council hereby rejects the Reduced Density Alternative.

4. Alternative 2 - Mixed Use A

Description: As identified in Section 6.0 of the Revised Final EIR Part 4, Volume 3, with the intent of avoiding or substantially reducing significant impacts created by the Project's traffic, air quality, and noise impacts, the City considered Mixed Use A Alternative. This alternative includes development of the Project site with approximately 1,410 acres of logistics warehousing (22 million square feet), 1,000 acres of light industrial uses (2,120 million square feet), 50 acres of retail commercial uses (500,000 square feet), 100 acres of professional or medical office uses (1.0 million square feet), and 150 acres of open space. (Revised Final EIR Part 4, Volume 3, pg. 6-29 to 6-30).

Impacts: Section 6.0 of the Revised Final EIR Part 4, Volume 3, identifies nine environmental issues that would have similar impacts as the Project. These issues are: Aesthetics, Agricultural and Forestry Resources, Cultural Resources, Biological Resources, Geology and Soils, Hydrology and Water Quality, Land Use and Planning, Mineral Resources, and Recreation. Under this alternative, impacts related to short-term construction-related air quality and noise impacts would remain significant and unavoidable, similar to the Project. Long-term air quality operational impacts under this alternative would be increased in magnitude,

remain significant and unavoidable, and would result in similar conditions as identified for the Project. The Mixed Use A Alternative would decrease the amount of logistics warehousing and would add light industrial, commercial, and office uses that would generate more permanent and more varied jobs than the Project, but some uses may require skilled workers and it is not known if or to what degree these workers already reside in the City. In addition, the developer will be supporting a local employment center to help City residents find positions within the WLC before the positions are advertised on a regional basis. The office uses proposed under this alternative may incrementally increase the total number of people that would be added to the City’s population and could have greater demands on public services and recreation. However, the increased property tax revenues, payment of fees, and dedication of parkland would reduce these impacts to a less than significant level. This alternative would increase the amount of wastewater generated, increase the amount of potable water required, and increase the amount of solid waste produced on-site. Similar to the Project, adherence to utility requirements would reduce these impacts to less than significant levels. Because of the increase in vehicle trips resulting from this alternative, impacts to noise and air quality would be proportionally increased from the Project and remain significant and unavoidable.

Long-term traffic impacts would remain significant and unavoidable for impacts associated with freeway segments as the City does not have control of when such freeway improvements would occur. Similarly, traffic- related noise would be increased in magnitude and cannot be mitigated to a less than significant level in a manner similar to the Project.

In summary, the Mixed Use A Alternative would increase employment opportunities but would substantially increase traffic, noise, and air quality impacts. All the impacts identified as significant under the Project, including air quality health risks, would still be significant under this alternative. (Revised Final EIR Part 4, Volume 3, pgs. 6-29 through 6-34).

Objectives: Under this alternative, nearly all of the Project objectives are met, with the exception of the following: creating a major logistics center with good regional and freeway access; providing a major logistics center to accommodate to some degree the ever-expanding volumes at the Ports of Los Angeles and Long Beach; creating a project that will provide a balanced approach to the City’s fiscal viability, economic expansion, and environmental integrity; and providing the infrastructure improvements required to meet Project needs in an efficient and cost-effective manner; and encouraging new development consistent with regional and municipal service capabilities. (Revised Final EIR Part 4, Volume 3, Table 6.O: Comparison of the Mixed Use A Alternative to the Project Objectives, pg. 6-34).

Finding: Under the Mixed Use A Alternative, the Project site would be developed with approximately 1,410 acres of logistics warehousing (22 million square feet), 1,000 acres of light industrial uses (2,120 million square feet), 50 acres of retail commercial uses (500,000 square feet), 100 acres of professional or medical office uses (1.0 million square feet), and 150 acres of open space. The Mixed Use A Alternative would increase employment opportunities but would substantially increase traffic, noise, and air quality impacts. All the impacts identified as significant under the Project, including air quality health risks, would still be significant under this alternative.

Most of the objectives of the Project would be met; however, the Mixed Use A Alternative would not meet the Project objectives of locating distribution services near transportation corridors and clustering such uses near the state highway system. This Council finds that the Mixed Use A Alternative would have similar impacts to all environmental issues. Because the Mixed Use A Alternative will not substantially reduce the environmental impact of the Project and it would not meet the Project objectives of locating distribution services near transportation corridors and clustering such uses near the state highway system, this Council hereby rejects the Mixed Use A Alternative.

Finally, because the WLC Specific Plan, which was adopted through the initiative process, does not allow commercial or professional uses without a vote of the electorate, the alternative is not legally available.

5. Alternative 3 - Mixed Use B

Description: As identified in Section 6.0 of the FEIR, Volume 3, the Mixed Use B Alternative would develop the project site similar to the land use plan of the Moreno Highlands Specific Plan (MHSP) but with 10 million square feet of logistics warehousing on the 603 acres proposed for business, retail, institutional, and other uses under the MHSP. (Revised Final EIR Part 4 Volume 3, pg. 6-34 to 6-35).

Impacts: Section 6.0 of the Revised Final EIR Part 4, Volume 3, Under Alternative 3, impacts related to short-term construction-related air quality would be similar to the Project as the same amount of land would be disturbed, and the same mix of equipment would be utilized. Long-term operational-related air pollutant emissions would be higher than the Project and would remain significant and unavoidable, with the exception of PM_{2.5} and SO_x. Like the Project, long-term air quality relative to criteria pollutants would still be significant, with the exception of SO_x. Assuming the same level of mitigation as the proposed Project, there would be no cancer risks associated with this alternative since the use of new technology diesel engines do not contribute to cancer risk as described in Revised Final EIR Volume 3 Section 4.3. The development of the Mixed Use B Alternative would have increased demands on public services and recreation facilities to serve future residential uses. However, increased property tax revenues, payment of development impact fees, and adherence to development requirements would reduce these impacts to a less than significant level. Water supply availability is expected to be available as water demand is expected to be the same. Water demand was determined to be available for the Project. There would be an increase in vehicle trips under this alternative, resulting in greater noise and air quality impacts compared to that identified for the Project; therefore, long-term traffic impacts would remain significant and unavoidable. Development of the Mixed-Use B Alternative would provide new employment opportunities and homes for residents of Moreno Valley, but new employment opportunities would be significantly reduced compared to the Project.

In summary, the Mixed-Use B Alternative would incrementally increase traffic and not improve the City's jobs/housing balance over the long-term. However, this is the only alternative that would reduce a significant impact of the Project (aesthetics – views) by substantially reducing the amount of warehousing on the site and replacing it with residential uses. Views of the area would still transition from vacant agricultural land to suburban development, but it would have a residential appearance compared to the Project. All the other

impacts identified as significant under the Project, including likely air quality health risks, would still be significant under this alternative. (Revised Final EIR Part 4, Volume 3, pgs. 6-34 through 6-38).

Objectives: Under this alternative, some of the Project objectives are met, with the exception of the following: providing the land use designation and infrastructure plans necessary to meet current market demands and to support the City’s Economic Development Action Plan; creating a major logistics with good regional and freeway access; establishing a master plan for the entire project area to ensure that the project is efficient and business-friendly, accommodating the next-generation of logistics buildings; providing a major logistics center to accommodate to some degree the ever-expanding trade volumes at the Ports of Los Angeles and Long Beach; creating a project that will provide a balanced approach to the City’s fiscal viability, economic expansion, and environmental integrity; providing the infrastructure improvements required to meet Project needs in an efficient and cost-effective manner; encouraging new development consistent with regional and municipal service capabilities; and providing thousands of construction job opportunities during the Project’s buildout. (Revised Final EIR Part 4, Volume 3, Table 6.Q: Comparison of the Mixed-Use B Alternative to the Project Objectives, pg. 6-38).

Finding: Under the Mixed Use B Alternative, development of the Project site similar to the land use plan of the Moreno Highlands Specific Plan (MHSP) but with 10 million square feet of logistics warehousing on the 603 acres proposed for business, retail, institutional, and other uses under the MHSP. The Mixed-Use B Alternative would incrementally increase traffic and not improve the City’s jobs/housing balance over the long-term. However, this is the only alternative that would reduce a significant impact of the Project (aesthetics – views) by substantially reducing the amount of warehousing on the site and replacing it with residential uses. Views of the area would still transition from vacant agricultural land to suburban development, but it would have a residential appearance compared to the Project. All the other impacts identified as significant under the Project, including likely air quality health risks, would still be significant under this alternative. (Revised Final EIR Part 4, Volume 3, pgs. 6-37).

Some of the objectives of the Project would be met; however, the Project objectives of locating distribution services near transportation corridors and clustering such uses near the state highway system would not be met. This Council finds that the Mixed-Use B Alternative would have similar impacts to all environmental issues except for aesthetic because this Alternative would eliminate the significant and unavoidable impacts to aesthetics. Because the Mixed Use B Alternative will not substantially reduce the environmental impact of the Project and it would not meet the Project objectives of locating major distribution services near transportation corridors and clustering such uses near the state highway system, provide land use designations and infrastructure plans necessary to meet current market demands and to support the City’s Economic Development Action Plan, and create a project that will provide a balanced approach to the City’s fiscal viability, economic expansion, and environmental integrity this Council hereby rejects the Mixed Use B Alternative.

Finally, because the WLC Specific Plan, which was adopted through the initiative process, does not allow commercial or residential uses without a vote of the electorate, the alternative is not legally available.

6. Alternatives Considered and Rejected

A variety of additional alternatives were considered as part of the Revised Final EIR Part 4, Volume 3's Alternatives Analysis. (Revised Final EIR Part 4, Volume 3, pgs. 6-3 through 6-5) Two possible alternatives were considered and rejected because they could not accomplish the basic objectives of the Project or they were considered infeasible. Per the *CEQA Guidelines* (Section 15126.6(c)), factors that may be considered when addressing the feasibility of alternatives include failure to meet most of the stated Project objectives, infeasibility, or inability to avoid significant environmental effects. The purpose of the Project is to provide for and expand employment and revenue opportunities within the City of Moreno Valley. The Project would expand employment options in a location that is convenient to existing transportation corridors, convenient to existing and future City residents and would augment the City's economic base. The following provides a discussion of the three development scenarios that were considered and rejected as potential alternatives to implementation of the Project based on Section 15126.6 of the *CEQA Guidelines* because they did not feasibly attain most of the basic objectives of the Project while reducing or avoiding any of the significant effects of the Project:

- **All Residential Alternative:** A number of residential uses, including very low density (2-acre or 5-acre lots) were considered prior to deciding on all warehousing uses, but it was concluded that any residential alternatives, or alternatives that emphasized residential uses, would further exacerbate the City's jobs/housing imbalance and did not meet any of the Project goals. In addition, the City's Economic Strategy Plan excludes additional residential development in this area. For these reasons, all Residential Use Alternatives were rejected for further analysis. However, an evaluation of the largely residential Moreno Highlands Specific Plan (MHSP) was provided under the No Project/Existing General Plan alternative. (Revised Final EIR Part 4, Volume 3, pg. 6-4).
- **Mixed Use Alternative:** The EIR examines two Mixed Use Alternatives with varying amounts of residential and non-residential uses. The No Project-Existing General Plan Alternative is based on the approved mixed-use Moreno Highlands Specific Plan (MHSP). In addition, Alternative 3 (Mixed Use B) evaluates the impacts of substituting logistics warehouse uses for the non-residential uses currently included in the MHSP. After extensive evaluation, it was concluded that any reasonable combination of residential and non-residential uses (i.e., light industrial, business park, office, commercial) would result in impacts similar to those of the MHSP, Alternative 2 (mixed non-residential uses but no residential uses), or Alternative 3 (Moreno Highlands Specific Plan with logistics warehousing as the main non-residential use). For this reason, no other Mixed Use Alternatives were considered further in this analysis. (Revised Final EIR Part 4, Volume 3, pg. 6-4).
- **Alternative Sites.** Section 6.0 of the Revised Final EIR Part 4, Volume 3 examines different sites in the surrounding region to determine if an alternative location would reduce or eliminate one or more significant impacts of the Project. This analysis must be based on feasible sites that could realistically support the Project (i.e., a contiguous 2,610-acre site for 40.6 million square feet of high-cube and light logistics warehouse uses as envisioned by the WLC Specific Plan). The surrounding jurisdictions, including Cities of Riverside, Perris, San Jacinto, Menifee, Calimesa, Banning, and Beaumont and the County of Riverside, along with Moreno Valley were contacted

to identify potential alternative sites for the Project. Revised Final EIR Part 4, Volume 3, Figure 6.1 pg. 44 shows the locations of the various jurisdictions that were contacted and/or analyzed in this evaluation and Revised Final EIR Part 4, Volume 3, Table 6.R pg. 45 presents the results of that analysis. Table 6.R indicates that there are no feasible alternative sites in the surrounding or nearby jurisdictions that could support the Project (i.e., that have enough vacant land zoned or available for logistics warehousing with good freeway and/or rail access). For these reasons, Alternative Sites were not considered further in this analysis. (Revised Final EIR Part 4, Volume 3, pgs. 6-38 through 6-41).

7. Environmentally Superior Alternative

As identified in the Revised Final EIR Part 4, Volume 3, the No Project/Existing General Plan Alternative has mixed impacts relative to the Project; it reduces aesthetic impacts to less than significant levels but worsens the jobs/housing ratio by introducing more housing than employment-generating uses. The Mixed Use A Alternative substantially increases traffic and related impacts compared to the Project impacts, but it does not create any additional significant impacts. The Mixed Use B Alternative would incrementally increase traffic and would not improve the jobs/housing balance. It would incrementally reduce health risks to existing residents along Redlands Boulevard (i.e., approximately 30 percent less warehousing), but could create health risks for new residents depending on the ultimate location of warehouses and new residences. In addition, this alternative would also worsen the jobs/housing ratio of the City by allowing the construction of many more homes than job-creating land uses. Regarding air quality impacts, development of any land uses would likely exceed SCAQMD thresholds mainly due to the size of the Project site. (Revised Final EIR Part 4, Volume 3, pg. 6-45 to 6-47).

The *CEQA Guidelines* (Section 15126.6 (e[2])) requires that an environmentally superior alternative be identified in the EIR. Based on the analysis in Revised Final EIR Part 4 Section 6 and the summary contained in Revised Final EIR Part 4 Table 6.S, Alternative 1 – Reduced Density – is the only alternative that reduces traffic, air quality, and related impacts by reducing the total square footage of warehousing by approximately 30 percent. Alternative 3—Mixed Use B—is the only alternative that would reduce a significant impact of the proposed project (i.e., aesthetics – views). However, it could create health risks for future residents of the Project and would worsen the jobs/housing balance of the City over the long term. For these reasons, the Revised Final EIR Part 4 concluded that Alternative 1 – Reduced Density — was environmentally superior to the proposed project.

Revised Final EIR Part 4 Table 6.T compared Alternative 1 to the project objectives and determined Alternative 1 does not meet 9 of the 12 major goals of the proposed project mainly because reducing the total square footage by 30 percent also reduces the amount of new employment and property tax revenues. Therefore, Alternative 1 - Reduced Density, was rejected in favor of the proposed project.

E. GROWTH-INDUCING IMPACTS

CEQA requires a discussion of ways in which the Project could be growth-inducing. Specifically, CEQA Guidelines Section 1512602(d) states that an EIR must describe the ways in which the Project could foster

economic or population growth, or the construction of additional housing, either directly or indirectly, in the surrounding environment.

The Project area is largely vacant undeveloped land, although there are six existing single-family homes in various locations on the WLC Project site along with associated ranch/farm buildings. The site has been farmed since the early 1900s and has supported dry (non-irrigated) farming, livestock grazing, and limited citrus groves. Much of the site continues to be used for dry farming.

The City's population has grown steadily over the past decades. Population projections developed by SCAG estimate the City's population will reach approximately 213,700 persons by the year 2020 and approximately 255,200 persons by the year 2035. The extent to which the new jobs created by a Project are filled by existing residents is a factor that tends to reduce the growth-inducing effect of a Project. Construction of the WLC Project will create short-term construction jobs. These short-term positions are anticipated to be filled by workers who, for the most part, reside in the Project area; therefore, construction of the WLC Project will not generate a permanent increase in population within the Project area. Development envisioned under the Specific Plan consists of approximately 40.6 million square feet of logistics warehouse and general warehouse facilities.

Development of the high-cube logistics warehouse and general warehouse facilities will create jobs in the local economy. It is estimated that the WLC Project would result in approximately 25,000 new on-site job opportunities in addition to 7,583 indirect jobs of which 3,792 are projected to be within the City as a result of Project implementation (Revised Final EIR Part 1, Response 1-G-170-4).

The new employment opportunities resulting from development of the proposed high-cube logistics warehouse and general warehouse uses will raise the City's current jobs-to-housing ratio by providing additional jobs to local residents. While the place of residence of the persons accepting employment provided by the proposed uses is uncertain, due to the City's projected jobs/housing ratio, it is reasonable to assume that a large percentage of these jobs would be filled by persons already living within the City or Project area. The Project does not include a residential component. The WLC Project is located within an area that is currently largely vacant and previously planned for a mix of residential, commercial, business park, and open space land uses in accordance with the General Plan Community Development Element. The WLC Project is consistent with the City's General Plan and zoning, which allows a mix of land use designations including Logistics Development and Light Logistics. Therefore, no significant increase in population of the City would result from the development or operation of the WLC Project.

The *Fiscal and Economic Impact Study World Logistics Center Moreno Valley, California* (Revised Final EIR Part 4 Appendix O "Study," DTA 2014) estimates that approximately 7,386 indirect/induced jobs will be created in the County, of which 3,693 jobs are projected to be within the City as a result of Project implementation (updated as approximately 25,000 new on-site job opportunities in addition to 7,583 indirect jobs of which 3,792 are projected to be within the City as a result of Project implementation, as noted in Revised Final EIR Part 1, Response 1-G-170-4). While the specific location of the potential additional indirect/induced jobs created within the County cannot be specifically determined, it is reasonable to assume that a large percentage of these jobs will support service jobs and are likely to be located in the WLC Project

vicinity, and therefore the City. As detailed in the Study, total recurring revenues available to the City are estimated at approximately \$11,257,466 per year. The greatest percentage of revenue is attributed to the Property Tax In-Lieu of Vehicle License Fee (40.2%), followed by Secured Property Tax (29.1%), and Business Receipts Tax and Licenses (10.8%). Total recurring costs to the City are estimated at approximately \$5,557,674 per year. The greatest percentage of cost is attributed to the Police Services (35.8%), followed by Infrastructure and Parks Maintenance Costs (34.1%), and Fire Services (13.3%).

Project recurring annual fiscal surplus that would be available to the City is estimated at approximately 7 million dollars which is twice the Project annual City General Fund costs.

The Project would add 40.6 million square feet of logistics facilities and associated infrastructure in the eastern portion of the City. Since the City currently has a jobs-to-housing ratio substantially lower than the region (i.e., SCAG region), it is likely that much of the employment that would be generated by this Project can be accommodated by the existing workforce in the City and surrounding area. In that way, the Project is growth-inducing in terms of employment. Due to relatively high vacancy rates in the City, it is also likely that the housing needs of new employees that do not already live in the City (i.e., own or rent) could largely be accommodated by the City's existing housing stock. Therefore, the WLC Project would only produce modest (i.e., not significant) growth inducement within Moreno Valley.

As previously noted, the specific location of the additional indirect jobs created within the County cannot be specifically determined; however, it is likely that a large percentage of these jobs will be support service jobs and are likely to be located in the Project vicinity. The Study assumes that one-half of these indirect jobs will be located within the City. The Study indicates that the creation of new jobs to the City will lead to more consumer spending by employees in existing retail establishments within the City, as well as new retail development that will be attracted to the City as a result of this spending. Job creation also results in increased tax revenues to the City through increased property taxes and sales taxes associated with development of the WLC Project. However, it is important to note that because of the difference in timing of the development of the various phases of the WLC Project, the number of employees summarized above will not be realized at the same time.

Development of the WLC Project is projected to create approximately 16,521 construction-related jobs within the City. Similar to recurring employment (i.e., permanent), it is likely that a large percentage of these jobs will be located in the general vicinity of the WLC Project and therefore within the City.

The WLC Project does not include a residential component; therefore, the jobs generated by the WLC Project would not need to support new households as a result of direct employment or indirect employment. Based on the potential increase in jobs (additional 25,000 direct jobs) within the City and no substantial increase in population as a result of the project, the City's jobs-to-housing ratio would improve from the (2011) ratio of 0.47 to 0.91, thus achieving a greater jobs-to-housing balance within the City. As development of the WLC Project is expected to occur over the course of many years, the jobs-to-housing ratio will not be significantly changed immediately. The City's current jobs-to-housing ratio is exceptionally low when compared to SCAG standards; therefore, the need for employment is immediate. A balance between jobs and housing within the City would have a positive impact by decreasing costs associated with commuting, traffic congestion, air

pollution, and improves the standard of living. It also provides savings and a better quality of life to consumers in operation and maintenance of automobiles, lessening commute times and saving to local public agencies in terms of the need to construct and maintain new road improvements.

Streets, water and sewer utilities, and municipal services would be extended to serve the WLC Project. The WLC Project will benefit other development projects in the Project area, and therefore, could potentially induce additional business and job growth by removing an impediment to growth, such as a lack of basic infrastructure or services. However, the WLC Project is located proximate to other existing warehouse, commercial, and residential uses. Therefore, the Project will necessitate extension of major infrastructure; however, the Project will not result in substantial population growth that has not already been planned for in the City's General Plan. As discussed in the Statement of Overriding Considerations in Section VI, the Project is consistent with the General Plan and would further the overall goals of the General Plan, and because the improvements necessary for development of the site would not facilitate growth that has not been anticipated in the project area, no significant growth-inducing effect would occur, and no mitigation is required. (Section 5.0 of the Revised Final EIR Part 4, Volume 3, pgs. 5-4 through 5-6)

F. SIGNIFICANT IRREVERSIBLE ENVIRONMENTAL CHANGES

Section 15126(c) of the CEQA Guidelines mandates that an EIR must address any significant irreversible environmental changes which would be involved in the proposed action should it be implemented. An impact would fall into this category if it resulted in any of the following:

- A. The Project would involve a large commitment of non-renewable resources;
- B. The primary and secondary impacts of the Project would generally commit future generations of people to similar uses;
- C. The Project involves uses in which irreversible damage could result from any potential environmental incidents associated with the Project; and/or
- D. The Project will consume large amounts of energy that are produced from non-renewable fossil fuels, although the WLC Specific Plan indicates the proposed uses will efficiently consume energy and water resources.

Determining whether the WLC Project may result in significant irreversible effects requires a determination of whether key resources would be degraded or destroyed in such a way that there would be little possibility of restoring them. Because no significant mineral resources were identified within the Project site, no significant impacts related to this issue would result from development of the Project. Natural resources in the form of construction materials would be utilized in the construction of the WLC Project and energy resources in the form of electricity and natural gas would be used during the long-term operation of the Project; however, their use is not expected to result in a negative impact related to the availability of these resources. Existing scenic vistas were identified as being visible from outside the Project limits. Implementation of the WLC Project would result in the obstruction of views of the Badlands, Mt. Russell and Mystic Lake/San Jacinto Wildlife Preserve from the nearest sensitive visual receptors and those traveling along roadways in the Project vicinity. This is a significant and irreversible environmental change that would occur as a result of Project

implementation. Cumulatively, future development along SR-60 would also result in the obstruction of the existing views of surrounding mountains and visual features.

In addition, this logistics warehouse project, in concert with the other built or approved industrial warehouse projects to the north and west, will fundamentally change the character and land use pattern of this portion of the City. Many of the Project-specific impacts are addressed, as outlined above, but the land use change represented by this and other industrial projects represents a substantial irreversible change in community character for this area. (Revised Final EIR Part 4, Volume 3 pgs. 5-4).

VI. STATEMENT OF OVERRIDING CONSIDERATIONS

Pursuant to Section 15093 of the CEQA Guidelines, this Council must balance the benefits of the proposed Project against unavoidable environmental risks in determining whether to approve the proposed Parcel Map and the proposed Development Agreement, and CEQA Guidelines Section 15093(b) provides that when a public agency approves a project that will result in significant impacts that are identified in the Final EIR but are not avoided or substantially lessened, the agency must state in writing the specific reasons to support its decision based on the Final EIR and/or other information in the whole administrative record. If the specific economic, legal, social, technological or other benefits of a proposed project outweigh its unavoidable adverse environmental impacts, the adverse effects may be considered “acceptable.”

As set forth in sections V.A and V.B above, many of the World Logistics Center’s impacts on the environment will either be insignificant or, through the imposition of mitigation measures as conditions of approval of the Project, can be reduced to less than significant.

Some impacts of the World Logistics Center will remain significant and unavoidable even after the imposition of all feasible mitigation measures which include impacts to aesthetics, air quality, land use, noise, transportation and circulation. There are no feasible alternatives to the Project which would mitigate or avoid those environmental impacts as indicated in Section V.D above.

In consideration of the above and as set forth below, this Council has determined that the benefits which will accrue from the development of the Project outweigh the significant and unavoidable impacts which the Project will produce.

Finding: Notwithstanding the significant unavoidable impacts to aesthetics (individually and cumulative), air quality (individually and cumulative), land use and planning, noise, and transportation discussed in subsection V.C above, the development of otherwise underused land, the creation of jobs by the Project, both during construction and after the Project is in operation, the multiplier effect which will create secondary jobs to support the Project and those who work in it, the substantial economic benefits which will be generated, directly and indirectly, by the Project, the reduction in commute times and the reduction of trips on the County’s highways during peak morning and evening hours in the peak travel direction, the reduction of water consumption over previously planned uses, the achievement of the City’s goal of attracting new business opportunities, the improvement of the City’s jobs/housing balance and the generation of revenues which will go into the City’s general fund constitute benefits which outweigh the unavoidable adverse environmental impacts to aesthetics, air quality, land use, noise and transportation and circulation. Each of the benefits, individually, constitutes a sufficient basis for approving the Project notwithstanding the significant and unavoidable impact on aesthetics, air quality, land use, noise and transportation and circulation which will result.

Factual Basis for the Finding:

Approval of the Project Will Create Jobs and Increase Economic Activity. At full build-out, the Project is estimated to generate over 25,000 ongoing direct jobs in the City. An economic study of the Project

concluded that the proposed WLC project could generate approximately 25,000 new on-site jobs within the City (Revised Final EIR Part 1, Response 1-G-170-4). In addition to the projected on-site job creation, the study estimates the proposed WLC Project could generate new off-site jobs (i.e., indirect/induced employment) in all industries of the economy. The study also estimated that an additional 7,583 indirect/induced jobs could be created in the County, of which 3,792 jobs were projected to be within the City as a result of project implementation. In constant 2012 dollars, these jobs will result in estimated annual wages of approximately \$830,000,000 for direct jobs and approximately \$300,000,000 in wages resulting from indirect and induced jobs. Of the estimated \$300,000,000 indirect and induced jobs approximately \$150,000,000 in wages will occur within the City. (Revised Final EIR Part 4 Appendix O, Table 4B.). This translates into an overall annual estimated economic output of approximately \$2,370,000,000, approximately \$1,940,000,000 of which will occur within the City (Revised Final EIR Part 4 Appendix O, Table 4C.). The Project also is estimated to generate in aggregate, almost 13,000 direct construction jobs over the 15-year build-out period, equivalent to approximately 850 full-time equivalent jobs every year for the duration of the 15-year construction period. These jobs will result in estimated wages, in constant 2012 dollars, of approximately \$625,000,000. (Revised Final EIR Part 4 Appendix O, Table 4D.) Added to this will be approximately 7,400 estimated indirect and induced jobs, with approximately 3,700 of them within the City, with wages, in constant 2012 dollars, of approximately \$300,000,000 half of which, approximately \$150,000,000 will be for jobs within the City. (Revised Final EIR Part 4 Appendix O, Table 4D.) Construction is estimated to result in approximately \$2,600,000,000 in total economic output, which includes in wages and sales income of which approximately \$2,140,000,000 will occur within the City. (Revised Final EIR Part 4 Appendix O, Table 4D.)

Furthermore, with the recent dramatic economic impact of the COVID-19 restrictions and associated substantial job loss, unemployment claims and direct impact to local businesses, the Project provides extraordinary economic value in construction jobs, City revenues, infrastructure improvements and permanent jobs at a time when such economic considerations are critical to a City's immediate and long-term success.

Approval of the Project Will Increase the City's Tax Revenues and Generate a Substantial Annual tax Surplus. At full build-out, the Project is estimated to generate approximately \$11,300,000 in annual revenues (in constant 2012 dollars) for the City (Revised Final EIR Part 4 Appendix O, Table 3A) with approximately \$5,500,000 in costs (Revised Final EIR Part 4 Appendix O, Table 3B) resulting in an estimated annual surplus of almost \$5,700,000 (Revised Final EIR Part 4 Appendix O, Table 3C). In addition, the City will receive an estimated additional \$1,800,000 in Moreno Valley Fire property taxes over the cost of the fire protection services which will be provided to the Project, money that can be spent on fire services in other parts of the City (Revised Final EIR Part 4 Appendix O, page 18).

Approval of the Project Will Provide Money for Schools. The Project is estimated to provide approximately \$47,502,000 in school impact mitigation fees (calculated based on a total 40,600,000 sq. ft. times the 2019 Moreno Valley School District and San Jacinto Unified School District's respective development fees) that can be used to improve educational opportunities for students within both the Moreno Valley Unified School District and the San Jacinto Unified School District. (Revised Final EIR Part 4, Table 4.14.D.) The Project is estimated to also generate approximately \$22,000,000 in additional State education revenue annually as a result of the 1% ad valorem property taxes assessed against the developed Project property. Further, the Project

is estimated to contribute \$6,993,000 to be used by the City to provide and enhance educational and workforce development training in the supply chain and logistics industries. Finally, the Project will also benefit education as a result of income taxes paid to the State on jobs created by the Project, which will be used to fund elementary and high schools, both locally and throughout the State. (Education Code § 14002.).

Approval of the Project Will Improve the City’s Jobs/Housing Balance. As shown in Section 4.13.1.3 of the Revised Final EIR Part 4, the City’s current jobs/housing balance of 0.47 is one of the lowest in Southern California and is almost 60% below the Southern California Association of Government’s 1.14 average, resulting in long commutes for many of the City’s residents. At full build-out, the jobs within the City associated with the Project, direct, indirect and induced, are projected to increase the jobs/housing balance to 0.91 (Revised Final EIR Part 4 Appendix O, Table 4F).

Approval of the Project Will Further the State of California’s Goals of Improving the Urban Jobs/Housing Balance. California Government Code 65890.1 declares the following:

- State land use patterns should be encouraged that balance the location of employment-generating uses with residential uses so that employment-related commuting is minimized.
- Balance in employment and residential land use patterns reduces traffic congestion and may contribute to improvement of air quality in urban areas.
- Balancing of employment-generating land uses and residential land uses improves economic and housing opportunities and reduces loss of economic productivity caused by transportation delay.
- The attainment of a more balanced land use pattern requires the cooperation of government agencies with the private sector to assure that public and private decisions affecting land use take into consideration the need to seek balance in the location of employment-generating land uses and residential land uses.
- Local agencies and state agencies should cooperate to facilitate the balancing of employment-generating land uses and residential land uses and provisions of transportation to serve these uses.
- Local governments have the primary responsibility to plan for local land use patterns, within the parameters established by state law to achieve statewide needs.
- It is the intent of the Legislature to move toward the goal that every California worker have available the opportunity to reside close to his or her jobsite.

By creating an estimated 25,000 direct jobs and more indirect and induced jobs in Moreno Valley, the Project improves the City’s jobs/housing balance and helps the City meet this State-mandated goal.

Approval of the Project Will Further the General Plan’s Goal to Create an Orderly and Balanced Land Use Pattern that Accommodates a Range of Residential, Cultural, Recreational, Business and Employment Opportunities (Goal 9.1, I). The Project adds a major jobs-rich, high- demand land use which is projected to provide a substantial number of both construction and permanent job opportunities to significantly improve the City’s low jobs-housing balance and establish a long-term stable tax base to fund City services. The Project includes a Specific Plan which incorporates extensive project design standards and

project review processes to ensure that all project development occurs in an orderly and balanced manner.

Approval of the Project Will Further the General Plan’s Goal of Creating Clean, Attractive Conditions, Free of Blight and Deteriorated Conditions (Goal 9.1, II). The Project will convert more than 2,600 acres of unused, unproductive marginal farmland into a comprehensively designed logistics campus incorporating Project-wide guidelines for site planning, architecture, and landscaping. The WLC project will advance many of the City’s General Plan goals, objectives and policies. The Project includes a Specific Plan which requires compliance with these guidelines for all development within the WLC, all of which will be subject to a discretionary plan review process including provisions for public review.

Approval of the Project Will Further the General Plan’s Goal of Creating a Community that Enjoys a Healthy Economic Climate that Benefits Both Residents and Businesses (Goal 9.1, IV). The Project will create substantial long-term economic growth and stability for the City as a whole through the creation of tens of thousands of short-term and long-term employment opportunities, increased property values, substantial on-going revenue sources from property taxes and retail sales, low cost of municipal services for logistics uses and payment of substantial development fees. Based on the projections from three separate economic analyses contained in the EIR, the Project will provide substantial annual tax surpluses that will generate funds for use by the City to address city-wide needs.

Approval of the Project Will Further the General Plan’s Goal of Creating Recreational Amenities, Recreational Services and Open Space, Including but not Limited to Parks, Multi-Use Trails, Community Centers and Open Space (Goal 9.1, V). The Project includes the offer of dedication of 74.3 acres of significant open space in the Mt. Russell area. This area is immediately adjacent to the State of California’s 8,800-acre Lake Perris State Recreation Area and the 9,000-acre San Jacinto Wildlife Area. The 74.3 acres will be offered for dedication to the state and to the City for open space use. In addition, the WLC Specific Plan includes the provision for more than five miles of new mixed-use trails to be developed through the Project extending the existing trail system to provide public access opportunities to the Lake Perris Recreation Area and the San Jacinto Wildlife Area.

Approval of the Project Will Further the General Plan’s Goal to Create a Pattern of Land Uses Which Organizes Future Growth, Minimizes Conflicts Between Land Uses and Which Promotes the Rational Utilization of Presently Underdeveloped and Undeveloped Parcels (Goal 2.1). The Project will develop a major undeveloped section of the City into a self-contained, master-planned logistics park featuring major setback areas between the Project and adjacent land uses. Development of the Project will occur in an organized rational manner subject to the review and approval by the City of all development proposals.

Approval of the Project Will Further the General Plan’s Goal to Create an Organized, Well-Designed, High Quality, and Functional Balance of Urban and Rural Land Uses that Will Meet the Needs of a Diverse Population and Promote the Optimum Degree of Health, Safety, Well-being and Beauty for All Areas of the Community While Maintaining a Sound Economic Base (Goal 2.2). The Project will convert more than 2,600 acres of unused, unproductive marginal farmland into a comprehensively designed logistics campus incorporating Project-wide guidelines for site planning, architecture, and landscaping. The WLC project will advance many of the City’s General Plan goals, objectives and policies. This Project replaces the

previously approved 20-year old Moreno Highlands Specific Plan west of Gilman Springs Road which proved to be unmarketable. The Project is projected to create thousands of job opportunities in the City of Moreno Valley within a master-planned logistics campus that will feature unified building design concepts, on-site and off-site landscaping, architecture, street design and a project-wide drainage and water quality system that emphasizes the creation of a sustainable business environment, a safe working environment for thousands of employees, in an attractive comfortable setting while creating a source of major economic benefits and stability to the City and its residents.

Approval of the Project Will Further the General Plan’s Goal of Achieving an Overall Design Statement that Will Establish a Visually Unique Image Throughout the City (Goal 2.3). The Project will be subject to extensive design guidelines which guide all elements of the development of the Project including grading, streets, buildings, lighting, landscaping, architecture, screening, parking, and signage all focused on creating a unified, aesthetically pleasing, functional design across the entire project area. The Project’s proximity to SR60 and Gilman Springs Road will provide a comprehensively planned, architecturally-significant entry statement for the City. Every element of the Project will be subject to City review and approval to ensure that all applicable standards and these City goals are met.

Approval of the Project Will Further the General Plan’s Goal of Providing Systems for Water Supply and Distribution; Wastewater Collection, Treatment and Disposal; and Energy Distribution Which are Capable of Meeting the Present and Future Needs of All Residential, Commercial and Industrial Customers Within the City of Moreno Valley (Goal 2.5). The Project will provide necessary infrastructure systems to accommodate the future water, wastewater and utility needs of all users within the WLC. Such infrastructure systems will be constructed to keep pace with demand and will be monitored by the City and the Eastern Municipal Water District in connection with the review of each individual building application. Infrastructure improvements will be required to be operational at such time as buildings are occupied.

Approval of the Project Will Further the General Plan’s Goal of Balancing the Provision of Urban and Rural Lands Within Moreno Valley by Providing Adequate Land for Present and Future Urban and Economic Development Needs, While Retaining the Significant Natural Features and the Rural Character and Lifestyle of the Northeastern Portion of the Community (Objective 2.1). The Project will establish a major center of jobs-rich land uses to provide thousands of job opportunities for residents of the City and the region and will generate substantial long-term tax revenues to the City, the County and the State to assist in the funding of public services throughout the region. The development of the Project will be accomplished without impact on the rural character and lifestyle of the northeastern portion of the community. The SR60 corridor will provide a significant visual and functional separation between the WLC project and the northeastern portion of the community.

Approval of the Project Will Further the General Plan’s Goal of Providing a Mix of Industrial Uses Which Will Provide a Sound and Diversified Economic Base and Ample Employment Opportunities for the Citizens of Moreno Valley with the Establishment of Industrial Activities that Have Good Access to the Regional Transportation System, Accommodate the Personal Needs of Workers and Business Visitors; and which Meets the Service Needs of Local Businesses (Objective 2.5). The Project will provide

a large-scale, master-planned logistics center specifically designed for the unique goods movement needs of the national and international business community relating to access, circulation, security and technology, all in an attractive, secure and sustainable environment. The Project will create thousands of job opportunities for the citizens of Moreno Valley and the region and will provide a substantial long-term source of tax revenues to help provide a stable and diversified economic base for the City. The circulation plan for the Project is oriented toward the SR60 freeway and to Gilman Springs Road so that traffic, particularly truck traffic, can move to and from the freeway system without interacting with drivers from residential areas in the vicinity. Heavy trucks are prohibited on streets adjacent to residential areas in the vicinity of the Project.

Approval of the Project Will Further the General Plan’s Goal of Designating Business Park/Industrial Areas to Provide for Manufacturing, Research and Development, Warehousing and Distribution as Well as Office and Support Commercial Activities (Policy 2.5.1). The Project will create a 2,600-acre master-planned logistics park which can provide up to 40,600,000 square feet of logistics uses (warehouse and distribution) and ancillary office uses in addition to associated infrastructure. Development of the Project will create thousands of job opportunities responding to the strong demand of the logistics industry and adding to the depth and variety of employment opportunities in the City. Development of the Project will provide a substantial long-term revenue benefits to the City allowing for the funding of City services across a broader and more stable economic base.

Approval of the Project Will Further the General Plan’s Goal of Locating Industrial Uses to Avoid Adverse Impacts on Surrounding Land Uses (Policy 2.5.2). The Project site is located at the most easterly end of the City and is buffered by SR60 on the north, Gilman Springs Road and the Badlands on the east, and the permanent open space of the San Jacinto Wildlife Area on the south. The Project includes several design features specifically to address the interface with the residential areas to the west of the Project. An extensive landscaped setback runs the full length of the Project along Redlands Boulevard, Bay Avenue and Merwin Street. This setback includes an earthen berm and a landscape design oriented to the adjacent residential neighborhoods. Special building height restrictions are applicable to the Project along its western edge to reduce the visibility of WLC buildings from the properties to the west. Other design features include: substantial development setbacks along all edges of the Project, extensive landscape treatments within these setbacks, a circulation system designed to direct trucks toward the freeways and away from residential areas, revisions to city-enforced Truck Routes to prohibit large trucks in residential areas, lighting restrictions, noise restrictions, building height limitations and architectural and landscape guidelines. These design features will be implemented by the City in connection with its review and approval of all development proposals within the WLC area.

Approval of the Project Will Further the General Plan’s Goal of Screening Manufacturing and Industrial Uses When Necessary to Reduce Glare, Noise, Dust, Vibrations and Unsightly Views (Policy 2.5.3). The Project provides extensive design guidelines in the Specific Plan to provide appropriate screening of WLC uses. The Specific Plan contains provisions for extensive landscape areas in setbacks around the WLC project, including an earthen berm along the western project edge. In addition, guidelines addressing building height limitations, on-site and off-site landscape requirements, equipment screening, light-shielding and noise restrictions are contained in the Specific Plan. Implementation of these design features will ensure that adjacent

properties are not adversely affected by the development of the WLC project. The City will implement these guidelines in connection with its Plot Plan review of all development proposals in the WLC as required in the Specific Plan.

Approval of the Project Will Further the General Plan’s Goal of Designing Industrial Developments to Discourage Access Through Residential Areas (Policy 2.5.4). The Project provides for a circulation system that directs traffic toward the freeways and away from local residential areas. The circulation plan provides no vehicular access to Redlands Blvd. between the existing intersections with Eucalyptus Ave. on the north and Cactus Ave. on the south. The City’s Truck Routes will be amended such that heavy truck traffic will be prohibited on Redlands Blvd. south of Eucalyptus Ave. and on Cactus Ave. west of the WLC project.

Approval of the Project Will Further the General Plan’s Goal of Encouraging Open Space Preservation through Policies that Recognize Valuable Natural Resources and Areas Required for Protection of Public Safety that Exist in the City (Objective 2.7). The Project includes 74.3 acres of land on the slopes of Mt. Russell will be offered for dedication to the State of California or to the City of Moreno Valley as permanent open space

Approval of the Project Will Further the General Plan’s Goal of Supporting and Encouraging the Annexation of Unincorporated Areas within the General Plan Study Area for which: a) Long-term Benefits Will be Derived by the City, b) Adequate Infrastructure and Services Have Been or Can Be Economically Provided in Accordance with Current City Standards, and c) the Proposed Annexation Will Generate Sufficient Revenues to Adequately Pay for the Provision of City Services Within a Reasonable Period of Time (Policy 2.9.1). The Project includes the annexation of an 85-acre parcel at the intersection of Gilman Springs Road and Alessandro Blvd., the development of which is incorporated into the WLC Specific Plan. The site’s location west of Gilman Springs Road makes its inclusion in the Specific Plan both practical and logical from a Project design perspective as well as for the delivery of public services.

Approval of the Project Will Further the General Plan’s Goal of Ensuring that All Development within the City of Moreno Valley Is of High Quality, Yields a Pleasant Living and Working Environment for Existing and Future Residents and Attracts Business as the Result of:

Consistent Exemplary Design (Objective 2.10). The Project establishes extensive design guidelines in the Specific Plan and establishes project review procedures by the City to ensure that all development is of high quality, compatible design, and incorporates features to enhance its environmental sustainability. The City will conduct a discretionary review of all development proposals to ensure that the overall WLC and each building within it will result in a pleasant environment for employees and visitors. Through the provisions of the Specific Plan, the Project will have a consistent design theme (Policy 2.10.1), will contain regulations regarding screening of outdoor storage and trash facilities (Policy 2.10.2), will require architecturally attractive building elevations (Policy 2.10.3), will require landscaping as an integral part of the Project design (Policy 2.10.4), requires a landscaped area as setback along the freeway right-of-way (Policy 2.10.5), will require a comprehensive sign program for the entire Project area (Policy 2.10.6), provides regulations for the control of on-site lighting (Policy 2.10.7 and 8), provides design standards for fences and walls (Policy 2.10.9), provides design standards for street frontages (Policy 2.10.10), provides design features (setbacks, berms, landscaping,

height restrictions, etc.) to screen the Project from residential properties (Policy 2.10.11), provides screening requirements for on-site parking areas (Policy 2.10.12) and requires compliance with the Municipal Code for landscaping in parking areas (Policy 2.10.13).

Approval of the Project Will Further the General Plan’s Goal of Maintaining a Water System Capable of Meeting Daily and Peak Demands of Moreno Valley Residents and Businesses Including the Provision of Adequate Fire Flows (Objective 2.11). The Project will be designed to minimize water consumption to the greatest degree possible. In addition to incorporating water-saving design features in all buildings, the Project will feature a landscape design that will minimize the use of mechanical irrigation to the greatest degree possible. The Project is required to confirm the availability of infrastructure to provide adequate water service (including fire flows) to serve development prior to the occupancy of each building in the WLC. Improvement plans will be reviewed and approved by the City and by Eastern Municipal Water District for all development within the WLC.

Approval of the Project Will Further the General Plan’s Goal of Maintaining a Wastewater Collection, Treatment and Disposal System Capable of Meeting the Daily and Peak Demands of Moreno Valley Residents and Businesses (Objective 2.12). The Project’s commitment to reducing water consumption throughout the Project will significantly reduce the amount of wastewater that will be generated. The Project is required to confirm the availability of infrastructure to provide adequate wastewater services to serve development prior to the occupancy of each building in the WLC. Improvement plans will be reviewed and approved by the City and by Eastern Municipal Water District for all development within the Project.

Approval of the Project Will Further the General Plan’s Goal of Coordinating Development Activity With the Provision of Public Infrastructure and Services (Objective 2.13). The Project is subject to state-mandated subdivision procedures as well as discretionary project review procedures both carried out by the City prior to the development of any property within the Project area. These procedures establish the nature and extent of infrastructure improvements needed to serve any proposed development. All development plans will be reviewed and approved by the service provider and such development will be limited to that which can be adequately served (Policy 2.13.1). Backbone facilities will be constructed with the initial phases of the development served (Policy 2.13.2). Such improvements are required to be operational prior to the occupancy of any new buildings (Policy 2.13.3). The Project will include advanced technology infrastructure, including high-speed internet access and solar energy. (Policy 2.13.4).

Approval of the Project Will Further the General Plan’s Goal of Developing a System of Trails Which Contribute to Environmental Quality and Energy Conservation by Providing Alternatives to Motorized Vehicular Travel and Opportunities for Recreational Equestrian Riding, Bicycle Riding and Hiking and that Connects With Major Regional Trail Systems (Objective 4.3). The Project includes the extension of the City’s multi-use trail system with five miles of trails to be constructed within the WLC. These trails will provide linkages between the residential area west of the Project to the Lake Perris Recreation Area and the San Jacinto Wildlife Area to the south of the Project and to the Badlands area east of the Project. The trails will extend along Eucalyptus Ave. providing a nearby linkage to the future trails on the north side of SR60 (Policy 4.3.1). In addition, a public Trail Head will be constructed along Alessandro Boulevard (Policy 4.3.5).

All such multi-use trails will be constructed along with adjacent development (Policy 4.3.3).

Approval of the Project Will Further the General Plan’s Goal of a Safe, Efficient, Environmentally and Fiscally Sound Integrated Vehicular Circulation System which Provides Access to Development and Supports Mobility Requirements of the System’s Users (Goal 5.1). The Project incorporates a circulation system that fully meets the needs of the WLC project through the provision of enhanced freeway interchanges, new and expanded arterial highways, and collector streets within the WLC (Objective 5.1). The design of this system of roadways will be evaluated with each proposed building to ensure that adequate access and circulation is provided for planned vehicles (autos and trucks) as well as emergency vehicles, trash trucks, pedestrians and bicycles (Policy 5.1.1). Class II bikeways will be constructed on all streets in the WLC to reduce conflicts between vehicular, pedestrian and bicycle traffic (Policy 5.1.2). Off-street parking is required to meet Municipal Code requirements (Policy 5.1.3) and additional truck pull-out parking bays along collector streets will be installed to offer additional truck parking without obstructing traffic flow. The circulation system is designed to preclude project truck traffic from traveling through residential areas by interrupting through traffic on Alessandro Blvd. and by not designating Redlands Blvd. south of Eucalyptus Ave. and Cactus Avenue west of the WLC project as Truck Routes.

Approval of the Project Will Further the General Plan’s Goal of Maintaining Level Of Service (LOS) “D” in the Vicinity of SR60 and High Employment Centers (Objective 5.3). The Project has been designed to meet the LOS “D” standard throughout the Project and each building project will be required to prepare and process a focused traffic impact analysis to confirm that this standard is met. Road improvements to maintain this standard will be constructed prior to occupancy of each building (Policy 5.3.1). Other traffic improvements will be funded through the collection of TUMF fees in connection with the construction of each building (Policy 5.3.5). Mitigation Measures imposed on the development of the Project will ensure that surrounding streets will not be exposed to additional traffic or traffic delays.

Approval of the Project Will Further the General Plan’s Goal of Maximizing the Efficiency of the Local Circulation System (Objective 5.5). The Project’s circulation system includes a system of roadways to provide safe and efficient access to all development parcels within the WLC. Each individual project will be reviewed and approved by the City to ensure that roadway spacing is appropriate (Policy 5.5.1), turn lanes are provided where necessary (Policy 5.5.2) and points of access are coordinated to ensure adequate capacity, efficiency and safety (Policy 5.5.3 and 5.5.4).

Approval of the Project Will Further the General Plan’s Goal of Encouraging Development of an Efficient Public Transportation System for the Entire Community (Objective 5.8). The Project has been designed to accommodate public transit vehicles on all Project streets, including future bus turnouts and bus shelters at such time as bus routes are established to serve the WLC (Policy 5.8.4).

Approval of the Project Will Further the General Plan’s Goal of Encouraging Development of Safe, Efficient and Aesthetic Pedestrian Facilities (Objective 5.9). The Project includes a system of pedestrian walkways that will link all Project sites to one another as well as to transit facilities, trails, bikeways, and off-Project locations (Policies 5.9.1 and .2). Such pedestrian walks will be designed into adjacent Project plans to enhance the aesthetics of the pedestrian experience while encouraging non-vehicular transportation. (Policies

5.9.3 and .4).

Approval of the Project Will Further the General Plan's Goal of Encouraging Bicycling as an Alternative to Single Occupant Vehicle Travel for the Purpose of Reducing Fuel Consumption.

Traffic Congestion and Air Pollution (Objective 5.10). The Project provides a comprehensive network of bikeways along all Project streets to link all Project sites as well as links to off-Project bicycle facilities and circulation facilities (Policy 5.10.1). Plot Plans for each building will ensure that facilities are incorporated (storage lockers, showers, etc.) to encourage the use of bicycles.

Approval of the Project Will Make Major Progress Toward Fulfilling Goals of the Moreno Valley Economic Development Action Plan. The Moreno Valley Economic Development Action Plan approved by the City Council, first as a two-year plan in April 2011, and again as a three-year plan in April 2013, specifically identified logistics development in eastern Moreno Valley as a primary economic opportunity for the City. The logistics industry has been a leader in job creation in the Inland Empire and is expected to remain a strong business sector for the region (Inland Empire Quarterly Economic Report, January, 2014). Accordingly, the Project will create jobs well-suited for the local population in a community with an unemployment rate of 9.7% (April, 2014), which is well above the State average of 7.3% (April, 2014). (City Manager's Report, pages 13-14 (June, 2014).

Approval of the Project Will Provide Quality Jobs. As set forth in Revised Final EIR Part 1 Response to Comment 1-F8-17, development of the Project is projected to create over 25,000 jobs with an estimated average annual income of \$40,926 (David Taussig & Associates, Fiscal and Economic Impact Study, 2014). This average income, taken from the U.S. Census Bureau for Riverside County and the Inland Empire, is slightly higher than the \$40,124 average income of current Moreno Valley residents according to the U.S. Bureau of Labor Statistics.

Approval of the Project Will Create Jobs in the Industry Where Demand Exists. For twenty years, the Moreno Highlands Specific Plan allowed for the development of a mix of residential, commercial, and small business park uses. However, due to a lack of demand, the uses allowed by the Specific Plan were never realized. Throughout Moreno Valley, there remains undeveloped residentially and commercially zoned property that sits underutilized due to a lack of demand resulting in a lack of job creation. Recognition of the lack of job creation was one of the driving elements of the City's Economic Development Action Plan (April, 2011 and April, 2013), which sought to increase investment in the City and create job opportunities within the City. The Economic Development Action Plan identified healthcare and the logistics industries as the two major areas of economic opportunity for the City, where job creation is directly linked to market demand. The City has lost job creation opportunities due to the mismatch between zoning and market demand for those land uses. By selectively aligning some of the City's land uses with market demands, the City will create job opportunities within the City that would not be achievable based on current zoning and market demand.

Approval of the Project Will Increase Employment, Furthering the City's Goal of Improving Quality of Life and Creating a Healthy Economic Climate by Reducing Poverty and Its Impacts. The Project will create jobs improving the economic vitality of the City and help reduce its 10.7% unemployment rate as of

August 2014, according to the City Manager’s October, 2014, Update. Increased employment in the City is one of many actions that will raise the quality of life and help improve the economic environment for the 1 in 6 residents, including 1 in 4 children, that live below the poverty line. By approving the Project, thereby creating an estimated 25,000 jobs, the City will help reduce poverty and its resulting impacts, which will result in an improved quality of life and economic climate (Ultimate General Plan Goals II and IV).

Approval of the Project Will Improve Public Health. One method of improving public health in Moreno Valley is to improve economic opportunities in the City because poverty is strongly correlated with many negative outcomes, particularly health. Public health research groups like the Robert Wood Johnson Foundation find that socioeconomic difficulties, not environmental issues, are the principal causes of public health risks (<http://www.dailynews.com/opinion/20131025/californias-poor-kept-in-poverty-by-job-killing-elite-john-husing>). And according to “IS POVERTY A DEATH SENTENCE? The Human Cost of Socioeconomic Disparities” by Senator Bernie Sanders (<http://www.sanders.senate.gov/>), almost as many people die from poverty as from lung cancer. Therefore, one of the best ways to improve public health in Moreno Valley is to increase the number of employment opportunities in the City. By approving the Project, thereby creating an estimated 25,000 direct jobs, the City will help reduce poverty and its resulting public health impacts.

Approval of the Project Will Allow for the Economic Use of Currently Underused Land. As set forth in Appendices C-1 and C-4 of the Revised Final EIR Part 4 , the Project site is currently suitable only for dry farming as the high cost and uncertain availability of irrigation water make irrigated farming economically infeasible. Further, as stated in section 3.3.1 of the Revised Final EIR Part 4 , there were numerous uses permitted by the previous zoning on the site (the Moreno Highlands Specific Plan), but, because there had been no market for the planned and permitted uses, the Project site has remained undeveloped for over 20 years. As set forth in the Project Objectives in Section 3.6 of the Revised Final EIR Part 4 and in the Fiscal and Economic Impact Study dated May 21, 2014 (Revised Final EIR Part 4 Appendix O), the approval of the Project will allow the conversion of vacant, marginally productive agricultural land into a jobs- and revenue-producing facility.

Approval of the Project Will Ensure the Availability of Industrially-Zoned Land in Moreno Valley to Meet Demand. With the exception of the Project site, the City of Moreno Valley has less than 150 acres, remaining for industrial development that does not already have an application for development pending. Over 14 million square feet of industrial development has been constructed in Moreno Valley with only one building currently vacant (City of Moreno Valley Economic Development Summary, July 10, 2014). As noted, inclusive of the 14 million square feet of industrial buildings already developed in the city, the City will still suffer from a substantial deficit of jobs compared to housing and the remaining 150 acres of industrial land in the City is insufficient to create the jobs needed to reduce poverty in the City and to meet the City’s employment goals set forth in the Economic Development Action Plan. Land for logistics development is in high demand and is one of the fastest-growing sectors in the Inland Empire (Inland Empire Quarterly Economic Report, January, 2014). Without additional industrially zoned land, the City will not be able to meet the regional demand for logistics facilities which the city has identified as a prime area of economic opportunity in the City. Approval of the Project will provide more than 2,400 acres of land for logistics use, responding to

the demand for those uses.

Approval of the Project Will Allow Moreno Valley to be More Competitive for Industrial Projects.

Moreno Valley substantially lags other cities in the Inland Empire in the percentage of land zoned for industrial/business park uses (see chart below):

City of Moreno Valley’s Economic Development Action Plan, Survey of Inland Region - Industrial/Business Park Zoning (April, 2011)

With hardly any other available land remaining in the City for industrial development, the City cannot effectively compete and gain its fair share of industry in the region. With an insufficient amount of industrially zoned land, Moreno Valley is unable to attract the jobs necessary to provide economic opportunities for its residents.

Approval of the Project Will Make Major Progress Toward Fulfilling the Regional Need for Logistics Development.

The Southern California Association of Governments, of which the City is a member, came to the following conclusions in its June, 2010, report, Industrial Space in Southern California: Future Supply and Demand for Warehousing and Intermodal Facilities, at pages ES- 1-2:

“According to assumed growth rates, the region will run out of suitably zoned vacant land in about the year 2028. At that time, forecasts show that the demand for warehousing space will be approximately 1,023 million square feet.

“During the year 2035, there will be a projected shortfall of space of about 228 million square feet, unless other land not currently zoned for warehousing becomes available.”

The Project will be developed over the time period that the region needs additional appropriately zoned land for warehousing and intermodal facilities. As a result, the Project will help meet the forecasted demand for such facilities and will allow the City to be well placed to reap the benefits from serving the demand for

logistics services.

Approval of the Project Will Implement Aggressive Air Quality Strategies. The Project will implement the most stringent air quality requirements. All trucks serving the facility will be required to meet U.S. Environmental Protection Agency's (USEPA) and California Air Resources Board's (CARB) most stringent engine emissions standards that apply to new heavy-duty vehicles (Mitigation Measure 4.3.6.2A). By prohibiting trucks that do not meet 2010 emissions standards, the Project will exceed the operational requirements of USEPA and CARB and other agencies. In addition, the Project will: 1) construct an alternative fueling station to encourage the use of alternatively-fueled vehicles (Mitigation Measure 4.3.6.3C); 2) prohibit the use of diesel in onsite facility equipment (Mitigation Measure 4.3.6.3B); and 3) restrict idling (Mitigation Measure 4.3.6.3B), and 4) prohibit the use of diesel backup generators (Mitigation Measure 4.3.6.3B).

Approval of the Project Will Ensure that the Health of Residents, School Children and Workers, both Within and Outside of the Project Area, Will Not Be Adversely Affected by the Construction and Operation of the Project. The development of a logistics facility necessarily involves the use of large numbers of diesel trucks. Numerous studies have found that the exhaust from the older diesel trucks can cause cancer and other adverse health effects. As set forth in Revised Final EIR Part 4 Section 4.3, the recent study conducted by the Health Effects Institute demonstrates that diesel trucks which comply with stringent USEPA and CARB standards do not cause cancer or adverse health effects. Project conditions of approval prohibit diesel trucks which do not comply with the 2010 standards from accessing the Project. The Revised Final EIR Part 2 utilized current OEHHA guidelines and the new EMFAC2017 emission factors, demonstrating that the Project would not result in significant health risk impacts (Revised Final EIR Part 2, Page 4.3-78). As a result, the City will enjoy the numerous benefits which will flow from the construction and operation of the Project without subjecting anyone to the risk of cancer and other adverse health effects which result from the use of older diesel trucks.

Approval of the Project Will Reduce Commuting Time and Decrease Traffic on the County's Highways during Peak Hours. As shown in Section 4.15.3.2 of the Revised Final EIR Part 4, the jobs created by the Project will result in shorter commutes for the City's residents, shorter commutes for those who do not reside in the City but who have been forced to seek jobs closer to Los Angeles and will allow workers from outside of the City to travel to and from the Project on the County's freeways in the off peak directions which will reduce commute times. (Revised Final EIR Part 4 Appendix L, section 4.D.)

Approval of the Project Will Result in Substantially Fewer Vehicle Trips Compared to the Previous Zoning (prior to adoption of the WLC Specific Plan). The traffic study for the Moreno Highlands Specific Plan (the previous zoning) forecasted a total of 178,608 average vehicle trips per day (ADT) resulting from the development of the Moreno Highlands plan. Deducting the land in the Moreno Highlands plan purchased by the California Department of Fish and Wildlife, San Diego Gas and Electric Company and Southern California Gas Company, none of which will be developed further, reduces the Average Daily Trips to 119,668. (Revised Final EIR Part 4, Volume 3, Table 6.G.) The development of the Moreno Highlands plan (zoning in place prior to November 2015 adoption of the WLC Specific Plan) would result in more than a 70% increase in Average Daily Trips as compared to the development of the World Logistics Center project (69,542

ADT). (Revised Final EIR Part 4, Volume 3, Table 6.G.) It is important to note that the approved Moreno Highlands traffic studies did not provide separate counts for car and truck traffic and did not provide a forecast in terms of passenger care equivalents (PCEs) therefore the Average Daily Trips for the Moreno Highlands plan may understate total traffic as compared to the World Logistics Center Average Daily Trips. However, even if the Moreno Highlands plan were to generate no truck trips at all (only passenger car trips), it would still generate substantially more PCE trips than the proposed Project. Further, the operation of the WLC will result in a substantial net decrease in vehicle miles currently traveled because of the substantial decrease in the commuting distances of the workers who will have jobs at the WLC (Attachment B).

Approval of the Project Will Result in the Consumption of Substantially Less Water Compared to Previous Zoning. When compared to the previously in place Moreno Highland Specific Plan, there will be a 64% decrease in projected water demand, 1,761,260 gallons per day, compared to 4,888,456 gallons per day after accounting for the land within the Specific Plan area which will never be developed. (Revised Final EIR Part 4, Table 6.I.) As a result, the Project's water usage consumption will be substantially below that anticipated in the City's General Plan and the 2010 Eastern Municipal Water District's Urban Water Management Plan. (Revised Final EIR Part 4, Volume 3, pg. 4.16-20.). As the Project is currently consistent with the General Plan and zoning, Project implementation will be consistent with General Plan and Urban Water Management Plan projections.

Approval of the Project Will Create a Master-Planned, Sustainable Development. The development of the Project will be governed by the World Logistics Center Specific Plan which will result in a master-planned industrial development that will create a jobs center in eastern Moreno Valley that is separated from residential communities. By governing the development of the Project through the use of the Specific Plan, the City has ensured that all development at the Project site will meet the highest environmental standards while limiting impacts on the community. The Project achieves these standards through requirements such as LEED certification for buildings, minimal irrigation landscaping, solar power which ensures sustainable design and the smallest environmental footprint. In addition, the use of a master-planned development ensures that the Project will meet the highest aesthetic standards, creating a world-class facility, subject to rigorous design standards.

VII. CERTIFICATION OF THE FINAL ENVIRONMENTAL IMPACT REPORT

A. FINDINGS

1. CEQA Compliance

The Moreno Valley City Council certifies that the Revised Final EIR was prepared in compliance with CEQA and the CEQA Guidelines and that the City Council has complied with CEQA's procedural and substantive requirements.

The Moreno Valley City Council further declares that it has reviewed and considered the EIR in evaluating the Project and that the Revised Final EIR reflects the independent judgment and analysis of the City Council. The City Council further finds that no new significant information as defined by CEQA Guidelines Section 15088.5, has been received by the City Council after the circulation of the RSFEIR and Recirculated Sections that would require further recirculation. All of the information added to the Revised Final EIR merely clarifies, amplifies or makes insignificant modifications to an already adequate DEIR, RSFEIR and Recirculated Sections pursuant to CEQA Guidelines Section 15088.5(b).

Accordingly, the City Council certifies the Revised Final EIR for the WLC Project.

As the decision-making body for approval of the Parcel Map, the City Council has reviewed and considered the information contained in the Findings and supporting documentation. The City Council determines that the Findings contain a complete and accurate reporting of the environmental impacts and mitigation measures associated with the Project, as well as complete and accurate reporting of the unavoidable impacts and benefits of the Project as detailed in the Statement of Overriding Considerations.

B. Significant Unavoidable Impacts/Statement of Overriding Considerations

The Project will have significant adverse impacts even following adoption of all feasible mitigation measures which are required by the Council. The following significant environmental impacts have been identified in the Revised Final EIR and will require mitigation but cannot be mitigated to a level of insignificance as set forth in Section V(C) of these Findings:

- Aesthetics - Scenic Vistas
- Aesthetics - Scenic Resources and Scenic Highways
- Aesthetics - Substantial degradation of the existing visual character or quality of the site and its surroundings
- Aesthetics - Cumulative Aesthetic Impacts
- Air Quality - Construction Air Pollutant Emissions
- Air Quality - Operational Air Pollutant Emissions
- Air Quality - Consistency with Air Quality Management Plan (AQMP)
- Air Quality - Cumulative Air Pollutant Emissions
- Air Quality - Sensitive Receptors

- Land Use and Planning - Physically divide an established neighborhood (impacts on existing residences)
- Noise - Short-Term Construction Noise
- Noise - Long-Term Traffic Noise
- Noise – Long Term Noise
- Noise - Cumulative Noise Levels
- Transportation - Off-Site Impacts to TUMF Facilities
- Transportation Off-Site Improvements to Roads Outside the Jurisdiction of the City and Not Part of the TUMF Program

The City Council has eliminated or substantially reduced environmental impacts where feasible as described in the Findings, and the City Council determines that the remaining unavoidable significant adverse impacts are acceptable due to the reasons set forth in the preceding Statement of Overriding Considerations.

C. Conclusions

All potentially significant environmental impacts from implementation of the Project have been identified in the Revised Final EIR and, with the implementation of the mitigation measures defined herein and set forth in the MMRP, will be mitigated to a less-than-significant level, except for the impacts identified in Section VII.A.2 above. All reasonable and feasible mitigation measures have been adopted in the MMRP and the City finds that economic, social, and environmental considerations of the proposed Project outweigh the unavoidable significant adverse impacts described in Section VII.A.2 above. Further, the City finds that each of the separate benefits of the proposed Project is hereby determined to be, independent of the other proposed Project benefits, a basis for overriding all unavoidable environmental impacts identified in the Revised Final EIR and in these Findings. The reasons for accepting these remaining significant impacts are described above. In making these findings, the City has balanced the benefits of the proposed Project against its unavoidable environmental impacts and finds that the benefits outweigh and override the significant unavoidable impacts for the reasons stated below.

VIII. ADOPTION OF MITIGATION MONITORING AND REPORTING PROGRAM

Pursuant to *Public Resources Code* Section 21081.6, the City Council hereby adopts, as conditions of approval of the Project, the Mitigation Monitoring and Reporting Plan (MMRP) provided as Resolution Exhibit B. In the event of any inconsistencies between the mitigation measures as set forth herein and the attached MMRP, the MMRP shall control, except to the extent that a mitigation measure contained herein is inadvertently omitted from the MMRP, in which case such mitigation measure shall be deemed as if it were included in the MMRP.

EXHIBIT C

REVISED FINAL ENVIRONMENTAL IMPACT REPORT BY REFERENCE

Attachment: 2020-XX Resolution Revised FEIR Appeal [Revision 1] (4074 : World Logistics Center)

RESOLUTION NUMBER 2020-_____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, DENYING THE APPEAL (PAA20-0003) OF THE PLANNING COMMISSION'S APPROVAL OF TENTATIVE PARCEL MAP NO. 36457 FOR FINANCE AND CONVEYANCE PURPOSES AND AFFIRMING PLANNING COMMISSION RESOLUTION 2020-21 APPROVING TENTATIVE PARCEL MAP NO. 36457

WHEREAS, the City of Moreno Valley is a general law city and a municipal corporation of the State of California; and;

WHEREAS, HF Properties, a California general partnership, Sunnymead Properties, a Delaware general partnership, Theodore Properties Partners, a Delaware general partnership, 13451 Theodore, LLC, a California limited liability company, and HL Property Partners, a Delaware general partnership (collectively "HF" or "Applicant") have a legal and equitable interests in approximately two thousand, two hundred sixty three (2263) acres of real property located in the region commonly referenced as the Rancho Belago area of the City of Moreno Valley, as described in the legal description set forth in Exhibit "A-1" and as illustrated in the depiction set forth in Exhibit "A-2" (the "Subject Property") of the proposed 2020 World Logistics Center Development Agreement; and

WHEREAS, on November 24, 2015, the City Council unanimously approved the World Logistics Center Land Use and Zoning Entitlements Initiative, also known as the "Moreno Valley Jobs initiative," which amended the General Plan of the City of Moreno Valley, amended the City of Moreno Valley Zoning Map, repealed the Moreno Highlands Specific Plan, and adopted the World Logistics Center Specific Plan, and imposed certain Project Conditions of Development; and

WHEREAS, the World Logistics Center Specific Plan allows the development of approximately forty million, six hundred thousand (40,600,000) square feet of industrial, logistics, warehouse and support uses on the land subject to the World Logistics Center Specific Plan; and

WHEREAS, on November 24, 2015, the Moreno Valley Community Services District Board of Directors also unanimously approved the "WLC Land Benefit Initiative," to request that the Riverside County Local Agency Formation Commission initiate the process for the Moreno Valley Community Services District to annex an 85-acre parcel along Gilman Springs Road; and

WHEREAS, HF submitted Tentative Parcel Map No. 36457 for Finance and Conveyance Purposes Only ("Parcel Map"), attached to Resolution 2020-21 as Exhibit 1, subject to subsequent processing and recordation of a future map for development purposes; and

Resolution No. 2020-XX
Date Adopted: June 16, 2020

WHEREAS, a Revised Final Environmental Impact Report was prepared for the “Project,” as collectively described and depicted in the World Logistics Center Land Use and Zoning Entitlements Initiative, WLC Land Benefit Initiative, Tentative Parcel Map No. 36457 for Finance and Conveyance Purposes Only and the proposed 2020 World Logistics Center Development Agreement; and

WHEREAS, Section 9.14.065 (“Finance and Conveyance Maps”) of the Moreno Valley Municipal Code set forth the criteria governing the filing and processing of tentative maps for finance and/or conveyance purposes; and

WHEREAS, pursuant to 9.14.065 C (“Submittal Requirements”), the Director of Community Development waived the following requirements as requested in advance by Applicant:

1. Identification of existing structures, both above and below ground, which are too small to show on the Parcel Map, such as but not limited to, power poles and fire hydrants;
2. Identification of widths, approximate grades of proposed streets and approximate street centerline radii of curves;
3. Identification of specific areas of existing subsurface sewage disposal systems and disposal areas;
4. Identification of proposed facilities for control of storm waters;
5. Identification of common areas and open spaces since there are none to show currently;
6. Identification of adjoining residential property and lot lines due to the size of the Parcel Map;
7. Identification of existing use and zoning of property immediately surrounding the Parcel Map;
8. Identification of existing zoning and proposed land use of property within the Parcel Map;
9. Inclusion of a detailed Site Grading Plan.
10. Identification of dimensions and location of sidewalks and common areas;
11. Inclusion of a soils and geology report; and
12. Inclusion of a regional housing needs statement; and

WHEREAS, the Planning Commission conducted a noticed Public Hearing on May 14-15, 2020, to consider the Revised Final Environmental Impact Report, the proposed 2020 World Logistics Center Development Agreement and Tentative Parcel Map No. 36457 for Finance and Conveyance Purposes Only; and

WHEREAS, at the conclusion of the May 14-15, 2020 Public Hearing, the Planning Commission adopted Resolution 2020-21 approving Tentative Parcel Map No. 36457 for Finance and Conveyance Purposes Only subject to certification of the World Logistics Center Revised Final Environmental Impact Report and approval of the 2020 World Logistics Center Development Agreement; and

Resolution No. 2020-XX
Date Adopted: June 16, 2020

WHEREAS, on or about May 26, 2020, Adriano L. Martinez filed an appeal on behalf of the Center for Biological Diversity, Center for Community Action & Environmental Justice, Coalition for Clean Air, San Bernardino Valley Audubon Society, and Sierra Club, challenging the Planning Commission's May 14-15 decision to approve Tentative Parcel Map 36457 for Finance and Conveyance Purposes Only (PAA20-0002); and

WHEREAS, on June 16, 2020, the City Council conducted a noticed Public Hearing to consider the appeal filed by Mr. Martinez.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:

Section 1. Recitals and Exhibits

That the foregoing Recitals and attached Exhibits are true and correct and are hereby incorporated by this reference.

Section 2. Evidence

That the City Council has considered all of the evidence submitted into the administrative record related to the appeal of the Planning Commission's approval Tentative Parcel Map No. 36457 for Finance and Conveyance Purposes Only, including, but not limited to, the following:

- (a) Moreno Valley General Plan and all other relevant provisions contained therein;
- (b) Title 9 ("Planning and Zoning") of the Moreno Valley Municipal Code and all other relevant provisions referenced therein;
- (c) Draft EIR and all studies, reports, public comments and responses thereto;
- (d) Final EIR and all studies, reports, public comments and responses thereto;
- (e) Draft Development Agreement by and between the City and Developer, its application and all documents, records and references contained therein;
- (f) World Logistics Center Land Use and Zoning Entitlements Initiative, also known as the "Moreno Valley Jobs initiative," that was unanimously approved by the City Council in November 24, 2015;
- (g) Amendments to the Moreno Valley General Plan as described in the World Logistics Center Land Use and Zoning Entitlements Initiative which were approved by the City Council through the City Council's adoption of the Logistics Center Land Use and Zoning Entitlements Initiative on November 24, 2015;
- (h) Amendments to the City of Moreno Valley Zoning Map as described in the World Logistics Center Land Use and Zoning Entitlements Initiative which were approved through the City Council's adoption of the Logistics Center Land Use and Zoning Entitlements Initiative on November 24, 2015;

Resolution No. 2020-XX
Date Adopted: June 16, 2020

(i) Moreno Highlands Specific Plan as described in the World Logistics Center Land Use and Zoning Entitlements Initiative which was repealed through the City Council's adoption of the Logistics Center Land Use and Zoning Entitlements Initiative on November 24, 2015;

(j) World Logistics Center Specific Plan as described in the World Logistics Center Land Use and Zoning Entitlements Initiative which was adopted through the City Council's adoption of the Logistics Center Land Use and Zoning Entitlements Initiative on November 24, 2015;

(k) Project Conditions of Development as described in the World Logistics Center Land Use and Zoning Entitlements Initiative which were imposed through the City Council's adoption of the Logistics Center Land Use and Zoning Entitlements Initiative on November 24, 2015;

(l) WLC Land Benefit Initiative, requesting that the Riverside County Local Agency Formation Commission initiate the process for the Moreno Valley Community Services District to annex an 85-acre parcel along Gilman Springs Road, unanimously approved by the Moreno Valley Community Services District Board of Directors on November 24, 2015;

(m) Tentative Parcel Map No. 36457 for Finance and Conveyance Purposes only, subject to subsequent processing and recordation of a future map for development purposes and all documents, records and references related thereto, including without limitation, the application and reports and written statements regarding the proposed method of control of storm water, including data as to amount of runoff, and the approximate grade and dimensions of the proposed facilities, unless waived;

(n) Written waiver requests submitted by Applicant and approval of said waivers by the Community Development Director;

(o) Planning Commission Staff Report and Staff Presentation and all documents, records and references related thereto;

(p) Testimony and/or comments from Developer and its representatives during the Planning Commission Public Hearing;

(q) Testimony and/or comments from all persons that was provided in written format or correspondence, at, or prior to, the Planning Commission Public Hearing;

(r) Riverside County Superior Court's Ruling on Peremptory Writ of Mandate, filed February 8, 2018;

(s) Riverside County Superior Court's Judgment Granting Petitions for a Peremptory Writ of Mandate, filed June 7, 2018; and

(t) Court of Appeal Opinion, Center for Community Action & Environmental Justice v. City of Moreno Valley (2018) 26 CA5t 689.

(u) City Council Staff Report and Staff Presentation and all documents, records and references related thereto;

(v) Testimony and/or comments from Developer and its representatives during the City Council Public Hearing;

(w) Testimony and/or comments from all persons that was provided in written format or correspondence, at, or prior to, the City Council Public Hearing;

Resolution No. 2020-XX
Date Adopted: June 16, 2020

(x) The findings set forth in Planning Commission Resolution 2020-20 approving and adopting a Mitigation Monitoring Reporting Program and Statement of Overriding Considerations and Certifying the Revised Final EIR;

(y) The findings set forth in Planning Commission Resolution 2020-21 Approving Tentative Parcel Map No. 36457 for Finance and Conveyance Purposes;

(z) The findings set forth in Planning Commission Resolution 2020-22 Recommending that the City Council Adopt the Requisite Ordinance Approving the WLC Development Agreement; and all written responses, prepared by staff, the applicant and/or applicant’s representatives to comments submitted to the City after the Planning Commission Public Hearing and any and all responses to comments submitted to the City prior to or at the City Council Public Hearing and after the Planning Commission Public Hearing; and

(aa) Tentative Court of Appeal Opinion, Albert Paulek, et al., v. City of Moreno Valley (May 2019), Case No. E071184.

Section 3. Findings

That based on the content of the foregoing Recitals and the Evidence contained in the Administrative Record as set forth above, the City Council affirms the findings set forth in Resolution _____ in addition to the findings set forth below:

- (a) The Tentative Parcel Map is for finance and conveyance purposes only;
- (b) The Tentative Parcel Map does not create a legal building site and that a future map for development purposes must be processed and recorded in order for any development on the site to occur;
- (c) No development approvals are included in this Tentative Parcel Map;
- (d) The Tentative Parcel Map includes parcel map identification number, assessor’s parcel number, title of map, and legal description of property;
- (e) The Tentative Parcel Map includes the name and address of the owner and subdivider and name and address of person preparing map;
- (f) The Tentative Parcel Map includes the approximate total acreage of property and lot size net and gross for a typical lot and for each irregular lot, overall dimensions, north arrow, scale and date;
- (g) The Tentative Parcel Map identifies the land division boundary line and vicinity map showing its relationship to the surrounding community;
- (h) The Tentative Parcel Map references the assessor’s map book and page numbers of adjoining land divisions;
- (i) The Tentative Parcel Map identifies the names, locations, right-of-way, width and improvements of existing adjacent streets, alleys, railroads and existing structures, both above and below ground, unless waived by the Community Development Director at the request of Applicant;
- (j) The Tentative Parcel Map identifies the names, location, widths of rights-of-way or proposed streets, alleys and easements, and the approximate grades of proposed streets and approximate street centerline radii of curves, unless waived by the Community Development Director at the request of Applicant;

Resolution No. 2020-XX
Date Adopted: June 16, 2020

Attachment: 2020-XX Resolution TPM 36457 Appeal (4074 : World Logistics Center)

(k) The Tentative Parcel Map identifies the streets, alleys and right-of-way providing legal access to the property, unless waived by the Community Development Director at the request of Applicant;

(l) The Tentative Parcel Map identifies all the proposed private streets, unless waived by the Community Development Director at the request of Applicant;

(m) The Tentative Parcel Map includes the names of utility purveyors, location and width of existing and proposed known public utility easements;

(n) The Tentative Parcel Map identifies the location and width of the areas for required subsurface sewage disposal systems, unless waived by the Community Development Director at the request of Applicant;

(o) The Tentative Parcel Map identifies all known existing wells on the property or within two hundred (200) feet of the subdivision boundary;

(p) The Tentative Parcel Map identifies all water courses, channels, existing culverts and drain pipes, including existing and proposed facilities for control of storm waters, unless waived by the Community Development Director at the request of Applicant;

(q) The Tentative Parcel Map identifies the land areas subject to overflow, inundation or flood hazard;

(r) The Tentative Parcel Map identifies the land or right-of-way to be dedicated for public use and right-of-way for railroads and other uses unless waived by the Community Development Director at the request of Applicant;

(s) The Tentative Parcel Map identifies all common areas and open spaces, unless waived by the Community Development Director at the request of Applicant;

(t) The Tentative Parcel Map identifies the proposed lot lines and approximate dimensions, unless waived by the Community Development Director at the request of Applicant;

(u) The Tentative Parcel Map identifies all adjoining property and lot lines, unless waived by the Community Development Director at the request of Applicant;

(v) The Tentative Parcel Map includes the maximum contour interval required by the City Engineer and the contour lines extend three hundred (300) feet beyond the exterior boundaries of the property since the adjacent property is unimproved and vacant;

(w) The Tentative Parcel Map identifies the existing use and zoning of property immediately surrounding tentative map;

(x) The Tentative Parcel Map identifies the existing zoning and proposed land use of the property, unless waived by the Community Development Director at the request of Applicant;

(y) The Tentative Parcel Map includes a statement as to whether the tentative map includes the entire contiguous ownership of the land divider or only a portion thereof;

(z) The parcel (or parcels) of land covered by the Tentative Parcel Map meet the minimum size requirements to ensure that future development can meet all applicable site development standards imposed by Title 9 of the Municipal Code;

(aa) The parcel (or parcels) of land have access from a public road, or access is both feasible and required by a condition of approval for the proposed map;

(bb) The parcel lines do not conflict with any public easements;

Resolution No. 2020-XX
Date Adopted: June 16, 2020

(cc) There are not physical constraints or other issues which may affect the feasibility of future development on the site (e.g., vehicular access, utility service extensions);

(dd) The Tentative Parcel Map provides sufficient information on future uses and feasibility of future uses to ensure consistency with the general plan and zoning designations for the site;

(ee) The site is suitable for the future permitted or proposed uses;

(ff) The Tentative Parcel Map provides sufficient information on the subdivision design and future improvements to evaluate its potential impact on the environment in compliance with the California Environmental Quality Act;

(gg) There is sufficient information on the subdivision design and future improvements to enable the city to determine whether the map complies with applicable water quality standards, particularly with respect to future discharge of waste into the sewer system.

(hh) The Tentative Parcel Map contains or is accompanied by all the necessary site grading information such as, but not limited to, the proposed cuts and fills in the subdivision related to slope stability, erosion control and landscaping of the proposed grading, subsurface sewage disposal unless waived by the Community Development Director at the request of Applicant; and

(ii) The Tentative Parcel Map includes the elevations of all individual building pads in the subdivision; the elevations at the perimeter of the subdivision; and the relationship of the subdivision to adjoining land and development unless waived by the Community Development Director at the request of Applicant.

(jj) The parcel (or parcels) of land covered by the map meet the minimum size requirements to ensure that future development can meet all applicable site development standards imposed by Title 9 of the Municipal Code.

(kk) The parcel (or parcels) of land have access from a public road, or access is both feasible and required by a condition of approval for the proposed map.

(ll) The parcel lines do not conflict with any public easements.

(mm) There are not physical constraints or other issues, which may affect the feasibility of future development on the site (e.g., vehicular access, utility service extensions). If necessary in order to adequately evaluate the map, additional technical studies (e.g., access study) should be required prior to finding the application complete;

(nn) The Tentative Parcel Map provides sufficient information on future uses and feasibility of future uses to ensure consistency with the general plan and zoning designations for the site;

(oo) The site is suitable for the future permitted or proposed uses;

(pp) The Tentative Parcel Map provides sufficient information on the subdivision design and future improvements to evaluate its potential impact on the environment in compliance with the California Environmental Quality Act;

(qq) The Tentative Parcel Map is consistent with applicable general and specific plans and the zoning ordinance;

(rr) That the design or improvement of the proposed subdivision is consistent with applicable general and specific plans;

Resolution No. 2020-XX
Date Adopted: June 16, 2020

- (ss) That the site is physically suitable for the type of development;
- (tt) That the site is physically suitable for the proposed density of development.
- (uu) That the design of the subdivision or the proposed improvements are not likely to cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat;
- (vv) That the design of the subdivision or type of improvements is not likely to cause serious public health problems;
- (ww) That the design of the subdivision or the type of improvements will not conflict with easements, acquired by the public at large, for access through or use of, property within the proposed subdivision; and
- (xx) That despite the waivers requested by Applicant and approved by the Community Development Director, the proposed map continues to comply with the spirit and intent of the Subdivision Map Act and Section 9.14.065 ("Finance and Conveyance Maps") of the Moreno Valley Municipal Code.

Section 4. Final Decision on Appeal

That based on the foregoing Recitals, Administrative Record and Findings, and the City Council's denial of the appeals (PAA20-0001 and PAA20-0002) challenging the Planning Commission's certification of the Revised Final EIR and affirmation of Planning Commission Resolution No. 2020-20 approving and adopting the Mitigation Monitoring and Reporting Program and the findings contained therein, for the Revised Final EIR; and approving and adopting the Statement of Overriding Considerations and the findings contained therein, for the Final Revised EIR; and certifying that the Revised Final Environmental Impact Report PEN18-0050 for the World Logistics Center, the City Council hereby denies the appeal filed by Adriano L. Martinez on behalf of the Center for Biological Diversity, Center for Community Action & Environmental Justice, Coalition for Clean Air, San Bernardino Valley Audubon Society, and Sierra Club, challenging the Planning Commission's May 14 decision to approve Tentative Parcel Map 36457 for Finance and Conveyance Purposes Only (PAA20-0002), and affirms the Planning Commission adoption of Resolution 2020-21 approving Tentative Parcel Map No. 36457 for Finance and Conveyance Purposes Only, as attached to Resolution 2020-21 as Exhibit A.

Section 5. Repeal of Resolution No. 2015-58

That Resolution No. 2015-58 which approved the former parcel map is hereby repealed and set aside as ordered by Hon. Judge Waters in the Peremptory Writ of Mandate dated June 12, 2018. (Case No: RIC 1510967 [MF])

Section 6. Repeal of Conflicting Provisions

That all the provisions as heretofore adopted by the City Council that are in conflict with the provisions of this Resolution are hereby repealed.

Resolution No. 2020-XX
Date Adopted: June 16, 2020

Section 7. Severability

That the City Council declares that, should any provision, section, paragraph, sentence or word of this Resolution be rendered or declared invalid by any final court action in a court of competent jurisdiction or by reason of any preemptive legislation, the remaining provisions, sections, paragraphs, sentences or words of this Resolution as hereby adopted shall remain in full force and effect.

Section 8. Effective Date

That this Resolution shall take effect immediately upon adoption.

Section 9. Certification

That the City Clerk shall certify to the passage of this Resolution.

WORLD LOGISTICS CENTER TENTATIVE PARCEL MAP NO. 36457 FOR FINANCE PURPOSES CITY OF MORENO VALLEY

ORDINANCE NUMBER 2020-_____

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, APPROVING THE WORLD LOGISTICS CENTER DEVELOPMENT AGREEMENT

WHEREAS, the City of Moreno Valley is a general law city and a municipal corporation of the State of California; and

WHEREAS, HF Properties, a California general partnership, Sunnymead Properties, a Delaware general partnership, Theodore Properties Partners, a Delaware general partnership, 13451 Theodore, LLC, a California limited liability company, and HL Property Partners, a Delaware general partnership (collectively "HF") has a legal and equitable interests in approximately two thousand, two hundred sixty three (2263) acres of real property located in the region commonly referenced as the Rancho Belago area of the City of Moreno Valley, as described in the legal description set forth in Exhibit "A-1" and as illustrated in the depiction set forth in Exhibit "A-2" ("Subject Property"); and

WHEREAS, the World Logistics Center Specific Plan allows the development of approximately forty million, six hundred thousand (40,600,000) square feet of industrial, logistics, warehouse and support use on the land subject to the World Logistics Center Specific Plan ("Project"); and

WHEREAS, on November 24, 2015, the City Council unanimously approved the World Logistics Center Land Use and Zoning Entitlements Initiative, also known as the "Moreno Valley Jobs initiative," which amended the General Plan of the City of Moreno Valley, amended the City of Moreno Valley Zoning Map, repealed the Moreno Highlands Specific Plan, and adopted the World Logistics Center Specific Plan, and imposed certain Project Conditions of Development; and

WHEREAS, on November 24, 2015, the Moreno Valley Community Services District Board of Directors also unanimously approved the "WLC Land Benefit Initiative" to request that the Riverside County Local Agency Formation Commission initiate the process for the Moreno Valley Community Services District to annex an 85-acre parcel along Gilman Springs Road; and

WHEREAS, HF submitted Tentative Parcel Map No. 36457 for Finance and Conveyance Purposes only, subject to subsequent processing and recordation of a future map for development purposes; and

WHEREAS, a Revised Final Environmental Impact Report was prepared for the "Project," as described and depicted in the World Logistics Center Land Use and Zoning Entitlements Initiative, WLC Land Benefit Initiative, Tentative Parcel Map No. 36457 and this Development Agreement; and

Ordinance No. XXX
Date Adopted: June 16, 2020

WHEREAS, to strengthen the public planning process, encourage private participation in comprehensive planning and reduce the economic risk of development, the California State Legislature adopted Sections 65864 et seq. of the California Government Code, "Development Agreement Statute" which authorizes cities to enter into property development agreements with any person(s) or entity(ies) having a legal or equitable interest in real property for the development of such real property in order to establish certain development rights in the real property; and

WHEREAS, Title 9, Section 9.02.110 ("Development Agreements") of the Moreno Valley Municipal Code acknowledges that the Development Agreement Statute permits local agencies and property owners to enter into development agreements as to matters such as the density, intensity, timing and conditions of development of real properties and that development agreements provide an enhanced degree of certainty in the development process for both the property owner/developer and the public agency; and

WHEREAS, the Agreement will eliminate uncertainty in planning for and secure orderly development of the Subject Property, assure progressive installation of necessary improvements, and ensure attainment of the maximum effective utilization of resources within City at the least economic cost to its citizens; and

WHEREAS, based on the foregoing recitals, City has determined that this Agreement is appropriate under the Development Agreement Statute and the City's "Development Agreement" provisions set forth in Title 9, Section 9.02.110 of the Municipal Code; and

WHEREAS, the Agreement is voluntarily entered into in consideration of the benefits to and the rights created in favor of each of the parties hereto and in reliance upon the various representations and warranties contained herein; and

WHEREAS, the City is authorized to enter into development agreements with persons having legal or equitable interests in real property for the development of such property pursuant to California State general laws: Article 2.5 of Chapter 4 of Division I of Title 7 of the California Government Code commencing with section 65864 (the "Development Agreement Law"), and Article XI, Section 7, of the California Constitution, together with City ordinances; and

WHEREAS, the development of the Subject Property will generate a variety of public benefits to the City, its residents, property owners, taxpayers and surrounding communities; and

WHEREAS, the Project is believed to substantially advance the goals of the City's adopted Economic Development Action Plan, expand and improve the City's property and sales tax base, invest significant private capital into the local

Ordinance No. XXX
Date Adopted: June 16, 2020

Attachment: Ordinance No. XXX WLC Development Agreement with DA (4074 : World Logistics Center)

economy, generate extensive construction employment and new permanent employment opportunities for Moreno Valley and the region, and will improve the severe jobs to housing imbalance that currently exists in the City; and

WHEREAS, among the public benefits, the development of the Project pursuant to the WLCSP will implement goals, objectives and policies of the City's General Plan, and the WLCSP, which will provide logistics development, public utility and open space uses for the Subject Property and for the City; and

WHEREAS, in exchange for the duties and obligations imposed by this Agreement, HF will receive the vested right to develop the Subject Property in accordance with the terms of the Agreement; and

WHEREAS, on May 14, 2020, the Planning Commission, at a duly noticed public hearing adopted Resolution 2020-20, approving and certifying the Revised Final Environmental Impact Report (SCH # 2012021045) and approved and adopted the related Mitigation Monitoring and Reporting Program and a Statement of Overriding Considerations and the findings contained therein; and

WHEREAS, on May 14, 2020, the Planning Commission, at a duly noticed public hearing adopted in Resolution 2020- 21, approving Tentative Parcel Map 36457 for Finance and Conveyance Purposes Only (PEN20-0017); and

WHEREAS, on May 14, 2020, the Planning Commission, at a duly noticed public hearing held pursuant to the Development Agreement Statute and the "Development Agreement" provisions set forth in Title 9, Section 9.02.110 of the Municipal Code, adopted Resolution 2020-22 recommending That the City Council adopt the requisite ordinance approving the 2020 World Logistics Center Development Agreement as attached hereto; and

WHEREAS, the City Council find and determine that the Agreement is consistent with the goals, objectives, policies, general land uses and programs specified in the City General Plan, as amended by the Project Approvals; is compatible with the uses authorized in and the land use regulations prescribed by the City in its Zoning Code; and will promote and encourage the development of the Subject Property by providing a greater degree of certainty with respect thereto, while also providing specified public benefits to the City; and

WHEREAS, on June 16, 2020, after a duly noticed public hearing held pursuant to the Development Agreement Law and the "Development Agreement" provisions set forth in Title 9, Section 9.02.110 of the Municipal Code, the City Council approved the introduction of Ordinance No. ____ (the "Enacting Ordinance") that approves and adopts the Agreement and authorize its execution on behalf of the City.

Ordinance No. XXX
Date Adopted: June 16, 2020

NOW THEREFORE, THE CITY COUNCIL OF THE CITY OF MORENO VALLEY DOES ORDAIN AS FOLLOWS:

SECTION 1. RECITALS

That the above Recitals are true and correct and are incorporated as though fully set forth herein.

SECTION 2. APPROVAL OF DEVELOPMENT AGREEMENT

That the City Council hereby approves the Development Agreement by and between the City of Moreno Valley and HF Properties, a California general partnership, Sunnymead Properties, a Delaware general partnership, Theodore Properties Partners, a Delaware general partnership, 13451 Theodore, LLC, a California limited liability company, and HL Property Partners, a Delaware general partnership (collectively "HF") and authorizes the Mayor to execute the Development Agreement on behalf of the City of Moreno Valley.

SECTION 3. REPEAL OF ORDINANCE NO. 901

That Ordinance No. 901 which approved the former WLC the Development Agreement in August 2015 is hereby repealed and set aside, which, although not ordered set aside by Hon. Judge Waters in the Peremptory Writ of Mandate dated June 12, 2018. (Case No: RIC 1510967 [MF]), had been approved in reliance on the previous Final EIR because the Development Agreement adopted through the initiative process in November, 2015, found to have been valid at the time the Writ of Mandate was issued, was set aside by the Court of Appeal in August, 2018.

SECTION 4. SEVERABILITY

That the City Council declares that, should any provision, section, paragraph, sentence or word of this Ordinance be rendered or declared invalid by any final court action in a court of competent jurisdiction or by reason of any preemptive legislation, the remaining provisions, sections, paragraphs, sentences or words of this Ordinance as hereby adopted shall remain in full force and effect.

SECTION 5. EFFECTIVE DATE OF ORDINANCE

That this Ordinance shall take effect thirty (30) days after its second reading by the City Council.

SECTION 6. CERTIFICATION

That the City Clerk shall certify to the passage of this Ordinance and shall cause the same to be published according to law.

DEVELOPMENT AGREEMENT
(World Logistics Center)

This DEVELOPMENT AGREEMENT (“Agreement”) is entered into as of this ____ day of _____, 2020, by and between the CITY OF MORENO VALLEY, a California general law municipal corporation (“City”), and HF PROPERTIES, a California general partnership, SUNNYMEAD PROPERTIES, a Delaware general partnership, THEODORE PROPERTIES PARTNERS, a Delaware general partnership, 13451 THEODORE, LLC, a California limited liability company, and HL PROPERTY PARTNERS, a Delaware general partnership (collectively “HF”). The City and HF hereafter are referred to collectively as the “Parties” and individually as a “Party.”

RECITALS

A. Consistent with the City’s economic development and general plan, the City and HF have agreed to enter into this Agreement because the World Logistics Center will be a master planned business park specifically designed to support large global companies and their business and logistics operations which will be a significant revenue generating, job creating and training/education project as further detailed in Exhibit A-3.

B. The City is authorized to enter into development agreements with persons having legal or equitable interests in real property for the development of such property pursuant to California State general laws: Article 2.5 of Chapter 4 of Division I of Title 7 of the California Government Code commencing with section 65864 (the “Development Agreement Law”), and Article XI, Section 7, of the California Constitution, together with City ordinances.

C. The City has enacted an ordinance, codified and set forth in the Moreno Valley Municipal Code as Title 9, Section 9.02.110 (the “Development Agreement Ordinance”) that establishes the procedures and requirements for its consideration of such development agreements upon application by, or on behalf of, persons having legal or equitable interests in real property pursuant to the Development Agreement Law.

D. HF represents and hereby warrants that it has a legal and equitable interests in approximately two thousand, two hundred sixty three (2263) acres of real property located in the region commonly referenced as the Rancho Belago area of the City, as described in the legal

05118111421417v4

Ordinance No. XXX
Date Adopted: June 16, 2020

Attachment: Ordinance No. XXX WLC Development Agreement with DA (4074 : World Logistics Center)

description set forth in Exhibit "A-1" and as illustrated in the depiction set forth in Exhibit "A-2" (the "Subject Property"). The City has been provided proof of the records HF relies upon for the representation and warranty by HF. City is relying upon this evidence and considers it to be an element of HF's consideration for this Agreement.

E. In clarification of the foregoing the Subject Property includes approximately 85 acres, as described on Exhibit "A-1" and depicted in Exhibit "A-2" that is currently located in an unincorporated area of Riverside County but is proposed by HF to be annexed to the City within five years, subject to the process and approval of the Riverside County Local Agency Formation Commission ("LAFCO") (the "Annexation").

F. The World Logistics Center Specific Plan ("WLCSP") allows the development of approximately forty million, six hundred thousand (40,600,000) square feet of industrial, logistics, warehouse and support use on the land subject to the WLCSP. The WLCSP, a General Plan Amendment and a Zone Change of the Subject Property and the Annexation, were unanimously approved by the City Council of the City on November 24, 2015, in response to initiative petitions submitted to it. The Development, as hereinafter defined, includes both HF improvements to the Subject Property and City entitlements, including but not limited to, Tentative Parcel Map 36457 and annexation of an 85-acre parcel along Gilman Springs Road. The Development, including the Project, as defined herein, will also include subdivision maps and other approvals needed to construct the facilities proposed for the Subject Property. The permitted uses of the Subject Property, including a plan of development, the density and intensity of use, the maximum height and size of proposed buildings are set forth in the WLCSP, as it may be amended from time to time, and are hereby incorporated by reference. The City's certification of the Environmental Impact Report and approval of the Tentative Parcel map are conditions precedent to this Agreement.

G. The development of the Subject Property will generate a variety of public benefits to the City, its residents, property owners, taxpayers and surrounding communities. The Project is believed to substantially advance the goals of the City's adopted Economic Development Action Plan, expand and improve the City's property and sales tax base, invest significant private capital into the local economy, generate extensive construction employment and new permanent employment opportunities for Moreno Valley and the region, and will improve the severe jobs to housing imbalance that currently exists in the City. Among the public benefits, the development of this Project pursuant to the WLCSP will implement goals, objectives and policies of the City's General Plan, and the WLCSP, which will provide logistics development, public utility and open space uses for the Subject Property and for the City. In exchange for the duties and obligations imposed by this Agreement, HF will receive the vested right to develop the Subject Property for the Term in accordance with the terms of this Agreement.

H. The City has previously adopted the Economic Development Action Plan ("EDAP"). The WLCSP responds to a portion of the EDAP. The eastern portion of Moreno Valley lacks the infrastructure necessary to support and implement the City's EDAP. To allow for the development of the World Logistics Center and the WLCSP, HF is willing to provide and assist the City in the development of infrastructure in support of the City's economic plan which may be in excess of HF's fair share and therefore may provide broader benefits. The City and HF desire to ensure that all beneficiaries of the Infrastructure Improvements will pay their fair

share per the Municipal Code. Therefore this Agreement includes reference to the City’s usual method for reimbursement to an owner for the amount of the costs of such Infrastructure Improvements which exceeds the fair share of those costs and accrues to the benefit of other owners.

I. On _____, 2020, the Planning Commission of the City, at a duly noticed public hearing certified, in Resolution 2020-___, the Revised Final Environmental Impact Report (SCH # 2012021045) (the “EIR”) and approved the related Mitigation Monitoring and Reporting Program and, in Resolution 2020- ___, Tentative Parcel Map 36457, PEN20-0017.

J. On _____, 2020, the Planning Commission of the City, at a duly noticed public hearing held pursuant to the Development Agreement Law and the Development Agreement Ordinance, recommended, in Resolution 2020-___ that the City Council find and determine that this Agreement is consistent with the goals, objectives, policies, general land uses and programs specified in the City General Plan, as amended by the Project Approvals; is compatible with the uses authorized in and the land use regulations prescribed by the City in its Zoning Code; and will promote and encourage the development of the Subject Property by providing a greater degree of certainty with respect thereto, while also providing specified public benefits to the City.

K. On _____, 2020, after a duly noticed public hearing held pursuant to the Development Agreement Law and the Development Agreement Ordinance, the City Council of the City approved the introduction of Ordinance No. ____ (the “Enacting Ordinance”) that would approve and adopt this Agreement and authorize its execution on behalf of the City. On _____, 2020, the City Council of the City adopted the Enacting Ordinance.

L. The Parties intend that HF will proceed with the Development upon the Subject Property pursuant to this Agreement within the Term.

AGREEMENT

NOW, THEREFORE, in consideration of the above recitals which are incorporated herein and intended to assist with the interpretation of this Agreement, and of the mutual covenants hereinafter contained and for other good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, the City and HF agree as follows:

ARTICLE 1 DEFINITIONS.

The following terms when used in this Agreement shall, unless defined elsewhere in this Agreement, have the meanings set forth below:

1.1 “Agreement” shall mean this Development Agreement by and between the City and HF and any subsequent amendments.

1.2 “City” shall mean the City of Moreno Valley, a municipal corporation, organized and existing under the general laws of the State of California.

1.3 “City Council” shall mean the governing body of the City.

Attachment: Ordinance No. XXX WLC Development Agreement with DA (4074 : World Logistics Center)

1.4 “Development” shall mean the improvement of the Subject Property for the purposes of completing the structures, improvements and facilities composing the Project, including but not limited to: grading; the construction of infrastructure related to the Project whether located within or outside the Subject Property; the construction of buildings and structures; construction of post-development storm drain related improvements and the installation of landscaping and public facilities and improvements. “Development” also includes the maintenance, repair, reconstruction, modification, or redevelopment of any building, structure, improvement, landscaping, or facility after the construction and completion thereof on the Subject Property. The Development shall at all times conform to the Agreement.

1.5 “Development Impact Fee,” “Development Impact Fees” or “DIF” means for purposes of this Agreement only those fees imposed pursuant to Moreno Valley Municipal Code Sections 3.42.070 (police facilities), 3.42.080 (City hall facilities), 3.42.090 (corporate yard facilities) and 3.42.100 (maintenance equipment). The term “Development Impact Fees” (or “DIF”) does not include those fees imposed by Moreno Valley Municipal Code Sections 3.42.030 (arterial streets), 3.42.040 (traffic signals), 3.42.050 (interchange improvements) and 3.42.060 (fire facilities).

1.6 “Development Plan” shall mean the plan for Development of the Subject Property pursuant to the Existing Regulations and including the Infrastructure Improvements.

1.7 “Development Requirement(s)” shall mean any fees or requirement(s) of the City imposed in connection with or pursuant to the Project Approvals such as the construction or improvement of public facilities or the payment of fees or assessments in order to lessen, offset, mitigate or compensate for the impacts of the Development.

1.8 “Effective Date” shall mean the date that is ninety (90) days after the date the City Council adopts the Enacting Ordinance unless litigation is commenced in which case the Effective Date shall mean the date on which the litigation is finally terminated, whether by dismissal which leaves all of the Project Approvals in place or by the entry of a final judgment, free from further appellate review, which upholds the Project Approvals. Notwithstanding the forgoing, Article 7 shall be immediately effective thirty one (31) days after the date the City Council adopts the enacting ordinance.

1.9 “Enacting Ordinance” shall mean the City Council adopted ordinance described in Recital K of this Agreement.

1.10 “Existing Regulations” shall mean the Project Approvals, Development Requirements, and all ordinances, resolutions, codes, rules, regulations and official policies of City, adopted and effective on the date of the adoption of the Enacting Ordinance governing Development and use of the Subject Property, including but not limited to the permitted use of land, the density or intensity of use, the maximum height and size of proposed building, and the architectural design, improvement and construction standards and specifications applicable to the Development of the Subject Property, all as set forth in the General Plan, WLCSP and Zone Change adopted by the City Council of the City on November 24, 2015. The City shall compile two sets of the Existing Regulations. Once that compilation has been completed by the City, one

set will be stored with the Agreement by the City Clerk for future use and certainty of requirements and the other set will be given to HF.

1.11 "HF" shall mean HF PROPERTIES, SUNNYMEAD PROPERTIES, THEODORE PROPERTIES PARTNERS, 13451 THEODORE, LLC and HL PROPERTY PARTNERS, and/or its successors or assigns to all or any portion of the Subject Property.

1.12 "Infrastructure Improvements" shall mean all public infrastructure improvements on and off the Subject Property.

1.13 "Judgment(s)" shall mean one or more final or interim judgment(s) of a court of competent jurisdiction affecting the rights of the Parties hereunder.

1.14 "Moreno Valley Municipal Code" shall mean the City's Municipal Code in effect on the date of the adoption of the Enacting Ordinance.

1.15 "Mortgagee" shall mean a mortgagee of a mortgage, a beneficiary under a deed of trust or any other security device, a lender, or each of their respective successors and assigns.

1.16 "Parcel" shall mean any lot created by a recorded subdivision or parcel map.

1.17 "Project" shall mean the Development and operation of the Subject Property pursuant to and consistent with the Development Plan and the provisions of this Agreement.

1.18 "Project Approvals" shall mean, collectively, the General Plan Amendment, the WLCSP, the Zone Change, the Annexation, all approved through the initiative process on November 24, 2015, and Tentative Parcel Map 36457.

1.19 "Subject Property" shall mean that certain real property consisting of the property more particularly described in Exhibit "A-1" attached hereto and depicted on Exhibit "A-2" attached hereto, any real property subject to the WLCSP acquired by HF after the date on which the Enacting Ordinance is adopted and all real property intended to be included by the Annexation. Until the Annexation is finally accomplished by HF at its sole cost and expense, nothing in this Agreement shall apply to the property to be annexed.

1.20 "Subsequent Development Approvals" shall mean any and all ministerial and/or discretionary permits, licenses, consents, rights and privileges, and other ministerial and/or discretionary actions approved or issued by City in connection with Development of the Subject Property after the date of the adoption of the Enacting Ordinance, including all associated environmental documentation and mitigation measures pursuant to the California Environmental Quality Act.

1.21 "Subsequent Regulations" shall mean any ordinances, resolutions, codes, rules, regulations and official policies of the City adopted and effective after the date of the adoption of the Enacting Ordinance.

1.22 "Term" shall mean the period of time during which this Agreement shall be in effect, enforceable and bind the Parties, as set forth below in Section 3.5 of this Agreement.

Attachment: Ordinance No. XXX WLC Development Agreement with DA (4074 : World Logistics Center)

Ordinance No. XXX
Date Adopted: June 16, 2020

ARTICLE 2 EXHIBITS.

The following documents are attached to, and by this reference made a part of, this Agreement:

- Exhibit “A-1” Legal Description of the Subject Property
- Exhibit “A-2” Depiction of the Subject Property
- Exhibit “A-3” Public Benefits

ARTICLE 3 GENERAL PROVISIONS.

3.1 Binding Effect of Agreement. From and following the Effective Date of this Agreement and throughout the Term, Development of the Subject Property and the City’s actions on applications for Subsequent Development Approvals affecting the Subject Property and the Development of the Subject Property shall be governed by the terms and conditions of this Agreement, all Project Approvals and all Subsequent Development Approvals. Any matter not addressed in the foregoing documents shall be regulated pursuant to then applied routine City practices and ordinances.

3.2 Ownership of Subject Property. HF represents and warrants that it is the holder of legal and equitable interests to all of the property described and shown in Exhibits “A-1” and “A-2” and thus is qualified to enter into and to be a party to this Agreement in accordance with Government Code section 65865(b), as set forth in documentation HF provided to City and upon which City relies as part of the consideration for this Agreement.

3.3 Addition of Parcels to This Agreement. The terms of this Agreement shall apply to the 85 acre Parcel described in Recital E upon its annexation into the City which process is intended to be completed within five years by HF at HF’s sole cost and to any real property subject to the WLCSP acquired by HF after the date on which the Enacting Ordinance is adopted.

3.4 Assignment Rights. From time to time HF may sell or otherwise transfer title to buildings or property in the WLC. HF shall have the right subject to City’s prior written approval to sell, transfer, or assign the Subject Property, in whole or in part (provided that no such parcel transfer shall violate the Subdivision Map Act, Government Code Section 66410, et seq.) to any person, partnership, joint venture, firm or corporation at any time during the Term of this Agreement; provided, however, that any such sale, transfer or assignment (collectively, “Assignment”) shall include the assignment and assumption of the rights, duties and obligations arising under or from this Agreement be made in strict compliance with the following conditions:

- (a) No assignment of any right or interest under this Agreement shall be made unless made together with the assignment of all or the concomitant part of the Subject Property.
- (b) Prior to any such Assignment, HF shall provide City with an executed agreement, in a form reasonably acceptable to City, by the purchaser, transferee or assignee (collectively, “Assignee”) and providing therein that the Assignee expressly and unconditionally

assumes all the duties and obligations of HF under this Agreement with respect to the portion of the Subject Property being transferred. City shall have the sole power to allocate, prorate, or otherwise apportion any term, provision, fee, contribution, or similar duty or obligation of HF, so that City, HF, and assignee have a specific agreement as to the duties and obligations, of all Parties after the Transfer.

(c) Any Assignment of this Agreement will require the prior written consent of the City, which will not be unreasonably withheld or delayed. The City's approval will be based upon the City's reasonable determination, in accordance with the standard set forth in Section 3.4.1(d) as to whether or not such Assignee has the requisite ability to complete the portion of the Subject Property being transferred. Within thirty (30) days following receipt by the City of written notice regarding Assignment (such notice must include development experience information regarding the Assignee sufficient to allow the City to make the above determination) the City will notify HF regarding its approval or disapproval of such Assignment. Failure of the City to respond in writing within thirty (30) days of receipt of the notice of the Assignment shall constitute approval of the assignment.

Any Assignment not made in compliance with the foregoing conditions shall result in HF continuing to be responsible for all obligations under this Agreement. Notwithstanding the failure of any Assignee to receive City approval and/or execute the Agreement required by subparagraph (c) above, the burdens of this Agreement shall be binding upon such Assignee, but the benefits of this Agreement including but not limited to DIF, shall not inure to such Assignee until and unless such Assignment is approved by the City and executed.

3.4.1 Release of HF. Notwithstanding any Assignment, HF shall continue to be obligated under this Agreement unless HF is given a release in writing by City, which release shall be provided by City upon the full satisfaction by HF of the following conditions:

(a) HF no longer has a legal or equitable interest in the portion of the Subject Property being transferred other than a lien on the portion of the Subject Property being transferred to secure the payment of the purchase price to HF. HF shall provide the City written notice to the City of the party to which the lien is to be transferred, upon transfer of the lien, pursuant to this Article 3.

(b) HF is not then in default under this Agreement in City's sole reasonable determination, subject to procedure set forth in Section 5.2 of this Agreement.

(c) HF has provided City with the notice and executed agreement and other information required under subparagraphs (b) and (c) of Subsection 3.4 above.

(d) The City has reviewed and approved the Assignee and the Assignment, such approval to include a determination by the City that the Assignee has the requisite ability to complete the portion of the Subject Property being transferred.

(e) The Assignee provides City with security equivalent to any security previously provided by HF to secure performance of its obligations hereunder with respect to the portion of the Subject Property being transferred. The City shall cooperate with HF to effectuate

the substitution of security provided by HF to that to be provided by the Assignee with respect to the portion of the Subject Property being transferred.

(i) HF has paid City all monies then due and owing to City under this Agreement.

3.4.2 Subsequent Assignment. Any subsequent Assignment after an initial Assignment shall be made only in accordance with and subject to the terms and conditions of this Article. All subsequent Assignors must deliver written acknowledgement of this Agreement, and the Assignees duties under the Agreement or the City may, in its sole discretion, terminate this Agreement as to that owner's parcel(s).

3.4.3 Termination of Agreement With Respect to Individual Parcels upon Sale and Completion of Construction. Notwithstanding any other provisions of this Agreement, this Agreement shall terminate with respect to any Parcel and such Parcel shall be released and no longer be subject to this Agreement without the execution or recordation of any further document upon satisfaction of the following conditions:

(a) The Parcel has been finally subdivided and sold or leased for a period longer than one year to a member of the public or other ultimate user; and,

(b) A Certificate of Occupancy has been issued for each new structure on the Parcel shown on the plot plan required by Section 11.3.2 of the WLCSP, and the fees set forth under this Agreement have been paid.

(c) The Parcel has no duty to contribute monies or render performance under this Agreement.

3.5 Term. Unless earlier terminated as provided in this Agreement, this Agreement shall continue in full force and effect until the earlier of (i) the date of completion of the last portion of the Development, or (ii) the date that is fifteen (15) years from and after the Effective Date of this Agreement unless new Certificates of Occupancy have been granted by the City for new buildings on the Subject Property consistent with the Development Plan for not less than twelve-million (12,000,000) square feet (gross floor area as defined by Moreno Valley Municipal Code 9.15.030) in which event the Term shall be extended for an additional ten (10) years, subject to extension pursuant to Section 11.9 below (the "Term"). Alternatively, if HF is, for any reason, unable to obtain new Certificates of Occupancy for not less than eight (8) million square feet, and up to twelve million (12,000,000) square feet within the original fifteen (15) year Term, it shall be entitled to have this Agreement extended for an additional ten (10) years, subject to extension pursuant to Section 11.9 below, upon the payment to the City of one million dollars (\$1,000,000) prior to the expiration of the original fifteen (15) year term.

3.6 City Cooperation.

(a) In anticipation of the effort necessary to facilitate the timely processing and permitting of project improvements, HF may request the City to designate a mutually agreeable individual (the "City's WLC Coordinator") who shall have the authority to facilitate and coordinate development services within the City and with HF for all actions to be taken by

05118111421417v4

8

Ordinance No. XXX
Date Adopted: June 16, 2020

the City which are needed for the development of the Project, including, but not limited to, discretionary approvals, entitlements, site plans, grading, building and occupancy permit applications and inspections through the City's review and approval processes, all at the full cost of HF, which HF shall pay in advance and replenish upon City's request, from time to time. If any payments are not received by City when requested, the WLC coordinator shall cease acting until the funds are received and normal City protocols shall govern. All applications submitted to the City shall be evaluated for completeness within twelve (12) working days of receipt by the City. If not complete, the City shall immediately ensure that HF is notified of what additional information is required.

(b) Upon receipt of an application deemed complete pursuant to subsection 3.6(a) above for a site, grading, building, occupancy, or similar permit, the City shall process, review and approve or disapprove the application within ten (10) working days for the first submittal and within ten (10) working days of any subsequent submittals.

(c) It shall be the City's WLC Coordinator's responsibility to ensure that all of the time limits set forth above are met.

(d) The Project shall, pursuant to ordinary procedures, participate in the City's "Time and Materials Fee Program" which is designed to ensure that the City is reimbursed by HF for its actual costs of providing discretionary approvals, entitlements, planning, grading, and building permits and inspections and fire prevention services. For convenience this shall include the payments due under sub sections 3.6(a) and 3.6(e).

(e) The City shall, pursuant to City's standard contracting procedures, maintain on-call contracts with at least three qualified entities or persons, mutually acceptable to both the City and HF, who can be called upon to immediately provide the services set forth above when the City's WLC Coordinator determines that the City, utilizing typical City staff resources, is unlikely to be able to meet the time limits set forth above. HF shall be solely responsible for the cost of using the qualified private entities or persons. HF shall deposit with City a sum City then determines necessary for such consultants, immediately upon written request from City. HF shall replenish such funds, from time to time, upon written request from City. If any funds are not received per City's request, the consultants shall, without liability, cease work until such money is received.

(f) The City's WLC Coordinator shall cooperate with HF in obtaining any permits or approvals needed from any other agency at full cost to HF.

(g) The City, at HF's request, shall meet with HF to consider in good faith, economic incentives sought by HF similar to those approved for logistics projects in other areas of the City after the Effective Date.

3.7 Time of the Essence. The Parties expressly acknowledge and agree that time is of the essence in the performance of the provisions of this Agreement.

3.8 Mutual Waiver of Estoppel Defenses by Parties. Notwithstanding any legal authorities to the contrary concerning the doctrines of waiver and estoppel as applied to public entities and the actions or inactions of public agencies or public agency officers and officials, the

Parties acknowledge and agree that each Party and its successors and assigns to all or any interest in the Subject Property are relying upon the contents of this Agreement and the Parties' execution of this Agreement and the recordation hereof, and that in consideration of such material reliance, each Party shall now be estopped from denying the underlying validity of this Agreement and each Party knowingly and expressly waives any such claim or defense.

ARTICLE 4 DEVELOPMENT OF THE PROPERTY.

4.1 Vested Right to Develop. During the Term, HF or its Assignee, shall have a vested right to develop the Subject Property in accordance with the Existing Regulations, and as subject to the provisions of this Agreement.

4.2 Effect of Agreement on Land Use Regulations. Except as otherwise provided under the terms of this Agreement, the rules, regulations and official policies governing permitted uses of the Subject Property, the density and intensity of use of the Subject Property, the maximum height and size of proposed buildings, and the design, improvement, and construction standards and specifications applicable to Development of the Subject Property, shall be only the Existing Regulations and those contained in the Development Plan.

4.3 Subsequent Development Approvals. When required by the Moreno Valley Municipal Code, the City shall accept for processing, review and take action upon all properly filed applications for Subsequent Development Approvals. The City further agrees that, unless otherwise requested by HF, the City shall not amend or rescind any Subsequent Development Approvals after such approvals have been granted by the City except as otherwise provided for in Title 9 of the City Municipal Code, or as directed by court order, or as related to approvals not granted by the City. Any Subsequent Development Approval, when granted, shall be deemed to be part of the Existing Regulations from the date of approval except as mandated by court order, or as specified in approvals not granted by the City.

4.4 Timing of Development. HF represents that it intends to commence and complete the physical improvements specified in the Development Plan for the Project. HF cannot specify the specific timing of development. HF will use its best efforts to commence construction at the earliest possible date consistent with market conditions. Because the California Supreme Court held in *Pardee Construction Co. v. City of Camarillo* (1984) 37 Ca1.3d 455, that the failure of the parties therein to provide for the timing of development resulted in a latter adopted initiative restricting the timing of development to prevail over such parties' agreement, it is the Parties' intent to cure that deficiency by expressly acknowledging and providing that HF shall have the right to develop the Subject Property at its own timing. In addition, to the extent HF decides to proceed with the Development of the Subject Property, City shall cooperate with HF with respect to the improvement of the Development of the Subject Property. If HF determines, in its sole and absolute discretion, to develop portions or phases of the Project, the City shall allow the phasing of public improvements unless the City determines that generally applied City of Moreno Valley Municipal engineering or planning requirements demand that additional or complete public improvements be made. The public improvements to be provided would be only those needed to serve the portion or phase being developed consistent with the environmental analysis which shall demonstrate to the City that the public improvements to be provided would be only those needed to serve the portion or phase being developed.

4.5 Terms of Maps and Other Project Approvals. Pursuant to California Government Code Sections 66452.6(1) and 65863.9, the term of any subdivision or parcel map that may be processed on all or any portion of the Subject Property and the term of each of the Development approvals, including Tentative Parcel Map 36457, and any Subsequent Development Approvals, shall be extended until the expiration of the Term.

4.6 Changes and Amendments. The Parties acknowledge that although Development of the Project may require Subsequent Development Approvals, such Development shall be in compliance with this Agreement including the Development Plan. The above notwithstanding, HF may determine that changes are appropriate and desirable in the existing Project Approvals or Development Plan. In the event HF finds that such a change is appropriate or desirable, HF may apply in writing for an amendment to the existing Project Approvals or the Development Plan to effectuate such change. The City shall review and process any request for an amendment in the same manner that it would review and process a similar request for an amendment from any other owner of commercial or industrial land in similar circumstances. Any amendment to the Project Approvals or the Development Plan, when granted, shall be deemed to be part of the Existing Regulations from the date of the grant. Such amendments shall not be unreasonably withheld.

4.7 Reservation of Authority.

4.7.1 Limitations, Reservations and Exceptions. Notwithstanding any other provision of this Agreement, the following Subsequent Regulations shall apply:

(a) Procedural regulations consistent with this Agreement relating to hearing bodies, petitions, applications, notices, findings, records, hearing, reports, recommendations, appeals and any other matter of procedure subject to the City's obligations under Section 3.6, and as may be the subject to future general law enactments by the State of California.

(b) Changes adopted by the California Building Standards Commission as part of the then current versions of Title 24 – the California Building Standards Code – and also adopted by the City as Subsequent Regulations.

(c) Subsequent Regulations, not otherwise specified under this Section 4.7.1, that are not in conflict with the Existing Regulations and the Development Plan.

(d) Subsequent Regulations, not otherwise specified under this Section 4.7.1, that are in conflict with the Existing Regulations or the Development Plan provided HF has given written consent to the application of such regulations to Development of the Subject Property at HF's sole and absolute discretion.

(e) Increased DIF, as defined in Section 1.5 of this Agreement, which shall be paid in the amount of the DIF in effect at the time that they are to be paid.

(f) Judgment(s) and/or federal, state and county laws and regulations which the City is required to enforce as against the Subject Property or the Development of the Subject Property.

4.7.2 Further Future Discretion of City. This Agreement shall not prevent the City, in acting on Subsequent Development Approvals, from applying Subsequent Regulations allowed under Section 4.7.1. Further, it is also understood and acknowledged by the Parties that the Project Approvals contemplate that the City may be required, in certain circumstances, to undertake further environmental review of Subsequent Development Approvals. If the circumstances set forth in CEQA Guideline Section 15162 occur in the context of the City considering Subsequent Development Approvals, or if otherwise required by the EIR, the City is required to, and shall, without being subject to claim, assertion of breach or other challenge by HF or Assignee exercise the maximum discretion authorized by law, consistent with the terms of CEQA and this Agreement.

4.7.3 Modification or Suspension by Federal or State, County, or Multi-Jurisdictional Law. In the event that any Judgment(s) or federal, state, county, or multi-jurisdictional laws or regulations, enacted after the Effective Date of this Agreement, prevent or preclude compliance with one or more of the provisions of this Agreement, such provisions of this Agreement shall be modified or suspended as may be necessary to comply with such Judgment(s) or federal, state, county, or multi jurisdictional laws or regulations, and this Agreement shall remain in full force and effect to the extent it is not inconsistent with such laws or regulations and to the extent such laws or regulations do not render such remaining provision impractical to enforce.

4.8 Payment of, and Reimbursement for, the Cost of Improvements Paid for by HF Which Are in Excess of HF's Fair Share. HF shall satisfy the requirements imposed by Mitigation Measure 4.15.7.4.A, as set forth in the EIR, to ensure that all of the Development's impacts on the City's circulation system, including, but not limited to, improvements to arterial streets, traffic signals and interchanges, are mitigated. Because HF will be responsible for paying for or constructing all circulation-related improvements, it shall not pay the fees imposed by Moreno Valley Municipal Code Sections 3.42.030 (arterial streets), 3.42.040 (traffic signals) and 3.42.050 (interchange improvements). City will provide to HF the reimbursement agreement(s) in the form and type as specified in Chapter 9.14 of Title 9 of the Moreno Valley Municipal Code.

4.9 Provision of a "turnkey" Fire Station. HF shall, at its own cost, provide a fully constructed, fully equipped fire station and fire station site, including fire trucks, as specified by the City's Fire Chief. The fire station's furniture and fixtures shall be reasonably comparable to those of the most recently completed fire station within the City. The fire station, equipment and trucks shall be provided as and when directed by the Fire Chief. Because HF will be responsible for the provision of the fire station, fire station site, equipment, and trucks, it shall not pay the fee imposed by Moreno Valley Municipal Code Section 3.42.060 (fire facilities). City will provide to HF the reimbursement agreement(s) in the form and type as specified in Chapter 9.14 of Title 9 of the Moreno Valley Municipal Code.

4.10 City's Provision of Public Infrastructure and Services. Except as otherwise prescribed in this Agreement and/or as required of the development through existing or future mitigation measures, development standards, and conditions of approval, the City shall provide the public infrastructure and services which are not HF's responsibility as determined by the City with timing at the sole and absolute discretion of the City.

4.11 Local Hiring Program. HF will establish a WLC Local Hiring Program, at HF's cost to identify, align, and facilitate educational interests and programs with workforce development programs that facilitate the hiring of Moreno Valley residents for job opportunities at the World Logistics Center, and associated jobs not directly at WLC, but in industries that support WLC. HF will require its contractors, suppliers and tenants to be active participants in Moreno Valley Employment Resource Center ("ERC") programs including, but not limited to, the job opportunity announcement program. World Logistics Center employers will be requested to submit all job announcements to the ERC at least one week prior to providing such announcements to other agencies or to the general public. Potential employers will be requested to provide information regarding job opportunities to the ERC including details regarding job titles, minimum qualifications, application processes, and employer contact information. HF shall request that subsequent users to make good faith efforts to hire Moreno Valley City residents. HF shall, upon City's request from time to time, provide to the City proof of its efforts under this section and the success of HF's efforts. HF shall also participate with the Hire MoVal Incentive Program, which was adopted by the City Council on April 28, 2015, and as it may be amended from time to time.

4.12 Education/Innovation/Training/Library Funding.

The City and HF are especially interested in ensuring that the residents of Moreno Valley are provided education resources and obtain every opportunity to secure the jobs which will be created by the operation of the World Logistics Center. Toward that end, HF is willing to contribute six million, nine hundred and ninety three thousand dollars (\$6,993,000), to be used by the City to provide and enhance educational and workforce development training in the supply chain and logistics industries, as follows:

(a) HF shall contribute no less than five million, two hundred sixty eight thousand dollars (\$5,268,000), one million dollars (\$1,000,000) to be contributed at the issuance of the first building permit for a logistics building on the Subject Property and \$0.11/square foot to be paid at the time of the issuance of the building permit for each succeeding building, excluding the fire station;

(b) In addition to the foregoing, beginning on the Effective Date and on each anniversary of that date thereafter, HF shall contribute to the City one hundred thousand dollars (\$100,000) per year for the next six (6) years; and

(c) In addition to the foregoing, beginning in the 7th year on the anniversary date of the Effective Date and continuing throughout the Term, HF shall contribute to the City one hundred twenty five thousand dollars (\$125,000) per year, on the specified anniversary date of the Effective Date, so long as this Agreement is in effect.

4.13 State Route 60 Landscape, Signage, Bridge Design Program. City shall set up a joint City/HF committee to develop freeway related landscaping, bridge architectural concepts, engineering and freeway signage regulations for SR-60 between Redlands Boulevard and Gilman Springs Road. The guidelines, concepts and regulations shall be developed in an expeditious manner. The City shall contribute up to Fifty Thousand Dollars (\$50,000) and HF

shall match the City’s contributions on a ten to one basis, up to Five-Hundred Thousand dollars (\$500,000).

4.14 Air Filtration Systems for Seven Properties on World Logistics Parkway and Dracaea Avenue. Notwithstanding the findings of the EIR, Owner agrees to fund the installation of air filtration systems meeting ASHRSE Standard 52.2 MERV-13 standards at the locations listed below, not to exceed \$25,000 per property. Property owners shall be under no obligation to accept such offer. Prior to the issuance of the first grading permit within the WLCSP, Owner shall provide documentation to the City confirming that an offer has been extended to each of the owners of said properties, and \$175,000 shall be deposited in a City account designated for this purpose and an agreement regarding the use and distribution of funds shall be executed between City and Owner. The affected property owners shall have two years from the receipt of the offer to accept the offer. Upon acceptance of each offer, Owner shall work with each owner to ensure the filtration system is properly installed within one year of acceptance. Owner shall invoice City for reimbursement of payments up to \$25,000 per property. This provision applies only to the following seven houses:

12400 World Logistics Center Parkway, Moreno Valley, CA 92555 current APN: 422-020-010

13100 World Logistics Center Parkway, Moreno Valley, CA 92555 current APN: 422-070-029

13200 World Logistics Parkway, Moreno Valley, CA 92555 current APN: 422-070-032

13241 World Logistics Parkway, Moreno Valley, CA 92555 current APN: 478-220-014

29080 Dracaea Avenue, Moreno Valley, CA 92555 current APN: 478-220-030

29140 Dracaea Avenue, Moreno Valley, CA 92555 current APN: 478-220-009

30240 Dracaea Avenue, Moreno Valley, CA 92555 current APN: 422-070-037

ARTICLE 5 REVIEW FOR COMPLIANCE.

5.1 Periodic Review. The City shall review this Agreement annually, on or before the anniversary of the Effective Date, in order to ascertain the good faith compliance by HF with the terms of the Agreement. As part of that review, HF or its successor and assigns shall submit an annual monitoring review statement describing its actions in compliance with this Agreement, in a form acceptable to the Community Development Director or his/her authorized designee, within thirty (30) calendar days after written notice therefrom requesting such a statement. The statement shall be accompanied by an annual review and administration fee sufficient to defray the estimated costs of review and administration of the Agreement during the succeeding year. The amount of the annual review and administration fee shall be set by resolution of the City Council. No failure on part of the City to conduct or complete the review as provided herein shall have any impact on the validity of this Agreement. HF shall, for the first year, deposit \$1,000.00 on the Effective Date for the first year of review.

5.2 Procedure. Each Party shall have a reasonable opportunity to assert matters which it believes have not been undertaken in accordance with the Agreement, to explain the basis for such assertion, and to receive from the other Party a justification of its position on such matters.

5.2.1 If on the basis of the Parties' review of any terms of the Agreement, either Party concludes that the other Party has not complied in good faith with the terms of the Agreement, then such Party may issue a written "Notice of Non-Compliance" specifying the grounds therefor and all facts demonstrating such non-compliance.

5.2.2 The Party receiving a Notice of Non-Compliance shall have thirty (30) calendar days to cure or remedy the non-compliance identified in the Notice of Non-Compliance, or if such cure or remedy is not reasonably capable of being cured or remedied within such thirty (30) days period, to commence to cure or remedy the non-compliance and to diligently and in good faith prosecute such cure or remedy to completion.

5.2.3 If the Party receiving the Notice of Non-Compliance does not believe it is out of compliance and contests the Notice, it shall do so by responding in writing to said Notice within thirty (30) calendar days after receipt of the Notice.

5.2.4 If a Notice of Non-Compliance is contested, the Parties shall, for a period of not less than fifteen (15) calendar days following receipt of the response, seek to arrive at a mutually acceptable resolution of the matter(s) occasioning the Notice. In the event that a cure or remedy is not timely effected or, if the Notice is contested and the Parties are not able to arrive at a mutually acceptable resolution of the matter(s) by the end of the fifteen (15) calendar day period, the party alleging the non-compliance may thereupon pursue the remedies provided in Article 6 of this Agreement.

5.2.5 Neither Party hereto shall be deemed in breach if the reason for non-compliance is due to a "force majeure" as defined in, and subject to the provisions of, Section 11.9 below or any other non performance authorized by this Agreement.

5.3 Certificate of Agreement Compliance. If, at the conclusion of an annual review, HF is found to be in compliance with this Agreement, City shall, upon request by HF, issue a Certificate of Agreement Compliance ("Certificate") to HF stating that after the most recent Periodic Review and based upon the information known or made known to the City that (1) this Agreement remains in effect and that (2) HF is in compliance. The Certificate, shall be in recordable form, shall contain information necessary to communicate constructive record notice of the finding of compliance, and shall state that the Certificate expires upon the earlier of (i) one (1) year from the date thereof, or (ii) the date of recordation of a Notice of Termination of Development Agreement. HF may record the Certificate with the County Recorder. Additionally, HF may at any time request from the City a Certificate stating, in addition to the foregoing, which obligations under this Agreement have been fully satisfied with respect to the Subject Property, or any lot or parcel within the Subject Property.

ARTICLE 6 DEFAULT AND REMEDIES.

6.1 Specific Performance; Waiver of Damages. The Parties acknowledge and agree that specific performance is the preferred remedy available for the enforcement of this Agreement. Accordingly, both Parties hereby waive the right to obtain monetary damages from the other Party by reason of default of this Agreement. Subject to the procedure set forth in Section 5.2 above, any material default by HF or the City of the Agreement that is not timely cured by HF or the City shall be deemed a material default by HF or the City of this Agreement.

6.2 Termination of the Agreement.

6.2.1 Termination of Agreement for Default of HF. The City in its reasonable discretion may terminate this Agreement for any failure of HF to perform any material duty or obligation of HF hereunder or to comply in good faith with the terms of this Agreement (hereinafter referred to as "default" or "breach"); provided, however, the City may terminate this Agreement pursuant to this Section only after following the procedure set forth in Section 5.2 and HF and/or Assignee fail to remedy any issue. Further, if a mortgage of HF comes into possession of the Subject Property by default of HF, City may without liability, and in its sole and absolute discretion, terminate this Agreement. A bankruptcy filing by HF or general Partner of HF, or HF's successors and assigns, shall also be grounds by City for termination of this Agreement.

6.2.2 Termination of Agreement for Default of City. HF in its reasonable discretion may terminate this Agreement for any default by the City; provided, however, HF may terminate this Agreement pursuant to this Section only after following the procedure set forth in Section 5.2 and thereafter providing written notice by HF to the City of the default setting forth the nature of the default and the actions, if any, required by the City to cure such default and, where the default can be cured, the failure of the City to cure such default within thirty (30) days after the effective date of such notice or, in the event that such default cannot be cured within such thirty (30) day period, the failure of the City to commence to cure such default within such thirty (30) day period and to diligently proceed to complete such actions and to cure such default.

6.2.3 Rights and Duties Following Termination. Upon the termination of this Agreement, no Party shall have any further right or obligation hereunder and City shall treat HF and the Subject Property pursuant to all ordinances, policies, and laws as uniformly applied in the City.

6.3 Institution of Legal Action. Subject to notice of default and opportunity to cure under Section 5.2, in addition to any other rights or remedies, any Party to this Agreement may institute an equitable action to cure, correct, or remedy any default, to enforce any covenants or agreements herein, to enjoin any threatened or attempted violation hereof, or to obtain any other equitable remedies consistent with this Agreement. Any action at law or in equity arising under this Agreement or brought by any Party hereto for the purpose of enforcing, construing or determining the validity of any provision of this Agreement shall be filed and tried in the Superior Court of the County of Riverside, State of California, or such other appropriate court in said County, and the Parties hereto waive all provisions of law providing for the filing, removal or change of venue to any other court. Service of process on the City shall be made in

accordance with California law. Service of process on HF shall be made in any manner permitted by California law and shall be effective whether served inside or outside California. If an action or proceeding is brought by any Party to this Agreement because of default, or to enforce a provision hereof, the prevailing Party shall be entitled to reimbursement of all costs and expenses, including attorneys' fees, incurred in prosecuting such legal action or proceeding. This provision is separate and severable, and shall survive the merger of this Agreement into any judgment on this Agreement. In all instances, the Parties agree that §6.1 also survives and controls the actions of the Parties, and further, that the Parties shall stipulate to the limitation on remedies imposed by §6.1.

ARTICLE 7 THIRD PARTY LITIGATION.

7.1 Notice, Defense and Indemnification of Third Party Litigation. The City shall promptly notify HF of any claim, action, or proceeding filed and served against the City to challenge, set aside, alter, void, annul, limit or restrict the approval and continued implementation and enforcement of this Agreement or any Existing Regulation, including but not limited to Project Approvals and CEQA challenges, as they may be filed from time to time by one or more third parties. HF agrees to fully defend, indemnify and hold the City harmless for all costs of defense and/or judgment(s) obtained in any such action or proceeding by reimbursing City, on a monthly basis, for any and all costs. The City shall notify HF within ten (10) calendar days after the City has selected the defense counsel(s). The City and HF agree to cooperate in the defense of such action(s), which includes HF being provided the opportunity to present City its views and recommendations regarding defense counsel or defense strategy. City shall use its best efforts to reasonably manage case costs and seek reasonable attorney rates.

7.2 Effect of Third Party Litigation on Implementation of Agreement. If any third party litigation referred to in Section 7.1 is filed, the City shall continue to comply with the terms of this Agreement unless prohibited from doing so by court order.

7.3 If third party litigation is filed and if HF decides, in its sole and absolute discretion, not to defend the litigation then upon providing written notice of that decision to the City not to defend the litigation this Agreement shall terminate and no Party shall thereafter have any rights or obligations under it. Nothing in this Agreement shall prevent the City, if it decides in its sole and absolute discretion, from defending the litigation at its own sole cost.

ARTICLE 8 MORTGAGEE AND LENDER PROTECTION.

8.1 The Parties hereto agree that this Agreement shall not prevent or limit HF, in any manner, at HF's sole discretion, from encumbering the Subject Property or any portion thereof or any improvement thereon by any mortgage, deed of trust or other security device securing financing with respect to the Subject Property. The City acknowledges that the lenders providing such financing may require certain Agreement interpretations and modifications and agrees upon request, from time to time, to meet with HF and representatives of such lenders to negotiate in good faith any such request for interpretation or modification but City reserves the right to make the final decisions, pursuant to law of such requests. The City is not bound nor is there any predetermination as to matters requiring public hearing or any adjudicative proceeding. Subject to compliance with applicable laws, the City will not unreasonably withhold its consent

to any such requested interpretation or modification provided the City determines such interpretation or modification is consistent with the intent and purposes of this Agreement and not harmful to City in any manner, in City's sole and absolute discretion. HF shall reimburse City for all costs incurred by City in connection with compliance with this Section 8.1 HF represents and warrants that there are presently no financing of any type or nature that encumber the Subject Property and further represents there are no covenants, financings or other burdens that impair City's rights under this Agreement, and further, no third party holds rights to the Subject Property superior to this Agreement as regards to City's rights.

8.2 Any Mortgagee of the Subject Property shall be entitled to the following rights and privileges:

(a) Neither entering into this Agreement nor a breach of this Agreement shall defeat, render invalid, diminish or impair the lien of any mortgage on the Subject Property made in good faith and for value, unless otherwise required by law.

(b) The Mortgagee of any mortgage or deed of trust encumbering the Subject Property, or any part thereof, which Mortgagee has submitted a request in writing to the City in the manner specified herein for giving notices, shall be entitled to receive written notification from the City of any default by HF in the performance of HF's obligations under this Agreement.

(c) If the City timely receives a request from a Mortgagee requesting a copy of any notice of default given to HF under the terms of this Agreement, the City shall make a good faith effort to provide a copy of that notice to the Mortgagee within ten (10) days of sending the notice of default to HF. The Mortgagee shall have the right, but not the obligation, to cure the default during the period that is the longer of (i) the remaining cure period allowed such Party under this Agreement, or (ii) thirty (30) days.

(d) Any Mortgagee who comes into possession of the Subject Property, or any part thereof, pursuant to foreclosure of the mortgage or deed of trust, or deed in lieu of such foreclosure, shall take the Subject Property, or part thereof, subject to the terms of this Agreement. Notwithstanding any other provision of this Agreement to the contrary, no Mortgagee shall have an obligation or duty under this Agreement to perform any of HF's obligations or other affirmative covenants of HF hereunder, or to guarantee such performance; except that (i) to the extent that any covenant to be performed by HF is a condition precedent to the performance of a covenant by the City, the performance thereof shall continue to be a condition precedent to the City's performance hereunder, and (ii) in the event any Mortgagee seeks to develop or use any portion of the Subject Property acquired by such Mortgagee by foreclosure, deed of trust, or deed in lieu of foreclosure, such Mortgagee shall strictly comply with all of the terms, conditions and requirements of this Agreement and the Development Plan applicable to the Subject Property or such part thereof so acquired by the Mortgagee. The successor Mortgagee is hereby on notice that the event of taking possession of the Subject Property allows, but does not require City to terminate this Agreement without cost or liability to City.

8.3 The City shall, at HF's cost paid to City immediately upon City's request, provide publically available information requested by potential lenders in a timely fashion. City shall not

be required, but may, provide any information exempt from disclosure under the California Public Records Act. (G.C. 6250 et. seq.)

ARTICLE 9 INSURANCE.

9.1 Liability Insurance. HF shall maintain an insurance policy protecting against death or injury to person or property for claims arising out of activities on the Subject Property in the amount of at least five million dollars (\$5,000,000) with the City, its officers, officials, employees, agents and representatives named as additional insured. This requirement is in addition to any liability insurance requirement which the City routinely imposes as a condition to the issuance of a building, grading or encroachment permit. In addition, all such insurance:

- (a) shall be primary insurance and not contributory with any other insurance the City or its officers, officials, employees, agents, and representatives may have;
- (b) shall contain no special limitations on the scope of protection affordable to the City and its officers, officials, employees, agents, and representatives;
- (c) shall be claims made and not dates of occurrence insurance;
- (d) shall apply separately to each insured against whom claim is made or suit is brought, except with respect to the limits of the insurer's liability;
- (e) shall provide that the policy shall not be canceled by the insurer or Owner unless there is a minimum of thirty (30) days prior written notice to the City;
- (f) shall be endorsed to include a waiver of subrogation rights against the City or its officers, officials, employees, agents, and representatives; and
- (g) shall not require Owner to meet a deductible of more than One Hundred Thousand Dollars (\$100,000) unless approved in writing by the City's Community Development Director in his/her sole and absolute discretion.

9.2 Workers Compensation Insurance. HF shall ensure that any consultant or contractor hired by HF for work on or related to the Subject Property shall carry workers compensation insurance as required by the State of California. This requirement is in addition to any workers compensation insurance requirement which the City routinely imposes as a condition to the issuance of a building, grading or encroachment permit.

ARTICLE 10 INDEMNITY FOR INJURY TO PERSON OR PROPERTY.

HF agrees to and shall indemnify, defend, and hold harmless the City and the City's officers, officials, members, employees, agents, and representatives, from and against any, and all claims, liabilities, awards, settlements, agreements, damages, and losses, including without limitation reasonable attorneys' fees and litigation expenses, including court and expert witness fees (collectively, "Claims"), with respect to any action brought due to the death or personal injury of any person, or physical damage to any person's real or personal property, caused by the construction of improvements by, or construction-related activities of, HF or HF's employees,

agents, representatives, servants, invitees, consultants, contractors, or subcontractors (collectively, "HF's Representatives") on the Subject Property, or for any construction defects in any improvements constructed by HF or HF's Representatives on the Subject Property or for any other work related to this Agreement. The foregoing indemnification provision shall survive the termination of this Agreement.

Notwithstanding the above, HF agrees to and shall indemnify, defend, and hold harmless the City and the City's officers, officials, members, employees, agents and representatives, from and against any and all claims, liabilities, damages, and losses, including without limitation reasonable attorneys' fees and litigation expenses, including court and expert witness with respect to any action brought to challenge the Project's entitlement approvals and/or the EIR.

ARTICLE 11 MISCELLANEOUS PROVISIONS.

11.1 Recordation of Agreement. The City Clerk shall have this Agreement recorded with the County Recorder within the period required by Government Code section 65868.5. Any amendments to this Agreement approved by the Parties, and any cancellation hereof, shall be similarly recorded. A failure to record this Agreement in a timely fashion shall not affect its validity in any manner.

11.2 Entire Agreement. This Agreement sets forth and contains the entire understanding and agreement of the Parties with respect to the subject matter set forth herein, and there are no oral or written representations, understandings or ancillary covenants, undertakings or agreements which are not contained or expressly referred to herein. No testimony or evidence of any such representations, understandings or covenants shall be admissible in any proceeding of any kind or nature to interpret or determine the terms or conditions of this Agreement except as to future and further agreements and the exercise of the Existing Regulations.

11.3 Severability. If any term, provision, covenant or condition of this Agreement shall be determined invalid, void or unenforceable, the invalid provision shall be deemed to be severable from the remaining provisions contained within the Agreement. The Parties hereby state and acknowledge they would have adopted each provision contained within this Agreement notwithstanding the presence of an invalid provision.

11.4 Interpretation and Governing Law. This Agreement and any dispute arising hereunder shall be governed and interpreted in accordance with the laws of the State of California. This Agreement shall be construed as a whole according to its fair language and common meaning to achieve the objectives and purposes of the Parties, and the rule of construction to the effect that ambiguities are to be resolved against both the drafting parties or in favor of the City or HF shall not be employed in interpreting this Agreement, all Parties having been represented by counsel in the negotiation and preparation, adoption, application and execution hereof.

11.5 Section Headings. All section headings and subheadings are inserted for convenience only and shall not affect any construction or interpretation of this Agreement.

11.6 Singular and Plural. As used herein, the singular of any word includes the plural.

11.7 Waiver. Failure of a Party to insist upon the strict performance of any of the provisions of this Agreement by the other Party, or the failure by a Party to exercise its rights upon the default of the other Party, shall not constitute a waiver of such Party's right to insist and demand strict compliance by the other Party with the terms of this Agreement thereafter.

11.8 No Third Party Beneficiaries. This Agreement is made and entered into for the sole protection and benefit for the Parties and their successors and assigns. No other person shall have any right of action based upon any provision of this Agreement.

11.9 Force Majeure. Neither Party shall be deemed to be in default where failure or delay in performance of any of its obligations under this Agreement is caused by earthquakes, acts of God, pandemics, fires, wars, riots or similar hostilities, strikes and other labor difficulties beyond the Party's control (including the Party's employment force), economic or environmental/physical conditions (such as lack of utilities) beyond HF's control which make Development uneconomic or infeasible, other causes beyond the Party's reasonable control or court actions (such as restraining orders or injunctions). If any such events shall occur, the Term of this Agreement and the time for performance shall be extended for the duration of each such event, provided that the Term shall not be extended under any circumstances for more than three (3) years regardless of the number or length of individual extensions and further, in no instance, shall be for a duration longer than the circumstance serving to cause the delay. Notwithstanding the foregoing, if construction ceases after commencement, but prior to the issuance of new Certificates of Occupancy, HF, at its sole cost, shall secure, preserve and prevent any nuisance conditions from occurring on the Subject Property.

11.10 Mutual Covenants. The covenants contained herein are mutual covenants and also constitute conditions to the concurrent or subsequent performance by the Party benefited thereby of the covenants to be performed hereunder by such benefited Party.

11.11 Counterparts. This Agreement may be executed by the Parties in counterparts, which counterparts shall be construed together and have the same effect as if all of the Parties had executed the same instrument.

11.12 Covenant Not To Sue Each Other Regarding the Construction of the Agreement. The Parties to this Agreement, and each of them, agree that this Agreement and each term hereof are legal, valid, binding, and enforceable. The Parties to this Agreement, and each of them, hereby covenant and agree that each of them will not commence, maintain, or prosecute any claim, demand, cause of action, suit, or other proceeding against any other Party to this Agreement, in law or in equity, or based on an allegation, or assert in any such action, that this Agreement or any term hereof is void, invalid, or unenforceable.

11.13 Project as a Private Undertaking. It is specifically understood and agreed by and between the Parties that the Development of the Subject Project is a private development, that neither Party is acting as the agent of the other in any respect hereunder, and that each Party is an independent contracting entity with respect to the terms, covenants and conditions contained in this Agreement. No partnership, joint venture or other association of any kind is formed by this Agreement. The only relationship between the City and HF is that of a government entity

regulating the Development of private property, on the one hand, and the holder of legal or equitable title to such property, on the other hand.

11.14 Further Actions and Instruments. Each of the Parties shall cooperate in good faith with and provide reasonable assistance to the other to the extent contemplated hereunder in the performance of all obligations under this Agreement and the satisfaction of the conditions of this Agreement. Upon the request of either Party at any time, the other Party shall promptly execute, with acknowledgment or affidavit if reasonably required, and file or record such required instruments and writings and take any actions as may be reasonably necessary under the terms of this Agreement to carry out the intent and to fulfill the provisions of this Agreement or to evidence or consummate the transactions contemplated by this Agreement.

11.15 Amendments in Writing/Cooperation. This Agreement may be amended only by written consent of both Parties specifically approving the amendment and in accordance with the Government Code section 65868. The Parties shall cooperate in good faith with respect to any amendment proposed in order to clarify the intent and application of this Agreement, and shall treat any such proposal on its own merits, and not as a basis for the introduction of unrelated matters. Subject to the provisions of Moreno Valley Municipal Code Section 9.02.110E, minor, non-material modifications which are clerical or strictly technical corrections which do not affect the substantive terms and conditions of the Agreement may be approved by the Community Development Director in consultation with the City Attorney as an operating Memorandum. City, upon its request, may be compensated for its costs reasonably incurred in reviewing and processing any request under this section, including costs arising from third parties engaged by the City in furtherance of any request.

11.16 Operating Memoranda. The Parties acknowledge and agree that the provisions of this Agreement require a close degree of cooperation between the City and HF, and Development of the Subject Property hereunder may demonstrate that refinements or clarifications are appropriate with respect to the details of performance of the City and HF. If and when, from time to time, during the Term of this Agreement, the City and HF agree that such refinements or clarifications are necessary or appropriate, they will effectuate such refinements or clarifications through operating memoranda approved by the City and HF, which, after execution, will be attached to this Agreement as addenda and become a part hereof, and may be further refined or clarified from time to time as necessary with future approval by the City and HF. The Community Development Director, in consultation with the City Attorney, will be authorized to make the determination whether a requested refinement or clarification and corresponding operating memoranda may require a public hearing and approval by the City Council. Notwithstanding the foregoing, the City staff or contract staff may decline to execute any operating Memoranda and may instead submit the matter to the City Council for its consideration and action.

11.17 Corporate Authority. The person(s) executing this Agreement on behalf of each of the Parties hereto represent and warrant that (i) such Party are duly organized and existing, (ii) they are duly authorized to execute and deliver this Agreement on behalf of said Party, (iii) without representing and warranting whether or not the Agreement is lawful by so executing this Agreement, such Party is formally bound to the provisions of this Agreement, and (iv) the

entering into this Agreement does not violate any provision of any other agreement to which such Party is bound.

11.18 Notices. All notices under this Agreement shall be effective upon any of the following: personal delivery, via e-mail, via facsimile so long as the sender receives confirmation of successful transmission from the sending machine, or three (3) business days after deposit in the United States mail, registered, certified, postage fully prepaid and addressed to the respective Parties as set forth below or as to such other address as the Parties may from time to time designate in writing:

11.19 Nonliability of City Officials. No officer, official, member, employee, contractor, attorney, agent, or representatives of the City shall be liable for any amounts due hereunder, and no judgment or execution thereon entered in any action hereon shall be personally enforced against any such officer, official, member, employee, agent, or representative.

11.20 No Brokers. The City and HF represent and warrant to the other that neither has employed any broker and/or finder to represent its interest in this transaction. Each Party agrees to indemnify and hold the other free and harmless from and against any and all liability, loss, cost, or expense (including court costs and reasonable attorney's fees) in any manner connected with a claim asserted by any individual or entity for any commission or finder's fee in connection with this Agreement arising out of agreements by the indemnifying Party to pay any commission or finder's fee.

IN WITNESS WHEREOF, the Parties hereto have executed this Agreement on the day and year first set forth above.

Ordinance No. XXX
 Date Adopted: June 16, 2020

EXHIBIT NO. A-3

Public Benefits: all are viewed as material consideration for this Agreement, by the City and its Council (not listed in priority).

1. Representation and Warranty in support of HF's legal or equitable interest in the land composing the area subject to this Agreement. (Recital E and 3.2)
2. DIF fees, public improvements, or both will be paid to the City to further public improvements. (1.5, 4.8, 4.9)
3. City has oversight over transfer of land or buildings within the area covered by the Agreement. (3.4)
4. HF pays for special staff and consultants. (3.6)
5. Education/Library/Job training/funding to City/Job opportunities. (4.11, 4.12)
6. Fire station: "turn key" fire station will be built on HF provided land and will be fully funded and equipped by HF. (4.8)
7. Land owners are bound, contractually, to provide City benefits beyond those available via a nexus condition.
8. City advances its General Plan's goals, policies and objectives as anticipated when it was adopted.
9. City controls when HF has qualified to release itself, in whole or part, from the Development Agreement. (3.4, 3.5)
10. City preserves its right to impose the enhanced development standards on the Project outlined in the specific plan. (4.2)
11. City has set performance criteria for the Terms of the Agreement. (3.5, 4.4)
12. City preserves the right to update standards and, as required and lawful, require further CEQA reviews. (4.7.1)
13. City Code Standards are imposed for any reimbursements to HF for oversizing any infrastructure. (4.8)
14. City required and is able to hold HF accountable for a local hiring program for City residents. (4.11)
15. City obtains Education, Library, Training, and Innovation funding for residents in the amount up to \$6,993,000, during the Term of the Development Agreement, with One Million Dollars (\$1,000,000) of that being provided in a single lump sum payment upon issuance of the first building permit.

05118111421417v4

Exhibit A-3-1

Ordinance No. XXX
Date Adopted: June 16, 2020

16. HF will contribute \$500,000 toward the City's development of SR 60 landscape, signage, bridge design enhancement. (4.13)
17. City will annually review and enforce its benefits, and ensure performance of its duties. (Article 5)
18. Defaults and issues in dispute have a specified resolution process. (Article 6)
19. City is covered by HF funded liability insurance (9.1) and from tort claims. (Article 10)
20. City is protected as to ensuring HF performance, despite external causation. (11.9)

Subject: World Logistics Center – Additional Errata to the Revised Final EIR

Dear Ms. Descoteaux:

Subsequent to the distribution of the Final Response to Comments and Revised Final EIR for the World Logistics Center (WLC) Project, Errata to the Revised Final EIR (Part 3) were identified. These revisions are clarifications and not substantive modifications. The revisions identified below do not change the significance conclusions presented in the Revised Final EIR or substantially alters the analysis presented for public review. Deleted text is shown in ~~strike-through~~ and additional text is shown as underline.

Pages 35-37 and Pages 755 - 756 of the Revised Final EIR (Part 1)

Revisions to Section 4.7.7.1, which includes Mitigation Measure 4.7.7.1, has been made as shown below. This revision is due to a refinement in Mitigation Measure 4.7.7.1 and does not result in a change in the ultimate impact determination and no new significant information is included.

4.7.7 NET ZERO MITIGATION MEASURE ~~CONDITIONED ON THE OUTCOME OF THE APPEAL IN PAULEK V. MORENO VALLEY~~

~~An appeal of the judgement entered on June 7, 2018, in the CEQA litigation, is currently pending in the Court of Appeal, Fourth Appellate District, Division Two, as *Paulek v. Moreno Valley Community Services District*, Case No. E071184. The appeal seeks judicial review of the FEIR’s application of California’s Cap and Trade Program to the analysis of GHG emissions for the construction and operation of the WLC. Specifically, the FEIR determined that the GHG emissions attributable to fuel suppliers and energy producers under Cap and Trade (capped emissions) could be deducted from the total GHG emissions to be evaluated against the significance threshold because capped emissions were already accounted for and mitigated at the producer/supplier level. To address the yet unknown determination of the appeal and to eliminate uncertainty as to how capped GHG emissions should be accounted for in determining the significance of at the pProject’s GHG emissions without consideration of Cap and Trade (capped emissions) under CEQA, a new mitigation measure, Mitigation Measure 4.7.7.1, shall apply requiring that the WLC Project’s GHG emissions be mitigated to net zero where the amount of GHG emissions to be mitigated is either “Total Uncapped” GHG emissions from Table 4.7-8 or “Project Emissions” from new Table 4.7-16, depending on the outcome of the appeal.~~

Attachment: WLC Errata_9JUNE2020 (4074 : World Logistics Center)

Ms. Descoteaux
June 9, 2020
Page 2

~~If the trial court's judgment is affirmed after the appellate process is completed or if the appeal is dismissed, then the GHG emissions to be mitigated to net zero will be the "Total Uncapped" GHG emissions from Table 4.7-8.~~

~~If the trial court's judgment is reversed after the appellate process is completed, then the amount of GHG emissions to be mitigated to net zero will be the "Project Emissions" shown on Table 4.7-16. As shown in Table 4.7-16, Project GHG emissions, both capped and uncapped, with implementation of Project Design Features and mitigation measures would, prior to the application of mitigation, exceed the SCAQMD's significance threshold of 10,000 mt CO₂e per year.~~

To mitigate the WLC Project's GHG emissions to net zero and to remove uncertainty as to how GHG emissions should be accounted for, the following mitigation, Mitigation Measure 4.7.7.1, shall apply. Mitigation Measure 4.7.7.1 shall read as follows:

- 4.7.7.1** ~~The developer shall mitigate the WLC Project's GHG emissions to net zero by purchasing and retiring providing offsets and/or carbon credits, based upon where the amount of GHG emissions set forth in to be mitigated is either "Total Uncapped" GHG emissions from Table 4.7-8 or "Project Emissions" from new Table 4.7-16 of the Revised Final EIR, depending on the outcome of the appeal in *Paulek v. Moreno Valley Community Services District ("Paulek")*. If the trial court's judgment in *Paulek* is affirmed after the appellate process is completed or if the appeal is dismissed, then the GHG emissions to be mitigated to net zero will be the "Total Uncapped" GHG emissions from Table 4.7-8. If the trial court's judgment is reversed after the appellate process is completed, then the amount of GHG emissions to be mitigated to net zero will be the "Project Emissions" shown on Table 4.7-16. Upon the purchase and retirement provision of offsets and/or the retirement of carbon credits, no further analysis of capped and uncapped GHG emissions will be required, and no further reduction of those emissions will be required.~~

~~The developer, in its sole discretion, shall demonstrate its reduction of GHG emissions through the purchase and retirement of provide the city with any combination of qualified offsets and/or carbon credits in its sole determination provided that the following conditions are satisfied:~~

- ~~a) Offsets: A developer shall provide proof of offsets to reduce or sequester GHG emissions (as distinguished from carbon credits) to the City's Planning Official that the offsets are real, permanent, additional, quantifiable, verifiable, and enforceable by an appropriate agency.~~
- ~~ba) Offset Carbon Credits: A developer shall provide proof to the City's Planning Official that purchased offset credits were registered with, and retired by, an Offset Project Registry, as defined in 17 California Code of Regulations an Offset Project Registry, as defined in 17 California Code of Regulations § 95802(a), the carbon credits represent~~

Ms. Descoteaux
June 9, 2020
Page 3

~~reductions in GHG emissions that are real, permanent, additional, quantifiable, verifiable, and enforceable by an appropriate agency. Credits registered by a carbon registry approved by the California Air Resources Board, such as, but not limited to, the Climate Action Reserve, American Carbon Registry, or Verra (formerly Verified Carbon Standard), or GHG Reduction Exchange (GHG RX), shall be conclusively presumed to meet all of the criteria set forth above. In order to prove that the offset carbon credits provided are real, permanent, additional, quantifiable, verifiable, and enforceable, as those terms are defined in 17 California Code of Regulations § 95802(a), and have been retired, the developer shall provide the City's Planning Official with (i) the protocol used to develop those credits, (ii) the third-party verification report concerning those credits, and (iii) the unique serial numbers of those credits showing that they have been retired.~~

- e) Timing: The developer shall provide proof to the City ~~that with offsets and/or carbon credits equal to the proportionate amount of GHG emissions resulting from the grading, construction and operation of facilities within the WLC have been purchased and retired as follows:~~ (i) The purchase and retirement of offset carbon credits required to mitigate the GHG emissions resulting from grading shall be a condition of the issuance of a grading permit. (ii) The purchase and retirement of offset carbon credits required to mitigate the GHG emissions resulting from the construction of a facility shall be a condition of the issuance of a building permit for the facility. (iii) The purchase and retirement of offset carbon credits required to mitigate the GHG emissions resulting from the operation of a facility shall be a condition of the issuance of a certificate of occupancy, temporary or permanent, for the facility. The developer shall also have the right, at any time, to purchase and retire offset carbon credits for some or all of the grading, construction and operation of facilities in the WLC Project in advance of the issuance of grading or construction permits or certificates of occupancy, temporary or permanent, for the facilities proposed in each plot plan (by square footage as compared to the total square footage of the project) as a condition of the issuance of a certificate of occupancy for such facilities, using either Table 4.7-8 or Table 4.7-16, as appropriate. The City shall retire the carbon credits upon their receipt. The developer shall have the right at any time to provide such offsets and/or carbon credits in advance of the issuance of any certificate of occupancy for any of the facilities in the WLC Project.

With the application of all previous mitigation measures (pages 4.7-27 – 4.7-30) and the new Mitigation Measure 4.7.7.1, the WLC Project's GHG emissions will be reduced to net zero at buildout, ~~as shown in Table 4.7-8 (Table 4.7-8 will be revised in Final RSFEIR as shown below) and Table 4.7-15. Revised Table 4.7-8 and Table 4.7-16 shows the mitigated GHG emissions, including new Mitigation Measure~~

Ms. Descoteaux
June 9, 2020
Page 4

4.7.7.1, for each year from 2020 through construction and 30-years operation of all Project facilities. Since total Project GHG emissions will be reduced to net zero, they are below the threshold of significance for every year and are therefore less than significant after mitigation.

Level of Impact After Mitigation. Less than significant.

Page 4.12-25 of the Revised Final EIR (Part 3)

Clarifications to the introductory paragraph of Mitigation Measure MM 4.12.6.1A have been made as shown below.

4.12.6.1A Prior to issuance of any discretionary project approvals that allow construction activity, a Noise Reduction Compliance Plan (NRCP) shall be submitted to and approved by the City. The NRCP shall be prepared by a qualified acoustical consultant describing how noise reduction measures shall be implemented to reduce the noise exposure on sensitive receptors adjacent to onsite and offsite construction areas. The noise reduction measures shall be implemented so that construction activities do not exceed the City’s daytime (except for sensitive receptors located within 500 feet of active construction areas) and nighttime average hourly noise standard of 60 dBA L_{eq} and 55 dBA L_{eq} , respectively. The construction noise reduction measures shall include, but not be limited to, the following measures:

Page 4.12-25, last sentence

A clarification to the text for level of significance after mitigation incorporation has been included to show the distance at which impacts would remain significant. No revision to the impact determination has been made and no new significant information has been included.

With regard to daytime construction, sensitive receptors located within and to the west of the project (within 500 feet of active construction areas) would continue to be exposed to construction noise levels that would exceed the City’s daytime exterior noise standard of 60 dBA L_{eq} even with implementation of mitigation.

Page 4.4-62 of the Revised Final EIR (Part 3)

A clarification to Mitigation Measure 4.4.5.2B has been made as shown below.

4.4.5.2B Prior to the approval of any tentative maps for development including or adjacent to any Criteria Cells identified in the Western Riverside County Multiple Species Habitat Conservation Plan, the applicant shall prepare and process a Joint Project Review (JPR) with the Riverside County ~~Resource~~ Regional Conservation Agency Authority (RCA). All criteria cells shall be identified on all such tentative maps. This measure shall be implemented to the satisfaction of the City Planning Division and Riverside County ~~Resource~~ Regional Conservation Agency Authority (“RCA”).

Attachment: WLC Errata_9JUNE2020 (4074 : World Logistics Center)

Ms. Descoteaux
June 9, 2020
Page 5

Page 4.4-76 of the Revised Final EIR (Part 3)

A clarification to the first paragraph of Mitigation Measure 4.4.6.2B has been made as shown below.

4.4.6.2B As required by the ~~Resource-Regional~~ Conservation ~~Agency-Authority~~ (RCA), a program-level Determination of a Biological Equivalent or Superior Preservation (DBESP) for impacts to Riverine/Riparian habitat has been prepared and shall be approved by the ~~Resource-Regional~~ Conservation ~~Agency-Authority~~ prior to project grading permit approval. The Determination of a Biological Equivalent or Superior Preservation includes a general discussion of mitigation options for impacts to riverine/riparian areas as well as general location and size of the mitigation area and includes a monitoring program.

The above revisions to portions of the Revised Final EIR, specifically Part 1 (Final Response to Comments) and Part 3 (RSFEIR), are modifications and clarifications, but none of the revisions provide significant new information that requires recirculation of the Revised Final EIR in accordance with the California Environmental Quality Act (CEQA) Guidelines Section 15088.5.

Sincerely,

Michael E. Houlihan, AICP
Principal Associate

APPEAL APPLICATION PAA20-0001

“Revised Final EIR (PEN18-0050)”

Appeal Application PAA20-0001

Letter To Moreno Valley Elected Representatives,

Mayor Yxstian Gutierrez: yxstiang@moval.org

Mayor Pro Tem Victoria Baca: victoriab@moval.org

Councilman Ulises Cabrera: ulisesc@moval.org

Councilwoman Carla J. Thornton: carlat@moval.org

Councilman David Marquez: davidma@moval.org

City of Moreno Valley

14177 Frederick St.

Moreno Valley, CA 92552

May 28, 2020. It is with great sorrow that as a United States Citizen, Combat Veteran and Wounded Warrior with 24 years of distinguished, honorable military service. As a Moreno Valley homeowner since 2008, taxpayer and patron that I must submit in writing to my elected representatives to the City of Moreno Valley. Pursuant to “Title 9 Planning and Zoning, Chapter 9.02 Permits and Approvals; Sections 9.02.040 and 9.14.050” of the Moreno Valley Municipal Code. A letter for an Appeal Application to PAA20-0001 for the Public Hearing Item #2 that was voted and passed by the Planning Commission on May 14, 2020:

Planning Commission

Regular Meeting

5/14/2020 7:00 PM

City Hall Council Chamber

Moreno Valley City Hall 14177 Frederick Street Moreno Valley, CA 92552

In relation to:

#2 Case: PEN18-0050 Revised Final EIR (RFEIR)

PEN20-0017 Tentative Parcel Map 36457 (Finance)

PEN20-0018 Development Agreement

From correspondence received by Julia Descoteaux, Associate Planner, Community Development, City of Moreno Valley <juliad@moval.org> on Wednesday 5/20/2020 5:57 PM:

“To: 'calissav@hotmail.com'”

Good Afternoon Mr. Lopez,

I understand you were at City Hall today and would like information on filing appeals for the WLC project from the May 14, 2020 Planning Commission hearing.

Here is the process during Covid-19.

If you have any questions, please feel free to contact the Planning Division at 951-413-3206 and we will assist you.

Best Regards,

Julia

The appeal period for the Planning Commission’s actions at the May 14, 2020 meeting are as follows:

Tentative Parcel Map for Finance and Conveyance Purposes Only (PEN20-0017) – the ten (10) consecutive calendar days appeal period begins Saturday May 16, 2020, and ends on Tuesday May 26, 2020 at 5:30pm

Revised Final EIR (PEN18-0050) – the fifteen (15) consecutive calendar days appeal period begins Saturday May 16, 2020, and ends on Monday June 1, 2020 at 5:30pm.

Appeals require a letter stating the specific reasons for the appeal and a processing fee of \$750 for each project.

There are two ways to file the appeals.

Contact 951-413-3206 for specific instructions.

Option 1

Set up an appointment to deliver your appeal letter and a check to City Hall. (You must have an appointment and submit prior to 5:30pm).

Option 2

If you wish to file an appeal electronically, please call 951-413-3206 to request Record Number, Invoice and uploading instructions. Invoices and uploads must be completed and verified prior to the 5:30pm deadline).

Julia Descoteaux

Associate Planner

Community Development

City of Moreno Valley

Further correspondence with Chris Ormsby and Sean Kelleher, I received the Appeals Application information with instructions for submission for Option 2:

“From: ANGEL LOPEZ <calissav@hotmail.com>

Sent: Friday, May 22, 2020 10:10 AM

To: Chris Ormsby <chriso@moval.org>; Sean P. Kelleher <seanke@moval.org>

Subject: Fw: WLC appeal process

Warning: External Email – Watch for Email Red Flags!

Good morning Mr. Ormsby and Mr. Kelleher,

My name is Angel Lopez-Ramirez, Moreno Valley resident. Combat Veteran and Wounded Warrior with Public Service.

As a private citizen, I contacted the planning division this morning at 9am by telephone to 951-413-3206. No one answered my call and it went directly to voicemail. Please see message below that I received from Julia Descoteaux.

I left a detailed voicemail message my request to file an appeals application with Option 2, to submit an appeals application for the Revised Final EIR. I also requested the Record Number, Invoice and uploading instructions. I want to file as a private citizen.

The voicemail greeting did not advise me that City Hall was closed today and did give me your hours of operation for Friday, today.

I sincerely request that I receive a reply to my voicemail with instructions requested to my cell number 818-388-1231, please call my number. I also provided my email calissav@hotmail.com as a second option for the planning division to respond.

Thank you.

Angel Lopez-Ramirez”

Mr. Ormsby replied to my request with instructions for completing the Appeals Application with assigned number PAA20-0001:

“From: Chris Ormsby

Subject: RE: WLC appeal process

Angel,

The appeal application has been created and is PAA20-0001. The invoice is attached.

For payment, you can access the portal at <https://aca.accela.com/MOVAL/Default.aspx>. Follow the steps to register as a user. Once you log in as a user, search on the application, PAA20-0001. You will then be able to add the payment to the cart and make a payment and upload the application. If you need me to walk you through the process, please let me know, or one of our Planning Technicians can contact you on Tuesday.

Our apologies regarding the voice message. It will be updated. This is the first Friday that the City has begun closing on Fridays.

Chris”

From correspondence communicated between Julia Descoteaux, Chris Ormsby and myself, I shall now submit my objections with arguments to the City Council under Appeal Application PAA20-0001 to vacate the Planning Commission’s decision to pass #2 Case: PEN18-0050 Revised Final EIR (RFEIR) by a Yes vote, with the exception that Robert Harris had recused himself.

Objections and Arguments

In an email correspondence dated May 12, 2020 at 5:55pm. I sent an email electronically to all five members of the City Council and Cc’d the City Clerk, City Attorney and Mr. Beau Yarbrough from the Press Enterprise. The correspondence was voicing my objections with evidence that Planning Commissioners Alvin DeJohnette, Joann Stephan, Rafael Brugueras recuse their selves from voting on #2 Case: PEN18-0050 Revised Final EIR (RFEIR) due to “Prejudice” and “Bias”. In this letter, I am reinforcing my objections with initial email correspondence Appealing to the City Council to vacate the vote from the Planning Commission.

byarbrough@scng.com <byarbrough@scng.com>

Subject: Planning Commission Regular Meeting 05/14/2020 7pm

Good evening City Council Members,

I am writing to convey my objections to the Planning Commission Regular meeting scheduled 05/14/2020 at 7pm. The meeting must not go forward with certain Planning Commissioners who are not fit to legislate Public Hearing Item #2. In addition, I request the City Clerk submit comments in their entirety to the public record and I have included Mr. Beau Yarbrough of The Press Enterprise.

My objections are for Public Hearing Item #2:

#2 Case: PEN18-0050 Revised Final EIR (RFEIR)

PEN20-0017 Tentative Parcel Map 36457 (Finance)

PEN20-0018 Development Agreement

Applicant: Highland Fairview

Property Owner: Highland Fairview

Planning Commissioners Alvin DeJohnette, Joann Stephan, Robert Harris and Rafael Brugueras are not fit to convene at the Public Hearing item #2 due to their connections to both the Mayor of Moreno Valley, Dr. Yxstian Gutierrez and Iddo Benzeevi of Highland Fairview.

The Planning Commission Agenda was posted in accordance with the Ralph M. Brown Act:
54954.2.

(a) (1) At least 72 hours before a regular meeting, the legislative body of the local agency, or its designee, shall post an agenda containing a brief general description of each item of business to be transacted or discussed at the meeting, including items to be discussed in closed session. A brief general description of an item generally need not exceed 20 words. The agenda shall specify the time and location of the regular meeting and shall be posted in a location that is freely accessible to members of the public and on the local agency's Internet Web site, if the local agency has one. If requested, the agenda shall be made available in appropriate alternative formats to persons with a disability, as required by Section 202 of the Americans with Disabilities Act of 1990 (42 U.S.C. Sec. 12132), and the federal rules and regulations adopted in implementation thereof. The agenda shall include information regarding how, to whom, and when a request for disability-related modification or accommodation, including auxiliary aids or services, may be made by a person with a disability who requires a modification or accommodation in order to participate in the public meeting.

As such, I am now exercising my rights under the Ralph M. Brown Act to submit my public comments and raise my objections due to prejudice and bias by the four named Planning Commissioners, further that they must recuse their votes to the matter:

54954.3.

(a) Every agenda for regular meetings shall provide an opportunity for members of the public to directly address the legislative body on any item of interest to the public, before or during the

legislative body's consideration of the item, that is within the subject matter jurisdiction of the legislative body, provided that no action shall be taken on any item not appearing on the agenda unless the action is otherwise authorized by subdivision (b) of Section 54954.2. However, the agenda need not provide an opportunity for members of the public to address the legislative body on any item that has already been considered by a committee, composed exclusively of members of the legislative body, at a public meeting wherein all interested members of the public were afforded the opportunity to address the committee on the item, before or during the committee's consideration of the item, unless the item has been substantially changed since the committee heard the item, as determined by the legislative body. Every notice for a special meeting shall provide an opportunity for members of the public to directly address the legislative body concerning any item that has been described in the notice for the meeting before or during consideration of that item.

Prejudice is defined in The Free Dictionary as follows:

"A forejudgment; bias; partiality; preconceived opinion. A leaning toward one side of a cause for some reason other than a conviction of its justice.

A juror can be disqualified from a case for being prejudiced, if his or her views on a subject or attitude toward a party will unduly influence the final decision."

Source: <https://legal-dictionary.thefreedictionary.com/prejudice>

Bias is defined in The Legal Dictionary as follows:

"The term *bias* refers to the tendency of a person to favor one thing, idea, or person over another.

In a legal context, bias can lead an individual, such as a judge or juror, to treat someone unfairly,

in spite of the fact that hearings and trials are designed to be *unbiased* assessments of the facts of a case. Bias may also affect such issues as applications for jobs or entry into the country, and recruitment of individuals for other purposes. To explore this concept, consider the following bias definition."

Source: <https://legaldictionary.net/bias/>

Alvin DeJohnette is a Special Education Teacher with the Moreno Valley Unified School District. As such, I am submitting a link to Transparent California which shows his perceived connection to Mayor Yxstian Gutierrez as Special Ed Teachers. Based on this connection, Alvin DeJohnette must recuse himself due to the prejudice of "leaning toward one side of a cause" from the perceived connection to the Mayor; further, from bias favoring the outcome for a "Yes" vote on Public Hearing Item #2.

Alvin DeJohnette Employment with Moreno Valley Unified School

District: <https://transparentcalifornia.com/salaries/2018/school-districts/riverside/moreno-valley-unified/alvin-d-dejohnette/>

Mayor Yxstian Gutierrez Employment with Moreno Valley Unified School

District: <https://transparentcalifornia.com/salaries/2018/school-districts/riverside/moreno-valley-unified/yxstian-a-gutierrez/>

Joann Stephan, Robert Harris and Rafael Brugueras are listed as Principal Officers with the Political Action Committee "Moreno Valley Jobs Coalition, Supporting Jobs Creation and Workforce Training Initiatives and The World Logistics Center Development, Major Funding by

Highland Fairview." As filed with The Moreno Valley City Clerk on 05/12/2016 on California Form 410 (attached).

Joann Stephan, in addition has openly supported the World Logistics Center as an advocate for them from this video posted on YouTube October 7, 2013. Joann Stephan from her comments, presents prejudice and bias. Further Joann Stephan must recuse herself due to the prejudice of "leaning toward one side of a cause" from YouTube video; further, from bias favoring the outcome for a "Yes" vote on Public Hearing Item #2.

Source: <https://www.youtube.com/watch?v=XygdNfohiw>

A second video of Joann Stephan openly advocating for the World Logistics Center can be seen on YouTube, posted 08/05/2015 with video evidence from 06/11/2015. In the video, from the 1 minute, 40 second mark you will find Joann Stephan advocating, and turning her head directly toward Iddo Benzeevi of Highland Fairview. This video footage presents clear and convincing evidence for a "conflict of interest" with prejudice and bias that Joann Stephan must recuse herself.

Source: https://www.youtube.com/watch?v=Ou6_Gc1rQZY&feature=youtu.be&fbclid=IwAR0ZOpAOdDFT9NTjrj1yL7skym99jCCv2eSe20RbGMIn11FWapxq71pibZU

The following link I am presenting was brought to my attention, which was a Photo taken with Iddo Benzeevi, Robert Harris and Rafael Brugueras on 04/15/2019 by a Real Estate seller on Facebook with her page made public. And I may add was a celebration before a City Council Vote the next day on 04/16/2019 to vote on the Skechers Building Expansion project.

Because of the photo taken with Iddo Benzeevi. There is clear and convincing evidence Robert Harris and Rafael Brugueras must recuse their selves for a "conflict of interest" with prejudice and bias favoring the outcome for a "Yes" vote on Public Hearing Item #2.

Source: <https://www.facebook.com/233736366829261/photos/a.415890128613883/968618826674341/?type=3&theater>

The photo itself is attached.

For my City Council members. I have presented clear and convincing evidence the Planning Commissioners named. Alvin DeJohnette, Joann Stephan, Robert Harris and Rafael Brugueras must recuse their selves from Public Hearing Item #2.

Very respectfully,

Angel Lopez-Ramirez

Combat Veteran, Wounded Warrior and Public Servant

Cell: 818-388-1231”

The following evidence, I am resubmitting as follows:

District: <https://transparentcalifornia.com/salaries/2018/school-districts/riverside/moreno-valley-unified/alvin-d-dejohnette/> (Exhibit 1A).

Mayor Yxstian Gutierrez Employment with Moreno Valley Unified School

District: <https://transparentcalifornia.com/salaries/2018/school-districts/riverside/moreno-valley-unified/yxstian-a-gutierrez/> (Exhibit 1B).

The following evidence, I am resubmitting as follows:

Joann Stephan, and Rafael Brugueras are listed as Principal Officers with the Political Action Committee "Moreno Valley Jobs Coalition, Supporting Jobs Creation and Workforce Training Initiatives and The World Logistics Center Development, Major Funding by Highland Fairview." As filed with The Moreno Valley City Clerk on 05/12/2016 on California Form 410 (Exhibit 1C).

The following evidence, I am resubmitting as follows:

Joann Stephan, in a video posted on YouTube October 7, 2013. Source: <https://www.youtube.com/watch?v=XygdNfohiw> Openly supporting the World Logistics Center, I am resubmitting as evidence (Exhibit 1D).

Joann Stephan in a second video openly advocating for the World Logistics Center can be seen on YouTube, posted 08/05/2015 with video evidence from 06/11/2015.

Source: https://www.youtube.com/watch?v=Ou6_Gc1rQZY&feature=youtu.be&fbclid=IwAR0ZOpAOdDFT9NTjrj1yL7skym99jCCv2eSe20RbGMIn11FWapxq71pibZU

In the video, from the 1 minute, 40 second mark. I am resubmitting as evidence (Exhibit 1E).

The following evidence, I am resubmitting as follows:

Photo taken with Iddo Benzeevi and Rafael Brugueras on 04/15/2019 by a Real Estate seller on Facebook. A celebration before a City Council Vote the next day on 04/16/2019 to vote on the Skechers Building Expansion project.

Source: <https://www.facebook.com/233736366829261/photos/a.415890128613883/968618826674341/?type=3&theater>

The Photo I am resubmitting as evidence (Exhibit 1F).

In an email correspondence follow up from May 17, 2020 at 12:37pm. I submitted further arguments to the City Council and argued the error the City Attorney committed during the Planning Commission from May 14, 2020. I added further objections with my arguments:

Subject: Re: Planning Commission Regular Meeting 05/14/2020 7pm

Good afternoon City Council Members,

In a follow up to my initial email with which I received no reply.

In response to the City Attorney's comments in which he opined to my claims of bias.

The City Attorney stated Commissioner Harris decided for himself he thought he needed to recuse himself, due to a petition he submitted in support for the WLC.

Further stating, "public officials are prohibited from voting on matters in which they stand to benefit" in reference to the planning commissioners. Further stating that "public officials must make decisions that benefit the public." And was not uncommon for public officials to publicly express their support for a project that publicly benefit the community as a whole, including taking a photograph with a developer who may bring jobs.

The City Attorney erred on his opinion and I now introduce two additional terms to further solidify my arguments.

The term "Ex Parte."

Ex Parte is defined in Merriam-Webster Dictionary as follows:

Definition of *ex parte*

1: on or from one side or party only —used of legal proceedings

2: from a one-sided or partisan point of view

Source: <https://www.merriam-webster.com/dictionary/ex%20parte>

Rafael Brugueras stated for the record before the motion to vote on the matter. First by stating in his own words, "we heard truth and we heard lies!"

Further stating for the record, "for Moreno Valley to take the fight to the school board, to fight for the trades for children to grow up in the logistic era" in reference to the World Logistics Center and children not having a problem finding a job in the future.

Second, attacking me personally for accusing him of citing his claims of "not doing favors for others", having "to live in the City and not wanting to be looked in a certain way." Further "doing his research to make a decision" and relying on the "City Staff." Further adding to know the character getting involved to know "the Mayor, to know Iddo Benzeevi, the staff and commissioners." Closing his remarks that he will "vote for the project" before the motion was brought forward to a vote by the Planning Commission Chair. The Vice Chair motioned to approve and adopt the measure for the World Logistics Center revised FEIR for a vote. The motion was second by Rafael Brugueras in excitement. Rafael made his intentions known to the public in a predetermined manner by his vote, further solidifying my objections to a vote with prejudice and bias with grounds of a one-sided partisan point of view.

I wish to further add "Political Influence" in my arguments.

Political Influence is defined in Law Insider as follows:

"Political influence or "authority" means a tribal council, leadership, internal process or other mechanism which the tribe or group has used as a means of influencing or controlling the behavior of its members in significant respects, and/or making decisions for the tribe or group which substantially affect its members, and/or representing the tribe or group in dealing with outsiders in matters of consequence. This process is to be understood in the context of the history, culture and social organization of the tribe or group."

Source: <https://www.lawinsider.com/dictionary/political-influence>

Iddo Benzeevi of Highland Fairview has influenced the named Planning Commissioners Rafael Brugueras and Joann Stephan when they were named as Principal Officers with the Political Action Committee "Moreno Valley Jobs Coalition, Supporting Jobs Creation and Workforce Training Initiatives and The World Logistics Center Development, Major Funding by Highland Fairview." As filed with The Moreno Valley City Clerk on 05/12/2016 on California Form 410.

How was the vote by the Planning Commission not marred with prejudice and bias by "Ex Parte" and "Political Influence" exerted by Iddo Benzeevi to his benefit when the vote will be brought before the City Council where Iddo Benzeevi retains "Ex Parte" and "Political Influence" over City Council members Yxstian Gutierrez, Victoria Baca, Ulises Cabrera and Carla Thornton through California Form 460 documents as a direct contributor to their campaigns?

Rafael Brugueras has had relationships with Yxstian Gutierrez and Iddo Benzeevi for years, citing an article from The Press Enterprise the relationship and extent Rafael Brugueras has: "Some residents raised criticisms about Brugueras' ties to Iddo Benzeevi, developer of the 40.6 million-square-foot World Logistics Center warehouse complex planned in the city.

Brugueras campaigned for Gutierrez and belongs to the Moreno Valley Jobs Coalition, a political action committee funded by Benzeevi's company Highland Fairview to campaign for the project. The company has also been a big financial supporter of Gutierrez, spending \$232,835 to support him through direct contributions and political action committees since 2014, campaign finance reports show."

Source: <https://www.pe.com/2017/04/04/after-monthlong-standoff-moreno-valley-selects-planning-commissioners/>

I wish to further add from the photo I had submitted taken on 04/15/2019 between Iddo Benzeevi, Rafael Brugueras and Robert Harris who sit on the Planning Commission.

That photo was in celebration and I will quote the remarks from Real Estate seller on Facebook with her page made public:

"Dinner at Iddo Benzeevi's home. Supporting his new Skechers Building Project coming to Moreno Valley Soon."

These comments were made in the photo before the City Council voted on the Skechers Building Expansion Project on 04/16/2019 per the City Council meeting Agenda. In which Rafael Brugueras himself was also present at that meeting (photo attached).

The same Real Estate seller on Facebook with her page made public posted on Facebook a photo with a celebration after the motion had passed (photo attached).

And I quote from the photo, "Hanging out at the Moreno Valley Council Chamber Supporting the Skechers Building Expansion and it looks like the Building was Approved."

Source: <https://www.facebook.com/233736366829261/photos/a.415890128613883/969125143290376/?type=3&theater>

With subsequent photo from City Hall after the motion passed with Rafael Brugueras as Planning Commissioner still in the audience (photo attached, red arrow pointing to Rafael).

I have presented further evidence that the City Attorney erred in his opinion with Planning Commissioners Rafael Brugueras and Joann Stephan not recusing their selves for prejudice, bias and conflicts of interest their votes were intended to benefit Iddo Benzeevi of Highland Fairview.

And now finally a question for the City Council, is it the "Modus Operandi" for Planning Commissioners to personally attack Moreno Valley residents (myself) by name to exert their personal views and bias during a Planning Commission hearing to vote on matters? Because Rafael Brugueras personally attacked me by name, first I demand an apology. Second, I demand that he be relieved immediately from his duties as Planning Commissioner and to vacate the vote by the Planning Commission from 05/14/2020 and return the manner to a new Planning Commission with no ties to the City Council, nor Iddo Benzevi of Highland Fairview for a hearing free from prejudice and bias.

I demand a response to my objections, additional arguments and evidence presented by certified mail.

Address: 10210 Via Pescadero, Moreno Valley CA 92557

Angel Lopez-Ramirez

Combat Veteran, Wounded Warrior and Public Servant

Cell: 818-388-1231”

For the record, today I have not received a reply from my demands to respond by Certified Mail from the City Council.

In the photo from the City Council voted on the Skechers Building Expansion Project on 04/16/2019 per the City Council meeting Agenda. In which Rafael Brugueras himself was also present at that meeting. I am resubmitting as evidence (Exhibit 1G).

In the Photo from Real Estate seller on Facebook with her page made public posted on Facebook a photo with a celebration after the Skechers Building Expansion had passed.

Source: <https://www.facebook.com/233736366829261/photos/a.415890128613883/969125143290376/?type=3&theater> I am resubmitting as evidence (Exhibit 1H).

The subsequent photo from City Hall after the motion passed with Rafael Bruguera as Planning Commissioner still in the audience, with red arrow pointing to him. I am resubmitting as evidence (Exhibit 1I).

Further, in my opinion stating the City Attorney erred in his opinion from Planning Commission proceedings on May 14, 2020. I am submitting additional arguments citing Case Law between BreakZone Billiards v. City of Torrance:

Source: <https://law.justia.com/cases/california/court-of-appeal/4th/81/1205.html>

“BreakZone Billiards v. City of Torrance (2000)

[No. B128098. Second Dist., Div. Two. June 30, 2000.]

BREAKZONE BILLIARDS et al., Plaintiffs and Appellants, v. CITY OF TORRANCE,
Defendant and Respondent.

(Superior Court of Los Angeles County, No. BS050766, David P. Yaffe, Judge.)

(Opinion by Goodman, J., fn. † with Boren, P. J., and Nott, J., concurring.)

COUNSEL

Grossblatt & Booth and Hillary Arrow Booth for Plaintiffs and Appellants.

Rutan & Tucker, Philip D. Kohn, M. Katherine Jenson; John L. Fellows III, City Attorney, and Patrick Q. Sullivan, Deputy City Attorney, for Defendant and Respondent. **[81 Cal. App. 4th 1208]**”

I am bringing to the focus of the City Council and City Attorney the following information from this Case Law:

“3. Was the impartiality of the decision makers impermissibly tainted by the campaign contributions?

[2] BreakZone contends that the receipt of campaign contributions by four members of the Torrance City Council deprived BreakZone of a **[81 Cal. App. 4th 1226]** decision by an impartial tribunal, thus depriving BreakZone of a fair hearing. fn. 15”

I made distinct arguments of prejudice with bias, depriving the public from a fair hearing solely in the favor of the applicant Iddo Benzeevi of Highland Fairview.

Further, I want to bring to your attention the arguments for “Common Law Conflict of Interest” from the Case Law:

“d. Common law conflict of interest.

BreakZone argues that the history of contributions by La Caze to four sitting council members and his financial interest in the outcome of litigation between him and BreakZone "provides the appearance of unfairness and **[81 Cal. App. 4th 1232]** bias." The existence of such unfairness, it is argued, is sufficient basis to reverse the judgment below. fn. 22

Analyzing BreakZone's contention requires that we answer these questions: Is there a "common law" conflict of interest doctrine notwithstanding Woodland Hills? Can a history of campaign contributions support a finding that a hearing in which the recipients sit as government officials make that hearing fundamentally unfair?

There is language predating Woodland Hills which may be read to suggest there is a common law of conflict of interest. Thus, in *Terry v. Bender*, supra, 143 Cal. App. 2d 198, a case in which it was alleged that a public official had a disqualifying personal interest in a public contract, the court stated: "A public office is a public trust created in the interest and for the benefit of the people. Public officers are obligated ... to discharge their responsibilities with integrity and fidelity.... [T]hey may not exploit or prostitute their official position for their private benefits. When public officials are influenced in the performance of their public duties by base and improper considerations of personal advantage, they violate their oath of office and vitiate the trust reposed in them, and the public is injured by being deprived of their loyal and honest services. It is therefore the general policy of this state that public officers shall not have a personal interest in any contract made in their official capacity." (Id. at p. 206.)

The facts of *Terry v. Bender* reveal that the public official there under scrutiny was alleged to have a direct and personal interest in the contract before that city council. (*Terry v. Bender*, supra, "143 Cal.App.2d at p. 206.) There is no similar factual allegation in the instant case and no authority cited by BreakZone can be read as establishing that a common law conflict of interest exists when the conflict is bottomed on campaign contributions made several years earlier. [**81 Cal. App. 4th 1233**]

We contrast the facts of this case with one in which it is alleged the campaign contribution is made in return for an express promise to act in a particular way in exercising governmental authority with respect to a particular matter then pending or which may be presented for governmental review and action at a later date. No such factual circumstance is alleged to exist in the instant case. (We do not foreclose a circumstance in which an earlier governmental action is "rewarded" in an illegal manner; this circumstance also is not suggested in this case.)

We have previously expressed caution over "general principles of conflict of interest." Thus, in *Friends of La Vina v. County of Los Angeles* (1991) 232 Cal. App. 3d 1446 [284 Cal. Rptr. 171], we reviewed a trial court's determination that it was a conflict of interest for responses to an environmental impact report to be drafted by a consultant to an agency rather than by the agency itself. In rejecting such a contention, we stated: "Except where the law clearly provides rules for identification and rectification of what might be termed conflicts of interest, that is a legislative not a judicial function. [Citations.]" (Id. at p. 1456.)

We find inapposite BreakZone's citation of *Clark v. City of Hermosa Beach*, supra, 48 Cal. App. 4th 1152. While the common law may recognize the appearance of unfairness, and provide remedies, such as writs of mandate, for allegations of denial of a fair hearing, BreakZone has not made the necessary record to invoke those protections, whether they be founded on statute or common law. We continue to be cautious in finding common law conflicts of interest. On the facts of this case, that caution is fully warranted. We reject the application of the doctrine in this case, assuming, arguendo, it exists."

My arguments from the Case Law, citing *BreakZone Billiards v. City of Torrance*. The evidence I have submitted with arguments clearly present "the appearance of unfairness and [81

Cal. App. 4th 1232] bias." The existence of such unfairness, it is argued, is sufficient basis to reverse the judgment.”

My arguments with objections and evidence presented, to include public testimony from the participants with overwhelming objections to vote No on Agenda Item #2 Case: PEN18-0050 Revised Final EIR (RFEIR). Were completely not taken into consideration and ignored by the Planning Commission. The Planning Commission was intent on passing the measure in a predetermined manner regardless of evidence presented, to please Iddo Benzeevi of Highland Fairview and sitting City Council members Mayor Yxstian Gutierrez, Mayor Pro Tem Victoria Baca, Councilman Ulises Cabrera and Councilwoman Carla J. Thornton who their selves were direct recipients from campaign contributions by Iddo Benzeevi and Highland Fairview.

Although BreakZone did not provide sufficient “arguendo” to secure protections for unfairness and bias under common law conflict of interest. My arguments with evidence presented, I believe, to include Campaign Contribution forms supporting Mayor Yxstian Gutierrez from 2014 (Supporting Document 1, Supporting Document 2), is sufficient to secure protections to vacate the Planning Commission decision on a Yes vote in favor of Iddo Benzeevi with Highland Fairview:

“We find inapposite BreakZone's citation of *Clark v. City of Hermosa Beach*, supra, 48 Cal. App. 4th 1152. While the common law may recognize the appearance of unfairness, and provide remedies, such as writs of mandate, for allegations of denial of a fair hearing, BreakZone has not made the necessary record to invoke those protections, whether they be founded on statute or common law. We continue to be cautious in finding common law conflicts of interest. On the

facts of this case, that caution is fully warranted. We reject the application of the doctrine in this case, assuming, arguendo, it exists.”

With urgency, my recommendation is for the City Council to Appeal the Planning Commission decision for a Yes vote #2 Case: PEN18-0050 Revised Final EIR (RFEIR). And vacate that vote on the grounds of prejudice, bias, and common law conflicts of interest and remand the matter back to the Planning Commission.

My next arguments are related to the Letter sent by California Attorney General, Xavier Becerra to Julia Descoteaux, Associate Planner with the Moreno Valley Planning Division. In a letter dated May 14, 2020. The same date of the Planning Commission meeting. Did no one in the Planning Division read that letter received? Did City Council members not read that letter received? Did Planning Commissioners not read that letter received? Based on the letter from the California Attorney General (attached), and I quote:

**“RE: World Logistics Center Revised Final Environmental Impact Report
(SCH # 2012021045)**

Dear Ms. Descoteaux:

Attorney General Xavier Becerra, in his independent capacity,¹ and the California Air Resources Board (CARB) jointly submit the following comments on the April 2020 Final Environmental Impact Report (FEIR) prepared for the World Logistics Center (the Project) in advance of the Project’s May 14, 2020 Moreno Valley (City) Planning Commission hearing. The Attorney General and CARB have the following concerns regarding the FEIR, as explained in detail below:

1. The FEIR does not correct the improper GHG analysis the Attorney General and CARB critiqued in multiple comment letters on prior versions of the Project's environmental impact report.²
2. The FEIR also continues to misrepresent CARB's positions.
3. The FEIR's new GHG Mitigation Measure 4.7.7.1 is inadequate.
4. The FEIR fails to adopt feasible mitigation measures that would substantially lessen the Project's significant adverse effects.
5. The addition of Mitigation Measure 4.7.7.1 is "significant information" that requires recirculation of the FEIR.

Until these shortcomings are corrected, the FEIR should not be certified by the City."

I was appalled the Planning Commission, despite my arguments with objections and evidence presented. Despite overwhelming objections from the public to the World Logistics Center Revised Final EIR (RFEIR), to vote No for the measure. I was further appalled the City Attorney opined during Planning Commission proceedings, the Revised Final EIR did remedy shortcomings and allowed a vote to proceed. Ignoring a letter from the California Attorney General further strengthens my arguments of prejudice, with bias under common law conflicts of interest the Planning Commission was predetermined to vote Yes on the measure regardless of opinion, public testimony, arguments or evidence presented.

My last argument to make is from a letter dated May 13, 2020 from the State of California Department of Fish and Wildlife (attached). One day prior to the Planning Commission meeting and decision made on May 14, 2020 in favor of Iddo Benzeevi with

Highland Fairview for the Revised Final EIR (RFEIR). The letter was submitted to Julia Descoteaux, Associate Planner with the Moreno Valley Planning Division. Once again, I present the same questions. Did no one in the Planning Division read that letter received? Did City Council members not read that letter received? Did Planning Commissioners not read that letter received?

And once again, I present the same arguments that ignoring a letter from State of California Department of Fish and Wildlife strengthens my arguments of prejudice, with bias under common law conflicts of interest the Planning Commission was predetermined to vote Yes on the measure regardless of opinion, public testimony, arguments or evidence presented.

Therefore the City Council has the responsibility to vacate that vote. By vacating that vote, further litigation may be avoided by a “writ of mandate” or affidavits to courts I can submit as a private citizen, Moreno Valley residents can submit making their voices heard, to force the City Council to Appeal the Planning Commission’s vote from May 14, 2020.

Respectfully submitted,

Angel E. Lopez-Ramirez (e-signed)

**RE: World Logistics Center Revised Final Environmental Impact Report
(SCH # 2012021045)**

Dear Ms. Descoteaux:

Attorney General Xavier Becerra, in his independent capacity,¹ and the California Air Resources Board (CARB) jointly submit the following comments on the April 2020 Final Environmental Impact Report (FEIR) prepared for the World Logistics Center (the Project) in advance of the Project’s May 14, 2020 Moreno Valley (City) Planning Commission hearing.

The Attorney General and CARB have the following concerns regarding the FEIR, as explained in detail below:

1. The FEIR does not correct the improper GHG analysis the Attorney General and CARB critiqued in multiple comment letters on prior versions of the Project’s environmental impact report.²

¹ The Attorney General’s Office submits these comments pursuant to his independent power and duty to protect the environment and natural resources of the State from pollution, impairment, or destruction, and in furtherance of the public interest. (See Cal. Const., art. V, § 13; Gov. Code, §§ 12511, 12600–12612; *D’Amico v. Bd. of Medical Examiners* (1974) 11 Cal.3d 1, 14–15.) This letter is not intended, and should not be construed, as an exhaustive discussion of the FEIR’s compliance with the California Environmental Quality Act (CEQA).

² The Attorney General and CARB previously reviewed the City’s July 2018 Revised Final Environmental Impact Report (RFEIR) and submitted comments regarding the RFEIR on September 7, 2018. As noted in those comment letters, the RFEIR’s analysis of greenhouse gas (GHG) related impacts does not meet CEQA’s requirements. On January 30, 2020, CARB also

Ms. Descoteaux
 May 14, 2020
 Page 2

2. The FEIR also continues to misrepresent CARB's positions.
3. The FEIR's new GHG Mitigation Measure 4.7.7.1 is inadequate.
4. The FEIR fails to adopt feasible mitigation measures that would substantially lessen the Project's significant adverse effects.
5. The addition of Mitigation Measure 4.7.7.1 is "significant information" that requires recirculation of the FEIR.

Until these shortcomings are corrected, the FEIR should not be certified by the City.

I. THE FEIR CONTINUES TO RELY ON ENVIRONMENTALLY IRRESPONSIBLE AND LEGALLY FLAWED ARGUMENTS TO AVOID PROPERLY ANALYZING AND MITIGATING THE PROJECT'S ENORMOUS GREENHOUSE GAS IMPACTS.

Under CEQA, a project's significant GHG impacts must be disclosed and mitigated to the extent feasible whenever the lead agency determines that the project contributes to a significant, cumulative climate change impact. 14 Cal. Code Regs. (CEQA Guidelines) § 15064.4. Yet, the FEIR continues to improperly divide the Project's GHG emissions into two categories, which it terms "capped" and "uncapped"; classifications that are created by the FEIR and have no relevance under CEQA. The FEIR asserts that "capped" emissions are "covered" by CARB's Cap-and-Trade Program, and therefore claims that they are exempt from any further CEQA analysis or mitigation.³

To purportedly support its improper approach to GHG analysis and mitigation, the FEIR relies on a few weak, misguided bases: (1) two mitigated negative declarations (MND); (2) an outdated guidance document from an air district with no jurisdiction in the South Coast Air Basin; (3) an inapposite appellate court decision that did not benefit from the input of California's expert agencies and other key stakeholders, and (4) unsupported arguments about indirect costs.

The FEIR does not, and cannot, explain why its GHG analysis and mitigation approach did not comply with the CEQA Guidelines, applicable case law, and other relevant guidance regarding GHG analysis and mitigation. In addition, the FEIR ignores the objections in our previous comment letters.

filed comments on the Draft Recirculated Revised Sections of the Final Environmental Impact Report (RRSFEIR). These three comment letters are attached to this letter as Exhibits A-C. Further, the Attorney General and CARB's amicus brief in *Paulek et al. v. Moreno Valley Community Services District et al.* (E071184) (*Paulek*), which further discusses the legal inadequacies of the GHG analysis, is attached hereto as Exhibit D.

³ Though Mitigation Measure 4.7.7.1 agrees to offset "capped" emissions in the event the City's GHG analysis is invalidated in *Paulek*, the improper legal arguments regarding the distinction between "capped" and "uncapped" emissions will remain.

Ms. Descoteaux
 May 14, 2020
 Page 3

The City cites the San Joaquin Valley Air Pollution Control District (SJVAPCD) Policy APR-2025, issued in 2014, and two MNDs approved by SCAQMD in 2014. The City states that its approach has been applied “for years” in light of those same documents. (FEIR at 23.) However, as the California Supreme Court has repeatedly held in more recent years, GHG law continues to evolve, and lead agencies have an obligation under CEQA to “stay in step.” *Cleveland National Forest Foundation v. San Diego Assn. of Governments* (2017) 3 Cal.5th 497, 504 (*SANDAG*).⁴ The documents the City relied on are out of date and not the appropriate guidance for analyzing GHG impacts under CEQA.

Note that in 2014, the California Supreme Court had not yet issued its seminal *Newhall* decision, which was published on November 30, 2015. *Center for Biological Diversity v. Dept. of Fish & Wildlife* (2015) 62 Cal.4th 204, 230 (*Newhall*). The Court then issued the *SANDAG* decision on July 13, 2017. (*SANDAG, supra*, (2017) 3 Cal.5th 497.) The FEIR ignores post-2014 materials that establish its approach is unlawful, including the *SANDAG* California Supreme Court decision referenced above, as well as CARB’s 2017 Scoping Plan.⁵

The City also relies on *Association of Irrigated Residents v. Kern County Board of Supervisors* (2017) 17 Cal.App.5th 708 (*AIR*). However, as previously noted, *AIR* did not broadly validate the City’s approach of excluding all fuel and electricity related emissions from its GHG analysis, particularly for a project that is not regulated by the Cap-and-Trade Regulation. (See FEIR at 22, 23.) That issue simply was not before the court, and was not given due consideration as a result. (See Exhibit A at 6; Exhibit B at 11-12; Exhibit D at 30-31.) *AIR* is thus inapposite.

Finally, the City also attempts to argue that the Project would effectively be paying for GHG mitigation through fuel and electrical costs passed down to the end consumer. (FEIR at 18-19.) It still remains unclear how there would be any price signal to Project proponents in this situation, given that any fuel-related costs would be paid by the fuel suppliers, and potentially passed down to the Project’s tenant logistics companies. Regardless, these fuel costs would not be paid by the Project proponents.

⁴ As the California Supreme Court has held, “CEQA requires public agencies ... to ensure that such analysis stay in step with evolving scientific knowledge and state regulatory schemes.” (*SANDAG* at 504.) The Court viewed the Scoping Plan as a particularly useful source of information, given the extensive study and public participation involved in its preparation. (*Ibid.*) A recent article provides a useful primer on this body of law. (See Janill Richards, *The SANDAG Decision: How Lead Agencies Can “Stay in Step” with Law and Science in Addressing the Climate Impacts of Large-Scale Planning and Infrastructure Projects* (2017) 26:2 Environmental Law News 17.)

⁵ Available at https://ww3.arb.ca.gov/cc/scopingplan/scoping_plan_2017.pdf. See, in particular, the “Climate Action through Local Planning and Permitting” chapter beginning at page 99, which describes the critical role played by local government contributions to CEQA reductions, including through the CEQA review process. See also CARB’s 2018 comment letter for more information on this point.

Ms. Descoteaux
 May 14, 2020
 Page 4

In sum, the City's weak attempts to support the FEIR's unlawful GHG analysis and mitigation approach are without merit. Thus, the FEIR violates CEQA by failing to fully analyze and mitigate the significant GHG impacts of the Project.

II. THE FEIR CONTINUES TO INCORRECTLY CLAIM THAT CARB SUPPORTS THE WLC'S GHG APPROACH.

The FEIR continues to misrepresent CARB's views on GHG analysis and mitigation.⁶ As noted in CARB's September 7, 2018 letter and in its *Paulek* amicus brief, CARB does not support the approach proposed; the approach is unlawful, inconsistent with relevant climate plans and regulations, and likely to set back the state's climate mitigation efforts if applied. Once again, the Cap-and-Trade Program was not designed to mitigate all GHG impacts associated with land use planning decisions. Rather, it was designed with responsible local CEQA compliance in mind as a complementary strategy. (See, e.g., 2017 Scoping Plan at 99-102.) Cap-and-Trade, which is neither tailored to nor affected by the Project, simply does not provide project-level mitigation in this case.

The FEIR points to several cherry-picked provisions from the 2011 Final Statement of Reasons for the Cap-and-Trade Project. (FEIR at 18-19.) Yet it fails to explain why there is not a single provision, from any point in time, indicating that CARB intended Cap-and-Trade compliance to constitute CEQA mitigation for unregulated entities and projects, or that it excuses land use projects wholesale from evaluating or mitigating their GHG emissions. Cap-and-Trade does not and CARB plainly never intended Cap-and-Trade to obviate CEQA mitigation requirements; that is a much bigger change that CARB would have expressly addressed had that been the intent. While the FEIR points out selected Scoping Plan provisions (FEIR at 25), it conveniently omits the directly applicable "Climate Action through Local Planning and Permitting" chapter describing how CARB relies on complimentary local planning actions (including robust CEQA analysis and mitigation) to accomplish the state's GHG mandates and goals. (See 2017 Scoping Plan at 99-102.) The City's approach would effectively render superfluous the CEQA mitigation recommendations in CARB's Scoping Plan, as there would be essentially nothing left to mitigate if agencies took the City's approach. It would also allow lead agencies to disregard their CEQA obligations and make less informed decisions. (See, e.g.,

⁶ In the *Paulek* litigation, attorneys for the developer argued that because CARB did not specifically object to the project's GHG significance methodology in its early comment letters, CARB "apparently had no problem with the EIRs not counting capped emissions against the [WLC] in order to determine the significance of greenhouse gas emissions." (Transcript of January 22, 2018 hearing in *Paulek* case, before Hon. Sharon J. Waters, p. 18, lines 3-7.) The City has failed to address this issue or otherwise correct this clear and consequential misrepresentation in its responses to comments.

Ms. Descoteaux
 May 14, 2020
 Page 5

SANDAG, supra, 3 Cal.5th at p. 519 [“nothing we say today invites regional planners to ‘shirk their responsibilities’ under CEQA”].)

Despite failing to mitigate 95% of the Project’s emissions, the FEIR appears to claim that the Project would be consistent with the “Climate Action through Local Planning and Permitting” chapter of the Scoping Plan mentioned above. (FEIR at 29.) This is incorrect. As noted above, that chapter of the Scoping Plan discusses how the State needs more, not less, responsible GHG planning and mitigation from project developers and lead agencies. Here, the City seeks to avoid almost entirely its obligation to mitigate its GHG emissions.

III. THE NEW GHG MITIGATION MEASURE 4.7.7.1 IS INADEQUATE.

As stated in our previous comments, under CEQA, the City must revise the FEIR to analyze all of the Project’s significant impacts relating to GHG emissions, including capped emissions. The FEIR must also adopt all feasible mitigation to address the Project’s significant GHG impacts. (*Newhall, supra*, 62 Cal.4th at p. 231.) Instead, the City revised the FEIR to add a mitigation measure for the Project, but this measure does not correct the FEIR’s CEQA violations. The new GHG mitigation measure would require the Project to purchase GHG offsets to mitigate its emissions, but only if the City loses the *Paulek* appellate litigation. (Measure 4.7.7.1.) This measure is inadequate for multiple reasons.

First, the City should adopt meaningful GHG mitigation measures in the FEIR, rather than continuing to avoid its responsibility to require mitigation unless specifically so ordered by a court. The City has conceded that such a measure is feasible by including its contingent GHG mitigation measure in the FEIR. (CEQA Guidelines, § 15092, subd. (b)(2)(A) [“A public agency shall not decide to approve or carry out a project for which an EIR was prepared unless . . . [t]he agency has . . . [e]liminated or substantially lessened all significant effects on the environment where feasible.”].) Indeed, more beneficial mitigation measures are feasible – including the use, for instance, of electrified trucks for the Project, which would reduce both GHGs and air pollution risk, as CARB has long recommended. Yet, the Project has not even adopted its inadequate offset measure, much less failed to explain why it has not adopted ostensibly feasible measures presented by CARB regarding design changes to favor zero emission vehicles. There is no indication in the record that even a more robust, legally-adequate GHG mitigation measure would be infeasible for the Project.

Second, the proposed measure, if it ever becomes effective, may not actually reduce the Project’s GHG emissions. Mitigation Measure 4.7.7.1 uses similar language to CARB’s offsets program, it lacks the essential safeguards that make CARB’s program successful. For example, the measure states that any offsets used must be “real, permanent, additional, quantifiable, verifiable, and enforceable by an appropriate agency.” (FEIR at 36.) However, these terms are not defined in the mitigation measure. They are left to the sole interpretation and discretion of the City’s Planning Official and thus not enforceable as CEQA requires. (See Pub. Resources Code, § 21081.6, subd. (b); CEQA Guidelines, § 15126.4, subd. (a)(2).) There is a broad continuum of voluntary-market offsets available for purchase by project proponents, ranging

Ms. Descoteaux
 May 14, 2020
 Page 6

from ineffective and unenforceable to rigorous. It remains unclear which types of offsets would be deemed by the City’s Planning Official to meet these undefined criteria.

In the land-use planning context, offsets—particularly offsets that are not tied to local projects—have distinct disadvantages as compared to on-site mitigation or other direct emission reduction measures. Offsets do not provide the important co-benefits of on-site mitigation such as local jobs, reduced local air pollution, local infrastructure and efficiency improvements. (See e.g. 2017 Scoping Plan at 102 (“CARB recommends that lead agencies prioritize on-site design features that reduce emissions, especially from [vehicle miles traveled], and direct investments in GHG reductions within the project’s region that contribute potential air quality, health, and economic co-benefits locally.”) This is why the 2017 Scoping Plan prioritizes local direct investments, and recommends turning to offset credits “[w]here further project design or regional investments are infeasible or not proven to be effective.” (2017 Scoping Plan at 102.) The proposed measure, by contrast, does not obligate the Project to first consider additional direct reductions, or other local or regional GHG emissions reductions, before deciding to purchase offsets. Such direct or local measures could otherwise benefit those in the Project vicinity. Furthermore, the measure does not in any way limit the percentage of offsets which may be used to mitigate the Project’s GHG emissions, as compared to more direct methods of GHG reduction. California’s Cap-and-Trade Program, for its part, sets a quantitative usage limit, which allows only 4-8% (depending on the calendar year) of an entity’s compliance obligation to be met through surrendering offsets. (See 17 Cal. Code Regs., § 95854.) This helps ensure that offsets are a relatively small part of the overall Cap-and-Trade Program, ensuring that the majority of GHG reductions come from reductions by regulated entities rather than from non-covered sectors.

The FEIR’s proposed measure entirely lacks this protection, instead allowing offsets (even ones that may not actually result in GHG reductions, as described above) as the sole GHG mitigation mechanism. These disadvantages, combined with the lack of any adequate criteria to ensure quality or enforceability of the offsets that may be purchased in this case, make the mitigation measure ineffective and unreliable.

Mitigation Measure 4.7.7.1 also seems to imply that CARB has broadly “approved” the offset registries it lists. The measure’s text states: “Credits registered by a carbon registry approved by the California Air Resources Board, such as, but not limited to, the Climate Action Reserve, American Carbon Registry, Verra (formerly Verified Carbon Standard) or GHG Reduction Exchange (GHG RX), shall be conclusively presumed to meet all of the criteria set forth above.” (FEIR at 36). CARB has approved only the American Carbon Registry, Climate Action Reserve, and Verra for the limited purpose of participation as Offset Project Registries in CARB’s Cap-and-Trade Program, pursuant to the process set forth in section 95986 of Title 17 of the California Code of Regulations. This approval only pertains to the registry’s participation in the Cap-and-Trade Regulation, in connection with issuing CARB offset credits. By contrast, the offsets contemplated by Mitigation Measure 4.7.7.1 are known as “voluntary market” offsets, which are generated under separate protocols adopted by the registries. CARB does not review

Ms. Descoteaux
 May 14, 2020
 Page 7

these voluntary market protocols. CARB’s “approval” of a registry as an Offset Project Registry under the Cap-and-Trade Program does not mean CARB has reviewed or approved that registry’s voluntary market offset protocols.

Mitigation Measure 4.7.7.1 improperly bypasses onsite and local mitigation and violates CEQA because of its unenforceability and thus must be revised.

IV. THE FEIR IMPROPERLY DECLINES TO ADOPT FEASIBLE MITIGATION MEASURES THAT WOULD SUBSTANTIALLY LESSEN THE PROJECT’S SIGNIFICANT ADVERSE EFFECTS.

The FEIR simultaneously argues the proposed use of offsets and credits is a feasible mitigation measure, and yet refuses to adopt such a measure now by conditioning it on the outcome of the *Paulek* litigation. This approach violates CEQA, which instructs that “public agencies should not approve projects as proposed if there are... feasible mitigation measures available which would substantially lessen the significant environmental effects of such projects.” (Pub. Res. Code 21002). The FEIR recognizes it is possible to offset the entire 232,402 metric tons of GHG from this Project but only guarantees the offset of 8,563 metric tons of GHG emissions. (See FEIR at page 39.) The entire 232,403 metric tons of GHGs will *not* be offset if the “trial court’s judgment in *Paulek* is affirmed after the appellate process is completed or if the appeal is dismissed.” However, if the appeal is dismissed, an appellate court will not have upheld the City’s GHG analysis and, as described above, the City’s misleadingly-named “capped” emissions would be considered a significant environmental effect. These emissions would need to be mitigated, and could be via a feasible and rigorous GHG mitigation measure (as described above). By refusing to adopt such a feasible mitigation measure here, the FEIR violates CEQA. (See CEQA Guidelines, § 15092.)

V. MITIGATION MEASURE 4.7.7.1 IS “SIGNIFICANT NEW INFORMATION” THAT REQUIRES RECIRCULATION OF THE FINAL EIR.

Pursuant to Public Resources Code section 21092.1, Mitigation Measure 4.7.7.1 is “significant new information” that requires a new opportunity for public comment. “Significant new information” includes a new “feasible way to mitigate or avoid [a substantial adverse environmental effect]... that the project’s proponents have declined to implement.” (*Laurel Heights Improvement Assn. v. Regents of University of California* (1993) 6 Cal.4th 1112, 1129, as modified on denial of reh. (Feb. 24, 1994)). As described above, Mitigation Measure 4.7.7.1 identifies a feasible, although not necessarily proper, way to mitigate the Project’s greenhouse gas emissions, yet declines to adopt such mitigation unconditionally.

When “significant new information... is added to an environmental impact report after notice... but prior to certification” the public agency must “give notice again pursuant to Section 21092... before certifying the environmental impact report.” (Pub. Resources Code, § 21092.1). Notice pursuant to Public Resources Code Section 21092(b)(2) requires a comment period.

Ms. Descoteaux
 May 14, 2020
 Page 8

However, Mitigation Measure 4.7.7.1 was added to the FEIR through a “Response to Comments on the Revised Sections of the Final EIR and Draft Recirculated Revised Sections of the Final EIR” without any such comment period. Instead, the City simultaneously released that document and a Notice of Completion informing the public that the Moreno Valley Planning Commission would review the Revised FEIR at a public hearing on May 14, 2020. Moreno Valley should have recirculated the EIR and provided an opportunity for public comment on the EIR with the addition of Mitigation Measure 4.7.7.1.⁷

VI. CONCLUSION

The Attorney General and CARB urge the City of Moreno Valley not to certify the FEIR without further revisions to the GHG analysis as described above. As stated in our previous comments, the City must take its obligations as a local government to mitigate climate change impacts seriously. The addition of a weak GHG measure that would apply only if the City’s approach is invalidated on appeal is not enough. However, if the City implements the actions that the state’s expert agencies have requested for years, the Project could be an important environmental leadership project. Indeed, the Project could create jobs by building a world-leading clean logistics project, protecting communities all along its supply chains. We encourage the City to take this opportunity to innovate and to lead. As always, we would be happy to work with the City to take the additional steps needed to fully comply with CEQA’s GHG analysis and proper mitigation requirements for the Project. We appreciate your consideration of our comments.

Sincerely,

HEATHER LESLIE
 Deputy Attorney General

For XAVIER BECERRA
 Attorney General

⁷ In its January 30, 2020 comments, CARB informed the City of its concerns with not being able to review the new GHG-related mitigation measure. (See January 30, 2020 CARB comment letter at page 1.) When CARB reached out to a City representative at that time, CARB was informed that the reference to the new GHG mitigation measure was included in the RRSFEIR in error, and it would be removed in the FEIR. Rather than remove that measure, the FEIR now includes a new GHG mitigation measure that has never before been circulated for public review, and which the City had previously indicated would not be part of the FEIR. The City only now has decided to release this measure as part of a vast FEIR package, just 14 days prior to the Project approval hearing.

RE: Revised Sections of the Final Environmental Impact Report for the World Logistics Center Project

Dear Mr. Armijo:

Attorney General Xavier Becerra submits the following comments on the Revised Sections of the Final Environmental Impact Report (“RFEIR”) prepared for the World Logistics Center (the “Project”).¹ The Project, a proposed warehouse and logistics complex in the City of Moreno Valley (“City”), would be one of the largest warehouse facilities in the world, with square footage equaling approximately 700 regulation-size football fields.

INTEREST OF THE ATTORNEY GENERAL

For well over a decade, the Attorney General has actively encouraged lead agencies to fulfill their CEQA responsibilities as they relate to climate change. It is now well-established that California, through law and policy, and consistent with sound science, is committed to achieving a low-carbon future by 2050 in order to reduce and avoid the most catastrophic effects of climate change. California has already begun to experience adverse climate effects, such as rising sea levels and longer, more intense fire seasons. The Attorney General is particularly concerned about how such effects may impact our most vulnerable communities, such as Inland Empire residents, who are already burdened by some of the worst air quality in the country.

¹ The Attorney General’s Office submits these comments pursuant to his independent power and duty to protect the environment and natural resources of the State from pollution, impairment, or destruction, and in furtherance of the public interest. (See Cal. Const., art. V, § 13; Gov. Code, §§ 12511, 12600-12612; *D’Amico v. Bd. of Medical Examiners* (1974) 11 Cal.3d 1, 14-15.) This letter is not intended, and should not be construed, as an exhaustive discussion of the RFEIR’s compliance with the California Environmental Quality Act (“CEQA”).

Attachment: Appeal of PEN18-0050 Revised Final EIR (PAA20-0001) A. Lopez-Ramirez (4074 : World Logistics Center)

Mr. Armijo
 September 7, 2018
 Page 2

Every large development project has the potential either to facilitate, or instead hinder, the State's achievement of its climate goals. It is therefore important that as lead agencies consider the impacts of individual development projects – many of which will operate for decades into the future – they evaluate and impose feasible mitigation for climate change impacts.

With these goals in mind, the Attorney General has provided guidance to local governments, commented on potential projects, and engaged with local interest organizations concerned with climate change and environmental justice. (See California Department of Justice, Office of the Attorney General, *California Environmental Quality Act*, <https://oag.ca.gov/environment/ceqa> (as of Sept. 7, 2018).) The Attorney General has also participated in litigation throughout the State to ensure that local governments comply with state requirements to fully analyze and implement all feasible mitigation measures to lessen significant impacts from greenhouse gas emissions (“GHGs”) caused by land use development projects. (See, e.g., *Cleveland National Forest Foundation v. San Diego Assn. of Governments* (2017) 3 Cal.5th 497; *People of the State of California v. County of San Bernardino* (Cty. of San Bernardino filed April 12, 2007) No. CIVSS700329.) The Attorney General also has a long-standing interest in ensuring environmental justice throughout the State and for communities in the Inland Empire. (See, e.g., *CCA EJ v. County of Riverside, et al.*, Case No. RIC1112063; California Department of Justice, Office of the Attorney General, *Environmental Justice at the Local and Regional Level: Legal Background* (July 10, 2012) https://oag.ca.gov/sites/all/files/agweb/pdfs/environment/ej_fact_sheet.pdf.)

After review of the GHG analysis in the RFEIR, the Attorney General believes that the City has failed to comply with CEQA's requirements for analyzing and implementing feasible mitigation for the significant GHG emissions that will result from this Project. For the reasons outlined below, the City's approach falls substantially short of meeting the requirements of CEQA, the regulations implementing CEQA – the CEQA Guidelines (Cal. Code Regs., tit. 14, § 15000 et seq.), and applicable case law. The City's approach in the RFEIR has the potential to seriously undermine the overall effort to meet the State's science-based GHG reduction goals for the transportation and land use sectors, and to disproportionately disadvantage environmental justice communities.

THE RFEIR'S GHG ANALYSIS VIOLATES CEQA AND UNDERMINES THE STATE'S CLIMATE OBJECTIVES.

As the RFEIR acknowledges, this Project at buildout will cause over 281,000 metric tons of GHGs to be released into the atmosphere every year, and will result in over 200,000 metric tons of GHG emissions beginning as early as 2028. (RFEIR at 4.7-35.) These emissions will presumably continue throughout the life of the project, though the RFEIR does not address this.

The RFEIR takes a very unusual and troubling approach to addressing the Project's GHG-related impacts, especially since climate pollution is undeniably a *cumulative* problem. (*Center for Biological Diversity v. Department of Fish & Wildlife* (2015) 62 Cal.4th 204, 256-257.) The RFEIR divides the Project's GHG emissions into two categories, which it terms

Mr. Armijo
 September 7, 2018
 Page 3

“capped” and “uncapped” – classifications created by this RFEIR. What the RFEIR deems “uncapped” emissions constitute only about 3% of the Project emissions. They include the comparatively minor landfill emissions caused by waste generated at the Project and the use of refrigerants at the Project. (RFEIR at 4.7-33.) For these emissions, the RFEIR follows the approach that would be expected under CEQA: the City has, in its discretion, designated a significance threshold (in this case, 10,000 metric tons of GHGs as recommended by the South Coast Air Quality Management District), compared the “uncapped” emissions to that threshold, and required feasible mitigation measures to ensure those emissions fall below that threshold.² (RFEIR at p. 4.7-19.) What the RFEIR terms “capped” emissions, however, constitute the remaining 97% of the Project’s predicted emissions. Those include emissions caused by mobile sources (namely, diesel trucks) and electricity use at the Project. (RFEIR at p. 4.7-33.) With respect to these emissions, the RFEIR deviates dramatically from standard CEQA methodology. The RFEIR asserts that these emissions are “covered” by the California Air Resources Board’s (“CARB”) Cap-and-Trade Program, and therefore claims that they are exempt from any further CEQA analysis or mitigation. (RFEIR at p. 4.7-22.) This is a novel and unsupportable approach under CEQA.

As discussed below, the RFEIR’s approach does not comply with CEQA, for several reasons. First, the Project is not regulated under the State’s Cap-and-Trade Program, so purported compliance with that Program cannot be used to exclude 97% of the Project’s GHG emissions from the analysis of whether the Project’s GHG emissions will result in significant climate change impacts. Second, CEQA requires that all of the emissions attributable to the Project be evaluated for significance, regardless of their source. Third, when comparing all of the Project’s emissions to California’s ambitious, science-based climate goals, as well as statewide, regional, and local plans for the reduction or mitigation of GHG emissions, the Project’s GHG emissions are clearly significant, requiring further feasible mitigation measures.

We are concerned about the City’s use of this analytical approach, both in the context of this Project and more generally. If the RFEIR’s approach is put into general use by the City, or followed by other lead agencies, emissions from transportation and electricity could largely be exempt from analysis and mitigation under CEQA. This is directly counter to the purposes of CEQA, and the Legislature’s considered decision to make clear that GHG emissions must be analyzed. (Senate Bill 97 (2007); Pub. Resources Code, § 21083.05.) The State cannot meet its well-established, long-term environmental GHG reduction goals if new local projects are free to add hundreds of thousands of tons of GHGs to the atmosphere every year without undergoing the

² Lead agencies may choose to use a “threshold of significance,” a working presumption that can assist in determining whether an impact is significant. (Cal. Code Regs., tit. 14, §§ 15064.4(b)(2); 15064.7.) “A threshold of significance is an identifiable quantitative, qualitative or performance level of a particular environmental effect, non-compliance with which means the effect will normally be determined to be significant by the agency and compliance with which means the effect normally will be determined to be less than significant.” (Cal. Code Regs., tit. 14, § 15064.7, subd. (a).)

Mr. Armijo
 September 7, 2018
 Page 4

analysis and mitigation that CEQA requires. Moreover, the RFEIR's approach will likely expose already-burdened communities in the State to greater amounts of GHG co-pollutants, such as diesel particulate matter and nitrogen oxides.

We urge the City to revise its GHG analysis to comply with CEQA by properly evaluating whether *all* of the Project's emissions—for all phases of the Project, direct and indirect, short-term and long-term—are cumulatively significant, and adopting feasible mitigation to ensure those emissions do not have a significant impact on the environment.

I. THE RFEIR'S NOVEL APPROACH TO "CAPPED" EMISSIONS VIOLATES CEQA.

The purpose of an environmental impact report is "to provide public agencies and the public in general with detailed information about the effect which a proposed project is likely to have on the environment; to list ways in which the significant effects of such a project might be minimized; and to indicate alternatives to such a project." (Pub. Resources Code § 21061.)

The City's approach violates a number of well-established CEQA principles. Lead agencies must "consider the whole of an action, not simply its constituent parts, when determining whether it will have a significant environmental effect." (Cal. Code Regs., tit. 14 § 15003, subd. (h).) This Project as a whole includes both the "capped" and "uncapped" GHG emissions, but the RFEIR fails to analyze and mitigate "capped" emissions. Moreover, both "direct and indirect significant effects" and "short-term and long-term effects" should be considered. (Cal. Code Regs., tit. 14, § 15126.2, subd. (a).) The RFEIR fails to inform the public of the long-term effects of the Project's GHG emissions by failing to analyze GHG emissions past buildout.

In addition to violating these more general principles, the City's approach to "capped" emissions contradicts the CEQA Guidelines specific to GHG analysis. "The determination of whether a project may have a significant effect on the environment calls for careful judgment on the part of the public agency involved, based to the extent possible on scientific and factual data." (Cal. Code Regs., tit. 14, § 15064, subd. (b).) The CEQA Guidelines advise lead agencies on how to determine the significance of a Project's GHG emissions. A lead agency should consider three non-exclusive methods for determining climate significance:

- (1) The extent to which the project may increase or reduce greenhouse gas emissions as compared to the existing environmental setting;
- (2) Whether the project emissions exceed a threshold of significance that the lead agency determines applies to the project[;]
- (3) The extent to which the project complies with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of greenhouse gas emissions. . . . If there is substantial evidence that the possible effects of

Mr. Armijo
 September 7, 2018
 Page 5

a particular project are still cumulatively considerable notwithstanding compliance with the adopted regulations or requirements, an EIR must be prepared for the project. (Cal. Code Regs., tit. 14, § 15064.4, subd. (b)).

While “[a]n ironclad definition of significant effect is not always possible,” (Cal. Code Regs., tit. 14 § 15064, subd. (b)), the RFEIR’s conclusion that the Project’s GHG impacts are not significant under CEQA (RFEIR at p. 4.7-33) is based solely on its unjustifiable exclusion of the vast majority of the GHG emissions of the Project. That exclusion is neither consistent with CEQA nor justified by the Cap-and-Trade Program, which does not apply to the Project.

A. Since the Project is Not Regulated Under Cap-and-Trade, The RFEIR Cannot Use Cap-and-Trade to Ignore the Significance of the Project’s GHG Emissions.

The RFEIR effectively treats the Cap-and-Trade Program as if it is a qualified mitigation plan for the Project and its “capped” emissions. (See Cal. Code Regs., tit. 17, §§ 15064, subd. (h)(3); 15064.4 subd. (b)(3)). It is not.

California’s Cap-and-Trade Program applies “an aggregate greenhouse gas allowance budget [to] *covered entities* and provides a trading mechanism for compliance instruments.” (Cal. Code Regs., tit. 17, § 95801 (emphasis added).) The Cap-and-Trade Program only applies to expressly identified entities, such as cement producers, petroleum refiners, electricity generators, natural gas supplies, fuel importers, and liquid petroleum gas supplies. (Cal. Code Regs., tit. 17, § 95811.) Warehouse and logistics complexes are *not* covered entities.

Although the operator of a refinery that produces liquefied petroleum gas in California is subject to the Cap-and-Trade Program, (Cal. Code Regs., tit. 17, § 95811, subd. (e)(1)), entities downstream from that refinery in the chain of commerce are not. The refinery itself may have compliance obligations under the Cap-and-Trade Program, which can be met by reducing its own GHG emissions or surrendering compliance instruments, but the gas station that resells the gas, the truck drivers who purchase it, and the warehouses to which the trucks drive do not. Because CEQA Guidelines section 15064.4, subdivision (b)(3) instruct lead agencies to consider the extent to which *the project* complies with GHG regulations or requirements, it is inappropriate to rely upon compliance with Cap-and-Trade by other entities downstream in the chain of commerce as a basis for avoiding analysis of project-related emissions. In the Final Statement of Reasons for the CEQA Guidelines addressing GHG emissions, the California Natural Resources Agency confirmed that, in implementing CEQA Guidelines section 15064.4, a lead agency must show that a GHG reduction plan “actually addresses the emissions that would result from the project.” (California Natural Resources Agency, Final Statement of Reasons for Regulatory Action: Amendments to the State CEQA Guidelines Addressing Analysis and Mitigation of Greenhouse Gas Emissions Pursuant to SB 97 (2009), available at http://resources.ca.gov/ceqa/docs/Final_Statement_of_Reasons.pdf, at p. 27.)

Mr. Armijo
September 7, 2018
Page 6

Further, the City's approach is not, as the RFEIR claims (RFEIR at 4.7-20), supported by *Association of Irrigated Residents v. Kern County Bd. of Supervisors* (2017) 17 Cal.App.5th 708 ("AIR"). Without commenting on whether or not that case was rightly decided, AIR is facially inapposite because the project being evaluated under CEQA in that case was a refinery, a covered entity under the Cap-and-Trade Program. Because this Project is not a covered entity under the Cap-and-Trade Program, it is unjustifiable for the RFEIR to use compliance with Cap-and-Trade as a factor in analyzing the significance of the Project's GHG emissions. There is no basis in the law for the use of Cap-and-Trade to exclude a full 97% of the Project's GHG emissions from analysis or mitigation.

The flaw in the City's approach becomes even more apparent when one considers its incongruous results. The RFEIR describes the Project, in part, as follows: "Goods imported through the Ports of Long Beach and Los Angeles as well as other locations are delivered via truck to the proposed distribution centers and distributed via truck both in and out of state locations. . . ." (Original FEIR at 3-27-3-28.) The heart of this Project is this movement of goods via trucks. Yet, the City's approach avoids any analysis of 210,596 metric tons of GHG emissions associated with the movement of goods via trucks. (RFEIR at p. 4.7-33.) 97% of the Project's total GHG emissions are simply dismissed under this approach. CEQA does not permit such a dismissal.

B. The RFEIR Must Consider All Emissions in Determining Significance.

Correctly applying CEQA requires an evaluation of *all* the Project's GHG emissions in determining significance. (See Cal. Code Regs., tit. 14, §§ 15064.4, subd. (b)(2); 15378 (defining "project" as "the whole of an action. . . .")) There is no basis here for comparing some of the Project's emissions to the significance threshold, but not others. Here, the City elected to use a threshold of 10,000 metric tons of GHGs. (RFEIR at p. 4.7-19.) CEQA Guidelines section 15064.4, subdivision (b)(2), notes that when using a threshold, an agency should compare all of the "project emissions" of GHGs to that threshold. Emissions from trucks and electricity are a result of the Project just as much as the "uncapped" emissions. They therefore must be compared to the significance threshold, and mitigated to the extent feasible.

Further, the City's attempt to exempt an impact from any significance analysis based solely on purported compliance with a single rule or regulation is unwarranted. Courts have repeatedly held compliance with a single environmental or land use law or regulation does not create an exemption from CEQA's requirement that lead agencies evaluate all of a project's significant environmental impacts. For example, "compliance with a general plan in and of itself 'does not insulate a project from the EIR requirement, where it may be fairly argued that the project will generate significant environmental effects.'" (*East Sacramento Partnerships for a Livable City v. City of Sacramento* (2016) 5 Cal.App.5th 281, 301; see also *Keep Our Mountains Quiet v. County of Santa Clara* (2015) 236 Cal.App.4th 714, 732 ("[A]n EIR is required if substantial evidence supports a fair argument that [a project] may have significant unmitigated noise impacts, even if other evidence shows the [project] will not generate noise in excess of [a] County's noise ordinance or general plan."))

Mr. Armijo
 September 7, 2018
 Page 7

C. In Light of the Project’s Substantial, Long-Term Projected Emissions, Its GHG Impacts Must Be Deemed Significant.

It seems impossible a proper evaluation of the Project’s emissions under CEQA could support a finding that the Project’s emissions are not significant. This Project—as currently designed—will lock in hundreds of thousands of tons of GHG emissions for decades to come, and may put this City and the region on a path that deeply undermines the State’s climate goals.

To reduce and avoid the most catastrophic effects of climate change, science tells us that we must dramatically reduce our annual statewide GHG emissions. California has taken ambitious steps to accomplish that objective. Assembly Bill 32 (“AB 32”) requires California to reduce its total statewide GHG emissions to 1990 levels by 2020. (Health & Saf. Code, § 38550.) Under Senate Bill 32 (“SB 32”), California must reduce its GHG emissions to 40% below 1990 levels by 2030. (Health & Saf. Code, § 38566.) In addition, the Governor’s Executive Order S-3-5 (“EO S-3-05”) directs state agencies to reduce statewide GHG emissions to 80% below 1990 levels by 2050. To achieve such ambitious but necessary goals, California will have to reduce GHG emissions from various sectors of the economy. Transportation, industry, and electricity generation are the top three contributing sectors to the State’s total GHG emissions. (CARB, 2017 Climate Change Scoping Plan (Nov. 2017) at p. 11 (“Scoping Plan”).) Below is a graph showing the dramatic downward trajectory of statewide GHG reductions necessary to achieve the State’s climate goals.

FIGURE 5: PLOTTING CALIFORNIA’S PATH FORWARD

(Scoping Plan at p. 24.)

Mr. Armijo
September 7, 2018
Page 8

California has adopted a multitude of regulations, requirements, plans, and policies to achieve the substantial reductions in statewide GHG emissions required by AB 32, SB 32, and EO S-3-5. CARB identified, in its Climate Change Scoping Plan, multiple required and voluntary measures working in concert as necessary for California to achieve its ambitious climate goals as depicted in the graph below. (See Scoping Plan at p. 28.)

FIGURE 7: SCOPING PLAN SCENARIO – ESTIMATED CUMULATIVE GHG REDUCTIONS BY MEASURE (2021–2030)⁶⁴

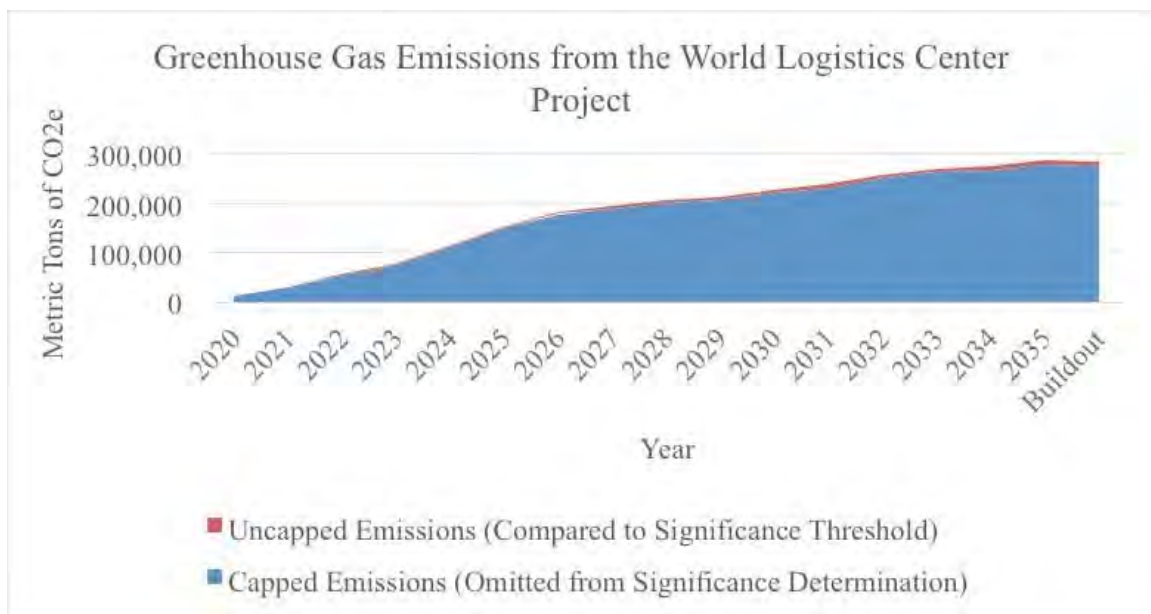

The Scoping Plan proposes various strategies for reductions in emissions from transportation and energy sectors. The Scoping Plan notes that for the GHG reductions from the transportation sector, “[vehicle miles traveled (“VMT”)] reductions are necessary to achieve the 2030 target and must be part of any strategy evaluated in this plan.” (Scoping Plan at p. 112.) In addition, under SB 375, CARB assigns California’s 18 Metropolitan Planning Organizations targets for GHG emission reductions in the transportation sector which are to be achieved based on land use patterns and transportation systems. (CARB, Updated Final Staff Report: Proposed Update to the SB 375 Greenhouse Gas Emission Reduction Targets (2017), available at https://www.arb.ca.gov/cc/sb375/final_staff_proposal_sb375_target_update_october_2017.pdf.) CARB’s recommended target for the Southern California Association of Governments is a 19% reduction in GHG emissions from transportation by 2035. (*Id.* at p. 34.)

CEQA requires the City evaluate the consistency of the Project’s substantial increases in GHG emissions with state and regional plans and policies calling for a dramatic reduction in GHG emissions. The Supreme Court in *Cleveland National Forest Foundation v. San Diego Association of Governments* (2017) 3 Cal.5th 497 (“*SANDAG*”) affirmed that an EIR should consider the project’s long-range greenhouse gas emission impacts through the year 2050, and address whether the project as a whole is in accord with the state’s climate goals. (*Id.* at p. 515.) The Supreme Court further instructed lead agencies to “stay in step with evolving scientific knowledge and state regulatory schemes.” (*Id.* at p. 504.)

Mr. Armijo
September 7, 2018
Page 9

The RFEIR estimates that the Project's total emissions will increase from the existing conditions of no emissions at the Project site to over 281,000 metric tons of GHG emissions annually at full buildout of the Project in 2040. (RFEIR at p. 4.7-33.) See the graph below depicting the trajectory of the Project's GHG emissions.³

The Project's substantial *increase* in GHG emissions conflicts with the downward trajectory for GHG emissions necessary to achieve state climate goals. This is illustrated clearly in the sharp difference in the upward trajectory of the graph of the Project's GHG emissions versus the steep downward trajectory in the graph of the State's climate goals as depicted in Figure 5 of the Scoping Plan and reproduced above. Yet, the RFEIR failed to evaluate the Project's consistency with state and regional goals, requirements, plans, and policies to reduce

³ Visual depictions such as this graph make it easier to understand the significant impact of GHG emissions from the Project on the environment. Such clarity is encouraged by the CEQA Guidelines, which state that EIRs should be "written in plain language and may use appropriate graphics so that decisionmakers and the public can rapidly understand the documents." (Cal. Code Regs., tit. 17, § 95811.) Such graphs are also helpful because they allow the decisionmakers to see a project's proposed greenhouse gas emissions as a trajectory and assess the "significance of the *shape* of that emissions curve as a whole." (Janill Richards, *The SANDAG Decision: How Lead Agencies Can "Stay in Step" with Law and Science in Addressing the Climate Impacts of Large-Scale Planning and Infrastructure Projects* (2017) 26:2 Environmental Law News 17, 19, available at http://legal-planet.org/wp-content/uploads/2018/09/environmental-law-news_2017_vol-26-no-2_fall_the-sandag-decision.pdf.) To better inform the public of the Project's unmitigated GHG emissions, we recommend revising the RFEIR to include graphical representations of the emissions trajectory of the project.

Mr. Armijo
September 7, 2018
Page 10

GHGs that should have been analyzed under CEQA. Comparing the Project's GHG trajectory against the state's climate goals would inform the public of the Project's GHG impacts. For example, the RFEIR's GHG analysis should have considered whether the Project will increase VMT. Because it did not, it is inconsistent with SB 375. Although the RFEIR's revised traffic analysis does include a VMT analysis, it is included only to address air quality issues, and not GHGs. (RFEIR at pp. 4.7-19 and 4.15-3.) Under CEQA, the City is required to consider how the project can reduce VMT and electricity use, "rather than expecting[ing] these reductions to come [only] from technological advances or other measures." (SANDAG, at 523.) The City ignores its CEQA obligations and instead, the RFEIR obscures the Project's GHG impacts by improperly exempting them from CEQA analysis.

In addition, there is no discussion in the RFEIR of the GHG emissions from the Project over its expected lifespan. GHG emissions are estimated up until the Project's full buildout in 2040 (RFEIR at p. 4.7-33), but the Project will clearly continue beyond that point, and the RFEIR gives no indication of how long that will be. The cumulative impact of the Project's GHG emissions over its entire lifespan should be considered and mitigated to the greatest extent feasible. Notably, by failing to estimate emissions through 2050, the RFEIR obscures the extent to which the Project does or does not comply with California's explicit 2050 climate goals.

D. The RFEIR Should Analyze and Adopt Feasible Mitigation Measures to Avoid or Lessen the Project's GHG Impacts.

CEQA requires that an EIR consider and adopt feasible alternatives or mitigation measures that would substantially lessen the significant and harmful environment effects of the project being analyzed. (See Pub. Resources Code, § 21002.) The RFEIR's failure to properly analyze the Project's significant GHG impacts also results in a failure to mitigate those impacts as required by CEQA. If the RFEIR's analysis were done properly, the Project's GHG emissions from vehicles and electricity would have vastly exceeded the significance threshold selected by the City. Those emissions would therefore have to be reduced through changes or alterations in the Project, or the City would be required to explain why "[s]pecific economic, legal, social, technological, or other considerations including provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or project alternatives... ." (Cal. Code Regs., tit. 22, § 15091, subds. (a)(1) and (a)(3).) There may be mitigation measures or project alternatives that could reduce or avoid the Project's GHG emissions, such as the adoption of requirements mandating the use of zero emission vehicles or a certain percentage of electricity from renewable electricity sources, such as on-site solar power generation.⁴ By

⁴ The Attorney General recognizes that devising climate mitigation on a project-by-project basis can be challenging. Many local governments have therefore elected to move toward enforceable Climate Action Plans ("CAPs") integrated with their general plans. (CARB, California Climate Action Portal Map, <https://webmaps.arb.ca.gov/capmap/> (as of Sept. 7, 2018).) Done correctly, CAPs can put local governments on the path to a lower-carbon future

Mr. Armijo
September 7, 2018
Page 11

excluding 97% of the Project's GHG emissions from its significance determination, the RFEIR obscures the extent of the Project's emissions and improperly evades the City's obligation to mitigate the Project's GHG impacts.

II. ADOPTION OF THIS METHOD OF EXEMPTING "CAPPED" EMISSIONS FROM CEQA ANALYSIS WILL UNDERMINE THE STATE'S VARIOUS POLICIES AND PROGRAMS TO REACH OUR AMBITIOUS CLIMATE GOALS.

The RFEIR's failure to comply with CEQA will have real consequences. If this RFEIR's approach is widely adopted, the State will not be able to achieve its ambitious climate goals. The RFEIR exempts the Project's emissions attributable to mobile sources and electricity use from CEQA analysis and mitigation. And yet transportation and electricity are two of the State's three largest sources of GHG emissions. (Scoping Plan at p. 11). Transportation and electricity are thus two of the most important areas in which GHG emissions must be reduced.

The RFEIR's approach to the transportation and electricity sectors incorrectly presumes that the Cap-and-Trade Program will achieve *all* GHG reductions necessary in those areas. But as CARB's 2017 Scoping Plan points out, "[l]ocal land use decisions play a particularly critical role in reducing GHG emissions associated with transportation, both at the project level, and in long-term plans..." (Scoping Plan at pp. 100-101.) If other lead agencies adopt the City's approach, millions of metric tons of GHGs resulting from development projects would be ignored and unmitigated through what amounts to a categorical exemption from CEQA. Local governments would therefore not be doing their part to help the State reach its ambitious, yet necessary, climate goals of emitting 40% below 1990 GHG levels by 2030 and 80% below 1990 levels by 2050. (Heath & Saf. Code, § 38566, Governor's Executive Order No. S-3-05 (June 1, 2005).)

Instead of claiming that no amount of transportation and electricity emissions can be significant under CEQA, and thus excluding them from any analysis and mitigation, lead agencies have an obligation to acknowledge the significance of such emissions and work to implement feasible mitigation of them.⁵

III. REVISING THE GHG ANALYSIS WILL LIKELY LEAD TO GREATER PROTECTION OF ENVIRONMENTAL JUSTICE COMMUNITIES.

In addition to, and separate from, the CEQA issues, revising the RFEIR's GHG analysis will likely help mitigate some of the Project's direct harmful effects on environmental justice communities. Moreno Valley contains some of the most pollution-burdened census tracts in the

while substantially streamlining the approval of individual projects that are consistent and comply with the CAP.

⁵ There are several examples of economically viable land use development projects that contributed no net additional GHG emissions. (Scoping Plan at p. 99.)

Mr. Armijo
 September 7, 2018
 Page 12

State according to California Environmental Protection Agency's CalEnviroScreen tool.⁶ City residents experience ozone and particulate matter (PM) 2.5 at rates higher than 90% of the State. The South Coast Air Basin, where Moreno Valley is located, exceeds federal public health standards for ozone, ozone precursors, and particulate matter. Exposure to these air contaminants contributes to asthma, lung cancer, and cardiovascular disease. Indeed, residents in Moreno Valley experience higher than average emergency room visits due to asthma and higher than average rates of cardiovascular disease, particularly residents living along freeways.

Furthermore, environmental justice concerns are significant for the residents of Moreno Valley. Moreno Valley residents are predominately people of color, made up of 56.5% Hispanic and 18% African American populations. (United States Census Bureau, Quick Facts for Moreno Valley, California, <https://www.census.gov/quickfacts/fact/table/morenovalleycitycalifornia.ca/PST045217> (as of Sept. 7, 2018).) The rates of poverty are dramatically higher in Moreno Valley compared to the state—according to U.S. Census data, 18.6% of Moreno Valley residents live in poverty, compared with the statewide poverty rate of 14.4%. (*Ibid.*, and United States Census Bureau, Quick Facts for California, <https://www.census.gov/quickfacts/fact/table/ca/PST045217> (as of Sept. 7, 2018).) They experience high rates of unemployment and housing burdens (paying more than 50% of their income for housing costs). These socioeconomic characteristics of Moreno Valley residents increase their sensitivity to the health effects of the heavy pollution burdens they experience.

Adding to these burdens, Riverside County as a whole, and the City of Moreno Valley specifically, are experiencing a great influx of logistics warehouse projects. Recent developments in Moreno Valley alone include an 825,000 square-foot distribution facility for the Aldi grocery chain, a 1.6 million square-foot distribution facility for Deckers Brands footwear company, and a 1.25 million square-foot fulfillment center for Amazon. These large projects, and their related impacts on the low-income communities of color who live nearby and in the communities residing along the freeways serving them, are dwarfed by the over 40 million square-foot Project.

By conducting a proper GHG analysis in the RFEIR and adopting feasible mitigation, the City will likely better protect the environmental justice communities living near both the Project and along the freeways that trucks will use to reach the Project. Reduction of GHG emissions leads to the reduction of co-pollutant emissions. (See Nicky Sheats, *Achieving Emissions Reductions for Environmental Justice Communities Through Climate Change Mitigation Policy* (2017) 41 WM. & MARY ENVTL. L. & POL'Y REV. 377, 387 (“[E]ven without the intentional maximization of co-pollutant reduction, there should be incidental co-pollutant

⁶ CalEnviroScreen is a tool that uses environmental, health, and socioeconomic information to produce scores and rank every census tract in the state. A census tract with a high score is one that experiences a much higher pollution burden than a census tract with a low score. (See CalEnviroScreen 3.0 Report, Office of Environmental Health Hazard Assessment, January 2017, available at <https://oehha.ca.gov/media/downloads/calenviroscreen/report/ces3report.pdf>.)

Mr. Armijo
 September 7, 2018
 Page 13

reductions as GHGs are being reduced [which] should improve the health of local communities.”)) This is especially true in the context of diesel truck emissions, where a VMT reduction would reduce both GHG emissions and co-pollutant emissions. Indeed, the RFEIR acknowledges that “[t]he *most effective way to reduce air pollution* impacts on the health of our nearly 17 million residents, including those in disproportionately impacted and environmental justice communities that are concentrated along our transportation corridors and goods movement facilities, *is to reduce emissions from mobile sources*,” and that those mobile sources constitute “the principal contributor to our air quality challenges.” (RFEIR at 4.3-11 (emphasis added).) Therefore, while revising the GHG analysis is necessary to comply with CEQA, the City should also see this as an opportunity to implement mitigation measures that would benefit the City’s residents and the other environmental justice communities impacted by this Project.

CONCLUSION

We appreciate the difficulty in analyzing GHG emissions under CEQA. However, local agencies must comply with the CEQA Guidelines for GHG analysis and cannot exempt GHG emissions from any significance analysis because of California’s Cap-and-Trade Program. We urge the City of Moreno Valley to revise the GHG analysis in the RFEIR as described above so as to support this State’s efforts to reduce GHG emissions, achieve our ambitious but necessary climate goals, and benefit local communities in the area who are already suffering some of the worst air pollution in the country. We would be happy to work with the City of Moreno Valley to take the additional steps needed to fully comply with CEQA’s GHG analysis and mitigation requirements for the Project. We appreciate your consideration of our comments.

Sincerely,

HEATHER LESLIE

Re: World Logistics Center Revised Final Environmental Impact Report
 (SCH # 2012021045)

Dear Mr. Armijo:

The California Air Resources Board (CARB) has reviewed the World Logistics Center (WLC or project) Revised Final Environmental Impact Report (RFEIR). CARB appreciates the opportunity to comment on the RFEIR. Unfortunately, despite revisions, the RFEIR mischaracterizes (1) the scope of the Cap-and-Trade Program administered by CARB as they relate to the state's overall greenhouse gas reduction mandates, and (2) how that program may be relevant to a CEQA analysis. Because the RFEIR's GHG analysis relies almost entirely on those mischaracterizations for its GHG analysis and significance determination, it does not meet California Environmental Quality Act (CEQA) requirements.

The RFEIR's core flaw with regard to greenhouse gases (GHGs) is that it declines fully to analyze or mitigate emissions from fuel and electricity demand that the project will cause - the vast majority of the project's emissions - on the ground that CARB's Cap-and-Trade Program purportedly "covers" the project's emissions for this purpose. In fact, the Program does not, and was never designed to, adequately address emissions from local projects and CEQA does not support a novel exemption for such emissions on this ground. The RFEIR's approach obscures the project's significant potential contribution to greenhouse gas emissions, and does not properly account for the combination of federal, state, and local approaches to address climate change that the crisis demands and the law requires.

We also note that the project still has not been modified to address serious health concerns from criteria and toxic air pollutants that CARB discussed in prior letters. Although this letter focuses on GHGs, we continue to be very concerned that local communities may face undue pollution from this project, if completed, as a result of inadequate mitigation.

We urge the City of Moreno Valley (City) to address the criteria and toxics issues we previously raised, and to revise its GHG analysis to accurately account for all GHG emissions that would result from the project, apply those emissions against the applicable significance threshold identified in the RFEIR, adopt feasible mitigation to

September 7, 2018
Page 2

ensure those emissions would not cause significant impacts, and recirculate the RFEIR, all as required by CEQA.

I. CARB's Participation in This Project's Review Process

CEQA requires analysis of a project's GHG emissions. Like all CEQA analyses, these disclosures must inform the public and provide appropriate information on mitigation. Planning for greenhouse gas reductions is critical at the project level, as CARB and other state agencies have repeatedly determined. Although various statewide programs address the climate change crisis as well, the CEQA guidelines, and state guidance documents, are clear that achieving the necessary reductions requires project-level focus.

The WLC project proponents have taken a different view in prior versions of the RFEIR and in related litigation, *Paulek v. City of Moreno Valley* (Riverside County Superior Court Case No. RIC 1510967) ("*Paulek*"). That case addresses, among other topics, the initial GHG analysis conducted for the WLC, and in the RFEIR. There, WLC advocates contended that, because some of the suppliers of the fuels and electricity consumed by the project are in the Cap-and-Trade Program CARB administers, the project was not required to analyze or mitigate the significant emissions impacts it would cause. Attorneys for the WLC also argued that because CARB did not specifically object to the project's GHG significance methodology, CARB "apparently had no problem with the EIRs not counting capped emissions against the [WLC] in order to determine the significance of greenhouse gas emissions."¹

CARB had, in fact, recommended an array of project-based emissions reductions strategies contrary to these claims. CARB takes this opportunity to reiterate those recommendations (prior letters are attached) and to explain why the Cap-and-Trade Program's operations do not allow a departure from CEQA's general rule that project-level impacts be properly addressed.²

¹ Transcript of January 22, 2018 hearing in *Paulek* case, before Hon. Sharon J. Waters, page 18, Lines 3-7.

² In both of CARB's comment letters, which we again incorporate by reference, CARB indicated that its recommendations were for the purpose of reducing not only criteria and toxics pollutants, but also for GHG emissions. CARB reviewed the Draft Environmental Impact Report (DEIR) and provided comments to the City of Moreno Valley in a letter dated April 16, 2013. CARB's comment letter expressed concern over the increase in health risk in the immediate area and the significant and unavoidable air quality and greenhouse gas (GHG) related impacts caused by the proposed WLC. To address those concerns, CARB recommended actions to support the development, demonstration, and deployment of zero and near-zero emission technology at the WLC. On June 8, 2015, CARB again provided comments on the Final Environmental Impact Report (FEIR), making similar recommendations. In those comments, CARB noted that the FEIR was unresponsive to the comments CARB provided in its April 16, 2013 letter regarding the DEIR. (See CARB April 16, 2013 letter at 2; CARB June 8, 2015 letter at 1, 3, and 8.)

September 7, 2018
Page 3

II. The RFEIR's Claims About CARB's Cap-and-Trade Regulation Are Incorrect

CEQA translates between high-level policy goals, and individual project choices to better inform the public and support decision-making. The GHG section of the RFEIR takes a novel, and factually unsupported, departure from ordinary CEQA practice by essentially excusing analysis and potential mitigation of GHG emissions when they are indirectly "covered" by a state program. Yet, state programs regularly address at least some aspect of essentially all CEQA impact areas – from state water pollution standards to habitat conservation laws to building codes to endangered species mandates, projects are always considered against a backdrop of state rules. In the ordinary course, the presence of state programs is not taken simply to "cover" the relevant project level impact. On the contrary, CEQA requires project proponents to inquire as to how the project affects environmental resources of statewide concern and to focus on project-level analysis and mitigation. The same rule applies with regard to greenhouse gases. As the California Supreme Court has held, "[l]ocal governments thus bear the primary burden of evaluating a land use project's impacts on greenhouse gas emissions."³

Project proponents may refer to statewide analyses and programs, but, as the Court held, ultimately must provide "substantial evidentiary support" explaining how project-level decisions relate to state-level programs to justify findings of significance based on those programs.⁴ This is particularly important for new projects, as, per the Court, "a greater degree of reduction may be needed from new projects than from the economy as a whole."⁵ And these projects may not simply point to *any* statewide regulations; on the contrary, "[a] significance analysis based on compliance with such statewide regulations ... only goes to impacts within the area governed by the regulations."⁶

In this instance, the Cap-and-Trade Program simply does not cover the project, or require it do anything to mitigate its emissions. As the Court explained, CARB has not "propose[d] statewide regulations of land use planning, but relies instead on local governments." (*Id.* at 230).

CARB has expressed its non-binding views on these matters via the Scoping Plans it is required to prepare under AB 32. The California Supreme Court has recognized the

CARB was not silent. Moreover, an inference from silence would be improper, in any event. CARB sometimes does not comment on individual projects' GHG or other analyses due to resource constraints and other considerations. Nothing should be inferred from silence on a particular matter.

Page 4

Scoping Plan as a valuable source of data for local governments.⁷ As each version of CARB's Scoping Plan, including the recent 2017 Scoping Plan Update, explains, on the basis of extensive modeling and analysis, the Cap-and-Trade Program is not intended to address project-level impacts and does not do so. Rather, complementary measures, including land-use planning and project-level analyses, are vital adjuncts to the Cap-and-Trade Program, serve additional purposes to address climate change, and, if neglected, put undue and unanticipated pressure on the Program. The RFEIR's analysis would thus make the problem it purports to analyze even worse; if followed generally, it would result in development patterns and mitigation choices that would lessen the state's ability to address climate change, and would contribute to cumulatively considerable impacts.

Rather than address project-level emissions, the Cap-and-Trade Program covers activities related to electricity generation, natural gas supply, oil and gas extraction, refining, and transportation fuel supply and combustion. The points of regulation are the operators of electricity generating plants, natural gas fuel suppliers, operators of oil and gas extraction facilities, refinery operators, and transportation fuel suppliers at the rack. See Tit. 17, Cal. Code Regs., § 95811. The Program also addresses GHG emissions in aggregate at the state level and is not intended nor designed to mitigate greenhouse gas from, or otherwise inform, local land use decisions. Without adequate analysis and mitigation, local jurisdictions may not appropriately consider the greenhouse gas implications of their decisions, conflicting with a core CEQA principle of promoting informed decisionmaking. Rather, demand for fuels and electricity created by poorly-planned local projects creates unnecessary demand on the Cap-and-Trade system, potentially raising prices in the system and making statewide compliance more difficult.

These impacts could be substantial because the transportation sector is the state's largest source of GHG emissions (as well as criteria and toxic pollutant emissions, as we have previously addressed with regard to this project). The recently released California Greenhouse Gas Emission Inventory – 2018 Edition shows that while the state's overall GHG emissions declined from 2015 to 2016, the emissions in the transportation sector increased 2 percent over that same time period.⁸ This increase was driven by increases in fuel purchases and use. To effectively achieve the State's GHG target, both production and demand for energy and fuels must be addressed. The

⁷ As the California Supreme Court has held "CEQA requires public agencies...to ensure that such analysis stay in step with evolving scientific knowledge and state regulatory schemes." The Court viewed the Scoping Plan as a particularly useful source of information, given the extensive study and public participation involved in its preparation. (*Cleveland National Forest Foundation v. San Diego Ass'n of Governments* (2017) 3 Cal. 5th 497, 504.) A recent article provides a useful primer on this body of law. (See Janill Richards, *The SANDAG Decision: How Lead Agencies Can "Stay in Step" with Law and Science in Addressing the Climate Impacts of Large-Scale Planning and Infrastructure Projects* (2017) 26:2 Environmental Law News 17))

⁸ See https://www.arb.ca.gov/cc/inventory/pubs/reports/2000_2016/ghg_inventory_trends_00-16.pdf.

September 7, 2018
Page 5

Legislature recognized this need with regard to electricity when passing SB 350 (Stats. 2015 Ch. 547, De León) to increase the Renewable Portfolio Standard and double energy savings. A similar approach is needed for transportation sector emissions. State-level production side policies such as the Renewable Portfolio Standard, Low Carbon Fuel Standard, and Cap-and-Trade Program cannot alone achieve the State's GHG reduction targets.

In this instance, the RFEIR not only improperly relies on the Cap-and-Trade Regulation; it also fails fully to address consistency with the local measures that *do* more clearly apply. There are a suite of potential emissions reduction strategies identified in the 2017 Scoping Plan aimed at reducing GHG emissions from on-road vehicle travel (e.g., fuel economy standards, technology advancements, SB 375⁹), and the majority of such emissions are not covered in any way by the Cap-and-Trade program.

The City chose not to analyze the project's consistency with the applicable Regional Transportation Plan (RTP), for example, which is subject to GHG emissions reduction targets set by CARB pursuant to SB 375. The City asserted that the RTP does not apply to this project (Table 4.7-11, page 4.7-41 of the RDEIR). We disagree, and suggest that a more appropriate analysis would be whether the project's GHG emissions from on-road transportation would be consistent with, or conflict with, assumptions in the applicable RTP found to comply with SB 375. The city might also refer to the additional nonbinding recommendations offered in CARB's Scoping Plan, though the application of these recommendations, if used, depend on the circumstances of a particular project.

We discuss these points in more detail below.

A. The Cap-and-Trade Regulation Was Never Designed to Achieve All Necessary GHG Reductions From Land Use and Logistics Planning.

The Cap-and-Trade Program was designed from the start as one of a diverse suite of measures, some statewide and some local, to move California toward achieving its GHG targets. To understand the Cap-and-Trade Program's purposes and limitations, the Scoping Plan provides helpful context. The Cap-and-Trade Program covers about 80 percent of all GHG emissions in California.¹⁰ Crucially, just because emissions are "covered" by Cap-and-Trade does not mean all of those emissions from any particular covered entity are mitigated or reduced. It simply means they are included in the cap.

⁹ SB 375 (Steinberg, Statutes of 2008).

¹⁰ Scoping Plan at ES16.

September 7, 2018
Page 6

Thirty-nine percent of California's GHG emissions come from the transportation sector, including logistics-related transportation (like the WLC would involve).¹¹ Another 19 percent of the state's GHG emissions comes from electricity generation.¹² In addition to Cap-and-Trade, the Scoping Plan includes various other CARB measures, some of which also address transportation and electricity sector emissions, including SB 350, the Low Carbon Fuel Standard, the Mobile Source Strategy, and the Sustainable Freight Action Plan. In addition to the other complementary Scoping Plan measures, the Scoping Plan also clearly states that "[l]ocal government efforts to reduce emissions within their jurisdiction are critical to achieving the State's long-term GHG goals."¹³

The RFEIR's GHG methodology departs from this science, and has enormous implications for other projects across the state: it would amount to a determination that massive logistics centers, sprawling far-flung residential developments, and other types of remote greenfield development need not do anything to address and mitigate their GHG emissions because those emissions are already "taken care of" by the Cap-and-Trade Program. This is simply not true.

B. The Cap-and-Trade Regulation Is Not Intended to Bear the Burden of Achieving the State's Transportation and Energy Sector GHG Goals Alone.

Cap-and-Trade is not intended to achieve California's climate goals on its own. Rather, Cap-and-Trade is designed to motivate behavior by capping and pricing carbon at the regulated entity level – that is, at the industrial facility and fuel/energy supplier level. It does not send a direct price signal to developers of land use or logistics projects. This means, if CEQA and other "checks" on unsustainable development are weakened as the WLC analysis proposes, such development would simply continue without direct cost to the developers, while adding market demand without mitigating the WLC's emissions.

Moreover, if land use development does not account for GHG emissions, more and more of our state's carbon "cap" would be taken up by increasing transportation emissions. Developers do not receive a price signal from Cap-and-Trade, meaning that there will be no clear incentive to alter this pattern, even as it impacts the Cap-and-Trade system. Thus, the prices of compliance instruments under the Cap-and-Trade Program would increase at a higher rate than was contemplated when CARB developed the Cap-and-Trade Program. This would eventually cause a greater cost burden than

¹¹ As noted above, transportation-related GHG emissions have increased, from 37% in 2015, to 39% in 2016. See CARB, *California Greenhouse Gas Emissions for 2000 to 2016, Trends of Emissions and Other Indicators* (July 2018) at 1 (available at https://www.arb.ca.gov/cc/inventory/pubs/reports/2000_2016/ghg_inventory_trends_00-16.pdf); see also Scoping Plan at ES1.

¹² Scoping Plan at ES1.

¹³ Scoping Plan at 99.; see also page 101.

September 7, 2018
Page 7

anticipated, and it would be borne by all Californians rather than dealt with during the project design phase. Properly-designed local policies, by contrast, may account for GHG emissions of development in a direct way—which furthers the equity objectives of AB 32, complements Cap-and-Trade, and better achieves California’s climate goals.

C. There Is No Substantial Evidence Showing that the Project’s Transportation and Electricity Related Emissions Would Actually Be Mitigated.

In the face of these substantial difficulties, the RFEIR does not articulate substantial evidence demonstrating a rational connection to the Cap-and-Trade Program – and that connection is badly attenuated, as we have explained. The project developer in this instance is claiming it may do nothing with regard to fuels and electricity, and will rely on reductions other entities may achieve. This is not the tight evidentiary connection required by the Supreme Court and by CEQA, and it is not consistent with the State’s GHG reduction programs.

The Final Statement of Reasons (FSOR) prepared when section 15064.4 of the CEQA guidelines, concerning GHGs, was promulgated demonstrates that to properly rely on subsection (b)(3), concerning compliance with statewide programs, a project must demonstrate *with evidence in the record* how the regulations of GHG emissions would actually address the emissions that result from the project. That document states:

Reading section 15064.4 together with 15064(h)(3), however, to demonstrate consistency with an existing GHG reduction plan, a lead agency would have to show that the plan actually addresses the emissions that would result from the project. *Thus, for example, a subdivision project could not demonstrate consistency with the ARB’s Early Action Measures because those measures do not address emissions resulting from a typical housing subdivision.* (ARB, Expanded List of Early Action Measures to Reduce Greenhouse Gas Emissions in California Recommended for Board Consideration, October 2007; see also State CEQA Guidelines, §§ 15063(d)(3) (initial study must be supported with information to support conclusions), 15128 (determination in an EIR that an impact is less than significant must be briefly explained).)¹⁴

Here, there is no evidence in the RFEIR regarding who is responsible for complying with Cap-and-Trade for all the GHG emissions at issue in this case – and it certainly is not the project itself. The project is a logistics facility, with trucks involved in interstate commerce, and it is not covered by that Program. Indeed, there is no basis for the

¹⁴ See Natural Resources Agency, Final Statement of Reasons for Amendments to the State CEQA Guidelines Addressing Analysis and Mitigation of Greenhouse Gas Emissions Pursuant to SB97 (December 2009) at 27 (emphasis added).

September 7, 2018
Page 8

RFEIR's conclusion that the fuel for all of the vehicles serving the project would be covered under the Cap-and-Trade regulation, since it is not clear that all of these vehicles would even purchase their fuel in California.

D. The Project Fails to Account for the Duration of the Project Compared to the Duration of the Cap-and-Trade Program.

The RFEIR states the project's buildout year is 2035,¹⁵ yet the GHG analysis seems to stop after 2035. This raises multiple problems for the RFEIR analysis.

First, it is unclear why the analysis stops at buildout, when GHG emissions (and other environmental impacts) would continue into the indefinite future – at their highest levels – once full operations begin. Without further analysis throughout the project's anticipated life (which does not appear to be stated in the RFEIR but, presumably, would be at least 30 years after buildout), the analysis is incomplete and dramatically understates the project's GHG emissions. This also means the project would likely place a much higher burden on the Cap-and-Trade program than disclosed in the RFEIR – a burden that, as described above, is pushed onto all Californians instead of the project developer as a result of the project's failure to mitigate the vast majority of its GHG emissions.

Second, the RFEIR fails to account for, or even consider, the fact that the current Cap-and-Trade regulation extends only to 2030 – which is five years *before* the project's full buildout is achieved. This means that the RFEIR has no plan whatsoever to account for its GHG emissions once the project is fully built out. The RFEIR also does not address the inconsistency between the project's GHG emissions and Executive Order S-03-05, which, among other things, establishes a state GHG reduction target to reduce GHG emissions to 80 percent below 1990 levels by 2050.¹⁶ The California Supreme Court has emphasized the importance of California's GHG targets in selecting appropriate CEQA thresholds.¹⁷ Despite these considerations, there is no substantial evidence in the record to ensure that *any* of the project's post-buildout operational emissions are mitigated by the Cap-and-Trade program.

E. The Project Fails to Include a Backstop In Case Cap-and-Trade is Altered.

¹⁵ Revised FEIR at 3-1.

¹⁶ See Governor's Executive Order No. S-03-05 (June 1, 2005) (available at [http://static1.squarespace.com/static/549885d4e4b0ba0bff5dc695/t/54d7f1e0e4b0f0798cee3010/1423438304744/California+Executive+Order+S-3-05+\(June+2005\).pdf](http://static1.squarespace.com/static/549885d4e4b0ba0bff5dc695/t/54d7f1e0e4b0f0798cee3010/1423438304744/California+Executive+Order+S-3-05+(June+2005).pdf)); see also Governor's Executive Order No. B-30-15 (April 29, 2015) (available at <https://www.gov.ca.gov/2015/04/29/news18938/>).

¹⁷ See *Cleveland Nat'l Forest Found. v. San Diego Assn. of Governments* (2017) 3 Cal.5th 497 at 516-519.

September 7, 2018
Page 9

In addition to its other evidentiary flaws, the RFEIR does not analyze how the analysis would change, and how the project's significant GHG impacts would be mitigated, if Cap-and-Trade were revised in a way that affects the state's GHG levels. In other words, the RFEIR's approach puts an almost complete reliance on the Cap-and-Trade Program in ways that, if adopted generally, would considerably affect the Program, and then fails to consider the possibility that the Program might change even as the Project continues to exist. This could include, for example, a scenario in which:

- The Cap-and-Trade program ceased to exist, or
- If the scope of the program were limited to exclude fuels and electricity, or
- If the Legislature or other factors required the program to be amended in a way that allows a higher cap.

Rather than anticipating any of these or other potential contingencies and building in an appropriate backstop to ensure the project's GHG emissions are mitigated below significance, the RFEIR instead blindly relies on the current Cap-and-Trade Program, with no further commitments or requirements. As a result, the RFEIR fails to provide substantial evidence supporting its conclusion that the project will result in less than significant GHG emissions, while forwarding an analysis that, if accepted, would make the state significantly less able to address climate change impacts resulting from its built infrastructure.

III. The RFEIR is Inconsistent with CEQA Requirements.

The RFEIR's multiple errors with regard to the Cap-and-Trade Program render it contrary with CEQA law. The RFEIR misapplies the key CEQA Guideline, section 15064.4(b), which provides in pertinent part:¹⁸

- (b) A lead agency should consider the following factors, *among others*, when assessing the significance of impacts from greenhouse gas emissions on the environment:
1. The extent to which the project may increase or reduce greenhouse gas emissions as compared to the existing environmental setting;
 2. Whether the project emissions exceed a threshold of significance that the lead agency determines applies to the project.
 3. The extent to which *the project complies* with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of greenhouse gas emissions. Such requirements must be adopted by the relevant public agency through a public review process and

¹⁸ CEQA Guidelines § 15064.4(b) (emphasis added).

September 7, 2018
Page 10

must reduce or mitigate the project's incremental contribution of greenhouse gas emissions. *If there is substantial evidence that the possible effects of a particular project are still cumulatively considerable notwithstanding compliance with the adopted regulations or requirements, an EIR must be prepared for the project.*

Thus, the CEQA Guidelines focus on project-level compliance and project-level impacts. State programs are available for consideration, but they are not held out as a panacea, for GHGs any more than for any other resource area.

Yet, the RFEIR relies upon subsection (b)(3) of this provision to claim that emissions which are indirectly included under the “cap” created by the Cap-and-Trade Program (referred to in the RFEIR as “capped emissions”) need not be analyzed and mitigated under CEQA. This approach would excuse all of the WLC’s transportation and electricity related emissions, leaving the project only “on the hook” for analyzing and mitigating a tiny fraction of its emissions. The following sections explain why this approach is legally and factually flawed.

A. Subsection (b)(3) Itself Does Not Allow The Approach Used in the Revised Final EIR.

As noted above, subsection (b)(3) of CEQA Guidelines section 15064.4 can be used as a factor to assess GHG significance when “*the project complies with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of greenhouse gas emissions...*” Here, the RFEIR concedes that the project is not subject to the Cap-and-Trade Regulation.¹⁹ This in itself should be sufficient to demonstrate that subsection (b)(3) is inapplicable to the project, as “the project” does not “comply” with Cap-and-Trade at all.

B. The RFEIR’s Hybrid Approach Used To Determine Significance Is Not Allowed.

In addition to improperly relying on subsection (b)(3), as described above, the RFEIR improperly attempts to create a “hybrid” significance scheme based on selectively combining subsection (b)(3) with the South Coast Air Quality Management District’s (SCAQMD) bright-line threshold. As explained in the RFEIR, a potentially appropriate significance threshold in this case is the SCAQMD’s 10,000 metric ton threshold.²⁰ The problem here is that the RFEIR does not compare the project’s GHG emissions against this 10,000 metric ton threshold, and then mitigate those emissions to below that threshold to the extent feasible. Rather, the RFEIR simply subtracts from its emissions quantifications any GHG emissions that it deems to be “capped,” and compares only the net “non-capped” emissions against the bright-line threshold.

¹⁹ See page 4.7-4.

²⁰ RFEIR at 4.7-21.

September 7, 2018
Page 11

This approach is unsupported in law. Regardless of which threshold applies, CEQA requires lead agencies to “make a good-faith effort, based to the extent possible on scientific and factual data, to describe, calculate or estimate the amount of greenhouse gas emissions resulting from a project.”²¹ CEQA then provides that the lead agency must consider “whether *the project emissions* exceed a threshold of significance the lead agency determines applies to the project.”²² Thus, even if subsection (b)(3) properly applied here (which it does not, as explained above), nothing in the CEQA Guidelines allows this hybrid approach of cherry-picking what emissions are applied to an otherwise-applicable bright-line threshold. The City has not even attempted to satisfy its burden of providing such substantial evidence. As noted elsewhere in this letter, Cap-and-Trade does not result in ton-for-ton mitigation of each metric ton covered by the program. Rather, it is a declining market-wide cap designed to achieve certain statewide goals – which, as explained elsewhere in this document, is not designed to mitigate all GHG emissions from land use and logistics facilities.

Because the REFIR fails to properly apply the vast majority of the project’s GHG emissions to the applicable bright-line significance threshold, it also fails to mitigate those emissions, as it simply dismisses them as “less than significant”. If the full scope of the GHG emissions attributable to the project were compared to the applicable bright-line threshold, the mitigated emissions would still be substantially over the threshold. CEQA requires that the project’s significant GHG emissions must be mitigated to the extent feasible. Additional mitigation measures are available to further reduce the project’s GHG emissions that were not considered due to the inappropriate exclusion of the majority of project-generated emissions from the analysis.

C. Reliance Upon *AIR v. Kern County* Is Improper.

While the RFEIR provides little support for the GHG significance approach it takes, the briefing for *Paulek* further explains the reasoning behind the project’s GHG analysis. In those briefs, attorneys for the developer claim that an unrelated appellate ruling, the *AIR v. Kern County* decision²³ is relevant. That decision concerned CEQA analyses for sources actually covered by the Cap-and-Trade Regulation, but the claim is that it somehow applies not only to GHGs from projects that are directly subject to the Cap-and-Trade Regulation, but also to all transportation and electricity related GHG

²¹ CEQA Guidelines § 15064.4(a).

²² CEQA Guidelines § 15064.4(b)(2).

²³ *Association of Irrigated Residents v. Kern County Board of Supervisors* (2017) 17 Cal. App. 5th 708. In CARB’s view this case was wrongly decided as to the Cap-and-Trade issue, and it is certainly not apposite in this very different context.

September 7, 2018
Page 12

emissions, the logic being that those emissions are technically included in the statewide "cap" on emissions. This is incorrect factually, for all the reasons discussed above.

It is also not a controlling case legally. The holding in *AIR v. Kern County* addressed whether it "is appropriate for a lead agency to conclude a *project compliance* [sic] with the cap-and-trade program provides a sufficient basis for determining the impact of the project's greenhouse gas emissions will be less than significant."²⁴ The project at issue in that case was a refinery that was directly subject to the Cap-and-Trade Regulation. The court did not address the broader question of whether *all* GHG emissions from resources that are indirectly covered by Cap-and-Trade, at some undefined upstream point, may be cast aside as less than significant. Here, as noted above, the WLC is *not* subject to the Cap-and-Trade regulation. It therefore does not "comply" with the Cap-and-Trade program, and is distinguishable from the project at issue in *AIR v. Kern County*.

C. Reliance Upon Obscure 2013 Negative Declarations and a Policy Document from Another District Is Similarly Uncompelling.

The RFEIR itself also attempts to justify excluding "capped emissions" from its significance analysis by referencing two seemingly cherry-picked 2013 mitigated negative declarations,²⁵ and one 2014 guidance document from the San Joaquin Valley Air Pollution Control District (SJVAPCD) titled Policy APR-2025. The RFEIR does not explain why it chose to follow the methodology allegedly used in two obscure mitigated negative declarations and in a 2014 policy document from an air district in a different air basin, rather than following traditional CEQA GHG analysis and mitigation principles. Furthermore, the primary SJVAPCD guidance documents regarding analyzing and mitigating GHG emissions under CEQA make no mention of Policy APR-2025, including the guidance documents relied upon in the *AIR v. Kern County* decision.²⁶

To the extent the RFEIR is considering what other air districts have done, it is worth noting that the California Air Pollution Control Officers' Association (CAPCOA) has considered a range of potential CEQA significance thresholds, none of which summarily

²⁴ *AIR v. Kern County* at 743 (emphasis added).

²⁵ The Revised FEIR only cryptically references these MNDs, without citations or links to the documents, and without any other information explaining the basis for their CEQA significance approach. The RFEIR's failure to include or adequately reference these mitigated negative declarations hampers the public's ability to review and comment on the RFEIR.

²⁶ See, e.g., *AIR v. Kern County* at 743-744; see also http://www.valleyair.org/transportation/GAMAQI_3-19-15.pdf; <http://www.valleyair.org/Programs/CCAP/12-17-09/3%20CCAP%20-%20FINAL%20LU%20Guidance%20-%20Dec%2017%202009.pdf>.

September 7, 2018
Page 13

exclude emissions that are indirectly included within the Cap-and-Trade program.²⁷ While that document was generated in 2008, it makes multiple references to the Cap-and-Trade program, and does not endorse simply subtracting all so-called “capped emissions” from GHG analyses.

D. Even If CEQA Guideline 15064.4(b)(3) Applied Here, The RFEIR Ignores Other Requirements in the CEQA Guidelines.

The sections above provide in-depth analysis regarding why subsection (b)(3) of CEQA Guideline 15064.4 does not allow this project to simply disregard the vast majority of its GHG emissions. Even if that subsection did apply, there are other deficiencies in the RFEIR’s GHG analysis that must be addressed.

First, the CEQA Guidelines make clear that an agency cannot focus solely on a single significance consideration while ignoring other evidence or indicators showing potentially significant impacts. For example:

- Section 15064.4(b) states that “[a] lead agency should consider the following factors, *among others*, when assessing the significance of impacts from greenhouse gas emissions on the environment.”
- Section 15064.4(b)(3) provides in pertinent part: “If there is substantial evidence that the possible effects of a particular project are still cumulatively considerable notwithstanding compliance with the adopted regulations or requirements, an EIR must be prepared for the project.”
- Section 15064(h)(3) provides: “If there is substantial evidence that the possible effects of a particular project are still cumulatively considerable notwithstanding that the project complies with the specified plan or mitigation program addressing the cumulative problem, an EIR must be prepared for the project.”

As discussed in depth above, there is evidence in this record showing significant GHG impacts that were not analyzed or mitigated in the RFEIR. CEQA does not allow these impacts to be overlooked, even if the lead agency believes the project’s GHG emissions would be less than significant under one particular (and here, improper) significance metric.

IV. Criteria Pollutants and Toxic Emissions Must Still Be Considered

In its 2013 and 2015 comment letters, CARB noted its substantial concerns regarding the project’s air pollutant and toxics emissions, and suggested several feasible means of reducing the significant impacts from those emissions. These emissions raise

²⁷ See CAPCOA, CEQA & Climate Change (January 2008). Available at <http://www.capcoa.org/wp-content/uploads/downloads/2010/05/CAPCOA-White-Paper.pdf>.

September 7, 2018
Page 14

substantial local exposure and environmental justice concerns, as Moreno Valley already suffers from very substantial air pollution exposures. These exposures would likely be worsened without appropriate mitigation measures.²⁸ CARB incorporates the comments from those letters into this letter by reference, and strongly recommends that the RFEIR be revised to incorporate all mitigation recommended in its 2013 and 2015 comment letters.

V. Conclusion

While the WLC has enormous GHG implications in itself, the attention this project has received, and the recent legal developments in the emerging *AIR v. Kern County* and *Paulek* line of cases, demonstrate that the City's decisions in the RFEIR have implications beyond the WLC project as well. The City should revise its GHG analysis to accurately account for all GHG emissions that would result from the project, apply those emissions against the applicable significance threshold identified in the RFEIR, and adopt feasible mitigation to ensure those emissions would not cause significant impacts, as required by CEQA.

Sincerely,

Richard W. Corey
Executive Officer

Re: World Logistics Center Draft Recirculated Revised Sections of the Final Environmental Impact Report (SCH # 2012021045)

Dear Mr. Armijo:

The California Air Resources Board (CARB) has reviewed the Draft Recirculated Revised Sections of the Final Environmental Impact Report (RRSFEIR) for the World Logistics Center (WLC or Project). CARB appreciates the opportunity to comment on the RRSFEIR, and raises two primary issues with the RRSFEIR in this letter.

1. The RRSFEIR contains the same flawed GHG analysis as the RFEIR.

CARB previously reviewed the City's July 2018 Revised Final Environmental Impact Report (RFEIR), and submitted comments regarding the RFEIR on September 7, 2018. As noted in that comment letter, CARB believes the RFEIR's analysis of greenhouse gas (GHG) related impacts does not meet California Environmental Quality Act (CEQA) requirements, as it relies almost entirely on mischaracterizations to reach its less-than-significant impact determination.

Unfortunately, the flaws described in CARB's September 7, 2018 comment letter remain in the RRSFEIR, which continues to rely upon mischaracterizations regarding California's Cap-and-Trade Program to dismiss any serious analysis or mitigation of the Project's GHG emissions. Therefore, as part of its comments on the current draft RRSFEIR, CARB re-submits its September 7, 2018 comment letter (attached to this letter) in its entirety. CARB directs its comments toward both the direct and cumulative impact analysis sections in the RRSFEIR.

2. The RRSFEIR does not include the new GHG mitigation measures it references.

The RRSFEIR includes passing references to new GHG-related mitigation measures, particularly measures 4.7.6.1E-1 and 4.7.6.1E-2 (see pages 4.7-20, 6.7-14, and 6.7-20). However, it appears the measures themselves have not been included in the RRSFEIR. Without the ability to review the mitigation measures relied upon by the City in reaching its significance determinations, the public has no way to evaluate the effectiveness of those measures, thwarting CEQA's public disclosure purpose.

Mr. Albert Armijo
January 30, 2020
Page 2

Conclusion

Both this comment letter and CARB's September 7, 2018 comment letter set forth substantial deficiencies in the environmental analysis prepared for the WLC project. Given these deficiencies, the City should revise the RRSFEIR to include adequate analysis and mitigation regarding all of the Project's environmental impacts, including GHG, air quality, and cumulative impacts. The City should then re-circulate the document for public review to allow the public to review and comment on the City's revised proposal.

Thank you for your consideration. As always, we welcome any questions from the City regarding ways to adequately analyze and mitigate the Project's GHG emissions.

Sincerely,

Richard W. Corey
Executive Officer

INTRODUCTION

The massive World Logistics Center (Project) will cause approximately 70,000 daily truck trips transporting goods from the ports of Long Beach and Los Angeles to Moreno Valley. (AR 003039, 058605–06.) These vehicle trips will emit hundreds of thousands of metric tons of greenhouse gas (GHG) emissions every year over the life of the Project. (AR 002729.) These GHG emissions, along with emissions from electricity needed to power the more than 40-million-square-foot project, will add to the existing climate pollutant problem, accumulating in the atmosphere and persisting for decades or longer.

Rather than analyzing and mitigating the Project’s emissions, lead agency Respondents Moreno Valley Community Services District, *et al.* (Respondents) shirk their responsibility as a local government to address climate change. They improperly rely on CARB’s statewide Cap-and-Trade climate program (Cap-and-Trade Program), which does not impose any regulatory requirements on this Project, as an excuse not to analyze and mitigate the Project’s climate change impacts. Respondents improperly ignore roughly 95% of the GHG emissions from the Project (AR 002718–19), disregarding the significance of those emissions, avoiding their duty to adopt all feasible mitigation measures, and failing to properly disclose their responsibility for this pollution to the public.

Respondents’ approach mischaracterizes the way state climate policies work and violates the California Environmental Quality Act (CEQA). CEQA directs that Respondents take “all action necessary” to protect the environment, recognizing the importance of local action driven through “meaningful” consideration of environmental impacts. (See Pub. Resources Code, §§ 21000, 21001, 21002, 21002.1.) CEQA does not allow Respondents to waive their CEQA obligations by pointing to a regulation that does not bind them (Cal. Code Regs., tit. 14, § 15000 et seq. (CEQA

Guidelines), § 15064.4), and Respondents wholly misconstrue the regulatory scheme they seek to use.

Although Respondents claim their approach is consistent with state climate policy, it is not. (See Plaintiffs/Appellants’ Supplemental Request Regarding Judicial Notice, Exhibit 1, California Air Resources Board, California’s 2017 Climate Change Scoping Plan (Nov. 2017) (2017 Scoping Plan) at pp. 19 [“Local actions are critical for implementation of California’s ambitious climate agenda”], 97–99 [more extensive discussion about the need for local action to achieve California’s climate goals]; see also Health & Saf. Code, §§ 38502, subd. (h) [identifying competing priorities to balance in emissions reductions], 38592 [nothing in this division relieves any person, entity, or agency of compliance with other law], 38690 [identifying overlapping automobile emissions policy].) Respondents’ approach has been repudiated by CARB, the Attorney General’s Office, and the Natural Resources Agency, as contrary to critical state climate goals. The state has long—and expressly—relied on a portfolio of climate change measures, including significant efforts by local governments, to address emissions that result from their land use decisions.

Respondents rely on the Cap-and-Trade Program to excuse their obligation to make better land use decisions. Cap-and-Trade is not intended as a stand-alone climate policy; instead, it assumes steady efforts to reduce emissions across the state. While Cap-and-Trade has an important role to play in limiting emissions from entities like power plants and refineries, the Program does not cover a host of other sources, including warehouses. Although the Program creates financial and legal obligations on fuel suppliers and electricity generators that may ultimately supply this Project, the Project experiences neither the direct legal requirements of the Program nor the full economic costs associated with its additional emissions. If projects were allowed to evade responsibility in

this way, they would steadily increase Cap-and-Trade Program costs upstream, while locking the state into ever-more expensive and inappropriate high-emitting development patterns. This is a recipe for failure in achieving the state’s climate goals. To avoid this scenario, the state relies on local governments to limit emissions from new development projects. Emissions from such projects are the responsibility of local governments and should be mitigated through the proper application of CEQA. Eliminating this crucial piece of the state’s portfolio approach undermines the state’s climate goals.

We have arrived at a crossroads for the future of GHG analysis under CEQA. If Respondents prevail, this case could singlehandedly undo the will of the Legislature by excusing essentially all projects from the obligation to consider GHG impacts from vehicle trips and energy use. This Court should reject Respondents’ argument and confirm that all lead agencies must do their part if we are to meet the state’s long-term climate stabilization objective.

STATEMENT OF INTERESTS

I. INTEREST OF THE ATTORNEY GENERAL

California has already begun to experience significant adverse impacts from climate change such as “more frequent, more catastrophic and more costly” wildfires, drought, “coastal erosion, disruption of water supply, threats to agriculture, spread of insect-borne diseases, and continuing health threats from air pollution.” (2017 Scoping Plan at p. ES2.) As California’s chief law enforcement officer, the Attorney General has the independent power and duty to protect the interest of all of California’s current and future residents in a clean, health, and safe environment. (See Cal. Const., art. V, § 13; Gov. Code, §§ 12511, 12600–12612; *D’Amico v. Bd. of Medical Examiners* (1974) 11 Cal.3d 1, 15.)

Upholding this duty, the Attorney General has actively encouraged lead agencies to fulfill their CEQA responsibilities as they relate to climate change for well over a decade. (See, e.g., *Cleveland National Forest Foundation v. San Diego Association of Governments* (2017) 3 Cal.5th 497 (*SANDAG*) at p. 519 [“nothing we say today invites regional planners to ‘shirk their responsibilities’ under CEQA”]; *City of Long Beach v. City of Los Angeles* (2018) 19 Cal.App.5th 465; *People v. County of San Bernardino* (San Bernardino County 2007) No. CIVSS0700329.)

The World Logistics Center, like every large development project, has the potential to either facilitate or hinder the state’s achievement of its climate goals. Here, Respondents’ unsupported approach to analyzing the Project’s GHG emissions has the potential to seriously undermine the overall effort to meet the state’s science-based GHG reduction goals for the transportation and land use sectors and to disproportionately affect environmental justice communities.¹ Given these significant interests, the Attorney General submits this amicus brief in support of Appellants,² in compliance with rule 8.200(c)(7) of the California Rules of Court in his independent capacity and on behalf of the California Air Resources Board (CARB).

¹ The Attorney General opposed this methodology in a comment letter it submitted on the revised sections of the Final EIR for this Project (Revised Final EIR or RFEIR). (Letter re: Revised Sections of the Final Environmental Impact Report for the World Logistics Center Project, Sept. 7, 2018, at:

<<https://oag.ca.gov/sites/all/files/agweb/pdfs/environment/comments-revised-sections-feir.pdf?>>.) The Revised Final EIR is not at issue in this litigation, but it includes the original EIR’s same flawed GHG analysis.

² This brief is submitted in support of Plaintiffs and Respondents Albert Thomas Paulek, et al. and Plaintiffs and Appellants Laborers International Union of North America, Local 1184, et al.

II. INTEREST OF THE CALIFORNIA AIR RESOURCES BOARD

CARB has a strong interest in participating in this case as amicus curiae. CARB is charged with protecting the public from the harmful effects of air pollution and developing programs and actions to fight climate change. As creator and administrator of the Cap-and-Trade Program, and as the lead agency on the Scoping Plan setting out many of the state’s climate policies, CARB is an expert on how the Cap-and-Trade Program was designed to function and interact with other state laws and programs as part of California’s portfolio approach to addressing GHG emissions. In their briefing, Respondents misrepresent CARB as effectively endorsing the EIR’s approach to GHG analysis. (Combined Respondents’ and Cross-Appellants’ Opening Brief at pp. 17, 36–38, 47–48, 56, 63.) But CARB has repeatedly made clear it does *not* support Respondents’ approach.³ As explained more fully below, Respondents’ arguments regarding GHG analysis are contrary to the construction given to applicable regulations by CARB, and by the Natural Resources Agency, agencies charged with interpreting and enforcing the programs at issue.

BACKGROUND

I. LEGAL BACKGROUND REGARDING CALIFORNIA’S EFFORTS TO COMBAT CLIMATE CHANGE

In 2006, recognizing the importance of combatting climate change and furthering the objectives of Executive Order S-3-05, the Legislature enacted the Global Warming Solutions Act of 2006, commonly known as

³ CARB also explained this approach when it formally opposed the GHG analysis Respondents rely on here through its comments on the RFEIR for this Project. (Letter re: World Logistics Center Revised Final Environmental Impact Report, Sept. 7, 2018, at: <https://ww3.arb.ca.gov/toxics/ttdceqalist/logisticsfeir.pdf?_ga=2.236813640.855160185.1575908432-1460774677.1564163003>.)

AB 32. (Health & Saf. Code, § 38500, et seq.) AB 32 mandates that, by 2020, California must reduce its total statewide annual GHG emissions to the level they were in 1990, and to 40 percent below that level by 2030. (Health & Saf. Code, §§ 38550, 38566.) This mandate puts the state on a trajectory of significant and continuous GHG emissions reductions through 2050, in order to stabilize the atmospheric levels of GHGs and reduce the risk of dangerous climate change.

Under AB 32, the Legislature tasked CARB with preparing a guidance planning document, known as the Scoping Plan that, while not binding, set out the state’s views based on extensive environmental and economic analyses on how policies may be effectively implemented so that California will meet the its ambitious GHG reduction goals. (See Health & Saf. Code, §§ 38561 et seq.) The Scoping Plan emphasizes the need for a multi-pronged emissions reduction approach that can be carried out by many entities and reflects the state’s position that it is necessary to reduce emissions at the source and through reductions in demand for energy. (2017 Scoping Plan, pp. 12, 19, 28).

The Scoping Plan includes a suite of regulations, measures, and policies designed to operate together to reduce GHG emissions. The Cap-and-Trade Program is one such policy. Entities that are directly subject to the Cap-and-Trade Program—like power plants, factories, refineries, and electricity generators and importers—must purchase and surrender compliance instruments (e.g., allowances) for their emissions. (See Cal. Code Regs., tit. 17, § 95812.) Downstream emitters such as cars and trucks, much less warehouses that such cars and trucks drive to, are not covered entities under Cap-and-Trade and have no such obligation to purchase or surrender allowances. The existence of the Program, in other words, does not obviate the need for action at other levels of the economy. On the contrary: If sources like the long-lasting development project in this

case build without regard to their emissions, they will increase overall state emissions and hence increase pressure and costs within the Cap-and-Trade Program.

To address the wide range of GHG emissions sources that are not directly controlled through the Cap-and-Trade Program, the state relies on other policies⁴—many of which require collaboration between the state and local governments. Agencies large and small across the state (including, crucially, cities and counties) are responsible for ensuring that proposed new land use plans, transportation projects, and development projects are consistent with evolving scientific knowledge and state regulatory schemes; CEQA is a critical tool for implementing these obligations.⁵ (See *SANDAG, supra*, 3 Cal.5th at p. 519; see also CEQA Guidelines, § 15064.4, subd. (b).)

The Scoping Plan makes clear that the Cap-and-Trade Program was *not* designed to replace local governments’ long-term planning obligations, but rather designed to work in concert with those policies to achieve the

⁴ See, e.g., Health & Saf. Code, §§ 38561, subd. (e) (requiring CARB to consider “the relative contribution of each source or source category to statewide greenhouse gas emissions”), 43018.5, subd. (a) (requiring CARB to “adopt regulations that achieve the maximum feasible and cost-effective reduction of greenhouse gas emissions from motor vehicles”).

⁵ For example, CARB provides regional emission reduction targets for local jurisdictions’ land use and transportation planning obligations under Senate Bill (SB) 375. (See Health & Saf. Code, § 65080, subd. (b)(2)(A) [known as “The Sustainable Communities and Climate Protection Act”].) CARB also works with regional air pollution control districts and air quality management districts to address emission sources that have both local and global effect, including methane from landfills and hydrofluorocarbons (HFCs), as well as to support state- and federally-mandated permitting of certain industrial sources of GHG emissions. (See California Air Resources Board, California’s 2017 Climate Change Scoping Plan (Nov. 2017) pp. 3, 104 <https://ww3.arb.ca.gov/cc/scopingplan/scoping_plan_2017.pdf>.)

state’s goals. (2017 Scoping Plan at p. 102 [“California’s future climate strategy will require increased focus on integrated land use planning”].)

Recent state reports have shown that California’s vehicular GHG emissions continue to increase year after year, and CARB has emphasized the need for local action. (See California Air Resources Board, 2018 Progress Report: California’s Sustainable Communities and Climate Protection Act (November 2018) at 4.) These increasing emissions demonstrate the crucial need for *more* complementary local action—not less—to ensure the state meets its GHG targets in cost-effective ways.

In light of the state’s GHG reduction policies, and CEQA’s focus on embedding environmental considerations in local decision-making, the Supreme Court has emphasized that careful CEQA analysis of GHG impacts will be required going forward, as lead agencies must “stay in step” with the evolving science and law related to the state’s long-term climate objectives in order to carry out their duties under CEQA. (*SANDAG, supra*, 3 Cal.5th at p. 519.)

II. OVERVIEW OF THE GHG ANALYSIS IN RESPONDENTS’ EIR

Mischaracterizing the collaborative efforts required to combat climate change and the role of the Cap-and-Trade Program, Respondents’ EIR takes a very unusual and troubling approach to addressing the Project’s GHG-related impacts.⁶ Respondents divide the Project’s GHG emissions into two categories, which the EIR terms “capped” and “uncapped.” (AR 002719.) What the EIR deems “uncapped” emissions constitute only about 4.6% of the Project’s emissions. (*Ibid.*) The “uncapped” category includes comparatively minor landfill emissions caused by waste generated at the

⁶ The Attorney General and CARB only address Respondents’ inappropriate use of the Cap-and-Trade Program in the GHG analysis of the EIR. This amicus brief is not intended to and should not be construed as an exhaustive discussion of the EIR’s compliance with CEQA.

Project and the use of refrigerants at the Project. (*Ibid.*) For these emissions, the EIR follows the approach that would be expected under CEQA: the City of Moreno Valley, in its discretion, designated a significance threshold (in this case, 10,000 metric tons of GHG emissions as recommended by the South Coast Air Quality Management District), compared the “uncapped” emissions to that threshold, and required feasible mitigation measures to ensure those emissions fall below that threshold. (AR 002719, AR 002729.)

What the EIR terms “capped” emissions, however, constitute the remaining 95.4% of the Project’s predicted emissions. (AR 002719.) Those include emissions caused by mobile sources (namely, diesel trucks), as well as natural gas and electricity use at the Project. (*Ibid.*) For these emissions, the EIR deviates dramatically from standard CEQA methodology. The EIR asserts these emissions are “covered” by Cap-and-Trade and therefore wholly exempt from any further CEQA analysis or mitigation. (AR 002723.) The EIR does *not* compare the Project’s “capped” emissions to the 10,000 metric ton threshold. (AR 002725.) Indeed, after mitigation measures are applied to the Project, the “capped” emissions remain nearly 40 times greater than the significance threshold. (AR 002729.) In forgoing any attempt to decrease the Project’s true total emissions to a less-than-significant level, Respondents fail to consider further mitigation measures that could have made this Project more compatible with the state’s climate goals. As described below, this approach is unlawful.

ARGUMENT

Respondents avoid disclosing and addressing mitigation for thousands of tons of GHG emissions each year pursuant to the misguided theory that those emissions are addressed by Cap-and-Trade. This argument is founded on misunderstandings of both the Cap-and-Trade Program and

CEQA—both of which require different industries and projects to take responsibility for their own impacts, rather than rely on others for mitigation. Most fundamentally, warehouse projects like the Project are not subject to Cap-and-Trade. Respondents therefore cannot accurately assert that “compliance” with Cap-and-Trade provides any legal basis to avoid analyzing and adequately mitigating the majority of the Project’s emissions.

The CEQA Guidelines allow projects to consider regulations “[with] which the project complies” for purposes of considering significance of GHG emissions. (See CEQA Guidelines, § 15064.4, subd. (b)(3).) However, that consideration does not apply here and Respondents’ approach, which in effect relies on other entities to undertake Respondents’ CEQA mitigation, not only violates both CEQA’s legal requirements and public disclosure and mitigation purposes, but also undermines the state climate objectives Cap-and-Trade is intended to further. Cap-and-Trade is designed to act in tandem with—not in spite of—critical tools like local land use planning to reduce GHG emissions. If allowed for Respondents and adopted by other local jurisdictions, such abdication by local governments would dramatically hinder the state’s ability to achieve its legislatively mandated long-term climate stabilization objectives and forgo pollution reduction co-benefits from GHG mitigation measures that are vital for environmental justice communities.

The Resources Agency agrees with CARB that “to demonstrate consistency with an existing GHG reduction plan, a lead agency would have to show that the plan actually addresses the emissions that would result from the project.” (See California Natural Resources Agency, Final Statement of Reasons for Regulatory Action: Amendments to the State CEQA Guidelines Addressing Analysis and Mitigation of Greenhouse Gas Emissions Pursuant to SB 97 (2009),

<http://resources.ca.gov/ceqa/docs/Final_Statement_of_Reasons.pdf>, at p. 27.)

I. WAREHOUSE AND LOGISTICS PROJECTS ARE NOT REGULATED BY CAP-AND-TRADE AND THEIR EMISSIONS MUST STILL BE MITIGATED BY LOCAL GOVERNMENTS

Warehouse and logistics complexes are not regulated by Cap-and-Trade. The Cap-and-Trade Program thus provides no legal or policy basis for Respondents to avoid their obligation to evaluate and mitigate GHG emissions. Cap-and-Trade applies “an aggregate greenhouse gas allowance budget [to] *covered entities* and provides a trading mechanism for” such allowances. (Cal. Code Regs., tit. 17, § 95801 (emphasis added).) Respondents seek to use Cap-and-Trade to zero-out and excuse the application of feasible mitigation measures to over 95% of all GHG emissions from the Project. Cap-and-Trade applies only to expressly identified entities (“covered entities”) such as cement producers, petroleum refiners, electricity generators, natural gas suppliers, fuel importers, and liquid petroleum gas suppliers. (Cal. Code Regs., tit. 17, § 95811.) Warehouse and logistics complexes are *not* covered entities. Cap-and-Trade compliance instruments do not factor in *whatsoever* because this Project is not covered by Cap-and-Trade.

The mere fact that warehouse and logistics complexes are in the chain of commerce with covered entities does not transform them into covered entities themselves. As an example, although the operator of a refinery that produces gasoline in California is subject to Cap-and-Trade, (Cal. Code Regs., tit. 17, § 95811, subd. (e)(1)), entities downstream from that refinery in the chain of commerce are not. The refinery itself may have compliance obligations under the Cap-and-Trade Program, which can be met by reducing the refinery’s own GHG emissions or surrendering allowances, but the gas station that resells the gas, the truck drivers who purchase it, and

the warehouses to which the trucks drive do not have compliance obligations. Under the state's portfolio approach, while the refinery may have met some or all of its climate obligations via Cap-and-Trade, the downstream entities have not. Because warehouses receive no set price or regulatory signals from Cap-and-Trade, they are not being directly incentivized to reduce emissions. Instead, other components of the state's portfolio address those emissions. Nothing in Cap-and-Trade explicitly or impliedly repealed the use of other measures to address climate change; they were designed to work together. (See, e.g., 2017 Scoping Plan at p. 28.) Local governments must responsibly plan new development to further the state's climate goals.

II. ALLOWING RESPONDENTS' UNTENABLE APPROACH TO GHG ANALYSIS WOULD HAVE SIGNIFICANT, NEGATIVE STATEWIDE CONSEQUENCES

If Respondents' approach to GHG analysis is endorsed, other lead agencies will undoubtedly follow this approach, and emissions from the transportation and land use sectors will be largely omitted from analysis and mitigation under CEQA. Widespread adoption of this approach would: (1) place the entire burden of California's well-established, long-term land-use related GHG reduction goals on Cap-and-Trade, thereby straining the program beyond its intended purpose and (2) expose already burdened communities in the state to greater amounts of GHG emissions and co-pollutants that accompany GHG emissions, such as diesel particulate matter and nitrogen oxides.

A. Respondents' GHG analysis undermines California's GHG reduction goals

As explained above, the Cap-and-Trade Program is just one part of a suite of complementary measures designed to achieve California's ambitious GHG reduction and climate stabilization objectives. Cap-and-

Trade provides no legal basis for Respondents to avoid local governments' obligations as lead agencies under CEQA to evaluate and mitigate GHG emissions from a project that the Cap-and-Trade Program does not even cover.

While any one policy may be insufficient or at risk of circumvention, the suite of policies work in concert toward the state's goals.^{7,8} This overlap is by design, and makes the suite of policies more resilient to changed circumstances, enforcement problems, and legal challenges. The upstream Cap-and-Trade Program thus works in tandem with downstream choices, including planning choices, to ensure both that total emissions decline and that projects throughout the state are designed to avoid putting undue upstream pressure on emissions or control costs. Weakening one policy because another policy might address it runs contrary to this approach.

⁷ See 2017 Scoping Plan, *supra*, pp. ES7–8, 10, 22, 97; cf. Elinor Ostrom, A Polycentric Approach for Coping with Climate Change (2014) 15 *Annals Econ. & Fin.* 97, 123 <<https://perma.cc/YSF4-B7N8>> (Nobel laureate describing an ideal policy approach to climate change as “Complex, Multi-Level Systems to Cope with a Complex, Multi-Level Problem”); Amir Bazaz, et al., Global Covenant of Mayors, Summary for Urban Policymakers: What the IPCC Special Report on Global Warming of 1.5.°C Means for Cities (Dec. 2018) pp. 22–23 <<https://perma.cc/R37B-3WDD>> (identifying interaction between sources of governance and importance of incentives beyond financial consequences at the community level).

⁸ Complementary measures are also important in light of the risk to any one measure posed by litigation. Private parties and the federal government have challenged California's GHG reduction policies, including aspects of the Cap-and-Trade Program. California's GHG vehicle emissions regulatory authority is currently also under challenge. The wisdom of the portfolio approach endorsed by the Scoping Plan is to ensure that the state's efforts continue via many channels, rather than relying on any one potentially challenged measure.

If other lead agencies adopt Respondents’ approach to GHG analysis under CEQA, their development projects would produce millions of metric tons of GHG emissions that would go unmitigated through what amounts to an unauthorized categorical exemption from CEQA. The economic analyses and feasibility of achieving the state’s legislatively mandated goals in the Scoping Plan account for all policies working in tandem. If any one policy fails to deliver reductions, this would put strain on the Cap-and-Trade Program to deliver more reductions than anticipated and at higher costs.

Respondents’ failure to account for the significance of the Project’s GHG emissions from transportation is particularly troubling in light of the fact that the transportation sector accounts for over 35% of the state’s total GHG emissions and these emissions continue to rise. (2017 Scoping Plan, *supra*, pp. ES1, 11 [charts of emissions by source]; see also California Air Resources Board, 2018 Progress Report: California’s Sustainable Communities and Climate Protection Act (November 2018) at 4.) As the California Supreme Court noted, “transportation emissions are affected by the location and density of residential and commercial development, the Scoping Plan does not propose statewide regulation of land use planning but *relies instead on local governments.*” (*Center for Biological Diversity v. Department of Fish and Wildlife* (2015) 62 Cal.4th 204, 230; emphasis added.) Local governments thus play a unique role in decreasing GHG emissions from the transportation sector.

Respondents contend that because statewide emissions are capped under the Cap-and-Trade Program, the amount of emissions from “capped” sources will be the same with or without their Project, but this claim ignores both their obligations under CEQA to disclose and mitigate their emissions and the intended design of the Cap-and-Trade Program. (See

Combined Respondents’ and Cross-Appellants’ Opening Brief at pp. 48–49.)

Cap-and-Trade is not a program designed to reduce emissions from local government actions, or land use; instead, it was designed on the assumption that local actors would simultaneously work to reduce emissions within their spheres. Cap-and-Trade alone was designed to account for less than 40% of the total emissions reductions needed to achieve California’s 2030 climate goals, and on the explicit assumption that local design choices would continue to reduce overall emissions (and hence economy-wide costs in the Cap-and-Trade Program). (2017 Scoping Plan at p. 28.) Indeed, relying entirely on the Cap-and-Trade Program to address land use would produce a mismatch that would strain the Program by functionally increasing demand for emissions reductions as unregulated entities displace their obligations onto the Program rather than taking action themselves, raising compliance costs for covered entities across all sectors and all consumers across the state at all income levels. California’s portfolio approach was designed to meet AB 32’s requirement that “greenhouse gas emissions reduction activities . . . adopted and implemented by [CARB] are complementary, nonduplicative, and can be implemented in an efficient and cost-effective manner.” (Cal. Health & Saf. Code, § 38561.) By taking a portfolio approach, the state has recognized that taking GHG action in specific sectors ensures that we achieve our broader climate and energy demand reduction goals. (See 2017 Scoping Plan at pp. 2, 24, 100 [describing Governor Brown’s five key climate change strategy “pillars”].) Ultimately, cost increases could make the Cap-and-Trade Program less effective as a key part of the suite of California’s climate policies.

In sum, Respondents’ position is fundamentally inconsistent with the state’s approach to climate change, and so disregards significant emissions

that should properly be addressed under CEQA, not an unrelated emissions program like Cap-and-Trade. Moreover, Respondents' approach would allow similar emissions from other projects that would follow its lead. (See Part III(A), *infra.*) The majority of land use projects are, like this Project, not covered by the Cap-and-Trade Program. Freight alone is an enormous industry; over 1.5 billion tons of freight were moved in California during 2015. (*Id.* at p. 73.) And other types of projects such as residential developments or agricultural enterprises may seek to invoke precedent created by this case. Thus, even if the Project standing alone does not excessively strain the Cap-and-Trade system, the collective weight of new projects failing to address GHG emissions in the CEQA process would.

B. Respondents' GHG analysis prevents co-pollutant reduction measures necessary to protect California's environmental justice communities

Permitting massive land development projects without requiring the necessary mitigation measures to decrease project emissions will also harm California's environmental justice communities—those already suffering from the worst environmental pollution in the state. The census tract the Project will be built in is ranked in the 75th to 80th percentile of census tracts in California in terms of greatest pollution burden indicators and health and vulnerability factors for population characteristic indicators. (CalEnviroScreen 3.0 for Census Tract 6065042624, Office of Environmental Health Hazard Assessment, last visited November 27, 2019 <<https://oehha.ca.gov/calenviroscreen/report/calenviroscreen-30>>.) Even without the Project, residents of this census tract already experience ozone, the main ingredient of smog, at a rate higher than 98% of the rest of California. (*Ibid.*) Relatedly, these residents also experience cardiovascular disease, which can result from exposure to air pollution, at a rate higher than 95% of the state. (*Ibid.*)

Considering additional mitigation properly may have resulted in additional zero-emissions technologies used for the Project, including, perhaps, from its trucks, as many commenters recommended. If such measures are not considered from this Project and other future projects like it are not mitigated, Moreno Valley and communities throughout the state will likely continue to suffer from worse air pollution. (See Nicky Sheats, *Achieving Emissions Reductions for Environmental Justice Communities Through Climate Change Mitigation Policy* (2017) 41 WM. & MARY ENVTL. L. & POL’Y REV. 377, 387 [“[E]ven without the intentional maximization of co-pollutant reduction, there should be incidental co-pollutant reductions as GHGs are being reduced [which] should improve the health of local communities.”]; see also Scoping Plan at p. 74 [“Air pollution from tailpipe emissions contributes to respiratory ailments, cardiovascular disease, and early death, with disproportionate impacts on vulnerable populations such as children, the elderly, those with existing health conditions . . . , low income communities, and communities of color.”].)

III. RESPONDENTS’ EIR VIOLATES CEQA

As explained above, the EIR’s approach to GHG analysis misrepresents the Cap-and-Trade Program and the Project’s place in that scheme. As a result, the EIR takes an unsupportable approach to evaluating the significance of GHG emissions from the Project. Contrary to CEQA’s focus on information disclosure and local responsibility for mitigation, the EIR ignores the vast majority of the Project’s emissions, and, in a misleading analysis, compares only a small fraction of the Project’s emissions to the applicable significance threshold. This flawed analysis leads the EIR to conclude that the impact from GHG emissions would be mitigated to a less-than-significant level, misleading the public and shirking mitigation responsibilities. Even if the Cap-and-Trade Program directly

applied to the Project’s emissions (it does not since, as explained above, this Project is not a covered entity under the Program), this method of evaluating a project’s significance *after* taking into account purported “mitigation” or impact-reducing components is not allowed by CEQA. As a result of its flawed analysis, the EIR fails to adopt all feasible mitigation measures and subverts CEQA’s important political function of ensuring informed decision making and informed public participation.

The EIR’s approach to GHG analysis fails on multiple levels. Perhaps most critically, in addition to pointing to “compliance” with a regulation that simply does not cover the Project to excuse mitigation, the EIR focuses on a single significance consideration while ignoring other evidence showing potentially significant impacts. CEQA does not allow clearly significant GHG impacts to be overlooked, even if a lead agency believes those impacts are considered less than significant under one particular metric. (See, e.g., *Oro Fino Gold Mining Corp. v. County of El Dorado* (1990) 225 Cal.App.3d 872, 274 [citizens’ personal observations about the significance of noise impacts on their community constituted substantial evidence that the impact may be significant and should be assessed in an EIR, even though the noise levels did not exceed general planning standards]; accord *SANDAG, supra*, 3 Cal.5th at p. 515 [“An adequate description of adverse environmental effects is necessary to inform the critical discussion of mitigation measures and project alternatives at the core of the EIR”].) This failure to address potentially significant impacts not only minimizes the Project’s significant impacts, but also warps the evaluation of whether the Project’s contribution to GHG emissions is a cumulatively considerable impact. (CEQA Guidelines, § 15064.) The cumulative effect of dozens of similar warehouse projects in the Moreno Valley area could—and almost certainly will—be significant.

A. The EIR improperly applies CEQA Guidelines Section 15064.4 to determine the significance of the Project’s GHG emissions.

The Resources Agency, the state’s expert on CEQA, has rejected the approach of using purported “compliance” with an inapplicable program to mitigate emissions. (Final Statement of Reasons for the CEQA Guidelines Amendments (2018) at p. 27 [“a subdivision project could not demonstrate ‘consistency’ with [CARB’s] Early Action Measures because those measures do not address emissions resulting from a typical housing subdivision”].)

The EIR misapplies CEQA Guidelines section 15064.4, which offers multiple factors a lead agency should consider in assessing the significance of impacts from GHG emissions. That Guideline provides, in pertinent part:

- (b) A lead agency should consider the following factors, *among others*, when assessing the significance of impacts from greenhouse gas emissions on the environment:
 - (1) The extent to which the project may increase or reduce greenhouse gas emissions as compared to the existing environmental setting;
 - (2) Whether the project emissions exceed a threshold of significance that the lead agency determines applies to the project.
 - (3) The extent to which *the project complies* with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of greenhouse gas emissions. Such requirements must be adopted by the relevant public agency through a public review process and must reduce or mitigate the project’s incremental contribution of greenhouse gas emissions. If there is substantial evidence that the possible effects of a *particular project* are still cumulatively considerable notwithstanding compliance with the adopted

regulations or requirements, an EIR must be prepared for the project.⁹

(CEQA Guidelines, § 15064.4, subd. (b), italics added.)

As reflected in subdivision (b)(3), compliance with “regulations or requirements adopted to implement a statewide, regional, or local plan” can factor into the assessment of GHG significance, but only when *the project complies* with those regulations or requirements. Yet, the EIR relies upon subsection (b)(3) to claim that emissions for which upstream suppliers surrendered allowances need not be analyzed and mitigated under CEQA. This approach excuses all of the Project’s transportation- and electricity-related emissions, thus requiring analysis and mitigation of only a tiny fraction of the Project’s emissions.

⁹ The 2018 update to the CEQA Guidelines added the following language:

(b) In determining the significance of a project’s greenhouse gas emissions, the lead agency should focus its analysis on the reasonably foreseeable incremental contribution of the project’s emissions to the effects of climate change. The agency’s analysis should consider a timeframe that is appropriate for the project. The agency’s analysis also must reasonably reflect evolving scientific knowledge and state regulatory schemes.

(b)(3) . . . In determining the significance of impacts, the lead agency may consider a project’s consistency with the State’s long-term climate goals or strategies, provided that substantial evidence supports the agency’s analysis of how those goals or strategies address the project’s incremental contribution to climate change.

(c) A lead agency may use a model or methodology to estimate greenhouse gas emissions resulting from a project. The lead agency has discretion to select the model or methodology it considers most appropriate to enable decision makers to intelligently take into account the project’s incremental contribution to climate change. The lead agency must support its selection of a model or methodology with substantial evidence. The lead agency should explain the limitations of the particular model or methodology selected for use.

Respondents' application of subdivision (b)(3) to this Project is wrong. Because the Project is not a covered entity under the Cap-and-Trade Program, subsection (b)(3) is inapplicable, as the project cannot "comply" with Cap-and-Trade at all. Moreover, as discussed above, such "compliance" would undermine Cap-and-Trade's purposes if adopted as a CEQA approach, not serve the environmental goals both AB 32 and CEQA set out to deliver.

B. The EIR failed to apply the SCAQMD's GHG emissions threshold to *all* of the Projects' GHG emissions.

The EIR takes an impermissible approach of applying the Cap-and-Trade Program to ostensibly reduce the Project's emissions significantly, then comparing only that reduced quantity to the bright-line significance threshold. This approach is not supported in law.¹⁰

CEQA requires lead agencies to "make a good-faith effort, based to the extent possible on scientific and factual data, to describe, calculate or estimate the amount of greenhouse gas emissions resulting from a project." (CEQA Guidelines, § 15064.4.) CEQA then provides that the lead agency must consider "whether *the project emissions* exceed a threshold of significance the lead agency determines applies to the project." (*Id.* at subd. (b)(2).) As explained in the EIR, a potentially appropriate

¹⁰ The EIR also attempts to justify excluding "capped emissions" from its significance analysis by referencing two seemingly cherry-picked 2013 mitigated negative declarations from other lead agencies, and one 2014 guidance document from the San Joaquin Valley Air Pollution Control District (SJVAPCD). (EIR 4.7-33.) The EIR does not explain why it chose to follow the methodology allegedly used in two obscure mitigated negative declarations and in a policy document from an air district in a different air basin, rather than following traditional CEQA GHG analysis and mitigation principles. These irrelevant, project-specific documents do not constitute substantial evidence supporting Respondents' argument.

significance threshold in this case is the South Coast Air Quality Management District's (SCAQMD) SCAQMD's 10,000 metric ton limit.¹¹ (EIR at p. 4.7-32.)

The problem here is that the EIR does not compare the Project's total GHG emissions against this 10,000 metric ton threshold, and then mitigate those emissions to below that threshold to the extent feasible. Instead, the EIR simply subtracts from the total any GHG emissions it deems to be "capped," and compares only the few "non-capped" emissions to the bright-line threshold. Because the EIR only compares a small fraction of the Project's GHG emissions to the applicable bright-line significance threshold, it only requires relatively minor mitigation measures to reduce the Project's emissions to what the EIR considers "less than significant." (EIR at pp. 1-55–57.)

Respondents' approach improperly applies so-called "mitigation" (the Cap-and-Trade Program) *before* comparing GHG emissions to the significance threshold. By combining impacts and mitigation analyses, it is unclear how the purported mitigation reduces impacts. This approach was rejected in *Lotus v. Dept. of Transportation* (2014) 223 Cal.App.4th 645, where the court stated:

The failure of the EIR to separately identify and analyze the significance of the impacts . . . before proposing mitigation measures is not merely a harmless procedural failing. . . . [T]his shortcutting of CEQA requirements subverts the purposes of CEQA by omitting material necessary to informed decisionmaking and informed public participation. It precludes both identification of potential

¹¹ It is worth noting that the Scoping Plans are not binding as to any particular CEQA methodology, or as to land use planning generally, and do not require use of any particular significance threshold. They are guidance documents; individual land use authorities can and do depart from particular suggestions in them if they have appropriate reasons to do so. The issue in this case, however, is that the Cap-and-Trade program does *not* provide such an appropriate reason.

environmental consequences arising from the project and also thoughtful analysis of the sufficiency of measures to mitigate those consequences. The deficiency cannot be considered harmless.

(*Id.* at p. 658.)

Furthermore, if the full scope of the GHG emissions attributable to the Project were compared to the applicable bright line threshold, the emissions, as mitigated, would still be substantially over the threshold—and would therefore require consideration of additional mitigation measures. (See EIR, pp. 4.7-35–36.)

Applying appropriate mitigation measures to reduce the so-called “capped” emissions would not “result in double counting and double mitigating emissions that are already mitigated through cap-and-trade” as Respondents assert. (Combined Respondents’ and Cross-Appellants’ Opening Brief at p. 57.) Gesturing towards Cap-and-Trade regulated entities is not proper mitigation because Cap-and-Trade does not apply to this Project in any way, and the Project itself has ample mitigation opportunities onsite. To mitigate this Project’s GHG emissions, Respondents would have to address emissions from mobile sources, which account for over 70% of the Project’s total emissions (which again are nearly 40 times greater than the significance threshold). (AR002729.) To reduce these emissions, fewer trucks could drive from the Project to the Ports of Long Beach and Los Angeles every day, the Project could be built closer to the ports, the Project could require more zero emission vehicles be used or provide charging equipment or incentives to encourage their use, or any number of other meaningful mitigation measures. But Cap-and-Trade does not require any of this. Such measures are instead included by local governments in local land use projects to ensure approved project impacts fall below significance thresholds. By never counting the “capped” emissions toward the significance threshold, there is *no* counting and *no*

project-level mitigation of hundreds of thousands of tons of yearly GHG emissions from this Project.

C. Respondents fail to consider the long-term GHG impacts of the Project.

The Supreme Court has made clear that an EIR should consider a project’s long-term GHG impacts, and should address whether the project as a whole is in accord with the state’s climate goals. (*Cleveland National Forest Foundation v. San Diego Association of Governments* (2017) 3 Cal.5th 497 (*SANDAG*) at p. 515.)¹² The state’s climate change goals extend beyond 2030. (See, e.g., Executive Order S-03-05 [established a statewide target of reducing GHG emissions to 80 percent below 1990 levels by 2050].) Because the Project is expected to operate for decades into the future, Respondents must account for emissions beyond 2030. But Respondents fail to account for emissions beyond that point—despite the fact that the Project’s full operation will not start until *five years later*, in 2035. (EIR at p. 4.3-61.) Respondents present no substantial evidence that any of the Project’s post-buildout operational emissions are mitigated by the Cap-and-Trade Program. (See, e.g., EIR, pp. 4.7-36–37 [stating, without citation, that “[s]ome of the project’s GHG emissions are subject to the requirements of the AB 32 Cap and Trade Program and will have a GHG allocation based on current GHG emissions levels”].) This is not an adequate CEQA analysis. (See *Oakland Heritage Alliance v. City of Oakland* (2011) 195 Cal.App.4th 884, 904 [EIR must contain substantial evidence that mitigation measures will reduce associated impacts to less-

¹² The parties in *AIR v. Kern* did not have the opportunity to brief the significance of *SANDAG* because the California Supreme Court filed its opinion in *SANDAG* over a month after the close of briefing in *AIR v. Kern*. It appears to amici that this is the first case at the California Court of Appeal where parties have had the opportunity to address both *SANDAG* and *AIR v. Kern* in their briefs.

than-significant-levels, such as by requiring compliance with applicable regulatory standards and preparation of site-specific studies]; Cal. Code Regs. tit. 14, § 15370, subd. (d) [“mitigation” includes “[r]educing or eliminating the impact over time by preservation and maintenance operations during the life of the action”].)

D. Reliance on *AIR v. Kern County* is improper.

Respondents incorrectly claim the Fifth Appellate District’s decision in *Association of Irrigated Residents v. Kern County Bd. of Supervisors* (2017) 17 Cal.App.5th 708 (*AIR*) upheld the use of the same GHG methodology as Respondents attempt to use here. (Combined Respondents’ and Cross-Appellants’ Opening Brief at p. 53.) Respondents’ use of the Cap-and-Trade Program here goes far beyond what was sanctioned in *AIR*. In *AIR*, the project being evaluated under CEQA was a refinery, a *covered entity* under Cap-and-Trade. The court held a lead agency was authorized “to determine that a project’s greenhouse gas emissions will have a less than significant effect on the environment based on *the project’s* compliance with the cap-and-trade program.” (*Id.* at p. 718; italics added.) Regardless of whether or not *AIR* was rightly decided, *here*, the question is much simpler and different from the question before the court in *AIR*. Here, it is undisputed that the Project is *not* a covered entity required to comply with the Cap-and-Trade Program. (Cal. Code Regs., tit. 17, § 95811.) Accordingly, this Court need only decide if projects that are *not* covered entities under Cap-and-Trade are nonetheless allowed to use the program to ignore significant GHG emissions they cause. The answer to that question is no.

Respondents argue the distinction between covered and non-covered entities is “a distinction without a difference.” (Combined Respondents’ and Cross-Appellants’ Opening Brief at p. 63.) Respondents are incorrect.

This distinction is crucial under CEQA and vital to the success of California’s ambitious climate policies.

From a CEQA perspective, the distinction is important because CEQA Guidelines section 15064.4, subdivision (b)(3) instructs lead agencies to consider the extent to which *a project* complies with GHG regulations or requirements. It is thus inappropriate for entities downstream in the chain of commerce from a covered entity to rely upon compliance with the Cap-and-Trade Program as a basis for avoiding analysis of project-related emissions.

From a policy perspective, as described above, the distinction is crucial because projects that are not subject to the Cap-and-Trade Program do not have the same direct incentives to reduce their GHG emissions as covered facilities, and Cap-and-Trade alone is not designed to achieve California’s ambitious climate goals. The distinction between covered and not-covered entities is thus crucial to the portfolio of climate change measures the state is relying on to protect our citizens going forward.

E. Respondents’ GHG analysis obfuscates the climate change impacts of this Project, undermining CEQA’s public disclosure purpose.

By failing to comply with CEQA Guidelines Section 15064.4, failing to compare all of the Project’s emissions to the GHG emissions threshold, and failing to consider the long-term GHG impacts of the Project, Respondents’ analysis undermines the informational purpose of CEQA. The purpose of an EIR “is to inform the public generally of the environmental impact of a proposed project.” (Cal. Code Regs. tit. 14, § 15003, subd. (c).)

CEQA prohibits public agencies from approving or carrying out a project that will have significant effects on the environment unless the agency makes “findings” demonstrating either that it made changes to the

project to avoid or mitigate those significant impacts, or that certain overriding considerations outweigh the impact. (Pub. Resources Code, § 21081.) Without a full and accurate disclosure of the Project’s impacts, Respondents erroneously concluded that the GHG impact would be less-than-significant, and thereby avoided making the subsequent findings that would inform the public whether the Project’s significant impacts are unavoidable and/or justified. Additionally, Respondents’ approach hinders the public’s ability to submit informed comments during the EIR’s public comment period—aside from addressing the *lack* of analysis—because the public is not provided with, and thus cannot evaluate, complete information or proper CEQA analysis.

CONCLUSION

California is striving on all fronts to meet its ambitious, long-term GHG reduction objectives; the health of its citizens and the environment depend on it. But this Court’s approval of Respondents’ approach to GHG analysis and mitigation would treat the Cap-and-Trade Program as the sole remedy to limit GHG emissions from land-use projects, placing unnecessary strain on Cap-and-Trade’s cost-effectiveness and seriously undermining the state’s critical climate change efforts. Amici respectfully request this Court reject the trial court’s holding and find in favor of Appellants as to GHG analysis.

Subject: Revised Final Environmental Impact Report
 City of Moreno Valley, World Logistics Center Project
 State Clearinghouse No. 2012021045

Dear Ms. Descoteaux:

The California Department of Fish and Wildlife (CDFW) received the Revised Final Environmental Impact Report (RFEIR) on May 5, 2020 from the City of Moreno Valley (City) for the World Logistics Center Project (Project) pursuant the California Environmental Quality Act (CEQA) and CEQA Guidelines.¹

Thank you for the opportunity to provide comments and recommendations regarding those activities involved in the Project that may affect California fish and wildlife. Likewise, we appreciate the opportunity to provide comments regarding those aspects of the Project that CDFW, by law, may be required to carry out or approve through the exercise of its own regulatory authority under the Fish and Game Code. CDFW is concerned with the adequacy of the City's assessment of impacts to the San Jacinto Wildlife Area (Wildlife Area; SJWA), and with the adequacy and enforceability of mitigation measures for biological resources. CDFW's concerns related to the SJWA and recommended edits to the City's mitigation measures to improve specificity and enforceability are identified and discussed below.

CDFW ROLE

CDFW is California's Trustee Agency for fish and wildlife resources, and holds those resources in trust by statute for all the people of the State. (Fish & G. Code, §§ 711.7, subd. (a) & 1802; Pub. Resources Code, § 21070; CEQA

¹ CEQA is codified in the California Public Resources Code in section 21000 et seq. The "CEQA Guidelines" are found in Title 14 of the California Code of Regulations, commencing with section 15000.

Ms. Julia Descoteaux, Associate Planner
 World Logistics Center Project
 May 13, 2020
 Page 2 of 16

Guidelines § 15386, subd. (a.) CDFW, in its trustee capacity, has jurisdiction over the conservation, protection, and management of fish, wildlife, native plants, and habitat necessary for biologically sustainable populations of those species. (*Id.*, § 1802.) Similarly, for purposes of CEQA, CDFW is charged by law to provide, as available, biological expertise during public agency environmental review efforts, focusing specifically on projects and related activities that have the potential to adversely affect fish and wildlife resources.

CDFW is also submitting comments as a Responsible Agency under CEQA. (Pub. Resources Code, § 21069; CEQA Guidelines, § 15381.) CDFW expects that it may need to exercise regulatory authority as provided by the Fish and Game Code. As proposed, for example, the Project may be subject to CDFW's lake and streambed alteration regulatory authority. (Fish & G. Code, § 1600 et seq.) Likewise, to the extent implementation of the Project as proposed may result in "take" as defined by State law of any species protected under the California Endangered Species Act (CESA) (Fish & G. Code, § 2050 et seq.), the Project proponent may seek related take authorization as provided by the Fish and Game Code.

CDFW previously provided comments on the Draft EIR on April 8, 2013, on the Final EIR June 11, 2015, and on the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) Determination of Biologically Equivalent or Superior Preservation (DBESP) on December 19, 2014.

CDFW Comments and Recommendations

CDFW's comments and recommendations on the Project are summarized below.

Impacts to rare, listed, and sensitive species

Mitigation Measures (MM) 4.4.6.2A, 4.4.6.4D, and 4.4.6.4E identify the preparation of translocation plans for rare and listed plant species (MM 4.4.6.2A), burrowing owl (MM4.4.6.4D), and Los Angeles pocket mouse (MM 4.4.6.4E).

Sensitive Plant Species

MM 4.4.6.2A provides mitigation measures for impacts to sensitive plant species:

Each Plot Plan application shall include a focused plant survey of the proposed development site prepared by a qualified biologist to identify if any of the following sensitive plants (i.e., Coulter's goldfields, smooth tarplant, Plummer's' mariposa lily, or thread-leaved brodiaea) are present. If any of the listed plants are found, they may be relocated to the 250-foot setback area outlined in the Specific Plan and discussed in Mitigation Measure 4.4.6.1A. Alternatively, at the applicant's discretion, an impact

Ms. Julia Descoteaux, Associate Planner
 World Logistics Center Project
 May 13, 2020
 Page 3 of 16

fee may be paid to the Western Riverside County Regional Conservation Authority (RCA) or other appropriate conservation organizations to offset for the loss of these species. This measure shall be implemented to the satisfaction of the Planning Official.

CDFW is concerned that City's "Planning Official" is not sufficiently qualified to review and approve a translocation plan for rare plant species. Further, thread-leaved brodiaea is a state endangered and federally threatened species and CDFW should review this proposal. To ensure that this proposal is implemented in compliance of rules and regulations related to state and/or federally listed plant species CDFW recommends that the City revise mitigation measure (MM) 4.4.6.2A and condition the measure to include the following (edits are in **bold** and ~~strikethrough~~):

MM 4.4.6.2A Each Plot Plan application shall include a focused plant survey of the proposed development site prepared by a qualified biologist to identify if any of the following sensitive plants (i.e., Coulter's goldfields, smooth tarplant, Plummer's' mariposa lily, or thread-leaved brodiaea) are present. If any of the listed plants are found, **the City will consult with the California Department of Fish and Wildlife (CDFW) and the U.S. Fish and Wildlife Service (USFWS). If translocation of the species is deemed appropriate by CDFW and/or USFWS a translocation plan shall be developed and submitted to CDFW and USFWS for review and approval** ~~they may be relocated to the 250-foot setback area outlined in the Specific Plan and discussed in Mitigation Measure 4.4.6.1A.~~ Alternatively, at the applicant's discretion, an impact fee may be paid to the Western Riverside County Regional Conservation Authority (RCA) or other appropriate conservation organizations to offset for the loss of these species. This measure shall be implemented to the satisfaction of the Planning Official.

Burrowing Owl

MM 4.4.6.4D provides mitigation measures for impacts to burrowing owl:

If active burrowing owl burrows are detected outside the breeding season (September through January), or within the breeding season but owls are not nesting or in the process of nesting, active and/or passive relocation may be conducted following consultation with the California Department of Fish and Wildlife. A relocation plan may be required by California Department of Fish and Wildlife if active and/or passive relocation is necessary. The relocation plan will outline the basic process and provides options for avoidance and mitigation. Artificial burrows - may be constructed within the buffer area south of the World Logistics Center

Ms. Julia Descoteaux, Associate Planner
 World Logistics Center Project
 May 13, 2020
 Page 4 of 16

Specific Plan. Construction activity may occur within 500 feet of the burrows at the discretion of the biological monitor in consultation with CDFW.

A relocation plan may be required by California Department of Fish and Wildlife if active or passive relocation is necessary. Artificial burrows may be constructed within appropriate burrowing owl habitat within the proposed open space/conservation area (Planning Area 30), a 74.3-acre area in the southwest portion of the Specific Plan. This area abuts the Lake Perris State Recreation Area (LPSRA) which is already in conservation. If suitable habitat is not present in Planning Area 30, owls may be relocated to the SJWA, the 250-foot buffer area or other suitable on-site or off-site areas. Construction activity may occur within 500 feet of the burrows at the discretion of the biological monitor.

CDFW previously provided comments on the City's proposal to translocate burrowing owl to the "250-foot buffer area" in a joint CDFW – US Fish and Wildlife Service (USFWS) comment letter written in response to the City's DBESP submitted for review as required by the Western Riverside MSHCP. In the joint letter (dated December 19, 2014) CDFW and the USFWS articulated to the City that the 250-foot buffer area is not appropriate as a receptor site for burrowing owl because it is insufficient in terms of area, spatial configuration, and conflicting planned use (the City has proposed the construction of detention basins, etc., within the buffer area). Burrowing owl require large open expanses of sparsely vegetated habitat to forage and nest, and the 250-foot buffer area would not provide these ecological needs. Further, because the buffer area is proposed to be planted with trees, CDFW and the USFWS also stated that the City's proposal to plant trees within the buffer area would provide perch sites for bird-eating raptors, such as red-tailed hawks, which eat burrowing owls, further reducing the appropriateness of the City's proposed mitigation approach.

MM 4.4.6.4D also includes reference to Planning Area 30. CDFW maintains similar concerns regarding the suitability of this area for burrowing owl: Planning Area 30 is insufficient in terms of area and spatial configuration. Further, based on CDFW's review of aerial photography the topography of much of Planning Area 30 is unlikely to be suitable for burrowing owl.

CDFW appreciates that the City has included an additional relocation option: CDFW's San Jacinto Wildlife Area. However, CDFW is concerned that MM 4.4.6.4D does not include specific and enforceable language to ensure that the financial burden of any proposed translocation of burrowing owl (including the translocation itself, short-term habitat management needs, as well as long-term management needs) is provided by the Project Applicant. CDFW is unable to assume this financial burden, and it is the responsibility of the Project Applicant to mitigate Project impacts.

Ms. Julia Descoteaux, Associate Planner
 World Logistics Center Project
 May 13, 2020
 Page 5 of 16

MM 4.4.6.4D identifies that CDFW would review any active and/or passive relocation plan for burrowing owl. Please note that these plans will also need to be reviewed and approved by the USFWS and the Western Riverside County Regional Conservation Authority (RCA).

To improve the specificity and enforceability of MM 4.4.6.4D and to ensure consistency with the MSHCP, CDFW recommends that the City revise mitigation measure MM 4.4.6.4D and condition the measure as following (edits are in **bold** and ~~strikethrough~~):

MM 4.4.6.4D If active burrowing owl burrows are detected outside the breeding season (September through January), or within the breeding season but owls are not nesting or in the process of nesting, active and/or passive relocation may be conducted following consultation with the California Department of Fish and Wildlife (**CDFW**), **U.S. Fish and Wildlife Service (USFWS)**, and the **Western Riverside County Regional Conservation Authority (RCA)**. A relocation plan ~~may~~ **will** be required by ~~California Department of Fish and Wildlife CDFW, the USFWS, and the RCA~~ if active and/or passive relocation is necessary. The relocation plan will outline the basic process, ~~and provides options for avoidance and mitigation,~~ **identify short- and long-term habitat management needs of the receiver site, and identify the entity responsible for all financial costs associated with the relocation plan and long-term management of the receiver site.** Artificial burrows - may be constructed within the buffer area south of the World Logistics Center Specific Plan. Construction activity may occur within 500 feet of the burrows at the discretion of the biological monitor in consultation with CDFW, **the USFWS, and RCA.**

A relocation plan ~~may~~ **will** be required by ~~California Department of Fish and Wildlife CDFW, the USFWS, and RCA~~ if active or passive relocation is necessary. Artificial burrows may be constructed within appropriate burrowing owl habitat within the proposed open space/conservation area (Planning Area 30), a 74.3-acre area in the southwest portion of the Specific Plan. This area abuts the Lake Perris State Recreation Area (LPSRA) which is already in conservation. If suitable habitat is not present in Planning Area 30, owls may be relocated **following written approval by CDFW, the USFWS, and RCA, to habitat deemed suitable by CDFW, the USFWS, and RCA (which may include the SJWA, the 250-foot buffer area or other suitable on-site or off-site areas).** Construction activity may occur within 500 feet of the burrows at the discretion of

Ms. Julia Descoteaux, Associate Planner
 World Logistics Center Project
 May 13, 2020
 Page 6 of 16

the biological monitor, **following consultation with CDFW, the USFWS, and RCA.**

Los Angeles Pocket Mouse

MM 4.4.6.4E provides mitigation measures for impacts to Los Angeles pocket mouse (LAPM):

Prior to the approval of any Plot Plans proposing the development of land including or adjacent to Drainage 9, a protocol survey for the Los Angeles Pocket Mouse (LAPM), including 100 feet upstream and downstream of the affected reach shall be prepared by a qualified biologist and submitted to the City. If the affected drainage is not occupied, the area is considered not to be occupied and development can continue without further action. If the species is found within the specific survey area, no development shall occur until an appropriate mitigation fee is paid or appropriate amount of land set aside on the project site or off site to compensate for any loss of occupied Los Angeles Pocket Mouse habitat. Alternatively, individuals may be relocated to the 250-foot setback zone along the southern boundary of the property identified in Mitigation Measure 4.4.6.1A, or other appropriate areas as determined by the United States Fish and Wildlife Service. If necessary, this measure shall also be coordinated with Mitigation Measure 4.4.6.2B regarding preparation and processing of a Determination of a Biological Equivalent or Superior Preservation report. This measure shall be implemented to the satisfaction of the City Planning Division.

MM 4.4.6.4E identifies that the City will review LAPM “protocol surveys,” and the USFWS will review any relocation plan for LAPM. CDFW is concerned that City staff are not appropriately qualified to determine if appropriate survey methodology has been employed by the Project Applicant, or review trapping results. CDFW recommends that proposed survey methodology and trapping results be reviewed and/or approved by CDFW and the USFWS. Further, any relocation plan prepared for LAPM will also need to be reviewed and approved by CDFW (in addition to the USFWS).

CDFW appreciates that MM 4.4.6.4E identifies that LAPM translocation, if deemed necessary, may occur to a site other than the 250-foot buffer area. CDFW and the USFWS previously commented that the 250-foot buffer area may not be appropriate as a receiver site because of size and configuration (it will be a narrow, relatively restricted area), and because of potential disruptions to existing small mammal populations, and predator-prey relationships. CDFW appreciates that the City has included an additional relocation option however, CDFW is concerned that MM 4.4.6.4E does not include specific and enforceable language to ensure that the financial burden of any proposed translocation of

Ms. Julia Descoteaux, Associate Planner
 World Logistics Center Project
 May 13, 2020
 Page 7 of 16

LAPM (including the translocation itself, short-term habitat management needs, as well as long-term management needs) is provided by the Project Applicant.

To improve the specificity and enforceability of MM 4.4.6.4E CDFW recommends that the City revise mitigation measure MM 4.4.6.4E and condition the measure as following (edits are in **bold** and ~~strike~~through):

MM 4.4.6.4E Prior to the approval of any Plot Plans proposing the development of land including or adjacent to Drainage 9, a protocol survey for the Los Angeles Pocket Mouse (LAPM), including 100 feet upstream and downstream of the affected reach shall be prepared by a qualified biologist and submitted to **CDFW and the USFWS for review and approval prior to submission to the City**. If the affected drainage is not occupied, the area is considered not to be occupied and development can continue without further action. If the species is found within the specific survey area, no development shall occur until an appropriate mitigation fee is paid or appropriate amount of land set aside on the project site or off site to compensate for any loss of occupied Los Angeles Pocket Mouse habitat. Alternatively, individuals may be relocated **to locations pre-approved by CDFW and the USFWS (which may include to the 250-foot setback zone along the southern boundary of the property identified in Mitigation Measure 4.4.6.1A, or other appropriate areas)** ~~as determined by the United States Fish and Wildlife Service~~. **All costs associated with the relocation, as well as short-and long-term management and monitoring of the receiver site shall be the responsibility of the Project Applicant**. If necessary, this measure shall also be coordinated with Mitigation Measure 4.4.6.2B regarding preparation and processing of a Determination of a Biologically Equivalent or Superior Preservation report. This measure shall be implemented to the satisfaction of the City Planning Division **following coordination with CDFW and the USFWS**.

Fish and Game Code section 1602

MM 4.4.6.3C conditions the Project Applicant(s) to submit to the City copies of appropriate permits/agreements for impacts to Waters of the State and Waters of the U.S. The measure identifies the “need for permits based on the results of the 2012 jurisdictional delineation.” Please note that CDFW will require that any stream mapping submitted to CDFW as a component of a Notification of Lake or Streambed Alteration be current. CDFW recommends the measure be revised to remove all reference to the “2012 jurisdictional delineation.” In addition to removing reference to out-of-date mapping, CDFW recommends that errors

Ms. Julia Descoteaux, Associate Planner
 World Logistics Center Project
 May 13, 2020
 Page 8 of 16

included in the measure be corrected. CDFW recommends that the City revise mitigation measure MM 4.4.6.3C as follows (edits are in **bold** and ~~strikethrough~~):

MM 4.4.6.3C Prior to issuance of any grading permit for any offsite improvements that support development within the World Logistics Center Specific Plan, the developer shall retain a qualified biologist to prepare a jurisdictional delineation (JD) for any drainage channels affected by construction of the offsite improvements. This jurisdictional delineation shall be submitted to the U.S. Army Corps of Engineers (USACE), **Regional Water Quality Control Board**, and California Department of Fish and Wildlife (CDFW) for review and concurrence. If the offsite improvements **are deemed by the regulatory agencies to not require regulatory permits/agreements, a written copy of this determination shall be submitted to the City** ~~will not affect any identified jurisdictional areas, no United States Army Corps of Engineers permitting is required.~~ **The Applicant shall consult with** ~~However, permitting through the~~ Regional Water Quality Control Board (RWQCB), and California Department of Fish and Wildlife (i.e., Streambed ~~Alteration~~ **Alteration** Agreement) ~~may still be required for these improvements. The applicant shall consult with~~ **and** United States Army Corps of Engineers, ~~California Department of Fish and Wildlife and Regional Water Quality Control Board~~ to establish the need for permits based on the results of the 2012 **current stream mapping jurisdictional delineation** and final design plans for each of the proposed the facilities. Consultation with the three agencies shall take place and appropriate permits obtained. Compensation for losses associated with any altered offsite drainages shall be in agreement with the permit conditions. Any landscaping associated with these offsite improvements shall use only native species to help protect biological resources residing within or traveling through these drainages per Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) Table 6.1.2. This measure shall be implemented to the satisfaction of the City Planning Division in consultation with the ~~U.S. Fish and Wildlife Service~~ **Regional Water Quality Control Board**, U.S. Army Corps of Engineers, and the California Department of Fish and Wildlife.

Wildlife Movement

The Biological Resources section (Section 4.4) of the Revised Sections of the FEIR (page 4.4-37) discusses that the Project will incorporate fencing to separate development areas from MSHCP open space areas to the south and along Gilman Springs Road. CDFW agrees that fencing is appropriate to minimize unauthorized public access, illegal trespass, and dumping. In addition, fencing

Ms. Julia Descoteaux, Associate Planner
 World Logistics Center Project
 May 13, 2020
 Page 9 of 16

along Gilman Springs Road should be designed to minimize wildlife movement and direct wildlife towards wildlife crossings. CDFW is concerned that because a mitigation measure has not been developed and included in the FEIR the City will be unable to enforce the construction of such fences as the Project is developed. To ensure enforceability, CDFW recommends that the City include a new mitigation measure in the FEIR conditioning the construction of fencing along the Project's southern and eastern boundaries, and wildlife fencing along Gilman Springs Road. CDFW recommends the inclusion of the following new mitigation measure in the FEIR:

Prior to issuance of any grading permit for Projects constructed immediately west of Gilman Springs Road (Planning Areas 6, 8, 11, 12), or north of the San Jacinto Wildlife Area (Planning Areas 10, 12) the Project Applicant shall provide for review and approval to the California Department of Fish and Wildlife and City design plans for the construction of appropriate fencing along the Project's eastern and/or southern boundary, as appropriate. The City shall also inspect fence construction prior to issuance of occupancy permits, or equivalent.

CDFW is concerned about the project's potential to restrict wildlife movement to and from the San Timoteo Badlands (Badlands) and SJWA/Mystic Lake area. As proposed, the Project will border the Badlands along portions of its northern border as well as its nearly 2-mile long eastern border at Gilman Springs Road, creating an obstruction to wildlife movement between the Badlands and open areas to the south (Mystic Lake, Lake Perris, and SJWA). The Project is located between the SJWA and the two existing culverts under State Route 60 (SR-60), and will also be located immediately west of Gilman Springs Road and the existing culverts under this road. Because the Project encompasses logistics centers that will significantly increase traffic volume, CDFW argues that the Project will have substantial effects on existing wildlife movement patterns. Species of concern include mountain lion, bobcat, badger, coyote, deer, long-tailed weasel, black-tailed jackrabbit, and desert cottontail. A fair argument can be made that the Project will increase noise, lighting, and traffic which may in turn negatively affect wildlife through direct mortality or alter movement patterns by forcing wildlife to move east or west, away from the Project. CDFW recommends that the Project install appropriate fencing along Gilman Springs Road and SR-60 to reduce wildlife mortality and direct animals to future or existing wildlife crossings.

CDFW recommends that the City condition the Project to require the installation of wildlife fencing along SR-60 and Gilman Springs Road to reduce Project-related wildlife mortality. CDFW recommends the inclusion of the following new mitigation measure in the FEIR:

Ms. Julia Descoteaux, Associate Planner
 World Logistics Center Project
 May 13, 2020
 Page 10 of 16

Prior to issuance of any grading permit for Projects constructed immediately west of Gilman Springs Road (Planning Areas 6, 8, 11, 12), or south of State Route 60 (Planning Area 6) the Project Applicant shall provide for review and approval to the California Department of Fish and Wildlife and City design plans for the construction of wildlife fencing along State Route 60 and Gilman Springs Road. The City shall inspect wildlife fence construction prior to issuance of occupancy permits, or equivalent.

Section 4.4 of the Revised Sections of the FEIR (page 4.4-61) discusses that the RCA submitted comments to the City stating that the project would likely cause an increase in truck traffic along Gilman Springs Road which “could significantly affect wildlife movement between Core H and proposed Core 3.” To mitigate these impacts the Revised Sections of the FEIR (page 4.4-61) states that it would be appropriate for the Project to contribute (financially) to the “fair share of the improvements to Gilman Springs Road, including provisions for wildlife movement or crossings.” CDFW agrees that contribution of funding for improvements to wildlife crossings along Gilman Springs Road would be appropriate, but CDFW is concerned that because a mitigation measure has not been developed and included in the FEIR the City will be unable to enforce the contribution of funds for this purpose. To ensure enforceability, CDFW recommends that the City include a new mitigation measure in the FEIR conditioning the contribution of funds to a mitigation account, to held by CDFW-approved entity, for later use for improvements to wildlife crossings along Gilman Springs Road. CDFW recommends the inclusion of the following new mitigation measure in the FEIR:

Prior to issuance of any grading permit the Project Applicant shall provide to the City 5% of total Project costs to be deposited into a mitigation account, held by a CDFW-approved entity, for later use for improvements to wildlife crossings along Gilman Springs Road.

Impacts to the San Jacinto Wildlife Area

CDFW previously provided comments on the Project’s proposal to construct buildings within 450 feet of the SJWA (refer to CDFW’s April 8, 2013, and June 11, 2015 comment letters). SJWA is an active hunting area, and hunts are regularly conducted along the SJWA’s northern boundary. Fish and Game Code Section 3004 prohibits the discharging of firearms within 150 yards (450 feet) of any building without express permission of the owner. Given that the City is proposing the construction of buildings within 450 feet of the northern property boundary of the SJWA, the City’s actions will directly constrain the public’s use of the SJWA. CDFW reiterates that unless the City increases the buffer distance between the SJWA and constructed elements of the Project to a minimum of 450 feet, the City will have effectively created restraints on hunting with the Wildlife

Ms. Julia Descoteaux, Associate Planner
 World Logistics Center Project
 May 13, 2020
 Page 11 of 16

Area. Further unless the environmental document is revised, it continues to be deficient in its analysis of impacts on public access and recreational pursuits within the SJWA.

CDFW strongly recommends that the buffer distance between the northern boundary of the SJWA and the Project be increased to a minimum of 450 feet.

Project's Consistency with Adopted HCPs/NCCPs

Projects proposed for construction within the MSHCP and the Stephens' kangaroo rat Habitat Conservation Plan (SKR HCP) are subject to payment of mitigation fees. Pages 4.4-60 and 4.4-61 discuss the required payment of these fees, however the City did not include a mitigation measure to ensure the enforceability of payment of fees. To ensure enforceability, CDFW recommends that the City include a new mitigation measure in the FEIR conditioning the payment of MSHCP and SKR HCP fees, as appropriate, prior to issuance of grading permits. CDFW recommends the inclusion of the following new mitigation measure in the FEIR:

Prior to issuance of any grading permit the Project Applicant shall pay appropriate Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP), and Stephens' kangaroo rat Habitat Conservation Plan mitigation fees.

Resource Management

MM 4.4.6.4F discusses the development of a Biological Resource Management Plan for the proposed 250-foot setback area. The measure discusses that the plan will be reviewed by the City's "Planning Official in consultation with the San Jacinto Wildlife Area Manager." CDFW is unaware that the City contacted CDFW's SJWA manager to verify that CDFW were available and able to contribute to the review of this plan, or whether this workload element could be accommodated based on CDFW's current staffing levels. CDFW appreciates that the City is requesting review of the proposed Biological Resource Management Plan, but we request that review of this document be determined by CDFW.

CDFW recommends that the City revise mitigation measure MM 4.4.6.4F as follows (edits are in **bold** and ~~strikethrough~~):

- 4.4.6.4F Prior to approval of any discretionary permits for development within Planning Areas 10 and 12, a Biological Resource Management Plan (BRMP) shall be prepared to prescribe how the 250-foot setback area outlined in Mitigation Measure 4.4.6.1A will be developed and maintained **in perpetuity**. This plan will identify frequent and infrequent vegetation management requirements (i.e.,

Ms. Julia Descoteaux, Associate Planner
 World Logistics Center Project
 May 13, 2020
 Page 12 of 16

removal of invasive plants) and the planting and maintaining trees to provide roosting and nesting opportunities for raptors and other birds. **The Biological Resource Management Plan will include an estimate of short-and long-term management costs, a discussion of how funds will be made available in perpetuity, and entities responsible for contribution of funds to support the Biological Resource Management Plan.** The Biological Resource Management Plan will also describe how relocation of listed or sensitive species will occur from other locations as outlined in Mitigation Measures 4.4.6.2A, 4.4.6.4D, and 4.4.6.4E.

The Biological Resource Management Plan, **including the short-and long-term funding strategy** shall be reviewed and approved by the Planning Official in consultation with **California Department of Fish and Wildlife** ~~San Jacinto Wildlife Area Manager~~. The Biological Resource Management Plan shall cover all the land within the 250-foot setback zone within Planning Areas 10 and 12. Implementation of the plan shall be supervised by a qualified biologist, to the satisfaction of the City Planning Division.

Fuel Management

MM 4.4.6.4J discusses the preparation of a Fuel Management Plan for those Planning Areas adjacent to the south and east boundary of the Project and MSHCP lands. The measure identifies that the plan shall demonstrate that adjacent MSHCP lands are adequately protected from expected fire risks. CDFW recommends that MM 4.4.6.4J be revised to also demonstrate that the Fuel Management Plan adequately protect CDFW's SJWA lands. CDFW recommends that the City revise mitigation measure MM 4.4.6.4J as follows (edits are in **bold** and ~~strikethrough~~):

- 4.4.6.4J A Fuel Management Plan shall be prepared on a project-by-project basis for those Planning Areas adjacent to the south and east boundary of the World Logistics Center Specific Plan adjacent to Western Riverside County Multiple Species Habitat Conservation Plan Conservation Areas **and/or San Jacinto Wildlife Area (SJWA) lands**. The Fuel Management Plan shall be prepared by the project proponent and submitted for approval to the prior to plot plan approval for those projects on the southern and eastern Western Riverside County Multiple Species Habitat Conservation Plan **and/or SJWA** boundary. Per the Western Riverside County Multiple Species Habitat Conservation Plan guidelines, the Fuel Management Plan shall include the following:

Ms. Julia Descoteaux, Associate Planner
 World Logistics Center Project
 May 13, 2020
 Page 13 of 16

- A plant palette of adequate plant species that may be planted within the Fuel Management Area, which will be approved by a biologist familiar with the plant requirements of the area.
- A list of non-native invasive plants that are prohibited from installation.
- Maintenance activities and a maintenance schedule.

Fuel modification zones shall be mapped and include an impact assessment as required under California Environmental Quality Act guidelines for a project-level analysis. The plan shall demonstrate that the adjacent Western Riverside County Multiple Species Habitat Conservation Plan Areas **and SJWA lands** are adequately protected from expected fire risks.

Minor Errors

MM4.4.6.2B and 4.4.6.3B include reference to the “Resource Conservation Agency (RCA).” CDFW assumes that the City is referring to the Western Riverside County **Regional Conservation Authority**. CDFW recommends that the City review the aforementioned mitigation measures and correct all references to the Regional Conservation Authority.

ENVIRONMENTAL DATA

CEQA requires that information developed in environmental impact reports and negative declarations be incorporated into a database which may be used to make subsequent or supplemental environmental determinations. (Pub. Resources Code, § 21003, subd. (e).) Accordingly, please report any special status species and natural communities detected during Project surveys to the California Natural Diversity Database (CNDDDB). Information can be submitted online or via completion of the CNDDDB field survey form at the following link: <https://wildlife.ca.gov/Data/CNDDDB/Submitting-Data>. The completed form can be mailed electronically to CNDDDB at the following email address: CNDDDB@wildlife.ca.gov. The types of information reported to CNDDDB can be found at the following link: <https://wildlife.ca.gov/Data/CNDDDB/Plants-and-Animals>.

FILING FEES

The Project, as proposed, would have an impact on fish and/or wildlife, and assessment of filing fees is necessary. Fees are payable upon filing of the Notice of Determination by the Lead Agency and serve to help defray the cost of environmental review by CDFW. Payment of the fee is required in order for the underlying project approval to be operative, vested, and final. (Cal. Code Regs, tit. 14, § 753.5; Fish & G. Code, § 711.4; Pub. Resources Code, § 21089.)

CDFW CONCLUSIONS AND FURTHER COORDINATION

CDFW appreciates the opportunity to comment on the RFEIR for the City of Moreno Valley's World Logistics Center Project (SCH No. 2012021045) and recommends that the City address the CDFW's comments and concerns prior to adoption of the RFEIR. Pursuant to CEQA Guidelines section 15097(f) CDFW has prepared a draft mitigation monitoring and reporting program (MMRP) for the new mitigation measures identified in this letter. The draft MMRP is enclosed at the end of this letter.

If you should have any questions pertaining to the comments provided in this letter, and to schedule a meeting, please contact Joanna Gibson at (909) 987-7449 or at Joanna.Gibson@wildlife.ca.gov.

Sincerely,

DocuSigned by:

Honorable Mayor and Members of the City Council
 City of Moreno Valley
 14177 Frederick St.
 Moreno Valley, CA 92552
planningemail@moval.org

Re: Appeal of Planning Commission Approval of Tentative Parcel Map and Certification of Final Revised Environmental Impact Report for World Logistics Center Project (Case Nos. PEN18-0050 and PEN20-0017)

Dear Honorable Mayor and Members of the City Council:

On behalf of the Center for Biological Diversity, Center for Community Action & Environmental Justice, Coalition for Clean Air, San Bernardino Valley Audubon Society, and Sierra Club, we write to appeal two decisions of the City of Moreno Valley Planning Commission (“Planning Commission”) related to the World Logistics Center Project (“WLC” or “Project”): (1) Resolution No. 2020-20 and associated exhibits (certifying a Revised Final Environmental Impact Report and adopting a Mitigation Monitoring and Reporting Program and Statement of Overriding Considerations for the Project); and (2) Resolution No. 2020-21 and associated exhibits (approving Tentative Parcel Map 37457 and associated conditions of approval). These items went to the Planning Commission on the evening of Thursday, May 14, 2020, but were ultimately approved on May 15, 2020. The Planning Commission approved the two items despite significant public opposition and documented non-compliance with the requirements of the California Environmental Quality Act (“CEQA”).

This letter serves as the formal appeal of the Planning Commission’s approvals pursuant to Chapter 9.02, Chapter 9.14, and/or other applicable provisions of the Moreno Valley Municipal Code. For the reasons set forth below, the approvals fail to meet the requirements of CEQA and other applicable law. Specifically, the Revised Final Environmental Impact Report (“Revised FEIR”) does not comply with CEQA. As a result, the City cannot make the findings required for approval of a tentative parcel map pursuant to Chapter 9.14 of the municipal code. In addition, the above-referenced organizations and others have previously described the legal failings of the Planning Commission’s determinations in written and oral comments submitted prior to or at the

Attachment: Appeal of PEN18-0050 Revised Final EIR (PAA20-0002) A. Martinez (4074 : World Logistics Center)

WLC Appeal
 May 26, 2020
 Page 2

Planning Commission's public hearing on the two approvals. In particular, Appellants specifically incorporate by reference the following letters filed in response to the 2019 Revised Final EIR:

- Letter from Ileene Anderson to Planning Commissioners (May 13, 2020) (Exhibit 1);
- Letter from Scott Wilson to Julia Descoteaux (May 13, 2020) (Exhibit 2);
- Letter from Heather Leslie and Richard Corey to Julia Descoteaux (May 14, 2020) (Exhibit 3);
- Letter from Adrian Martinez to Julia Descoteaux (May 14, 2020) (Exhibit 4);
- Letter from Tom Thornsley to Julia Descoteaux (May 14, 2020) (Exhibit 5);
- Karen Jakpor letter regarding particulates increasing COVID 19 infections with cited sources; and
- Lindsay Robinson letter raising concerns and conflicts of interest for PC members and new road improvements.

These comments and their attachments also set forth reasons for these appeals and are therefore incorporated by reference in their entirety. In addition, we seek to bring the following studies to the City Council's attention:

- Wu, Xiao, et al., Exposure to air pollution and COVID-19 mortality in the United States: A nationwide cross-sectional study, Department of Biostatistics, Harvard (Exhibit 6); and
- Andrée, Pieter Johannes, Incidence of COVID-19 and connections with air pollution exposure, Policy Research Working Paper 9221, April 2020, World Bank Group (Exhibit 7).

These studies provide new evidence of the harms of COVID-19 to communities exposed to elevated levels of air pollution.

Accordingly, we respectfully request that the City Council reverse, reject and/or overrule the Planning Commission's approvals and remand both determinations back to the Planning Commission with directions to undertake a lawful environmental review.

I. BACKGROUND OF THE PROJECT

The immense proposed WLC would harm the region's environment. The Project would occupy 40.6 million square feet, dramatically changing the City and committing a significant portion of its total land area to warehouses, distribution centers, and associated facilities. The Project has a host of impacts ranging from degradation of biological resources to impairing air quality to localized impacts that will harm adjacent community members.

Moreover, the Project's impacts would reach far beyond the City. The Project could add more than 14,000 new diesel truck trips per day to freeways linking the City to seaports more than 80 miles away in Los Angeles and Long Beach. In all, the Project will generate thousands of daily vehicle trips, according to the final EIR's traffic analysis.

1. The Project Approval Process.

Highland Fairview filed its Project application with the City in April 2012. On February 26, 2012, the City issued a Notice of Preparation of an EIR. Subsequently, on February 5, 2013, the City released a draft EIR, which found numerous "significant" and "unavoidable" environmental impacts, for a 60-day public comment period. Over a hundred residents, environmental groups, and government agencies submitted comments. In May 2015, the City released the final EIR, containing substantial changes from the draft EIR.

On August 19, 2015, after the City's Planning Commission approved Highland Fairview's proposal, the City Council adopted *Resolution No. 2015-56* certifying the final EIR, adopting a statement of overriding considerations without employing the many feasible mitigation measures put forth by agency and other commenters, and approving a mitigation monitoring program. The City also issued other approvals in reliance on the EIR, including: (1) *Resolution No. 2015-57*, approving general plan amendments; (2) *Resolution No. 2015-58*, approving a tentative parcel map for financing purposes; (3) *Resolution No. 2015-59*, requesting that Riverside County Local Agency Formation Commission ("LAFCO") begin proceedings to allow the City to annex an 85-acre site within the Project area; and (4) *Resolution No. CSD 2015-29*, requiring the City's Community Services District to initiate LAFCO proceedings for the expansion of the District's boundaries to include the annexed 85-acre site. Subsequently, on August 25, 2015, the City Council passed *Ordinance No. 900*, adopting the WLC Specific Plan and other zoning modifications, and *Ordinance No. 901*, approving a development agreement between the City and Highland Fairview.

The City filed a Notice of Determination on August 26, 2015, summarizing the approvals and environmental review. Subsequently, in September 2015, community, labor, environmental, and governmental entities filed seven lawsuits challenging the City's failure to comply with CEQA. To date, the City and Highland Fairview have settled three of the lawsuits, and one case has been dismissed.

On June 7, 2018, the San Bernardino Superior Court entered judgement in favor of the groups challenging the original CEQA document based on an opinion entered on February 8, 2018. On June 14, 2018, the Superior Court issued a Peremptory Writ of Mandate. An appeal and a cross appeal have been filed in this case, but no final determination of the issues have been made.

A. Highland Fairview’s Ballot Initiatives and Related Litigation.

In response to the many CEQA lawsuits, Highland Fairview subsidized an effort to secure enough petition signatures to qualify three initiative measures for the ballot. (*Center for Community Action & Environmental Justice v. City of Moreno Valley* (2018) 26 Cal.App.5th 689, 694-97 (hereafter *Center for Community Action & Environmental Justice*.) By repealing and reapproving some of the City’s August 25, 2015, approvals through the initiative process, the measures were intended to reapprove the Project without any CEQA review. (See *Tuolumne Jobs & Small Business Alliance v. Superior Court* (2014) 59 Cal.4th 1029, 1036-39 [CEQA review not required prior to legislative body’s decision to adopt initiative measure or submit it to voters].)

First, the Land Use Initiative (also known as the “Moreno Valley Jobs Initiative”) repealed the Project’s land use entitlements, Ordinance 900, and Resolutions 2015-57 and 2015-59. It then re-amended the general plan and zoning map, re-repealed the Moreno Highlands Specific Plan, and re-adopted the WLC Specific Plan, and included the mitigation-monitoring program as “conditions of development.” Second, the Development Agreement Initiative (also called the “Moreno Valley Workforce Training Initiative”) repealed the Project’s development agreement, and then adopted a “new” development agreement substantially similar to the original agreement adopted by Ordinance 901. And third, the WLC Land Benefit Initiative repealed Resolution No. CSD 2015-29, which called for the expansion of the Community Service District boundary to accommodate the Project.

On November 16, 2015, the City Clerk determined that each measure had sufficient signatures. (*Center for Community Action & Environmental Justice, supra*, 26 Cal.App.5th at 696.) On November 24, 2015, the City Council voted to adopt the three initiatives outright instead of allowing a vote by the electorate. (*Ibid.*; Elec. Code, § 9215.)

2. Land Use and Development Agreement Initiative Litigation.

In response, several petitioners in the pending CEQA actions filed lawsuits challenging the validity of the Land Use and Development Agreement initiatives. (*Center for Community Action & Environmental Justice, supra*, 26 Cal.App.5th at 694-96.) In September 2016, the Superior Court entered judgment in favor of the City and Highland Fairview. Appellants Center for Community Action and Environmental Justice and other organizations appealed the Superior Court’s decision on the Development Agreement Initiative on the ground that a development agreement cannot be adopted by initiative.

On August 23, 2018, the Court of Appeals ruled in favor of Appellants in a published opinion. The City and the developer filed a petition for review with the Supreme Court, which denied review. (*Center for Community Action & Environmental Justice v. City of Moreno Valley*, review den. Nov. 28, 2018, S251674.) The Development Agreement Initiative provided that in the event of a successful legal

challenge, the original Ordinance No. 901 approving a development agreement between the City and Highland Fairview would be reinstated.

The initiatives did not repeal Resolution No. 2015-56, which among other approvals certified the final EIR. Nor did the initiatives repeal Resolution No. 2015-58, which approved a tentative parcel map for financing purposes. These approvals, along with the revived Ordinance No. 901, remain subject to CEQA notwithstanding the initiative measures.

3. The Subsequent EIRs.

In July of 2018, the City released a revised final EIR for the Project. In December of 2019, the City released a new revised final EIR for the Project. On May 14, 2020, the Planning Commission decided several items related to this project, including certification of the Revised Final EIR. The Planning Commission made a decision on the Revised FEIR on May 15, 2020.

The following points outline the major deficiencies regarding the Board's environmental determination:

II. The Revised FEIR Fails to Adequately Disclose, Analyze the Significance of, and Provide Mitigation for the Project's Significant Climate Impacts.

The City's review of this Project's climate and greenhouse gas ("GHG") emissions impacts has always been fatally flawed, as outlined in numerous prior comment letters, which are hereby incorporated by reference. The sufficiency of that analysis is now pending before the California Court of Appeal. Now, in a revised final EIR released only days before the Planning Commission once again considers Project-related approvals, the City and developer have proposed an entirely new strategy for analyzing and mitigating GHG emissions. The new strategy, like the old, fails to satisfy CEQA's requirements.

a. Legal Standards

The City's determinations regarding the significance of greenhouse gas ("GHG") emissions and the effectiveness of mitigation must be based on a correct interpretation of the law. (See, e.g., *City of San Diego v. Board of Trustees of California State University* (2015) 61 Cal.4th 945, 956 [agency's use of erroneous legal standard constitutes a failure to proceed in a manner required by law].) Moreover, because the Revised FEIR continues

to use a quantitative threshold as the basis for its significance determination,¹ there must be specific, quantitative evidence to support a conclusion that mitigation measure (“MM”) 4.7.7.1 will actually reduce Project emissions sufficiently to achieve compliance with that threshold. (See *Center for Biological Diversity v. California Department of Fish & Wildlife* (2015) 62 Cal.4th 204, 227-28.) And even to the extent the Revised FEIR is still relying on the prior threshold of 10,000 metric tons CO₂-equivalent (“MM CO₂e”) per year, the same quantitative evidentiary standard controls.

CEQA establishes strict standards for mitigation. “Mitigation measures must be fully enforceable through permit conditions, agreements, or other legally binding instruments.” CEQA Guidelines § 15126.4(a)(2). Development of specific mitigation measures may be deferred only if the agency makes an enforceable commitment to mitigation and adopts specific performance standards that measures must meet. (CEQA Guidelines § 15126.4(a)(1)(B); *King and Gardiner Farms, LLC v. County of Kern* (2020) 45 Cal.App.5th 814, 857-58.)

Proposals for the use of offsets or carbon credits as CEQA mitigation must be evaluated in light of other state statutes addressing these instruments. When it adopted Assembly Bill 32 (“AB 32”) in 2006, the Legislature established standards for greenhouse gas offsets used in any statewide Cap-and-Trade system: (1) they must be “real, permanent, quantifiable, verifiable,” and “enforceable” by the California Air Resources Board (“CARB”); and (2) they must be “in addition to any greenhouse gas emission reduction otherwise required by law or regulation, and any other greenhouse gas emission reduction that otherwise would occur.” (Health & Safety Code, § 38562(d)(1), (2).) CARB adopted regulations applying these standards to carbon credits issued by private “registries”—essentially carbon market brokers—who wish to sell credits for use within the Cap-and-Trade system. (See Cal. Code Regs., tit. 17, §§ 95970(a), 95971, 95972.)

Evaluating compliance with these standards requires substantial expertise and rigorous analysis. CARB follows a detailed regulatory process in an effort to establish that offset “protocols”² intended for Cap-and-Trade compliance meet statutory and

¹ The EIR contains two independent thresholds of significance. (See Draft Recirculated Revised Sections of the Final Environmental Impact Report at 4.7-18.) Exceedance of either threshold would result in significant climate impacts. Accordingly, the City and developer may not dismiss fatal flaws in the EIR’s analysis of one threshold by attempting after the fact to rely solely on the other.

² “Protocols” are, in effect, the rules offset projects must follow. CARB defines an “offset protocol” as “a documented set of procedures and requirements to quantify ongoing GHG reductions or GHG removal enhancements achieved by an offset project and calculate the project baseline. Offset protocols specify relevant data collection and monitoring procedures, emission factors, and conservatively account for uncertainty and activity-shifting and market-shifting leakage risks associated with an offset project.” (Cal. Code Regs., tit. 17, § 95802.)

regulatory requirements. (See CARB, *California Air Resources Board's Process for the Review and Approval of Compliance Offset Protocols in Support of the Cap and Trade Regulation* (May 2013), at <https://ww3.arb.ca.gov/cc/capandtrade/compliance-offset-protocol-process.pdf> (visited May 10, 2020); attached as Exhibit A.) Offset credits must represent greenhouse gas reductions that are “permanent” (i.e., will last at least 100 years), “conservatively quantified to ensure that only real reductions are credited,” independently verifiable, and enforceable through “clear monitoring and measurement requirements that can be ... enforced by ARB.” (*Id.*, p. 4.) Offsets also must be “additional, or beyond any reduction required through regulation or action that would have otherwise occurred in a conservative business-as-usual scenario”; this would exclude any “project type that includes technology or GHG abatement practices that are already widely used.” (*Ibid.*; see also *id.*, pp. 7-8.)

b. Mitigation Measure 4.7.7.1 Fails to Satisfy CEQA’s Requirements

MM 4.7.7.1 falls far short of CEQA’s standards for adequate mitigation. Any finding that the Project’s climate impacts would be less than significant based on implementation of MM 4.7.7.1 would lack both evidentiary and legal support.

i. Mitigation Measure 4.7.7.1 Cannot Support a Conclusion that the Project’s GHG Emissions Will Be Less Than Significant.

MM 4.7.7.1 proposes that the Project’s massive GHG emissions be mitigated through “proof” of either “offsets” or “carbon credits.” (Revised FEIR 1a at 755-56.) As a threshold matter, the difference between “offsets” and “carbon credits” is not explained. “Offsets” appear to be purported GHG reductions from projects *other* than those listed by a registry or conducted pursuant to any established protocol or other recognized mechanism for reducing emissions. Yet, MM 4.7.7.1 provides no standards for the City’s Planning Official to use in determining whether such “offsets” are “real, permanent, additional, quantifiable, verifiable, and enforceable by an appropriate agency” and surplus or “additional.” These determinations require rigorous, transparent review and substantial expertise, as reflected in CARB’s Cap-and-Trade regulations and protocol review process. There is no evidence that “the City’s Planning Official” has the expertise or capacity to ensure compliance with or enforcement of these standards. Nor does MM 4.7.7.1 provide any performance standards to guide the Planning Official’s determinations. It also appears that the Planning Official would reach his or her determinations without any public or expert review—in short, without any transparency or documentation whatsoever. Finally, to the extent MM 4.7.7.1 would apply similar criteria to “offsets” and “carbon credits,” it cannot ensure compliance with those criteria for the reasons discussed below. As a result, MM 4.7.7.1’s reliance on “offsets” is vague, unenforceable, ineffective, improperly deferred, and inadequate under CEQA.

The “carbon credits” provisions of MM 4.7.7.1 similarly are unsupported by either law or evidence.

First, there is no evidence MM 4.7.7.1 will result in effective mitigation. Although MM 4.7.7.1 lists the basic criteria required under Health and Safety Code section 38562(d)(1) and (2), it requires the City to “conclusively presume[]” that these criteria are satisfied by any offset credit purchased from “a carbon registry approved by the California Air Resources Board.” (Revised FEIR 1a at 756 [listing without limitation “Climate Action Reserve, American Carbon Registry, Verra [formerly Verified Carbon Standard] or GHG Reduction Exchange (GHG RX)”].) The City cannot simply presume that every carbon credit purchased from one of these registries will meet the referenced criteria. On the contrary, to support such a conclusion, the City would need to identify substantial evidence showing that each and every credit generated under each and every protocol used by each and every registry “approved” by CARB, now or in the future, would meet these criteria. No such evidence exists. Indeed, MM 4.7.7.1’s reliance on a conclusive presumption is a tacit concession that no such evidence exists.

Tellingly, MM 4.7.7.1 and CARB take complete opposite approaches to review of voluntary market carbon credits marketed by private registries. CARB does not simply presume all credits issued by specified registries are adequate, as MM 4.7.7.1 would require the City to do. Nor does CARB take registries at their word that all of their protocols meet state requirements. Rather, CARB independently evaluates each protocol through a full regulatory process in order to determine whether it complies with state standards. (See generally 17 Cal. Code Regs. §§ 95970-95972; see also Exhibit A.) Using these procedures, CARB has approved only six protocols for use in the Cap-and-Trade system over the last 10 years. (CARB, Compliance Offset Program, at <https://ww3.arb.ca.gov/cc/capandtrade/offsets/offsets.htm> (visited May 8, 2020).) And, as discussed below, CARB’s approved protocols remain beset by serious questions as to their adequacy and efficacy despite this process. MM 4.7.7.1, on the other hand, completely abandons any pretense of review or oversight. It would *require* the City to accept credits generated under any protocol listed by any registry, without any review whatsoever of whether those credits or the protocols they were generated under satisfy the measure’s stated criteria, and without any ability even to question whether the credit is adequate.

Second, CARB “approval” of a registry does not establish anything about the quality of carbon credits sold by that registry on the voluntary market. The reference to CARB approval in MM 4.7.7.1 is therefore deeply misleading.³ The fact that a registry is “approved by CARB” does not establish that voluntary market carbon credits sold by that

³ Notably, despite MM 4.7.7.1’s suggestion to the contrary, the “GHG RX” registry has *not* been approved by CARB to list Cap-and-Trade compliance offsets. (California Air Resources Board, Offset Project Registries, at <https://ww3.arb.ca.gov/cc/capandtrade/offsets/registries/registries.htm> (visited May 8, 2020), attached as Exhibit M.) The “GHG Rx” program was developed by the California Air Pollution Control Officers Association, but it currently lists no available projects or credits available for purchase, and appears for all practical purposes to be defunct. (See CAPCOA Greenhouse Gas Reduction Exchange (GHG Rx), at www.ghgrx.org (visited May 8, 2020); attached as Exhibit N.)

registry satisfy the criteria listed in MM 4.7.7.1. CARB approval of a registry to list Cap-and-Trade-compliant credits does not entail CARB review or approval of other protocols used or credits listed by that registry; CARB’s procedures for approving compliance protocols and authorizing registries to list credits generated under those protocols are entirely separate. (Compare 17 Cal. Code Regs. §§ 95970-95972 [CARB compliance protocol approval process] with *id.*, § 95986 [establishing conflict of interest, insurance, expertise, and other business requirements for registries that list Cap-and-Trade compliance credits].) At best, MM 4.7.7.1’s reference to “approved” registries reflects a misinterpretation of CARB’s regulations and their application (or lack thereof) to the quality of offsets traded on the voluntary market; at worst, it reflects an intentional effort to mislead decision-makers and the public. Either way, the measure’s reliance on CARB “approval” is legally erroneous. As a result, a registry’s “CARB-approved” status cannot support any conclusion regarding the effectiveness of MM 4.7.7.1, the ability of registry credits to satisfy the measure’s purported criteria, or the significance of the Project’s impacts after mitigation.

Third, although each private registry may use a wide range of protocols or methodologies in determining which carbon credits to list for sale, the City cannot simply presume that compliance with those protocols ensures compliance with the criteria that purportedly govern MM 4.7.7.1. All GHG offsets are inherently uncertain because reductions embodied in offset credits must be compared against what would have happened without the offset project—a counterfactual scenario that cannot be tested because it will never happen. (See Haya et al. 2016, attached as Exhibit B.) Studies have shown that even the Cap-and-Trade compliance protocols adopted through CARB’s regulatory process do not result in one-for-one reductions of GHG emissions. (Haya 2019, attached as Exhibit C; Anderson and Perkins 2017, attached as Exhibit D.) CARB’s compliance protocols are largely based on Climate Action Reserve protocols, which suffer from the same deficiencies. Moreover, American Carbon Standard and Verra both list projects using United Nations Clean Development Mechanism (“CDM”) methodologies.⁴ Scientists and academic experts have long criticized CDM offset projects for their lack of additionality and other flaws. (See, e.g., Aldy and Stavins 2012, attached as Exhibit E; Cames et al. 2016, attached as Exhibit F; Haya 2009, attached as Exhibit G; He and Morse 2013, attached as Exhibit H; Wara 2008, attached as Exhibit I; Zhang and Wang 2011, attached as Exhibit J.) Carbon markets can also create perverse incentives that undermine the environmental integrity and additionality of offsets. (Schneider & Kollmuss 2015; attached as Exhibit K.)

⁴ See American Carbon Registry, Carbon Accounting, at <https://americancarbonregistry.org/carbon-accounting/old/carbon-accounting> (visited May 8, 2020) (generally accepting CDM methodologies with some additional review); Verra, Verified Carbon Standard Methodologies, at <https://verra.org/methodologies/> (visited May 8, 2020) (accepting “any methodology developed under the [CDM] ... for projects and programs registering with VCS).

ii. MM 4.7.7.1 Improperly Defers Formulation of Mitigation.

Because MM 4.7.7.1 defers the identification of specific measures to offset the Project's GHG emissions (whether those measures are denominated "offsets" or "carbon credits"), it must meet CEQA's requirements for deferred mitigation. It fails to do so. MM 4.7.7.1 lacks specific performance standards "the mitigation *will* achieve." (CEQA Guidelines § 15126.4(a)(1)(B).) The measure's list of basic criteria offsets and credits must satisfy does not suffice, because the measure does not establish any performance standards governing how compliance with those criteria will be measured. Performance standards must be specific, not so vague as to grant officials unfettered discretion as to whether effective mitigation will be implemented at all. See *King and Gardiner Farms*, 45 Cal.App.5th at 857-58. As discussed above, there is no evidence the voluntary market registries' processes are designed to ensure carbon credits comply with these criteria, and the City cannot wish this lack of evidence away by "presuming" otherwise. Nor is there any evidence the City's Planning Official can credibly implement these criteria in the absence of any performance standards, guidance, or relevant expertise in evaluating offset projects or carbon credit purchases. MM 4.7.7.1 simply requires the City to presume that whatever a developer submits is adequate. That is not a performance standard. Nor is it even an adequate commitment to ensure mitigation is implemented. MM 4.7.7.1 is improperly deferred.

iii. MM 4.7.7.1 Improperly Defers Implementation of Mitigation.

Implementation of mitigation under MM 4.7.7.1 is also improperly deferred until after emissions occur. Under CEQA, mitigation measures must be in place before an impact occurs; unmitigated impacts are not permitted before mitigation is implemented. *King and Gardiner Farms, LLC v. County of Kern* (2020) 45 Cal.App.5th 814, 860. Rather, "[o]nce the project reaches the point where activity will have a significant adverse effect on the environment, the mitigation measures must be in place." *POET, LLC v. State Air Resources Bd.* (2013) 218 Cal.App.4th 681, 738. Accordingly, there must be substantial evidence that GHG reductions embodied in offsets or carbon credits have actually occurred prior to any GHG-emitting activity. MM 4.7.7.1 violates this requirement by allowing a developer to provide offsets or carbon credits as a condition of issuance of a certificate of occupancy. (Revised FEIR 1a at 756). However, a certificate of occupancy cannot be issued until after grading and construction are complete and the buildings are inspected. (See generally 2019 California Building Code, tit. 24, Part 2, § 111.) By that time, all construction-related emissions will have occurred *before* mitigation is in place—a clear violation of CEQA's prohibition against deferred implementation. Moreover, some carbon credit registries (including Climate Action Reserve) are now marketing carbon credits based on "forecasted" emissions reductions that have not yet occurred. Reliance on such credits—which MM 4.7.7.1 does nothing to restrict—also would violate CEQA's requirement that mitigation be in place before impacts occur.

iv. MM 4.7.7.1 Is Not Adequately Enforceable.

MM 4.7.7.1 improperly eliminates any role for the City in enforcing the effectiveness of mitigation. At best, MM 4.7.7.1 relies entirely on enforcement by carbon credit registries, without identifying any evidence as to how or whether enforcement might occur, and how or whether City enforcement could serve as a backstop in the event registry enforcement fails. As a result, credits under MM 4.7.7.1 are not “enforceable by an appropriate agency” as MM 4.7.7.1 purports to require. The term “agency” as used in CEQA means a *public* agency, not a third party who may list offset credits for sale. (See, e.g., Pub. Resources Code §§ 21001.1, 21004, 21062, 21063, 21065, 21069, 21070.) Public agencies are ultimately responsible under CEQA for the efficacy and enforcement of mitigation measures. Public agencies must make findings regarding the significance of impacts and the incorporation of feasible mitigation measures (*id.*, § 21081), and must adopt mitigation monitoring and reporting plans that ensure implementation and enforcement of mitigation (*id.*, § 21081.6). The City cannot delegate its basic legal responsibilities under CEQA to developers, offset program operators, registries, or other third parties.

Nor can MM 4.7.7.1 be deemed enforceable by virtue of any third-party agreements that might govern the registries’ issuance of carbon credits. Under MM 4.7.7.1, it does not appear the City would even be aware of, much less be able to monitor or enforce, any agreement between a carbon credit project developer and the registry listing the credits. And even if any such agreement were capable of being enforced by the registry (for example, where an offset project violated the agreement and credits issued by that project were subsequently invalidated), MM 4.7.7.1 contains no mechanism that would require the developer to provide additional credits or take any other action. As the California Attorney General pointed out in a recent amicus brief addressing a substantively similar mitigation measure proposed by the County of San Diego, such measures “lack any adequate criteria to ensure enforceability of the offsets purchased....” (Amicus Brief of the California Attorney General in Support of Petitioners and Respondents, *Sierra Club, et al. v. County of San Diego*, Cal. Ct. App., Fourth Dist., Div. 1, Case No. D075478 (filed Oct. 29, 2019), attached as Exhibit L.) MM 4.7.7.1 improperly abdicates the City’s basic enforcement responsibility.

v. MM 4.7.7.1 Appears to Arbitrarily Limit Mitigation Obligations to 30 Years.

Although MM 4.7.7.1 is not entirely clear on this point, it appears that the developer’s mitigation obligations may be limited to “construction and 30-years operation [*sic*] of all Project facilities.” (Revised FEIR 1a at 756 [citing Tables 4.7-8 and 4.7-16].) Yet nothing in the Revised FEIR appears to limit the Project’s operations to a 30 years following buildout. Accordingly, the Revised FEIR’s conclusion that MM 4.7.7.1 will reduce Project emissions to “net zero” is unsupported. Moreover, as the California Attorney General pointed out in its *Sierra Club v. County of San Diego* amicus brief, developments like the Project that increase VMT result in “structural” GHG emissions that likely will continue well beyond 2050, jeopardizing the state’s ability to

meet its long-term emissions reduction goals.⁵ (See Exhibit L at 22-23.) Mitigation obligations must continue throughout the life of the project.

vi. The Revised FEIR Fails to Address Potentially Significant Impacts of Mitigation.

The Revised FEIR adds an entirely new mitigation strategy, but fails to address any of the environmental impacts of that strategy. CEQA requires analysis of potentially significant impacts that could occur from implementation of mitigation measures. (CEQA Guidelines § 15126.4(a)(1)(D).) Two offset project types generating large shares of offsets on the voluntary offset market globally can have significant environmental and social impacts. Large hydropower projects often impact river water quality and river ecosystems (Haya & Parekh 2011; attached as Exhibit O). Numerous articles have documented the impact that avoided deforestation offset projects have had by displacing forest communities or barring forest communities from their traditional use of the forest. (See, e.g. Kansanga & Luginaah 2019, attached as Exhibit P; Beymer-Farris & Bassett 2012, attached as Exhibit Q.) Researchers also have identified severe adverse environmental and social effects from international forest carbon projects. (See, e.g., Cavanagh & Benjaminsen 2014, attached as Exhibit R.) In the United States and around the world, solar and wind energy projects, livestock digesters, and solid waste to energy projects—all of which are eligible carbon offset projects under various registry protocols—can damage wildlife habitat and increase air pollution. The Revised FEIR’s complete omission of any analysis of these readily foreseeable environmental impacts is legal error and also deprives the Revised FEIR of any evidentiary support.

c. The Revised FEIR Must Be Recirculated for Full Public Review and Comment.

The Revised FEIR contains significant new information and must be recirculated for public review and comment before being considered by the City. (CEQA Guidelines § 15088.5.) The Revised FEIR reflects a fundamental change in how climate impacts are disclosed, analyzed, and mitigated. Prior to release of the Revised FEIR, environmental review for this Project assumed that all GHG emissions with some tenuous connection to the state’s Cap-and-Trade system (what the Revised FEIR still misleadingly calls “capped” emissions) could be dismissed as less than significant. Now, with the California Court of Appeal poised to rule on the correctness of this argument, the City and the developer have switched strategies entirely, substituting a “net zero” analysis for the EIR’s previous “capped emissions” analysis.

Recirculation is required here for at least two reasons. First, the Revised FEIR’s new analysis, however conditional, shows that prior versions of the EIR were fundamentally inadequate. By including a brand new mitigation strategy in the Revised FEIR only a few days before the Planning Commission hearing, the City has thwarted

⁵ This aspect of the Project also deprives the FEIR’s conclusions under the second threshold of significance for climate impacts (interference with policies or plans) of support.

meaningful public comment on significant new information raising complex new issues. Recirculation is required on this basis alone. Second, the Revised FEIR's new analysis reveals that impacts previously dismissed as insignificant before mitigation are, in fact, significant. Table 4.7-5 as it appeared in the Draft Recirculated Revised Sections of the Final Environmental Impact Report measured only "Total Uncapped" Project emissions in applying the 10,000 MT CO₂e/year significance threshold. (DRRSFEIR at 4.7-27 to 4.7-28.) The table thus concluded that emissions for 2020 through 2023 would be less than significant without mitigation, even though "Total Capped" emissions exceeded 10,000 MT CO₂e for each year. (*Ibid.*) The Revised FEIR, in contrast, at least conditionally considers all Project emissions—both "capped" and "uncapped"—in applying the 10,000 MT CO₂e/year threshold. By this measure, Project emissions for 2020 through 2023 would exceed the 10,000 MT CO₂e threshold in each year, and thus would be significant before mitigation. The Revised FEIR may not dismiss this impact by concluding that MM 4.7.7.1 will prevent any significant impact after mitigation; the significance of impacts must be disclosed and analyzed prior to development and incorporation of mitigation measures, not after, avoidance (See *Lotus v. Department of Transportation* (2014) 223 Cal.App.4th 645, 655-58.) The Revised FEIR must be recirculated.

III. The Revised FEIR's Continued Reliance on the Cap and Trade Program to Cover the Vast Majority of GHG Emissions Remains Unlawful.

The Response to Comments in the Revised FEIR does not resolve the significant critiques of the GHG analysis reflected in prior comments. In fact, it doubles down on the flawed approach of using cap and trade as a mechanism to disguise the vast majority of GHG emissions from this Project.

Importantly, CARB, the agency responsible for implementation of AB 32 and the Cap-and-Trade Program, has stated several times that the "[Cap-and-Trade] Program does not, and was never designed to, adequately address emissions from local projects and CEQA does not support a novel exemption for such emissions on this ground."⁶ In fact, this issue was raised in the Final Statement of Reasons for the 2018 revisions to the California Environmental Quality Act Guidelines where the Building Industry Association made the following request:

Comment 44.37

Guideline 15064.4. Analyzing Impacts from Greenhouse Gas Emissions Consistent with *Association of Irrigated Residents v. Kern County Board of Supervisors* (2017) 17 Cal.App.5th 708, the following sentence should be added at the end of subsection (b)(3): "Project-related greenhouse gas emissions resulting from

⁶ Letter from CARB to Moreno Valley, September 7, 2018, available at https://ww3.arb.ca.gov/toxics/ttdceqalist/logisticsfeir.pdf?_ga=2.143040245.1938875667.1580500719-1770248365.1564513994.

WLC Appeal
 May 26, 2020
 Page 14

sources subject to the cap-and-trade program shall not be considered when determining whether the project-related emissions are significant.”⁷

The Natural Resources Agency emphatically rejected this comment from the Building Industry Association in stating the following:

Response 44.37

The Agency declines to make any changes in response to this comment. The decision in *Association of Irrigated Residents v. Kern County Board of Supervisors* (2017) 17 Cal.App.5th 708 (“*AIR v. Kern*”) is from one state appellate court and has not been consistently applied by any other appellate courts. Moreover, the Agency finds that the case does not support the suggested addition. The holding in that case is limited to its facts. That court held only that the CEQA Guidelines may authorize a lead agency to determine that a project's greenhouse gas emissions will have a less than significant effect on the environment based on the project's compliance with the Cap-and-Trade program. The project in that case was directly regulated by the Cap-and-Trade program. The decision did not hold that all emissions from may be subject to the Cap-and-Trade regulation at any point in the supply chain are exempt from CEQA analysis, regardless of how those sources are used by the project.⁸

The Natural Resources Agency further elaborated by referencing CARB’s letter on the WLC.

The Agency notes that the California Air Resources Board (CARB) has prepared an extensive legal analysis setting forth why the Cap-and-Trade program does not excuse projects from CEQA’s analysis and mitigation requirements, including emissions from vehicular trips or energy consumption from development projects. (This analysis, prepared by CARB as CEQA comments regarding a major freight logistics facility, is available at <https://www.arb.ca.gov/toxics/ttdceqalist/logisticsfeir.pdf>.) The Agency further notes that CARB’s analysis is consistent with this Agency’s discussion of how greenhouse gas regulations factor into a CEQA analysis of greenhouse gas emissions. (See Final Statement of Reasons (SB 97), December 2009, at p. 100 (“Lead agencies should note ... that compliance with one requirement, affecting only one source of a project’s emissions, may not necessarily support a conclusion that all of the project’s emissions are less than significant”).)

⁷ California Natural Resources Agency, Final Statement of Reasons for Regulatory Action Amendments to the State CEQA Guidelines, OAL Notice File No. Z-2018-0116-12, Exhibit A. at p. 219 (November 2018) *available at*

http://resources.ca.gov/ceqa/docs/2018_CEQA_ExA_FSOR.pdf.

⁸ *Id.*

The effect of existing regulations is addressed further in the updates to Sections 15064(b) and 15064.7 of the CEQA Guidelines.⁹

Thus, both CARB (the agency responsible for implementation of AB 32 and the Cap-and-Trade Program) and the Natural Resources Agency (the agency responsible for drafting the CEQA Guidelines the Revised FEIR relies upon for authority) agree that the City cannot rely on Cap-and-Trade to dismiss the significance of all transportation and energy emissions.

Instead of recognizing that both CARB and the Natural Resources Agency disagree with its approach, the Revised FEIR continues to rely on outdated decisions in other projects by the South Coast AQMD and the San Joaquin Valley APCD--two agencies that have no jurisdiction over the GHG emissions from this Project and deserve no deference on this issue.

But, even if these agencies' positions were entitled to deference on this issue, which they are not, the evidence in the record is flawed. The Revised FEIR includes new attachments A and B, which are the specific South Coast AQMD documents the Revised FEIR claims support the use of Cap-and-Trade to discount energy emissions under CEQA. Initially, neither document allows transportation emissions – the vast majority of GHG emissions associated with the WLC – to be discarded from a significance determination.

Moreover, both of these documents are from 2014. Since that time, the South Coast AQMD has produced several other CEQA documents. In fact, in the most recent document from 2020, the agency does not appear to contend that energy-related and transportation emissions are insignificant for CEQA purposes because they are purportedly “covered” under the Cap-and-Trade program. *See* South Coast AQMD, Phillips 66 Los Angeles Refinery Ultra Low Sulfur Diesel Project Environmental Impact Report, available at <http://www.aqmd.gov/docs/default-source/ceqa/documents/permit-projects/2020/01-feir-chapters1-7.pdf?sfvrsn=6>.

In the context of the San Joaquin Valley APCD document, the Revised FEIR fails to explain the relevance of an agency interpretation that has no nexus to this Project. Because of this, the City must recirculate a Draft EIR to properly disclose the significant climate pollution impacts from this Project.

IV. Analysis of Important Mitigation Measures has been Curtailed by the Revised FEIR's Failure to Analyze Impacts

Mitigation of a project's significant impacts is one of the “most important” functions of CEQA. *See Sierra Club v. Gilroy City Council*, 222 Cal.App.3d 30, 41 (1990). If the EIR is the heart of CEQA, then mitigation is its teeth. *See Env'tl. Council of*

⁹ *Id.*

Sacramento v. City of Sacramento, 142 Cal.App.4th 108 at 1039. Under CEQA, feasible mitigation measures must be adopted that will avoid or substantially lessen significant environmental effects. Pub. Res. Code § 21002. CEQA is clear that “[m]itigation measures must be fully enforceable through permit conditions, agreements, or other legally-binding agreements.” CEQA Guidelines § 15126.5(a)(2).

The Revised Final EIR fails to meaningfully analyze requirements that would mitigate the harmful greenhouse gas and air quality impacts from this project, including requirements for use of trucks cleaner than the current commitment of trucks meeting 2010 emission standards – a standard that would allow trucks 10 years or older to enter the project in perpetuity. Several zero-emissions models are either available and/or will be increasingly available as this project is built. Moreover, CARB will adopt a vehicle sales standard in June to require manufacturers to produce zero-emission trucks in California across a range of truck classes. The Revised FEIR fails to provide sufficient evidence refuting requirements for use of zero-emission trucks is feasible.

The Revised Final EIR similarly fails to adequately consider mitigation measures requiring zero-emissions forklifts and yard dogs (e.g. yard hostlers). There are many zero-emissions models, and the Revised Final EIR should require the use of this technology for all onsite vehicles that fall into these categories.

In addition, the project fails to commit to feasible technologies to reduce the impacts of the buildings, including increased solar to cover more than just the office energy of the buildings and all-electric buildings to prevent the need for combustion for appliances. These and other technologies identified by several commenters are feasible and should be implemented to mitigate the significant Nitrogen Oxide and other criteria pollutant emissions, in addition to the significant GHG emissions.

Because the WLC project fails to include all feasible mitigation, the document should be recirculated.

V. The Revised FEIR Fails to Adequately Disclose, Analyze the Significance of, and Provide Mitigation for the Project’s Significant Biological Impacts.

The Revised FEIR’s biological resources sections include glaring gaps and inconsistent language in contravention of the CEQA’s requirements. For example, section 15130 of the CEQA Guidelines require an EIR to analyze the cumulative impacts of the proposed project in conjunction with other developments that affect or could affect the project area. A cumulative impact refers to two or more individual effects that are considerable when taken together, or that compound or increase other environmental impacts. CEQA Guidelines § 15355. And while an agency is not expected to foresee the unforeseeable, it is expected to use its “best efforts to find out and disclose all that it reasonably can.” (CEQA Guidelines § 15144; see also *City of Richmond*, supra, 184 Cal.App.4th at 96; *Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho*

Cordova (2007) 40 Cal. 4th 412, 428.) Here the Revised FEIR failed to provide a cumulative analysis of the Project's impact on biological resources. Nearby projects, including the Village of Lakeview housing development that will also impact the southern portion of the San Jacinto Wildlife Area are not included in the Revised FEIR's analysis, in violation of CEQA. (*Kings County Farm Bureau v. City of Hanford* (1990) 221 Cal.App.3d 692, 721. (Absent meaningful cumulative analysis there would be no control of development and "piecemeal development would inevitably cause havoc in virtually every aspect of the [] environment").)

The Revised FEIR also claims, without providing substantial evidence, "250-foot development setback is adequate for a project-SJWA buffer separation and supported by a compilation of available academic and scientific literature and studies on wildlife impacts from diesel emissions, and also the distance established in nesting bird surveys for setbacks from human activity." (RFEIR at pg. 4.4-97, emphasis original.) However, as numerous commenters raised, negative edge effects from human activity, traffic, lighting, noise, pollutants, invasive weeds, and increased fire frequency have been found to be biologically significant up to 300 meters (~1000 feet) away from anthropogenic features in terrestrial systems. These negative edge effects were not fully analyzed nor mitigated in the Revised FEIR.

Additionally, while truck and vehicle traffic will increase on Gilman Springs Road and all roads adjacent to the San Jacinto Wildlife Area for both construction and operation, the Revised FEIR fails analyze much less avoid, minimize or mitigate the anticipated wildlife "roadkill". The Revised FEIR fails to provide any analysis of the increasing wildlife injury and mortality that will occur from the increased traffic and instead states "these impacts would be less than significant as long as the County coordinates with the RCA and takes wildlife movement between Core H and proposed Core 3 into account when designing and improving Gilman Springs Road" (at pg. 4.4-97). By failing to adequately analyze impacts from increased traffic on wildlife injury and mortality, the Revised FEIR also fails to also provide avoidance, minimization and mitigation measures. Under CEQA, "the public agency bears the burden of affirmatively demonstrating that, notwithstanding a project's impact on the environment, the agency's approval of the proposed project followed meaningful consideration of alternatives and mitigation measures." (*Mountain Lion Foundation v. Fish & Game Com.* (1997) 16 Cal.4th 105, 134.) It is not the RCA's and the County's responsibility to analyze, avoid, minimize and mitigate the impacts from this project; it is the developer's responsibility as the applicant, and the City's responsibility as the lead agency.

Because the biological impacts section is faulty, the document should be recirculated.

VI. The Revised FEIR Fails to Adequately Disclose, Analyze the Significance of, and Provide Mitigation for the Project's Significant Noise Impacts.

The Revised Final EIR has significantly weakened mitigation measures designed to protect the public from noise pollution. When the original final EIR was approved it used the "**Noise Assessment for the WLCSP**" to establish mitigation measures that would be necessary to limit construction impacts to those residents in the surrounding homes. It noted that work within the project area may be done on a 24 hour, 7 days per week schedule, which goes beyond the Moreno Valley Municipal Code's (MVMC Section 8.14.040 Miscellaneous standards and regulations) listed hours of 7 a.m. to 7 p.m. The Noise Assessment defined construction limits so as to limit noise impacts on the surrounding residences outside the standard construction hours and clearly outlined the high level of noise that could be expected both during daytime and nighttime hours beyond the allowed decibel levels defined by the MVMC. Thus the study included "**Mitigation Measure N-2. No Nighttime Grading Within 2,800 Feet of Residences South of the Freeway.**" It goes on to allow closer nighttime construction at 1,580 feet after the installation of an appropriate sound barrier.

The new "**Noise and Vibration Technical Report Assessment**" proposed a substantially different evaluation and lesser mitigation for the noise impacts. It states that "No construction activity shall occur within 800 feet of residences between 8 p.m. and 7 a.m. on weekdays and weekends, and a 12-foot tall temporary construction sound barrier blocking the line-of-sight of construction activity to any residential receptor located within 800 feet of active construction areas shall be installed prior to commencement of any construction activity."

The mitigation requirement for a sound barrier is similar to the original MM, but the active setback is now moved forward by 2,000 feet, three and a half times closer. Additionally, the MM includes options that would eliminate the need to install the on-site sound barrier if a vote by those affected fails to garner 50% favorable votes or 100% favorable votes for a sound barrier placed on private property.¹⁰ These two provisions were never a consideration in the original noise analysis nor do they seem to be fair to the community due to the speculative nature of whether a sound barrier will be used or not. In addition, the developer's ownership of properties in those locations subject to the noise impacts are entitled to a vote on sound barrier installations. Those property holdings collectively could prevent any opportunity for a favorable vote to occur. While the clause in MM **4.12.6.2A** may be a greater benefit to the developer than to the surrounding

¹⁰ Allowing a vote on whether or not sound barriers will be installed also raises serious constitutional questions concerning the City's ability to delegate its basic land use authority to private property owners. (See, e.g., *Vaquero Energy, Inc. v. County of Kern* (2019) 42 Cal.App.5th 312, 328-334 [discussing federal and state case law].)

WLC Appeal
 May 26, 2020
 Page 19

residents, it poses a vague and unclear mitigation measures and makes it impossible to assess the efficacy at blocking noise impacts.

The EIRs for this Project have included multiple noise studies, including the following:

“**Noise Assessment for the WLCSP**” (Mestre Greve Associates) original dated January 2013, revised September 2014. (This document is still referenced in the 12-2019 Draft Recirculated Revised Sections of the Final Environmental Impact Report); and

“**Noise and Vibration Technical Report Assessment** (ESA)”, July 2018 which was not in the original 2014 DEIR for WLC.

Both studies have been cited for noise impacts, but the Revised FEIR has taken away significant mitigation measures designed to protect residents from noise pollution. The May 14, 2020 letter from Tom Thornsley attached as Exhibit 5 provides several examples of mitigation measures either being vague and speculative and/or less effective than prior mitigation measures. This failure to articulate and mitigate the noise impacts from the WLC project violates CEQA. This violation of CEQA means the noise analysis needs to be improved to provide effective and feasible mitigation.

VII. The Failure to Provide Spanish Translation of the Environmental Impact Report and Oral Comments at the Hearing Violates State Law.

The Final EIR should have been translated into Spanish for better review by the public. Moreover, there was at least once instance where a speaker at the Planning Commission spoke Spanish during oral testimony, and there was no translation provided to the Planning Commissioners. This failure to provide translation undermined the informational purposes of CEQA and otherwise fell short of the requirements of state law.

VIII. The Revised FEIR Fails to Adequately Disclose, Analyze the Significance of, and Provide Mitigation for the Project’s Significant Agricultural Impacts.

The Revised Final EIR fails to adequately address and mitigate the agricultural impacts related to this Project. In particular, the Revised FEIR continues to fail to acknowledge the significant agricultural impacts. In fact, the Revised FEIR improperly defers mitigation of agricultural impacts until future plans are produced related to the development of Parcels 10 and 12. This deferral of mitigation for agricultural impacts is not permitted under CEQA.

WLC Appeal
 May 26, 2020
 Page 20

IX. The Final EIR for this Project Makes it Impossible for the Public and Decision-Makers to Be Adequately Informed.

The current EIR for the project is a complex web with two revised versions of the EIR having been completed since the Superior Court struck down the entire EIR. Overall, the document was amended in significant ways up to two weeks before the Planning Commission meeting. The many versions of the document and reliance on information from an invalidated EIR from 2014, in addition to the two subsequent versions, have rendered the EIR's overall analysis incomprehensible. The public and decision-makers have not been provided with sufficient information to participate meaningfully in the process or proceed with rational decision-making.

X. Conclusion

The above referenced organizations have attached several of the relevant letters and attachments filed related to this appeal. We respectfully request that this information be incorporated into the record for this appeal.

For the reasons stated in the incorporated prior comments and in this letter, (1) the Revised FEIR fails to comply with CEQA, and (2) the City cannot make the required findings to approve the tentative parcel map and other actions reliant upon the Revised Final EIR. Accordingly, the Planning Commission's decisions on its approvals must be reversed, rejected and/or overruled.

Thank you for your consideration of this appeal.

Sincerely,

Adriano L. Martinez

RE: Deny Public Hearing Item #2 - Mitigation Monitoring and Reporting Program (“MMRP”), Statement of Overriding Consideration, Revised Final Environmental Impact Report, a Tentative Parcel Map 36457 that divides property for finance and conveyance purposes only, and the Development Agreement between the City of Moreno Valley and Highland Fairview within the World Logistics Center Specific Plan boundary.

Dear Planning Commissioners,

These comments are submitted on behalf of the Center for Biological Diversity’s (the “Center”) members, staff and supporters, regarding the Revised Final Environmental Impact Report (“RFEIR”) for the World Logistics Center. The Center has reviewed the RFEIR and provides comments on primarily the biological issues. At this point, we urge the Planning Commission to reject the project and instead require the issues we raise below be addressed in a renewed CEQA process. The Center has closely monitored this project for many years and remains concerned about the RFEIR inadequate analysis and mitigation of the project’s impacts to sensitive species and habitats. The current RFEIR fails to adequately preserve southern California’s, and specifically western Riverside County’s incredible biodiversity. Troublingly, extensive conservation investments by State, County and local agencies remain imperiled by inconsistent language and inadequate impact analysis in the current RFEIR.

The Center is a non-profit, public interest environmental organization dedicated to the protection of native species and their habitats through science, policy, and environmental law. The Center has over 1.7 million members and online activists throughout California and the United States. The Center has worked for many years to protect imperiled plants and wildlife, open space, air and water quality, and overall quality of life for people in western Riverside County.

I. The RFEIR Fails to Provide a Cumulative Impacts Analysis

The RFEIR simply fails to provide a cumulative impact analysis to biological resources (at page 4.4-118 to 119). While Table 1.1-1: World Logistics Center Project Environmental Impact Summary provides a section on Cumulative Biological Impacts (at pg. 1-26) it does not

actually provide an analysis, but instead references proposed project mitigation measures. In accordance with CEQA (CEQA Guidelines Section 15130 *et seq.*) an EIR must analyze the cumulative impacts of the proposed project in conjunction with other developments that affect or could affect the project area. According to CEQA, a cumulative impact refers to two or more individual effects that are considerable when taken together, or that compound or increase other environmental impacts (CEQA Guidelines Section 15355). And while an agency is not expected to foresee the unforeseeable, it is expected to use its “best efforts to find out and disclose all that it reasonably can.” (CEQA Guidelines § 15144; see also *City of Richmond*, supra, 184 Cal.App.4th at 96; *Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova* (2007) 40 Cal. 4th 412, 428 [hereinafter *Vineyard*].)

Therefore, to comply with CEQA, a cumulative scenario needs to be developed that identifies and evaluates past, present, and reasonably foreseeable future projects within the cumulative study area that would be constructed or commence operation during the timeframe of activity associated with the proposed project. For example, but not limited to, the Villages of Lakeview housing development will also impact the southern portion of the San Jacinto Wildlife Area (“SJWA”). The lack of a cumulative impact analysis to biological resources violates CEQA. The purpose of analyzing cumulative environmental impacts is to assess adverse environmental change “as a whole greater than the sum of its parts.” (*Environmental Protection Information Center v. Johnson* (1985) 170 Cal.App.3d 604, 625.) Absent meaningful cumulative analysis there would be no control of development and “piecemeal development would inevitably cause havoc in virtually every aspect of the [] environment.” (*Kings County Farm Bureau v. City of Hanford* (1990) 221 Cal.App.3d 692, 721.)

II. The RFEIR Fails to Provide an Adequate Development Setback for the SJWA

The RFEIR still proposes only a 250-foot wide development setback from the southernmost property line along the SJWA boundary with a 150-foot area for truck traffic and other activities other than actual buildings (at pg. 4.4-97). Negative edge effects from human activity, traffic, lighting, noise, pollutants, invasive weeds, and increased fire frequency have been found to be biologically significant up to 300 meters (~1000 feet) away from anthropogenic features in terrestrial systems (Environmental Law Institute 2003). The RFEIR states “250-foot development setback is adequate for a project-SJWA **bufferseparation** and supported by a compilation of available academic and scientific literature and studies on wildlife impacts from diesel emissions, and also the distance established in nesting bird surveys for setbacks from human activity” (at pg. 4.4-97, emphasis original), but the RFEIR does not provide the literature and studies to support this assertion.

The SJWA is a core area under the Western Riverside Multi-Species Habitat Conservation Plan (“WR HCP”), serves as a mitigation site for a prior project’s impacts and is a regionally important wildlife area. Therefore, a larger development setback needs to be incorporated to prevent negative edge effects from occurring to the project’s southernmost property line along the SJWA boundary. While down lighting as required in the RFEIR will help minimize light pollution, the other negative edge effects – increased traffic, noise, pollutants, invasive weeds and increased fire frequency - have not been adequately addressed.

For example, Mitigation Measure 4.4.6.3J requires “A Fuel Management Plan shall be prepared on a project-by-project basis for those Planning Areas adjacent to the south and east boundary of the WLC site adjacent to Western Riverside County Multiple Species Habitat Conservation Plan Conservation Areas” (at pg. 4.4-118), but absent that plan being available, the plan’s adequacy is unclear. In this case, the fuels to be manage are actually wildlife habitat. The RFEIR should require a comprehensive Fire Management Plan to protect not only the development where fire ignitions are more likely to occur but also requirements to prevent the fires from escaping onto the SJWA, as well as actions to implement if indeed fire originating on the development spreads to the SJWA.

III. The RFEIR Proposes Inconsistent Mitigation Measures

Despite the inadequate 250-foot development setback along the boundary with the SJWA, the RFEIR proposes inconsistent information as to where impact-mitigating fences/walls are to be constructed. First, MM 4.4.6.1A states “All development proposals in Planning Areas 10 and 12 shall include a minimum six-foot tall chain link fence or similar barrier to separate warehouse activity from the setback area” (at pg. 1-16). MM 4.4.6.1A also states “all truck activity areas adjacent to the 250- foot buffer area along the southern property line shall be enclosed by minimum 11-foot tall solid walls” (at pg. 1-17). The purpose of the mitigation measure is to reduce impacts to the SJWA. (*California Clean Energy Committee v. City of Woodland* (2014) 225 Cal.App.4th 173, 180.) Therefore, in order to minimize negative edge effect impacts, a solid wall, not a chain link fence, needs to be constructed. Secondly, the RFEIR states that “Warehousing will have a minimum 11-foot solid wall along the SJWA boundary” (at pg. 4.4-60) and “the Specific Plan requires solid walls along the property line.” (at pg. 4.4-97). However, having a wall at the boundary of the 250-foot development setback with the SJWA defeats the setback’s impact minimization purpose. The wall needs to be placed at the northern edge of the development setback nearest the development in order to help minimize the edge effect impacts.

IV. The RFEIR Fails to Provide All Required Plans

The RFEIR does not provide even a draft of all of the required plans in order for the decision-makers and the public to be able to evaluate the adequacy of the avoidance, minimization and mitigation. In addition to the Fuel Management Plans, other missing plans include but are not limited to:

- Traffic Control Plan (at pg. 1-10)
- Landscape plan for the 250-foot setback area (at pg. 1-17 and 1-23)
- Compensatory Mitigation Plan (at pg. 1-18)
- Burrowing owl Relocation plan (at pg. 1-22) and,
- Biological Resource Management Plan (BRMP) to prescribe how the 250-foot setback area is maintained (at pg. 1-23)

These plans are all key parts to evaluating the effectiveness of the proposed mitigation measures and should be included as part of the RFEIR.

V. The RFEIR Fails to Address Traffic Impacts to Wildlife on Gilman Springs Road including through the SJWA

While truck and vehicle traffic will increase on Gilman Springs Road for both construction and operation, the RFEIR fails analyze much less avoid, minimize or mitigate the anticipated wildlife “roadkill”. The RFEIR fails to provide any analysis of the increasing wildlife injury and mortality that will occur from the increased traffic and instead states “these impacts would be less than significant as long as the County coordinates with the RCA and takes wildlife movement between Core H and proposed Core 3 into account when designing and improving Gilman Springs Road” (at pg. 4.4-97). By failing to adequately analyze impacts from increased traffic on wildlife injury and mortality, the RFEIR also fails to also provide avoidance, minimization and mitigation measures. Under CEQA, “the public agency bears the burden of affirmatively demonstrating that, notwithstanding a project’s impact on the environment, the agency’s approval of the proposed project followed meaningful consideration of alternatives and mitigation measures.” (*Mountain Lion Foundation v. Fish & Game Com.* (1997) 16 Cal.4th 105, 134.) It is not the RCA’s and the County’s responsibility to analyze, avoid, minimize and mitigate the impacts from this project, it the developer and the City’s responsibility as the lead agency.

VI. CONCLUSION

Thank you for the opportunity to comment on the RFEIR for the World Logistics Center. Because of the numerous inaccuracies, short-comings and confusion in the RFEIR, we request that the Planning Commission deny recommending certification of the RFEIR, and the Mitigation Monitoring and Reporting Program (“MMRP”), Statement of Overriding Consideration, the Tentative Parcel Map 36457 that divides property for finance and conveyance purposes only, and the Development Agreement between the City of Moreno Valley and Highland Fairview within the World Logistics Center Specific Plan boundary. Rather than allowing this project to move forward with inadequate and incomplete environmental review, the City should send the RFEIR back t for revisions to address the failures identified above.

Please keep the Center to your notice list for all future updates to the Project and do not hesitate to contact the Center with any questions at the number or email listed below.

Subject: Revised Final Environmental Impact Report
 City of Moreno Valley, World Logistics Center Project
 State Clearinghouse No. 2012021045

Dear Ms. Descoteaux:

The California Department of Fish and Wildlife (CDFW) received the Revised Final Environmental Impact Report (RFEIR) on May 5, 2020 from the City of Moreno Valley (City) for the World Logistics Center Project (Project) pursuant the California Environmental Quality Act (CEQA) and CEQA Guidelines.¹

Thank you for the opportunity to provide comments and recommendations regarding those activities involved in the Project that may affect California fish and wildlife. Likewise, we appreciate the opportunity to provide comments regarding those aspects of the Project that CDFW, by law, may be required to carry out or approve through the exercise of its own regulatory authority under the Fish and Game Code. CDFW is concerned with the adequacy of the City's assessment of impacts to the San Jacinto Wildlife Area (Wildlife Area; SJWA), and with the adequacy and enforceability of mitigation measures for biological resources. CDFW's concerns related to the SJWA and recommended edits to the City's mitigation measures to improve specificity and enforceability are identified and discussed below.

CDFW ROLE

CDFW is California's Trustee Agency for fish and wildlife resources, and holds those resources in trust by statute for all the people of the State. (Fish & G. Code, §§ 711.7, subd. (a) & 1802; Pub. Resources Code, § 21070; CEQA

¹ CEQA is codified in the California Public Resources Code in section 21000 et seq. The "CEQA Guidelines" are found in Title 14 of the California Code of Regulations, commencing with section 15000.

Ms. Julia Descoteaux, Associate Planner
 World Logistics Center Project
 May 13, 2020
 Page 2 of 16

Guidelines § 15386, subd. (a.) CDFW, in its trustee capacity, has jurisdiction over the conservation, protection, and management of fish, wildlife, native plants, and habitat necessary for biologically sustainable populations of those species. (*Id.*, § 1802.) Similarly, for purposes of CEQA, CDFW is charged by law to provide, as available, biological expertise during public agency environmental review efforts, focusing specifically on projects and related activities that have the potential to adversely affect fish and wildlife resources.

CDFW is also submitting comments as a Responsible Agency under CEQA. (Pub. Resources Code, § 21069; CEQA Guidelines, § 15381.) CDFW expects that it may need to exercise regulatory authority as provided by the Fish and Game Code. As proposed, for example, the Project may be subject to CDFW's lake and streambed alteration regulatory authority. (Fish & G. Code, § 1600 et seq.) Likewise, to the extent implementation of the Project as proposed may result in "take" as defined by State law of any species protected under the California Endangered Species Act (CESA) (Fish & G. Code, § 2050 et seq.), the Project proponent may seek related take authorization as provided by the Fish and Game Code.

CDFW previously provided comments on the Draft EIR on April 8, 2013, on the Final EIR June 11, 2015, and on the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) Determination of Biologically Equivalent or Superior Preservation (DBESP) on December 19, 2014.

CDFW Comments and Recommendations

CDFW's comments and recommendations on the Project are summarized below.

Impacts to rare, listed, and sensitive species

Mitigation Measures (MM) 4.4.6.2A, 4.4.6.4D, and 4.4.6.4E identify the preparation of translocation plans for rare and listed plant species (MM 4.4.6.2A), burrowing owl (MM4.4.6.4D), and Los Angeles pocket mouse (MM 4.4.6.4E).

Sensitive Plant Species

MM 4.4.6.2A provides mitigation measures for impacts to sensitive plant species:

Each Plot Plan application shall include a focused plant survey of the proposed development site prepared by a qualified biologist to identify if any of the following sensitive plants (i.e., Coulter's goldfields, smooth tarplant, Plummer's' mariposa lily, or thread-leaved brodiaea) are present. If any of the listed plants are found, they may be relocated to the 250-foot setback area outlined in the Specific Plan and discussed in Mitigation Measure 4.4.6.1A. Alternatively, at the applicant's discretion, an impact

Ms. Julia Descoteaux, Associate Planner
 World Logistics Center Project
 May 13, 2020
 Page 3 of 16

fee may be paid to the Western Riverside County Regional Conservation Authority (RCA) or other appropriate conservation organizations to offset for the loss of these species. This measure shall be implemented to the satisfaction of the Planning Official.

CDFW is concerned that City's "Planning Official" is not sufficiently qualified to review and approve a translocation plan for rare plant species. Further, thread-leaved brodiaea is a state endangered and federally threatened species and CDFW should review this proposal. To ensure that this proposal is implemented in compliance of rules and regulations related to state and/or federally listed plant species CDFW recommends that the City revise mitigation measure (MM) 4.4.6.2A and condition the measure to include the following (edits are in **bold** and ~~strikethrough~~):

MM 4.4.6.2A Each Plot Plan application shall include a focused plant survey of the proposed development site prepared by a qualified biologist to identify if any of the following sensitive plants (i.e., Coulter's goldfields, smooth tarplant, Plummer's' mariposa lily, or thread-leaved brodiaea) are present. If any of the listed plants are found, **the City will consult with the California Department of Fish and Wildlife (CDFW) and the U.S. Fish and Wildlife Service (USFWS). If translocation of the species is deemed appropriate by CDFW and/or USFWS a translocation plan shall be developed and submitted to CDFW and USFWS for review and approval** ~~they may be relocated to the 250-foot setback area outlined in the Specific Plan and discussed in Mitigation Measure 4.4.6.1A.~~ Alternatively, at the applicant's discretion, an impact fee may be paid to the Western Riverside County Regional Conservation Authority (RCA) or other appropriate conservation organizations to offset for the loss of these species. This measure shall be implemented to the satisfaction of the Planning Official.

Burrowing Owl

MM 4.4.6.4D provides mitigation measures for impacts to burrowing owl:

If active burrowing owl burrows are detected outside the breeding season (September through January), or within the breeding season but owls are not nesting or in the process of nesting, active and/or passive relocation may be conducted following consultation with the California Department of Fish and Wildlife. A relocation plan may be required by California Department of Fish and Wildlife if active and/or passive relocation is necessary. The relocation plan will outline the basic process and provides options for avoidance and mitigation. Artificial burrows - may be constructed within the buffer area south of the World Logistics Center

Ms. Julia Descoteaux, Associate Planner
 World Logistics Center Project
 May 13, 2020
 Page 4 of 16

Specific Plan. Construction activity may occur within 500 feet of the burrows at the discretion of the biological monitor in consultation with CDFW.

A relocation plan may be required by California Department of Fish and Wildlife if active or passive relocation is necessary. Artificial burrows may be constructed within appropriate burrowing owl habitat within the proposed open space/conservation area (Planning Area 30), a 74.3-acre area in the southwest portion of the Specific Plan. This area abuts the Lake Perris State Recreation Area (LPSRA) which is already in conservation. If suitable habitat is not present in Planning Area 30, owls may be relocated to the SJWA, the 250-foot buffer area or other suitable on-site or off-site areas. Construction activity may occur within 500 feet of the burrows at the discretion of the biological monitor.

CDFW previously provided comments on the City's proposal to translocate burrowing owl to the "250-foot buffer area" in a joint CDFW – US Fish and Wildlife Service (USFWS) comment letter written in response to the City's DBESP submitted for review as required by the Western Riverside MSHCP. In the joint letter (dated December 19, 2014) CDFW and the USFWS articulated to the City that the 250-foot buffer area is not appropriate as a receptor site for burrowing owl because it is insufficient in terms of area, spatial configuration, and conflicting planned use (the City has proposed the construction of detention basins, etc., within the buffer area). Burrowing owl require large open expanses of sparsely vegetated habitat to forage and nest, and the 250-foot buffer area would not provide these ecological needs. Further, because the buffer area is proposed to be planted with trees, CDFW and the USFWS also stated that the City's proposal to plant trees within the buffer area would provide perch sites for bird-eating raptors, such as red-tailed hawks, which eat burrowing owls, further reducing the appropriateness of the City's proposed mitigation approach.

MM 4.4.6.4D also includes reference to Planning Area 30. CDFW maintains similar concerns regarding the suitability of this area for burrowing owl: Planning Area 30 is insufficient in terms of area and spatial configuration. Further, based on CDFW's review of aerial photography the topography of much of Planning Area 30 is unlikely to be suitable for burrowing owl.

CDFW appreciates that the City has included an additional relocation option: CDFW's San Jacinto Wildlife Area. However, CDFW is concerned that MM 4.4.6.4D does not include specific and enforceable language to ensure that the financial burden of any proposed translocation of burrowing owl (including the translocation itself, short-term habitat management needs, as well as long-term management needs) is provided by the Project Applicant. CDFW is unable to assume this financial burden, and it is the responsibility of the Project Applicant to mitigate Project impacts.

Ms. Julia Descoteaux, Associate Planner
 World Logistics Center Project
 May 13, 2020
 Page 5 of 16

MM 4.4.6.4D identifies that CDFW would review any active and/or passive relocation plan for burrowing owl. Please note that these plans will also need to be reviewed and approved by the USFWS and the Western Riverside County Regional Conservation Authority (RCA).

To improve the specificity and enforceability of MM 4.4.6.4D and to ensure consistency with the MSHCP, CDFW recommends that the City revise mitigation measure MM 4.4.6.4D and condition the measure as following (edits are in **bold** and ~~strikethrough~~):

MM 4.4.6.4D If active burrowing owl burrows are detected outside the breeding season (September through January), or within the breeding season but owls are not nesting or in the process of nesting, active and/or passive relocation may be conducted following consultation with the California Department of Fish and Wildlife (**CDFW**), **U.S. Fish and Wildlife Service (USFWS)**, and the **Western Riverside County Regional Conservation Authority (RCA)**. A relocation plan ~~may~~ **will** be required by ~~California Department of Fish and Wildlife CDFW, the USFWS, and the RCA~~ if active and/or passive relocation is necessary. The relocation plan will outline the basic process, ~~and provides options for avoidance and mitigation,~~ **identify short- and long-term habitat management needs of the receiver site, and identify the entity responsible for all financial costs associated with the relocation plan and long-term management of the receiver site.** Artificial burrows - may be constructed within the buffer area south of the World Logistics Center Specific Plan. Construction activity may occur within 500 feet of the burrows at the discretion of the biological monitor in consultation with CDFW, **the USFWS, and RCA.**

A relocation plan ~~may~~ **will** be required by ~~California Department of Fish and Wildlife CDFW, the USFWS, and RCA~~ if active or passive relocation is necessary. Artificial burrows may be constructed within appropriate burrowing owl habitat within the proposed open space/conservation area (Planning Area 30), a 74.3-acre area in the southwest portion of the Specific Plan. This area abuts the Lake Perris State Recreation Area (LPSRA) which is already in conservation. If suitable habitat is not present in Planning Area 30, owls may be relocated **following written approval by CDFW, the USFWS, and RCA, to habitat deemed suitable by CDFW, the USFWS, and RCA (which may include the SJWA, the 250-foot buffer area or other suitable on-site or off-site areas).** Construction activity may occur within 500 feet of the burrows at the discretion of

Ms. Julia Descoteaux, Associate Planner
 World Logistics Center Project
 May 13, 2020
 Page 6 of 16

the biological monitor, **following consultation with CDFW, the USFWS, and RCA.**

Los Angeles Pocket Mouse

MM 4.4.6.4E provides mitigation measures for impacts to Los Angeles pocket mouse (LAPM):

Prior to the approval of any Plot Plans proposing the development of land including or adjacent to Drainage 9, a protocol survey for the Los Angeles Pocket Mouse (LAPM), including 100 feet upstream and downstream of the affected reach shall be prepared by a qualified biologist and submitted to the City. If the affected drainage is not occupied, the area is considered not to be occupied and development can continue without further action. If the species is found within the specific survey area, no development shall occur until an appropriate mitigation fee is paid or appropriate amount of land set aside on the project site or off site to compensate for any loss of occupied Los Angeles Pocket Mouse habitat. Alternatively, individuals may be relocated to the 250-foot setback zone along the southern boundary of the property identified in Mitigation Measure 4.4.6.1A, or other appropriate areas as determined by the United States Fish and Wildlife Service. If necessary, this measure shall also be coordinated with Mitigation Measure 4.4.6.2B regarding preparation and processing of a Determination of a Biological Equivalent or Superior Preservation report. This measure shall be implemented to the satisfaction of the City Planning Division.

MM 4.4.6.4E identifies that the City will review LAPM “protocol surveys,” and the USFWS will review any relocation plan for LAPM. CDFW is concerned that City staff are not appropriately qualified to determine if appropriate survey methodology has been employed by the Project Applicant, or review trapping results. CDFW recommends that proposed survey methodology and trapping results be reviewed and/or approved by CDFW and the USFWS. Further, any relocation plan prepared for LAPM will also need to be reviewed and approved by CDFW (in addition to the USFWS).

CDFW appreciates that MM 4.4.6.4E identifies that LAPM translocation, if deemed necessary, may occur to a site other than the 250-foot buffer area. CDFW and the USFWS previously commented that the 250-foot buffer area may not be appropriate as a receiver site because of size and configuration (it will be a narrow, relatively restricted area), and because of potential disruptions to existing small mammal populations, and predator-prey relationships. CDFW appreciates that the City has included an additional relocation option however, CDFW is concerned that MM 4.4.6.4E does not include specific and enforceable language to ensure that the financial burden of any proposed translocation of

Ms. Julia Descoteaux, Associate Planner
 World Logistics Center Project
 May 13, 2020
 Page 7 of 16

LAPM (including the translocation itself, short-term habitat management needs, as well as long-term management needs) is provided by the Project Applicant.

To improve the specificity and enforceability of MM 4.4.6.4E CDFW recommends that the City revise mitigation measure MM 4.4.6.4E and condition the measure as following (edits are in **bold** and ~~striketrough~~):

MM 4.4.6.4E Prior to the approval of any Plot Plans proposing the development of land including or adjacent to Drainage 9, a protocol survey for the Los Angeles Pocket Mouse (LAPM), including 100 feet upstream and downstream of the affected reach shall be prepared by a qualified biologist and submitted to **CDFW and the USFWS for review and approval prior to submission to the City**. If the affected drainage is not occupied, the area is considered not to be occupied and development can continue without further action. If the species is found within the specific survey area, no development shall occur until an appropriate mitigation fee is paid or appropriate amount of land set aside on the project site or off site to compensate for any loss of occupied Los Angeles Pocket Mouse habitat. Alternatively, individuals may be relocated **to locations pre-approved by CDFW and the USFWS (which may include to** the 250-foot setback zone along the southern boundary of the property identified in Mitigation Measure 4.4.6.1A, or other appropriate areas) ~~as determined by the United States Fish and Wildlife Service~~. **All costs associated with the relocation, as well as short-and long-term management and monitoring of the receiver site shall be the responsibility of the Project Applicant**. If necessary, this measure shall also be coordinated with Mitigation Measure 4.4.6.2B regarding preparation and processing of a Determination of a Biologically Equivalent or Superior Preservation report. This measure shall be implemented to the satisfaction of the City Planning Division **following coordination with CDFW and the USFWS**.

Fish and Game Code section 1602

MM 4.4.6.3C conditions the Project Applicant(s) to submit to the City copies of appropriate permits/agreements for impacts to Waters of the State and Waters of the U.S. The measure identifies the “need for permits based on the results of the 2012 jurisdictional delineation.” Please note that CDFW will require that any stream mapping submitted to CDFW as a component of a Notification of Lake or Streambed Alteration be current. CDFW recommends the measure be revised to remove all reference to the “2012 jurisdictional delineation.” In addition to removing reference to out-of-date mapping, CDFW recommends that errors

Ms. Julia Descoteaux, Associate Planner
 World Logistics Center Project
 May 13, 2020
 Page 8 of 16

included in the measure be corrected. CDFW recommends that the City revise mitigation measure MM 4.4.6.3C as follows (edits are in **bold** and ~~strikethrough~~):

MM 4.4.6.3C Prior to issuance of any grading permit for any offsite improvements that support development within the World Logistics Center Specific Plan, the developer shall retain a qualified biologist to prepare a jurisdictional delineation (JD) for any drainage channels affected by construction of the offsite improvements. This jurisdictional delineation shall be submitted to the U.S. Army Corps of Engineers (USACE), **Regional Water Quality Control Board**, and California Department of Fish and Wildlife (CDFW) for review and concurrence. If the offsite improvements **are deemed by the regulatory agencies to not require regulatory permits/agreements, a written copy of this determination shall be submitted to the City** ~~will not affect any identified jurisdictional areas, no United States Army Corps of Engineers permitting is required.~~ **The Applicant shall consult with** ~~However, permitting through the Regional Water Quality Control Board (RWQCB), and California Department of Fish and Wildlife (i.e., Streambed Alteration Agreement) may still be required for these improvements. The applicant shall consult with~~ **and United States Army Corps of Engineers, California Department of Fish and Wildlife and Regional Water Quality Control Board** to establish the need for permits based on the results of the 2012 **current stream mapping jurisdictional delineation** and final design plans for each of the proposed the facilities. Consultation with the three agencies shall take place and appropriate permits obtained. Compensation for losses associated with any altered offsite drainages shall be in agreement with the permit conditions. Any landscaping associated with these offsite improvements shall use only native species to help protect biological resources residing within or traveling through these drainages per Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) Table 6.1.2. This measure shall be implemented to the satisfaction of the City Planning Division in consultation with the ~~U.S. Fish and Wildlife Service~~ **Regional Water Quality Control Board**, U.S. Army Corps of Engineers, and the California Department of Fish and Wildlife.

Wildlife Movement

The Biological Resources section (Section 4.4) of the Revised Sections of the FEIR (page 4.4-37) discusses that the Project will incorporate fencing to separate development areas from MSHCP open space areas to the south and along Gilman Springs Road. CDFW agrees that fencing is appropriate to minimize unauthorized public access, illegal trespass, and dumping. In addition, fencing

Ms. Julia Descoteaux, Associate Planner
 World Logistics Center Project
 May 13, 2020
 Page 9 of 16

along Gilman Springs Road should be designed to minimize wildlife movement and direct wildlife towards wildlife crossings. CDFW is concerned that because a mitigation measure has not been developed and included in the FEIR the City will be unable to enforce the construction of such fences as the Project is developed. To ensure enforceability, CDFW recommends that the City include a new mitigation measure in the FEIR conditioning the construction of fencing along the Project's southern and eastern boundaries, and wildlife fencing along Gilman Springs Road. CDFW recommends the inclusion of the following new mitigation measure in the FEIR:

Prior to issuance of any grading permit for Projects constructed immediately west of Gilman Springs Road (Planning Areas 6, 8, 11, 12), or north of the San Jacinto Wildlife Area (Planning Areas 10, 12) the Project Applicant shall provide for review and approval to the California Department of Fish and Wildlife and City design plans for the construction of appropriate fencing along the Project's eastern and/or southern boundary, as appropriate. The City shall also inspect fence construction prior to issuance of occupancy permits, or equivalent.

CDFW is concerned about the project's potential to restrict wildlife movement to and from the San Timoteo Badlands (Badlands) and SJWA/Mystic Lake area. As proposed, the Project will border the Badlands along portions of its northern border as well as its nearly 2-mile long eastern border at Gilman Springs Road, creating an obstruction to wildlife movement between the Badlands and open areas to the south (Mystic Lake, Lake Perris, and SJWA). The Project is located between the SJWA and the two existing culverts under State Route 60 (SR-60), and will also be located immediately west of Gilman Springs Road and the existing culverts under this road. Because the Project encompasses logistics centers that will significantly increase traffic volume, CDFW argues that the Project will have substantial effects on existing wildlife movement patterns. Species of concern include mountain lion, bobcat, badger, coyote, deer, long-tailed weasel, black-tailed jackrabbit, and desert cottontail. A fair argument can be made that the Project will increase noise, lighting, and traffic which may in turn negatively affect wildlife through direct mortality or alter movement patterns by forcing wildlife to move east or west, away from the Project. CDFW recommends that the Project install appropriate fencing along Gilman Springs Road and SR-60 to reduce wildlife mortality and direct animals to future or existing wildlife crossings.

CDFW recommends that the City condition the Project to require the installation of wildlife fencing along SR-60 and Gilman Springs Road to reduce Project-related wildlife mortality. CDFW recommends the inclusion of the following new mitigation measure in the FEIR:

Ms. Julia Descoteaux, Associate Planner
 World Logistics Center Project
 May 13, 2020
 Page 10 of 16

Prior to issuance of any grading permit for Projects constructed immediately west of Gilman Springs Road (Planning Areas 6, 8, 11, 12), or south of State Route 60 (Planning Area 6) the Project Applicant shall provide for review and approval to the California Department of Fish and Wildlife and City design plans for the construction of wildlife fencing along State Route 60 and Gilman Springs Road. The City shall inspect wildlife fence construction prior to issuance of occupancy permits, or equivalent.

Section 4.4 of the Revised Sections of the FEIR (page 4.4-61) discusses that the RCA submitted comments to the City stating that the project would likely cause an increase in truck traffic along Gilman Springs Road which “could significantly affect wildlife movement between Core H and proposed Core 3.” To mitigate these impacts the Revised Sections of the FEIR (page 4.4-61) states that it would be appropriate for the Project to contribute (financially) to the “fair share of the improvements to Gilman Springs Road, including provisions for wildlife movement or crossings.” CDFW agrees that contribution of funding for improvements to wildlife crossings along Gilman Springs Road would be appropriate, but CDFW is concerned that because a mitigation measure has not been developed and included in the FEIR the City will be unable to enforce the contribution of funds for this purpose. To ensure enforceability, CDFW recommends that the City include a new mitigation measure in the FEIR conditioning the contribution of funds to a mitigation account, to held by CDFW-approved entity, for later use for improvements to wildlife crossings along Gilman Springs Road. CDFW recommends the inclusion of the following new mitigation measure in the FEIR:

Prior to issuance of any grading permit the Project Applicant shall provide to the City 5% of total Project costs to be deposited into a mitigation account, held by a CDFW-approved entity, for later use for improvements to wildlife crossings along Gilman Springs Road.

Impacts to the San Jacinto Wildlife Area

CDFW previously provided comments on the Project’s proposal to construct buildings within 450 feet of the SJWA (refer to CDFW’s April 8, 2013, and June 11, 2015 comment letters). SJWA is an active hunting area, and hunts are regularly conducted along the SJWA’s northern boundary. Fish and Game Code Section 3004 prohibits the discharging of firearms within 150 yards (450 feet) of any building without express permission of the owner. Given that the City is proposing the construction of buildings within 450 feet of the northern property boundary of the SJWA, the City’s actions will directly constrain the public’s use of the SJWA. CDFW reiterates that unless the City increases the buffer distance between the SJWA and constructed elements of the Project to a minimum of 450 feet, the City will have effectively created restraints on hunting with the Wildlife

Ms. Julia Descoteaux, Associate Planner
 World Logistics Center Project
 May 13, 2020
 Page 11 of 16

Area. Further unless the environmental document is revised, it continues to be deficient in its analysis of impacts on public access and recreational pursuits within the SJWA.

CDFW strongly recommends that the buffer distance between the northern boundary of the SJWA and the Project be increased to a minimum of 450 feet.

Project's Consistency with Adopted HCPs/NCCPs

Projects proposed for construction within the MSHCP and the Stephens' kangaroo rat Habitat Conservation Plan (SKR HCP) are subject to payment of mitigation fees. Pages 4.4-60 and 4.4-61 discuss the required payment of these fees, however the City did not include a mitigation measure to ensure the enforceability of payment of fees. To ensure enforceability, CDFW recommends that the City include a new mitigation measure in the FEIR conditioning the payment of MSHCP and SKR HCP fees, as appropriate, prior to issuance of grading permits. CDFW recommends the inclusion of the following new mitigation measure in the FEIR:

Prior to issuance of any grading permit the Project Applicant shall pay appropriate Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP), and Stephens' kangaroo rat Habitat Conservation Plan mitigation fees.

Resource Management

MM 4.4.6.4F discusses the development of a Biological Resource Management Plan for the proposed 250-foot setback area. The measure discusses that the plan will be reviewed by the City's "Planning Official in consultation with the San Jacinto Wildlife Area Manager." CDFW is unaware that the City contacted CDFW's SJWA manager to verify that CDFW were available and able to contribute to the review of this plan, or whether this workload element could be accommodated based on CDFW's current staffing levels. CDFW appreciates that the City is requesting review of the proposed Biological Resource Management Plan, but we request that review of this document be determined by CDFW.

CDFW recommends that the City revise mitigation measure MM 4.4.6.4F as follows (edits are in **bold** and ~~strikethrough~~):

- 4.4.6.4F Prior to approval of any discretionary permits for development within Planning Areas 10 and 12, a Biological Resource Management Plan (BRMP) shall be prepared to prescribe how the 250-foot setback area outlined in Mitigation Measure 4.4.6.1A will be developed and maintained **in perpetuity**. This plan will identify frequent and infrequent vegetation management requirements (i.e.,

removal of invasive plants) and the planting and maintaining trees to provide roosting and nesting opportunities for raptors and other birds. **The Biological Resource Management Plan will include an estimate of short-and long-term management costs, a discussion of how funds will be made available in perpetuity, and entities responsible for contribution of funds to support the Biological Resource Management Plan.** The Biological Resource Management Plan will also describe how relocation of listed or sensitive species will occur from other locations as outlined in Mitigation Measures 4.4.6.2A, 4.4.6.4D, and 4.4.6.4E.

The Biological Resource Management Plan, **including the short-and long-term funding strategy** shall be reviewed and approved by the Planning Official in consultation with **California Department of Fish and Wildlife** ~~San Jacinto Wildlife Area Manager~~. The Biological Resource Management Plan shall cover all the land within the 250-foot setback zone within Planning Areas 10 and 12. Implementation of the plan shall be supervised by a qualified biologist, to the satisfaction of the City Planning Division.

Fuel Management

MM 4.4.6.4J discusses the preparation of a Fuel Management Plan for those Planning Areas adjacent to the south and east boundary of the Project and MSHCP lands. The measure identifies that the plan shall demonstrate that adjacent MSHCP lands are adequately protected from expected fire risks. CDFW recommends that MM 4.4.6.4J be revised to also demonstrate that the Fuel Management Plan adequately protect CDFW's SJWA lands. CDFW recommends that the City revise mitigation measure MM 4.4.6.4J as follows (edits are in **bold** and ~~strikethrough~~):

- 4.4.6.4J A Fuel Management Plan shall be prepared on a project-by-project basis for those Planning Areas adjacent to the south and east boundary of the World Logistics Center Specific Plan adjacent to Western Riverside County Multiple Species Habitat Conservation Plan Conservation Areas **and/or San Jacinto Wildlife Area (SJWA) lands**. The Fuel Management Plan shall be prepared by the project proponent and submitted for approval to the prior to plot plan approval for those projects on the southern and eastern Western Riverside County Multiple Species Habitat Conservation Plan **and/or SJWA** boundary. Per the Western Riverside County Multiple Species Habitat Conservation Plan guidelines, the Fuel Management Plan shall include the following:

Ms. Julia Descoteaux, Associate Planner
 World Logistics Center Project
 May 13, 2020
 Page 13 of 16

- A plant palette of adequate plant species that may be planted within the Fuel Management Area, which will be approved by a biologist familiar with the plant requirements of the area.
- A list of non-native invasive plants that are prohibited from installation.
- Maintenance activities and a maintenance schedule.

Fuel modification zones shall be mapped and include an impact assessment as required under California Environmental Quality Act guidelines for a project-level analysis. The plan shall demonstrate that the adjacent Western Riverside County Multiple Species Habitat Conservation Plan Areas **and SJWA lands** are adequately protected from expected fire risks.

Minor Errors

MM4.4.6.2B and 4.4.6.3B include reference to the “Resource Conservation Agency (RCA).” CDFW assumes that the City is referring to the Western Riverside County **Regional Conservation Authority**. CDFW recommends that the City review the aforementioned mitigation measures and correct all references to the Regional Conservation Authority.

ENVIRONMENTAL DATA

CEQA requires that information developed in environmental impact reports and negative declarations be incorporated into a database which may be used to make subsequent or supplemental environmental determinations. (Pub. Resources Code, § 21003, subd. (e).) Accordingly, please report any special status species and natural communities detected during Project surveys to the California Natural Diversity Database (CNDDDB). Information can be submitted online or via completion of the CNDDDB field survey form at the following link: <https://wildlife.ca.gov/Data/CNDDDB/Submitting-Data>. The completed form can be mailed electronically to CNDDDB at the following email address: CNDDDB@wildlife.ca.gov. The types of information reported to CNDDDB can be found at the following link: <https://wildlife.ca.gov/Data/CNDDDB/Plants-and-Animals>.

Ms. Julia Descoteaux, Associate Planner
 World Logistics Center Project
 May 13, 2020
 Page 14 of 16

FILING FEES

The Project, as proposed, would have an impact on fish and/or wildlife, and assessment of filing fees is necessary. Fees are payable upon filing of the Notice of Determination by the Lead Agency and serve to help defray the cost of environmental review by CDFW. Payment of the fee is required in order for the underlying project approval to be operative, vested, and final. (Cal. Code Regs, tit. 14, § 753.5; Fish & G. Code, § 711.4; Pub. Resources Code, § 21089.)

CDFW CONCLUSIONS AND FURTHER COORDINATION

CDFW appreciates the opportunity to comment on the RFEIR for the City of Moreno Valley's World Logistics Center Project (SCH No. 2012021045) and recommends that the City address the CDFW's comments and concerns prior to adoption of the RFEIR. Pursuant to CEQA Guidelines section 15097(f) CDFW has prepared a draft mitigation monitoring and reporting program (MMRP) for the new mitigation measures identified in this letter. The draft MMRP is enclosed at the end of this letter.

If you should have any questions pertaining to the comments provided in this letter, and to schedule a meeting, please contact Joanna Gibson at (909) 987-7449 or at Joanna.Gibson@wildlife.ca.gov.

Sincerely,

DocuSigned by:

**RE: World Logistics Center Revised Final Environmental Impact Report
(SCH # 2012021045)**

Dear Ms. Descoteaux:

Attorney General Xavier Becerra, in his independent capacity,¹ and the California Air Resources Board (CARB) jointly submit the following comments on the April 2020 Final Environmental Impact Report (FEIR) prepared for the World Logistics Center (the Project) in advance of the Project’s May 14, 2020 Moreno Valley (City) Planning Commission hearing.

The Attorney General and CARB have the following concerns regarding the FEIR, as explained in detail below:

1. The FEIR does not correct the improper GHG analysis the Attorney General and CARB critiqued in multiple comment letters on prior versions of the Project’s environmental impact report.²

¹ The Attorney General’s Office submits these comments pursuant to his independent power and duty to protect the environment and natural resources of the State from pollution, impairment, or destruction, and in furtherance of the public interest. (See Cal. Const., art. V, § 13; Gov. Code, §§ 12511, 12600–12612; *D’Amico v. Bd. of Medical Examiners* (1974) 11 Cal.3d 1, 14–15.) This letter is not intended, and should not be construed, as an exhaustive discussion of the FEIR’s compliance with the California Environmental Quality Act (CEQA).

² The Attorney General and CARB previously reviewed the City’s July 2018 Revised Final Environmental Impact Report (RFEIR) and submitted comments regarding the RFEIR on September 7, 2018. As noted in those comment letters, the RFEIR’s analysis of greenhouse gas (GHG) related impacts does not meet CEQA’s requirements. On January 30, 2020, CARB also

Attachment: Appeal of PEN18-0050 Revised Final EIR (PAA20-0002) A. Martinez (4074 : World Logistics Center)

Ms. Descoteaux
 May 14, 2020
 Page 2

2. The FEIR also continues to misrepresent CARB's positions.
3. The FEIR's new GHG Mitigation Measure 4.7.7.1 is inadequate.
4. The FEIR fails to adopt feasible mitigation measures that would substantially lessen the Project's significant adverse effects.
5. The addition of Mitigation Measure 4.7.7.1 is "significant information" that requires recirculation of the FEIR.

Until these shortcomings are corrected, the FEIR should not be certified by the City.

I. THE FEIR CONTINUES TO RELY ON ENVIRONMENTALLY IRRESPONSIBLE AND LEGALLY FLAWED ARGUMENTS TO AVOID PROPERLY ANALYZING AND MITIGATING THE PROJECT'S ENORMOUS GREENHOUSE GAS IMPACTS.

Under CEQA, a project's significant GHG impacts must be disclosed and mitigated to the extent feasible whenever the lead agency determines that the project contributes to a significant, cumulative climate change impact. 14 Cal. Code Regs. (CEQA Guidelines) § 15064.4. Yet, the FEIR continues to improperly divide the Project's GHG emissions into two categories, which it terms "capped" and "uncapped"; classifications that are created by the FEIR and have no relevance under CEQA. The FEIR asserts that "capped" emissions are "covered" by CARB's Cap-and-Trade Program, and therefore claims that they are exempt from any further CEQA analysis or mitigation.³

To purportedly support its improper approach to GHG analysis and mitigation, the FEIR relies on a few weak, misguided bases: (1) two mitigated negative declarations (MND); (2) an outdated guidance document from an air district with no jurisdiction in the South Coast Air Basin; (3) an inapposite appellate court decision that did not benefit from the input of California's expert agencies and other key stakeholders, and (4) unsupported arguments about indirect costs.

The FEIR does not, and cannot, explain why its GHG analysis and mitigation approach did not comply with the CEQA Guidelines, applicable case law, and other relevant guidance regarding GHG analysis and mitigation. In addition, the FEIR ignores the objections in our previous comment letters.

filed comments on the Draft Recirculated Revised Sections of the Final Environmental Impact Report (RRSFEIR). These three comment letters are attached to this letter as Exhibits A-C. Further, the Attorney General and CARB's amicus brief in *Paulek et al. v. Moreno Valley Community Services District et al.* (E071184) (*Paulek*), which further discusses the legal inadequacies of the GHG analysis, is attached hereto as Exhibit D.

³ Though Mitigation Measure 4.7.7.1 agrees to offset "capped" emissions in the event the City's GHG analysis is invalidated in *Paulek*, the improper legal arguments regarding the distinction between "capped" and "uncapped" emissions will remain.

Ms. Descoteaux
 May 14, 2020
 Page 3

The City cites the San Joaquin Valley Air Pollution Control District (SJVAPCD) Policy APR-2025, issued in 2014, and two MNDs approved by SCAQMD in 2014. The City states that its approach has been applied “for years” in light of those same documents. (FEIR at 23.) However, as the California Supreme Court has repeatedly held in more recent years, GHG law continues to evolve, and lead agencies have an obligation under CEQA to “stay in step.” *Cleveland National Forest Foundation v. San Diego Assn. of Governments* (2017) 3 Cal.5th 497, 504 (*SANDAG*).⁴ The documents the City relied on are out of date and not the appropriate guidance for analyzing GHG impacts under CEQA.

Note that in 2014, the California Supreme Court had not yet issued its seminal *Newhall* decision, which was published on November 30, 2015. *Center for Biological Diversity v. Dept. of Fish & Wildlife* (2015) 62 Cal.4th 204, 230 (*Newhall*). The Court then issued the *SANDAG* decision on July 13, 2017. (*SANDAG, supra*, (2017) 3 Cal.5th 497.) The FEIR ignores post-2014 materials that establish its approach is unlawful, including the *SANDAG* California Supreme Court decision referenced above, as well as CARB’s 2017 Scoping Plan.⁵

The City also relies on *Association of Irrigated Residents v. Kern County Board of Supervisors* (2017) 17 Cal.App.5th 708 (*AIR*). However, as previously noted, *AIR* did not broadly validate the City’s approach of excluding all fuel and electricity related emissions from its GHG analysis, particularly for a project that is not regulated by the Cap-and-Trade Regulation. (See FEIR at 22, 23.) That issue simply was not before the court, and was not given due consideration as a result. (See Exhibit A at 6; Exhibit B at 11-12; Exhibit D at 30-31.) *AIR* is thus inapposite.

Finally, the City also attempts to argue that the Project would effectively be paying for GHG mitigation through fuel and electrical costs passed down to the end consumer. (FEIR at 18-19.) It still remains unclear how there would be any price signal to Project proponents in this situation, given that any fuel-related costs would be paid by the fuel suppliers, and potentially passed down to the Project’s tenant logistics companies. Regardless, these fuel costs would not be paid by the Project proponents.

⁴ As the California Supreme Court has held, “CEQA requires public agencies ... to ensure that such analysis stay in step with evolving scientific knowledge and state regulatory schemes.” (*SANDAG* at 504.) The Court viewed the Scoping Plan as a particularly useful source of information, given the extensive study and public participation involved in its preparation. (*Ibid.*) A recent article provides a useful primer on this body of law. (See Janill Richards, *The SANDAG Decision: How Lead Agencies Can “Stay in Step” with Law and Science in Addressing the Climate Impacts of Large-Scale Planning and Infrastructure Projects* (2017) 26:2 Environmental Law News 17.)

⁵ Available at https://ww3.arb.ca.gov/cc/scopingplan/scoping_plan_2017.pdf. See, in particular, the “Climate Action through Local Planning and Permitting” chapter beginning at page 99, which describes the critical role played by local government contributions to CEQA reductions, including through the CEQA review process.  Page 4

In sum, the City's weak attempts to support the FEIR's unlawful GHG analysis and mitigation approach are without merit. Thus, the FEIR violates CEQA by failing to fully analyze and mitigate the significant GHG impacts of the Project.

II. THE FEIR CONTINUES TO INCORRECTLY CLAIM THAT CARB SUPPORTS THE WLC'S GHG APPROACH.

The FEIR continues to misrepresent CARB's views on GHG analysis and mitigation.⁶ As noted in CARB's September 7, 2018 letter and in its *Paulek* amicus brief, CARB does not support the approach proposed; the approach is unlawful, inconsistent with relevant climate plans and regulations, and likely to set back the state's climate mitigation efforts if applied. Once again, the Cap-and-Trade Program was not designed to mitigate all GHG impacts associated with land use planning decisions. Rather, it was designed with responsible local CEQA compliance in mind as a complementary strategy. (See, e.g., 2017 Scoping Plan at 99-102.) Cap-and-Trade, which is neither tailored to nor affected by the Project, simply does not provide project-level mitigation in this case.

The FEIR points to several cherry-picked provisions from the 2011 Final Statement of Reasons for the Cap-and-Trade Project. (FEIR at 18-19.) Yet it fails to explain why there is not a single provision, from any point in time, indicating that CARB intended Cap-and-Trade compliance to constitute CEQA mitigation for unregulated entities and projects, or that it excuses land use projects wholesale from evaluating or mitigating their GHG emissions. Cap-and-Trade does not and CARB plainly never intended Cap-and-Trade to obviate CEQA mitigation requirements; that is a much bigger change that CARB would have expressly addressed had that been the intent. While the FEIR points out selected Scoping Plan provisions (FEIR at 25), it conveniently omits the directly applicable "Climate Action through Local Planning and Permitting" chapter describing how CARB relies on complimentary local planning actions (including robust CEQA analysis and mitigation) to accomplish the state's GHG mandates and goals. (See 2017 Scoping Plan at 99-102.) The City's approach would effectively render superfluous the CEQA mitigation recommendations in CARB's Scoping Plan, as there would be essentially nothing left to mitigate if agencies took the City's approach. It would also allow lead agencies to disregard their CEQA obligations and make less informed decisions. (See, e.g.,

⁶ In the *Paulek* litigation, attorneys for the developer argued that because CARB did not specifically object to the project's GHG significance methodology in its early comment letters, CARB "apparently had no problem with the EIRs not counting capped emissions against the [WLC] in order to determine the significance of greenhouse gas emissions." (Transcript of January 22, 2018 hearing in *Paulek* case, before Hon. Sharon J. Waters, p. 18, lines 3-7.) The City has failed to address this issue or otherwise correct this clear and consequential misrepresentation in its responses to comments.

Ms. Descoteaux
 May 14, 2020
 Page 5

SANDAG, supra, 3 Cal.5th at p. 519 [“nothing we say today invites regional planners to ‘shirk their responsibilities’ under CEQA”].)

Despite failing to mitigate 95% of the Project’s emissions, the FEIR appears to claim that the Project would be consistent with the “Climate Action through Local Planning and Permitting” chapter of the Scoping Plan mentioned above. (FEIR at 29.) This is incorrect. As noted above, that chapter of the Scoping Plan discusses how the State needs more, not less, responsible GHG planning and mitigation from project developers and lead agencies. Here, the City seeks to avoid almost entirely its obligation to mitigate its GHG emissions.

III. THE NEW GHG MITIGATION MEASURE 4.7.7.1 IS INADEQUATE.

As stated in our previous comments, under CEQA, the City must revise the FEIR to analyze all of the Project’s significant impacts relating to GHG emissions, including capped emissions. The FEIR must also adopt all feasible mitigation to address the Project’s significant GHG impacts. (*Newhall, supra*, 62 Cal.4th at p. 231.) Instead, the City revised the FEIR to add a mitigation measure for the Project, but this measure does not correct the FEIR’s CEQA violations. The new GHG mitigation measure would require the Project to purchase GHG offsets to mitigate its emissions, but only if the City loses the *Paulek* appellate litigation. (Measure 4.7.7.1.) This measure is inadequate for multiple reasons.

First, the City should adopt meaningful GHG mitigation measures in the FEIR, rather than continuing to avoid its responsibility to require mitigation unless specifically so ordered by a court. The City has conceded that such a measure is feasible by including its contingent GHG mitigation measure in the FEIR. (CEQA Guidelines, § 15092, subd. (b)(2)(A) [“A public agency shall not decide to approve or carry out a project for which an EIR was prepared unless . . . [t]he agency has . . . [e]liminated or substantially lessened all significant effects on the environment where feasible.”].) Indeed, more beneficial mitigation measures are feasible – including the use, for instance, of electrified trucks for the Project, which would reduce both GHGs and air pollution risk, as CARB has long recommended. Yet, the Project has not even adopted its inadequate offset measure, much less failed to explain why it has not adopted ostensibly feasible measures presented by CARB regarding design changes to favor zero emission vehicles. There is no indication in the record that even a more robust, legally-adequate GHG mitigation measure would be infeasible for the Project.

Second, the proposed measure, if it ever becomes effective, may not actually reduce the Project’s GHG emissions. Mitigation Measure 4.7.7.1 uses similar language to CARB’s offsets program, it lacks the essential safeguards that make CARB’s program successful. For example, the measure states that any offsets used must be “real, permanent, additional, quantifiable, verifiable, and enforceable by an appropriate agency.” (FEIR at 36.) However, these terms are not defined in the mitigation measure. They are left to the sole interpretation and discretion of the City’s Planning Official and thus not enforceable as CEQA requires. (See Pub. Resources Code, § 21081.6, subd. (b); CEQA Guidelines, § 15126.4, subd. (a)(2).) There is a broad continuum of voluntary-market offsets available for purchase by project proponents, ranging

Ms. Descoteaux
 May 14, 2020
 Page 6

from ineffective and unenforceable to rigorous. It remains unclear which types of offsets would be deemed by the City’s Planning Official to meet these undefined criteria.

In the land-use planning context, offsets—particularly offsets that are not tied to local projects—have distinct disadvantages as compared to on-site mitigation or other direct emission reduction measures. Offsets do not provide the important co-benefits of on-site mitigation such as local jobs, reduced local air pollution, local infrastructure and efficiency improvements. (See e.g. 2017 Scoping Plan at 102 (“CARB recommends that lead agencies prioritize on-site design features that reduce emissions, especially from [vehicle miles traveled], and direct investments in GHG reductions within the project’s region that contribute potential air quality, health, and economic co-benefits locally.”) This is why the 2017 Scoping Plan prioritizes local direct investments, and recommends turning to offset credits “[w]here further project design or regional investments are infeasible or not proven to be effective.” (2017 Scoping Plan at 102.) The proposed measure, by contrast, does not obligate the Project to first consider additional direct reductions, or other local or regional GHG emissions reductions, before deciding to purchase offsets. Such direct or local measures could otherwise benefit those in the Project vicinity. Furthermore, the measure does not in any way limit the percentage of offsets which may be used to mitigate the Project’s GHG emissions, as compared to more direct methods of GHG reduction. California’s Cap-and-Trade Program, for its part, sets a quantitative usage limit, which allows only 4-8% (depending on the calendar year) of an entity’s compliance obligation to be met through surrendering offsets. (See 17 Cal. Code Regs., § 95854.) This helps ensure that offsets are a relatively small part of the overall Cap-and-Trade Program, ensuring that the majority of GHG reductions come from reductions by regulated entities rather than from non-covered sectors.

The FEIR’s proposed measure entirely lacks this protection, instead allowing offsets (even ones that may not actually result in GHG reductions, as described above) as the sole GHG mitigation mechanism. These disadvantages, combined with the lack of any adequate criteria to ensure quality or enforceability of the offsets that may be purchased in this case, make the mitigation measure ineffective and unreliable.

Mitigation Measure 4.7.7.1 also seems to imply that CARB has broadly “approved” the offset registries it lists. The measure’s text states: “Credits registered by a carbon registry approved by the California Air Resources Board, such as, but not limited to, the Climate Action Reserve, American Carbon Registry, Verra (formerly Verified Carbon Standard) or GHG Reduction Exchange (GHG RX), shall be conclusively presumed to meet all of the criteria set forth above.” (FEIR at 36). CARB has approved only the American Carbon Registry, Climate Action Reserve, and Verra for the limited purpose of participation as Offset Project Registries in CARB’s Cap-and-Trade Program, pursuant to the process set forth in section 95986 of Title 17 of the California Code of Regulations. This approval only pertains to the registry’s participation in the Cap-and-Trade Regulation, in connection with issuing CARB offset credits. By contrast, the offsets contemplated by Mitigation Measure 4.7.7.1 are known as “voluntary market” offsets, which are generated under separate protocols adopted by the registries. CARB does not review

Ms. Descoteaux
 May 14, 2020
 Page 7

these voluntary market protocols. CARB's "approval" of a registry as an Offset Project Registry under the Cap-and-Trade Program does not mean CARB has reviewed or approved that registry's voluntary market offset protocols.

Mitigation Measure 4.7.7.1 improperly bypasses onsite and local mitigation and violates CEQA because of its unenforceability and thus must be revised.

IV. THE FEIR IMPROPERLY DECLINES TO ADOPT FEASIBLE MITIGATION MEASURES THAT WOULD SUBSTANTIALLY LESSEN THE PROJECT'S SIGNIFICANT ADVERSE EFFECTS.

The FEIR simultaneously argues the proposed use of offsets and credits is a feasible mitigation measure, and yet refuses to adopt such a measure now by conditioning it on the outcome of the *Paulek* litigation. This approach violates CEQA, which instructs that "public agencies should not approve projects as proposed if there are... feasible mitigation measures available which would substantially lessen the significant environmental effects of such projects." (Pub. Res. Code 21002). The FEIR recognizes it is possible to offset the entire 232,402 metric tons of GHG from this Project but only guarantees the offset of 8,563 metric tons of GHG emissions. (See FEIR at page 39.) The entire 232,403 metric tons of GHGs will *not* be offset if the "trial court's judgment in *Paulek* is affirmed after the appellate process is completed or if the appeal is dismissed." However, if the appeal is dismissed, an appellate court will not have upheld the City's GHG analysis and, as described above, the City's misleadingly-named "capped" emissions would be considered a significant environmental effect. These emissions would need to be mitigated, and could be via a feasible and rigorous GHG mitigation measure (as described above). By refusing to adopt such a feasible mitigation measure here, the FEIR violates CEQA. (See CEQA Guidelines, § 15092.)

V. MITIGATION MEASURE 4.7.7.1 IS "SIGNIFICANT NEW INFORMATION" THAT REQUIRES RECIRCULATION OF THE FINAL EIR.

Pursuant to Public Resources Code section 21092.1, Mitigation Measure 4.7.7.1 is "significant new information" that requires a new opportunity for public comment. "Significant new information" includes a new "feasible way to mitigate or avoid [a substantial adverse environmental effect]... that the project's proponents have declined to implement." (*Laurel Heights Improvement Assn. v. Regents of University of California* (1993) 6 Cal.4th 1112, 1129, as modified on denial of reh. (Feb. 24, 1994)). As described above, Mitigation Measure 4.7.7.1 identifies a feasible, although not necessarily proper, way to mitigate the Project's greenhouse gas emissions, yet declines to adopt such mitigation unconditionally.

When "significant new information... is added to an environmental impact report after notice... but prior to certification" the public agency must "give notice again pursuant to Section 21092... before certifying the environmental impact report." (Pub. Resources Code, § 21092.1). Notice pursuant to Public Resources Code Section 21092(b)(2) requires a comment period.

Ms. Descoteaux
 May 14, 2020
 Page 8

However, Mitigation Measure 4.7.7.1 was added to the FEIR through a “Response to Comments on the Revised Sections of the Final EIR and Draft Recirculated Revised Sections of the Final EIR” without any such comment period. Instead, the City simultaneously released that document and a Notice of Completion informing the public that the Moreno Valley Planning Commission would review the Revised FEIR at a public hearing on May 14, 2020. Moreno Valley should have recirculated the EIR and provided an opportunity for public comment on the EIR with the addition of Mitigation Measure 4.7.7.1.⁷

VI. CONCLUSION

The Attorney General and CARB urge the City of Moreno Valley not to certify the FEIR without further revisions to the GHG analysis as described above. As stated in our previous comments, the City must take its obligations as a local government to mitigate climate change impacts seriously. The addition of a weak GHG measure that would apply only if the City’s approach is invalidated on appeal is not enough. However, if the City implements the actions that the state’s expert agencies have requested for years, the Project could be an important environmental leadership project. Indeed, the Project could create jobs by building a world-leading clean logistics project, protecting communities all along its supply chains. We encourage the City to take this opportunity to innovate and to lead. As always, we would be happy to work with the City to take the additional steps needed to fully comply with CEQA’s GHG analysis and proper mitigation requirements for the Project. We appreciate your consideration of our comments.

Sincerely,

HEATHER LESLIE
 Deputy Attorney General

For XAVIER BECERRA
 Attorney General

⁷ In its January 30, 2020 comments, CARB informed the City of its concerns with not being able to review the new GHG-related mitigation measure. (See January 30, 2020 CARB comment letter at page 1.) When CARB reached out to a City representative at that time, CARB was informed that the reference to the new GHG mitigation measure was included in the RRSFEIR in error, and it would be removed in the FEIR. Rather than remove that measure, the FEIR now includes a new GHG mitigation measure that has never before been circulated for public review, and which the City had previously indicated would not be part of the FEIR. The City only now has decided to release this measure as part of a vast FEIR package, just 14 days prior to the Project approval hearing.

RE: Revised Sections of the Final Environmental Impact Report for the World Logistics Center Project

Dear Mr. Armijo:

Attorney General Xavier Becerra submits the following comments on the Revised Sections of the Final Environmental Impact Report (“RFEIR”) prepared for the World Logistics Center (the “Project”).¹ The Project, a proposed warehouse and logistics complex in the City of Moreno Valley (“City”), would be one of the largest warehouse facilities in the world, with square footage equaling approximately 700 regulation-size football fields.

INTEREST OF THE ATTORNEY GENERAL

For well over a decade, the Attorney General has actively encouraged lead agencies to fulfill their CEQA responsibilities as they relate to climate change. It is now well-established that California, through law and policy, and consistent with sound science, is committed to achieving a low-carbon future by 2050 in order to reduce and avoid the most catastrophic effects of climate change. California has already begun to experience adverse climate effects, such as rising sea levels and longer, more intense fire seasons. The Attorney General is particularly concerned about how such effects may impact our most vulnerable communities, such as Inland Empire residents, who are already burdened by some of the worst air quality in the country.

¹ The Attorney General’s Office submits these comments pursuant to his independent power and duty to protect the environment and natural resources of the State from pollution, impairment, or destruction, and in furtherance of the public interest. (See Cal. Const., art. V, § 13; Gov. Code, §§ 12511, 12600-12612; *D’Amico v. Bd. of Medical Examiners* (1974) 11 Cal.3d 1, 14-15.) This letter is not intended, and should not be construed, as an exhaustive discussion of the RFEIR’s compliance with the California Environmental Quality Act (“CEQA”).

Attachment: Appeal of PEN18-0050 Revised Final EIR (PAA20-0002) A. Martinez (4074 : World Logistics Center)

Mr. Armijo
 September 7, 2018
 Page 2

Every large development project has the potential either to facilitate, or instead hinder, the State's achievement of its climate goals. It is therefore important that as lead agencies consider the impacts of individual development projects – many of which will operate for decades into the future – they evaluate and impose feasible mitigation for climate change impacts.

With these goals in mind, the Attorney General has provided guidance to local governments, commented on potential projects, and engaged with local interest organizations concerned with climate change and environmental justice. (See California Department of Justice, Office of the Attorney General, *California Environmental Quality Act*, <https://oag.ca.gov/environment/ceqa> (as of Sept. 7, 2018).) The Attorney General has also participated in litigation throughout the State to ensure that local governments comply with state requirements to fully analyze and implement all feasible mitigation measures to lessen significant impacts from greenhouse gas emissions (“GHGs”) caused by land use development projects. (See, e.g., *Cleveland National Forest Foundation v. San Diego Assn. of Governments* (2017) 3 Cal.5th 497; *People of the State of California v. County of San Bernardino* (Cty. of San Bernardino filed April 12, 2007) No. CIVSS700329.) The Attorney General also has a long-standing interest in ensuring environmental justice throughout the State and for communities in the Inland Empire. (See, e.g., *CCA EJ v. County of Riverside, et al.*, Case No. RIC1112063; California Department of Justice, Office of the Attorney General, *Environmental Justice at the Local and Regional Level: Legal Background* (July 10, 2012) https://oag.ca.gov/sites/all/files/agweb/pdfs/environment/ej_fact_sheet.pdf.)

After review of the GHG analysis in the RFEIR, the Attorney General believes that the City has failed to comply with CEQA's requirements for analyzing and implementing feasible mitigation for the significant GHG emissions that will result from this Project. For the reasons outlined below, the City's approach falls substantially short of meeting the requirements of CEQA, the regulations implementing CEQA – the CEQA Guidelines (Cal. Code Regs., tit. 14, § 15000 et seq.), and applicable case law. The City's approach in the RFEIR has the potential to seriously undermine the overall effort to meet the State's science-based GHG reduction goals for the transportation and land use sectors, and to disproportionately disadvantage environmental justice communities.

THE RFEIR'S GHG ANALYSIS VIOLATES CEQA AND UNDERMINES THE STATE'S CLIMATE OBJECTIVES.

As the RFEIR acknowledges, this Project at buildout will cause over 281,000 metric tons of GHGs to be released into the atmosphere every year, and will result in over 200,000 metric tons of GHG emissions beginning as early as 2028. (RFEIR at 4.7-35.) These emissions will presumably continue throughout the life of the project, though the RFEIR does not address this.

The RFEIR takes a very unusual and troubling approach to addressing the Project's GHG-related impacts, especially since climate pollution is undeniably a *cumulative* problem. (*Center for Biological Diversity v. Department of Fish & Wildlife* (2015) 62 Cal.4th 204, 256-257.) The RFEIR divides the Project's GHG emissions into two categories, which it terms

Mr. Armijo
 September 7, 2018
 Page 3

“capped” and “uncapped” – classifications created by this RFEIR. What the RFEIR deems “uncapped” emissions constitute only about 3% of the Project emissions. They include the comparatively minor landfill emissions caused by waste generated at the Project and the use of refrigerants at the Project. (RFEIR at 4.7-33.) For these emissions, the RFEIR follows the approach that would be expected under CEQA: the City has, in its discretion, designated a significance threshold (in this case, 10,000 metric tons of GHGs as recommended by the South Coast Air Quality Management District), compared the “uncapped” emissions to that threshold, and required feasible mitigation measures to ensure those emissions fall below that threshold.² (RFEIR at p. 4.7-19.) What the RFEIR terms “capped” emissions, however, constitute the remaining 97% of the Project’s predicted emissions. Those include emissions caused by mobile sources (namely, diesel trucks) and electricity use at the Project. (RFEIR at p. 4.7-33.) With respect to these emissions, the RFEIR deviates dramatically from standard CEQA methodology. The RFEIR asserts that these emissions are “covered” by the California Air Resources Board’s (“CARB”) Cap-and-Trade Program, and therefore claims that they are exempt from any further CEQA analysis or mitigation. (RFEIR at p. 4.7-22.) This is a novel and unsupportable approach under CEQA.

As discussed below, the RFEIR’s approach does not comply with CEQA, for several reasons. First, the Project is not regulated under the State’s Cap-and-Trade Program, so purported compliance with that Program cannot be used to exclude 97% of the Project’s GHG emissions from the analysis of whether the Project’s GHG emissions will result in significant climate change impacts. Second, CEQA requires that all of the emissions attributable to the Project be evaluated for significance, regardless of their source. Third, when comparing all of the Project’s emissions to California’s ambitious, science-based climate goals, as well as statewide, regional, and local plans for the reduction or mitigation of GHG emissions, the Project’s GHG emissions are clearly significant, requiring further feasible mitigation measures.

We are concerned about the City’s use of this analytical approach, both in the context of this Project and more generally. If the RFEIR’s approach is put into general use by the City, or followed by other lead agencies, emissions from transportation and electricity could largely be exempt from analysis and mitigation under CEQA. This is directly counter to the purposes of CEQA, and the Legislature’s considered decision to make clear that GHG emissions must be analyzed. (Senate Bill 97 (2007); Pub. Resources Code, § 21083.05.) The State cannot meet its well-established, long-term environmental GHG reduction goals if new local projects are free to add hundreds of thousands of tons of GHGs to the atmosphere every year without undergoing the

² Lead agencies may choose to use a “threshold of significance,” a working presumption that can assist in determining whether an impact is significant. (Cal. Code Regs., tit. 14, §§ 15064.4(b)(2); 15064.7.) “A threshold of significance is an identifiable quantitative, qualitative or performance level of a particular environmental effect, non-compliance with which means the effect will normally be determined to be significant by the agency and compliance with which means the effect normally will be determined to be less than significant.” (Cal. Code Regs., tit. 14, § 15064.7, subd. (a).)

Mr. Armijo
 September 7, 2018
 Page 4

analysis and mitigation that CEQA requires. Moreover, the RFEIR's approach will likely expose already-burdened communities in the State to greater amounts of GHG co-pollutants, such as diesel particulate matter and nitrogen oxides.

We urge the City to revise its GHG analysis to comply with CEQA by properly evaluating whether *all* of the Project's emissions—for all phases of the Project, direct and indirect, short-term and long-term—are cumulatively significant, and adopting feasible mitigation to ensure those emissions do not have a significant impact on the environment.

I. THE RFEIR'S NOVEL APPROACH TO "CAPPED" EMISSIONS VIOLATES CEQA.

The purpose of an environmental impact report is "to provide public agencies and the public in general with detailed information about the effect which a proposed project is likely to have on the environment; to list ways in which the significant effects of such a project might be minimized; and to indicate alternatives to such a project." (Pub. Resources Code § 21061.)

The City's approach violates a number of well-established CEQA principles. Lead agencies must "consider the whole of an action, not simply its constituent parts, when determining whether it will have a significant environmental effect." (Cal. Code Regs., tit. 14 § 15003, subd. (h).) This Project as a whole includes both the "capped" and "uncapped" GHG emissions, but the RFEIR fails to analyze and mitigate "capped" emissions. Moreover, both "direct and indirect significant effects" and "short-term and long-term effects" should be considered. (Cal. Code Regs., tit. 14, § 15126.2, subd. (a).) The RFEIR fails to inform the public of the long-term effects of the Project's GHG emissions by failing to analyze GHG emissions past buildout.

In addition to violating these more general principles, the City's approach to "capped" emissions contradicts the CEQA Guidelines specific to GHG analysis. "The determination of whether a project may have a significant effect on the environment calls for careful judgment on the part of the public agency involved, based to the extent possible on scientific and factual data." (Cal. Code Regs., tit. 14, § 15064, subd. (b).) The CEQA Guidelines advise lead agencies on how to determine the significance of a Project's GHG emissions. A lead agency should consider three non-exclusive methods for determining climate significance:

- (1) The extent to which the project may increase or reduce greenhouse gas emissions as compared to the existing environmental setting;
- (2) Whether the project emissions exceed a threshold of significance that the lead agency determines applies to the project[.];
- (3) The extent to which the project complies with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of greenhouse gas emissions. . . . If there is substantial evidence that the possible effects of

Mr. Armijo
 September 7, 2018
 Page 5

a particular project are still cumulatively considerable notwithstanding compliance with the adopted regulations or requirements, an EIR must be prepared for the project. (Cal. Code Regs., tit. 14, § 15064.4, subd. (b)).

While “[a]n ironclad definition of significant effect is not always possible,” (Cal. Code Regs., tit. 14 § 15064, subd. (b)), the RFEIR’s conclusion that the Project’s GHG impacts are not significant under CEQA (RFEIR at p. 4.7-33) is based solely on its unjustifiable exclusion of the vast majority of the GHG emissions of the Project. That exclusion is neither consistent with CEQA nor justified by the Cap-and-Trade Program, which does not apply to the Project.

A. Since the Project is Not Regulated Under Cap-and-Trade, The RFEIR Cannot Use Cap-and-Trade to Ignore the Significance of the Project’s GHG Emissions.

The RFEIR effectively treats the Cap-and-Trade Program as if it is a qualified mitigation plan for the Project and its “capped” emissions. (See Cal. Code Regs., tit. 17, §§ 15064, subd. (h)(3); 15064.4 subd. (b)(3)). It is not.

California’s Cap-and-Trade Program applies “an aggregate greenhouse gas allowance budget [to] *covered entities* and provides a trading mechanism for compliance instruments.” (Cal. Code Regs., tit. 17, § 95801 (emphasis added).) The Cap-and-Trade Program only applies to expressly identified entities, such as cement producers, petroleum refiners, electricity generators, natural gas supplies, fuel importers, and liquid petroleum gas supplies. (Cal. Code Regs., tit. 17, § 95811.) Warehouse and logistics complexes are *not* covered entities.

Although the operator of a refinery that produces liquefied petroleum gas in California is subject to the Cap-and-Trade Program, (Cal. Code Regs., tit. 17, § 95811, subd. (e)(1)), entities downstream from that refinery in the chain of commerce are not. The refinery itself may have compliance obligations under the Cap-and-Trade Program, which can be met by reducing its own GHG emissions or surrendering compliance instruments, but the gas station that resells the gas, the truck drivers who purchase it, and the warehouses to which the trucks drive do not. Because CEQA Guidelines section 15064.4, subdivision (b)(3) instruct lead agencies to consider the extent to which *the project* complies with GHG regulations or requirements, it is inappropriate to rely upon compliance with Cap-and-Trade by other entities downstream in the chain of commerce as a basis for avoiding analysis of project-related emissions. In the Final Statement of Reasons for the CEQA Guidelines addressing GHG emissions, the California Natural Resources Agency confirmed that, in implementing CEQA Guidelines section 15064.4, a lead agency must show that a GHG reduction plan “actually addresses the emissions that would result from the project.” (California Natural Resources Agency, Final Statement of Reasons for Regulatory Action: Amendments to the State CEQA Guidelines Addressing Analysis and Mitigation of Greenhouse Gas Emissions Pursuant to SB 97 (2009), available at http://resources.ca.gov/ceqa/docs/Final_Statement_of_Reasons.pdf, at p. 27.)

Mr. Armijo
September 7, 2018
Page 6

Further, the City's approach is not, as the RFEIR claims (RFEIR at 4.7-20), supported by *Association of Irrigated Residents v. Kern County Bd. of Supervisors* (2017) 17 Cal.App.5th 708 ("AIR"). Without commenting on whether or not that case was rightly decided, AIR is facially inapposite because the project being evaluated under CEQA in that case was a refinery, a covered entity under the Cap-and-Trade Program. Because this Project is not a covered entity under the Cap-and-Trade Program, it is unjustifiable for the RFEIR to use compliance with Cap-and-Trade as a factor in analyzing the significance of the Project's GHG emissions. There is no basis in the law for the use of Cap-and-Trade to exclude a full 97% of the Project's GHG emissions from analysis or mitigation.

The flaw in the City's approach becomes even more apparent when one considers its incongruous results. The RFEIR describes the Project, in part, as follows: "Goods imported through the Ports of Long Beach and Los Angeles as well as other locations are delivered via truck to the proposed distribution centers and distributed via truck both in and out of state locations. . . ." (Original FEIR at 3-27-3-28.) The heart of this Project is this movement of goods via trucks. Yet, the City's approach avoids any analysis of 210,596 metric tons of GHG emissions associated with the movement of goods via trucks. (RFEIR at p. 4.7-33.) 97% of the Project's total GHG emissions are simply dismissed under this approach. CEQA does not permit such a dismissal.

B. The RFEIR Must Consider All Emissions in Determining Significance.

Correctly applying CEQA requires an evaluation of *all* the Project's GHG emissions in determining significance. (See Cal. Code Regs., tit. 14, §§ 15064.4, subd. (b)(2); 15378 (defining "project" as "the whole of an action. . . .")) There is no basis here for comparing some of the Project's emissions to the significance threshold, but not others. Here, the City elected to use a threshold of 10,000 metric tons of GHGs. (RFEIR at p. 4.7-19.) CEQA Guidelines section 15064.4, subdivision (b)(2), notes that when using a threshold, an agency should compare all of the "project emissions" of GHGs to that threshold. Emissions from trucks and electricity are a result of the Project just as much as the "uncapped" emissions. They therefore must be compared to the significance threshold, and mitigated to the extent feasible.

Further, the City's attempt to exempt an impact from any significance analysis based solely on purported compliance with a single rule or regulation is unwarranted. Courts have repeatedly held compliance with a single environmental or land use law or regulation does not create an exemption from CEQA's requirement that lead agencies evaluate all of a project's significant environmental impacts. For example, "compliance with a general plan in and of itself 'does not insulate a project from the EIR requirement, where it may be fairly argued that the project will generate significant environmental effects.'" (*East Sacramento Partnerships for a Livable City v. City of Sacramento* (2016) 5 Cal.App.5th 281, 301; see also *Keep Our Mountains Quiet v. County of Santa Clara* (2015) 236 Cal.App.4th 714, 732 ("[A]n EIR is required if substantial evidence supports a fair argument that [a project] may have significant unmitigated noise impacts, even if other evidence shows the [project] will not generate noise in excess of [a] County's noise ordinance or general plan."))

Mr. Armijo
 September 7, 2018
 Page 7

C. In Light of the Project’s Substantial, Long-Term Projected Emissions, Its GHG Impacts Must Be Deemed Significant.

It seems impossible a proper evaluation of the Project’s emissions under CEQA could support a finding that the Project’s emissions are not significant. This Project—as currently designed—will lock in hundreds of thousands of tons of GHG emissions for decades to come, and may put this City and the region on a path that deeply undermines the State’s climate goals.

To reduce and avoid the most catastrophic effects of climate change, science tells us that we must dramatically reduce our annual statewide GHG emissions. California has taken ambitious steps to accomplish that objective. Assembly Bill 32 (“AB 32”) requires California to reduce its total statewide GHG emissions to 1990 levels by 2020. (Health & Saf. Code, § 38550.) Under Senate Bill 32 (“SB 32”), California must reduce its GHG emissions to 40% below 1990 levels by 2030. (Health & Saf. Code, § 38566.) In addition, the Governor’s Executive Order S-3-5 (“EO S-3-05”) directs state agencies to reduce statewide GHG emissions to 80% below 1990 levels by 2050. To achieve such ambitious but necessary goals, California will have to reduce GHG emissions from various sectors of the economy. Transportation, industry, and electricity generation are the top three contributing sectors to the State’s total GHG emissions. (CARB, 2017 Climate Change Scoping Plan (Nov. 2017) at p. 11 (“Scoping Plan”).) Below is a graph showing the dramatic downward trajectory of statewide GHG reductions necessary to achieve the State’s climate goals.

FIGURE 5: PLOTTING CALIFORNIA’S PATH FORWARD

(Scoping Plan at p. 24.)

Mr. Armijo
September 7, 2018
Page 8

California has adopted a multitude of regulations, requirements, plans, and policies to achieve the substantial reductions in statewide GHG emissions required by AB 32, SB 32, and EO S-3-5. CARB identified, in its Climate Change Scoping Plan, multiple required and voluntary measures working in concert as necessary for California to achieve its ambitious climate goals as depicted in the graph below. (See Scoping Plan at p. 28.)

FIGURE 7: SCOPING PLAN SCENARIO – ESTIMATED CUMULATIVE GHG REDUCTIONS BY MEASURE (2021–2030)⁶⁴

The Scoping Plan proposes various strategies for reductions in emissions from transportation and energy sectors. The Scoping Plan notes that for the GHG reductions from the transportation sector, “[vehicle miles traveled (“VMT”)] reductions are necessary to achieve the 2030 target and must be part of any strategy evaluated in this plan.” (Scoping Plan at p. 112.) In addition, under SB 375, CARB assigns California’s 18 Metropolitan Planning Organizations targets for GHG emission reductions in the transportation sector which are to be achieved based on land use patterns and transportation systems. (CARB, Updated Final Staff Report: Proposed Update to the SB 375 Greenhouse Gas Emission Reduction Targets (2017), available at https://www.arb.ca.gov/cc/sb375/final_staff_proposal_sb375_target_update_october_2017.pdf.) CARB’s recommended target for the Southern California Association of Governments is a 19% reduction in GHG emissions from transportation by 2035. (*Id.* at p. 34.)

CEQA requires the City evaluate the consistency of the Project’s substantial increases in GHG emissions with state and regional plans and policies calling for a dramatic reduction in GHG emissions. The Supreme Court in *Cleveland National Forest Foundation v. San Diego Association of Governments* (2017) 3 Cal.5th 497 (“*SANDAG*”) affirmed that an EIR should consider the project’s long-range greenhouse gas emission impacts through the year 2050, and address whether the project as a whole is in accord with the state’s climate goals. (*Id.* at p. 515.) The Supreme Court further instructed lead agencies to “stay in step with evolving scientific knowledge and state regulatory schemes.” (*Id.* at p. 504.)

Mr. Armijo
September 7, 2018
Page 9

The RFEIR estimates that the Project's total emissions will increase from the existing conditions of no emissions at the Project site to over 281,000 metric tons of GHG emissions annually at full buildout of the Project in 2040. (RFEIR at p. 4.7-33.) See the graph below depicting the trajectory of the Project's GHG emissions.³

The Project's substantial *increase* in GHG emissions conflicts with the downward trajectory for GHG emissions necessary to achieve state climate goals. This is illustrated clearly in the sharp difference in the upward trajectory of the graph of the Project's GHG emissions versus the steep downward trajectory in the graph of the State's climate goals as depicted in Figure 5 of the Scoping Plan and reproduced above. Yet, the RFEIR failed to evaluate the Project's consistency with state and regional goals, requirements, plans, and policies to reduce

³ Visual depictions such as this graph make it easier to understand the significant impact of GHG emissions from the Project on the environment. Such clarity is encouraged by the CEQA Guidelines, which state that EIRs should be "written in plain language and may use appropriate graphics so that decisionmakers and the public can rapidly understand the documents." (Cal. Code Regs., tit. 17, § 95811.) Such graphs are also helpful because they allow the decisionmakers to see a project's proposed greenhouse gas emissions as a trajectory and assess the "significance of the *shape* of that emissions curve as a whole." (Janill Richards, *The SANDAG Decision: How Lead Agencies Can "Stay in Step" with Law and Science in Addressing the Climate Impacts of Large-Scale Planning and Infrastructure Projects* (2017) 26:2 Environmental Law News 17, 19, available at http://legal-planet.org/wp-content/uploads/2018/09/environmental-law-news_2017_vol-26-no-2_fall_the-sandag-decision.pdf.) To better inform the public of the Project's unmitigated GHG emissions, we recommend revising the RFEIR to include graphical representations of the emissions trajectory of the project.

Mr. Armijo
 September 7, 2018
 Page 10

GHGs that should have been analyzed under CEQA. Comparing the Project's GHG trajectory against the state's climate goals would inform the public of the Project's GHG impacts. For example, the RFEIR's GHG analysis should have considered whether the Project will increase VMT. Because it did not, it is inconsistent with SB 375. Although the RFEIR's revised traffic analysis does include a VMT analysis, it is included only to address air quality issues, and not GHGs. (RFEIR at pp. 4.7-19 and 4.15-3.) Under CEQA, the City is required to consider how the project can reduce VMT and electricity use, "rather than expecting[ing] these reductions to come [only] from technological advances or other measures." (SANDAG, at 523.) The City ignores its CEQA obligations and instead, the RFEIR obscures the Project's GHG impacts by improperly exempting them from CEQA analysis.

In addition, there is no discussion in the RFEIR of the GHG emissions from the Project over its expected lifespan. GHG emissions are estimated up until the Project's full buildout in 2040 (RFEIR at p. 4.7-33), but the Project will clearly continue beyond that point, and the RFEIR gives no indication of how long that will be. The cumulative impact of the Project's GHG emissions over its entire lifespan should be considered and mitigated to the greatest extent feasible. Notably, by failing to estimate emissions through 2050, the RFEIR obscures the extent to which the Project does or does not comply with California's explicit 2050 climate goals.

D. The RFEIR Should Analyze and Adopt Feasible Mitigation Measures to Avoid or Lessen the Project's GHG Impacts.

CEQA requires that an EIR consider and adopt feasible alternatives or mitigation measures that would substantially lessen the significant and harmful environment effects of the project being analyzed. (See Pub. Resources Code, § 21002.) The RFEIR's failure to properly analyze the Project's significant GHG impacts also results in a failure to mitigate those impacts as required by CEQA. If the RFEIR's analysis were done properly, the Project's GHG emissions from vehicles and electricity would have vastly exceeded the significance threshold selected by the City. Those emissions would therefore have to be reduced through changes or alterations in the Project, or the City would be required to explain why "[s]pecific economic, legal, social, technological, or other considerations including provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or project alternatives... ." (Cal. Code Regs., tit. 22, § 15091, subds. (a)(1) and (a)(3).) There may be mitigation measures or project alternatives that could reduce or avoid the Project's GHG emissions, such as the adoption of requirements mandating the use of zero emission vehicles or a certain percentage of electricity from renewable electricity sources, such as on-site solar power generation.⁴ By

⁴ The Attorney General recognizes that devising climate mitigation on a project-by-project basis can be challenging. Many local governments have therefore elected to move toward enforceable Climate Action Plans ("CAPs") integrated with their general plans. (CARB, California Climate Action Portal Map, <https://webmaps.arb.ca.gov/capmap/> (as of Sept. 7, 2018).) Done correctly, CAPs can put local governments on the path to a lower-carbon future

Mr. Armijo
September 7, 2018
Page 11

excluding 97% of the Project's GHG emissions from its significance determination, the RFEIR obscures the extent of the Project's emissions and improperly evades the City's obligation to mitigate the Project's GHG impacts.

II. ADOPTION OF THIS METHOD OF EXEMPTING "CAPPED" EMISSIONS FROM CEQA ANALYSIS WILL UNDERMINE THE STATE'S VARIOUS POLICIES AND PROGRAMS TO REACH OUR AMBITIOUS CLIMATE GOALS.

The RFEIR's failure to comply with CEQA will have real consequences. If this RFEIR's approach is widely adopted, the State will not be able to achieve its ambitious climate goals. The RFEIR exempts the Project's emissions attributable to mobile sources and electricity use from CEQA analysis and mitigation. And yet transportation and electricity are two of the State's three largest sources of GHG emissions. (Scoping Plan at p. 11). Transportation and electricity are thus two of the most important areas in which GHG emissions must be reduced.

The RFEIR's approach to the transportation and electricity sectors incorrectly presumes that the Cap-and-Trade Program will achieve *all* GHG reductions necessary in those areas. But as CARB's 2017 Scoping Plan points out, "[l]ocal land use decisions play a particularly critical role in reducing GHG emissions associated with transportation, both at the project level, and in long-term plans..." (Scoping Plan at pp. 100-101.) If other lead agencies adopt the City's approach, millions of metric tons of GHGs resulting from development projects would be ignored and unmitigated through what amounts to a categorical exemption from CEQA. Local governments would therefore not be doing their part to help the State reach its ambitious, yet necessary, climate goals of emitting 40% below 1990 GHG levels by 2030 and 80% below 1990 levels by 2050. (Heath & Saf. Code, § 38566, Governor's Executive Order No. S-3-05 (June 1, 2005).)

Instead of claiming that no amount of transportation and electricity emissions can be significant under CEQA, and thus excluding them from any analysis and mitigation, lead agencies have an obligation to acknowledge the significance of such emissions and work to implement feasible mitigation of them.⁵

III. REVISING THE GHG ANALYSIS WILL LIKELY LEAD TO GREATER PROTECTION OF ENVIRONMENTAL JUSTICE COMMUNITIES.

In addition to, and separate from, the CEQA issues, revising the RFEIR's GHG analysis will likely help mitigate some of the Project's direct harmful effects on environmental justice communities. Moreno Valley contains some of the most pollution-burdened census tracts in the

while substantially streamlining the approval of individual projects that are consistent and comply with the CAP.

⁵ There are several examples of economically viable land use development projects that contributed no net additional GHG emissions. (Scoping Plan at p. 99.)

Mr. Armijo
September 7, 2018
Page 12

State according to California Environmental Protection Agency's CalEnviroScreen tool.⁶ City residents experience ozone and particulate matter (PM) 2.5 at rates higher than 90% of the State. The South Coast Air Basin, where Moreno Valley is located, exceeds federal public health standards for ozone, ozone precursors, and particulate matter. Exposure to these air contaminants contributes to asthma, lung cancer, and cardiovascular disease. Indeed, residents in Moreno Valley experience higher than average emergency room visits due to asthma and higher than average rates of cardiovascular disease, particularly residents living along freeways.

Furthermore, environmental justice concerns are significant for the residents of Moreno Valley. Moreno Valley residents are predominately people of color, made up of 56.5% Hispanic and 18% African American populations. (United States Census Bureau, Quick Facts for Moreno Valley, California, <https://www.census.gov/quickfacts/fact/table/morenovalleycitycalifornia.ca/PST045217> (as of Sept. 7, 2018).) The rates of poverty are dramatically higher in Moreno Valley compared to the state—according to U.S. Census data, 18.6% of Moreno Valley residents live in poverty, compared with the statewide poverty rate of 14.4%. (*Ibid.*, and United States Census Bureau, Quick Facts for California, <https://www.census.gov/quickfacts/fact/table/ca/PST045217> (as of Sept. 7, 2018).) They experience high rates of unemployment and housing burdens (paying more than 50% of their income for housing costs). These socioeconomic characteristics of Moreno Valley residents increase their sensitivity to the health effects of the heavy pollution burdens they experience.

Adding to these burdens, Riverside County as a whole, and the City of Moreno Valley specifically, are experiencing a great influx of logistics warehouse projects. Recent developments in Moreno Valley alone include an 825,000 square-foot distribution facility for the Aldi grocery chain, a 1.6 million square-foot distribution facility for Deckers Brands footwear company, and a 1.25 million square-foot fulfillment center for Amazon. These large projects, and their related impacts on the low-income communities of color who live nearby and in the communities residing along the freeways serving them, are dwarfed by the over 40 million square-foot Project.

By conducting a proper GHG analysis in the RFEIR and adopting feasible mitigation, the City will likely better protect the environmental justice communities living near both the Project and along the freeways that trucks will use to reach the Project. Reduction of GHG emissions leads to the reduction of co-pollutant emissions. (See Nicky Sheats, *Achieving Emissions Reductions for Environmental Justice Communities Through Climate Change Mitigation Policy* (2017) 41 WM. & MARY ENVTL. L. & POL'Y REV. 377, 387 (“[E]ven without the intentional maximization of co-pollutant reduction, there should be incidental co-pollutant

⁶ CalEnviroScreen is a tool that uses environmental, health, and socioeconomic information to produce scores and rank every census tract in the state. A census tract with a high score is one that experiences a much higher pollution burden than a census tract with a low score. (See CalEnviroScreen 3.0 Report, Office of Environmental Health Hazard Assessment, January 2017, available at <https://oehha.ca.gov/media/downloads/calenviroscreen/report/ces3report.pdf>.)

Mr. Armijo
 September 7, 2018
 Page 13

reductions as GHGs are being reduced [which] should improve the health of local communities.”)) This is especially true in the context of diesel truck emissions, where a VMT reduction would reduce both GHG emissions and co-pollutant emissions. Indeed, the RFEIR acknowledges that “[t]he *most effective way to reduce air pollution* impacts on the health of our nearly 17 million residents, including those in disproportionately impacted and environmental justice communities that are concentrated along our transportation corridors and goods movement facilities, *is to reduce emissions from mobile sources*,” and that those mobile sources constitute “the principal contributor to our air quality challenges.” (RFEIR at 4.3-11 (emphasis added).) Therefore, while revising the GHG analysis is necessary to comply with CEQA, the City should also see this as an opportunity to implement mitigation measures that would benefit the City’s residents and the other environmental justice communities impacted by this Project.

CONCLUSION

We appreciate the difficulty in analyzing GHG emissions under CEQA. However, local agencies must comply with the CEQA Guidelines for GHG analysis and cannot exempt GHG emissions from any significance analysis because of California’s Cap-and-Trade Program. We urge the City of Moreno Valley to revise the GHG analysis in the RFEIR as described above so as to support this State’s efforts to reduce GHG emissions, achieve our ambitious but necessary climate goals, and benefit local communities in the area who are already suffering some of the worst air pollution in the country. We would be happy to work with the City of Moreno Valley to take the additional steps needed to fully comply with CEQA’s GHG analysis and mitigation requirements for the Project. We appreciate your consideration of our comments.

Sincerely,

HEATHER LESLIE

Re: World Logistics Center Revised Final Environmental Impact Report
 (SCH # 2012021045)

Dear Mr. Armijo:

The California Air Resources Board (CARB) has reviewed the World Logistics Center (WLC or project) Revised Final Environmental Impact Report (RFEIR). CARB appreciates the opportunity to comment on the RFEIR. Unfortunately, despite revisions, the RFEIR mischaracterizes (1) the scope of the Cap-and-Trade Program administered by CARB as they relate to the state's overall greenhouse gas reduction mandates, and (2) how that program may be relevant to a CEQA analysis. Because the RFEIR's GHG analysis relies almost entirely on those mischaracterizations for its GHG analysis and significance determination, it does not meet California Environmental Quality Act (CEQA) requirements.

The RFEIR's core flaw with regard to greenhouse gases (GHGs) is that it declines fully to analyze or mitigate emissions from fuel and electricity demand that the project will cause - the vast majority of the project's emissions - on the ground that CARB's Cap-and-Trade Program purportedly "covers" the project's emissions for this purpose. In fact, the Program does not, and was never designed to, adequately address emissions from local projects and CEQA does not support a novel exemption for such emissions on this ground. The RFEIR's approach obscures the project's significant potential contribution to greenhouse gas emissions, and does not properly account for the combination of federal, state, and local approaches to address climate change that the crisis demands and the law requires.

We also note that the project still has not been modified to address serious health concerns from criteria and toxic air pollutants that CARB discussed in prior letters. Although this letter focuses on GHGs, we continue to be very concerned that local communities may face undue pollution from this project, if completed, as a result of inadequate mitigation.

We urge the City of Moreno Valley (City) to address the criteria and toxics issues we previously raised, and to revise its GHG analysis to accurately account for all GHG emissions that would result from the project, apply those emissions against the applicable significance threshold identified in the RFEIR, adopt feasible mitigation to

September 7, 2018
Page 2

ensure those emissions would not cause significant impacts, and recirculate the RFEIR, all as required by CEQA.

I. CARB's Participation in This Project's Review Process

CEQA requires analysis of a project's GHG emissions. Like all CEQA analyses, these disclosures must inform the public and provide appropriate information on mitigation. Planning for greenhouse gas reductions is critical at the project level, as CARB and other state agencies have repeatedly determined. Although various statewide programs address the climate change crisis as well, the CEQA guidelines, and state guidance documents, are clear that achieving the necessary reductions requires project-level focus.

The WLC project proponents have taken a different view in prior versions of the RFEIR and in related litigation, *Paulek v. City of Moreno Valley* (Riverside County Superior Court Case No. RIC 1510967) ("*Paulek*"). That case addresses, among other topics, the initial GHG analysis conducted for the WLC, and in the RFEIR. There, WLC advocates contended that, because some of the suppliers of the fuels and electricity consumed by the project are in the Cap-and-Trade Program CARB administers, the project was not required to analyze or mitigate the significant emissions impacts it would cause. Attorneys for the WLC also argued that because CARB did not specifically object to the project's GHG significance methodology, CARB "apparently had no problem with the EIRs not counting capped emissions against the [WLC] in order to determine the significance of greenhouse gas emissions."¹

CARB had, in fact, recommended an array of project-based emissions reductions strategies contrary to these claims. CARB takes this opportunity to reiterate those recommendations (prior letters are attached) and to explain why the Cap-and-Trade Program's operations do not allow a departure from CEQA's general rule that project-level impacts be properly addressed.²

¹ Transcript of January 22, 2018 hearing in *Paulek* case, before Hon. Sharon J. Waters, page 18, Lines 3-7.

² In both of CARB's comment letters, which we again incorporate by reference, CARB indicated that its recommendations were for the purpose of reducing not only criteria and toxics pollutants, but also for GHG emissions. CARB reviewed the Draft Environmental Impact Report (DEIR) and provided comments to the City of Moreno Valley in a letter dated April 16, 2013. CARB's comment letter expressed concern over the increase in health risk in the immediate area and the significant and unavoidable air quality and greenhouse gas (GHG) related impacts caused by the proposed WLC. To address those concerns, CARB recommended actions to support the development, demonstration, and deployment of zero and near-zero emission technology at the WLC. On June 8, 2015, CARB again provided comments on the Final Environmental Impact Report (FEIR), making similar recommendations. In those comments, CARB noted that the FEIR was unresponsive to the comments CARB provided in its April 16, 2013 letter regarding the DEIR. (See CARB April 16, 2013 letter at 2; CARB June 8, 2015 letter at 1, 3, and 8.)

September 7, 2018
Page 3

II. The RFEIR's Claims About CARB's Cap-and-Trade Regulation Are Incorrect

CEQA translates between high-level policy goals, and individual project choices to better inform the public and support decision-making. The GHG section of the RFEIR takes a novel, and factually unsupported, departure from ordinary CEQA practice by essentially excusing analysis and potential mitigation of GHG emissions when they are indirectly "covered" by a state program. Yet, state programs regularly address at least some aspect of essentially all CEQA impact areas – from state water pollution standards to habitat conservation laws to building codes to endangered species mandates, projects are always considered against a backdrop of state rules. In the ordinary course, the presence of state programs is not taken simply to "cover" the relevant project level impact. On the contrary, CEQA requires project proponents to inquire as to how the project affects environmental resources of statewide concern and to focus on project-level analysis and mitigation. The same rule applies with regard to greenhouse gases. As the California Supreme Court has held, "[l]ocal governments thus bear the primary burden of evaluating a land use project's impacts on greenhouse gas emissions."³

Project proponents may refer to statewide analyses and programs, but, as the Court held, ultimately must provide "substantial evidentiary support" explaining how project-level decisions relate to state-level programs to justify findings of significance based on those programs.⁴ This is particularly important for new projects, as, per the Court, "a greater degree of reduction may be needed from new projects than from the economy as a whole."⁵ And these projects may not simply point to *any* statewide regulations; on the contrary, "[a] significance analysis based on compliance with such statewide regulations ... only goes to impacts within the area governed by the regulations."⁶

In this instance, the Cap-and-Trade Program simply does not cover the project, or require it do anything to mitigate its emissions. As the Court explained, CARB has not "propose[d] statewide regulations of land use planning, but relies instead on local governments." (*Id.* at 230).

CARB has expressed its non-binding views on these matters via the Scoping Plans it is required to prepare under AB 32. The California Supreme Court has recognized the

CARB was not silent. Moreover, an inference from silence would be improper, in any event. CARB sometimes does not comment on individual projects' GHG or other analyses due to resource constraints and other considerations. Nothing should be inferred from silence on a particular matter.

⁵ *Id.* at 225.

⁶ *Id.* at 229.

September 7, 2018
Page 4

Scoping Plan as a valuable source of data for local governments.⁷ As each version of CARB's Scoping Plan, including the recent 2017 Scoping Plan Update, explains, on the basis of extensive modeling and analysis, the Cap-and-Trade Program is not intended to address project-level impacts and does not do so. Rather, complementary measures, including land-use planning and project-level analyses, are vital adjuncts to the Cap-and-Trade Program, serve additional purposes to address climate change, and, if neglected, put undue and unanticipated pressure on the Program. The RFEIR's analysis would thus make the problem it purports to analyze even worse; if followed generally, it would result in development patterns and mitigation choices that would lessen the state's ability to address climate change, and would contribute to cumulatively considerable impacts.

Rather than address project-level emissions, the Cap-and-Trade Program covers activities related to electricity generation, natural gas supply, oil and gas extraction, refining, and transportation fuel supply and combustion. The points of regulation are the operators of electricity generating plants, natural gas fuel suppliers, operators of oil and gas extraction facilities, refinery operators, and transportation fuel suppliers at the rack. See Tit. 17, Cal. Code Regs., § 95811. The Program also addresses GHG emissions in aggregate at the state level and is not intended nor designed to mitigate greenhouse gas from, or otherwise inform, local land use decisions. Without adequate analysis and mitigation, local jurisdictions may not appropriately consider the greenhouse gas implications of their decisions, conflicting with a core CEQA principle of promoting informed decisionmaking. Rather, demand for fuels and electricity created by poorly-planned local projects creates unnecessary demand on the Cap-and-Trade system, potentially raising prices in the system and making statewide compliance more difficult.

These impacts could be substantial because the transportation sector is the state's largest source of GHG emissions (as well as criteria and toxic pollutant emissions, as we have previously addressed with regard to this project). The recently released California Greenhouse Gas Emission Inventory – 2018 Edition shows that while the state's overall GHG emissions declined from 2015 to 2016, the emissions in the transportation sector increased 2 percent over that same time period.⁸ This increase was driven by increases in fuel purchases and use. To effectively achieve the State's GHG target, both production and demand for energy and fuels must be addressed. The

⁷ As the California Supreme Court has held "CEQA requires public agencies...to ensure that such analysis stay in step with evolving scientific knowledge and state regulatory schemes." The Court viewed the Scoping Plan as a particularly useful source of information, given the extensive study and public participation involved in its preparation. (*Cleveland National Forest Foundation v. San Diego Ass'n of Governments* (2017) 3 Cal. 5th 497, 504.) A recent article provides a useful primer on this body of law. (See Janill Richards, *The SANDAG Decision: How Lead Agencies Can "Stay in Step" with Law and Science in Addressing the Climate Impacts of Large-Scale Planning and Infrastructure Projects* (2017) 26:2 Environmental Law News 17))

⁸ See https://www.arb.ca.gov/cc/inventory/pubs/reports/2000_2016/ghg_inventory_trends_00-16.pdf.

September 7, 2018
Page 5

Legislature recognized this need with regard to electricity when passing SB 350 (Stats. 2015 Ch. 547, De León) to increase the Renewable Portfolio Standard and double energy savings. A similar approach is needed for transportation sector emissions. State-level production side policies such as the Renewable Portfolio Standard, Low Carbon Fuel Standard, and Cap-and-Trade Program cannot alone achieve the State's GHG reduction targets.

In this instance, the RFEIR not only improperly relies on the Cap-and-Trade Regulation; it also fails fully to address consistency with the local measures that *do* more clearly apply. There are a suite of potential emissions reduction strategies identified in the 2017 Scoping Plan aimed at reducing GHG emissions from on-road vehicle travel (e.g., fuel economy standards, technology advancements, SB 375⁹), and the majority of such emissions are not covered in any way by the Cap-and-Trade program.

The City chose not to analyze the project's consistency with the applicable Regional Transportation Plan (RTP), for example, which is subject to GHG emissions reduction targets set by CARB pursuant to SB 375. The City asserted that the RTP does not apply to this project (Table 4.7-11, page 4.7-41 of the RDEIR). We disagree, and suggest that a more appropriate analysis would be whether the project's GHG emissions from on-road transportation would be consistent with, or conflict with, assumptions in the applicable RTP found to comply with SB 375. The city might also refer to the additional nonbinding recommendations offered in CARB's Scoping Plan, though the application of these recommendations, if used, depend on the circumstances of a particular project.

We discuss these points in more detail below.

A. The Cap-and-Trade Regulation Was Never Designed to Achieve All Necessary GHG Reductions From Land Use and Logistics Planning.

The Cap-and-Trade Program was designed from the start as one of a diverse suite of measures, some statewide and some local, to move California toward achieving its GHG targets. To understand the Cap-and-Trade Program's purposes and limitations, the Scoping Plan provides helpful context. The Cap-and-Trade Program covers about 80 percent of all GHG emissions in California.¹⁰ Crucially, just because emissions are "covered" by Cap-and-Trade does not mean all of those emissions from any particular covered entity are mitigated or reduced. It simply means they are included in the cap.

⁹ SB 375 (Steinberg, Statutes of 2008).

¹⁰ Scoping Plan at ES16.

September 7, 2018
Page 6

Thirty-nine percent of California's GHG emissions come from the transportation sector, including logistics-related transportation (like the WLC would involve).¹¹ Another 19 percent of the state's GHG emissions comes from electricity generation.¹² In addition to Cap-and-Trade, the Scoping Plan includes various other CARB measures, some of which also address transportation and electricity sector emissions, including SB 350, the Low Carbon Fuel Standard, the Mobile Source Strategy, and the Sustainable Freight Action Plan. In addition to the other complementary Scoping Plan measures, the Scoping Plan also clearly states that "[l]ocal government efforts to reduce emissions within their jurisdiction are critical to achieving the State's long-term GHG goals."¹³

The RFEIR's GHG methodology departs from this science, and has enormous implications for other projects across the state: it would amount to a determination that massive logistics centers, sprawling far-flung residential developments, and other types of remote greenfield development need not do anything to address and mitigate their GHG emissions because those emissions are already "taken care of" by the Cap-and-Trade Program. This is simply not true.

B. The Cap-and-Trade Regulation Is Not Intended to Bear the Burden of Achieving the State's Transportation and Energy Sector GHG Goals Alone.

Cap-and-Trade is not intended to achieve California's climate goals on its own. Rather, Cap-and-Trade is designed to motivate behavior by capping and pricing carbon at the regulated entity level – that is, at the industrial facility and fuel/energy supplier level. It does not send a direct price signal to developers of land use or logistics projects. This means, if CEQA and other "checks" on unsustainable development are weakened as the WLC analysis proposes, such development would simply continue without direct cost to the developers, while adding market demand without mitigating the WLC's emissions.

Moreover, if land use development does not account for GHG emissions, more and more of our state's carbon "cap" would be taken up by increasing transportation emissions. Developers do not receive a price signal from Cap-and-Trade, meaning that there will be no clear incentive to alter this pattern, even as it impacts the Cap-and-Trade system. Thus, the prices of compliance instruments under the Cap-and-Trade Program would increase at a higher rate than was contemplated when CARB developed the Cap-and-Trade Program. This would eventually cause a greater cost burden than

¹¹ As noted above, transportation-related GHG emissions have increased, from 37% in 2015, to 39% in 2016. See CARB, *California Greenhouse Gas Emissions for 2000 to 2016, Trends of Emissions and Other Indicators* (July 2018) at 1 (available at https://www.arb.ca.gov/cc/inventory/pubs/reports/2000_2016/ghg_inventory_trends_00-16.pdf); see also Scoping Plan at ES1.

¹² Scoping Plan at ES1.

¹³ Scoping Plan at 99.; see also page 101.

September 7, 2018
Page 7

anticipated, and it would be borne by all Californians rather than dealt with during the project design phase. Properly-designed local policies, by contrast, may account for GHG emissions of development in a direct way—which furthers the equity objectives of AB 32, complements Cap-and-Trade, and better achieves California’s climate goals.

C. There Is No Substantial Evidence Showing that the Project’s Transportation and Electricity Related Emissions Would Actually Be Mitigated.

In the face of these substantial difficulties, the RFEIR does not articulate substantial evidence demonstrating a rational connection to the Cap-and-Trade Program – and that connection is badly attenuated, as we have explained. The project developer in this instance is claiming it may do nothing with regard to fuels and electricity, and will rely on reductions other entities may achieve. This is not the tight evidentiary connection required by the Supreme Court and by CEQA, and it is not consistent with the State’s GHG reduction programs.

The Final Statement of Reasons (FSOR) prepared when section 15064.4 of the CEQA guidelines, concerning GHGs, was promulgated demonstrates that to properly rely on subsection (b)(3), concerning compliance with statewide programs, a project must demonstrate *with evidence in the record* how the regulations of GHG emissions would actually address the emissions that result from the project. That document states:

Reading section 15064.4 together with 15064(h)(3), however, to demonstrate consistency with an existing GHG reduction plan, a lead agency would have to show that the plan actually addresses the emissions that would result from the project. *Thus, for example, a subdivision project could not demonstrate consistency with the ARB’s Early Action Measures because those measures do not address emissions resulting from a typical housing subdivision.* (ARB, Expanded List of Early Action Measures to Reduce Greenhouse Gas Emissions in California Recommended for Board Consideration, October 2007; see also State CEQA Guidelines, §§ 15063(d)(3) (initial study must be supported with information to support conclusions), 15128 (determination in an EIR that an impact is less than significant must be briefly explained).)¹⁴

Here, there is no evidence in the RFEIR regarding who is responsible for complying with Cap-and-Trade for all the GHG emissions at issue in this case – and it certainly is not the project itself. The project is a logistics facility, with trucks involved in interstate commerce, and it is not covered by that Program. Indeed, there is no basis for the

¹⁴ See Natural Resources Agency, Final Statement of Reasons for Amendments to the State CEQA Guidelines Addressing Analysis and Mitigation of Greenhouse Gas Emissions Pursuant to SB97 (December 2009) at 27 (emphasis added).

September 7, 2018
Page 8

RFEIR's conclusion that the fuel for all of the vehicles serving the project would be covered under the Cap-and-Trade regulation, since it is not clear that all of these vehicles would even purchase their fuel in California.

D. The Project Fails to Account for the Duration of the Project Compared to the Duration of the Cap-and-Trade Program.

The RFEIR states the project's buildout year is 2035,¹⁵ yet the GHG analysis seems to stop after 2035. This raises multiple problems for the RFEIR analysis.

First, it is unclear why the analysis stops at buildout, when GHG emissions (and other environmental impacts) would continue into the indefinite future – at their highest levels – once full operations begin. Without further analysis throughout the project's anticipated life (which does not appear to be stated in the RFEIR but, presumably, would be at least 30 years after buildout), the analysis is incomplete and dramatically understates the project's GHG emissions. This also means the project would likely place a much higher burden on the Cap-and-Trade program than disclosed in the RFEIR – a burden that, as described above, is pushed onto all Californians instead of the project developer as a result of the project's failure to mitigate the vast majority of its GHG emissions.

Second, the RFEIR fails to account for, or even consider, the fact that the current Cap-and-Trade regulation extends only to 2030 – which is five years *before* the project's full buildout is achieved. This means that the RFEIR has no plan whatsoever to account for its GHG emissions once the project is fully built out. The RFEIR also does not address the inconsistency between the project's GHG emissions and Executive Order S-03-05, which, among other things, establishes a state GHG reduction target to reduce GHG emissions to 80 percent below 1990 levels by 2050.¹⁶ The California Supreme Court has emphasized the importance of California's GHG targets in selecting appropriate CEQA thresholds.¹⁷ Despite these considerations, there is no substantial evidence in the record to ensure that *any* of the project's post-buildout operational emissions are mitigated by the Cap-and-Trade program.

E. The Project Fails to Include a Backstop In Case Cap-and-Trade is Altered.

¹⁵ Revised FEIR at 3-1.

¹⁶ See Governor's Executive Order No. S-03-05 (June 1, 2005) (available at [http://static1.squarespace.com/static/549885d4e4b0ba0bff5dc695/t/54d7f1e0e4b0f0798cee3010/1423438304744/California+Executive+Order+S-3-05+\(June+2005\).pdf](http://static1.squarespace.com/static/549885d4e4b0ba0bff5dc695/t/54d7f1e0e4b0f0798cee3010/1423438304744/California+Executive+Order+S-3-05+(June+2005).pdf)); see also Governor's Executive Order No. B-30-15 (April 29, 2015) (available at <https://www.gov.ca.gov/2015/04/29/news18938/>).

September 7, 2018
Page 9

In addition to its other evidentiary flaws, the RFEIR does not analyze how the analysis would change, and how the project's significant GHG impacts would be mitigated, if Cap-and-Trade were revised in a way that affects the state's GHG levels. In other words, the RFEIR's approach puts an almost complete reliance on the Cap-and-Trade Program in ways that, if adopted generally, would considerably affect the Program, and then fails to consider the possibility that the Program might change even as the Project continues to exist. This could include, for example, a scenario in which:

- The Cap-and-Trade program ceased to exist, or
- If the scope of the program were limited to exclude fuels and electricity, or
- If the Legislature or other factors required the program to be amended in a way that allows a higher cap.

Rather than anticipating any of these or other potential contingencies and building in an appropriate backstop to ensure the project's GHG emissions are mitigated below significance, the RFEIR instead blindly relies on the current Cap-and-Trade Program, with no further commitments or requirements. As a result, the RFEIR fails to provide substantial evidence supporting its conclusion that the project will result in less than significant GHG emissions, while forwarding an analysis that, if accepted, would make the state significantly less able to address climate change impacts resulting from its built infrastructure.

III. The RFEIR is Inconsistent with CEQA Requirements.

The RFEIR's multiple errors with regard to the Cap-and-Trade Program render it contrary with CEQA law. The RFEIR misapplies the key CEQA Guideline, section 15064.4(b), which provides in pertinent part:¹⁸

- (b) A lead agency should consider the following factors, *among others*, when assessing the significance of impacts from greenhouse gas emissions on the environment:
1. The extent to which the project may increase or reduce greenhouse gas emissions as compared to the existing environmental setting;
 2. Whether the project emissions exceed a threshold of significance that the lead agency determines applies to the project.
 3. The extent to which *the project complies* with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of greenhouse gas emissions. Such requirements must be adopted by the relevant public agency through a public review process and

¹⁸ CEQA Guidelines § 15064.4(b) (emphasis added).

September 7, 2018
Page 10

must reduce or mitigate the project's incremental contribution of greenhouse gas emissions. *If there is substantial evidence that the possible effects of a particular project are still cumulatively considerable notwithstanding compliance with the adopted regulations or requirements, an EIR must be prepared for the project.*

Thus, the CEQA Guidelines focus on project-level compliance and project-level impacts. State programs are available for consideration, but they are not held out as a panacea, for GHGs any more than for any other resource area.

Yet, the RFEIR relies upon subsection (b)(3) of this provision to claim that emissions which are indirectly included under the “cap” created by the Cap-and-Trade Program (referred to in the RFEIR as “capped emissions”) need not be analyzed and mitigated under CEQA. This approach would excuse all of the WLC’s transportation and electricity related emissions, leaving the project only “on the hook” for analyzing and mitigating a tiny fraction of its emissions. The following sections explain why this approach is legally and factually flawed.

A. Subsection (b)(3) Itself Does Not Allow The Approach Used in the Revised Final EIR.

As noted above, subsection (b)(3) of CEQA Guidelines section 15064.4 can be used as a factor to assess GHG significance when “*the project complies* with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of greenhouse gas emissions...” Here, the RFEIR concedes that the project is not subject to the Cap-and-Trade Regulation.¹⁹ This in itself should be sufficient to demonstrate that subsection (b)(3) is inapplicable to the project, as “the project” does not “comply” with Cap-and-Trade at all.

B. The RFEIR’s Hybrid Approach Used To Determine Significance Is Not Allowed.

In addition to improperly relying on subsection (b)(3), as described above, the RFEIR improperly attempts to create a “hybrid” significance scheme based on selectively combining subsection (b)(3) with the South Coast Air Quality Management District’s (SCAQMD) bright-line threshold. As explained in the RFEIR, a potentially appropriate significance threshold in this case is the SCAQMD’s 10,000 metric ton threshold.²⁰ The problem here is that the RFEIR does not compare the project’s GHG emissions against this 10,000 metric ton threshold, and then mitigate those emissions to below that threshold to the extent feasible. Rather, the RFEIR simply subtracts from its emissions quantifications any GHG emissions that it deems to be “capped,” and compares only the net “non-capped” emissions against the bright-line threshold.

¹⁹ See page 4.7-4.

²⁰ RFEIR at 4.7-21.

September 7, 2018
Page 11

This approach is unsupported in law. Regardless of which threshold applies, CEQA requires lead agencies to “make a good-faith effort, based to the extent possible on scientific and factual data, to describe, calculate or estimate the amount of greenhouse gas emissions resulting from a project.”²¹ CEQA then provides that the lead agency must consider “whether *the project emissions* exceed a threshold of significance the lead agency determines applies to the project.”²² Thus, even if subsection (b)(3) properly applied here (which it does not, as explained above), nothing in the CEQA Guidelines allows this hybrid approach of cherry-picking what emissions are applied to an otherwise-applicable bright-line threshold. The City has not even attempted to satisfy its burden of providing such substantial evidence. As noted elsewhere in this letter, Cap-and-Trade does not result in ton-for-ton mitigation of each metric ton covered by the program. Rather, it is a declining market-wide cap designed to achieve certain statewide goals – which, as explained elsewhere in this document, is not designed to mitigate all GHG emissions from land use and logistics facilities.

Because the REFIR fails to properly apply the vast majority of the project’s GHG emissions to the applicable bright-line significance threshold, it also fails to mitigate those emissions, as it simply dismisses them as “less than significant”. If the full scope of the GHG emissions attributable to the project were compared to the applicable bright-line threshold, the mitigated emissions would still be substantially over the threshold. CEQA requires that the project’s significant GHG emissions must be mitigated to the extent feasible. Additional mitigation measures are available to further reduce the project’s GHG emissions that were not considered due to the inappropriate exclusion of the majority of project-generated emissions from the analysis.

C. Reliance Upon *AIR v. Kern County* Is Improper.

While the RFEIR provides little support for the GHG significance approach it takes, the briefing for *Paulek* further explains the reasoning behind the project’s GHG analysis. In those briefs, attorneys for the developer claim that an unrelated appellate ruling, the *AIR v. Kern County* decision²³ is relevant. That decision concerned CEQA analyses for sources actually covered by the Cap-and-Trade Regulation, but the claim is that it somehow applies not only to GHGs from projects that are directly subject to the Cap-and-Trade Regulation, but also to all transportation and electricity related GHG

²¹ CEQA Guidelines § 15064.4(a).

²² CEQA Guidelines § 15064.4(b)(2).

²³ *Association of Irrigated Residents v. Kern County Board of Supervisors* (2017) 17 Cal. App. 5th 708. In CARB’s view this case was wrongly decided as to the Cap-and-Trade issue, and it is certainly not apposite in this very different context.

September 7, 2018
Page 12

emissions, the logic being that those emissions are technically included in the statewide "cap" on emissions. This is incorrect factually, for all the reasons discussed above.

It is also not a controlling case legally. The holding in *AIR v. Kern County* addressed whether it "is appropriate for a lead agency to conclude a *project compliance* [sic] with the cap-and-trade program provides a sufficient basis for determining the impact of the project's greenhouse gas emissions will be less than significant."²⁴ The project at issue in that case was a refinery that was directly subject to the Cap-and-Trade Regulation. The court did not address the broader question of whether *all* GHG emissions from resources that are indirectly covered by Cap-and-Trade, at some undefined upstream point, may be cast aside as less than significant. Here, as noted above, the WLC is *not* subject to the Cap-and-Trade regulation. It therefore does not "comply" with the Cap-and-Trade program, and is distinguishable from the project at issue in *AIR v. Kern County*.

C. Reliance Upon Obscure 2013 Negative Declarations and a Policy Document from Another District Is Similarly Uncompelling.

The RFEIR itself also attempts to justify excluding "capped emissions" from its significance analysis by referencing two seemingly cherry-picked 2013 mitigated negative declarations,²⁵ and one 2014 guidance document from the San Joaquin Valley Air Pollution Control District (SJVAPCD) titled Policy APR-2025. The RFEIR does not explain why it chose to follow the methodology allegedly used in two obscure mitigated negative declarations and in a 2014 policy document from an air district in a different air basin, rather than following traditional CEQA GHG analysis and mitigation principles. Furthermore, the primary SJVAPCD guidance documents regarding analyzing and mitigating GHG emissions under CEQA make no mention of Policy APR-2025, including the guidance documents relied upon in the *AIR v. Kern County* decision.²⁶

To the extent the RFEIR is considering what other air districts have done, it is worth noting that the California Air Pollution Control Officers' Association (CAPCOA) has considered a range of potential CEQA significance thresholds, none of which summarily

²⁴ *AIR v. Kern County* at 743 (emphasis added).

²⁵ The Revised FEIR only cryptically references these MNDs, without citations or links to the documents, and without any other information explaining the basis for their CEQA significance approach. The RFEIR's failure to include or adequately reference these mitigated negative declarations hampers the public's ability to review and comment on the RFEIR.

²⁶ See, e.g., *AIR v. Kern County* at 743-744; see also http://www.valleyair.org/transportation/GAMAQI_3-19-15.pdf; <http://www.valleyair.org/Programs/CCAP/12-17-09/3%20CCAP%20-%20FINAL%20LU%20Guidance%20-%20Dec%2017%202009.pdf>.

September 7, 2018
Page 13

exclude emissions that are indirectly included within the Cap-and-Trade program.²⁷ While that document was generated in 2008, it makes multiple references to the Cap-and-Trade program, and does not endorse simply subtracting all so-called “capped emissions” from GHG analyses.

D. Even If CEQA Guideline 15064.4(b)(3) Applied Here, The RFEIR Ignores Other Requirements in the CEQA Guidelines.

The sections above provide in-depth analysis regarding why subsection (b)(3) of CEQA Guideline 15064.4 does not allow this project to simply disregard the vast majority of its GHG emissions. Even if that subsection did apply, there are other deficiencies in the RFEIR’s GHG analysis that must be addressed.

First, the CEQA Guidelines make clear that an agency cannot focus solely on a single significance consideration while ignoring other evidence or indicators showing potentially significant impacts. For example:

- Section 15064.4(b) states that “[a] lead agency should consider the following factors, *among others*, when assessing the significance of impacts from greenhouse gas emissions on the environment.”
- Section 15064.4(b)(3) provides in pertinent part: “If there is substantial evidence that the possible effects of a particular project are still cumulatively considerable notwithstanding compliance with the adopted regulations or requirements, an EIR must be prepared for the project.”
- Section 15064(h)(3) provides: “If there is substantial evidence that the possible effects of a particular project are still cumulatively considerable notwithstanding that the project complies with the specified plan or mitigation program addressing the cumulative problem, an EIR must be prepared for the project.”

As discussed in depth above, there is evidence in this record showing significant GHG impacts that were not analyzed or mitigated in the RFEIR. CEQA does not allow these impacts to be overlooked, even if the lead agency believes the project’s GHG emissions would be less than significant under one particular (and here, improper) significance metric.

IV. Criteria Pollutants and Toxic Emissions Must Still Be Considered

In its 2013 and 2015 comment letters, CARB noted its substantial concerns regarding the project’s air pollutant and toxics emissions, and suggested several feasible means of reducing the significant impacts from those emissions. These emissions raise

²⁷ See CAPCOA, CEQA & Climate Change (January 2008). Available at <http://www.capcoa.org/wp-content/uploads/downloads/2010/05/CAPCOA-White-Paper.pdf>.

September 7, 2018
Page 14

substantial local exposure and environmental justice concerns, as Moreno Valley already suffers from very substantial air pollution exposures. These exposures would likely be worsened without appropriate mitigation measures.²⁸ CARB incorporates the comments from those letters into this letter by reference, and strongly recommends that the RFEIR be revised to incorporate all mitigation recommended in its 2013 and 2015 comment letters.

V. Conclusion

While the WLC has enormous GHG implications in itself, the attention this project has received, and the recent legal developments in the emerging *AIR v. Kern County* and *Paulek* line of cases, demonstrate that the City's decisions in the RFEIR have implications beyond the WLC project as well. The City should revise its GHG analysis to accurately account for all GHG emissions that would result from the project, apply those emissions against the applicable significance threshold identified in the RFEIR, and adopt feasible mitigation to ensure those emissions would not cause significant impacts, as required by CEQA.

Sincerely,

Richard W. Corey
Executive Officer

²⁸ On these issues of acute local exposure, especially to roadway emissions, and the importance of fully addressing these sources of risk, see Ann Carlson, *The Clean Air Act's Blind Spot: Microclimates and Hotspot Pollution* (2018) 65 UCLA L. Rev. 1036.

Re: World Logistics Center Draft Recirculated Revised Sections of the Final Environmental Impact Report (SCH # 2012021045)

Dear Mr. Armijo:

The California Air Resources Board (CARB) has reviewed the Draft Recirculated Revised Sections of the Final Environmental Impact Report (RRSFEIR) for the World Logistics Center (WLC or Project). CARB appreciates the opportunity to comment on the RRSFEIR, and raises two primary issues with the RRSFEIR in this letter.

1. The RRSFEIR contains the same flawed GHG analysis as the RFEIR.

CARB previously reviewed the City's July 2018 Revised Final Environmental Impact Report (RFEIR), and submitted comments regarding the RFEIR on September 7, 2018. As noted in that comment letter, CARB believes the RFEIR's analysis of greenhouse gas (GHG) related impacts does not meet California Environmental Quality Act (CEQA) requirements, as it relies almost entirely on mischaracterizations to reach its less-than-significant impact determination.

Unfortunately, the flaws described in CARB's September 7, 2018 comment letter remain in the RRSFEIR, which continues to rely upon mischaracterizations regarding California's Cap-and-Trade Program to dismiss any serious analysis or mitigation of the Project's GHG emissions. Therefore, as part of its comments on the current draft RRSFEIR, CARB re-submits its September 7, 2018 comment letter (attached to this letter) in its entirety. CARB directs its comments toward both the direct and cumulative impact analysis sections in the RRSFEIR.

2. The RRSFEIR does not include the new GHG mitigation measures it references.

The RRSFEIR includes passing references to new GHG-related mitigation measures, particularly measures 4.7.6.1E-1 and 4.7.6.1E-2 (see pages 4.7-20, 6.7-14, and 6.7-20). However, it appears the measures themselves have not been included in the RRSFEIR. Without the ability to review the mitigation measures relied upon by the City in reaching its significance determinations, the public has no way to evaluate the effectiveness of those measures, thwarting CEQA's public disclosure purpose.

Mr. Albert Armijo
January 30, 2020
Page 2

Conclusion

Both this comment letter and CARB's September 7, 2018 comment letter set forth substantial deficiencies in the environmental analysis prepared for the WLC project. Given these deficiencies, the City should revise the RRSFEIR to include adequate analysis and mitigation regarding all of the Project's environmental impacts, including GHG, air quality, and cumulative impacts. The City should then re-circulate the document for public review to allow the public to review and comment on the City's revised proposal.

Thank you for your consideration. As always, we welcome any questions from the City regarding ways to adequately analyze and mitigate the Project's GHG emissions.

Sincerely,

Richard W. Corey
Executive Officer

Attachment: Appeal of PEN18-0050 Revised Final EIR (PAA20-0002) A. Martinez (4074 : World Logistics Center)

INTRODUCTION

The massive World Logistics Center (Project) will cause approximately 70,000 daily truck trips transporting goods from the ports of Long Beach and Los Angeles to Moreno Valley. (AR 003039, 058605–06.) These vehicle trips will emit hundreds of thousands of metric tons of greenhouse gas (GHG) emissions every year over the life of the Project. (AR 002729.) These GHG emissions, along with emissions from electricity needed to power the more than 40-million-square-foot project, will add to the existing climate pollutant problem, accumulating in the atmosphere and persisting for decades or longer.

Rather than analyzing and mitigating the Project’s emissions, lead agency Respondents Moreno Valley Community Services District, *et al.* (Respondents) shirk their responsibility as a local government to address climate change. They improperly rely on CARB’s statewide Cap-and-Trade climate program (Cap-and-Trade Program), which does not impose any regulatory requirements on this Project, as an excuse not to analyze and mitigate the Project’s climate change impacts. Respondents improperly ignore roughly 95% of the GHG emissions from the Project (AR 002718–19), disregarding the significance of those emissions, avoiding their duty to adopt all feasible mitigation measures, and failing to properly disclose their responsibility for this pollution to the public.

Respondents’ approach mischaracterizes the way state climate policies work and violates the California Environmental Quality Act (CEQA). CEQA directs that Respondents take “all action necessary” to protect the environment, recognizing the importance of local action driven through “meaningful” consideration of environmental impacts. (See Pub. Resources Code, §§ 21000, 21001, 21002, 21002.1.) CEQA does not allow Respondents to waive their CEQA obligations by pointing to a regulation that does not bind them (Cal. Code Regs., tit. 14, § 15000 et seq. (CEQA

Guidelines), § 15064.4), and Respondents wholly misconstrue the regulatory scheme they seek to use.

Although Respondents claim their approach is consistent with state climate policy, it is not. (See Plaintiffs/Appellants’ Supplemental Request Regarding Judicial Notice, Exhibit 1, California Air Resources Board, California’s 2017 Climate Change Scoping Plan (Nov. 2017) (2017 Scoping Plan) at pp. 19 [“Local actions are critical for implementation of California’s ambitious climate agenda”], 97–99 [more extensive discussion about the need for local action to achieve California’s climate goals]; see also Health & Saf. Code, §§ 38502, subd. (h) [identifying competing priorities to balance in emissions reductions], 38592 [nothing in this division relieves any person, entity, or agency of compliance with other law], 38690 [identifying overlapping automobile emissions policy].) Respondents’ approach has been repudiated by CARB, the Attorney General’s Office, and the Natural Resources Agency, as contrary to critical state climate goals. The state has long—and expressly—relied on a portfolio of climate change measures, including significant efforts by local governments, to address emissions that result from their land use decisions.

Respondents rely on the Cap-and-Trade Program to excuse their obligation to make better land use decisions. Cap-and-Trade is not intended as a stand-alone climate policy; instead, it assumes steady efforts to reduce emissions across the state. While Cap-and-Trade has an important role to play in limiting emissions from entities like power plants and refineries, the Program does not cover a host of other sources, including warehouses. Although the Program creates financial and legal obligations on fuel suppliers and electricity generators that may ultimately supply this Project, the Project experiences neither the direct legal requirements of the Program nor the full economic costs associated with its additional emissions. If projects were allowed to evade responsibility in

this way, they would steadily increase Cap-and-Trade Program costs upstream, while locking the state into ever-more expensive and inappropriate high-emitting development patterns. This is a recipe for failure in achieving the state’s climate goals. To avoid this scenario, the state relies on local governments to limit emissions from new development projects. Emissions from such projects are the responsibility of local governments and should be mitigated through the proper application of CEQA. Eliminating this crucial piece of the state’s portfolio approach undermines the state’s climate goals.

We have arrived at a crossroads for the future of GHG analysis under CEQA. If Respondents prevail, this case could singlehandedly undo the will of the Legislature by excusing essentially all projects from the obligation to consider GHG impacts from vehicle trips and energy use. This Court should reject Respondents’ argument and confirm that all lead agencies must do their part if we are to meet the state’s long-term climate stabilization objective.

STATEMENT OF INTERESTS

I. INTEREST OF THE ATTORNEY GENERAL

California has already begun to experience significant adverse impacts from climate change such as “more frequent, more catastrophic and more costly” wildfires, drought, “coastal erosion, disruption of water supply, threats to agriculture, spread of insect-borne diseases, and continuing health threats from air pollution.” (2017 Scoping Plan at p. ES2.) As California’s chief law enforcement officer, the Attorney General has the independent power and duty to protect the interest of all of California’s current and future residents in a clean, health, and safe environment. (See Cal. Const., art. V, § 13; Gov. Code, §§ 12511, 12600–12612; *D’Amico v. Bd. of Medical Examiners* (1974) 11 Cal.3d 1, 15.)

Upholding this duty, the Attorney General has actively encouraged lead agencies to fulfill their CEQA responsibilities as they relate to climate change for well over a decade. (See, e.g., *Cleveland National Forest Foundation v. San Diego Association of Governments* (2017) 3 Cal.5th 497 (*SANDAG*) at p. 519 [“nothing we say today invites regional planners to ‘shirk their responsibilities’ under CEQA”]; *City of Long Beach v. City of Los Angeles* (2018) 19 Cal.App.5th 465; *People v. County of San Bernardino* (San Bernardino County 2007) No. CIVSS0700329.)

The World Logistics Center, like every large development project, has the potential to either facilitate or hinder the state’s achievement of its climate goals. Here, Respondents’ unsupported approach to analyzing the Project’s GHG emissions has the potential to seriously undermine the overall effort to meet the state’s science-based GHG reduction goals for the transportation and land use sectors and to disproportionately affect environmental justice communities.¹ Given these significant interests, the Attorney General submits this amicus brief in support of Appellants,² in compliance with rule 8.200(c)(7) of the California Rules of Court in his independent capacity and on behalf of the California Air Resources Board (CARB).

¹ The Attorney General opposed this methodology in a comment letter it submitted on the revised sections of the Final EIR for this Project (Revised Final EIR or RFEIR). (Letter re: Revised Sections of the Final Environmental Impact Report for the World Logistics Center Project, Sept. 7, 2018, at:

<<https://oag.ca.gov/sites/all/files/agweb/pdfs/environment/comments-revised-sections-feir.pdf?>>.) The Revised Final EIR is not at issue in this litigation, but it includes the original EIR’s same flawed GHG analysis.

² This brief is submitted in support of Plaintiffs and Respondents Albert Thomas Paulek, et al. and Plaintiffs and Appellants Laborers International Union of North America, Local 1184, et al.

II. INTEREST OF THE CALIFORNIA AIR RESOURCES BOARD

CARB has a strong interest in participating in this case as amicus curiae. CARB is charged with protecting the public from the harmful effects of air pollution and developing programs and actions to fight climate change. As creator and administrator of the Cap-and-Trade Program, and as the lead agency on the Scoping Plan setting out many of the state’s climate policies, CARB is an expert on how the Cap-and-Trade Program was designed to function and interact with other state laws and programs as part of California’s portfolio approach to addressing GHG emissions. In their briefing, Respondents misrepresent CARB as effectively endorsing the EIR’s approach to GHG analysis. (Combined Respondents’ and Cross-Appellants’ Opening Brief at pp. 17, 36–38, 47–48, 56, 63.) But CARB has repeatedly made clear it does *not* support Respondents’ approach.³ As explained more fully below, Respondents’ arguments regarding GHG analysis are contrary to the construction given to applicable regulations by CARB, and by the Natural Resources Agency, agencies charged with interpreting and enforcing the programs at issue.

BACKGROUND

I. LEGAL BACKGROUND REGARDING CALIFORNIA’S EFFORTS TO COMBAT CLIMATE CHANGE

In 2006, recognizing the importance of combatting climate change and furthering the objectives of Executive Order S-3-05, the Legislature enacted the Global Warming Solutions Act of 2006, commonly known as

³ CARB also explained this approach when it formally opposed the GHG analysis Respondents rely on here through its comments on the RFEIR for this Project. (Letter re: World Logistics Center Revised Final Environmental Impact Report, Sept. 7, 2018, at: <https://ww3.arb.ca.gov/toxics/ttdceqalist/logisticsfeir.pdf?_ga=2.236813640.855160185.1575908432-1460774677.1564163003>.)

AB 32. (Health & Saf. Code, § 38500, et seq.) AB 32 mandates that, by 2020, California must reduce its total statewide annual GHG emissions to the level they were in 1990, and to 40 percent below that level by 2030. (Health & Saf. Code, §§ 38550, 38566.) This mandate puts the state on a trajectory of significant and continuous GHG emissions reductions through 2050, in order to stabilize the atmospheric levels of GHGs and reduce the risk of dangerous climate change.

Under AB 32, the Legislature tasked CARB with preparing a guidance planning document, known as the Scoping Plan that, while not binding, set out the state’s views based on extensive environmental and economic analyses on how policies may be effectively implemented so that California will meet the its ambitious GHG reduction goals. (See Health & Saf. Code, §§ 38561 et seq.) The Scoping Plan emphasizes the need for a multi-pronged emissions reduction approach that can be carried out by many entities and reflects the state’s position that it is necessary to reduce emissions at the source and through reductions in demand for energy. (2017 Scoping Plan, pp. 12, 19, 28).

The Scoping Plan includes a suite of regulations, measures, and policies designed to operate together to reduce GHG emissions. The Cap-and-Trade Program is one such policy. Entities that are directly subject to the Cap-and-Trade Program—like power plants, factories, refineries, and electricity generators and importers—must purchase and surrender compliance instruments (e.g., allowances) for their emissions. (See Cal. Code Regs., tit. 17, § 95812.) Downstream emitters such as cars and trucks, much less warehouses that such cars and trucks drive to, are not covered entities under Cap-and-Trade and have no such obligation to purchase or surrender allowances. The existence of the Program, in other words, does not obviate the need for action at other levels of the economy. On the contrary: If sources like the long-lasting development project in this

case build without regard to their emissions, they will increase overall state emissions and hence increase pressure and costs within the Cap-and-Trade Program.

To address the wide range of GHG emissions sources that are not directly controlled through the Cap-and-Trade Program, the state relies on other policies⁴—many of which require collaboration between the state and local governments. Agencies large and small across the state (including, crucially, cities and counties) are responsible for ensuring that proposed new land use plans, transportation projects, and development projects are consistent with evolving scientific knowledge and state regulatory schemes; CEQA is a critical tool for implementing these obligations.⁵ (See *SANDAG, supra*, 3 Cal.5th at p. 519; see also CEQA Guidelines, § 15064.4, subd. (b).)

The Scoping Plan makes clear that the Cap-and-Trade Program was *not* designed to replace local governments’ long-term planning obligations, but rather designed to work in concert with those policies to achieve the

⁴ See, e.g., Health & Saf. Code, §§ 38561, subd. (e) (requiring CARB to consider “the relative contribution of each source or source category to statewide greenhouse gas emissions”), 43018.5, subd. (a) (requiring CARB to “adopt regulations that achieve the maximum feasible and cost-effective reduction of greenhouse gas emissions from motor vehicles”).

⁵ For example, CARB provides regional emission reduction targets for local jurisdictions’ land use and transportation planning obligations under Senate Bill (SB) 375. (See Health & Saf. Code, § 65080, subd. (b)(2)(A) [known as “The Sustainable Communities and Climate Protection Act”].) CARB also works with regional air pollution control districts and air quality management districts to address emission sources that have both local and global effect, including methane from landfills and hydrofluorocarbons (HFCs), as well as to support state- and federally-mandated permitting of certain industrial sources of GHG emissions. (See California Air Resources Board, California’s 2017 Climate Change Scoping Plan (Nov. 2017) pp. 3, 104 <https://ww3.arb.ca.gov/cc/scopingplan/scoping_plan_2017.pdf>.)

state’s goals. (2017 Scoping Plan at p. 102 [“California’s future climate strategy will require increased focus on integrated land use planning”].)

Recent state reports have shown that California’s vehicular GHG emissions continue to increase year after year, and CARB has emphasized the need for local action. (See California Air Resources Board, 2018 Progress Report: California’s Sustainable Communities and Climate Protection Act (November 2018) at 4.) These increasing emissions demonstrate the crucial need for *more* complementary local action—not less—to ensure the state meets its GHG targets in cost-effective ways.

In light of the state’s GHG reduction policies, and CEQA’s focus on embedding environmental considerations in local decision-making, the Supreme Court has emphasized that careful CEQA analysis of GHG impacts will be required going forward, as lead agencies must “stay in step” with the evolving science and law related to the state’s long-term climate objectives in order to carry out their duties under CEQA. (*SANDAG, supra*, 3 Cal.5th at p. 519.)

II. OVERVIEW OF THE GHG ANALYSIS IN RESPONDENTS’ EIR

Mischaracterizing the collaborative efforts required to combat climate change and the role of the Cap-and-Trade Program, Respondents’ EIR takes a very unusual and troubling approach to addressing the Project’s GHG-related impacts.⁶ Respondents divide the Project’s GHG emissions into two categories, which the EIR terms “capped” and “uncapped.” (AR 002719.) What the EIR deems “uncapped” emissions constitute only about 4.6% of the Project’s emissions. (*Ibid.*) The “uncapped” category includes comparatively minor landfill emissions caused by waste generated at the

⁶ The Attorney General and CARB only address Respondents’ inappropriate use of the Cap-and-Trade Program in the GHG analysis of the EIR. This amicus brief is not intended to and should not be construed as an exhaustive discussion of the EIR’s compliance with CEQA.

Project and the use of refrigerants at the Project. (*Ibid.*) For these emissions, the EIR follows the approach that would be expected under CEQA: the City of Moreno Valley, in its discretion, designated a significance threshold (in this case, 10,000 metric tons of GHG emissions as recommended by the South Coast Air Quality Management District), compared the “uncapped” emissions to that threshold, and required feasible mitigation measures to ensure those emissions fall below that threshold. (AR 002719, AR 002729.)

What the EIR terms “capped” emissions, however, constitute the remaining 95.4% of the Project’s predicted emissions. (AR 002719.) Those include emissions caused by mobile sources (namely, diesel trucks), as well as natural gas and electricity use at the Project. (*Ibid.*) For these emissions, the EIR deviates dramatically from standard CEQA methodology. The EIR asserts these emissions are “covered” by Cap-and-Trade and therefore wholly exempt from any further CEQA analysis or mitigation. (AR 002723.) The EIR does *not* compare the Project’s “capped” emissions to the 10,000 metric ton threshold. (AR 002725.) Indeed, after mitigation measures are applied to the Project, the “capped” emissions remain nearly 40 times greater than the significance threshold. (AR 002729.) In forgoing any attempt to decrease the Project’s true total emissions to a less-than-significant level, Respondents fail to consider further mitigation measures that could have made this Project more compatible with the state’s climate goals. As described below, this approach is unlawful.

ARGUMENT

Respondents avoid disclosing and addressing mitigation for thousands of tons of GHG emissions each year pursuant to the misguided theory that those emissions are addressed by Cap-and-Trade. This argument is founded on misunderstandings of both the Cap-and-Trade Program and

CEQA—both of which require different industries and projects to take responsibility for their own impacts, rather than rely on others for mitigation. Most fundamentally, warehouse projects like the Project are not subject to Cap-and-Trade. Respondents therefore cannot accurately assert that “compliance” with Cap-and-Trade provides any legal basis to avoid analyzing and adequately mitigating the majority of the Project’s emissions.

The CEQA Guidelines allow projects to consider regulations “[with] which the project complies” for purposes of considering significance of GHG emissions. (See CEQA Guidelines, § 15064.4, subd. (b)(3).) However, that consideration does not apply here and Respondents’ approach, which in effect relies on other entities to undertake Respondents’ CEQA mitigation, not only violates both CEQA’s legal requirements and public disclosure and mitigation purposes, but also undermines the state climate objectives Cap-and-Trade is intended to further. Cap-and-Trade is designed to act in tandem with—not in spite of—critical tools like local land use planning to reduce GHG emissions. If allowed for Respondents and adopted by other local jurisdictions, such abdication by local governments would dramatically hinder the state’s ability to achieve its legislatively mandated long-term climate stabilization objectives and forgo pollution reduction co-benefits from GHG mitigation measures that are vital for environmental justice communities.

The Resources Agency agrees with CARB that “to demonstrate consistency with an existing GHG reduction plan, a lead agency would have to show that the plan actually addresses the emissions that would result from the project.” (See California Natural Resources Agency, Final Statement of Reasons for Regulatory Action: Amendments to the State CEQA Guidelines Addressing Analysis and Mitigation of Greenhouse Gas Emissions Pursuant to SB 97 (2009),

<http://resources.ca.gov/ceqa/docs/Final_Statement_of_Reasons.pdf>, at p. 27.)

I. WAREHOUSE AND LOGISTICS PROJECTS ARE NOT REGULATED BY CAP-AND-TRADE AND THEIR EMISSIONS MUST STILL BE MITIGATED BY LOCAL GOVERNMENTS

Warehouse and logistics complexes are not regulated by Cap-and-Trade. The Cap-and-Trade Program thus provides no legal or policy basis for Respondents to avoid their obligation to evaluate and mitigate GHG emissions. Cap-and-Trade applies “an aggregate greenhouse gas allowance budget [to] *covered entities* and provides a trading mechanism for” such allowances. (Cal. Code Regs., tit. 17, § 95801 (emphasis added).) Respondents seek to use Cap-and-Trade to zero-out and excuse the application of feasible mitigation measures to over 95% of all GHG emissions from the Project. Cap-and-Trade applies only to expressly identified entities (“covered entities”) such as cement producers, petroleum refiners, electricity generators, natural gas suppliers, fuel importers, and liquid petroleum gas suppliers. (Cal. Code Regs., tit. 17, § 95811.) Warehouse and logistics complexes are *not* covered entities. Cap-and-Trade compliance instruments do not factor in *whatsoever* because this Project is not covered by Cap-and-Trade.

The mere fact that warehouse and logistics complexes are in the chain of commerce with covered entities does not transform them into covered entities themselves. As an example, although the operator of a refinery that produces gasoline in California is subject to Cap-and-Trade, (Cal. Code Regs., tit. 17, § 95811, subd. (e)(1)), entities downstream from that refinery in the chain of commerce are not. The refinery itself may have compliance obligations under the Cap-and-Trade Program, which can be met by reducing the refinery’s own GHG emissions or surrendering allowances, but the gas station that resells the gas, the truck drivers who purchase it, and

the warehouses to which the trucks drive do not have compliance obligations. Under the state's portfolio approach, while the refinery may have met some or all of its climate obligations via Cap-and-Trade, the downstream entities have not. Because warehouses receive no set price or regulatory signals from Cap-and-Trade, they are not being directly incentivized to reduce emissions. Instead, other components of the state's portfolio address those emissions. Nothing in Cap-and-Trade explicitly or impliedly repealed the use of other measures to address climate change; they were designed to work together. (See, e.g., 2017 Scoping Plan at p. 28.) Local governments must responsibly plan new development to further the state's climate goals.

II. ALLOWING RESPONDENTS' UNTENABLE APPROACH TO GHG ANALYSIS WOULD HAVE SIGNIFICANT, NEGATIVE STATEWIDE CONSEQUENCES

If Respondents' approach to GHG analysis is endorsed, other lead agencies will undoubtedly follow this approach, and emissions from the transportation and land use sectors will be largely omitted from analysis and mitigation under CEQA. Widespread adoption of this approach would: (1) place the entire burden of California's well-established, long-term land-use related GHG reduction goals on Cap-and-Trade, thereby straining the program beyond its intended purpose and (2) expose already burdened communities in the state to greater amounts of GHG emissions and co-pollutants that accompany GHG emissions, such as diesel particulate matter and nitrogen oxides.

A. Respondents' GHG analysis undermines California's GHG reduction goals

As explained above, the Cap-and-Trade Program is just one part of a suite of complementary measures designed to achieve California's ambitious GHG reduction and climate stabilization objectives. Cap-and-

Trade provides no legal basis for Respondents to avoid local governments' obligations as lead agencies under CEQA to evaluate and mitigate GHG emissions from a project that the Cap-and-Trade Program does not even cover.

While any one policy may be insufficient or at risk of circumvention, the suite of policies work in concert toward the state's goals.^{7,8} This overlap is by design, and makes the suite of policies more resilient to changed circumstances, enforcement problems, and legal challenges. The upstream Cap-and-Trade Program thus works in tandem with downstream choices, including planning choices, to ensure both that total emissions decline and that projects throughout the state are designed to avoid putting undue upstream pressure on emissions or control costs. Weakening one policy because another policy might address it runs contrary to this approach.

⁷ See 2017 Scoping Plan, *supra*, pp. ES7–8, 10, 22, 97; cf. Elinor Ostrom, A Polycentric Approach for Coping with Climate Change (2014) 15 *Annals Econ. & Fin.* 97, 123 <<https://perma.cc/YSF4-B7N8>> (Nobel laureate describing an ideal policy approach to climate change as “Complex, Multi-Level Systems to Cope with a Complex, Multi-Level Problem”); Amir Bazaz, et al., *Global Covenant of Mayors, Summary for Urban Policymakers: What the IPCC Special Report on Global Warming of 1.5.°C Means for Cities* (Dec. 2018) pp. 22–23 <<https://perma.cc/R37B-3WDD>> (identifying interaction between sources of governance and importance of incentives beyond financial consequences at the community level).

⁸ Complementary measures are also important in light of the risk to any one measure posed by litigation. Private parties and the federal government have challenged California's GHG reduction policies, including aspects of the Cap-and-Trade Program. California's GHG vehicle emissions regulatory authority is currently also under challenge. The wisdom of the portfolio approach endorsed by the Scoping Plan is to ensure that the state's efforts continue via many channels, rather than relying on any one potentially challenged measure.

If other lead agencies adopt Respondents’ approach to GHG analysis under CEQA, their development projects would produce millions of metric tons of GHG emissions that would go unmitigated through what amounts to an unauthorized categorical exemption from CEQA. The economic analyses and feasibility of achieving the state’s legislatively mandated goals in the Scoping Plan account for all policies working in tandem. If any one policy fails to deliver reductions, this would put strain on the Cap-and-Trade Program to deliver more reductions than anticipated and at higher costs.

Respondents’ failure to account for the significance of the Project’s GHG emissions from transportation is particularly troubling in light of the fact that the transportation sector accounts for over 35% of the state’s total GHG emissions and these emissions continue to rise. (2017 Scoping Plan, *supra*, pp. ES1, 11 [charts of emissions by source]; see also California Air Resources Board, 2018 Progress Report: California’s Sustainable Communities and Climate Protection Act (November 2018) at 4.) As the California Supreme Court noted, “transportation emissions are affected by the location and density of residential and commercial development, the Scoping Plan does not propose statewide regulation of land use planning but *relies instead on local governments.*” (*Center for Biological Diversity v. Department of Fish and Wildlife* (2015) 62 Cal.4th 204, 230; emphasis added.) Local governments thus play a unique role in decreasing GHG emissions from the transportation sector.

Respondents contend that because statewide emissions are capped under the Cap-and-Trade Program, the amount of emissions from “capped” sources will be the same with or without their Project, but this claim ignores both their obligations under CEQA to disclose and mitigate their emissions and the intended design of the Cap-and-Trade Program. (See

Combined Respondents’ and Cross-Appellants’ Opening Brief at pp. 48–49.)

Cap-and-Trade is not a program designed to reduce emissions from local government actions, or land use; instead, it was designed on the assumption that local actors would simultaneously work to reduce emissions within their spheres. Cap-and-Trade alone was designed to account for less than 40% of the total emissions reductions needed to achieve California’s 2030 climate goals, and on the explicit assumption that local design choices would continue to reduce overall emissions (and hence economy-wide costs in the Cap-and-Trade Program). (2017 Scoping Plan at p. 28.) Indeed, relying entirely on the Cap-and-Trade Program to address land use would produce a mismatch that would strain the Program by functionally increasing demand for emissions reductions as unregulated entities displace their obligations onto the Program rather than taking action themselves, raising compliance costs for covered entities across all sectors and all consumers across the state at all income levels. California’s portfolio approach was designed to meet AB 32’s requirement that “greenhouse gas emissions reduction activities . . . adopted and implemented by [CARB] are complementary, nonduplicative, and can be implemented in an efficient and cost-effective manner.” (Cal. Health & Saf. Code, § 38561.) By taking a portfolio approach, the state has recognized that taking GHG action in specific sectors ensures that we achieve our broader climate and energy demand reduction goals. (See 2017 Scoping Plan at pp. 2, 24, 100 [describing Governor Brown’s five key climate change strategy “pillars”].) Ultimately, cost increases could make the Cap-and-Trade Program less effective as a key part of the suite of California’s climate policies.

In sum, Respondents’ position is fundamentally inconsistent with the state’s approach to climate change, and so disregards significant emissions

that should properly be addressed under CEQA, not an unrelated emissions program like Cap-and-Trade. Moreover, Respondents' approach would allow similar emissions from other projects that would follow its lead. (See Part III(A), *infra.*) The majority of land use projects are, like this Project, not covered by the Cap-and-Trade Program. Freight alone is an enormous industry; over 1.5 billion tons of freight were moved in California during 2015. (*Id.* at p. 73.) And other types of projects such as residential developments or agricultural enterprises may seek to invoke precedent created by this case. Thus, even if the Project standing alone does not excessively strain the Cap-and-Trade system, the collective weight of new projects failing to address GHG emissions in the CEQA process would.

B. Respondents' GHG analysis prevents co-pollutant reduction measures necessary to protect California's environmental justice communities

Permitting massive land development projects without requiring the necessary mitigation measures to decrease project emissions will also harm California's environmental justice communities—those already suffering from the worst environmental pollution in the state. The census tract the Project will be built in is ranked in the 75th to 80th percentile of census tracts in California in terms of greatest pollution burden indicators and health and vulnerability factors for population characteristic indicators. (CalEnviroScreen 3.0 for Census Tract 6065042624, Office of Environmental Health Hazard Assessment, last visited November 27, 2019 <<https://oehha.ca.gov/calenviroscreen/report/calenviroscreen-30>>.) Even without the Project, residents of this census tract already experience ozone, the main ingredient of smog, at a rate higher than 98% of the rest of California. (*Ibid.*) Relatedly, these residents also experience cardiovascular disease, which can result from exposure to air pollution, at a rate higher than 95% of the state. (*Ibid.*)

Considering additional mitigation properly may have resulted in additional zero-emissions technologies used for the Project, including, perhaps, from its trucks, as many commenters recommended. If such measures are not considered from this Project and other future projects like it are not mitigated, Moreno Valley and communities throughout the state will likely continue to suffer from worse air pollution. (See Nicky Sheats, *Achieving Emissions Reductions for Environmental Justice Communities Through Climate Change Mitigation Policy* (2017) 41 WM. & MARY ENVTL. L. & POL’Y REV. 377, 387 [“[E]ven without the intentional maximization of co-pollutant reduction, there should be incidental co-pollutant reductions as GHGs are being reduced [which] should improve the health of local communities.”]; see also Scoping Plan at p. 74 [“Air pollution from tailpipe emissions contributes to respiratory ailments, cardiovascular disease, and early death, with disproportionate impacts on vulnerable populations such as children, the elderly, those with existing health conditions . . . , low income communities, and communities of color.”].)

III. RESPONDENTS’ EIR VIOLATES CEQA

As explained above, the EIR’s approach to GHG analysis misrepresents the Cap-and-Trade Program and the Project’s place in that scheme. As a result, the EIR takes an unsupportable approach to evaluating the significance of GHG emissions from the Project. Contrary to CEQA’s focus on information disclosure and local responsibility for mitigation, the EIR ignores the vast majority of the Project’s emissions, and, in a misleading analysis, compares only a small fraction of the Project’s emissions to the applicable significance threshold. This flawed analysis leads the EIR to conclude that the impact from GHG emissions would be mitigated to a less-than-significant level, misleading the public and shirking mitigation responsibilities. Even if the Cap-and-Trade Program directly

applied to the Project’s emissions (it does not since, as explained above, this Project is not a covered entity under the Program), this method of evaluating a project’s significance *after* taking into account purported “mitigation” or impact-reducing components is not allowed by CEQA. As a result of its flawed analysis, the EIR fails to adopt all feasible mitigation measures and subverts CEQA’s important political function of ensuring informed decision making and informed public participation.

The EIR’s approach to GHG analysis fails on multiple levels. Perhaps most critically, in addition to pointing to “compliance” with a regulation that simply does not cover the Project to excuse mitigation, the EIR focuses on a single significance consideration while ignoring other evidence showing potentially significant impacts. CEQA does not allow clearly significant GHG impacts to be overlooked, even if a lead agency believes those impacts are considered less than significant under one particular metric. (See, e.g., *Oro Fino Gold Mining Corp. v. County of El Dorado* (1990) 225 Cal.App.3d 872, 274 [citizens’ personal observations about the significance of noise impacts on their community constituted substantial evidence that the impact may be significant and should be assessed in an EIR, even though the noise levels did not exceed general planning standards]; accord *SANDAG, supra*, 3 Cal.5th at p. 515 [“An adequate description of adverse environmental effects is necessary to inform the critical discussion of mitigation measures and project alternatives at the core of the EIR”].) This failure to address potentially significant impacts not only minimizes the Project’s significant impacts, but also warps the evaluation of whether the Project’s contribution to GHG emissions is a cumulatively considerable impact. (CEQA Guidelines, § 15064.) The cumulative effect of dozens of similar warehouse projects in the Moreno Valley area could—and almost certainly will—be significant.

A. The EIR improperly applies CEQA Guidelines Section 15064.4 to determine the significance of the Project’s GHG emissions.

The Resources Agency, the state’s expert on CEQA, has rejected the approach of using purported “compliance” with an inapplicable program to mitigate emissions. (Final Statement of Reasons for the CEQA Guidelines Amendments (2018) at p. 27 [“a subdivision project could not demonstrate ‘consistency’ with [CARB’s] Early Action Measures because those measures do not address emissions resulting from a typical housing subdivision”].)

The EIR misapplies CEQA Guidelines section 15064.4, which offers multiple factors a lead agency should consider in assessing the significance of impacts from GHG emissions. That Guideline provides, in pertinent part:

- (b) A lead agency should consider the following factors, *among others*, when assessing the significance of impacts from greenhouse gas emissions on the environment:
 - (1) The extent to which the project may increase or reduce greenhouse gas emissions as compared to the existing environmental setting;
 - (2) Whether the project emissions exceed a threshold of significance that the lead agency determines applies to the project.
 - (3) The extent to which *the project complies* with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of greenhouse gas emissions. Such requirements must be adopted by the relevant public agency through a public review process and must reduce or mitigate the project’s incremental contribution of greenhouse gas emissions. If there is substantial evidence that the possible effects of a *particular project* are still cumulatively considerable notwithstanding compliance with the adopted

regulations or requirements, an EIR must be prepared for the project.⁹

(CEQA Guidelines, § 15064.4, subd. (b), *italics added.*)

As reflected in subdivision (b)(3), compliance with “regulations or requirements adopted to implement a statewide, regional, or local plan” can factor into the assessment of GHG significance, but only when *the project complies* with those regulations or requirements. Yet, the EIR relies upon subsection (b)(3) to claim that emissions for which upstream suppliers surrendered allowances need not be analyzed and mitigated under CEQA. This approach excuses all of the Project’s transportation- and electricity-related emissions, thus requiring analysis and mitigation of only a tiny fraction of the Project’s emissions.

⁹ The 2018 update to the CEQA Guidelines added the following language:

(b) In determining the significance of a project’s greenhouse gas emissions, the lead agency should focus its analysis on the reasonably foreseeable incremental contribution of the project’s emissions to the effects of climate change. The agency’s analysis should consider a timeframe that is appropriate for the project. The agency’s analysis also must reasonably reflect evolving scientific knowledge and state regulatory schemes.

(b)(3) . . . In determining the significance of impacts, the lead agency may consider a project’s consistency with the State’s long-term climate goals or strategies, provided that substantial evidence supports the agency’s analysis of how those goals or strategies address the project’s incremental contribution to climate change.

(c) A lead agency may use a model or methodology to estimate greenhouse gas emissions resulting from a project. The lead agency has discretion to select the model or methodology it considers most appropriate to enable decision makers to intelligently take into account the project’s incremental contribution to climate change. The lead agency must support its selection of a model or methodology with substantial evidence. The lead agency should explain the limitations of the particular model or methodology selected for use.

Respondents' application of subdivision (b)(3) to this Project is wrong. Because the Project is not a covered entity under the Cap-and-Trade Program, subsection (b)(3) is inapplicable, as the project cannot "comply" with Cap-and-Trade at all. Moreover, as discussed above, such "compliance" would undermine Cap-and-Trade's purposes if adopted as a CEQA approach, not serve the environmental goals both AB 32 and CEQA set out to deliver.

B. The EIR failed to apply the SCAQMD's GHG emissions threshold to *all* of the Projects' GHG emissions.

The EIR takes an impermissible approach of applying the Cap-and-Trade Program to ostensibly reduce the Project's emissions significantly, then comparing only that reduced quantity to the bright-line significance threshold. This approach is not supported in law.¹⁰

CEQA requires lead agencies to "make a good-faith effort, based to the extent possible on scientific and factual data, to describe, calculate or estimate the amount of greenhouse gas emissions resulting from a project." (CEQA Guidelines, § 15064.4.) CEQA then provides that the lead agency must consider "whether *the project emissions* exceed a threshold of significance the lead agency determines applies to the project." (*Id.* at subd. (b)(2).) As explained in the EIR, a potentially appropriate

¹⁰ The EIR also attempts to justify excluding "capped emissions" from its significance analysis by referencing two seemingly cherry-picked 2013 mitigated negative declarations from other lead agencies, and one 2014 guidance document from the San Joaquin Valley Air Pollution Control District (SJVAPCD). (EIR 4.7-33.) The EIR does not explain why it chose to follow the methodology allegedly used in two obscure mitigated negative declarations and in a policy document from an air district in a different air basin, rather than following traditional CEQA GHG analysis and mitigation principles. These irrelevant, project-specific documents do not constitute substantial evidence supporting Respondents' argument.

significance threshold in this case is the South Coast Air Quality Management District's (SCAQMD) SCAQMD's 10,000 metric ton limit.¹¹ (EIR at p. 4.7-32.)

The problem here is that the EIR does not compare the Project's total GHG emissions against this 10,000 metric ton threshold, and then mitigate those emissions to below that threshold to the extent feasible. Instead, the EIR simply subtracts from the total any GHG emissions it deems to be "capped," and compares only the few "non-capped" emissions to the bright-line threshold. Because the EIR only compares a small fraction of the Project's GHG emissions to the applicable bright-line significance threshold, it only requires relatively minor mitigation measures to reduce the Project's emissions to what the EIR considers "less than significant." (EIR at pp. 1-55–57.)

Respondents' approach improperly applies so-called "mitigation" (the Cap-and-Trade Program) *before* comparing GHG emissions to the significance threshold. By combining impacts and mitigation analyses, it is unclear how the purported mitigation reduces impacts. This approach was rejected in *Lotus v. Dept. of Transportation* (2014) 223 Cal.App.4th 645, where the court stated:

The failure of the EIR to separately identify and analyze the significance of the impacts . . . before proposing mitigation measures is not merely a harmless procedural failing. . . . [T]his shortcutting of CEQA requirements subverts the purposes of CEQA by omitting material necessary to informed decisionmaking and informed public participation. It precludes both identification of potential

¹¹ It is worth noting that the Scoping Plans are not binding as to any particular CEQA methodology, or as to land use planning generally, and do not require use of any particular significance threshold. They are guidance documents; individual land use authorities can and do depart from particular suggestions in them if they have appropriate reasons to do so. The issue in this case, however, is that the Cap-and-Trade program does *not* provide such an appropriate reason.

environmental consequences arising from the project and also thoughtful analysis of the sufficiency of measures to mitigate those consequences. The deficiency cannot be considered harmless.

(*Id.* at p. 658.)

Furthermore, if the full scope of the GHG emissions attributable to the Project were compared to the applicable bright line threshold, the emissions, as mitigated, would still be substantially over the threshold—and would therefore require consideration of additional mitigation measures. (See EIR, pp. 4.7-35–36.)

Applying appropriate mitigation measures to reduce the so-called “capped” emissions would not “result in double counting and double mitigating emissions that are already mitigated through cap-and-trade” as Respondents assert. (Combined Respondents’ and Cross-Appellants’ Opening Brief at p. 57.) Gesturing towards Cap-and-Trade regulated entities is not proper mitigation because Cap-and-Trade does not apply to this Project in any way, and the Project itself has ample mitigation opportunities onsite. To mitigate this Project’s GHG emissions, Respondents would have to address emissions from mobile sources, which account for over 70% of the Project’s total emissions (which again are nearly 40 times greater than the significance threshold). (AR002729.) To reduce these emissions, fewer trucks could drive from the Project to the Ports of Long Beach and Los Angeles every day, the Project could be built closer to the ports, the Project could require more zero emission vehicles be used or provide charging equipment or incentives to encourage their use, or any number of other meaningful mitigation measures. But Cap-and-Trade does not require any of this. Such measures are instead included by local governments in local land use projects to ensure approved project impacts fall below significance thresholds. By never counting the “capped” emissions toward the significance threshold, there is *no* counting and *no*

project-level mitigation of hundreds of thousands of tons of yearly GHG emissions from this Project.

C. Respondents fail to consider the long-term GHG impacts of the Project.

The Supreme Court has made clear that an EIR should consider a project’s long-term GHG impacts, and should address whether the project as a whole is in accord with the state’s climate goals. (*Cleveland National Forest Foundation v. San Diego Association of Governments* (2017) 3 Cal.5th 497 (*SANDAG*) at p. 515.)¹² The state’s climate change goals extend beyond 2030. (See, e.g., Executive Order S-03-05 [established a statewide target of reducing GHG emissions to 80 percent below 1990 levels by 2050].) Because the Project is expected to operate for decades into the future, Respondents must account for emissions beyond 2030. But Respondents fail to account for emissions beyond that point—despite the fact that the Project’s full operation will not start until *five years later*, in 2035. (EIR at p. 4.3-61.) Respondents present no substantial evidence that any of the Project’s post-buildout operational emissions are mitigated by the Cap-and-Trade Program. (See, e.g., EIR, pp. 4.7-36–37 [stating, without citation, that “[s]ome of the project’s GHG emissions are subject to the requirements of the AB 32 Cap and Trade Program and will have a GHG allocation based on current GHG emissions levels”].) This is not an adequate CEQA analysis. (See *Oakland Heritage Alliance v. City of Oakland* (2011) 195 Cal.App.4th 884, 904 [EIR must contain substantial evidence that mitigation measures will reduce associated impacts to less-

¹² The parties in *AIR v. Kern* did not have the opportunity to brief the significance of *SANDAG* because the California Supreme Court filed its opinion in *SANDAG* over a month after the close of briefing in *AIR v. Kern*. It appears to amici that this is the first case at the California Court of Appeal where parties have had the opportunity to address both *SANDAG* and *AIR v. Kern* in their briefs.

than-significant-levels, such as by requiring compliance with applicable regulatory standards and preparation of site-specific studies]; Cal. Code Regs. tit. 14, § 15370, subd. (d) [“mitigation” includes “[r]educing or eliminating the impact over time by preservation and maintenance operations during the life of the action”].)

D. Reliance on *AIR v. Kern County* is improper.

Respondents incorrectly claim the Fifth Appellate District’s decision in *Association of Irrigated Residents v. Kern County Bd. of Supervisors* (2017) 17 Cal.App.5th 708 (*AIR*) upheld the use of the same GHG methodology as Respondents attempt to use here. (Combined Respondents’ and Cross-Appellants’ Opening Brief at p. 53.) Respondents’ use of the Cap-and-Trade Program here goes far beyond what was sanctioned in *AIR*. In *AIR*, the project being evaluated under CEQA was a refinery, a *covered entity* under Cap-and-Trade. The court held a lead agency was authorized “to determine that a project’s greenhouse gas emissions will have a less than significant effect on the environment based on *the project’s* compliance with the cap-and-trade program.” (*Id.* at p. 718; italics added.) Regardless of whether or not *AIR* was rightly decided, *here*, the question is much simpler and different from the question before the court in *AIR*. Here, it is undisputed that the Project is *not* a covered entity required to comply with the Cap-and-Trade Program. (Cal. Code Regs., tit. 17, § 95811.) Accordingly, this Court need only decide if projects that are *not* covered entities under Cap-and-Trade are nonetheless allowed to use the program to ignore significant GHG emissions they cause. The answer to that question is no.

Respondents argue the distinction between covered and non-covered entities is “a distinction without a difference.” (Combined Respondents’ and Cross-Appellants’ Opening Brief at p. 63.) Respondents are incorrect.

This distinction is crucial under CEQA and vital to the success of California’s ambitious climate policies.

From a CEQA perspective, the distinction is important because CEQA Guidelines section 15064.4, subdivision (b)(3) instructs lead agencies to consider the extent to which *a project* complies with GHG regulations or requirements. It is thus inappropriate for entities downstream in the chain of commerce from a covered entity to rely upon compliance with the Cap-and-Trade Program as a basis for avoiding analysis of project-related emissions.

From a policy perspective, as described above, the distinction is crucial because projects that are not subject to the Cap-and-Trade Program do not have the same direct incentives to reduce their GHG emissions as covered facilities, and Cap-and-Trade alone is not designed to achieve California’s ambitious climate goals. The distinction between covered and not-covered entities is thus crucial to the portfolio of climate change measures the state is relying on to protect our citizens going forward.

E. Respondents’ GHG analysis obfuscates the climate change impacts of this Project, undermining CEQA’s public disclosure purpose.

By failing to comply with CEQA Guidelines Section 15064.4, failing to compare all of the Project’s emissions to the GHG emissions threshold, and failing to consider the long-term GHG impacts of the Project, Respondents’ analysis undermines the informational purpose of CEQA. The purpose of an EIR “is to inform the public generally of the environmental impact of a proposed project.” (Cal. Code Regs. tit. 14, § 15003, subd. (c).)

CEQA prohibits public agencies from approving or carrying out a project that will have significant effects on the environment unless the agency makes “findings” demonstrating either that it made changes to the

project to avoid or mitigate those significant impacts, or that certain overriding considerations outweigh the impact. (Pub. Resources Code, § 21081.) Without a full and accurate disclosure of the Project’s impacts, Respondents erroneously concluded that the GHG impact would be less-than-significant, and thereby avoided making the subsequent findings that would inform the public whether the Project’s significant impacts are unavoidable and/or justified. Additionally, Respondents’ approach hinders the public’s ability to submit informed comments during the EIR’s public comment period—aside from addressing the *lack* of analysis—because the public is not provided with, and thus cannot evaluate, complete information or proper CEQA analysis.

CONCLUSION

California is striving on all fronts to meet its ambitious, long-term GHG reduction objectives; the health of its citizens and the environment depend on it. But this Court’s approval of Respondents’ approach to GHG analysis and mitigation would treat the Cap-and-Trade Program as the sole remedy to limit GHG emissions from land-use projects, placing unnecessary strain on Cap-and-Trade’s cost-effectiveness and seriously undermining the state’s critical climate change efforts. Amici respectfully request this Court reject the trial court’s holding and find in favor of Appellants as to GHG analysis.

Re: NOTICE OF COMPLETION - Revised Final Environmental Impact Report (Revised Final EIR) (2012021045); Agenda Item No. 2 on May 14, 2020 Planning Commission Meeting (World Logistics Center Project Development Agreement, Tentative Parcel Map for Finance and Conveyance Purposes only with Certification of the Recirculated Revised Final Environmental Impact Report)

Dear Ms. Descoteaux:

I respectfully submit the following comments to the 2020 Revised Final Environmental Impact Report (“Revised FEIR”) for the World Logistics Center Project (“WLC” or “Project”), in addition to the World Logistics Center Project Development Agreement, Tentative Parcel Map for Finance and Conveyance Purposes Only. Please present these comments and the attachments to the Planning Commission prior to hearing this matter.

As described in the Revised FEIR, this Project entails construction of the largest warehouse development in the nation. For a development of this magnitude, it is vital to properly disclose the environmental consequences of the proposed action and to identify and adopt all feasible mitigation measures and alternatives. Unfortunately, the Revised FEIR continues to fail in its duty to comply with the California Environmental Quality Act (“CEQA”). As such, the City cannot rely on the environmental review contained in the document for the purpose of Project approval, and must require preparation and circulation of a new Recirculated Draft Environmental Impact Report (“Recirculated DEIR”) to allow the public and decision-makers an opportunity for meaningful review of the Project’s impacts, prior to issuing any Project approvals.

I. The Air Quality Analysis Continues To Be Flawed.

The various versions of the EIR constantly have sought to understate air quality impacts from this project. But, high levels of emissions and impacts will result from this Project. The thousands of trucks and other vehicles associated with this project will harm a large area of the region with impacts to local residents in the project vicinity most acutely. The decision on this Project is being based on a flawed air quality analysis.

For example, the Statement of Overriding Considerations concludes “[c]urrently, the 2016 AQMP is being reviewed by the U.S. EPA and CARB. Until the approval of the EPA and

CARB, the current regional air quality plan is the Final 2012 AQMP adopted by the SCAQMD on December 7, 2012. Therefore, consistency analysis with the 2016 AQMP has not been included.” Statement of Overriding Considerations, at 151. This is wrong. The EPA approved the 2016 AQMP on October 1, 2019. 84 Fed. Reg. 52005 (Oct. 1, 2019). Therefore, the EIR must analyze the projects compliance against the 2016 AQMP. Moreover, conclusory statements about compliance with the 2016 AQMP are not sufficient. The Revised FEIR and the Statement of Overriding Considerations must actually analyze compliance with this most recently approved air plan.

The Revised FEIR also continues to ignore the feasibility of implementing zero-emission technologies, including zero-emission trucks – amongst many classes (ie class 2-8) – as a mitigation measure. The Revised FEIR notes “[t]he mitigation measures adopted included some of the suggestions from [California Air Resources Board’s (“CARB”)] previous letters, but do not include the zero-emission technology requirements. Subsequent environmental review may require that specific technology that work with future users be required as condition of approval, but a broad requirement that unknown future users use a specific technology is not currently feasible since current zero-emission technology is very limited in medium-duty and heavy-duty trucks.” Revised FEIR, at 89.

The Revised FEIR’s dismissal of zero-emissions technologies for a project that spans decades based on an analysis from the past is not supported by CEQA. The Revised FEIR notes that “[t]he status of zero-emission technology was addressed in the responses to both of CARB’s previous letters. Essentially, as CARB’s ongoing multi-year planning (not implementation) effort on the Sustainable Freight Plan to lay out pathways to get to a zero-emission freight sector demonstrates, there are no commercially available technology zero-emission on-road heavy-duty trucks available and as CARB’s own progress report on heavy-duty technology and fuels assessment states zero- and non-zero emission technologies are still at the demonstration phase.” Revised FEIR, at 89. This basis is largely based on an analysis completed by CARB in 2015.

In fact in a more recent fact sheet from the Air Resources Board, the commercial availability is answered with the following:

Are any zero-emission trucks commercial available?

There are more than 70 different models of zero-emission vans, trucks, and buses that already are commercially available from several manufacturers. Most trucks and vans operate less than 100 miles per day and several zero-emission configurations are available to serve that need. As technology advances, zero-emission trucks will become suitable for more applications. Most major truck manufacturers have announced plans to introduce market ready zero-emission trucks in the near future.

California Air Resources Board, Advanced Clean Trucks Accelerating Zero-Emission Truck Markets, available at <https://ww2.arb.ca.gov/sites/default/files/2019-07/190521factsheet.pdf>. In fact, CARB feels comfortable enough with this feasibility of zero-emission trucks that next month it will adopt the Advanced Clean Trucks Rule, which will require manufacturers to produce zero-emission trucks starting as soon as 2024. The Revised FEIR never explains with substantial evidence why zero-emission trucks for any of the classes that will visit this Project

are infeasible to be used at the project start for a portion (or all) of the trucks servicing the new warehouses as they are built. And the Revised FEIR also does not provide substantial evidence why these zero-emission technologies cannot be used out into the future when CARB will require manufacturers to make zero-emission trucks across a broad class of trucks. *See* CARB, Proposed Amendments to the Proposed Clean Trucks Regulation, *available at* <https://ww3.arb.ca.gov/regact/2019/act2019/30daynotice.pdf>. The Revised FEIR failure to address new data on feasibility of zero-emission trucks, including addressing the forthcoming sales mandate from CARB, violates CEQA.

II. The Revised FEIR Fails to Adequately Disclose, Analyze the Significance of, and Provide Mitigation for the Project’s Significant Climate Impacts.

The City’s review of this Project’s climate and greenhouse gas (“GHG”) emissions impacts has always been fatally flawed, as outlined in numerous prior comment letters, which are hereby incorporated by reference. The sufficiency of that analysis is now pending before the California Court of Appeal. Now, in a final EIR released only days before the Planning Commission once again considers Project-related approvals, the City and developer have proposed an entirely new strategy for analyzing and mitigating GHG emissions. The new strategy, like the old, fails to satisfy CEQA’s requirements.

a. Legal Standards

The City’s determinations regarding the significance of greenhouse gas (“GHG”) emissions and the effectiveness of mitigation must be based on a correct interpretation of the law. (See, e.g., *City of San Diego v. Board of Trustees of California State University* (2015) 61 Cal.4th 945, 956 [agency’s use of erroneous legal standard constitutes a failure to proceed in a manner required by law].) Moreover, because the FEIR continues to use a quantitative threshold as the basis for its significance determination,¹ there must be specific, quantitative evidence to support a conclusion that mitigation measure (“MM”) 4.7.7.1 will actually reduce Project emissions sufficiently to achieve compliance with that threshold. (See *Center for Biological Diversity v. California Department of Fish & Wildlife* (2015) 62 Cal.4th 204, 227-28.) And even to the extent the FEIR is still relying on the prior threshold of 10,000 metric tons CO₂-equivalent (“MM CO_{2e}”) per year, the same quantitative evidentiary standard controls.

CEQA establishes strict standards for mitigation. “Mitigation measures must be fully enforceable through permit conditions, agreements, or other legally binding instruments.” CEQA Guidelines § 15126.4(a)(2). Development of specific mitigation measures may be deferred only if the agency makes an enforceable commitment to mitigation and adopts specific performance

¹ The EIR contains two independent thresholds of significance. (See Draft Recirculated Revised Sections of the Final Environmental Impact Report at 4.7-18.) Exceedance of either threshold would result in significant climate impacts. Accordingly, the City and developer may not dismiss fatal flaws in the EIR’s analysis of one threshold by attempting after the fact to rely solely on the other.

standards that measures must meet. (CEQA Guidelines § 15126.4(a)(1)(B); *King and Gardiner Farms, LLC v. County of Kern* (2020) 45 Cal.App.5th 814, 857-58.)

Proposals for the use of offsets or carbon credits as CEQA mitigation must be evaluated in light of other state statutes addressing these instruments. When it adopted Assembly Bill 32 (“AB 32”) in 2006, the Legislature established standards for greenhouse gas offsets used in any statewide Cap-and-Trade system: (1) they must be “real, permanent, quantifiable, verifiable,” and “enforceable” by the California Air Resources Board (“CARB”); and (2) they must be “in addition to any greenhouse gas emission reduction otherwise required by law or regulation, and any other greenhouse gas emission reduction that otherwise would occur.” (Health & Safety Code, § 38562(d)(1), (2).) CARB adopted regulations applying these standards to carbon credits issued by private “registries”—essentially carbon market brokers—who wish to sell credits for use within the Cap-and-Trade system. (*See* Cal. Code Regs., tit. 17, §§ 95970(a), 95971, 95972.)

Evaluating compliance with these standards requires substantial expertise and rigorous analysis. CARB follows a detailed regulatory process in an effort to establish that offset “protocols”² intended for Cap-and-Trade compliance meet statutory and regulatory requirements. (See CARB, *California Air Resources Board’s Process for the Review and Approval of Compliance Offset Protocols in Support of the Cap and Trade Regulation* (May 2013), at <https://ww3.arb.ca.gov/cc/capandtrade/compliance-offset-protocol-process.pdf> (visited May 10, 2020); attached as Exhibit A.) Offset credits must represent greenhouse gas reductions that are “permanent” (i.e., will last at least 100 years), “conservatively quantified to ensure that only real reductions are credited,” independently verifiable, and enforceable through “clear monitoring requirements that can be ... enforced by ARB.” (AR 1383:66171.) Offsets also must be “additional, or beyond any reduction required through regulation or action that would have otherwise occurred in a conservative business-as-usual scenario”; this would exclude any “project type that includes technology or GHG abatement practices that are already widely used.” (*Ibid.*; see also *id.*, pp. 66174-75.)

b. Mitigation Measure 4.7.7.1 Fails to Satisfy CEQA’s Requirements

MM 4.7.7.1 falls far short of CEQA’s standards for adequate mitigation. Any finding that the Project’s climate impacts would be less than significant based on implementation of MM 4.7.7.1 would lack both evidentiary and legal support.

i. Mitigation Measure 4.7.7.1 Cannot Support a Conclusion that the Project’s GHG Emissions Will Be Less Than Significant.

MM 4.7.7.1 proposes that the Project’s massive GHG emissions be mitigated through “proof” of either “offsets” or “carbon credits.” (FEIR 1a at 755-56.) As a threshold matter, the

² “Protocols” are, in effect, the rules offset projects must follow. CARB defines an “offset protocol” as “a documented set of procedures and requirements to quantify ongoing GHG reductions or GHG removal enhancements achieved by an offset project and calculate the project baseline. Offset protocols specify relevant data collection and monitoring procedures, emission factors, and conservatively account for uncertainty and activity-shifting and market-shifting leakage risks associated with an offset project.” (Cal. Code Regs., tit. 17, § 95802.)

difference between “offsets” and “carbon credits” is not explained. “Offsets” appear to be purported GHG reductions from projects *other* than those listed by a registry or conducted pursuant to any established protocol or other recognized mechanism for reducing emissions. Yet MM 4.7.7.1 provides no standards for the City’s Planning Official to use in determining whether such “offsets” are “real, permanent, additional, quantifiable, verifiable, and enforceable by an appropriate agency.” These determinations require rigorous, transparent review and substantial expertise, as reflected in CARB’s Cap-and-Trade regulations and protocol review process. There is no evidence that “the City’s Planning Official” has the expertise or capacity to ensure compliance with or enforcement of these standards. Nor does MM 4.7.7.1 provide any performance standards to guide the Planning Official’s determinations. It also appears that the Planning Official would reach his or her determinations without any public or expert review—in short, without any transparency whatsoever. Finally, to the extent MM 4.7.7.1 would apply similar criteria to “offsets” and “carbon credits,” it cannot ensure compliance with those criteria for the reasons discussed below. As a result, MM 4.7.7.1’s reliance on “offsets” is vague, unenforceable, ineffective, improperly deferred, and inadequate under CEQA.

The “carbon credits” provisions of MM 4.7.7.1 similarly are unsupported by either law or evidence.

First, there is no evidence MM 4.7.7.1 will result in effective mitigation. Although MM 4.7.7.1 lists the basic criteria required under Health and Safety Code section 38562(d)(1) and (2), it requires the City to “conclusively presume[.]” that these criteria are satisfied by any offset credit purchased from “a carbon registry approved by the California Air Resources Board.” (FEIR 1a at 756 [listing without limitation “Climate Action Reserve, American Carbon Registry, Verra [formerly Verified Carbon Standard] or GHG Reduction Exchange (GHG RX)”.]) The City cannot simply presume that every carbon credit purchased from one of these registries will meet the referenced criteria. On the contrary, to support such a conclusion, the City would need to identify substantial evidence showing that each and every credit generated under each and every protocol used by each and every registry “approved” by CARB, now or in the future, would meet these criteria. No such evidence exists. Indeed, MM 4.7.7.1’s reliance on a conclusive presumption is a tacit concession that no such evidence exists.

Tellingly, MM 4.7.7.1 and CARB take complete opposite approaches to review of voluntary market carbon credits marketed by private registries. CARB does not simply presume all credits issued by specified registries are adequate, as MM 4.7.7.1 would require the City to do. Nor does CARB take registries at their word that all of their protocols meet state requirements. Rather, CARB independently evaluates each protocol through a full regulatory process in order to determine whether it complies with state standards. (See generally 17 Cal. Code Regs. §§ 95970-95972; see also Exhibit A.) Using these procedures, CARB has approved only six protocols for use in the Cap-and-Trade system over the last 10 years. (CARB, Compliance Offset Program, at <https://ww3.arb.ca.gov/cc/capandtrade/offsets/offsets.htm> (visited May 8, 2020).) And, as discussed below, CARB’s approved protocols remain beset by serious questions as to their adequacy and efficacy despite this process. MM 4.7.7.1, on the other hand, completely abandons any pretense of review or oversight. It would *require* the City to accept credits generated under any protocol listed by any registry, without any review

whatsoever of whether those credits or the protocols they were generated under satisfy the measure's stated criteria, and without any ability even to question whether the credit is adequate.

Second, CARB "approval" of a registry does not establish anything about the quality of carbon credits sold by that registry on the voluntary market. The reference to CARB approval in MM 4.7.7.1 is therefore deeply misleading.³ The fact that a registry is "approved by CARB" does not establish that voluntary market carbon credits sold by that registry satisfy the criteria listed in MM 4.7.7.1. CARB approval of a registry to list Cap-and-Trade-compliant credits does not entail CARB review or approval of other protocols used or credits listed by that registry; CARB's procedures for approving compliance protocols and authorizing registries to list credits generated under those protocols are entirely separate. (Compare 17 Cal. Code Regs. §§ 95970-95972 [CARB compliance protocol approval process] with *id.*, § 95986 [establishing conflict of interest, insurance, expertise, and other business requirements for registries that list Cap-and-Trade compliance credits].) At best, MM 4.7.7.1's reference to "approved" registries reflects a misinterpretation of CARB's regulations and their application (or lack thereof) to the quality of offsets traded on the voluntary market; at worst, it reflects an intentional effort to mislead decision-makers and the public. Either way, the measure's reliance on CARB "approval" is legally erroneous. As a result, a registry's "CARB-approved" status cannot support any conclusion regarding the effectiveness of MM 4.7.7.1, the ability of registry credits to satisfy the measure's purported criteria, or the significance of the Project's impacts after mitigation.

Third, although each private registry may use a wide range of protocols or methodologies in determining which carbon credits to list for sale, the City cannot simply presume that compliance with those protocols ensures compliance with the criteria that purportedly govern MM 4.7.7.1. All GHG offsets are inherently uncertain because reductions embodied in offset credits must be compared against what would have happened without the offset project—a counterfactual scenario that cannot be tested because it will never happen. (See Haya et al. 2016, attached as Exhibit B.) Studies have shown that even the Cap-and-Trade compliance protocols adopted through CARB's regulatory process do not result in one-for-one reductions of GHG emissions. (Haya 2019, attached as Exhibit C; Anderson and Perkins 2017, attached as Exhibit D.) CARB's compliance protocols are largely based on Climate Action Reserve protocols, which suffer from the same deficiencies. Moreover, American Carbon Standard and Verra both list projects using United Nations Clean Development Mechanism ("CDM") methodologies.⁴

³ Notably, despite MM 4.7.7.1's suggestion to the contrary, the "GHG RX" registry has *not* been approved by CARB to handle transactions in Cap-and-Trade offsets. (California Air Resources Board, Offset Project Registries, at <https://ww3.arb.ca.gov/cc/capandtrade/offsets/registries/registries.htm> (visited May 8, 2020), attached as Exhibit M.) The "GHG Rx" program was developed by the California Air Pollution Control Officers Association, but it currently lists no available projects or credits available for purchase, and appears for all practical purposes to be defunct. (See CAPCOA Greenhouse Gas Reduction Exchange (GHG Rx), at www.ghgrx.org (visited May 8, 2020); attached as Exhibit N.)

⁴ See American Carbon Registry, Carbon Accounting, at <https://americancarbonregistry.org/carbon-accounting/old/carbon-accounting> (visited May 8, 2020) (generally accepting CDM methodologies with some additional review); Verra, Verified Carbon Standard Methodologies, at <https://verra.org/methodologies/> (visited May 8, 2020) (accepting "any methodology developed under the [CDM] ... for projects and programs registering with VCS).

Scientists and academic experts have long criticized CDM offset projects for their lack of additionality and other flaws. (See, e.g., Aldy and Stavins 2012, attached as Exhibit E; Cames et al. 2016, attached as Exhibit F; Haya 2009, attached as Exhibit G; He and Morse 2013, attached as Exhibit H; Wara 2008, attached as Exhibit I; Zhang and Wang 2011, attached as Exhibit J.) Carbon markets can also create perverse incentives that undermine the environmental integrity and additionality of offsets. (Schneider & Kollmuss 2015; attached as Exhibit K.)

ii. MM 4.7.7.1 Improperly Defers Formulation of Mitigation.

Because MM 4.7.7.1 defers the identification of specific measures to offset the Project’s GHG emissions (whether those measures are denominated “offsets” or “carbon credits”), it must meet CEQA’s requirements for deferred mitigation. It fails to do so. MM 4.7.7.1 lacks specific performance standards “the mitigation *will* achieve.” (CEQA Guidelines § 15126.4(a)(1)(B).) The measure’s list of basic criteria offsets and credits must satisfy does not suffice, because the measure does not establish any performance standards governing how compliance with those criteria will be measured. Performance standards must be specific, not so vague as to grant officials unfettered discretion as to whether effective mitigation will be implemented at all. See *King and Gardiner Farms*, 45 Cal.App.5th at 857-58. As discussed above, there is no evidence the voluntary market registries’ processes are designed to ensure carbon credits comply with these criteria, and the City cannot wish this lack of evidence away by “presuming” otherwise. Nor is there any evidence the City’s Planning Official can credibly implement these criteria in the absence of any performance standards, guidance, or relevant expertise in evaluating offset projects or carbon credit purchases. MM 4.7.7.1 simply requires the City to presume that whatever a developer submits is adequate. That is not a performance standard. Nor is it even an adequate commitment to ensure mitigation is implemented. MM 4.7.7.1 is improperly deferred.

iii. MM 4.7.7.1 Improperly Defers Implementation of Mitigation.

Implementation of mitigation under MM 4.7.7.1 is also improperly deferred until after emissions occur. Under CEQA, mitigation measures must be in place before an impact occurs; unmitigated impacts are not permitted before mitigation is implemented. *King and Gardiner Farms, LLC v. County of Kern* (2020) 45 Cal.App.5th 814, 860. Rather, “[o]nce the project reaches the point where activity will have a significant adverse effect on the environment, the mitigation measures must be in place.” *POET, LLC v. State Air Resources Bd.* (2013) 218 Cal.App.4th 681, 738. Accordingly, there must be substantial evidence that GHG reductions embodied in offsets or carbon credits have actually occurred prior to any GHG-emitting activity. MM 4.7.7.1 violates this requirement by allowing a developer to provide offsets or carbon credits as a condition of issuance of a certificate of occupancy. (FEIR 1a at 756). However, a certificate of occupancy cannot be issued until after grading and construction are complete and the buildings are inspected. (See generally 2019 California Building Code, tit. 24, Part 2, § 111.) By that time, all construction-related emissions will have occurred *before* mitigation is in place—a clear violation of CEQA’s prohibition against deferred implementation. Moreover, some carbon credit registries (including Climate Action Reserve) are now marketing carbon credits based on “forecasted” emissions reductions that have not yet occurred. Reliance on such credits—which MM 4.7.7.1 does nothing to restrict—also would violate CEQA’s requirement that mitigation be in place before impacts occur.

iv. MM 4.7.7.1 Is Not Adequately Enforceable.

MM 4.7.7.1 improperly eliminates any role for the City in enforcing the effectiveness of mitigation. At best, MM 4.7.7.1 relies entirely on enforcement by carbon credit registries, without identifying any evidence as to how or whether enforcement might occur, and how or whether City enforcement could serve as a backstop in the event registry enforcement fails. As a result, credits under MM 4.7.7.1 are not “enforceable by an appropriate agency” as MM 4.7.7.1 purports to require. The term “agency” as used in CEQA means a *public* agency, not a third-party broker of offset credits. (See, e.g., Pub. Resources Code §§ 21001.1, 21004, 21062, 21063, 21065, 21069, 21070.) Public agencies are ultimately responsible under CEQA for the efficacy and enforcement of mitigation measures. Public agencies must make findings regarding the significance of impacts and the incorporation of feasible mitigation measures (*id.*, § 21081), and must adopt mitigation monitoring and reporting plans that ensure implementation and enforcement of mitigation (*id.*, § 21081.6). The City cannot delegate its basic legal responsibilities under CEQA to developers, offset program operators, registries, or other third parties.

Nor can MM 4.7.7.1 be deemed enforceable by virtue of any third-party agreements that might govern the registries’ issuance of carbon credits. Under MM 4.7.7.1, it does not appear the City would even be aware of, much less be able to monitor or enforce, any agreement between an carbon credit project developer and the registry listing the credits. And even if any such agreement were capable of being enforced by the registry (for example, where an offset project violated the agreement and credits issued by that project were subsequently invalidated), MM 4.7.7.1 contains no mechanism that would require the developer to provide additional credits or take any other action. As the California Attorney General pointed out in a recent amicus brief addressing a substantively similar mitigation measure proposed by the County of San Diego, such measures “lack any adequate criteria to ensure enforceability of the offsets purchased....” (Amicus Brief of the California Attorney General in Support of Petitioners and Respondents, *Sierra Club, et al. v. County of San Diego*, Cal. Ct. App., Fourth Dist., Div. 1, Case No. D075478 (filed Oct. 29, 2019), attached as Exhibit L.) MM 4.7.7.1 improperly abdicates the City’s basic enforcement responsibility.

v. MM 4.7.7.1 Appears to Arbitrarily Limit Mitigation Obligations to 30 Years.

Although MM 4.7.7.1 is not entirely clear on this point, it appears that the developer’s mitigation obligations may be limited to “construction and 30-years operation [*sic*] of all Project facilities.” (FEIR 1a at 756 [citing Tables 4.7-8 and 4.7-16].) Yet nothing in the FEIR appears to limit the Project’s operations to a 30 years following buildout. Accordingly, the FEIR’s conclusion that MM 4.7.7.1 will reduce Project emissions to “net zero” is unsupported. Moreover, as the California Attorney General pointed out in its *Sierra Club v. County of San Diego* amicus brief, developments like the Project that increase VMT result in “structural” GHG emissions that likely will continue well beyond 2050, jeopardizing the state’s ability to meet its

long-term emissions reduction goals.⁵ (See Exhibit L at 22-23.) Mitigation obligations must continue throughout the life of the project.

vi. The FEIR Fails to Address Potentially Significant Impacts of Mitigation.

The FEIR adds an entirely new mitigation strategy, but fails to address any of the environmental impacts of that strategy. CEQA requires analysis of potentially significant impacts that could occur from implementation of mitigation measures. (CEQA Guidelines § 15126.4(a)(1)(D).) Two offset project types generating large shares of offsets on the voluntary offset market globally can have significant environmental and social impacts. Large hydropower projects often impact river water quality and river ecosystems (Haya & Parekh 2011; attached as Exhibit O). Numerous articles have documented the impact that avoided deforestation offset projects have had by displacing forest communities or barring forest communities from their traditional use of the forest. (See, e.g. Kansanga & Luginaah 2019, attached as Exhibit P; Beymer-Farris & Bassett 2012, attached as Exhibit Q.) Researchers also have identified severe adverse environmental and social effects from international forest carbon projects. (See, e.g., Cavanagh & Benjaminsen 2014, attached as Exhibit R.) In the United States and around the world, solar and wind energy projects, livestock digesters, and solid waste to energy projects—all of which are eligible carbon offset projects under various registry protocols—can damage wildlife habitat and increase air pollution. The FEIR’s complete omission of any analysis of these readily foreseeable environmental impacts is legal error and also deprives the FEIR of any evidentiary support.

c. The FEIR Must Be Recirculated for Full Public Review and Comment.

The FEIR contains significant new information and must be recirculated for public review and comment before being considered by the City. (CEQA Guidelines § 15088.5.) The FEIR reflects a fundamental change in how climate impacts are disclosed, analyzed, and mitigated. Prior to release of the FEIR, environmental review for this Project assumed that all GHG emissions with some tenuous connection to the state’s Cap-and-Trade system (what the FEIR still misleadingly calls “capped” emissions) could be dismissed as less than significant. Now, with the California Court of Appeal poised to rule on the correctness of this argument, the City and the developer have switched strategies entirely, substituting a “net zero” analysis for the EIR’s previous “capped emissions” analysis.

Recirculation is required here for at least two reasons. First, the FEIR’s new analysis, however conditional, shows that prior versions of the EIR were fundamentally inadequate. By including a brand new mitigation strategy in the FEIR only a few days before the Planning Commission hearing, the City has thwarted meaningful public comment on significant new information raising complex new issues. Recirculation is required on this basis alone. Second, the FEIR’s new analysis in reveals that impacts previously dismissed as insignificant before mitigation are, in fact, significant. Table 4.7-5 as it appeared in the Draft Recirculated Revised

⁵ This aspect of the Project also deprives the FEIR’s conclusions under the second threshold of significance for climate impacts (interference with policies or plans) of support.

Sections of the Final Environmental Impact Report measured only “Total Uncapped” Project emissions in applying the 10,000 MT CO₂e/year significance threshold. (DRRSFEIR at 4.7-27 to 4.7-28.) The table thus concluded that emissions for 2020 through 2023 would be less than significant without mitigation, even though “Total Capped” emissions exceeded 10,000 MT CO₂e for each year. (*Ibid.*) The FEIR, in contrast, at least conditionally considers all Project emissions—both “capped” and “uncapped”—in applying the 10,000 MT CO₂e/year threshold. By this measure, Project emissions for 2020 through 2023 would exceed the 10,000 MT CO₂e threshold in each year, and thus would be significant before mitigation. The FEIR may not dismiss this impact by concluding that MM 4.7.7.1 will prevent any significant impact after mitigation; the significance of impacts must be disclosed and analyzed prior to development and incorporation of mitigation measures, not after. avoidance (See *Lotus v. Department of Transportation* (2014) 223 Cal.App.4th 645, 655-58.) The FEIR must be recirculated.

III. The Revised FEIR’s Continued Reliance on the Cap and Trade Program to Cover the Vast Majority of GHG Emissions Remains Unlawful.

The Response to Comments in the Revised FEIR does not resolve the significant critiques to the GHG analysis. In fact, it doubles down on the flawed approach of using cap and trade as a mechanism to disguise the vast majority of GHG emissions from this Project. This letter solely addresses a few new items included in the Revised FEIR.

Importantly, the California Air Resources Board, the agency responsible for implementation of AB 32 and the Cap-and-Trade Program, has stated several times that the “[Cap-and-Trade] Program does not, and was never designed to, adequately address emissions from local projects and CEQA does not support a novel exemption for such emissions on this ground.”⁶ In fact, this issue was raised in the Final Statement of Reasons for the 2018 revisions to the California Environmental Quality Act Guidelines where the Building Industry Association made the following request:

Comment 44.37

Guideline 15064.4. Analyzing Impacts from Greenhouse Gas Emissions

Consistent with *Association of Irrigated Residents v. Kern County Board of Supervisors* (2017) 17 Cal.App.5th 708, the following sentence should be added at the end of subsection (b)(3): “Project-related greenhouse gas emissions resulting from sources subject to the cap-and-trade program shall not be considered when determining whether the project-related emissions are significant.”⁷

The Natural Resources Agency emphatically rejected this comment from the Building Industry Association in stating the following:

⁶ Letter from California Air Resources Board to Moreno Valley, September 7, 2018, *available at* https://ww3.arb.ca.gov/toxics/ttdceqalist/logisticsfeir.pdf?_ga=2.143040245.1938875667.1580500719-1770248365.1564513994.

⁷ California Natural Resources Agency, Final Statement of Reasons for Regulatory Action Amendments to the State CEQA Guidelines, OAL Notice File No. Z-2018-0116-12, Exhibit A. at p. 219 (November 2018) *available at* http://resources.ca.gov/ceqa/docs/2018_CEQA_ExA_FSOR.pdf.

Response 44.37

The Agency declines to make any changes in response to this comment. The decision in *Association of Irrigated Residents v. Kern County Board of Supervisors* (2017) 17 Cal.App.5th 708 (“AIR v. Kern”) is from one state appellate court and has not been consistently applied by any other appellate courts. Moreover, the Agency finds that the case does not support the suggested addition. The holding in that case is limited to its facts. That court held only that the CEQA Guidelines may authorize a lead agency to determine that a project's greenhouse gas emissions will have a less than significant effect on the environment based on the project's compliance with the Cap-and-Trade program. The project in that case was directly regulated by the Cap-and-Trade program. The decision did not hold that all emissions from may be subject to the Cap-and-Trade regulation at any point in the supply chain are exempt from CEQA analysis, regardless of how those sources are used by the project.⁸

The Natural Resources Agency further elaborated referencing the Air Resources Board’s letter on the exact project studied in the Draft Recirculated FEIR.

The Agency notes that the California Air Resources Board (CARB) has prepared an extensive legal analysis setting forth why the Cap-and-Trade program does not excuse projects from CEQA’s analysis and mitigation requirements, including emissions from vehicular trips or energy consumption from development projects. (This analysis, prepared by CARB as CEQA comments regarding a major freight logistics facility, is available at <https://www.arb.ca.gov/toxics/ttdceqalist/logisticsfeir.pdf>.) The Agency further notes that CARB’s analysis is consistent with this Agency’s discussion of how greenhouse gas regulations factor into a CEQA analysis of greenhouse gas emissions. (See Final Statement of Reasons (SB 97), December 2009, at p. 100 (“Lead agencies should note ... that compliance with one requirement, affecting only one source of a project’s emissions, may not necessarily support a conclusion that all of the project’s emissions are less than significant”).)

The effect of existing regulations is addressed further in the updates to Sections 15064(b) and 15064.7 of the CEQA Guidelines.⁹

Thus, the agency responsible for implementation of AB 32 and the Cap-and-Trade Program, in addition to the agency responsible for drafting the CEQA Guidelines the Draft Recirculated FEIR relies upon for authority disagrees with the approach taken by the City to rely on Cap-and-Trade for all transportation and energy emissions.

Instead of adhering to the position of the relevant agency, the Revised FEIR continues to rely on two agencies that deserve no deference on this issue. But, even if these agencies positions were entitled to deference on this issue, which they are not, the evidence in the record is flawed. The Revised Final EIR includes new attachments A and B, which are the specific South Coast AQMD Documents relied upon for the conclusion to support the use of cap and trade to erase

⁸ *Id.*

⁹ *Id.*

transportation and energy emissions. Importantly, both of these documents are from 2014. Since that time, the South Coast has produced several other CEQA documents. In fact, in the most recent document from 2020, they do not use this same approach of arguing emissions from transportation will be addressed under the cap and trade program. See South Coast AQMD, Phillips 66 Los Angeles Refinery Ultra Low Sulfur Diesel Project Environmental Impact Report, available at <http://www.aqmd.gov/docs/default-source/ceqa/documents/permit-projects/2020/01-feir-chapters1-7.pdf?sfvrsn=6>. The Developer asked the South Coast to weigh in on its settlement in Attachment Q, so it is unclear why the Developer failed to ask whether the South Coast AQMD continues to use this clearly flawed cap and trade rationale for transportation and energy-related emissions. In reviewing the other CEQA documents where the South Coast AQMD was a lead agency, I could not find other instances of this approach being used after 2014.

In the context of the San Joaquin Valley APCD document, the Revised FEIR fails to explain the relevance of an agency interpretation that has no nexus to this Project. Because of this, the City must recirculate a Draft EIR to properly disclose the significant climate pollution impacts from this Project.

IV. The FEIR Must Be Recirculated Before Project Approval and Certification.

Under CEQA, an EIR must be re-circulated for review and comment whenever significant new information becomes known to the lead agency and is added to the EIR after public notice of the availability of the draft document has been made, and before the EIR is certified. Pub. Res. Code § 21092.1. Under such circumstances the lead agency is specifically required to re-notice the environmental review document to the public and all responsible agencies, and is required to obtain comments from the same, before certifying the document's impacts and alternatives analyses as well as any mitigation measures. See *id.*; see also, Pub. Res. Code § 21153. A lead agency's decision not to recirculate an EIR must be supported by substantial evidence. Cal. Code Regs. tit. 14 ("CEQA Guidelines" or "Guidelines") § 15088.5(e). "Significant new information" includes any information regarding changes in the environmental setting of the project under review. Guidelines § 15088.5(a). It also includes information or data that has been added to the EIR and is considered "significant" because it deviates from that which was presented in the draft document, depriving the public from a meaningful opportunity to comment upon a significant environmental effect of the project, or a feasible way to mitigate or avoid such an effect at the time of circulation of the draft. *Id.* Some examples of significant new information provided in the CEQA Guidelines are: "(1) information relating to a new significant environmental impact that would result from the project or a new mitigation measure; (2) a substantial increase in the severity of an environmental impact [that] would result unless mitigation measures are adopted; and (3) any feasible alternative or mitigation measure considerably different from others previously analyzed ..." Guidelines § 15088.5 (a)(1)-(3). Recirculation is further required where the draft EIR is "so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded." Guidelines § 15088.5 (a).

The required re-noticing and new comment period for a re-circulated EIR is essential to meeting CEQA's procedural and substantive environmental review requirements, as the EIR's

assessment of a project's impacts, mitigation measures and alternatives and the public's opportunity to weigh in on the same is at the heart of CEQA. *Laurel Heights Improvement Assn. v. Regents of University of California* (1993) 6 Cal.4th 1112, 1123. Where new information is added to an EIR in such a way as to highlight informational deficiencies in the draft document's environmental impacts, mitigation and alternatives analyses, the public must be allowed the opportunity and additional time to comment on the changes made in the final document's analyses. Moreover, where significant new information that is added to the EIR's assessment of a particular impact area falls within the purview of another responsible agency's area of expertise that agency must also be allowed a meaningful opportunity to review and respond to such new information and any changes implicated in the EIR's analyses.

While re-circulation is indeed an exception and not the rule in the preparation of final environmental review documents, it is an exception that must be invoked here – where the absence of significant information rendered the draft EIR ineffective in meeting CEQA's substantive mandates, and now, where included, the addition of significant new information substantially changes the FEIR's analyses and conclusions regarding the Project's impacts, feasible alternatives and required mitigation. *Laurel Heights Improvement Assn. v. Regents of Univ. of Cal.* (1993) 6 Cal.4th 1112, 1132. As stated in numerous comments to the various versions of the EIR, that document failed to provide critical information regarding the project area and scope of the project's impacts; it failed to adequately describe fundamental information relating to the phasing and timing of the project's massive structural and infrastructural developments; it lacked adequate detail specifically regarding the construction and operations phases of the project; and it contained analyses and mitigation measures relating to the Project's air quality, traffic, human health and biological resources impacts based on outdated or inapplicable studies and data. In some instances the Revised FEIR erratically and arbitrarily includes selective new data into its analysis of the Project's impacts and mitigation measures, and in others critical information remains absent from the document. Whether referenced in the Revised FEIR as new information, or wholly omitted from the document's analyses, the addition of such information is essential to the public's ability to participate in the environmental review process. The Revised FEIR must therefore be re-drafted and re-circulated document to provide the public at large and the Project's numerous other responsible agencies with more time to review and analyze the Project's impacts and to assess or prescribe necessary mitigation measure to minimize those impacts. The City cannot render a determination on the issuance of the project approvals under consideration until such recirculation occurs, and CEQA compliance is assured.

V. The Draft Statement of Overriding Considerations is Unsupported by Substantial Evidence and Fails To Justify the Project's Significant Impacts and Interference with Health Protective Air Quality Standards Attainment

The Statement of Overriding Considerations is insufficient to justify the Project's significant and unavoidable impacts for the reasons explained below. The statement's terms are insufficiently analyzed in both the draft EIR and in the Revised FEIR. Moreover because the Revised FEIR as a whole suffers from serious deficiencies that taint the whole of the analyses contained in the document, the draft statement cannot adequately weigh the Project's adverse, significant impacts with the espoused benefits from the Project contained in any statement of overriding considerations. *Vedanta Society of So. California v. California Quartet, Ltd.* (2000)

84 Cal.App.4th 517, 530 (a project with significant and unmitigated environmental impacts can only be approved when “the elected decision makers have their noses rubbed” in the Project’s environmental effects, and still vote to move forward). As such the statement and its purported benefits must be rejected.

As the lead agency for the Project, if the City is to approve a project of this magnitude, and with the unmitigated significant environmental and human health impacts that the Project will cause, it “must adopt a statement of overriding considerations.” Pub Res. Code § 21081, subd. (b); Guidelines, § 15093. In contrast with mitigation and feasibility findings, overriding considerations can be “larger, more general reasons for approving the project, such as the need to create new jobs, provide housing, generate taxes, and the like.” *Concerned Citizens of South Central L.A. v. Los Angeles Unified School Dist.* (1994) 24 Cal.App.4th 826, 847. Yet, like mitigation and feasibility studies, a statement of overriding consideration is also subject to a substantial evidence standard of review. *Sierra Club v. Contra Costa County* (1992) 10 Cal.App.4th 1212, 1223; Guidelines § 15093, subd. (b).” Thus, an agency's unsupported claim that the project will confer general benefits is insufficient, and the asserted overriding considerations must be supported by substantial evidence in the FEIR or somewhere in the record. *Sierra Club v. Contra Costa County* (1992) 10 Cal.App.4th 1212, 1223; Guidelines § 15093, subd. (b).”

As part of the EIR review process, statements of overriding consideration are intended to “vindicate the ‘right of the public to be informed in such a way that it can intelligently weigh the environmental consequences’ of a proposed project[;]” and they must make a good-faith effort to inform the public of the risks and potential benefits of the Project whose approval is proposed. *Woodward Park Homeowners Ass'n, Inc. v. City of Fresno* (2007) 150 Cal.App.4th 683, 717-718 (citing *Karlson v. City of Camarillo* (1980) 100 Cal.App.3d 789, 804).

In accordance with this standard, before approving the Project and the FEIR the City must show that it has considered each of the Project’s significant and unavoidable impacts in light of *each* of the alleged overriding considerations that it asserts will justify those impacts. *Cherry Valley Pass Acres & Neighbors v. City of Beaumont* (2010) 190 Cal.App.4th 316, 357 (upholding a statement of overriding consideration on the basis that “the City found the project had eight benefits, each of which ‘separately and individually’ outweighed its unavoidable impacts). Thus, the City must specifically consider and set forth overriding considerations to justify the Project’s significant and unavoidable direct indirect and cumulative impacts in each of the following areas: aesthetics, land use and biological resources, noise, traffic and air quality.

The statement of overriding consideration attached to the FEIR asserts two general areas of benefits that it asserts outweigh the Project’s significant and detrimental, un-mitigated impacts: (1) an increase in jobs that improves the job to housing ratio in the City of Moreno Valley, and (2) an increase the in the City’s overall tax revenue, which could be used to improve schools and confer other public benefits to the residents of the City. Any additional public benefits that the draft statement assumes may result from approval of the Project flow from one of those two underlying considerations.

These two alleged benefits are, however, based on erroneous assumptions that (a) the

Project will bring secure, desirable and certain jobs to the City of Moreno Valley; and (b) that the environmental degradation caused by the Project's significant and unavoidable impacts will not outweigh the benefits conferred by the Project in monetary terms, or based on any other form of valuation methodologies. While the draft statement sites thoroughly to "appendix O" the Fiscal and Economic Impact Study, it fails to account for aspects of the job market that will undoubtedly impact the nature and desirability of the jobs made available at the Project, if it is approved, constructed and permitted to operate. Just some of these unmentioned aspects include trends towards employing largely contract, part-time or temporary or short-term labor to fill the jobs created by the WLC. Indeed the study is based on an assumption that either the WLC or other logistics uses will result in the permanent employment of .5 employees per 1,000 building square feet. Appendix O, at 20. Yet the study fails to calculate what the rate of employment would be if some or all of those jobs were characterized as part-time or temporary contract labor employment.

The draft statement of overriding considerations similarly fails to account for any discrepancy in full-time vs. part time, temporary or contract jobs. Moreover, additional aspects of job desirability including working conditions for laborers employed at the WLC or similar logistics enterprises that would operate in the project area are left wholly omitted from both the Appendix O study and the statement, and to the extent the draft statement relies on the development agreement to ensure that such jobs are actually ensured, such assurances are illusory as the development agreement terms remain unclear.

The draft statement of overriding considerations also fails to adequately quantify, either monetarily or based on some other form of valuation method, the consequences of the Project's impacts, specifically including its impacts to human health, the environment and invaluable threatened and endangered biological resources that surround the proposed project area.

Weighing the Project's true impacts against its purported benefits is a critical environmental review requirement. *See Woodward Park Homeowners Ass'n, Inc. v. City of Fresno*, 150 Cal.App.4th, 720. The City must therefore engage in a good faith effort to thoroughly analyze of the full scope of the impacts for which the statement of overriding consideration is being offered.

Doing so here would involve some process by which to measure conclusory statements that fully contradict the evidence on the record, such as the statement that the Project will improve health public health. Draft Statement of Overrid., at 209.

Finally, the draft statement of overriding considerations fails to justify the Project's impediment to the South Coast Air Basin achieving federal and state NAAQS, and it's steady, foreseeable future contribution to the region's ability to meet Air Quality Management Plan targets, which are essential to ensuring compliance with state and federal law. The statement of overriding consideration cannot, in essence justify the Project's apparent conflict of potentially causing violations of air quality standards, which carry severe economic sanctions for the 18 million people living the South Coast Air Basin based on parochial economic justifications for one city.

For these reasons stated herein and because the alleged Project benefits included in the draft statement of overriding consideration run counter to the evidence on the record, the City cannot approve the Project, and cannot certify the Revised FEIR as an informational document.

Given the limited time, this comment only raises some of the issues that are of concern related to this project. We appreciate your consideration of these comments. Please do not hesitate to contact us at amartinez@earthjustice.org if you have questions about this comment letter.

Sincerely,

Adriano L. Martinez
Earthjustice

California Air Resources Board's Process for the Review and Approval of Compliance Offset Protocols in Support of the Cap-and-Trade Regulation

1 BACKGROUND

Under the Cap-and-Trade Program, covered entities may use compliance offset credits to satisfy up to eight percent of their compliance obligation.¹ This limit applies to each individual covered or opt-in covered entity for each compliance period. Compliance offsets are tradable credits that represent verified greenhouse gas (GHG) emissions reductions or removal enhancements from sources not subject to a compliance obligation in the Cap-and-Trade Program and resulting from one of the following: (1) a project undertaken using an Air Resources Board (ARB or Board) approved Compliance Offset Protocol pursuant to Subarticle 13 of the Cap-and-Trade Regulation; (2) an offset credit issued by a linked jurisdiction pursuant to Subarticle 12 of the Cap-and-Trade Regulation; or (3) a sector-based offset credit issued by an approved sector-based crediting program pursuant to Subarticle 14 of the Cap-and-Trade Regulation. In almost all cases, these GHG sources are outside of the industrial, energy, and transportation sectors. This document describes ARB's process for the review and approval of new ARB Compliance Offset Protocols. As an important market feature, offset credits can provide covered entities a source of low-cost emissions reductions for compliance flexibility. The inclusion of offset credits will also support the development of innovative projects and technologies from sources outside capped sectors that can play a key role in reducing emissions both inside and outside California.

As required by Division 25.5 of the Health and Safety Code (Assembly Bill 32 or AB 32), any reduction of GHG emissions used for compliance purposes must be real, permanent, quantifiable, verifiable, enforceable, and additional (Health and Safety Code §38562(d)(1) and (2)). Any offsets issued by ARB must be quantified according to Board-approved Compliance Offset Protocols. The Cap-and-Trade Regulation (Regulation) includes provisions for collecting and submitting the appropriate monitoring documentation to support the verification and enforcement of reductions realized through the generation and retirement of Compliance offset credits. The regulatory provisions and the requirements of the Compliance Offset Protocols will ensure that the reductions are quantified accurately, represent real GHG emissions reduction, and are not double-counted within the system. Compliance Offset Protocols are considered regulatory documents and are made publicly available so that anyone interested in

¹ "Compliance obligation" is defined as "the quantity of verified reported emissions or assigned emissions for which an entity must submit compliance instruments to ARB." Title 17, California Code of Regulations, section 95802(a).

developing an offset project can do so if their project meets Board-approved standards. Information on existing and proposed protocols can be found here:

<http://www.arb.ca.gov/cc/capandtrade/offsets/offsets.htm>

It is important to note that compliance offset credits are only one way to incentivize voluntary GHG reductions outside of the Cap-and-Trade Program. Projects that could reduce GHG reductions could be incentivized through the use of grants, the generation of voluntary offsets, and potentially as regulatory offsets for compliance with the California Environmental Quality Act.

2 COMPLIANCE OFFSET PROTOCOL REQUIREMENTS

2.1 How will ARB determine which protocols to take through the approval process?

Periodically, ARB staff will review offset protocols that are available for use in the voluntary offset programs. These voluntary protocols will be assessed against the protocol criteria listed below. This process will be coordinated with our Western Climate Initiative (WCI) partners. Staff will also consider proposed protocols submitted by stakeholders that include elements to ensure any resulting offsets would meet the AB 32 offset and ARB protocol requirements presented in section 2.2. The specific process and steps prior to Board consideration are provided in section 3 below.

In addition to the ability to generate offsets that meet the AB 32 criteria, there are several other factors that are considered when deciding which project types will be considered for potential development of a Compliance Offset Protocol. These factors include, but are not limited to, the following:

- Potential for projects in California;
- Potential offset supply;
- Cost-effectiveness; and
- Co-benefits.

ARB staff is also working with our WCI partner jurisdictions to identify which offset project types to evaluate next as part of the regional trading program, which may also include a review of existing protocols from voluntary offset programs.² Staff will determine if a proposed protocol for a project type can be applied in California and/or at the regional level, and if it has the potential to meet the criteria listed above. There may be instances where a protocol is not applicable in every jurisdiction of a linked program. In all cases, all linked jurisdictions will have to agree on offset project protocols to

² See: <http://www.westernclimateinitiative.org/component/remository/Offsets-Committee-Documents/> accessed May 3, 2013.

ensure nothing will impact the fungibility of offsets across a regional Cap-and-Trade Program.

ARB staff will continue to meet with stakeholders and consider additional proposed offset project types that meet the AB 32 offset and ARB protocol requirements as we coordinate with WCI partner jurisdictions.

2.2 What criteria will ARB use to evaluate new protocols?

ARB must ensure that all GHG emissions reductions issued as offset credits under a Compliance Offset Protocol meet the AB 32 offset criteria as defined in the Regulation. ARB's decision not to develop a Compliance Offset Protocol does not preclude that project type from being incentivized through grants, development of voluntary offsets, or potentially as mitigation for compliance with the California Environmental Quality Act.

The Regulation also specifies the criteria for Compliance Offset Protocols in section 95972. These requirements will be broadly applied to each offset project type for which ARB is developing a protocol. There may be additional considerations that staff, in collaboration with stakeholders, may look at for specific offset project types.

New protocols can only be considered for project types that meet the following requirements:

- The resulting GHG emission reductions are from sources that are not covered by the cap and that are not subject to a compliance obligation. This is because there is no net reduction (i.e. no "offset") as a result of emissions being shifted from one source under the cap to another source under the cap. As a matter of policy, we do not issue offset credits for reductions from sources that would be covered by the cap but are located outside the State. For example, energy-related projects, such as the installation of solar panels, would not be eligible for offsets as the actual emission reductions are associated with power generation and all electricity generation is already covered under the Cap-and-Trade Program. Similarly, transportation fuels are covered in the program starting in 2015, so ARB will not adopt a Compliance Offset Protocol for cleaner vehicle fleets.
- The GHG emissions reduction must be a direct reduction within a confined project boundary. Recycling activities would not be eligible for offset credit as the recycling activities do not have a direct GHG reduction at the recycling facility, but may have an emissions impact upstream when new materials are extracted or manufactured in lieu of the recycling. Currently, to avoid double counting

issues in the Cap-and-Trade Program, ARB does not plan to adopt protocols that include a lifecycle analysis.

- The GHG emissions reduction must be permanent. For avoided GHG emissions, there must be no opportunity for a reversal of the avoided emissions. An example of this type of permanence is methane flaring in livestock digester projects, which permanently destroys methane. For GHG sequestration, the project must be able to ensure the GHG will not be released into the atmosphere for at least one hundred years. Both the U.S. Forest and Urban Forestry Projects Compliance Offset Protocols require a commitment to keep any credited carbon stocks sequestered for at least 100 years.
- The GHG emissions reduction must be conservatively quantified to ensure that only real reductions are credited. This requires a sound foundation and understanding of the underlying quantification for all sources, sinks, and reservoirs within a project boundary so that the net change from implementing the project represents a real reduction for issuing credit.
- The GHG emissions reduction must be verifiable and enforceable. This requires a Compliance Offset Protocol to have clear monitoring and measurement requirements that can be audited by a verifier and enforced by ARB.
- The GHG emissions reduction must be additional, or beyond any reduction required through regulation or action that would have otherwise occurred in a conservative³ business-as-usual scenario.⁴ In order for ARB to ensure offset credits are additional, ARB would not adopt a protocol for a project type that includes technology or GHG abatement practices that are already widely used. See section 4 for more information.

³ “Conservative,” in the context of offsets, means “utilizing project baseline assumptions, emission factors, and methodologies that are more likely than not to understate net GHG reductions or GHG removal enhancements for an offset project to address uncertainties affecting the calculation or measurement of GHG reductions or GHG removal enhancements.” Title 17, California Code of Regulations, section 95802(a).

⁴ “Business-as-usual scenario” means “the set of conditions reasonably expected to occur within the offset project boundary in the absence of the financial incentives provided by offset credits, taking into account all current laws and regulations, as well as current economic and technological trends.” Title 17, California Code of Regulations, section 95802(a).

3 PROCESS FOR ADOPTION OF COMPLIANCE OFFSET PROTOCOLS

3.1 What are the rulemaking requirements for approving Compliance Offset Protocols?

Compliance Offset Protocols are considered regulatory documents and are subject to the Administrative Procedure Act (APA).⁵ As with any regulation that is considered by the Board, each Compliance Offset Protocol must be developed through a full stakeholder process. As part of this APA process and consistent with ARB's certified regulatory program, staff will also develop an environmental analysis that is included in the staff report prepared for any Compliance Offset Protocol to be considered by the Board. This process satisfies the requirements of the California Environmental Quality Act (CEQA). The primary steps and details of the APA process and how it applies to protocol review and adoption are as follows:

- **Offset Protocol Announcements and Timing:** Staff will announce decisions to develop new offset protocols in a public setting, open to all stakeholders. Information related to new offset protocols will be shared in a transparent and public process so as not to give any one entity a potential market information advantage over another entity.
- **Informal Development Activities:** During this step, staff will hold public workshops or technical meetings to discuss the development of a potential offset protocol, focusing on areas such as, but not limited to, project specific mitigation methods, defining a project boundary, quantification of baseline conditions, and quantification of actual GHG reductions or removal enhancements. Staff will look at offset supply potential that could be generated under each potential Compliance Offset Protocol, prioritizing those with supply in California and then broadly across the United States. When considering offset supply, staff will be interested not only in the potential supply from a single project and the potential supply if only small projects can occur, but also in whether the mitigation methods or technology(ies) are easily transferrable for a larger volume of reductions. This process would, where appropriate, also include the development of draft protocol text following stakeholder input.

Depending on the complexity of the project type, ARB may hold a series of workshops or technical workgroup meetings. Dates of the workshops or

⁵ Government Code, § 11340 et seq. Although Health and Safety Code section 38571 exempts quantification methodologies from the Administrative Procedure Act (APA), Compliance Offset Protocols and the corresponding adoption through the Cap-and-Trade Regulation would include regulatory components that are subject to APA requirements.

meetings will be posted on the ARB website and posted to the relevant email listservs. When possible, such meetings are webcast for broad public participation.

All workshop presentations will be posted on the ARB website and a protocol-specific development webpage will be posted that contains information about the development of that specific protocol. During the first public workshop, a protocol staff lead for ARB will be identified along with his or her contact information.

- **Issuing the Notice:** This step initiates the APA rulemaking action. When, after completing the preliminary activities described above, ARB determines that it would like to proceed with a formal rulemaking on a proposed Compliance Offset Protocol, ARB will issue a notice of proposed rulemaking, which is included in the California Regulatory Notice Register. This notice will include the Board hearing date when staff will present the proposed Compliance Offset Protocol for Board consideration. This notice is posted at least 45-days prior to the Board hearing.
- **Availability of the Proposed Text and the Initial Statement of Reasons:** At least 45-days prior to the Board hearing, ARB will make available the proposed Compliance Offset Protocol text and a staff report that includes an explanation of why certain decisions were made in the development of the proposed Compliance Offset Protocol, any relevant analyses to support the proposed Compliance Offset Protocol, and an analysis of potential environmental impacts. ARB will post the proposed text and the staff report on its rulemaking website with the 45-day notice. ARB practice is to notify the public of the availability of these documents through the relevant email listservs.
- **45-Day Comment Period:** ARB will provide at least 45 days for the public to review the proposed Compliance Offset Protocol text and staff report and provide written comments to ARB.
- **Public Hearing:** Staff will present the proposed Compliance Offset Protocol to the Board for its consideration. This process usually includes a staff presentation at a regularly scheduled Board hearing. The dates and agendas for each hearing are posted on the rulemaking website. Stakeholders can provide written and oral testimony to the Board before the Board takes any action on the proposed Compliance Offset Protocol text. The Board may choose to adopt the proposed Compliance Offset Protocol text as written or to direct staff to make changes and release amended material for a formal comment period of at least 15-days. ARB will consider all formal comments on its proposed Compliance Offset Protocol as required by the APA and Board policy.

- Summary and Response to Comments:** ARB must summarize and respond to all formal comments submitted during the 45-day comment period, at the Board hearing, and during any subsequent 15-day comment periods on the proposed Compliance Offset Protocol in a document referred to as the Final Statement of Reasons. In this document, ARB will indicate where it made a change in response to a comment, or why a change is not appropriate. When applicable, the written responses to comments addressing the environmental analysis will be considered by the Board prior to making any findings required by the CEQA before a proposed protocol is adopted. This process ensures that ARB has understood and considered all relevant material presented to it before adopting a proposed protocol.
- Submission of a Rulemaking Action to the Office of Administrative Law (OAL) for Review:** Following final ARB approval, the rulemaking record is submitted to OAL for review. ARB also posts a Notice of Decision with the Secretary of Natural Resources in accordance with its CEQA certified program. OAL has 30 working days to review the rulemaking record to determine whether it demonstrates that ARB satisfied the requirements of the APA. Upon OAL approval, the Board-adopted Compliance Offset Protocol is filed with Secretary of State and becomes effective within a quarterly time schedule provided in the APA.

The Administrative Procedures Act mandates that ARB complete a rulemaking within one calendar year from the date the 45-day notice is published in the California Notice Register. If ARB does not submit the final protocol and regulatory amendments to the Office of Administrative Law by that date, ARB must initiate a new rulemaking. This includes a new 45-day comment period and Board hearing.

4 ADDITIONALITY

AB 32 and the Cap-and-Trade Regulation require any reductions used for compliance to be beyond what would otherwise be required by law, regulation, or legally binding mandate, and that exceed what would otherwise occur in a conservative business-as-usual scenario. For each proposed Compliance Offset Protocol, staff will establish whether GHG reductions or removal enhancements that result from the implementation of offset projects under the protocol are already being required by a local, state, or federal regulation. If a specific GHG mitigation method is already required by regulation, any reductions from that mitigation method would not meet the requirements for additionality. In this case the proposed Compliance Offset Protocol could not include

that specific GHG mitigation method and compliance offsets would not be issued for that reduction activity.

To assess if a specific GHG mitigation method may have “otherwise occurred,” staff will establish if that method is common practice in the geographic area in which the proposed Compliance Offset Protocol is applicable. Where possible, this review would include staff’s best estimate of the percent of the technology or mitigation in use for that sector. This can be done through outreach to the sector that would generate potential offsets, discussions with trade organizations, data research, and reviews of technology trends. Staff will take into consideration cost barriers that may prohibit technology or GHG mitigation methods from occurring in the absence of revenues from the generation of offset credits. For each proposed Compliance Offset Protocol, staff will share their findings during a stakeholder process and solicit feedback to determine whether a specific technology or GHG mitigation method is beyond common practice, and if the resulting reductions would meet the requirements for additionality.

5 HOW DOES ENVIRONMENTAL CREDIT STACKING WORK UNDER THE CALIFORNIA COMPLIANCE OFFSET PROGRAM?

Environmental credit stacking refers to a situation where a single activity provides more than one marketable environmental credit. For example, forest projects can result in carbon sequestration and improved watershed quality benefits. ARB believes that environmental co-benefits are a desired result of its Compliance Offset Protocols. The additional incentives such as other environmental credits would not by themselves disqualify a project type from being considered for the development of a Compliance Offset Protocol. ARB’s assessment of additionality will be based on how prevalent a mitigation practice or technology is within a sector, regardless of whether or not the activity could generate other marketable environmental credits.

6 WILL ARB PERIODICALLY REVIEW COMPLIANCE OFFSET PROTOCOLS?

Yes, ARB will continue to monitor the adoption of new or modified regulations that could affect additionality, as well as new developments in scientific data and quantification related to adopted Compliance Offset Protocols that would warrant a change to an existing Compliance Offset Protocol. Staff will propose amendments to Compliance Offset Protocols as necessary through a stakeholder process prior to Board consideration. Staff will weigh the decision to update a protocol against the market desire for certainty to support an active and robust compliance offset program. Any amendments to an existing Compliance Offset Protocol would involve the same APA process as developing a new Compliance Offset Protocol.

Once ARB updates an existing Compliance Offset Protocol, the previous version would no longer be used by new projects from the date that OAL approves the new version. Any existing projects under the previous version of the protocol would be required to use the new version of the protocol once the existing crediting period has ended.

7 HOW CAN I PARTICIPATE IN THE COMPLIANCE OFFSET PROTOCOL DEVELOPMENT PROCESS?

ARB encourages interested parties, including subject matter experts and general members of the public to attend Compliance Offset Protocol development workshops and provide informal and formal written feedback on proposed content during the Compliance Offset Protocol development process. Stakeholders can also request meetings with ARB staff to discuss protocol-related issues. Stakeholders are encouraged to sign up for the Cap-and-Trade listserv to make sure they are notified of any workshops or public information related to Compliance Offset Protocol development:

http://www.arb.ca.gov/listserv/listserv_ind.php?listname=capandtrade.

8 SUBMITTING IDEAS FOR COMPLIANCE OFFSET PROTOCOLS?

8.1 Can a voluntary offset program recommend a protocol for review?

Yes. Voluntary offset programs such as the American Carbon Registry, Climate Action Reserve, Verified Carbon Standard, and others may submit protocols to ARB for review. However, regardless of how the voluntary protocols are developed, ARB staff must determine whether the voluntary protocol should be developed for use in the Cap-and-Trade Program and if so, to conduct its own rulemaking process under the Administrative Procedure Act. As outlined above, under this process ARB would review, modify, and present a proposed Compliance Offset Protocol for Board consideration. This process ensures that any voluntary protocol modified for consideration by the Board demonstrates the resulting reductions meet the offset criteria in AB 32 as defined in the Cap-and-Trade Regulation and the criteria listed earlier in this document.

Protocols developed by the voluntary programs are not Compliance Offset Protocols as they are not developed through a rulemaking process, may not meet the AB 32 and Cap-and-Trade Regulation criteria, and were not approved by the Board.

8.2 Why has ARB not developed Compliance Offset Protocols for all of the existing voluntary offset protocols?

There are many existing voluntary offset protocols for use in the voluntary offset market. However, ARB must ensure any Compliance Offset Protocol it develops will result in

offset credits that meet the AB 32 offset criteria and the general protocol criteria in section 2.2. ARB will periodically review the available voluntary offset protocols and the potential to develop them into Compliance Offset Protocols.

8.3 Why can't we limit offset protocols just to California projects?

An important role for compliance offsets in the Cap-and-Trade Program is to provide cost containment for covered entities in the program. A covered entity can meet up to eight percent of its compliance obligation by using offsets in each compliance period. It is important to note that if all entities under the cap were to maximize the use of offsets up to the eight percent limit, there would still need to be on-site GHG emissions reductions at covered entities to meet the overall cap limits through 2020. Since the Cap-and-Trade Program already covers most sectors of California's economy under the cap, limiting offsets to just projects in California would significantly reduce the offset supply potential available to covered entities. This would increase their cost for compliance under the Cap-and-Trade Program. As stated in section 2.1, ARB will try to identify potential Compliance Offset Protocols that may be applicable in California, as well as across the United States.

8.4 What if I have a good idea for an offset protocol?

ARB encourages stakeholders to engage with staff regarding the development of new Compliance Offset Protocols and potential new project types that may fit the criteria for compliance offsets. Section 2.2 of this document contains the requirements for Compliance Offset Protocols. These requirements can help stakeholders discern if their ideas could potentially be considered for the Compliance Offset Program.

8.5 Will ARB only approve protocols based on a standardized approach?

Yes, approved Compliance Offset Protocols serve as a cornerstone of the Compliance Offset Program to ensure that reductions are appropriately quantified, monitored, reported, and documented. Those protocols taken to the Board for adoption will consist of standardized methods that quantify reductions based on specific criteria and pre-established calculation methods. This approach streamlines the calculation of project baselines and determination of the additionality of projects by using standard eligibility criteria that ensure projects are additional. By establishing the standardized criteria in the Compliance Offset Protocol, there is less subjectivity by verifiers or offset project developers as to whether a project may be additional and this supports consistent quantification rigor in the offset program.

8.6 Will ARB approve protocols developed under a project-based approach?

No, ARB is not planning to accept project-based protocols because each individual project protocol must be approved by the Board and such a process would be lengthy and administratively burdensome.

Additional Information

More information on the Cap-and-Trade Program, compliance offsets, and current rulemaking activities can be found here:

Chapter 15

Carbon Offsets in California: Science in the Policy Development Process

Barbara Haya, Aaron Strong, Emily Grubert, and Danny Cullenward

Abstract Natural and social scientists are increasingly stepping out of purely academic roles to actively inform science-based climate change policies. This chapter examines a practical example of science and policy interaction. We focus on the implementation of California’s global warming law, based on our participation in the public process surrounding the development of two new carbon offset protocols. Most of our work on the protocols focused on strategies for ensuring that the environmental quality of the program remains robust in the face of significant scientific and behavioral uncertainty about protocol outcomes. In addition to responding to technical issues raised by government staff, our contributions—along with those from other outside scientists—helped expand the protocol development discussion to include important scientific issues that would not have otherwise been part of the process. We close by highlighting the need for more scientists to proactively engage the climate policy development process.

Keywords Carbon offsets • Climate change policy • Carbon markets • Science and policy

15.1 Introduction and Background

Natural and social scientists in the field of global climate change are increasingly stepping out of purely academic roles to inform and support policy that is science-based. This chapter explores the roles that science and scientists play in climate policy development using an example from the California climate policy process. Beginning in the spring of 2013, we participated in the public process for

developing two new carbon offset protocols in California. We relay our experiences as scientists in these processes with two main goals. First, we describe the types of input we and other natural and social scientists provided to regulators, in order to shed light on how scientific issues emerge in policy development and the associated role scientists play in practice. Second, we hope this example will encourage interested scientists to engage the climate policy process more directly. Fundamentally, we believe that scientists' active participation in climate policy development can improve policy outcomes and generate useful research agendas.

The primary theme of our work is supporting the robustness of California's offsets policies, a topic on which most of our efforts focused. As used in discussions of global climate change, another term—*resilience*—most commonly refers to the ability of communities or nature to adapt to the uncertain impacts of climate change. In the context of climate change policy, *robustness* offers a similar framing. It refers to the ability of a policy to reliably meet its goals despite substantial uncertainty in predicting or measuring its outcomes (Lempert and Schlesinger 2000).

The concept of policy robustness is particularly relevant in the context of policies concerning carbon offsets because of the deep scientific and behavioral uncertainties involved in calculating accurate emission reductions from offset projects. Because greenhouse gas emitters in a climate policy system that recognizes offsets—such as California's carbon market—use offset credits to justify increased emissions within the policy system's boundaries, it is critical that offsets accurately represent true emission reductions. Meeting this standard is no simple matter, however, as it requires scientifically complex and inherently uncertain methodologies.

The uncertainty stems from the need to calculate emission reductions by comparing an offset project's emissions against an inherently unknowable counterfactual scenario: the emissions that would have occurred without the offset project. Both estimates are subject to uncertain physical, social, and economic drivers. In light of this uncertainty, ensuring that offset credits represent true emission reductions requires conservative decisions about project and baseline emissions to ensure that protocols actually reduce the credited emissions reductions. Accordingly, our participation in California's public policy development processes focused on ways to preserve the robustness of the two offset protocols on which we worked.

The chapter is organized as follows. We begin with an overview of California's climate mitigation policies, describing how offsets fit into the state policy system, as well as the key challenges offsets pose for policy-makers. Next, we describe our activities as stakeholders in the public process for developing new offset protocols. We illustrate our work with a handful of examples that highlight scientific issues that emerged in the policy process, including issues that the regulatory agency identified for public input, as well as those issues we raised in our independent capacity. In the final section, we offer some concluding thoughts about our experience and the various roles we and other scientists played in these policy processes. Finally, we encourage other environmental scientists to explore proactive models of policy engagement.

15.1.1 *California's Climate Policy*

In 2006, California passed the Global Warming Solutions Act (AB 32), launching the state's comprehensive approach to climate mitigation policy. Its key feature is a legally binding requirement to reduce statewide greenhouse gas (GHG) emissions back to 1990 levels by the year 2020. To accomplish this goal, state law delegated broad authority to the California Air Resources Board (CARB), which developed a suite of climate policy instruments over the last several years (CARB 2008, 2014a). The most prominent is California's cap-and-trade program. This program applies to California's electricity, industrial, and fuels sectors, covering about 85 % of state-wide emissions.

Briefly, cap-and-trade carbon markets set an overall limit (or *cap*) on anthropogenic greenhouse gas emissions within the covered sectors. The regulator then issues tradable emissions allowances, with the total number equal to the cap. Each emissions allowance credit confers the right to emit one tonne of GHG pollution (measured in tonnes of CO₂ equivalent, tCO₂e). Covered entities must submit one allowance per tCO₂e of pollution they emit. Since allowances are tradable, if a regulated emitter can reduce emissions more cheaply than the price of a permit, it can do so, freeing up permits to sell to others who face costlier mitigation opportunities. This lowers compliance costs compared to a system in which each emitter must meet an established standard without trading.

Carbon offsets extend the flexibility of this approach by allowing covered entities to seek lower-cost emission reduction opportunities outside of the carbon market—for example, in another state or in an economic sector not covered by the cap—instead of reducing emissions within the capped sectors. The financial benefits to regulated emitters are straightforward: expanding the range of mitigation opportunities outside the capped system through offsets reduces compliance costs. Since climate change is driven by the global stock of GHGs in the atmosphere, reducing one tonne of emissions has the same effect regardless of location.¹ As we discuss below, however, accurately calculating the net emissions reductions raises new challenges.

15.1.2 *Offsets in California*

Companies subject to the cap-and-trade market can use offset credits to cover up to 8 % of their total emissions. This limit on the use of offsets appears significantly more generous when expressed as a percentage of the total mitigation required in the carbon market: if all regulated parties use the maximum amount allowed, offsets

¹ Though other pollution impacts that are coincident with the greenhouse gas emissions may have important local and regional effects, including on public health

would contribute about half of the total emission reductions expected under California's climate policy through 2020 (Haya 2013).

Carbon offsets in California work as follows. CARB issues offset credits for projects that follow approved protocols. The protocols themselves determine what project activities are eligible and define the methodologies by which projects estimate their emission reductions. Thus, offset protocols must be designed to anticipate all of the emissions-related drivers that apply in a given sector—a task that typically involves complex issues of environmental and social science.

Although the decision to develop a new protocol lies entirely at CARB's discretion, offset protocol methodologies must meet certain standards. State law and market regulations both require that emission reductions from offsets be “real, additional, quantifiable, permanent, verifiable, and enforceable.”² Each of these terms has a formal legal definition. The most challenging requirement has been *additionality*, defined in AB 32 as crediting only those emission reductions that are made “in addition to any greenhouse gas emission reduction otherwise required by law or regulation, and any other greenhouse gas emission reduction that otherwise would occur.”³ CARB's climate regulations provide more context on how additionality is to be tested, requiring the use of a “conservative, business-as-usual scenario.”⁴

The regulations also directly address uncertainty and risk management, defining conservative scenarios as those whose “project baseline assumptions, emission factors, and methodologies that are more likely than not to understate net GHG emission reductions or GHG removal enhancements for an offset project to address uncertainties affecting the calculation or measurement of [net GHG reductions].”⁵

Finally, it is important to recognize that political perspectives on offsets vary widely. Many stakeholders, including most major emitters in the market, are strongly supportive of offsets as a mechanism to keep compliance costs low. After all, the supply of offset credits is widely expected to meaningfully reduce carbon market prices relative to a market without offsets (Borenstein et al. 2014; EPRI 2013). In contrast, several nonprofit stakeholders have expressed concerns about whether California's offsets truly represent reductions in GHG emissions. For example, two environmental groups sued CARB, claiming that the agency's decision to evaluate additionality using a performance standard at the protocol level does not satisfy the requirements of AB 32. The trial court rejected the plaintiffs' claims, finding that CARB had the necessary legal authority to adopt its performance standard approach. The court then applied a highly deferential standard to review CARB's treatment of additionality in each of its existing protocols (*Our Children's Earth Foundation v. CARB* 2015). Beyond highlighting the political opposition to offsets, this decision suggests that future legal challenges to CARB's protocol methodologies would face a difficult legal test under which the regulator is likely to prevail.

15.1.3 *Critical Issues for Carbon Offsets*

Offsets raise a number of technical challenges, and CARB's two new protocols are no exception. A carbon market maintains its environmental integrity only if the offset credits it recognizes represent actual net reductions in greenhouse gas emissions. In practice, however, uncertainty about those reductions requires detailed scientific input and is often the subject of significant controversy.

A critical task for policy-makers is establishing a robust standard for offset additionality. An offset project is considered additional only if it occurred because of the financial investment made in return for offset credits. In other words, an offset program should only credit those emission reductions it causes and should not credit reductions that would otherwise have occurred. This standard is necessary to ensure that any climate policy system that accepts offsets achieves its intended emission reductions. But additionality is difficult to achieve in practice. Several studies have shown that a large portion of credits generated by the Clean Development Mechanism (CDM, the Kyoto Protocol's offsets program) were non-additional projects that would have occurred without the financial incentive of offset credits and thus do not represent net emission reductions (Cullenward and Wara 2014; Haya 2009; Haya and Parekh 2011; Wara 2008). As a result, their use by countries to meet Kyoto Protocol targets came at the expense of real reductions in greenhouse gas emissions.

Two issues further complicate the basic question of establishing whether offset credits represent real additional emission reductions. First, uncertainty analysis is particularly important for offset projects in the land-use and agricultural sectors, where emissions vary widely across location, crop, and ecosystem types. Second, there is the risk that offset program incentives cause emissions to increase outside of offset project boundaries. The most egregious example involves offset credits in the CDM awarded for the destruction of hydrofluorocarbons (HFCs), a potent family of greenhouse gases emitted as byproducts in the production of certain refrigerants. Manufacturers realized they could earn greater profits from destroying HFCs than from the sale of the refrigerant itself. There is strong evidence that they increased their production as a result of this incentive, creating surplus HFC byproducts that they subsequently destroyed to earn offset income (Wara 2008). Beyond enticing non-additional credits, the income from HFC-related offsets might have discouraged national governments from directly regulating HFC emissions, in order to maintain offset project eligibility—an effect that has been documented for a range of other project types (Figueres 2006).

Although the problems observed in past offset systems remain relevant, it is important to recognize that CARB's approach to additionality is different than that of its predecessor, the Kyoto Protocol's CDM. The CDM requires individual offset project applicants to evaluate their counterfactual emissions scenarios and demonstrate additionality for each individual project. In contrast, the California system makes these determinations at the protocol level by defining project eligibility criteria. Once CARB has approved a protocol, a project applicant needs only to

demonstrate compliance with the protocol's eligibility criteria in order to earn credit. Given the use of up-front project eligibility criteria, robust protocol design is particularly critical to ensuring that California's offset credits represent real emission reductions.

Finally, we note the importance of CARB's early offset protocols as institutional precedents in American climate policy. As one of the first legally binding climate policies in the United States, California's cap-and-trade system has already become a standard point of reference for climate policy design. In turn, CARB's treatment of complex and uncertain scientific issues in its offset protocol development process will surely set an important example for others.

15.1.4 Proposed Mine Methane Capture and Rice Cultivation Protocols

By the beginning of 2013, CARB had approved four offset protocols covering projects in the following areas: (1) forestry, (2) urban forestry, (3) livestock waste management, and (4) destruction of ozone-depleting substances. We participated in the policy development process for two new protocols: (1) mine methane capture and (2) rice cultivation, which we describe briefly here for background.

CARB approved the Mine Methane Capture (MMC) protocol in April 2014 (CARB 2014b), following a year of development and stakeholder engagement. The protocol awards credits to projects that capture methane that otherwise would have been released into the atmosphere from coal and trona⁶ mining activities. CARB's MMC protocol recognizes two types of projects. Methane can be captured for use as a fuel, such as by injecting captured gas into natural gas pipelines or using it to fire an on-site power plant. Alternatively, MMC projects can destroy methane without putting it to productive use through flaring or oxidation. In any of these cases, methane (CH₄) is converted to carbon dioxide (CO₂), a much less potent greenhouse gas.

At the time that this chapter was written, CARB was in the process of developing a rice cultivation protocol and responding to comments submitted on a discussion draft of the protocol released in March 2014. This protocol would credit reductions in methane emissions from changes in rice cultivation practice in California and the South Central United States. Rice cultivation produces methane emissions because production fields are submerged under water for a large portion of the year. This causes biomass to decompose without oxygen, producing CH₄ rather than CO₂. Methane emissions can be reduced if the fields are submerged for less time or if less biomass is left on the field to decompose anaerobically.

⁶Trona is a mineral mined as the primary source of sodium carbonate in the United States.

15.2 Science in the Policy Development Process

In April 2013, CARB established technical working groups to bring together stakeholders to inform the development of two new offset protocols. The working groups included offset project developers, project verifiers (who verify that project developers have met the protocol's requirements), representatives from industries facing compliance obligations in the carbon market (i.e., offset buyers), environmental nonprofit staff, academic research scientists, representatives from organizations that develop offsets standards for voluntary carbon markets, and state and federal officials from outside agencies. Each working group convened approximately once every three months, though additional discussion continued between meetings.

15.2.1 *The Interdisciplinary Nature of Climate Change Policy Development*

As a preliminary matter, we note that the scientific and technical expertise needed to ensure the environmental integrity of carbon offset protocols spans a wide range of disciplines. For example, the MMC and rice cultivation protocols drew on experts—including a number of outside scientists, in addition to our group—who provided advice on statistical uncertainty assessment, biogeochemical and ecological modeling, field measurements of gas fluxes, economic analysis, life-cycle analysis, basic mineralogy, engineering of mine construction, wildlife ecology, insect population dynamics, the sociology of agricultural crop production practices, modeling hydrological connectivity above- and belowground, state and federal water law, land-use law, environmental law, and organizational theory. As this list indicates, there are many opportunities for a variety of scientific experts to proactively engage the climate policy process—no agency has all of the necessary experts on staff.

15.2.2 *What Did We Do?*

Our participation in the offset protocol development process included a wide range of activities. We interfaced with a variety of stakeholders, including CARB staff, CARB board members, offset project developers, and nonprofit groups. Similarly, our communications ranged from informal conversations in person to formal written comment letters. As members of the technical working groups for each protocol, we attended meetings at the agency's headquarters in Sacramento and brought attention to issues we viewed as critical to the environmental integrity of the draft protocols as they developed, based on detailed independent analysis.

We provided our assessments to CARB staff as informal communications and later submitted formal comment letters during public comment periods in the administrative process. At times when we believed that CARB was not adequately addressing critical concerns, we spoke with individual CARB staff and board members outside of the formal working group process, occasionally with the participation of other stakeholders; we also raised our concerns through public testimony at formal board meetings.

The overarching goal of our involvement was to apply our research team's interdisciplinary expertise to helping ensure the environmental quality of the protocols. We did not use a single set of methods in our contributions, but rather, each of us brought methods from our respective disciplines to our shared goal. Below, we offer examples of scientific issues that highlight the kinds of input we offered in an effort to ensure that California's offset protocols reflect the best available science and are robust in the face of significant uncertainty.

Our examples are organized according to different ways that scientific issues arose in the policy development process—at the agency's request or according to our independent review of the protocols—rather than by protocol or chronology. In this way, we hope to illustrate both how science was used in developing the protocols and what roles scientists can expect (or be expected) to play in such processes.

15.2.3 Scientific Issues Raised by the Agency

Our first category of scientific engagement in the policy development process focuses on those issues that CARB proactively identified, either via agency staff asking stakeholders directly for input or by inclusion on agency-drafted meeting agendas. We review one such example in this section.

15.2.3.1 Scale of Uncertainty Assessment in Model-Estimated Emissions from Rice Cultivation

If the proposed rice cultivation protocol is adopted, it will become the first California protocol to use a computer-based model to estimate emission reductions. Using a model is necessary in this case because direct field measurements of emissions are technically challenging, costly, and time-consuming. The proposed protocol relies on a mechanistic biogeochemical model, the DeNitrification-DeComposition (DNDC) model, originally developed at the University of New Hampshire (2012).

The DNDC model is used to estimate offset project emissions and emission reductions. Through the technical working group, we—along with other scientists, including DNDC model developers, biogeochemists, and agricultural experts—addressed questions about model uncertainty and validation, the model's ability to estimate emissions of the potent GHG nitrous oxide (N_2O), and specific biogeochemical parameters used in the model.

Models are by definition simplifications of complex processes and are not perfectly accurate. Accordingly, the draft protocol applies a *deduction* that reduces the model-estimated emission reductions to conservatively account for any model error. Early drafts of the protocol included this deduction, but applied only one value for all eligible projects. Since DNDC must be field-calibrated to particular crop types, however, we were concerned that a blanket assessment of an uncertainty deduction for model error was too general and would not reflect the uncertainty of the model as it would be applied in the rice cultivation protocol—specifically, to fields in different ecosystems, with different cultivars, and in different regions around the country.

We focused our attention on how finely to parse assessments of model uncertainty, raising this issue in both formal and informal comments. Ultimately, the draft protocol included separate uncertainty deduction calculations for each of the rice-growing regions, rather than a single uncertainty deduction for all applications of the model. Furthermore, CARB decided to update the uncertainty deduction coefficients on an annual basis, a feature that will make the protocol more robust in light of new information. On the other hand, there is no formal mechanism for updating the model itself in response to newly published scientific information that directly affects relevant calculations. In the end, the potential for model structures and inputs to change highlights the profound challenge of integrating active scientific research into a fixed policy structure. Inevitably, there will be trade-offs between the adaptability of the protocol to new information and the stability of compliance rules that offset project developers desire.

15.2.4 *Scientific Issues We Raised*

A second category of scientific engagement describes our independent evaluation of issues that emerged during the protocol development process, as opposed to the assessment of issues on which CARB specifically requested input. In this section, we discuss examples of issues we raised about the conservative estimation of emission reductions from individual projects, additionality assessment, and the risk of unintended consequences caused by interactions between offset protocols and other policies. In some cases, we raised questions that were not being addressed at the time, and in others, we advanced new perspectives on issues that were already under agency consideration.

15.2.4.1 **Statistical Bias in the Rice Cultivation Emissions Model**

Statistical bias occurs when a prediction repeatedly over- or underestimates real-world outcomes. A model is unbiased if its outcomes are equally likely to over- and underpredict actual emissions as determined by direct field measurements. An unbiased model may still over- or underestimate the reductions achieved by an

individual offset project, but the uncertainty deduction factor (discussed above) ensures that over-crediting is still avoided with a high degree of certainty. However, a model that has not been validated as statistically unbiased for the project types credited under the protocol may result in an overestimation of the emissions reduced by those project types, even after the uncertainty deduction factor is applied.

During the rice protocol development process, CARB staff referred to hundreds of field measurements that had validated the DNDC model, finding no trend in the estimates. Thus, they concluded that the model was not biased. We were concerned, however, that some of the project types eligible under the protocol were not included in the data used to validate the model. Noting this gap, we argued that an assessment of bias at the level of the entire DNDC model was insufficient, and that project-type specific assessment of model bias was warranted. To avoid over-crediting, we suggested that CARB approve the eligibility of a project type under the protocol only if the DNDC model has been validated to have no statistical bias for the type of activities credited by that project type. As of this writing and to the best of our knowledge, CARB staff provided the technical working group with only a list of published references, not the actual data from the model runs used in the bias assessment.

As CARB continues to collect field data to validate the model, we hope to view the complete dataset on which CARB validates the DNDC model. This example illustrates the important role scientists play in reviewing the technical basis of policy—in this case, the methods used to assess statistical bias in an emissions model, in order to avoid over-crediting. It also illustrates the importance of transparency and access to data, both of which are necessary to enable scientific review.

15.2.4.2 Additionality of Methane Capture at Abandoned Mines

Our second example in this category concerns the treatment of additionality in the MMC protocol. CARB determines the additionality of different project types by assessing whether the project activity is *common practice* among a relevant population; a project type is considered additional if it is not common practice. Applying this approach to methane capture at abandoned mines under the MMC protocol, CARB staff studied abandoned underground mines in the United States, finding that “few currently capture and destroy mine methane. Methane capture and destruction is therefore deemed not to be business-as-usual at these mines” (CARB 2013, p. 7). This language suggests that CARB was prepared to deem all abandoned mine methane control projects additional under the MMC protocol.

The case of methane capture at abandoned mines demonstrates the importance of assessing additionality for subcategories of project types and not just for the entire population of possible projects as a whole. It also highlights the value of performing a conservative quantitative assessment to examine compliance with the protocol level additionality standard. While only 38 of the more than 10,000 abandoned mines in the United States have implemented methane capture projects, these 38 mines emit one third of all methane released from abandoned mines in the country (Ruby Canyon Engineering 2013a). Thus, existing methane capture projects at

abandoned mines are correlated with high rates of methane emissions—exactly as one would expect, given that the costs of capturing methane decrease as the rate and concentration of methane emissions at mines increase.

If all abandoned mines were eligible for MMC offset credits, the protocol could generate non-additional credits from projects that would have proceeded regardless of the financial incentives offsets provide. Indeed, if methane capture project development trends at abandoned mines from the last two decades were to continue, the volume of non-additional credits enabled by CARB's initial common practice assessment would likely far exceed methane capture from truly additional projects enabled by the financial incentive created by the offsets program as assessed by Ruby Canyon Engineering (2013b).

A more detailed analysis of abandoned mines suggested a path forward. Currently, most methane capture at abandoned mines occurs at mines that captured methane for pipeline injection when they were active. In fact, all mines that captured methane and were closed within the last ten years continued to capture methane after being abandoned. Methane capture at this subcategory of mines is undoubtedly common practice. Accordingly, CARB narrowed its eligibility criteria in the final protocol it adopted in April 2014, excluding those abandoned mines where methane had been captured and injected into pipelines when the mine was active (CARB 2014b, p. 14).

Our calculations showed that this approach excludes most, but not all, of the non-additional crediting that would conceivably be generated under CARB's initial definition of common practice at abandoned mines. While most non-additional methane capture is excluded from crediting by the narrowing of CARB's eligibility criteria for abandoned mines, past trends suggest that a smaller amount of methane capture may still be cost-effective on its own. We performed a quantitative analysis on the narrowed pool of eligible projects.

We found that if past trends in the development of new methane capture projects at abandoned mines that never previously captured methane were to continue, the expected generation of credits from non-additional projects is likely to be small compared to the expected effect of the protocol on new project development. Our analysis further indicated that under-crediting from conservative methodologies used to estimate emission reductions from abandoned mines under the protocol can reasonably be expected to counterbalance this non-additional crediting.⁷ In other words, even though it is likely that some abandoned mines that would have chosen to implement methane capture technology regardless of the offset credit could generate credits under the protocol, the total quantity of offset credits generated by the protocol is unlikely to exceed the net emission reductions enabled by the protocol.

⁷For a more detailed description of this assessment, please see comments submitted by Barbara Haya on behalf of our research team dated February 14, 2014, "RE: Comments on the informal draft of the Mine Methane Capture (MMC) Projects Compliance Offset Protocol released 31 January 2014" available on California Air Resources Board's Workshop Comments Log: <http://www.arb.ca.gov/lispub/comm2/bccommlog.php?listname=discussion-draft-ws>.

As a result, we concluded that the protocol is expected to meet the additionality requirement defined under AB 32.

In addition to describing how the regulator's approach to a particular technical issue evolved during the MMC protocol development process, this example illustrates a methodological issue that speaks to the broader architecture of California's offsets policy. CARB's common practice approach appears to be designed to avoid the subjectivity of other eligibility metrics by referring to objective measurements of the frequency of emission-reducing activities. Nevertheless, we believe that this approach belies a persistent analytical subjectivity. As the abandoned mine issue shows, how CARB defines the population of project types against which it makes its common practice determination has important implications for the additionality of the offset protocol as whole. This example illustrates the importance of performing additionality assessments on subcategories of projects and conservatively excluding subcategories that could be considered common practice. More broadly, it also shows that the decision to use a common practice standard does not avoid the need for careful risk assessments of possible outcomes; these assessments remain necessary to identify appropriate project eligibility criteria that contain the risk of over-crediting.

15.2.4.3 Potential Conflicts with Clean Air Act Implementation

Our final example concerns a prospective impact that could occur beyond offset project boundaries. Here, our analysis focused on the potential for California's MMC protocol to interfere with other states' implementation of regulations under the federal Clean Air Act. The problem is this: although California's offset regulations exclude as ineligible those offset projects whose emission-reducing activities are separately required by law, they do not consider the incentive California's offset protocols create to keep legal standards in other jurisdictions low.

Under the Clean Air Act, any major new source of greenhouse gases is required to apply for a Prevention of Significant Deterioration (PSD) permit from its state environmental agency. In turn, the state agency is required to determine the best available control technology (BACT) for that particular project. State agencies have broad discretion in setting each project's BACT, with limited room for the federal Environmental Protection Agency (EPA) to review their findings. We expressed concern that California's MMC protocol would create incentives for out-of-state agencies to keep GHG BACT standards for mines artificially low. After all, were an out-of-state regulator to require methane destruction under the BACT determination for a PSD permit that methane destruction project would become ineligible for offset credits (and revenues).

In order to mitigate this risk, we recommended a do-no-harm precaution, temporarily excluding from the MMC protocol those mines that would require a PSD permit under the Clean Air Act. Once a specified number of PSD permits were

issued to comparable mines, however, we suggested the MMC protocol could then expand its eligibility to mines that required PSD permits—so long as the early BACT determinations indicate that this course would be appropriate. Ultimately, these issues were not addressed in the adopted protocol and will be monitored informally.

15.3 Conclusions

The development of two new carbon offset protocols in California provides a rich case study in science-based policy-making. As public members of the technical working groups established by the California Air Resources Board, we both observed and contributed to the scientific discussions that arose during the course of protocol development. In addition to responding to the issues and questions raised by CARB directly, we—along with other outside scientists—played an essential role in expanding the protocol development discussion.

Most importantly, our engagement focused extra attention on the robustness of the protocols, providing strategies to avoid over-crediting despite substantial uncertainty in predicting protocol outcomes. Robustness is critical in the development of carbon offset protocols because of the significant scientific and behavioral uncertainty involved in accurately calculating emission reductions from individual projects. Fundamentally, this uncertainty stems from the challenge of estimating emission reductions (and the number of offset credits awarded) against an inherently unknowable counterfactual scenario of what would have happened without the offset program. Because offset credits are used in place of emission reductions within existing climate policy systems, methodological decisions must be made conservatively and guided by scientific risk assessments in order to avoid weakening these systems. Protocols should also be responsive to new scientific information and changes in the socioeconomic drivers of emissions. By conducting independent analyses of these kinds of issues, we aimed to increase the agency's capacity to evaluate key risks and improve the robustness of the offset protocols.

Finally, we hope the examples in this chapter encourage more members of the scientific community to seek ways to actively engage the development of climate policies. Although the offset protocols on which we worked were certainly informed by traditional scientific publications, our experience shows how the full treatment of scientific issues in the policy process occurs more through direct participation than literature reviews. Many of the critical policy questions involving science and uncertainty analysis would be difficult, if not impossible, to anticipate from a detached distance. In addition, their successful resolution depends on professional relationships built through iterative interactions in the policy process. Collectively, these factors suggest the need for more academics to explore ways to actively engage the climate policy process in the future.

POLICY BRIEF: The California Air Resources Board's U.S. Forest offset protocol underestimates leakage

May 7, 2019

Barbara Haya, PhD, Research Fellow, Center for Environmental Public Policy, University of California, Berkeley, bhaya@berkeley.edu

SUMMARY

Analysis of projects generating 80% of total offset credits issued by the California Air Resources Board's (ARB) U.S. Forest offset protocol finds that 82% of these credits likely do not represent true emissions reductions due to the protocol's use of lenient leakage accounting methods. The U.S. Forest protocol has generated 80% of the offset credits in California's cap-and-trade program. The total quantity of emissions allowed because of this over-crediting equals approximately 80 million tons of CO₂, which is one third of the total expected effect of California's cap-and-trade program during 2021 to 2030 (ARB 2017).

Leakage, in the context of the protocol, occurs when a reduction in timber harvesting at a project site causes an increase in timber harvesting elsewhere to meet timber demand. The way ARB's protocol accounts for leakage when calculating the number of credits awarded has three serious problems.

First, the protocol uses a 20% leakage rate when a rate of 80% or higher is supported by published studies of leakage rates from reduced timber harvesting in the United States (Gan & McCarl 2007, Wear & Murray 2004). Using an unsupported low rate results in over-crediting.

Second and more importantly, there is an inconsistency between the timing of when increases in on-site carbon storage and releases due to leakage are accounted for in the protocol's methods. Most improved forest management projects assume and credit a large reduction in timber harvesting in the first year of the offset project, but deduct the associated leakage over 100 years. This outcome is physically inconsistent, as it assumes the forest would be harvested in the first year for the purpose of giving credit but assumes harvesting would be spread out over 100 years for the purpose of reducing credits to account for leakage. As a result, most forest offset projects begin in greenhouse gas debt; project landowners generate offset credits that allow emitters in California to emit more than the state's emissions cap today, in exchange for promises that their lands will continue to increase their storage of carbon over 100 years.

Third, it is unclear whether the protocol requires forestland owners to increase carbon stocks to cover leakage for 25 years or for 100 years. The ambiguity relates to whether forestland owners are required to continue to maintain on-site growth to cover the impacts of leakage after the end of the project's 25-year crediting period. If forestland owners are only required to account for leakage for 25 years, participating projects could result in no net increase in carbon storage over 100 years compared to the baseline scenario.

The below table presents the actual emissions reductions achieved by projects under the protocol under different assumptions, reported as proportions of the credits already issued. For example, the cell on the upper left (100%) represents the assumptions underlying current policy. If these

assumptions are accurate, then 100% of the credits issued represent true emissions reductions. On the other hand, if these assumptions are inaccurate, the proportion of credits that represent actual emissions reductions can be much lower. The cell on the lower right (18%) shows that if the true leakage rate is 80% and ARB chose to only credit reductions already achieved, rather than reductions expected in the future, then the real reductions achieved to date by the project add up to only 18% of the credits issued.

This analysis was performed on all credits generated by 36 compliance forest offset projects through March 23, 2019. Collectively, these projects generated offset credits equal to 97 million tons of CO₂ reductions, which is 80% of the total credits that ARB has issued under its U.S. Forest protocol.

Actual emissions reductions by U.S. Forest offset projects as percent of credits issued to date

		Expected over 100 years (ARB's current approach)	Achieved to date (Recommended approach)
If the true leakage rate is:	20%	100%	65%
	40%	99%	49%
	60%	97%	33%
	80%	96%	18%

ARB can avoid the over-crediting discussed here with a few modifications to its protocol. ARB should (1) apply a leakage rate that is 80% or higher; and (2) determine the net benefits of reduced harvesting on an annual basis by accounting for both the increased carbon storage on site and the decreased carbon storage elsewhere due to leakage at the same time. This solution is reflected in the bottom right cell of the above table (18%).

These changes are needed for the protocol to be in accordance with current law and regulation. First, given the uncertainty in true leakage rates from reduced timber harvesting within the United States, using an 80% leakage rate or higher, as is supported by the academic literature, better fulfills the conservativeness principle laid out in ARB's cap-and-trade regulations.¹ Using low rates that are not reflected in published literature is unjustified and does not fulfill the conservativeness principle. Second, generating credits today for expected net reductions over many decades into the future runs contrary to the goals of California's Global Warming Solutions Act (AB32), the 2006 law authorizing California's cap-and-trade and offsets programs. This law states that for any trade in credits using a market-based compliance mechanism, the reductions credited should occur "over the same time period" and be "equivalent in amount to any direct emission reduction required" under California's climate change law.²

¹ " 'Conservative' means, in the context of offsets, utilizing project baseline assumptions, emission factors, and methodologies that are more likely than not to understate net GHG reductions or GHG removal enhancements for an offset project to address uncertainties affecting the calculation or measurement of GHG reductions or GHG removal enhancements." California Code of Regulations, title 17, § 95802.

² California Health & Safety Code § 38562(d)(3).

DETAILED DISCUSSION

How the U.S. Forest offset protocol works

The large majority of U.S. Forest offset projects credit forestland owners for holding more carbon on site per acre than they would have in the business-as-usual baseline scenario. Landowners must commit to maintaining those higher carbon levels for 100 years. Projects can be anywhere in the United States, and to date, approximately 20% of credits generated have been from projects in California, and 80% have been from projects elsewhere in the United States.

Most of these improved forest management projects define a business-as-usual baseline scenario that involves aggressive timber harvesting that brings on-site carbon storage close to the average per acre for forests in their region. The assumption is that these offset projects maintain higher on-site carbon stocks by reducing timber harvesting.

In the first year of an improved forest management offset project, the landowner earns offset credits for the amount of carbon on their land above the business-as-usual baseline scenario minus two factors. First, estimates of carbon released due to leakage are deducted. Second, not all loss of on-site carbon is released into the atmosphere. The protocol accounts for the portion of harvested timber that remains long-term in wood products like in houses and furniture and buried in landfills, which would be reduced if total timber harvesting is reduced by the project. Each subsequent year, the landowner is credited for any incremental increase in carbon sequestration on the participating lands as trees grow and sequester more carbon, minus the same two factors.

Leakage rate

ARB's U.S. Forest offset protocol uses a 20% leakage rate. A 20% leakage rate means that 20% of the reduction in timber harvesting caused an offset project is replaced by an increase in harvesting on other forestlands. The other 80% of the reduction is assumed not to be replaced and simply represents a decrease in timber use (i.e., fewer houses built, less paper produced, etc.)

Published literature suggests the leakage rate from reduced timber harvesting in the United States is at least 80%. Using a computable general equilibrium model, Gan & McCarl (2007) estimate that if timber production were reduced in the United States, 77% of that that timber harvesting would be displaced to other countries. Wear & Murray (2004) use econometric modeling to trace the effects of reductions in federal timber sales in the western United States in the late 1980s through the 1990s. They estimate that 84% of the reduced timber production was displaced to elsewhere within North America. Both articles underrepresent total leakage from conservation on U.S. forestlands. The former only estimates international leakage, ignoring leakage that might occur among forestland within the United States; the latter only estimates leakage in North America, ignoring leakage that could occur elsewhere. The existing academic literature on leakage rates from reduced forest harvesting does not support a 20% leakage rate. A conservative approach to addressing uncertainty in the true leakage rate would apply a leakage rate that is at least 80%.

The Climate Action Reserve, which developed the original U.S. Forest offset protocol on which ARB based its own protocol, revised its leakage rate from 20% to a sliding scale up to 80%,

depending on the amount of timber harvesting performed by the offset project itself. Under this protocol, an 80% leakage rate is applied to offset projects that do not harvest at all.

The timing issue explained

As is typically done with offset projects, emissions reductions are estimated against a baseline scenario representing what would likely have happened without the offset program. Almost all ARB improved forest management offset projects define baseline scenarios that are well below their actual carbon stocks in their first year. On average across all projects analyzed, these baselines equal 70% of current carbon stocks. This means that in the first year of a project, the land owner is issued a quantity of credits equal to, on average, around 30% of the carbon stocks on their project lands, adjusted downward to account for leakage and any reduction in carbon held long-term in harvested wood products and landfills.

To create a baseline, the landowner models the carbon stocks and fluxes associated with a 100-year timber harvest scenario that reflects the harvesting expected to take place without the financial incentives from the offset program. The modeled scenario should be financially feasible and fulfill all legal and contractual obligations. In order for most projects to earn credits under the protocol, the calculated average carbon stocks in the baseline scenario over 100-years should be no less than that of the average forestlands for the project's region and forest type.

This modeled scenario is then abstracted into two key parameters used to calculate emissions reduced and credits generated by the project. Baseline on-site carbon storage and harvesting rates are assumed to equal the average values generated by the modeled scenario over 100 years. This simplified baseline is treated as equivalent, in terms of carbon accounting, to the range of financially feasible timber harvest scenarios that could have happened without the offset program. Flat average baseline values have the advantage of not requiring the landowner to calculate year-to-year increases in carbon storage against the harvest and growth cycles in one specific baseline management regime for each of 100 years. But this approach has one important disadvantage—flat average baseline values for carbon storage and harvest rates are internally contradictory and physically impossible.

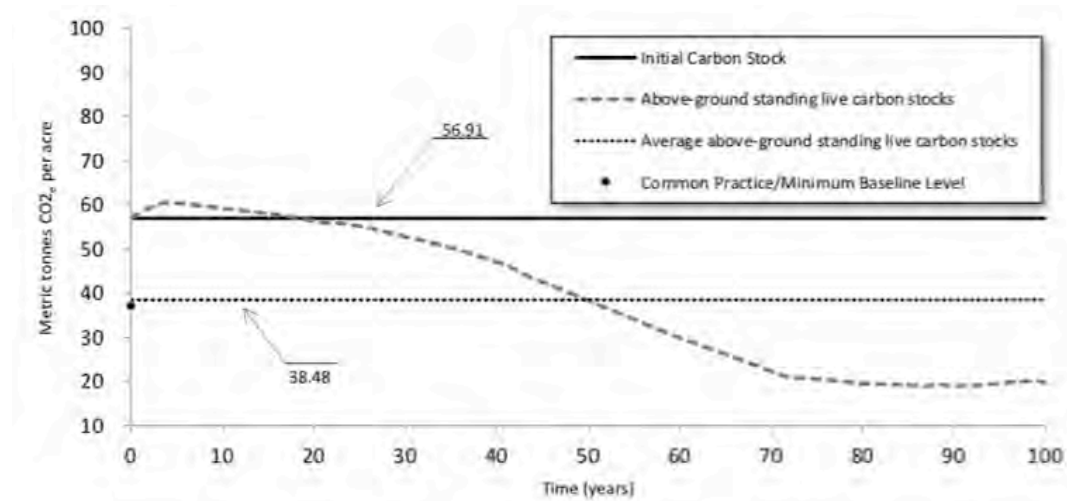

The figure below presents an example of a modeled harvesting scenario used to define the baseline for one large offset project – ACR360, a half million acre project in southern Alaska. The curved dotted line is the modeled business-as-usual scenario for above-ground standing live carbon stocks. The straight dotted line is the baseline used to generate credits, which is the average above-ground standing live carbon stock in the 100-year modeled scenario. The solid line is the actual carbon storage on the project lands at the start of the project.

This simplified baseline scenario suggests that, if the project were not earning offset credits, its lands would be harvested to baseline levels in year 1 and maintained at those carbon stocking levels for 100 years. However, contradicting this assumption, the baseline also assumes that a constant quantity of timber is harvested each year over the project life, equal to the average rate over the 100-year modeled scenario. This second assumption is used to calculate leakage.

These two assumptions are contradictory because it is not possible for both carbon storage and harvesting to simultaneously remain at their respective average values over the project life. Carbon storage and harvesting rates are correlated with one another, and inextricably tied to the actual net growth rate of the project forest. If carbon storage is assumed to drop to the baseline in year 1, that

would happen because of a large amount of timber harvesting. If the harvesting rate is assumed to be constant over 100 years, however, then the carbon storage on the land will also decrease slowly, rather than abruptly in year 1. By mixing these two assumptions into a physically impossible baseline scenario, the protocol maximizes credits generated without reflecting the actual rate at which emissions to the atmosphere are avoided. The protocol calculates gains in carbon against the baseline using the first assumption, and losses in carbon from leakage using the second assumption. As a result, credit generation is frontloaded, and landowners need to continue to increase net carbon storage for decades to make up for the leakage effects associated the reduced harvesting credited at the start of the projects.

Baseline carbon stocks for Finite Carbon – Ahtna Native Improved Forest Management offset project

From: ACR360 “Finite Carbon – Ahtna Native Alaskan IFM” Version 1.3, Attachments G and H: Baseline Carbon Stocks, Submittal Date: 1/19/2018

This over-crediting allows emitters in California to emit more than the state’s emissions cap today in exchange for promises of forest carbon sequestration over 100 years to cover leakage from the start of the project. This is problematic for several reasons. First, emissions today are not equivalent to reductions decades from now given the urgency of climate change mitigation to avoid tipping points. California is designing its cap-and-trade and offset programs as models for other jurisdictions. If California exports a model that trades emissions today with reductions decades from now, California would promote a form of climate policy that fails to reduce emissions in these immediate critical years. Second, these promises can be difficult to keep since productivity slows in ageing forests (Gray et al 2016) and as forests respond to a warming climate. On project lands with less harvesting, fewer older trees will be replaced with younger trees, and the average tree age will increase over the 100 years of the project.

ACR360 generated close to 15 million offset credits in its first year, equal to more than 60% of the expected average annual effect of California’s cap-and-trade program on emissions during 2021-2030.

The 25 year versus 100 year issue explained

If forestland owners are required to increase carbon to cover leakage for 100 years, then there would be no over-crediting over 100 years of the project. Over-crediting in the early years of the project would slowly be compensated as leakage is deducted each year for the project life.

However, it is unclear whether the protocol requires forestland owners to account for the emissions from leakage for 25 or for 100 years. The crediting period of a U.S. Forest offset project is 25 years. After the end of each 25-year crediting period, landowners can choose to renew their offset project for another 25 years but are not required to do so. For each year of a crediting period, landowners must report the net impact of the project on emissions taking into account any change in on-site carbon storage, and any releases due to leakage or reductions in carbon held long-term in harvested wood products and in landfills. If the net impact of the project in any year is negative, a *reversal* is understood to have occurred. The carbon reductions that were previously credited and later released must be replaced with additional procurement of allowance or offset credits.

How a reversal is defined after the last year of crediting is unclear in the protocol. Following the last year of crediting, forestland owners are required to maintain the credited on-site carbon storage for another 100 years. It is unclear if they are also required to ensure their forestland continues to grow to cover off-site releases due to leakage and due to reductions in carbon held long-term in harvested wood projects and landfills.

If forestland owners are only required to account for leakage for 25 years, crediting for reduced harvesting in the first year of the project will be awarded in full, while potentially, as low as only 1% of the leakage associated with that reduced harvest is deducted each year for only 25 years. It would be possible for participating projects to result in a net decrease in carbon storage over 100 years compared to the baseline.³

Methods

Landowners report how they calculate their requested credit issuance in Offset Project Data Reports (OPDRs) based on instructions laid out in the protocol. These reports are made public through the offset registries. We reproduce these calculations for all credits issued to 36 projects as of March 23, 2019. We use data provided by the landowner in their OPDRs and supplemental materials, and adjust the projects' assumptions for leakage and the timing of harvesting in the baseline to investigate the quantity of over-crediting.

Adjusted leakage rate

Using data reported in the OPDRs, we reproduce the calculations of leakage (also called *secondary effects*), carbon in harvested wood products and landfills (HWP&L), and total reductions achieved using leakage rates of 40%, 60%, and 80% instead of 20%.

³ Please see public comments submitted to ARB on May 10, 2018, *Comments on proposed cap-and-trade regulatory amendments*, for a more detailed discussion of this need to clarify and revise how the protocol defines a reversal after the last year of credit issuance, found at <http://bhaya.berkeley.edu>.

Adjusted timing of baseline harvesting

We recalculate the credits that would have been generated if the protocol's leakage calculations matched its assumption that timber is harvested in year 1 of the baseline scenario to bring carbon storage down to baseline levels, and continues to be harvested at smaller rates needed to maintain the baseline carbon storage level for one hundred years.

We do this in the following manner:

First, the baseline harvesting level prior to delivery to the mill (PDM) in the first year of the project is calculated as the difference between standing live carbon in the project compared to the baseline.

Second, we calculate the baseline carbon in trees harvested in years 2 to 100 so that the sum of the baseline PDM over 100 years is the same as the sum using ARB's current methods. We calculate the baseline PDM in years 2 through 100 (99 years) as:

$$\text{PDM}_{\text{annual after year 1}} = (\text{PDM}_{\text{total}} - \text{PDM}_{\text{year 1}}) / 99$$

Third, we recalculate the carbon in baseline HWP&L in a similar manner, by:

- a) using the ratio of HWP&L to PDM in year 1 of the baseline in the OPDR to recalculate carbon in HWP&L in year 1 of the baseline for the revised PDM value;
- b) calculating carbon in HWP&L in years 2 through 100 using the same process as for timber harvesting, so that the sum of carbon in HWP&L over 100 years of the baseline is the same in our estimates as it is in ARB's current estimates over the project life;

Fourth, we recalculate emissions reductions from the project using these revised leakage and carbon in HWP&L figures, and otherwise following the methods defined by the protocol.

When baseline or project PDM figures are missing from any of the OPDRs, we calculate the missing PDMs mathematically from other reported figures when possible, and apply the following assumptions when needed:

- The ratios of carbon in HWP&L to PDM remain the same across reporting periods.
- When the first reporting period does not equal exactly one year, the PDM in the first year is a prorated amount, reflecting what most projects with at least two reporting periods have done.
- The ratio of carbon in HWP&L to PDM is the same in both the baseline and project scenarios.

Other than the changes and assumptions described above, we repeat the methods used in the OPDRs to re-estimate emissions reduced and credits generated.
