OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

South Map:	5641330 PERRIS, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

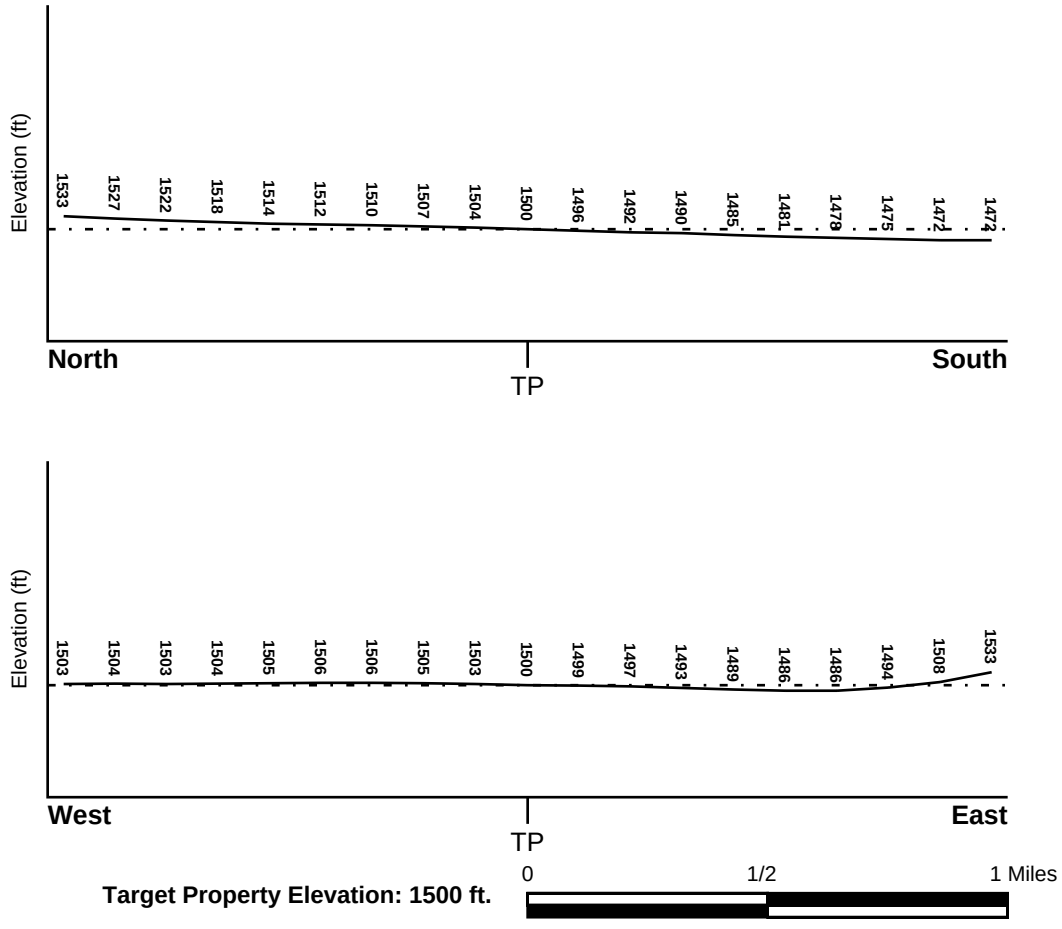
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 1500 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06065C0765G	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06065C1430H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
NOT AVAILABLE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: GREENFIELD

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	25 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 6.6
2	25 inches	42 inches	fine sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 6.6
3	42 inches	59 inches	loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 6.6

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
4	59 inches	72 inches	stratified loamy sand to sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 6.6

Soil Map ID: 2

Soil Component Name: HANFORD

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	7 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 5.6
2	7 inches	40 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 5.6

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
3	40 inches	59 inches	stratified loamy sand to coarse sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 5.6

Soil Map ID: 3

Soil Component Name: EXETER

Soil Surface Texture: sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	16 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 4 Min: 1.4	Max: 8.4 Min: 7.4
2	16 inches	37 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 4 Min: 1.4	Max: 8.4 Min: 7.4

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)

2	20 inches	62 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 14 Min: 4	Max: 7.8 Min: 6.6

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AES Due Diligence, Inc were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Data by infoUSA®

with any questions or comments.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by EDR. The report was designed to assist parties seeking to meet the search requirements of the ASTM Standard Practice for Assessment of Vapor Encroachment into Structures on Property Involved in Real Estate Transactions (E 2600).

STANDARD ENVIRONMENTAL RECORDS	Default Area of Concern (Miles)*	property	1/10	> 1/10
Federal NPL site list	1.0	0	0	0
Federal Delisted NPL site list	1.0	0	0	0
Federal CERCLIS list	0.5	0	0	0
Federal CERCLIS NFRAP site list	0.5	0	0	0
Federal RCRA CORRACTS facilities list	1.0	0	0	0
Federal RCRA non-CORRACTS TSD facilities list	0.5	0	0	0
Federal RCRA generators list	0.25	0	1	0

Status Date:	08/19/2016
Case Worker:	CAB
RB Case Number:	Not Reported
Local Agency:	Not Reported
File Location:	Local Agency
Local Case Number:	200420313
Potential Media Affect:	Aquifer used for drinking water supply
Potential Contaminants of Concern:	Gasoline
Site History:	***Data prior to 2005 does not appear in GeoTracker. Consult agency file for all site data*** Site History/Release Information: July 2003 - Soil samples were taken during dispenser and piping upgrades. Petroleum constituents were detected in several of the samples with the highest concentration in the north-central dispenser area (piping sample P4d7 with 17 ppm TBA). All samples were non-detect (ND) for benzene and MTBE. 203 tons of impacted soil was removed during the upgrades. The site was entered into the Local Oversight Program. Assessment and Remediation: 2005 - Four groundwater (gw) monitoring wells (MW-1 through MW-4) were installed around the perimeter of the UST cavity and dispenser islands. Heaviest soil impacts were identified near the USTs (MW-1 and MW-4) between 20 and 85 feet below grade (ft bg) with the highest concentrations approx 50 to 55 ft bg (78 ppm MTBE in MW-4@50 ft). The highest TBA detection in the soil was 57 ppm (MW-4@30 ft) while other constituents tested were low or ND. Depth to gw was approx 83 ft bg with flow to the southwest. Maximum gw concentrations were: 3800 ppb TPHg (MW-1), 80 ppb B (MW-3), ND<50 ppb TXE, 14000 ppb MTBE (MW-1), ND<500 ppb TBA. Neither the soil or the gw impacts were delineated 2006 - Three gw monitoring wells (MW-6, MW-10, MW-11) were installed at the property boundaries. Two observation wells (OBS-1 and OBS-2) were installed for remedial feasibility pilot testing. One cone penetration test (CPT) boring (CPT-1) was completed adjacent to MW-6. GW grab sample from CPT-1 detected 34000 ppb TPHg, 370000 ppb MTBE, 2600 ppb TBA and 1900 ppb TAME. GW from MW-6 (adjacent to Perris Blvd) and MW-11 (northern portion of the station) had very high MTBE detections (480000 ppb MW-6 and 200000 ppb MW-11). 2007 - Four dual-nested soil vapor extraction (SVE) wells (SVE-1 through SVE-4) were installed for remedial feasibility testing. All four wells had elevated MTBE and

SHELL SERVICE STATION, 15980 PERRIS BLVD, MORENO VALLEY, CA 92551-4691 (Continued)

TBA in the soil with concentrations up to 42 ppm MTBE (SVE-1@45 feet) and 56 ppm TBA (SVE-4@60 feet). Eleven air sparge (AS) wells (AS-1, AS-3 through AS-11, AS-13) were also installed for remedial feasibility testing. All locations had ppm concentrations of MTBE at depths below 50 ft bg. Three off-site monitoring wells (MW-5, MW-8, and MW-12) were installed northwest (MW-5 and MW-12) and southwest (MW-8) of the site. GW from MW-8 and MW-12 had low to ND concentrations and MW-5 had detections of 1200 ppb TPHg and 2200 ppb MTBE. SVE and gw extraction pilot testing was conducted. SVE mass removal rates were approx 85 lb/day TPHg and 64 lb/day MTBE. Vapor concentrations remained consistent throughout the test. Consultant recommended remediating the site using SVE with air sparging/oxygen injection. 2007 (December) to 2011 SVE and AS remediation was conducted. Beginning December 2007, vapors were extracted from all four dual-nested SVE wells and beginning January 2008, air sparging was implemented on all 11 AS wells. SVE was shut down July 2010 and AS continued to operate until October 2011. A total 836 lbs TPHg and 591 lbs MTBE were removed using SVE. 2008 - One on-site monitoring well (MW-13) and four off-site monitoring wells (MW-14 through MW-16, MW-19) were installed to further delineate the gw plume. The wells provided delineation of the dissolved plume to the north and west. One gw extraction well (EW-1) and two observation wells (OBS-3 and OBS-4) were installed for gw remediation feasibility testing. GW in EW-1 and OBS-4 had elevated concentrations. Nine remedial gw extraction events were conducted to reduce elevated MTBE and TBA in the gw. A vacuum truck was used to pump a total of 2207 gallons of gw from MW-1, MW-4, MW-6, MW-10, and MW-11. 2009 - Off-site monitoring wells MW-17 and MW-18 were installed west of Perris Blvd. The wells provided delineation of the western gw plume boundary as TBA was the only detection in the gw (34 and 79 ppb). Three re-injection wells (RI-1 through RI-3) were installed for injection of treated gw since off-site discharge permits could not be obtained. GW extraction pilot testing was conducted and it was concluded that this would be a feasible remedial technology for reducing gw impacts at the site. Permits for gw discharge were unable to be obtained, so re-injection of treated gw was proposed. Re-injection pilot testing was conducted and it was concluded that re-injection would be feasible method of

SHELL SERVICE STATION, 15980 PERRIS BLVD, MORENO VALLEY, CA 92551-4691 (Continued)

managing the treated gw. 2010 - Two on-site monitoring wells (MW-20 and MW-21) were installed southwest of the station building. GW sampling indicated the wells defined the southwestern limits of the dissolved plume. SVE rebound testing was conducted. Test results were favorable with rebounded vapor concentrations all below 1 ppmv. Five confirmation soil borings (CB-1 through CB-5) were drilled to 85 ft bg. Soil samples from each 5-ft depth interval from each boring were ND for all constituents except MTBE and TBA. The highest MTBE detection was 0.2 ppm from CB-4-75 and the highest TBA detection was 3 ppm from CB-2-80. All MTBE and TBA detections were from samples collected below the water table. Soil remedial efforts were considered effective, however, MTBE and TBA concentrations in the gw remained elevated. 2011 - Two off-site monitoring wells (MW-7 and MW-9) were installed south of Iris Avenue. GW sampling indicated the wells defined the southern and southeastern limits of the dissolved plume. 2012 - Two additional gw monitoring wells (MW-22 and MW-23) were installed. MW-22 was installed on-site, adjacent to EW-1, and MW-23 was installed off-site, southeast of MW-9. Neither well had GW impacts. Delineation of soil and gw impacts was considered complete. 2013 to 2015 - Monitored natural attenuation (MNA) was implemented, and Oxygen-releasing sleeves (O-Sox) were placed in wells MW-4, MW-6, MW-11, MW-15 and OBS-4 in an attempt to reduce remaining elevated MTBE and TBA concentrations. Notable decreases in concentrations were not observed and the O-Sox were removed January 2015. MTBE and TBA concentrations have remained relatively stable following another year of monitoring since O-Sox removal. 2015 - With a rise in gw levels of approx 30-ft since monitoring began in 2005, most of the wells associated with the cleanup have submerged well screens. RCDEH requested installation of an appropriately screened well in the area with the highest gw concentrations so the results could be compared with nearby submerged well(s). One gw mon well (MW-24) was installed near submerged well MW-6. Soil from MW-24 was ND for all constituents tested from 5 to 65 ft bg. A year of gw monitoring of MW-24 has shown all constituents ND, except one detection of TBA (11 ppb). During this same sampling period, gw from MW-6 had detections up to 6700 ppb TPHg, 3800 ppb MTBE and 42000 ppb TBA. The consultant concludes that the elevated concentrations in MW-6 are attributable to petroleum

MAP FINDINGS

SHELL SERVICE STATION, 15980 PERRIS BLVD, MORENO VALLEY, CA 92551-4691 (Continued)

fuel constituents trapped in the fine grained material and surrounding filter pack at depths below the current gw level. As such, it is not representative of surrounding conditions and should not be used for LTCP evaluation. Groundwater Monitoring: GW monitoring has been conducted at the site since March 2005. During this time period, gw has risen approx 30 ft from an initial depth of approx 80 ft bg to the current depth of approx 50 ft bg. GW flow has been consistently to the south and southeast. Most of the wells have submerged well screens as discussed above. Maximum historic gw concentrations were: 400000 ppb TPHg (MW-6), 80 ppb benzene (MW-3), 480000 ppb MTBE (MW-6), and 260000 ppb TBA (MW-4). Current (August 2016) gw concentrations are: 6600 ppb TPHg, 2500 ppb MTBE, and 35000 ppb TBA (well MW-6). The new properly screened well, MW-24 (near MW-6), did not have any contaminants detected. Low Threat Closure Policy (LTCP) Evaluation: The site meets the General Criteria and the Direct Contact and Outdoor Air Exposure Criteria of the LTCP. The Petroleum Vapor Intrusion to Indoor Air Criteria was not evaluated based on the active commercial petroleum fueling facility LTCP exemption. Except for the MTBE exceedance in well MW-6 (2500 ppb MTBE Q3-2016), the LTCP Groundwater-Specific Criteria was met using scenario 1.2 (plume length <250 ft, no free product, nearest existing water supply well >1000 ft, benzene <3000 ppb, and <1000 ppb MTBE). MW-6 is located approx 25 ft from MW-24, which is ND for MTBE. It should be noted that elevated TBA concentrations remain in the gw at MW-6 (35000 ppb), however, the LTCP does not specifically address concentrations of TBA, but instead considers TBA attributable to the break-down of MTBE. A UST system is currently installed and operating at the site. Prior to a change in land use, the potential threat of petroleum vapor intrusion into indoor air should be evaluated.

FINDS: Other Ascertainable Records

Registry ID:	110012538511

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

SHELL SERVICE STATION, 15980 PERRIS BLVD, MORENO VALLEY, CA 92551-4691 (Continued)

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

PRELIMINARY REPORT

In response to the application for a policy of title insurance referenced herein, ***Chicago Title Company*** *hereby reports that it is prepared to issue, or cause to be issued, as of the date hereof, a policy or policies of title insurance describing the land and the estate or interest therein hereinafter set forth, insuring against loss which may be sustained by reason of any defect, lien or encumbrance not shown or referred to as an exception herein or not excluded from coverage pursuant to the printed Schedules, Conditions and Stipulations or Conditions of said policy forms.*

The printed Exceptions and Exclusions from the coverage and Limitations on Covered Risks of said policy or policies are set forth in Attachment One. The policy to be issued may contain an arbitration clause. When the Amount of Insurance is less than that set forth in the arbitration clause, all arbitrable matters shall be arbitrated at the option of either the Company or the Insured as the exclusive remedy of the parties. Limitations on Covered Risks applicable to the CLTA and ALTA Homeowner's Policies of Title Insurance which establish a Deductible Amount and a Maximum Dollar Limit of Liability for certain coverages are also set forth in Attachment One. Copies of the policy forms should be read. They are available from the office which issued this report.

This report (and any supplements or amendments hereto) is issued solely for the purpose of facilitating the issuance of a policy of title insurance and no liability is assumed hereby. If it is desired that liability be assumed prior to the issuance of a policy of title insurance, a Binder or Commitment should be requested.

The policy(s) of title insurance to be issued hereunder will be policy(s) of Chicago Title Insurance Company, a Florida corporation.

Please read the exceptions shown or referred to herein and the exceptions and exclusions set forth in Attachment One of this report carefully. The exceptions and exclusions are meant to provide you with notice of matters which are not covered under the terms of the title insurance policy and should be carefully considered.

It is important to note that this preliminary report is not a written representation as to the condition of title and may not list all liens, defects and encumbrances affecting title to the land.

16. Any rights of the parties in possession of a portion of, or all of, said Land, which rights are not disclosed by the public records.

The Company will require, for review, a full and complete copy of any unrecorded agreement, contract, license and/or lease, together with all supplements, assignments and amendments thereto, before issuing any policy of title insurance without excepting this item from coverage.

The Company reserves the right to except additional items and/or make additional requirements after reviewing said documents.

PLEASE REFER TO THE "INFORMATIONAL NOTES" AND "REQUIREMENTS" SECTIONS WHICH FOLLOW FOR INFORMATION NECESSARY TO COMPLETE THIS TRANSACTION.

END OF EXCEPTIONS

REQUIREMENTS SECTION

1. The Company will require the following documents for review prior to the issuance of any title insurance predicated upon a conveyance or encumbrance from the entity named below:

   Limited Liability Company: Maple Lane Group, LLC, a California limited liability company

   a) A copy of its operating agreement, if any, and all amendments, supplements and/or modifications thereto, certified by the appropriate manager or member.

   b) If a domestic Limited Liability Company, a copy of its Articles of Organization and all amendments thereto with the appropriate filing stamps.

   c) If the Limited Liability Company is member-managed, a full and complete current list of members certified by the appropriate manager or member.

   d) A current dated certificate of good standing from the proper governmental authority of the state in which the entity is currently domiciled.

   e) If less than all members, or managers, as appropriate, will be executing the closing documents, furnish evidence of the authority of those signing.

   f) If Limited Liability Company is a Single Member Entity, a Statement of Information for the Single Member will be required.

   g) Each member and manager of the LLC without an Operating Agreement must execute in the presence of a notary public the Certificate of California LLC (Without an Operating Agreement) Status and Authority form.

2. Unrecorded matters which may be disclosed by an Owner's Affidavit or Declaration. A form of the Owner's Affidavit/Declaration is attached to this Preliminary Report/Commitment. This Affidavit/Declaration is to be completed by the record owner of the land and submitted for review prior to the closing of this transaction. Your prompt attention to this requirement will help avoid delays in the closing of this transaction. Thank you.

   The Company reserves the right to add additional items or make further requirements after review of the requested Affidavit/Declaration.

3. Prior to the close of escrow, the Company requires a Statement of Information to be completed by the following party(s),

   Party(s): All Parties

   The Company reserves the right to add additional items or make further requirements after review of the requested Statement of Information.

END OF REQUIREMENTS

INFORMATIONAL NOTES SECTION

1. Note: Property taxes, including any personal property taxes and any assessments collected with taxes, are paid. For proration purposes the amounts were:

Tax Identification No.:	312-020-025-5
Fiscal Year:	2018-2019
1st Installment:	$1,379.49
2nd Installment:	$1,379.49
Exemption:	$0.00
Code Area:	021-185

2. Note: The policy of title insurance will include an arbitration provision. The Company or the insured may demand arbitration. Arbitrable matters may include, but are not limited to, any controversy or claim between the Company and the insured arising out of or relating to this policy, any service of the Company in connection with its issuance or the breach of a policy provision or other obligation. Please ask your escrow or title officer for a sample copy of the policy to be issued if you wish to review the arbitration provisions and any other provisions pertaining to your Title Insurance coverage.

3. Notice: Please be aware that due to the conflict between federal and state laws concerning the cultivation, distribution, manufacture or sale of marijuana, the Company is not able to close or insure any transaction involving Land that is associated with these activities.

4. Pursuant to Government Code Section 27388.1, as amended and effective as of 1-1-2018, a Documentary Transfer Tax (DTT) Affidavit may be required to be completed and submitted with each document when DTT is being paid or when an exemption is being claimed from paying the tax. If a governmental agency is a party to the document, the form will not be required. DTT Affidavits may be available at a Tax Assessor-County Clerk-Recorder.

5. Due to the special requirements of SB 50 (California Public Resources Code Section 8560 et seq.), any transaction that includes the conveyance of title by an agency of the United States must be approved in advance by the Company's State Counsel, Regional Counsel, or one of their designees.

6. Note: There are NO conveyances affecting said Land recorded within 24 months of the date of this report.

END OF INFORMATIONAL NOTES

WIRESAFE™ | Inquire before you wire!

Wire Fraud Alert

This Notice is not intended to provide legal or professional advice. If you have any questions, please consult with a lawyer.

All parties to a real estate transaction are targets for wire fraud and many have lost hundreds of thousands of dollars because they simply relied on the wire instructions received via email, without further verification. **If funds are to be wired in conjunction with this real estate transaction, we strongly recommend verbal verification of wire instructions through a known, trusted phone number prior to sending funds.**

In addition, the following non-exclusive self-protection strategies are recommended to minimize exposure to possible wire fraud.

- **NEVER RELY** on emails purporting to change wire instructions. Parties to a transaction rarely change wire instructions in the course of a transaction.
- **ALWAYS VERIFY** wire instructions, specifically the ABA routing number and account number, by calling the party who sent the instructions to you. DO NOT use the phone number provided in the email containing the instructions, use phone numbers you have called before or can otherwise verify. **Obtain the phone number of relevant parties to the transaction as soon as an escrow account is opened**. DO NOT send an email to verify as the email address may be incorrect or the email may be intercepted by the fraudster.
- **USE COMPLEX EMAIL PASSWORDS** that employ a combination of mixed case, numbers, and symbols. Make your passwords greater than eight (8) characters. Also, change your password often and do NOT reuse the same password for other online accounts.
- **USE MULTI-FACTOR AUTHENTICATION** for email accounts. Your email provider or IT staff may have specific instructions on how to implement this feature.

For more information on wire-fraud scams or to report an incident, please refer to the following links:

FIDELITY NATIONAL FINANCIAL, INC.
PRIVACY NOTICE

Fidelity National Financial, Inc. and its majority-owned subsidiary companies (collectively, "FNF," "our," or "we") respect and are committed to protecting your privacy. This Privacy Notice explains how we collect, use, and protect personal information, when and to whom we disclose such information, and the choices you have about the use and disclosure of that information.

Types of Information Collected
We may collect two types of information from you: Personal Information and Browsing Information.

Personal Information. FNF may collect the following categories of Personal Information:
- contact information (*e.g.*, name, address, phone number, email address);
- demographic information (*e.g.*, date of birth, gender, marital status);
- identity information (*e.g.*, Social Security Number, driver's license, passport, or other government ID number);
- financial account information (*e.g.*, loan or bank account information); and
- other personal information necessary to provide products or services to you.

Browsing Information. FNF may automatically collect the following types of Browsing Information when you access an FNF website, online service, or application (each an "FNF Website") from your Internet browser, computer, and/or mobile device:
- Internet Protocol (IP) address and operating system;
- browser version, language, and type;
- domain name system requests; and
- browsing history on the FNF Website, such as date and time of your visit to the FNF Website and visits to the pages within the FNF Website

How Personal Information is Collected
We may collect Personal Information about you from:
- information we receive from you on applications or other forms;
- information about your transactions with FNF, our affiliates, or others; and
- information we receive from consumer reporting agencies and/or governmental entities, either directly from these entities or through others.

How Browsing Information is Collected
If you visit or use an FNF Website, Browsing Information may be collected during your visit. Like most websites, our servers automatically log each visitor to the FNF Website and may collect the Browsing Information described above. We use Browsing Information for system administration, troubleshooting, fraud investigation, and to improve our websites. Browsing Information generally does not reveal anything personal about you, though if you have created a user account for an FNF Website and are logged into that account, the FNF Website may be able to link certain browsing activity to your user account.

Other Online Specifics
Cookies. When you visit an FNF Website, a "cookie" may be sent to your computer. A cookie is a small piece of data that is sent to your Internet browser from a web server and stored on your computer's hard drive. Information gathered using cookies helps us improve your user experience. For example, a cookie can help the website load properly or can customize the display page based on your browser type and user preferences. You can choose whether or not to accept cookies by changing your Internet browser settings. Be aware that doing so may impair or limit some functionality of the FNF Website.

Web Beacons. We use web beacons to determine when and how many times a page has been viewed. This information is used to improve our websites.

Do Not Track. Currently our FNF Websites do not respond to "Do Not Track" features enabled through your browser.

Links to Other Sites. FNF Websites may contain links to other websites. FNF is not responsible for the privacy practices or the content of any of those other websites. We advise you to read the privacy policy of every website you visit.

Use of Personal Information
FNF uses Personal Information for three main purposes:
- To provide products and services to you or in connection with a transaction involving you.
- To improve our products and services.
- To communicate with you about our, our affiliates', and third parties' products and services, jointly or independently.

When Information Is Disclosed
We may make disclosures of your Personal Information and Browsing Information in the following circumstances:
- to enable us to detect or prevent criminal activity, fraud, material misrepresentation, or nondisclosure;
- to nonaffiliated service providers who provide or perform services or functions on our behalf and who agree to use the information only to provide such services or functions;
- to nonaffiliated third party service providers with whom we perform joint marketing, pursuant to an agreement with them to jointly market financial products or services to you;
- to law enforcement or authorities in connection with an investigation, or in response to a subpoena or court order; or

- in the good-faith belief that such disclosure is necessary to comply with legal process or applicable laws, or to protect the rights, property, or safety of FNF, its customers, or the public.

The law does not require your prior authorization and does not allow you to restrict the disclosures described above. Additionally, we may disclose your information to third parties for whom you have given us authorization or consent to make such disclosure. We do not otherwise share your Personal Information or Browsing Information with nonaffiliated third parties, except as required or permitted by law.

We reserve the right to transfer your Personal Information, Browsing Information, and any other information, in connection with the sale or other disposition of all or part of the FNF business and/or assets, or in the event of bankruptcy, reorganization, insolvency, receivership, or an assignment for the benefit of creditors. By submitting Personal Information and/or Browsing Information to FNF, you expressly agree and consent to the use and/or transfer of the foregoing information in connection with any of the above described proceedings.

Please see "**Choices With Your Information**" to learn the disclosures you can restrict.

Security of Your Information
We maintain physical, electronic, and procedural safeguards to guard your Personal Information. We limit access to nonpublic personal information about you to employees who need to know that information to do their job. When we provide Personal Information to others as discussed in this Privacy Notice, we expect that they process such information in compliance with our Privacy Notice and in compliance with applicable privacy laws.

Choices With Your Information
If you do not want FNF to share your information with our affiliates to directly market to you, you may send an "opt out" request by email, phone, or physical mail as directed at the end of this Privacy Notice. We do not share your Personal Information with nonaffiliates for their use to direct market to you.

Whether you submit Personal Information or Browsing Information to FNF is entirely up to you. If you decide not to submit Personal Information or Browsing Information, FNF may not be able to provide certain services or products to you.

For California Residents: We will not share your Personal Information and Browsing Information with nonaffiliated third parties, except as permitted by California law.

For Nevada Residents: You may be placed on our internal Do Not Call List by calling (888) 934-3354 or by contacting us via the information set forth at the end of this Privacy Notice. Nevada law requires that we also provide you with the following contact information: Bureau of Consumer Protection, Office of the Nevada Attorney General, 555 E. Washington St., Suite 3900, Las Vegas, NV 89101; Phone number: (702) 486-3132; email: BCPINFO@ag.state.nv.us.

For Oregon Residents: We will not share your Personal Information and Browsing Information with nonaffiliated third parties for marketing purposes, except after you have been informed by us of such sharing and had an opportunity to indicate that you do not want a disclosure made for marketing purposes.

For Vermont Residents: We will not share information about your creditworthiness to our affiliates and will not disclose your personal information, financial information, credit report, or health information to nonaffiliated third parties to market to you, other than as permitted by Vermont law, unless you authorize us to make those disclosures.

Information From Children
The FNF Websites are meant for adults and are not intended or designed to attract persons under the age of eighteen (18).We do not collect Personal Information from any person that we know to be under the age of thirteen (13) without permission from a parent or guardian.

International Users
FNF's headquarters is located within the United States. If you reside outside the United States and choose to provide Personal Information or Browsing Information to us, please note that we may transfer that information outside of your country of residence for any of the purposes described in this Privacy Notice. By providing FNF with your Personal Information and/or Browsing Information, you consent to our collection, transfer, and use of such information in accordance with this Privacy Notice.

FNF Website Services for Mortgage Loans
Certain FNF companies provide services to mortgage loan servicers, including hosting websites that collect customer information on behalf of mortgage loan servicers (the "Service Websites"). The Service Websites may contain links to both this Privacy Notice and the mortgage loan servicer or lender's privacy notice. The sections of this Privacy Notice titled When Information is Disclosed, Choices with Your Information, and Accessing and Correcting Information do not apply to the Service Websites. The mortgage loan servicer or lender's privacy notice governs use, disclosure, and access to your Personal Information. FNF does not share Personal Information collected through the Service Websites, except (1) as required or authorized by contract with the mortgage loan servicer or lender, or (2) as required by law or in the good-faith belief that such disclosure is necessary to comply with a legal process or applicable law, to enforce this Privacy Notice, or to protect the rights, property, or safety of FNF or the public.

Your Consent To This Privacy Notice; Notice Changes
By submitting Personal Information and/or Browsing Information to FNF, you consent to the collection and use of the information in accordance with this Privacy Notice. We may change this Privacy Notice at any time. The revised Privacy Notice, showing the new revision date, will be posted on the FNF Website. Each time you provide information to us following any amendment of this Privacy Notice, your provision of information to us will signify your assent to and acceptance of the terms of the revised Privacy Notice for all previously collected information and information

collected from you in the future. We may use comments, information or feedback that you submit to us in any manner that we may choose without notice or compensation to you.

Accessing and Correcting Information; Contact Us
If you have questions, would like to access or correct your Personal Information, or want to opt-out of information sharing for affiliate marketing, send your requests via email to privacy@fnf.com, by phone to (888) 934-3354, or by mail to:

Fidelity National Financial, Inc.
601 Riverside Avenue
Jacksonville, Florida 32204
Attn: Chief Privacy Officer

Notice of Available Discounts

Pursuant to Section 2355.3 in Title 10 of the California Code of Regulations Fidelity National Financial, Inc. and its subsidiaries ("FNF") must deliver a notice of each discount available under our current rate filing along with the delivery of escrow instructions, a preliminary report or commitment. Please be aware that the provision of this notice does not constitute a waiver of the consumer's right to be charged the field rate. As such, your transaction may not qualify for the below discounts.

You are encouraged to discuss the applicability of one or more of the below discounts with a Company representative. These discounts are generally described below; consult the rate manual for a full description of the terms, conditions and requirements for each discount. These discounts only apply to transaction involving services rendered by the FNF Family of Companies. This notice only applies to transactions involving property improved with a one-to-four family residential dwelling.

FNF Underwritten Title Company
CTC - Chicago Title Company

FNF Underwriter
CTIC - Chicago Title Insurance Company

Available Discounts

CREDIT FOR PRELIMINARY REPORTS AND/OR COMMITMENTS ON SUBSEQUENT POLICIES (CTIC)
Where no major change in the title has occurred since the issuance of the original report or commitment, the order may be reopened within 12 months and all or a portion of the charge previously paid for the report or commitment may be credited on a subsequent policy charge within the following time period from the date of the report.

DISASTER LOANS (CTIC)
The charge for a lender's Policy (Standard or Extended coverage) covering the financing or refinancing by an owner of record, within 24 months of the date of a declaration of a disaster area by the government of the United States or the State of California on any land located in said area, which was partially or totally destroyed in the disaster, will be 50% of the appropriate title insurance rate.

CHURCHES OR CHARITABLE NON-PROFIT ORGANIZATIONS (CTIC)
On properties used as a church or for charitable purposes within the scope of the normal activities of such entities, provided said charge is normally the church's obligation the charge for an owner's policy shall be 50% to 70% of the appropriate title insurance rate, depending on the type of coverage selected. The charge for a lender's policy shall be 40% to 50% of the appropriate title insurance rate, depending on the type of coverage selected.

EMPLOYEE RATE (CTC and CTIC)
No charge shall be made to employees (including employees on approved retirement) of the Company or its underwritten, subsidiary title companies for policies or escrow services in connection with financing, refinancing, sale or purchase of the employees' bona fide home property. Waiver of such charges is authorized only in connection with those costs which the employee would be obligated to pay, by established custom, as a party to the transaction.

ATTACHMENT ONE

CALIFORNIA LAND TITLE ASSOCIATION
STANDARD COVERAGE POLICY – 1990

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building or zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien, or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
   (b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.
3. Defects, liens, encumbrances, adverse claims or other matters:
   (a) whether or not recorded in the public records at Date of Policy, but created, suffered, assumed or agreed to by the insured claimant;
   (b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;
   (c) resulting in no loss or damage to the insured claimant;
   (d) attaching or created subsequent to Date of Policy; or
   (e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the insured mortgage or for the estate or interest insured by this policy.
4. Unenforceability of the lien of the insured mortgage because of the inability or failure of the insured at Date of Policy, or the inability or failure of any subsequent owner of the indebtedness, to comply with the applicable doing business laws of the state in which the land is situated.
5. Invalidity or unenforceability of the lien of the insured mortgage, or claim thereof, which arises out of the transaction evidenced by the insured mortgage and is based upon usury or any consumer credit protection or truth in lending law.
6. Any claim, which arises out of the transaction vesting in the insured the estate of interest insured by this policy or the transaction creating the interest of the insured lender, by reason of the operation of federal bankruptcy, state insolvency or similar creditors' rights laws.

EXCEPTIONS FROM COVERAGE - SCHEDULE B, PART I

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.
   Proceedings by a public agency which may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the public records.
2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of the land or which may be asserted by persons in possession thereof.
3. Easements, liens or encumbrances, or claims thereof, not shown by the public records.
4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by the public records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b) or (c) are shown by the public records.
6. Any lien or right to a lien for services, labor or material not shown by the public records.

CLTA HOMEOWNER'S POLICY OF TITLE INSURANCE (12-02-13)
ALTA HOMEOWNER'S POLICY OF TITLE INSURANCE

EXCLUSIONS

In addition to the Exceptions in Schedule B, You are not insured against loss, costs, attorneys' fees, and expenses resulting from:

1. Governmental police power, and the existence or violation of those portions of any law or government regulation concerning:
   a. building;
   b. zoning;
   c. land use;
   d. improvements on the Land;
   e. land division; and
   f. environmental protection.
   This Exclusion does not limit the coverage described in Covered Risk 8.a., 14, 15, 16, 18, 19, 20, 23 or 27.
2. The failure of Your existing structures, or any part of them, to be constructed in accordance with applicable building codes. This Exclusion does not limit the coverage described in Covered Risk 14 or 15.
3. The right to take the Land by condemning it. This Exclusion does not limit the coverage described in Covered Risk 17.
4. Risks:
   a. that are created, allowed, or agreed to by You, whether or not they are recorded in the Public Records;
   b. that are Known to You at the Policy Date, but not to Us, unless they are recorded in the Public Records at the Policy Date;

c. that result in no loss to You; or
d. that first occur after the Policy Date - this does not limit the coverage described in Covered Risk 7, 8.e., 25, 26, 27 or 28.

5. Failure to pay value for Your Title.
6. Lack of a right:
   a. to any land outside the area specifically described and referred to in paragraph 3 of Schedule A; and
   b. in streets, alleys, or waterways that touch the Land.
   This Exclusion does not limit the coverage described in Covered Risk 11 or 21.
7. The transfer of the Title to You is invalid as a preferential transfer or as a fraudulent transfer or conveyance under federal bankruptcy, state insolvency, or similar creditors' rights laws.
8. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
9. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

LIMITATIONS ON COVERED RISKS

Your insurance for the following Covered Risks is limited on the Owner's Coverage Statement as follows:

- For Covered Risk 16, 18, 19, and 21 Your Deductible Amount and Our Maximum Dollar Limit of Liability shown in Schedule A.

The deductible amounts and maximum dollar limits shown on Schedule A are as follows:

	Your Deductible Amount	Our Maximum Dollar Limit of Liability
Covered Risk 16:	1.00% % of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 10,000.00
Covered Risk 18:	1.00% % of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 19:	1.00% of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 21:	1.00% of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 5,000.00

2006 ALTA LOAN POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 13 or 14); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or any consumer credit protection or truth-in-lending law.
6. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   (a) a fraudulent conveyance or fraudulent transfer, or
   (b) a preferential transfer for any reason not stated in Covered Risk 13(b) of this policy.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the Insured Mortgage in the Public Records. This Exclusion does not modify or limit the coverage provided under Covered Risk 11(b).

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

(Except as provided in Schedule B - Part II,(t(or T)his policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees or expenses, that arise by reason of:

(PART I

(The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor or material not shown by the Public Records.

PART II

In addition to the matters set forth in Part I of this Schedule, the Title is subject to the following matters, and the Company insures against loss or damage sustained in the event that they are not subordinate to the lien of the Insured Mortgage:)

2006 ALTA OWNER'S POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 9 and 10); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Title.
4. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction vesting the Title as shown in Schedule A, is
   (a) a fraudulent conveyance or fraudulent transfer; or
   (b) a preferential transfer for any reason not stated in Covered Risk 9 of this policy.
5. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the deed or other instrument of transfer in the Public Records that vests Title as shown in Schedule A.

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees or expenses, that arise by reason of:
(The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown in the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.

4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and that are not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor or material not shown by the Public Records.
7. (Variable exceptions such as taxes, easements, CC&R's, etc. shown here.)

ALTA EXPANDED COVERAGE RESIDENTIAL LOAN POLICY (12-02-13)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 16, 17, 18, 19, 20, 21, 22, 23, 24, 27 or 28); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury, or any consumer credit protection or truth-in-lending law. This Exclusion does not modify or limit the coverage provided in Covered Risk 26.
6. Any claim of invalidity, unenforceability or lack of priority of the lien of the Insured Mortgage as to Advances or modifications made after the Insured has Knowledge that the vestee shown in Schedule A is no longer the owner of the estate or interest covered by this policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching subsequent to Date of Policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11(b) or 25.
8. The failure of the residential structure, or any portion of it, to have been constructed before, on or after Date of Policy in accordance with applicable building codes. This Exclusion does not modify or limit the coverage provided in Covered Risk 5 or 6.
9. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   (a) a fraudulent conveyance or fraudulent transfer, or
   (b) a preferential transfer for any reason not stated in Covered Risk 27(b) of this policy.
10. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
11. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

OWNER'S DECLARATION

Escrow No.: 00111266-002-KAH-K27
Property Address: Vacant Land APN 312-020-025
Moreno Valley, CA

The undersigned hereby declares as follows:

1. (Fill in the applicable paragraph and strike the other)
   a. Declarant ("Owner") is the owner or lessee, as the case may be, of certain premises located at Vacant Land APN 312-020-025, Moreno Valley, CA, further described as follows: See Preliminary Report/Commitment No. for full legal description (the "Land").
   b. Declarant is the _____ of _____ ("Owner"), which is the owner or lessee, as the case may be, of certain premises located at Vacant Land APN 312-020-025, Moreno Valley, CA, further described as follows: See Preliminary Report/Commitment No. for full legal description (the "Land").
2. (Fill in the applicable paragraph and strike the other)
   a. During the period of six months immediately preceding the date of this declaration no work has been done, no surveys or architectural or engineering plans have been prepared, and no materials have been furnished in connection with the erection, equipment, repair, protection or removal of any building or other structure on the Land or in connection with the improvement of the Land in any manner whatsoever.
   b. During the period of six months immediately preceding the date of this declaration certain work has been done and materials furnished in connection with _____ upon the Land in the approximate total sum of $_____, but no work whatever remains to be done and no materials remain to be furnished to complete the construction in full compliance with the plans and specifications, nor are there any unpaid bills incurred for labor and materials used in making such improvements or repairs upon the Land, or for the services of architects, surveyors or engineers, except as follows: _____. Owner, by the undersigned Declarant, agrees to and does hereby indemnify and hold harmless Chicago Title Company against any and all claims arising therefrom.
3. Owner has not previously conveyed the Land; is not a debtor in bankruptcy (and if a partnership, the general partner thereof is not a debtor in bankruptcy); and has not received notice of any pending court action affecting the title to the Land.
4. Except as shown in the above-referenced Preliminary Report/Commitment, there are no unpaid or unsatisfied mortgages, deeds of trust, Uniform Commercial Code financing statements, regular assessments, special assessments, periodic assessments or any assessment from any source, claims of lien, special assessments, or taxes that constitute a lien against the Land or that affect the Land but have not been recorded in the public records. There are no violations of the covenants, conditions and restrictions as shown in the above-referenced Preliminary Report/Commitment.
5. The Land is currently in use as _____; _____ occupy/occupies the Land; and the following are all of the leases or other occupancy rights affecting the Land:

   _____
6. There are no other persons or entities that assert an ownership interest in the Land, nor are there unrecorded easements, claims of easement, or boundary disputes that affect the Land.
7. There are no outstanding options to purchase or rights of first refusal affecting the Land.
8. Between the most recent Effective Date of the above-referenced Preliminary Report/Commitment and the date of recording of the Insured Instrument(s), Owner has not taken or allowed, and will not take or allow, any action or inaction to encumber or otherwise affect title to the Land.

This declaration is made with the intention that Chicago Title Company (the "Company") and its policy issuing agents will rely upon it in issuing their title insurance policies and endorsements. Owner, by the undersigned Declarant, agrees to indemnify the Company against loss or damage (including attorneys fees, expenses, and costs) incurred by the Company as a result of any untrue statement made herein.

I declare under penalty of perjury that the foregoing is true and correct and that this declaration was executed on _____ at _____.

Natural Hazard Disclosure ("NHD") Statement and Acknowledgment of Receipt

The transferor and his or her agent(s) or a third-party consultant disclose the following information with the knowledge that even though this is not a warranty, prospective transferees may rely on this information in deciding whether and on what terms to purchase the Property. Transferor hereby authorizes any agent(s) representing any principal(s) in this action to provide a copy of this statement to any person or entity in connection with any actual or anticipated sale of the Property.

The following are representations made by the transferor and his or her agent(s) or a third-party consultant based on their knowledge and maps drawn by the State. This information is a disclosure and is not intended to be part of any contract between the transferee and the transferor. THIS REAL PROPERTY LIES WITHIN THE FOLLOWING HAZARDOUS AREA(S):

A SPECIAL FLOOD HAZARD AREA (Any type Zone "A" or "V") designated by the Federal Emergency Management Agency
Yes___ No X Do not know and information not available from local jurisdiction ___

AN AREA OF POTENTIAL FLOODING shown on a dam failure inundation map pursuant to Section 8589.5 of the Government Code.
Yes___ No X Do not know and information not available from local jurisdiction___

A VERY HIGH FIRE HAZARD SEVERITY ZONE pursuant to Section 51178 or 51179 of the Government Code. The owner of this Property is subject to the maintenance requirements of Section 51182 of the Government Code.
Yes___ No X

A WILDLAND AREA THAT MAY CONTAIN SUBSTANTIAL FOREST FIRE RISK AND HAZARDS pursuant to Section 4125 of the Public Resources Code. The owner of this Property is subject to the maintenance requirements of Section 4291 of the Public Resources Code. Additionally, it is not the state's responsibility to provide fire protection services to any building or structure located within the wildlands unless the Department of Forestry and Fire Protection has entered into a cooperative agreement with a local agency for those purposes pursuant to Section 4142 of the Public Resources Code.
Yes___ No X

AN EARTHQUAKE FAULT ZONE pursuant to Section 2622 of the Public Resources Code.
Yes___ No X

A SEISMIC HAZARD ZONE pursuant to Section 2696 of the Public Resources Code.
Yes (Landslide Zone)___ Yes (Liquefaction Zone)___

No___ Map not yet released by state X

THESE HAZARDS MAY LIMIT YOUR ABILITY TO DEVELOP THE REAL PROPERTY, TO OBTAIN INSURANCE, OR TO RECEIVE ASSISTANCE AFTER A DISASTER. THE MAPS ON WHICH THESE DISCLOSURES ARE BASED ESTIMATE WHERE NATURAL HAZARDS EXIST. THEY ARE NOT DEFINITIVE INDICATORS OF WHETHER OR NOT A PROPERTY WILL BE AFFECTED BY A NATURAL DISASTER. TRANSFEREE(S) AND TRANSFEROR(S) MAY WISH TO OBTAIN PROFESSIONAL ADVICE REGARDING THOSE HAZARDS AND OTHER HAZARDS THAT MAY AFFECT THE PROPERTY.

The Natural Hazard Disclosure Report For RIVERSIDE County

Property Address: VACANT LAND
MORENO VALLEY, RIVERSIDE COUNTY, CA 92555
("Property")

APN: 312-020-025
Report Date: 10/01/2019
Report Number: 2555340

Natural Hazard Disclosure Report

Part 1. State Defined Natural Hazard Zones

Statutory Natural Hazard Disclosures

Section 1103 of the California Civil Code mandates the disclosure of six (6) natural hazard zones if the Property is located within any such zone. Those six "statutory" hazard zones, disclosed on the **Natural Hazard Disclosure Statement** ("NHDS") on Page one of this Report, are explained below. Note that the NHDS does not provide for informing buyers if a property is only partially within any of the delineated zones or provide additional flood zone information which could be very important to the process. The following summary is intended to give buyers additional information they may need to help them in the decision-making process and to place the information in perspective.

SPECIAL FLOOD HAZARD AREA

DISCUSSION: Property in a Special Flood Hazard Area (any type of Zone "A" or "V" as designated by the Federal Emergency Management Agency ("FEMA") is subject to flooding in a "100-year rainstorm." Federally connected lenders require homeowners to maintain flood insurance for buildings in these zones. A 100-year flood occurs on average once every 100 years, but may not occur in 1,000 years or may occur in successive years. According to FEMA, a home located within a SFHA has a 26% chance of suffering flood damage during the term of a 30-year mortgage. Other types of flooding, such as dam failure, are not considered in developing these zones. Flood insurance for properties in Zones B, C, D, X, X500, and X500_Levee is available but is not required.

Zones A, AO, AE, AH, AR, A1-A30: Area of "100-year" flooding - a 1% or greater chance of annual flooding.
Zone A99: An “adequate progress” determination for flood control system construction projects that, once completed, may significantly limit the area of a community that will be included in the Special Flood Hazard Area (SFHA). Such projects reduce but do not eliminate, the risk of flooding to people and structures in “levee-impacted” areas, and allow mandatory flood insurance to be available at a lower cost.
Zones V, V1-V30: Area of "100-year" flooding in coastal (shore front) areas subject to wave action.
Zone B: Area of moderate flood risk. These are areas between the "100" and "500" year flood-risk levels.
Zones C, D: NOT IN an area of "100-year" flooding. Area of minimal (Zone C) or undetermined (Zone D) flood hazard.
Zones X: An area of minimal flood risk. These are areas outside the "500" year flood-risk level.
Zone X500: An area of moderate flood risk. These are areas between the "100" and "500" year flood-risk levels.
Zone X500_LEVEE: An area of moderate flood risk that is protected from "100-year flood" by levee and that is subject to revision to high risk (Zone A) if levee is decertified by FEMA.
Zone N: Area Not Included, no flood zone designation has been assigned or not participating in the National Flood Insurance Program.

Notice: The Company is not always able to determine if the Property is subject to a FEMA Letter of Map Revision ("LOMR") or other FEMA letters of map change. If Seller is aware that the Property is subject to a LOMR or other letters of map change, the Seller shall disclose the map change and attach a copy of the FEMA letter(s) to the Report. Contact FEMA at http://msc.fema.gov for additional information.

For more information about flood zones, visit:
https://efotg.sc.egov.usda.gov/references/public/NM/FEMA_FLD_HAZ_guide.pdf

PUBLIC RECORD: Official Flood Insurance Rate Maps ("FIRM") compiled and issued by the Federal Emergency Management Agency ("FEMA") pursuant to 42 United States Code §4001, et seq.

AREA OF POTENTIAL FLOODING (DAM FAILURE)

Since 1998 California law has required seller disclosure of areas of potential inundation due to sudden or total dam failure as delineated on inundation maps submitted by dam owners to the California Office of Emergency Services (“OES”) for review and approval; however, as of June 27, 2017, the date on which Senate Bill 92 (SB 92) became operative, the review and approval of inundation maps prepared by licensed civil engineers and submitted by dam owners became the statutory responsibility of the California Department of Water Resources (“DWR”) Division of Safety of Dams (“DSOD”) as required by California Water Code Section 6161. These inundation maps are a component of emergency action plans submitted by dam owners to comply with statutory requirements set forth under the California Water Code for extremely high, high, and significant hazard dams and their critical appurtenant structures. Inundation maps are not required by the California Water Code for low hazard dams. SB 92 further requires dam owners to update the emergency action plan, including an inundation map, no less frequently than every 10 years or sooner.

The Natural Hazard Disclosure Report For RIVERSIDE County

Property Address: VACANT LAND
MORENO VALLEY, RIVERSIDE COUNTY, CA 92555
("Property")

APN: 312-020-025
Report Date: 10/01/2019
Report Number: 2555340

To date DWR has yet to review, approve, and make publicly available inundation maps and data for many facilities with inundation areas that are subject to disclosure requirements. Inundation maps will continue to be posted and updated maps will replace outdated maps as they are approved by DSOD. In the absence of DSOD-approved data, inundation maps previously approved by the OES will be used by the Company to facilitate compliance with specified statutory real estate transfer disclosure requirements. These include inundation maps for federally owned dams over which DSOD has no jurisdictional authority and for which inundation maps are not available from DSOD. These dams include, among others, Folsom Dam, Isabella Dam, Hansen Dam, Prado Dam, and Seven Oaks Reservoir (owned by the U.S. Army Corps of Engineers) as well as Monticello Dam, New Melones Dam, and Shasta Dam (owned by the U.S. Bureau of Reclamation). The Company may also use OES-approved maps should the mapped inundation area for a given facility be greater than that depicted on a DSOD-approved map.

PUBLIC RECORD: (1) Official dam inundation maps made publicly available prior to June 27, 2017 by the State of California Office of Emergency Services ("OES") pursuant to California Government Code §8589.5; (2) Official inundation boundary digital data made publicly available since June 28, 2017 by the State of California Department of Water Resources (DWR) pursuant to California Water Code §6161. DWR states that its inundation boundary data typically includes flooding depths greater than one foot but some information may be redacted for security purposes.

VERY HIGH FIRE HAZARD SEVERITY ZONE (VHFHSZ)

DISCUSSION: VHFHSZs can be defined by the California Department of Forestry and Fire Protection ("Calfire") as well as by local fire authorities within "Local Responsibility Areas" where fire suppression is the responsibility of a local fire department. Properties located within VHFHS Zones may have a higher risk for fire damage and, therefore, may be subject to (i) additional construction requirements such as a "Class A" roof for new construction or replacement of existing roofs; and (ii) additional maintenance responsibilities such as adequate vegetation clearance near the structure, spark screens on chimneys and stovepipes, leaf removal from roofs, and other basic fire-safety practices. Contact the local fire department for a complete list of requirements and exceptions.

PUBLIC RECORD: Maps issued by Calfire pursuant to California Government Code § 51178 recommending VHFHSZs to be adopted by the local jurisdiction within its Local Responsibility Area, or VHFHSZs adopted by the local jurisdiction within the statutory 120-day period defined in California Government Code § 51179.

WILDLAND FIRE AREA (STATE RESPONSIBILITY AREA)

DISCUSSION: The State Board of Forestry classifies all lands within the State of California based on various factors such as ground cover, beneficial use of water from watersheds, probable damage from erosion, and fire risks. Fire prevention and suppression in all areas which are not within a Wildland - State Responsibility Area ("WSRA") is primarily the responsibility of the local or federal agencies, as applicable.

For property located within a WSRA, please note that (1) there may be substantial forest fire risks and hazards; (2) except for property located within a county which has assumed responsibility for prevention and suppression of all fires, it is NOT the state's responsibility to provide fire protection services to any building or structure located within a WSRA unless the Department has entered into a cooperative agreement with a local agency; and (3) the property owner may be is subject to (i) additional construction requirements such as a "Class A" roof for new construction or replacement of existing roofs; and (ii) additional maintenance responsibilities such as adequate vegetation clearance near the structure, spark screens on chimneys and stovepipes, leaf removal from roofs, and other basic fire-safety practices.

The existence of local agreements for fire service is not available in the Public Record and, therefore, is not included in this disclosure. For very isolated properties with no local fire services or only seasonal fire services there may be significant fire risk. If the Property is located within a WSRA, please contact the local fire department for more detailed information.

PUBLIC RECORD: Official maps issued by the California Department of Forestry and Fire Protection ("Calfire") pursuant to California Public Resources Code § 4125.

SRA Fire Prevention Benefit Fee Advisory

In 2011, the California Legislature and Governor enacted a "Fire Prevention Fee" on habitable structures in the State's wildland fire responsibility area. The yearly fee, levied on property owners, paid for various activities to prevent and suppress wildfires in the SRA, and was most recently at the rate of $152.33 per habitable structure on the property.

Effective July 1, 2017, as authorized by Assembly Bill 398 and signed by the Governor, that fire prevention fee is suspended until 2031.

For more information, please refer to "Part 6. State Responsibility Area Fire Prevention Fee" in the JCP-LGS Property Tax Report.

The Natural Hazard Disclosure Report For RIVERSIDE County

Property Address: VACANT LAND
MORENO VALLEY, RIVERSIDE COUNTY, CA 92555
("Property")

APN: 312-020-025
Report Date: 10/01/2019
Report Number: 2555340

EARTHQUAKE FAULT ZONE

DISCUSSION: Earthquake Fault Zones are delineated and adopted by California as part of the Alquist-Priolo Earthquake Fault Zone Act of 1972. Property in an Earthquake Fault Zone ("EF Zone") does not necessarily have a fault trace existing on the site. EF Zones are areas or bands delineated on both sides of known active earthquake faults. EF Zones vary in width but average one-quarter (1/4) mile in width with the "typical" zone boundaries set back approximately 660 feet on either side of the fault trace. The potential for "fault rupture" damage (ground cracking along the fault trace) is relatively high only if a structure is located directly on a fault trace. If a structure is not on a fault trace, shaking will be the primary effect of an earthquake. During a major earthquake, shaking will be strong in the vicinity of the fault and may be strong at some distance from the fault depending on soil and bedrock conditions. It is generally accepted that properly constructed wood-frame houses are resistant to shaking damage.

PUBLIC RECORD: Official earthquake fault zone or special study zone maps approved by the State Geologist and issued by the California Department of Conservation, California Geological Survey pursuant to California Public Resources Code §2622.

SEISMIC HAZARD MAPPING ACT ZONE

DISCUSSION: Official Seismic Hazard Zone ("SH Zone") maps delineate Areas of Potential Liquefaction and Areas of Earthquake-Induced Landsliding. A property that lies partially or entirely within a designated SH Zone may be subject to requirements for site-specific geologic studies and mitigation before any new or additional construction may take place.

Earthquake-Induced Landslide Hazard Zones are areas where the potential for earthquake-induced landslides is relatively high. Areas most susceptible to these landslides are steep slopes in poorly cemented or highly fractured rocks, areas underlain by loose, weak soils, and areas on or adjacent to existing landslide deposits. The CGS cautions these maps do not capture all potential earthquake-induced landslide hazards and that earthquake-induced ground failures are not addressed by these maps. Furthermore, no effort has been made to map potential run-out areas of triggered landslides. It is possible that such run-out areas may extend beyond the zone boundaries. An earthquake capable of causing liquefaction or triggering a landslide may not uniformly affect all areas within a SH Zone.

Liquefaction Hazard Zones are areas where there is a potential for, or an historic occurrence of liquefaction. Liquefaction is a soil phenomenon that can occur when loose, water saturated granular sediment within 40 feet of the ground surface, are shaken in a significant earthquake. The soil temporarily becomes liquid-like and structures may settle unevenly. The Public Record is intended to identify areas with a relatively high potential for liquefaction but not to predict the amount or direction of liquefaction-related ground displacement, nor the amount of damage caused by liquefaction. The many factors that control ground failure resulting from liquefaction must be evaluated on a site specific basis.

PUBLIC RECORD: Official seismic hazard maps or digital data thereof approved by the State Geologist and issued by the California Department of Conservation, California Geological Survey pursuant to California Public Resources Code §2696.

STATUTORY NATURAL HAZARD DISCLOSURE REPORTING STANDARD: "IN" shall be reported if any portion of the Property is located within any of the above zones as delineated in the Public Record. "NOT IN" shall be reported if no portion of the Property is located within any of the above zones as delineated in the Public Record. Map Not Available shall be reported in areas not yet evaluated by the governing agency according to the Public Record. Please note that "MAP NOT AVAILABLE" will be applicable to most portions of the state. Official Seismic Hazard Zone ("SH Zone") maps delineate Areas of Potential Liquefaction and Areas of Earthquake-Induced Landsliding.

Part 2. County and City Defined Natural Hazard Zones

HAZARD MAPS IN THE LOCAL GENERAL PLAN

General Plan regulates property development. There are currently over 530 incorporated cities and counties in California. The state Government Code (Sections 65000 et seq.) requires each of those jurisdictions to adopt a comprehensive, long-term "General Plan" for its physical development. That General Plan regulates land uses within the local jurisdiction in order to protect the public from hazards in the environment and conserve local natural resources. The General Plan is the official city or county policy regarding the location of housing, business, industry, roads, parks, and other land uses.

Municipal hazard zones can affect the cost of ownership. Each county and city adopts its own distinct General Plan according to that jurisdiction's unique vegetation, landscape, terrain, and other geographic and geologic conditions. The "Safety Element" (or Seismic Safety Element) of that General Plan identifies the constraints of earthquake fault, landslide, flood, fire and other natural hazards on local land use, and it delineates hazard zones within which private property improvements may be regulated through the building-permit approval process, which can affect the future cost of ownership. Those locally regulated hazard zones are in addition to the federal and state defined hazard zones associated with statutory disclosures in the preceding section.

City and/or County natural hazard zones explained below. Unless otherwise specified, only those officially adopted Safety Element or Seismic Safety Element maps (or digital data thereof) which are publicly available, are of a scale, resolution, and quality that readily enable parcel-specific hazard determinations, and are consistent in character with those statutory federal or state disclosures will be considered for eligible for use as the basis for county- or city-level disclosures set forth in this Report. Please also note:

- If an officially adopted Safety Element or Seismic Safety Element map relies on data which is redundant of that used for state-level disclosures, this Report will indicate so and advise Report recipients to refer to the state-level hazard discussion section for more information.
- If an officially adopted Safety Element or Seismic Safety Element cites underlying maps created by another agency, those maps may be regarded as incorporated by reference and may be used as the basis for parcel-specific determinations if those maps meet the criteria set forth in this section.
- Because county- and city-level maps are developed independently and do not necessarily define or delineate a given hazard the same way, the boundaries for the "same" hazard may be different.

If one or more maps contained in the Safety Element and/or Seismic Safety Element of an officially adopted General Plan are used as the basis for local disclosure, those maps will appear under the "Public Record(s) Searched" for that county or city.

REPORTING STANDARDS

A good faith effort has been made to disclose all hazard features on pertinent Safety Element and Seismic Safety Element maps with well-defined boundaries; however, those hazards with boundaries that are not delineated will be deemed not suitable for parcel-specific hazard determinations. Some map features, such as lines drawn to represent the location of a fault trace, may be buffered to create a zone to facilitate disclosure. Those map features which can not be readily distinguished from those representing hazards may be included to prevent an omission of a hazard feature. If the width of a hazard zone boundary is in question, "IN" will be reported if that boundary impacts any portion of a property. Further explanations concerning specific map features peculiar to a given county or city will appear under the "Reporting Standards" for that jurisdiction.

PUBLIC RECORDS VS. ON-SITE EVALUATIONS

Mapped hazard zones represent evaluations of generalized hazard information. Any specific site within a mapped zone could be at less or more relative risk than is indicated by the zone designation. A site-specific evaluation conducted by a geotechnical consultant or other qualified professional may provide more detailed and definitive information about the Property and any conditions which may or do affect it.

PROPERTY USE AND PERMITTING

No maps beyond those identified as "Public Record(s)" have been consulted for the purpose of these local disclosures. These disclosures are intended solely to make Report recipient(s) aware of the presence of mapped hazards. For this reason -- and because local authorities may use on these or additional maps or data differently to determine property-specific land use and permitting approvals -- Report recipients are advised to contact the appropriate local agency, usually Community Development, Planning, and/or Building, prior to the transaction to ascertain if these or any other conditions or related regulations may impact the Property use or improvement.

The Natural Hazard Disclosure Report For RIVERSIDE County

Property Address: VACANT LAND
MORENO VALLEY, RIVERSIDE COUNTY, CA 92555
("Property")

APN: 312-020-025
Report Date: 10/01/2019
Report Number: 2555340

RIVERSIDE COUNTY GEOLOGIC DISCUSSION

PUBLIC RECORD(S) SEARCHED: The following Public Records, contained in the Safety Element of the General Plan as adopted by the County Board of Supervisors in 2003 and updated in December 2015, are utilized for those county-level disclosures below: County-produced digital data of "Earthquake Fault Study Zones" and "Generalized Liquefaction".

FAULT

Because there are numerous active faults throughout Riverside County, the Safety Element states that "all proposed structures for human occupancy should be required to investigate the potential for and setback from ground rupture". While the County regulates most development projects (including all land divisions and most structures for human occupancy) within earthquake fault zones, the Safety Element notes that the following projects are exempt: Single family, wood-frame and steel-frame dwellings that are one or two stories, are not part of a development of four units or more, and are not located within 50 feet of a fault. The Safety Element also notes that a geologic investigation must show that proposed buildings will not be built across active faults before a project can be permitted within an A-P Earthquake Fault Zone, County Fault Zone, or within 150 feet of any other potentially active or active fault mapped in published United States Geological Survey or California Geological Survey reports. A licensed geologist must prepare a site-specific evaluation and written report. "If an active fault is found, a structure for human occupancy must be set back 50 feet from the fault, unless adequate evidence, as determined and accepted by the County Engineering Geologist, is presented to support a different setback.".

Reporting Standards: "IN" shall be reported if any portion of the Property is within a fault zone as delineated in the Public Record. "NOT IN" shall be reported if no portion of the Property is located within a fault zone as delineated in the Public Record. Both vector and .pdf versions of the Public Record identify "Alquist-Priolo Zones" and "Existing County Zones".

LIQUEFACTION SUSCEPTIBILITY

According to the Safety Element, liquefaction occurs primarily in saturated, loose, fine- to medium grained soils in areas where the groundwater table is within approximately 50 feet of the surface. Shaking causes the soils to lose strength and behave as liquid. Excess water pressure is vented upward through fissures and soil cracks, and a water-soil slurry bubbles onto the ground surface. Liquefaction-related effects include loss of bearing strength, ground oscillations, lateral spreading, and flow failures or slumping. Site-specific geotechnical studies are the only practical and reliable way of determining the specific liquefaction potential of a site; however, a determination of general risk potential can be provided based on soil type and depth of groundwater. Please contact the County to determine if there is a site-specific requirement for a geological and geologic investigation.

Reporting Standards: "IN" shall be reported as will the more/most severe level of Generalized Liquefaction as designated in the Public Record (which, for the purposes of this Report, have been grouped as "Very High or High", "Moderate", and "Low or Very Low") affecting any portion of the Property. "NOT IN" shall be reported if no portion of the Property is located within an area of Generalized Liquefaction as designated in the Public Record.

OTHER HAZARDS

NOTE: Not all maps referenced in the Safety Element have been made publicly available in a format that enables reliable parcel-specific determinations. These include "Earthquake-Induced Slope Instability", "Regions Underlain by Steep Slopes", "Engineering Geologic Materials", "Documented Subsidence Areas", "Wind Erosion Susceptibility Areas", "Dam Failure Inundation Areas", and "Wildfire Susceptibility". These will be evaluated for inclusion into future reports should such data be made publicly available by Riverside County. For questions regarding geotechnical development regulations pertaining to these additional hazards, please contact the County of Riverside Planning Department.

Report Number: 2555340

CITY-LEVEL GEOLOGIC AND SEISMIC ZONES DISCUSSION

This Report reviews the officially adopted geologic hazard maps in the Safety Element that each city in California is required to include in its General Plan. The city the subject Property is located in has either not officially adopted hazard zonation maps in its General Plan at an appropriate scale to delineate where hazards may exist on a single parcel basis or will not make such maps available outside city offices. However, all Parties should be California is "earthquake country." Faults that may exist in this city or in neighboring regions could cause earthquake shaking or other fault related-phenomena on the Property. Other geologic hazards such as, but not limited to liquefaction (a type of soil settling that can occur when loose, water-saturated sediments are shaken significantly in an earthquake) may occur in certain valley floor areas and landslides are a possibility in any hillside area. Such potential natural hazards may exist and be delineated on other sources used by the city in its Planning, Engineering, or Building Departments. Such potential sources are not reviewed in this Report.

END OF LOCAL AREA DISCLOSURES AND DISCUSSIONS SECTION

Report Number: 2555340

Part 3. Additional Property Specific Disclosures

FORMER MILITARY ORDNANCE SITE DISCLOSURE

DISCUSSION: Former Military Ordnance (FUD) sites can include sites with common industrial waste (such as fuels), ordnance or other warfare materiel, unsafe structures to be demolished, or debris for removal. California Civil Code Section 1102 requires disclosure of those sites containing unexploded ordnance. "Military ordnance" is any kind of munitions, explosive device/material or chemical agent used in military weapons. Unexploded ordnance are munitions that did not detonate. NOTE: **MOST** FUD sites do not contain unexploded ordnance. Only those FUD sites that the U.S. Army Corps of Engineers (USACE) has identified to contain Military Ordnance or have mitigation projects planned for them are disclosed in this Report. Additional sites may be added as military installations are released under the Federal Base Realignment and Closure (BRAC) Act. Active military sites are NOT included on the FUD site list.

PUBLIC RECORD: Data contained in Inventory Project Reports, Archives Search Reports, and related materials produced for, and made publicly available in conjunction with, the Defense Environmental Restoration Program for Formerly Used Defense Sites by the U.S. Army Corps of Engineers. Sites for which no map has been made publicly available shall not be disclosed.

REPORTING STANDARD: If one or more facility identified in the Public Record is situated within a one (1) mile radius of the Property, "**WITHIN**" shall be reported. The name of that facility or facilities shall also be reported.

The Natural Hazard Disclosure Report For RIVERSIDE County

Property Address: VACANT LAND
MORENO VALLEY, RIVERSIDE COUNTY, CA 92555
("Property")

APN: 312-020-025
Report Date: 10/01/2019
Report Number: 2555340

AIRPORT INFLUENCE AREA DISCLOSURE

DISCUSSION:
If any portion of the Property is in either an officially designated "airport influence area" ("AIA") or a two mile radius of a qualifying facility for which an AIA has not yet been officially designated, the following Notice is required:

NOTICE OF AIRPORT IN VICINITY
If this property is presently located in the vicinity of an airport, as identified in the determination section of this Report, within what is known as an airport influence area…the property may be subject to some of the annoyances or inconveniences associated with proximity to airport operations (for example: noise, vibration, or odors). Individual sensitivities to those annoyances can vary from person to person. In that case, you may wish to consider what airport annoyances, if any, are associated with the property before you complete your purchase and determine whether they are acceptable (California Civil Code, Section 1103.4).

Certain airports are not disclosed in this Report. JCP-LGS has made a good faith effort to identify the airports covered under Section 1102.6a. Sources consulted include official land use maps and/or digital data made available by a governing Airport Land Use Commission (ALUC) or other designated government body. Most facilities for which an Airport Influence Area has been designated are included on the "California Airports List" maintained by the California Department of Transportation's Division of Aeronautics. Not disclosed in this Report are public use airports that are not in the "California Airports List", airports that are physically located outside California, heliports and seaplane bases that do not have regularly scheduled commercial service, and private airports or military air facilities unless specifically identified in the "California Airports List". **If the seller has actual knowledge of an airport in the vicinity of the subject property that is not disclosed in this Report, and that is material to the transaction, the seller should disclose this actual knowledge in writing to the buyer.**

Most facilities for which an Airport Influence Area has been designated are included on the "California Airports List" maintained by the California Department of Transportation's Division of Aeronautics. The inclusion of military and private airports varies by County, and heliports and seaplane bases are not included, therefore, airports in these categories may or may not be included in this disclosure.

NOTE: Proximity to an airport does not necessarily mean that the property is exposed to significant aviation noise levels. Alternatively, there may be properties exposed to aviation noise that are greater than two miles from an airport. Factors that affect the level of aviation noise include weather, aircraft type and size, frequency of aircraft operations, airport layout, flight patterns or nighttime operations. Buyer should be aware that aviation noise levels can vary seasonally or change if airport usage changes.

PUBLIC RECORD: Based on officially adopted land use maps and/or digital data made publicly available by the governing ALUC or other designated government body. If the ALUC or other designated government body has not made publicly available a current officially adopted airport influence area map, then California law states that "a written disclosure of an airport within two (2) statute miles shall be deemed to satisfy any city or county requirements for the disclosure of airports in connection with transfers of real property."

REPORTING STANDARD: "**IN**" shall be reported along with the facility name(s) and the "Notice of Airport in Vicinity" if any portion of the Property is situated within either (a) an Airport Influence Area as designated on officially adopted maps or digital data or (b) a two (2) mile radius of a qualifying facility for which an official Airport Influence Area map or digital data has not been made publicly available by the ALUC or other designated governing body. "**NOT IN**" shall be reported if no portion of the Property is within either area.

The Natural Hazard Disclosure Report For RIVERSIDE County

Property Address: VACANT LAND
MORENO VALLEY, RIVERSIDE COUNTY, CA 92555
("Property")

APN: 312-020-025
Report Date: 10/01/2019
Report Number: 2555340

AIRPORT NOISE DISCLOSURE

DISCUSSION: California Civil Code §1102.17 requires the seller(s) of residential real property who has/have actual knowledge that the property in the transaction is affected by airport use must give written notice of that knowledge, as soon as practicable, before transfer of title.

Under the Federal Aviation Administration's *Airport Noise Compatibility Planning Program Part 150*, certain 65 decibel (dB) Community Noise Equivalent Level (CNEL) contour maps have been produced for some airports. Not all airports have produced noise exposure maps. A property may be near or at some distance from an airport and not be within a delineated noise exposure area, but still experience aviation noise. Unless 65dB CNEL contour maps are published, helipads and military sites are not included in this section of the Report.

The *Airport Noise Compatibility Planning Program* is voluntary and not all airports have elected to participate. Furthermore, not all property in the vicinity of an airport is exposed to 65dB CNEL or greater average aviation noise levels. Conversely a property may be at some distance from an airport and still experience aviation noise. Buyer should be aware that aviation noise levels can vary seasonally or change if airport usage changes after a map is published or after the Report Date. JCP-LGS uses the most seasonally conservative noise exposures provided.

Federal funding may be available to help airports implement noise reduction programs. Such programs vary and may include purchasing properties, rezoning, and insulating homes for sound within 65dB areas delineated on CNEL maps. Airport owners have also cooperated by imposing airport use restrictions that include curfews, modifying flight paths, and aircraft limitations.

PUBLIC RECORD: Certain 65 decibel (dB) Community Noise Equivalent Level (CNEL) contour maps produced under the Federal Aviation Administration's *Airport Noise Compatibility Planning Program Part 150*.

REPORTING STANDARD: "**IN**" shall be reported if any portion of the Property is situated within a 65 decibel Community Noise Equivalent Level contour identified in the Public Record. "**NOT IN**" shall be reported if no portion of the Property is situated within a 65 decibel Community Noise Equivalent Level contour identified in the Public Record.

The Natural Hazard Disclosure Report For RIVERSIDE County

Property Address: VACANT LAND
MORENO VALLEY, RIVERSIDE COUNTY, CA 92555
("Property")

Part 4. General Advisories

METHAMPHETAMINE CONTAMINATED PROPERTY DISCLOSURE ADVISORY

DISCUSSION: According to the "Methamphetamine Contaminated Property Cleanup Act of 2005" a property owner must disclose in writing to a prospective buyer if local health officials have issued an order prohibiting the use or occupancy of a property contaminated by meth lab activity. The owner must also give a copy of the pending order to the buyer to acknowledge receipt in writing. Failure to comply with these requirements may subject an owner to, among other things, a civil penalty up to $5,000. Aside from disclosure requirements, this new law also sets forth procedures for local authorities to deal with meth-contaminated properties, including the filing of a lien against a property until the owner cleans up the contamination or pays for the cleanup costs.

The Natural Hazard Disclosure Report For RIVERSIDE County

Property Address: VACANT LAND
MORENO VALLEY, RIVERSIDE COUNTY, CA 92555
("Property")

APN: 312-020-025
Report Date: 10/01/2019

MOLD ADVISORY

DISCUSSION: The Buyer is hereby advised that naturally occurring molds may exist both inside and outside of any home and may not be visible to casual inspection. Persons exposed to extensive mold levels can become sensitized and develop allergies to the mold or other health problems. Extensive mold growth can damage a structure and its contents. All prospective purchasers of residential and commercial property are advised to thoroughly inspect the Property for mold. Be sure to inspect the Property inside and out for sources of excess moisture, current water leaks and evidence of past water damage.

As part of a buyer's physical inspection of the condition of a property, the buyer should consider engaging an appropriate and qualified professional to inspect and test for the presence of harmful molds and to advise the buyer of any potential risk and options available. This advisory is not a disclosure of whether harmful mold conditions exist at a property or not. No testing or inspections of any kind have been performed by The Company. Any use of this form is acknowledgement and acceptance that The Company does not disclose, warrant or indemnify mold conditions at a property in any way and is not responsible in any way for mold conditions that may exist. Information is available from the California Department of Health Services Indoor Air Quality Section fact sheet entitled, "Mold in My Home: What Do I Do?" The fact sheet is available at https://archive.cdph.ca.gov/programs/IAQ/Pages/IndoorMold.aspx or by calling (510) 620-3620.

The Toxic Mold Protection Act of 2001 requires that information be developed regarding the potential issues surrounding naturally occurring molds within a home. Information was written by environmental authorities for inclusion in the *Residential Environmental Hazards: A Guide for Homeowners, Buyers, Landlords and Tenants* booklet developed by the California Environmental Protection Agency and the Department of Health Services. It is found in Chapter VII of that booklet, and includes references to sources for additional information.

For local assistance, contact your county or city Department of Health, Housing, or Environmental Health.

The Natural Hazard Disclosure Report For RIVERSIDE County

Property Address: VACANT LAND
MORENO VALLEY, RIVERSIDE COUNTY, CA 92555
("Property")

APN: 312-020-025
Report Date: 10/01/2019
Report Number: 2555340

RADON ADVISORY

DISCUSSION: For its Radon Advisory, JCP-LGS uses the updated assessment of radon exposure published in 1999 by the Lawrence Berkeley National Laboratory (LBNL) and Columbia University, under support from the U.S. Environmental Protection Agency (EPA), the National Science Foundation, and the US Department of Energy (published online at http://www2.lbl.gov/Science-Articles/Archive/radon-risk-website.html). Based on this recent assessment, JCP-LGS radon advisory is as follows:

All of California's 58 counties have a predicted median annual-average living-area concentration of radon below 2.0 pCi/L (picocuries per liter of indoor air) -- which is well below the EPA's guideline level of 4 pCi/L and equivalent to the lowest hazard zone (Zone 3) on the 1993 EPA Map of Radon Zones.

The "median concentration" means that half of the homes in a county are expected to be below this value and half to be above it. All houses contain some radon, and a few houses will contain much more than the median concentration. **The only way to accurately assess long-term exposure to radon in a specific house is through long-term testing (sampling the indoor air for a year or more). The EPA recommends that all homes be tested for radon.** Columbia University's "Radon Project" website offers help to homeowners in assessing the cost vs. benefit of testing a specific house for radon or modifying it for radon reduction (see http://www.stat.columbia.edu/~radon/).

NOTE: JCP-LGS does not use the EPA's 1993 map for advisory purposes because that map shows "short-term" radon exposure averaged by county. It was based on "screening measurements" that were intentionally designed to sample the worst-case conditions for indoor air in US homes--using spot checks (sampling for just a few days), in the poorest air quality (with sealed doors and windows), at the worst time of the year (winter), in the worst part of the house (the basement, if one was available). These short-term, winter, basement measurements are both biased and variable compared to long-term radon concentrations (averaged over a year) in the living area of a house. Long-term concentrations are a more accurate way to judge the long-term health risk from radon. For the above reasons, the EPA expressly disclaims the use of its 1993 map for determining whether any house should be tested for radon, and authorizes no other use of its map for property-specific purposes. For additional information about EPA guidelines and radon testing, see "Chapter VII--Radon", in the California Department of Real Estate's *Residential Environmental Hazards: A Guide for Homeowners, Homebuyers, Landlords and Tenants*.

ENDANGERED SPECIES ACT ADVISORY

DISCUSSION: The Federal Endangered Species Act of 1973 ("ESA"), as amended, requires that plant and animal species identified and classified ("listed") by the Federal government as "threatened" or "endangered" be protected under U.S. law. Areas of habitat considered essential to the conservation of a listed species may be designated as "critical habitat" and may require special management considerations or protection. All threatened and endangered species -- even if critical habitat is not designated for them -- are equally afforded the full range of protections available under the ESA.

In California alone, over 300 species of plants and animals have been designated under the ESA as threatened or endangered, and over 80 species have critical habitats designated for them. Most California counties are host to a dozen or more protected species and, in many cases, 10 or more species have designated critical habitats within a county.

ADVISORY: An awareness of threatened and endangered species and/or critical habitats is not reasonably expected to be within the actual knowledge of a seller.

No federal or state law or regulation requires a seller or seller's agent to disclose threatened or endangered species or critical habitats, or to otherwise investigate their possible existence on real property. Therefore, Buyer is advised that, prior to purchasing a vacant land parcel or other real property, Buyer should consider investigating the existence of threatened or endangered species, or designated critical habitats, on or in the vicinity of the Property which could affect the use of the Property or the success of any proposed (re)development.

FOR MORE INFORMATION: Complete and current information about the threatened and endangered species in California that are Federally listed in each county -- including all critical habitats designated there -- is available on the website of the U.S. Fish & Wildlife Service, the Federal authority which has enforcement responsibility for the ESA.

The Natural Hazard Disclosure Report For RIVERSIDE County

Property Address: VACANT LAND
MORENO VALLEY, RIVERSIDE COUNTY, CA 92555
("Property")

APN: 312-020-025
Report Date: 10/01/2019
Report Number: 2555340

ABANDONED MINES ADVISORY

DISCUSSION: According to the California Department of Conservation, Office of Mine Reclamation, since the Gold Rush of 1849, tens of thousands of mines have been dug in California. Many were abandoned when they became unproductive or unprofitable. The result is that California's landscape contains many thousands of abandoned mines, which can pose health, safety, or environmental hazards on and around the mine property. Mines can present serious physical safety hazards, such as open shafts or adits (mine tunnel), and they may create the potential to contaminate surface water, groundwater, or air quality. Some abandoned mines are such massive problems as to earn a spot on the Federal Superfund environmental hazard list.

No California law requires the disclosure of abandoned mines in a real estate transaction, unless the existence of an abandoned mine is within the actual knowledge of the Seller and is deemed to be a fact material to the transaction.

The Office of Mine Reclamation (OMR) and the U.S. Geological Survey maintain a database of abandoned mines -- however, it is known to be incomplete and based on maps that are often decades out of date. Many mines are not mapped because they are on private land. The OMR warns that, ***"Many old and abandoned mines are not recorded in electronic databases, and when they are, the information may not be detailed enough to accurately define, differentiate or locate the mine feature, such as a potentially hazardous vertical shaft or horizontal adit or mine waste." (See reference below.)***

Accordingly, this Report does not contain an abandoned mines disclosure from any government database or map or any other source, in order to protect the seller from liability for non-disclosure of unrecorded abandoned mines.

Parties concerned about the possible existence or impact of abandoned mines in the vicinity of the Property are advised to retain a State-licensed geotechnical consultant to study the site and issue a report. Other sources of information include, but are not limited to, the State Office of Mine Reclamation at (916) 323-9198 (website: http://www.conservation.ca.gov/OMR), and the Engineering, Planning or Building Departments in the subject City and County.

FOR MORE INFORMATION: For more information visit the State Office of Mine Reclamation's website at:
http://www.conservation.ca.gov/omr/abandoned_mine_lands/Pages/index.aspx

OIL & GAS WELL ADVISORY

California is currently ranked fourth in the nation among oil producing states. Surface oil production is concentrated mainly in the Los Angeles Basin and Kern County, and in districts elsewhere in the state. In recent decades, real estate development has rapidly encroached into areas where oil production has occurred. Because the state's oil production has been in decline since the 1980's, thousands of oil and gas wells have been shut down or abandoned, and many of those wells are in areas where residential neighborhoods now exist.

According to the California Department of Conservation ("DOC"), to date, about 230,000 oil and gas wells have been drilled in California and around 105,000 are still in use. The majority of remaining wells have been sealed ("capped") under the supervision of the DOC's Division of Oil, Gas and Geothermal Resources. A smaller number have been abandoned and have no known responsible operator -- these are called "orphan" wells. The state has a special fund that pays the cost of safely capping orphan wells, however, that program is limited in its scope and progress.

Buyer should be aware that, while the DOC database is the most comprehensive source available for California oil and gas well information, the DOC makes no warranties that the database is absolutely complete, or that reported well locations are known with absolute accuracy.

For More Information
For a search of the state's databases of oil and gas wells and sites of known environmental contamination on or near the Property, please obtain the JCP-LGS Residential Environmental Report. For general information, visit the California Department of Conservation, Division of Oil, Gas, and Geothermal Resources at http://www.consrv.ca.gov/dog.

END OF NATURAL HAZARD DISCLOSURE REPORT SECTION
See Terms and Conditions at end of this Report.

Property Address: VACANT LAND
MORENO VALLEY, RIVERSIDE COUNTY, CA 92555
("Property")

APN: 312-020-025
Report Date: 10/01/2019
Report Number: 2555340

TERMS and CONDITIONS

ACCEPTANCE OR USE OF THIS REPORT CONSTITUTES APPROVAL AND ACCEPTANCE OF THE TERMS, CONDITIONS, AND LIMITATIONS STATED HEREIN.

The Report ("Report") is subject to each of the following Terms and Conditions. Each Recipient (defined below) of the Report agrees that the Report is subject to the following Terms and Conditions, and each Recipient agrees to be bound by such. Use of this Report by any Recipient constitutes acceptance of the Terms and Conditions to the Report. The Terms and Conditions below are incorporated by this reference into the Report. **This Report is not an insurance policy.**

This Report is made for the real property specifically described in the Report (the "Property") and solely for the transaction for which it was originally purchased ("Transaction"). The Property shall not include any property beyond the boundaries of the real property described in the Report. The Property shall not include any structures (whether located on the Property, or not), easements, or any right, title, interest, estate, or easement in any abutting streets, roads, alleys, lanes, ways, or waterways.

IMPORTANT NOTICE: Transferor(s) and transferee(s) shall read the complete Report in its entirety before the close of escrow. A "Signature Page" or "Summary Pages" document may be included in the electronic delivery of this Report. Those documents do not replace the complete Report or remove the need to read the complete Report, and do not remove the requirement to disclose. The Signature Page and Summary Pages documents are subject to the Terms and Conditions of the complete Report.

A. **No Third Party Reliance on This Report.** Only the transferor(s) and transferee(s), and their agents/brokers, if any, involved in the Transaction (collectively, the "Recipients") may use and rely on this Report and only after they have paid in full for the Report. While disclosures made on the Natural Hazard Disclosure Statement in the Report may indicate certain risks to the Property, the disclosures are only "…between the transferor, the transferor's agents, and the transferee, and shall not be used by any other party, including, but not limited to, insurance companies, lenders, or governmental agencies, for any purpose." Cal. Civil Code section 1103.2, subdivision (g).

B. **Seller and Seller's Agent's Responsibility of Full Disclosure.** Recipients are obligated to make disclosures, and always disclose material facts, that are within their actual knowledge.

C. **Scope of Report.** This Report is limited to determining whether the Property is in those specified natural hazard zones and property tax districts, and in proximity to those specified environmental sites (depending on the report product ordered), as defined in the Report. The Report is not a geologic report or a land survey and no site inspection has been made in producing the Report. JCP-LGS makes no determination, expresses no opinion or view, and assumes no responsibility in this Report concerning the right, entitlement, or ability to develop or improve the Property. JCP-LGS has no information concerning whether the Property can be developed or improved. No determination is made and no opinion is expressed, or intended, by this Report concerning structures or soils on or outside of the Property, including, without limitation, habitability of structures or the Property, suitability of the Property for construction or improvement, potential for soil settlement, drainage, soil subsidence, or other soil or site conditions. The Recipient(s) is advised to consult the local Planning Department to determine whether factors beyond the scope of this Report may limit the transferee(s) ability to use or improve the Property.

   The Report is not a title report, and no determination is made and no opinion is expressed, or intended, by this Report as to title to the Property or liens against the Property, recorded or otherwise, or whether the Property is comprised of legal lots in conformance with the California Subdivision Map Act or local ordinances. The Report is not a property inspection report, and no determination is made and no opinion is expressed, or intended, by this Report concerning architectural, structural, mechanical, engineering, or legal matters, or the marketability or value of the Property. JCP-LGS has not conducted any testing or physical or visual examination or inspection of the Property, nor is this Report a substitute for any such testing, physical or visual examination, or inspection.

D. **Tax and Environmental Disclosures (if included in Report).** No determination is made and no opinion is expressed, or intended, by the Report concerning the existence of property tax liabilities, or the existence of hazardous or toxic materials or substances, or any other defects, on, under, or in proximity to the Property, unless specifically described in the Report. JCP-LGS's total liability for any error or omission in its disclosures relating to taxes and/or environmental matters shall be limited to actual proven damages not to exceed the price paid for this Report.

E. **JCP-LGS Database Updates.** Each database used in this Report is updated by the responsible agency at various intervals. Updates for a database are determined by the responsible agency and may be made at any time and without notice. JCP-LGS maintains an update schedule and makes reasonable efforts to use updated information. For these reasons, JCP-LGS reports information as of the date when the database was last updated by JCP-LGS. That date is specified as the "Database Date" for each database.

F. **Statutory and Additional Disclosures, Advisories, and Local Addenda (if included in Report).** No determination is made and no opinion is expressed, or intended, by this Report concerning the need to purchase earthquake or flood insurance for the Property. In preparing the Report, JCP-LGS accurately reported on information contained in Government Records. JCP-LGS reviewed and relied upon those Government Records specifically identified and described in the Report. JCP-LGS has not reviewed or relied upon any Government Records that are not specifically identified in the Report. JCP-LGS also has not reviewed any plat maps, survey maps, surveyor maps, assessor maps, assessor parcel maps, developer maps, or engineering maps, whether or not such maps have been recorded. No determination is made and no opinion is expressed, or intended, by the Report concerning any matters identified in Government Records that were not reviewed by JCP-LGS. Local Addenda, where applicable, are included "AS IS" as an accommodation to the local real estate board that provided the content; JCP-LGS assumes no responsibility for the accuracy of any information included in the Local Addenda.

G. **FEMA Flood Determination Certificate (if accompanying the Report).** No determination is made and no opinion is expressed, or intended, by the Report concerning the requirement for or cost of flood insurance on the Property. Recipient(s) understands that a lender may require flood insurance to secure its loan collateral independent of whether FEMA may require flood insurance under the National Flood Insurance Program on a federally backed mortgage. The FEMA Flood Determination Certificate ("Flood Certificate"), which may accompany the Report, is produced by a third-party expert certified by FEMA to provide Flood Certificates. JCP-LGS assumes no liability for errors in that third-party flood determination.

H. **Changes to Government Record after Report Date.** This Report is issued as of the Report Date identified in the Report. JCP-LGS shall have no obligation to advise any Recipient of any information learned or obtained after the Report Date even if such information would modify or otherwise affect the Report. Subsequent to JCP-LGS acquisition of Government Records, changes may be made to said Government Records and JCP-LGS is not responsible for advising the Recipients of any changes. JCP-LGS will update this Report upon request and at no charge during the transaction process for which this Report was issued, but not to exceed one year from the date of the Report. Likewise, JCP-LGS is not liable for any impact on the Property that any change to the Government Records may have.

Terms and Conditions

Property Address: VACANT LAND
MORENO VALLEY, RIVERSIDE COUNTY, CA 92555
("Property")

APN: 312-020-025
Report Date: 10/01/2019
Report Number: 2555340

I. **Government Record Sources.**JCP-LGS relies upon the Government Records specifically identified in the Report without conducting an independent investigation of their accuracy. JCP-LGS assumes no responsibility for the accuracy of the Government Records identified in the Report. JCP-LGS makes no warranty or representation of any kind, express or implied, with respect to the Report. JCP-LGS expressly disclaims and excludes any and all other express and implied warranties, including, without limitation, warranties of merchantability or fitness for a particular purpose. The JCP-LGS Report is "AS IS".

J. **Limitation of JCP-LGS's Liability**

1. JCP-LGS is not responsible for:
   - Any inaccuracies or incompleteness of the information in the Public Records.
   - Inaccurate address information provided for the Property.
   - Any other information not contained in the Public Records as of the Report Date.
   - Any information which would be disclosed by a physical inspection of the Property.
   - Any information known by one of the Parties.
   - The health or risk to humans or animals that may be associated with any of the disclosed hazards.
   - The costs of investigating or remediating any of the disclosed hazards.

2. JCP-LGS's total liability and responsibility to all Recipients collectively for any and all liabilities, causes of action, claim or claims, including but not limited to claims for breach of contract or negligence, shall be limited to the price paid for the Report. JCP-LGS expressly disclaims any liability for Recipients indirect, incidental and/or consequential damages, including without limitation lost profits even if such damages are foreseeable. In the event of any error, omission or inaccuracy in the JCP-LGS Report for which JCP-LGS is liable, JCP-LGS shall have no duty to defend or pay any attorneys' fees, costs or expenses incurred by the Recipients, or any of them. The Recipients, and each of them, expressly waive the benefits of California Civil Code Section 2778. JCP-LGS has not conducted an independent investigation of the accuracy of the information provided by the Recipient. JCP-LGS assumes no responsibility for the accuracy of information provided by the Recipient. JCP-LGS shall be subrogated to all rights of any claiming party against anyone including, but not limited to, another party who had actual knowledge of a matter and failed to disclose it to the Recipients in writing prior to the close of escrow.

K. **Reporting of Risk Elements for Condominium Projects, Planned Unit Developments, and Other Properties with Common or Undivided Interests ("Common Interests")** Unless otherwise noted, this report is based solely on the real Property referenced by the Property's Assessor's Parcel Number ("APN"). An APN whose boundary does not include all Common Interests associated with the parcel will generate a report which does not identify the natural hazards relating to the Common Interests that extend beyond the APN parcel boundary. Accordingly, it is imperative that you consult with the property's homeowners association(s) to determine those risks.

L. **Governing Law.** The Report shall be governed by, and construed in accordance with, the laws of the State of California.

M. **Small Claims or Arbitration.** This provision constitutes an agreement to arbitrate disputes on an individual basis. Any party may bring an individual action in small claims court instead of pursuing arbitration. All disputes and claims arising out of or relating to the Report must be resolved by binding arbitration. This Report to arbitrate includes, but is not limited to, all disputes and claims between JCP-LGS, transferor(s) and transferee(s) and claims that arose prior to purchase of the Report. This agreement to arbitrate applies to transferor(s) and transferee(s) successors in interest, assigns, heirs, spouses, and children. As noted above, a party may elect to bring an individual action in small claims court instead of arbitration, so long as the dispute falls within the jurisdictional requirements of small claims court.

Any arbitration must take place on an individual basis, JCP-LGS, transferor(s) and transferee(s) agree that they are waiving any right to a jury trial and to bring or participate in a class, representative, or private attorney general action, and further agree that the arbitrator lacks the power to consider claims for injunctive or declaratory relief, or to grant relief effecting anyone other than the individual claimant.

The arbitration is governed by the Commercial Arbitration Rules and the Supplementary Procedures for Consumer Related Disputes (the "AAA Rules") of the American Arbitration Association ("AAA"), as modified by this Agreement, and will be administered by the AAA. Company will pay all AAA filing, administration and arbitrator fees for any arbitration it initiates and for any arbitration initiated by another party for which the value of the claims is $75,000 or less, unless an arbitrator determines that the claims have been brought in bad faith or for an improper purpose, in which case the payment of AAA fees will be governed by the AAA Rules. **A COPY OF THESE RULES IS AVAILABLE FROM THE AAA'S WEB SITE AT WWW.ADR.ORG OR ON REQUEST FROM THE COMPANY. THE ARBITRATION AWARD MAY INCLUDE ATTORNEY'S FEES IF ALLOWED BY FEDERAL, STATE, OR OTHER APPLICABLE LAW AND MAY BE ENTERED AS A JUDGMENT IN ANY COURT OF PROPER JURISDICTION.**

The arbitration will take place in the same county in which the property covered by the Report is located. The Federal Arbitration Act will govern the interpretation, applicability and enforcement of this arbitration agreement. This arbitration agreement will survive the termination of this Report.

N. **Severability.** If any provision of the Terms and Conditions to this Report is determined to be invalid or unenforceable for any reason, then such provision shall be treated as severed from the remainder of the Terms and Conditions, and shall not affect the validity and enforceability of all of the other provisions of the Terms and Conditions.

O. **Other Agreements.** This Report constitutes the entire, integrated agreement between JCP-LGS and Recipients, and supersedes and replaces all prior statements, representations, negotiations, and agreements.

END OF REPORT

ACORD™ CERTIFICATE OF LIABILITY INSURANCE

DATE (MM/DD/YYYY) 1/31/2019

THIS CERTIFICATE IS ISSUED AS A MATTER OF INFORMATION ONLY AND CONFERS NO RIGHTS UPON THE CERTIFICATE HOLDER. PROFESSIONAL SUMMARY

- Robert Presta brings over 25 years experience in architecture and real estate to AES Due Diligence.
- Former Regional Manager for a national architectural and engineering consulting firm.
- Due diligence physical surveys of existing properties to determine quality and condition of the structure, equipment, finishes and fixtures, identify items requiring repair or replacement, ADA compliance status; and estimate associated costs.
- Phase One Environmental Site Assessments following ASTM 1527-05 or client standards, including federal and state database searches, on-site observations and screening tests for hazardous materials.
- Review and analysis of construction documents, schedules and budgets for proposed projects.
- On-site monitoring of new construction, renovation and repair work for conformance to documents, quality of workmanship, acceptability of requisition requests and adequacy of remaining funds.
- Held rank of Captain in the U.S. Marine Corps, flew on board F-4B jet fighter aircraft as Radar Intercept Officer.

Registrations
Professional Engineer – Illinois, Wisconsin, Michigan, Indiana, Ohio, Kentucky, Virginia

Professional Geologist – Illinois, Wisconsin

Certified Professional Geologist – National

Professional Activities
American Institute of Professional Geologists

Professional Summary

- In over twenty-five years of work experience, Mr. Dahlstrand has performed environmental assessments throughout the United States and internationally, supervised other professionals, managed local officers and national environmental consulting operations, conducted training classes for professionals and clients, and authored technical papers.
- Environmental Services Manager for a national consulting firm performing approximately 1,500 Phase I Environmental Site Assessments annually in the United States.
- Project Manager for the engineering design of a portion of a municipal solid waste landfill which included leachate collection system and ground water gradient control system design. Developed a comprehensive data management system to allow rapid access to all QA/QC data and facilitate development of report-quality tables.
- Project Manager for the investigation of PCB contaminated sites at utility-owned substations to determine the extent and severity of contamination. Developed specialized subsurface investigation protocols to assure sample integrity, developed remediation alternatives and costs.
- Project Manager for a RCRA Treatment, Storage and Disposal site in northeastern Illinois.
- Subsurface explorations at three (3) abandon manufactured gas plant sites, which contained hazardous waste.

Professional Summary

- Founded HydroSolutions of California, Inc. in 1985 as a high tech environmental consulting company that focused on pollution liabilities impacting real estate.
- Developed HydroSolutions of California Baseline programs, copyrighted the Enhanced Pollution Awareness Survey utilized by corporate personnel.
- Contributed to developing the environmental policy for the Federal Home Loan Bank Board that included the tiered environmental phase I and II approach to establishing a base level of due diligence in the lending industry.
- Founding Advisory Board Member of the Cooperative Solution Program, Board of Director for the Institute of Environmental Solutions. Represented environmental consulting for the Program's pilot project assigned by California Governor Wilson during the early 1990s. Worked with four national laboratories, California Department of Toxic Substances, Regional Water Quality Control Board, the land development company and the lender. The property was located in Antioch, California.
- Mr. Baker managed approximately 400 projects of the firm. Potential responsible party investigations, groundwater monitoring programs, site characterization of petroleum, solvents and metals, vapor extraction and bioremediation of soils, well head protection programs, aquifer analysis were some projects performed by Mr. Baker.
- Mr. Baker also supported the company by presenting over three hundred presentations, workshops, classes and seminars for the banking, real estate, academia and land development industries.

Professional Summary

- Richard Darwicki brings over 40 years experience in Engineering and Construction Consulting Services to AES Due Diligence, Inc. These service experience include military, mid- and high-rise structures, retail, industrial, single and multi-family residential, resort and hospitality, assisted living and congregate care, office and medical facilities.
- He has designed wastewater treatment systems, reverse water filtration systems, water chlorinating facilities, vapor recovery fuel islands, double containment fuel tank systems, and site utilities for commercial, industrial, retail, and residential projects.
- He has also participated in Department of Energy studies to establish new energy standards for building construction and to design and develop solar energy collection systems for NASA and Rockwell International.
- As Chief Engineer for several firms, his responsibilities included cost estimations, specification writing, contract administration, field construction monitoring and environmental assessments for public and private projects.
- Due Diligence physical surveys since 1988of existing properties to determine quality and condition of the structure, equipment, finishes and fixtures Identifiying items requiring repair or replacement, ADA Compliance status, and estimating associated costs.
- On-site monitoring of new construction, renovation and repair work.
- Phase I Environmental Site Assessments (ASTM 1527-05) including on-site observations.
- Previously a Registered Environmental Assessor, expired in 1996, with new registration pending.

Preliminary Drainage Report

Saturday, April 04, 2020

INTRODUCTION

The following report and calculations were prepared to analyze the 2, 10 & 100-year storm runoff from the development of the TTM 37909 at the east of Perris Boulevard on the south side of Iris Boulevard in the City of Moreno Valley, Ca. An infiltration basin is proposed for both mitigation of increased runoff from the site and for onsite BMPs for treatment of site runoff.

SITE BACKGROUND

The proposed project is located on the south side Iris Boulevard east of Perris Boulevard. The property is vacant and undeveloped and slopes from northwest to southeast.

There is no offsite areas draining onto the property.

The soil type for the area is Type B per Plate C-1.17 "Hydrologic Soils Group Map for Sunnymead" from the Riverside County Hydrology Manual.

METHODOLOGY

Subareas were determined based on the proposed grading of the site. A link-node model was created for each subarea, with flow path length and elevations shown for the upstream and downstream nodes for the subarea. Peak flowrates were determined for each subarea using the CivilDesign Corporation "RIV" rational method hydrology software. The results of those calculations are shown on the site hydrology map included with this report. Separate maps for the existing and developed condition are included with this report.

ANALYSES/DISCUSSION

Rational method hydrology calculations have been prepared for 2, 10 & 100-year existing and proposed condition for the project site. In the existing condition site drainage sheet flows across the property to southeast towards where it flows offsite across the existing MWD and EMWD easements.

In the proposed condition the site will be a several sub-areas where storm flows will flow to the internal street section and be conveyed to the southeast corner of the property where they will be directed into an infiltration basin system. The infiltration basin will be located in the proposed landscape area onsite adjacent to the WMD and EMWD easement areas along the westerly portion of the property and will discharge to the existing point of discharge.

The drainage areas and peak 2, 10 & 100-year discharges are summarized below:

Rational Method Calculations

Existing Condition

Description	Area (Ac.)	2-year discharge (cfs)	10-year discharge (cfs)	100-year discharge (cfs)	Tc mim.
Area 1	7.25	1.98	5.19	10.0	28.27
Area 2	2.32	0.57	1.56	3.09	34.25
Area 3	0.61	0.15	0.42	0.82	34.82
Area 4	0.64	0.14	0.39	0.77	36.40

Proposed Condition

Description	Area (Ac.)	2-year discharge (cfs)	10-year discharge (cfs)	100-year discharge (cfs)	Tc mim.
Area 1	3.04	2.56	4.11	6.40	14.58
Area 2	4.08	3.54	5.69	8.85	13.77
Area 3 – confluenced	7.70	6.36	10.25	15.97	14.07
Area 4	2.32	0.57	1.56	3.09	34.25
Area 5	0.61	0.15	0.42	0.82	34.82

PROPOSED PROJECT BMP's

Based on soil infiltration test results we have selected an infiltration basin onsite as the method for treatment of onsite flows. The details of the proposed infiltration basin system are described in detail in the Preliminary Water Quality Management Plan prepared for this project.

CONCLUSION

Based on the calculations and proposed improvements, onsite flows can be conveyed to suitable points of disposal, and the proposed site development will not impact offsite properties.

**** CONFLUENCE OF MINOR STREAMS ****
_____
Along Main Stream number: 1 in normal stream number 2
Stream flow area = 4.080(Ac.)
Runoff from this stream = 8.849(CFS)
Time of concentration = 13.77 min.
Rainfall intensity = 2.505(In/Hr)
Summary of stream data:

Stream No.	Flow rate (CFS)	TC (min)	Rainfall Intensity (In/Hr)
1	6.401	14.99	2.401
2	8.849	13.77	2.505

Largest stream flow has longer or shorter time of concentration
Qp = 8.849 + sum of
Qa Tb/Ta
6.401 * 0.918 = 5.879

```
Qp =     14.728

Total of 2 streams to confluence:
Flow rates before confluence point:
       6.401       8.849
Area of streams before confluence:
        3.040        4.080
Results of confluence:
Total flow rate =     14.728(CFS)
Time of concentration =    13.768 min.
Effective stream area after confluence =      7.120(Ac.)

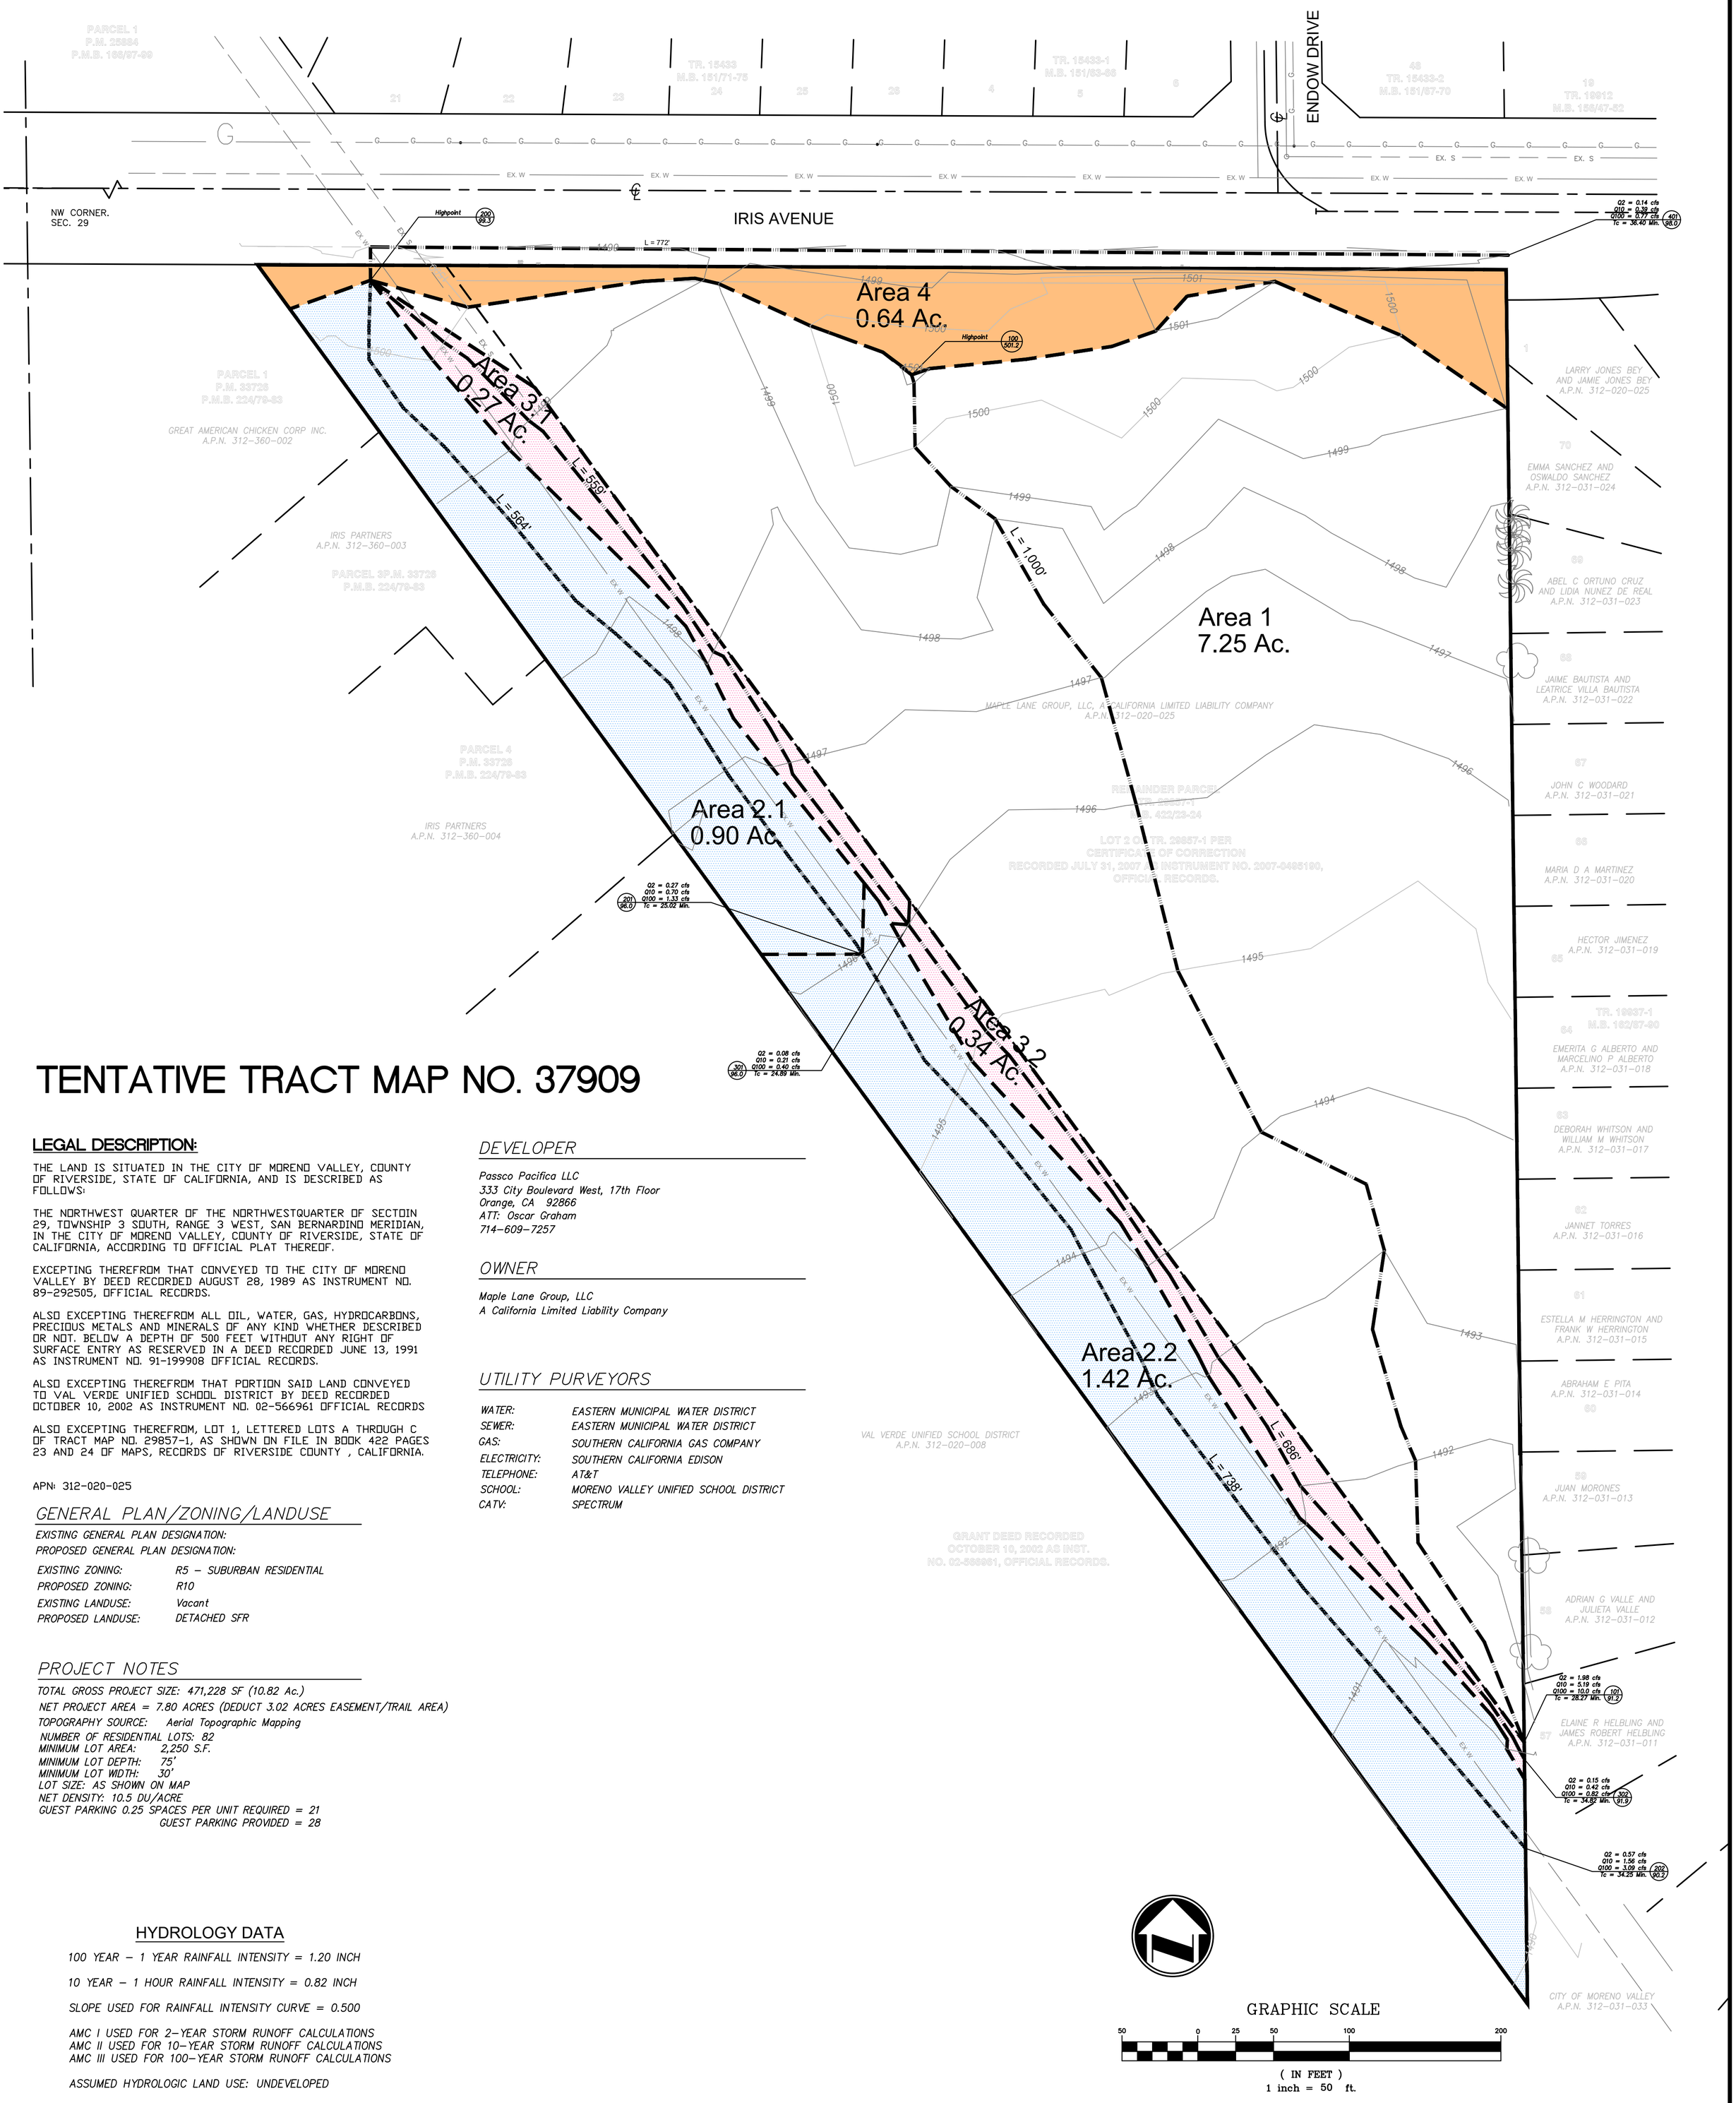
PLATE C-1.11

Tentative Tract Map No. 37909



TENTATIVE TRACT MAP NO. 37909

LEGAL DESCRIPTION:

THE LAND IS SITUATED IN THE CITY OF MORENO VALLEY, COUNTY OF RIVERSIDE, STATE OF CALIFORNIA, AND IS DESCRIBED AS FOLLOWS:

THE NORTHWEST QUARTER OF THE NORTHWESTQUARTER OF SECTOIN 29, TOWNSHIP 3 SOUTH, RANGE 3 WEST, SAN BERNARDINO MERIDIAN, IN THE CITY OF MORENO VALLEY, COUNTY OF RIVERSIDE, STATE OF CALIFORNIA, ACCORDING TO OFFICIAL PLAT THEREOF.

EXCEPTING THEREFROM THAT CONVEYED TO THE CITY OF MORENO VALLEY BY DEED RECORDED AUGUST 28, 1989 AS INSTRUMENT NO. 89-292505, OFFICIAL RECORDS.

ALSO EXCEPTING THEREFROM ALL OIL, WATER, GAS, HYDROCARBONS, PRECIOUS METALS AND MINERALS OF ANY KIND WHETHER DESCRIBED OR NOT. BELOW A DEPTH OF 500 FEET WITHOUT ANY RIGHT OF SURFACE ENTRY AS RESERVED IN A DEED RECORDED JUNE 13, 1991 AS INSTRUMENT NO. 91-199908 OFFICIAL RECORDS.

ALSO EXCEPTING THEREFROM THAT PORTION SAID LAND CONVEYED TO VAL VERDE UNIFIED SCHOOL DISTRICT BY DEED RECORDED OCTOBER 10, 2002 AS INSTRUMENT NO. 02-566961 OFFICIAL RECORDS

ALSO EXCEPTING THEREFROM, LOT 1, LETTERED LOTS A THROUGH C OF TRACT MAP NO. 29857-1, AS SHOWN ON FILE IN BOOK 422 PAGES 23 AND 24 OF MAPS, RECORDS OF RIVERSIDE COUNTY , CALIFORNIA.

OWNER'S CERTIFICATION

This Project-Specific Water Quality Management Plan (WQMP) has been prepared for Passco Pacifica, LLC by Adkan Engineers for Iris Park Tract 37909 project.

This WQMP is intended to comply with the requirements of City of Moreno Valley which includes the requirement for the preparation and implementation of a Project-Specific WQMP.

The undersigned, while owning the property/project described in the preceding paragraph, shall be responsible for the implementation and funding of this WQMP and will ensure that this WQMP is amended as appropriate to reflect up-to-date conditions on the site. In addition, the property owner accepts responsibility for interim operation and maintenance of Stormwater BMPs until such time as this responsibility is formally transferred to a subsequent owner. This WQMP will be reviewed with the facility operator, facility supervisors, employees, tenants, maintenance and service contractors, or any other party (or parties) having responsibility for implementing portions of this WQMP. At least one copy of this WQMP will be maintained at the project site or project office in perpetuity. The undersigned is authorized to certify and to approve implementation of this WQMP. The undersigned is aware that implementation of this WQMP is enforceable under City of Moreno Valley Water Quality Ordinance (Municipal Code Section 9.10.080).

"I, the undersigned, certify under penalty of law that the provisions of this WQMP have been reviewed and accepted and that the WQMP will be transferred to future successors in interest."

List of Appendices

Section A: Project and Site Information

PROJECT INFORMATION		
Type of Project:	Residential	
Planning Area:	Residential	
Community Name:	Moreno Valley	
Development Name:	Iris Park Tract 37909	
PROJECT LOCATION		
Latitude & Longitude (DMS): 33.887903, -117.222970		
Project Watershed and Sub-Watershed: Santa Ana River		
Gross Acres: 10.82		
APN(s): 312-020-025		
Map Book and Page No.: Parcel Map Book 224 Page 79-83		
PROJECT CHARACTERISTICS		
Proposed or Potential Land Use(s)	R5 Suburban Residential	
Proposed or Potential SIC Code(s)	1522	
Area of Impervious Project Footprint (SF)	332,910 SF	
Total Area of proposed Impervious Surfaces within the Project Footprint (SF)/or Replacement	332,910 SF	
Does the project consist of offsite road improvements?	☐ Y	☒ N
Does the project propose to construct unpaved roads?	☐ Y	☒ N
Is the project part of a larger common plan of development (phased project)?	☐ Y	☒ N
EXISTING SITE CHARACTERISTICS		
Total area of existing Impervious Surfaces within the Project limits Footprint (SF)	0 sf	
Is the project located within any MSHCP Criteria Cell?	☐ Y	☒ N
If so, identify the Cell number:	N/A	
Are there any natural hydrologic features on the project site?	☐ Y	☒ N
Is a Geotechnical Report attached?	☒ Y	☐ N
If no Geotech. Report, list the NRCS soils type(s) present on the site (A, B, C and/or D)	B	
What is the Water Quality Design Storm Depth for the project?	0.65	

The planned development will consist of 82 single-family residences, street improvements, onsite parking, community park and a stormwater treatment area (Bio-retention Basin) in the southeast corner of the site. All onsite runoff will flow to the south as per the existing drainage path.

A.1 Maps and Site Plans

When completing your Project-Specific WQMP, include a map of the local vicinity and existing site. In addition, include all grading, drainage, landscape/plant palette and other pertinent construction plans in Appendix 2. At a **minimum**, your WQMP Site Plan should include the following:

- Drainage Management Areas
- Proposed Structural BMPs
- Drainage Path
- Drainage Infrastructure, Inlets, Overflows
- Source Control BMPs
- Buildings, Roof Lines, Downspouts
- Impervious Surfaces
- Standard Labeling
- BMP Locations (Lat/Long)

Use your discretion on whether or not you may need to create multiple sheets or can appropriately accommodate these features on one or two sheets. Keep in mind that the Co-Permittee plan reviewer must be able to easily analyze your project utilizing this template and its associated site plans and maps.

A.1 Identify Receiving Waters

Using Table A.1 below, list in order of upstream to downstream, the receiving waters that the project site is tributary to. Continue to fill each row with the Receiving Water's 303(d) listed impairments (if any), designated beneficial uses, and proximity, if any, to a RARE beneficial use. Include a map of the receiving waters in Appendix 1.

Table A.1 Identification of Receiving Waters

Receiving Waters	EPA Approved 303(d) List Impairments	Designated Beneficial Uses	Proximity to RARE Beneficial Use
Perris Valley Channel	N/A	N/A	Not a RARE water body
Canyon Lake (Railroad Canyon Reservoir)	Pathogens, Nutrients	MUN, AGR, GWR, REC1, REC2, WARM, WILD	Not a RARE water body
Lake Elsinore	Nutrients, Organic Enrichment/Low Dissolved Oxygen	REC1, REC2, WARM, WILD	Not a RARE water body

A.2 Additional Permits/Approvals required for the Project:

Table A.2 Other Applicable Permits

Agency	Permit Required	
State Department of Fish and Game, 1602 Streambed Alteration Agreement	☐ Y	☒ N
State Water Resources Control Board, Clean Water Act (CWA) Section 401 Water Quality Cert.	☐ Y	☒ N
US Army Corps of Engineers, CWA Section 404 Permit	☐ Y	☒ N
US Fish and Wildlife, Endangered Species Act Section 7 Biological Opinion	☐ Y	☒ N
Statewide Construction General Permit Coverage	☒ Y	☐ N
Statewide Industrial General Permit Coverage	☐ Y	☒ N
Western Riverside MSHCP Consistency Approval (e.g., JPR, DBESP)	☐ Y	☒ N
Other *(please list in the space below as required)* City of Moreno Valley Grading permits, encroachment permits	☒ Y	☐ N

If yes is answered to any of the questions above, the Co-Permittee may require proof of approval/coverage from those agencies as applicable including documentation of any associated requirements that may affect this Project-Specific WQMP.

Section B: Optimize Site Utilization (LID Principles)

Review of the information collected in Section 'A' will aid in identifying the principal constraints on site design and selection of LID BMPs as well as opportunities to reduce imperviousness and incorporate LID Principles into the site and landscape design. For example, **constraints** might include impermeable soils, high groundwater, groundwater pollution or contaminated soils, steep slopes, geotechnical instability, high-intensity land use, heavy pedestrian or vehicular traffic, utility locations or safety concerns. **Opportunities** might include existing natural areas, low areas, oddly configured or otherwise unbuildable parcels, easements and landscape amenities including open space and buffers (which can double as locations for bioretention BMPs), and differences in elevation (which can provide hydraulic head). Prepare a brief narrative for each of the site optimization strategies described below. This narrative will help you as you proceed with your LID design and explain your design decisions to others.

The 2010 Santa Ana MS4 Permit further requires that LID Retention BMPs (Infiltration Only or Harvest and Use) be used unless it can be shown that those BMPs are infeasible. Therefore, it is important that your narrative identify and justify if there are any constraints that would prevent the use of those categories of LID BMPs. Similarly, you should also note opportunities that exist which will be utilized during project design. Upon completion of identifying Constraints and Opportunities, include these on your WQMP Site plan in Appendix 1.

Consideration of "highest and best use" of the discharge should also be considered. For example, Lake Elsinore is evaporating faster than runoff from natural precipitation can recharge it. Requiring infiltration of 85% of runoff events for projects tributary to Lake Elsinore would only exacerbate current water quality problems associated with Pollutant concentration due to lake water evaporation. In cases where rainfall events have low potential to recharge Lake Elsinore (i.e. no hydraulic connection between groundwater to Lake Elsinore, or other factors), requiring infiltration of Urban Runoff from projects is counterproductive to the overall watershed goals. Project proponents, in these cases, would be allowed to discharge Urban Runoff, provided they used equally effective filtration-based BMPs.

Site Optimization

The following questions are based upon Section 3.2 of the WQMP Guidance Document. Review of the WQMP Guidance Document will help you determine how best to optimize your site and subsequently identify opportunities and/or constraints, and document compliance.

Did you identify and preserve existing drainage patterns? If so, how? If not, why?

Yes, existing drainage patterns on site drain all water from the North to the Southeast corner of the site. The proposed design uses catch basins at the southeast area of the site that are ultimately collected at the bioretention basin at the southeast corner of the property and then will connect to a storm drain line at the intersection of Saddlebrook Lane and Red Maple Lane.

Did you identify and protect existing vegetation? If so, how? If not, why?

No, existing natural vegetation will not be protected. All vegetation will be removed.

Did you identify and preserve natural infiltration capacity? If so, how? If not, why?

No, natural infiltration will not be used due to low infiltration rates

Did you identify and minimize impervious area? If so, how? If not, why?

No site design will be typical for this type of development, but will have open spaces of landscape and a community park

Did you identify and disperse runoff to adjacent pervious areas? If so, how? If not, why?

Yes, roof runoff from proposed buildings will be directed to yard swales on site for the majority of the site. However, runoff from impervious areas will drain to a proposed storm drain on site, and then into the bioretention basin on site for water quality purposes.

Section C: Delineate Drainage Management Areas (DMAs)

Utilizing the procedure in Section 3.3 of the WQMP Guidance Document which discusses the methods of delineating and mapping your project site into individual DMAs, complete Table C.1 below to appropriately categorize the types of classification (e.g., Type A, Type B, etc.) per DMA for your project site. Upon completion of this table, this information will then be used to populate and tabulate the corresponding tables for their respective DMA classifications.

Table C.1 DMA Classifications

DMA Name or ID	Surface Type(s)[1][2]	Area (Sq. Ft.)	DMA Type
D.1.1	Roofs/Concrete	127,146.00	D
D.1.2	Streets	84,067.00	D
D.1.3	Pad Landscaping	68,466.00	D
D.1.4	Landscaping	53,231.00	D

[1]Reference Table 2-1 in the WQMP Guidance Document to populate this column
[2]If multi-surface provide back-up

Table C.2 Type 'A', Self-Treating Areas

DMA Name or ID	Area (Sq. Ft.)	Stabilization Type	Irrigation Type (if any)

Table C.3 Type 'B', Self-Retaining Areas

Self-Retaining Area				**Type 'C' DMAs that are draining to the Self-Retaining Area**		
DMA Name/ ID	Post-project surface type	Area (square feet) [A]	Storm Depth (inches) [B]	DMA Name / ID	[C] from Table C.4 = [C]	Required Retention Depth (inches) [D]

$$[D] = [B] + \frac{[B] \cdot [C]}{[A]}$$

Table C.4 Type 'C', Areas that Drain to Self-Retaining Areas

DMA					Receiving Self-Retaining DMA		
DMA Name/ ID	Area (square feet)	Post-project surface type	Impervious fraction	Product	DMA name /ID	Area (square feet)	Ratio
	[A]		[B]	[C] = [A] x [B]		[D]	[C]/[D]

Table C.5 Type 'D', Areas Draining to BMPs

DMA Name or ID	BMP Name or ID
D.1.1	Bio-Retention Basin
D.1.2	Bio-Retention Basin
D.1.3	Bio-Retention Basin
D.1.4	Bio-Retention Basin

Note: More than one drainage management area can drain to a single LID BMP, however, one drainage management area may not drain to more than one BMP.

Section D: Implement LID BMPs

D.1 Infiltration Applicability

Is there an approved downstream 'Highest and Best Use' for stormwater runoff (see discussion in Chapter 2.4.4 of the WQMP Guidance Document for further details)? ☐ Y ☒ N

If yes has been checked, Infiltration BMPs shall not be used for the site; proceed to section D.3

If no, continue working through this section to implement your LID BMPs. It is recommended that you contact your Co-Permittee to verify whether or not your project discharges to an approved downstream 'Highest and Best Use' feature.

Geotechnical Report

A Geotechnical Report or Phase I Environmental Site Assessment may be required by the Copermittee to confirm present and past site characteristics that may affect the use of Infiltration BMPs. In addition, the Co-Permittee, at their discretion, may not require a geotechnical report for small projects as described in Chapter 2 of the WQMP Guidance Document. If a geotechnical report has been prepared, include it in Appendix 3. In addition, if a Phase I Environmental Site Assessment has been prepared, include it in Appendix 4.

Is this project classified as a small project consistent with the requirements of Chapter 2 of the WQMP Guidance Document? ☐ Y ☒ N

Infiltration Feasibility

Table D.1 below is meant to provide a simple means of assessing which DMAs on your site support Infiltration BMPs and is discussed in the WQMP Guidance Document in Chapter 2.4.5. Check the appropriate box for each question and then list affected DMAs as applicable. If additional space is needed, add a row below the corresponding answer.

Table D.1 Infiltration Feasibility

Does the project site…	YES	NO
…have any DMAs with a seasonal high groundwater mark shallower than 10 feet?		X
If Yes, list affected DMAs:		
…have any DMAs located within 100 feet of a water supply well?		X
If Yes, list affected DMAs:		
…have any areas identified by the geotechnical report as posing a public safety risk where infiltration of stormwater could have a negative impact?		X
If Yes, list affected DMAs:		
…have measured in-situ infiltration rates of less than 1.6 inches / hour?	X	
If Yes, list affected DMAs:		
…have significant cut and/or fill conditions that would preclude in-situ testing of infiltration rates at the final infiltration surface?		X
If Yes, list affected DMAs:		
…geotechnical report identify other site-specific factors that would preclude effective and safe infiltration?		X
Describe here:		

If you answered "Yes" to any of the questions above for any DMA, Infiltration BMPs should not be used for those DMAs and you should proceed to the assessment for Harvest and Use below.

D.2 Harvest and Use Assessment

Please check what applies*:*

☐ Reclaimed water will be used for the non-potable water demands for the project.

☒Downstream water rights may be impacted by Harvest and Use as approved by the Regional Board (verify with the Copermittee).

☐The Design Capture Volume will be addressed using Infiltration Only BMPs. In such a case, Harvest and Use BMPs are still encouraged, but it would not be required if the Design Capture Volume will be infiltrated or evapotranspired.

☐None of the above

If any of the above boxes have been checked, Harvest and Use BMPs need not be assessed for the site. If none of the above criteria applies, follow the steps below to assess the feasibility of irrigation use, toilet use and other non-potable uses (e.g., industrial use).

Irrigation Use Feasibility

Complete the following steps to determine the feasibility of harvesting stormwater runoff for Irrigation Use BMPs on your site:

Step 1: Identify the total area of irrigated landscape on the site, and the type of landscaping used.

Total Area of Irrigated Landscape: **N/A**

Type of Landscaping (Conservation Design or Active Turf): **N/A**

Step 2: Identify the planned total of all impervious areas on the proposed project from which runoff might be feasibly captured and stored for irrigation use. Depending on the configuration of buildings and other impervious areas on the site, you may consider the site as a whole, or parts of the site, to evaluate reasonable scenarios for capturing and storing runoff and directing the stored runoff to the potential use(s) identified in Step 1 above.

Total Area of Impervious Surfaces: **N/A**

Step 3: Cross reference the Design Storm depth for the project site (see Exhibit A of the WQMP Guidance Document) with the left column of Table 2-3 in Chapter 2 to determine the minimum area of Effective Irrigated Area per Tributary Impervious Area (EIATIA).

Enter your EIATIA factor: **N/A**

Step 4: Multiply the unit value obtained from Step 3 by the total of impervious areas from Step 2 to develop the minimum irrigated area that would be required.

Minimum required irrigated area: **N/A**

Step 5: Determine if harvesting stormwater runoff for irrigation use is feasible for the project by comparing the total area of irrigated landscape (Step 1) to the minimum required irrigated area (Step 4).

Minimum required irrigated area (Step 4)	Available Irrigated Landscape (Step 1)
N/A	**N/A**

Toilet Use Feasibility

Complete the following steps to determine the feasibility of harvesting stormwater runoff for toilet flushing uses on your site:

Step 1: Identify the projected total number of daily toilet users during the wet season, and account for any periodic shut downs or other lapses in occupancy:

Projected Number of Daily Toilet Users: **N/A**

Project Type: **N/A**

Step 2: Identify the planned total of all impervious areas on the proposed project from which runoff might be feasibly captured and stored for toilet use. Depending on the configuration of buildings and other impervious areas on the site, you may consider the site as a whole, or parts of the site, to evaluate reasonable scenarios for capturing and storing runoff and directing the stored runoff to the potential use(s) identified in Step 1 above.

Total Area of Impervious Surfaces: **N/A**

Step 3: Enter the Design Storm depth for the project site (see Exhibit A) into the left column of Table 2-2 in Chapter 2 to determine the minimum number or toilet users per tributary impervious acre (TUTIA).

Enter your TUTIA factor: **N/A**

Step 4: Multiply the unit value obtained from Step 3 by the total of impervious areas from Step 2 to develop the minimum number of toilet users that would be required.

Minimum number of toilet users: **N/A**

Step 5: Determine if harvesting stormwater runoff for toilet flushing use is feasible for the project by comparing the Number of Daily Toilet Users (Step 1) to the minimum required number of toilet users (Step 4).

Minimum required Toilet Users (Step 4)	Projected number of toilet users (Step 1)
N/A	**N/A**

Other Non-Potable Use Feasibility

Are there other non-potable uses for stormwater runoff on the site (e.g. industrial use)? See Chapter 2 of the Guidance for further information. If yes, describe below. If no, write N/A.

N/A

Step 1: Identify the projected average daily non-potable demand, in gallons per day, during the wet season and accounting for any periodic shut downs or other lapses in occupancy or operation.

Average Daily Demand: **N/A**

Step 2: Identify the planned total of all impervious areas on the proposed project from which runoff might be feasibly captured and stored for the identified non-potable use. Depending on the configuration of buildings and other impervious areas on the site, you may consider the site as a whole, or parts of the site, to evaluate reasonable scenarios for capturing and storing runoff and directing the stored runoff to the potential use(s) identified in Step 1 above.

Total Area of Impervious Surfaces: **N/A**

Step 3: Enter the Design Storm depth for the project site (see Exhibit A) into the left column of Table 2-4 in Chapter 2 to determine the minimum demand for non-potable uses per tributary impervious acre.

Enter the factor from Table 2-4: **N/A**

Step 4: Multiply the unit value obtained from Step 3 by the total of impervious areas from Step 2 to develop the minimum number of gallons per day of non-potable use that would be required.

Minimum required use: **N/A**

Step 5: Determine if harvesting stormwater runoff for other non-potable use is feasible for the project by comparing the projected average daily use (Step 1) to the minimum required non-potable use (Step 4).

Minimum required non-potable use (Step 4)	Projected average daily use (Step 1)
N/A	**N/A**

If Irrigation, Toilet and Other Use feasibility anticipated demands are less than the applicable minimum values, Harvest and Use BMPs are not required and you should proceed to utilize LID Bioretention and Biotreatment per Section 3.4.2 of the WQMP Guidance Document.

D.3 Bioretention and Biotreatment Assessment

Other LID Bioretention and Biotreatment BMPs as described in Chapter 2.4.7 of the WQMP Guidance Document are feasible on nearly all development sites with sufficient advance planning.

Select one of the following:

☒ LID Bioretention/Biotreatment BMPs will be used for some or all DMAs of the project as noted below in Section D.4 (note the requirements of Section 3.4.2 in the WQMP Guidance Document).

☐ A site-specific analysis demonstrating the technical infeasibility of all LID BMPs has been performed and is included in Appendix 5. If you plan to submit an analysis demonstrating the technical infeasibility of LID BMPs, request a pre-submittal meeting with the Copermittee to discuss this option. Proceed to Section E to document your alternative compliance measures.

D.4 Feasibility Assessment Summaries

From the Infiltration, Harvest and Use, Bioretention and Biotreatment Sections above, complete Table D.2 below to summarize which LID BMPs are technically feasible, and which are not, based upon the established hierarchy.

Table D.2 LID Prioritization Summary Matrix

DMA Name/ID	LID BMP Hierarchy				No LID (Alternative Compliance)
	1. Infiltration	2. Harvest and use	3. Bioretention	4. Biotreatment	
D.1.1	☐	☐	☒	☐	☐
D.1.2	☐	☐	☒	☐	☐
D.1.3	☐	☐	☒	☐	☐
D.1.4	☐	☐	☒	☐	☐

For those DMAs where LID BMPs are not feasible, provide a brief narrative below summarizing why they are not feasible, include your technical infeasibility criteria in Appendix 5, and proceed to Section E below to document Alternative Compliance measures for those DMAs. Recall that each proposed DMA must pass through the LID BMP hierarchy before alternative compliance measures may be considered.

The site does not have proper infiltration rates at the location where the infiltration basin is being proposed.

D.5 LID BMP Sizing

Each LID BMP must be designed to ensure that the Design Capture Volume will be addressed by the selected BMPs. First, calculate the Design Capture Volume for each LID BMP using the V_{BMP} worksheet in Appendix F of the LID BMP Design Handbook. Second, design the LID BMP to meet the required V_{BMP} using a method approved by the Copermittee. Utilize the worksheets found in the LID BMP Design Handbook or consult with your Copermittee to assist you in correctly sizing your LID BMPs. Complete Table D.3 below to document the Design Capture Volume and the Proposed Volume for each LID BMP. Provide the completed design procedure sheets for each LID BMP in Appendix 6. You may add additional rows to the table below as needed.

Table D.3 DCV Calculations for LID BMPs

DMA Type/ID	DMA Area (square feet)	Post-Project Surface Type	Effective Impervious Fraction, I_f	DMA Runoff Factor	DMA Areas x Runoff Factor	*Enter BMP Name / Identifier Here*		
	[A]		[B]	[C]	[A] x [C]			
D.1.1	*127,146*	*Roofs*	*1.0*	*0.89*	*113,414.20*			
D.1.2	*84,067*	*Concrete/Asphalt*	*1.0*	*0.89*	*74,987.80*			
D.1.3	*68,466*	*Pad Landscaping*	*0.1*	*0.11*	*7,562.60*			
D.1.4	*53,231*	*Landscaping*	*0.1*	*0.11*	*5,879.80*			
						Design Storm Depth (in)	*Design Capture Volume, V_{BMP} (cubic feet)*	*Proposed Volume on Plans (cubic feet)*
	332,910				201,844.40	0.65	10,933.20	***10,933.20***

[B], [C] is obtained as described in Section 2.3.1 of the WQMP Guidance Document

[E] is obtained from Exhibit A in the WQMP Guidance Document

[G] is obtained from a design procedure sheet, such as in LID BMP Design Handbook and placed in Appendix 6

Section E: Alternative Compliance (LID Waiver Program)

LID BMPs are expected to be feasible on virtually all projects. Where LID BMPs have been demonstrated to be infeasible as documented in Section D, other Treatment Control BMPs must be used (subject to LID waiver approval by the Copermittee). Check one of the following Boxes:

☒ LID Principles and LID BMPs have been incorporated into the site design to fully address all Drainage Management Areas. No alternative compliance measures are required for this project and thus this Section is not required to be completed.

- *Or* -

☐ The following Drainage Management Areas are unable to be addressed using LID BMPs. A site-specific analysis demonstrating technical infeasibility of LID BMPs has been approved by the Co-Permittee and included in Appendix 5. Additionally, no downstream regional and/or sub-regional LID BMPs exist or are available for use by the project. The following alternative compliance measures on the following pages are being implemented to ensure that any pollutant loads expected to be discharged by not incorporating LID BMPs, are fully mitigated.

E.1 Identify Pollutants of Concern

Utilizing Table A.1 from Section A above which noted your project's receiving waters and their associated EPA approved 303(d) listed impairments, cross reference this information with that of your selected Priority Development Project Category in Table E.1 below. If the identified General Pollutant Categories are the same as those listed for your receiving waters, then these will be your Pollutants of Concern and the appropriate box or boxes will be checked on the last row. The purpose of this is to document compliance and to help you appropriately plan for mitigating your Pollutants of Concern in lieu of implementing LID BMPs.

Table E.1 Potential Pollutants by Land Use Type

Priority Development Project Categories and/or Project Features (check those that apply)	General Pollutant Categories							
	Bacterial Indicators	Metals	Nutrients	Pesticides	Toxic Organic Compounds	Sediments	Trash & Debris	Oil & Grease
☒ Detached Residential Development	P	N	P	P	N	P	P	P
☐ Attached Residential Development	P	N	P	P	N	P	P	P(2)
☐ Commercial/Industrial Development	P(3)	P	P(1)	P(1)	P(5)	P(1)	P	P
☐ Automotive Repair Shops	N	P	N	N	P(4, 5)	N	P	P
☐ Restaurants (>5,000 ft^2)	P	N	N	N	N	N	P	P
☐ Hillside Development (>5,000 ft^2)	P	N	P	P	N	P	P	P
☐ Parking Lots (>5,000 ft^2)	P(6)	P	P(1)	P(1)	P(4)	P(1)	P	P
☐ Retail Gasoline Outlets	N	P	N	N	P	N	P	P
Project Priority Pollutant(s) of Concern	☐	☐	☐	☐	☐	☐	☐	☐

P = Potential

N = Not Potential

(1) A potential Pollutant if non-native landscaping exists or is proposed onsite; otherwise not expected

(2) A potential Pollutant if the project includes uncovered parking areas; otherwise not expected

(3) A potential Pollutant is land use involving animal waste

(4) Specifically petroleum hydrocarbons

(5) Specifically solvents

(6) Bacterial indicators are routinely detected in pavement runoff

E.2 Stormwater Credits

Projects that cannot implement LID BMPs but nevertheless implement smart growth principles are potentially eligible for Stormwater Credits. Utilize Table 3-8 within the WQMP Guidance Document to identify your Project Category and its associated Water Quality Credit. If not applicable, write N/A.

Table E.2 Water Quality Credits

Qualifying Project Categories	Credit Percentage[2]
Total Credit Percentage[1]	

[1]Cannot Exceed 50%

[2]Obtain corresponding data from Table 3-8 in the WQMP Guidance Document

E.3 Sizing Criteria

After you appropriately considered Stormwater Credits for your project, utilize Table E.3 below to appropriately size them to the DCV, or Design Flow Rate, as applicable. Please reference Chapter 3.5.2 of the WQMP Guidance Document for further information.

Table E.3 Treatment Control BMP Sizing

DMA Type/ID	DMA Area (square feet)	Post-Project Surface Type	Effective Impervious Fraction, I_f	DMA Runoff Factor	DMA Area x Runoff Factor		*Enter BMP Name / Identifier Here*		
	[A]		[B]	[C]	[A] x [C]				
						Design Storm Depth (in)	*Minimum Design Capture Volume or Design Flow Rate (cubic feet or cfs)*	*Total Storm Water Credit % Reduction*	*Proposed Volume or Flow on Plans (cubic feet or cfs)*
	A_T = Σ[A]				Σ= [D]	[E]	$[F] = \frac{[D]x[E]}{[G]}$	[F] X (1-[H])	[I]

[B], [C] is obtained as described in Section 2.3.1 from the WQMP Guidance Document

[E] is for Flow-Based Treatment Control BMPs [E] = .2, for Volume-Based Control Treatment BMPs, [E] obtained from Exhibit A in the WQMP Guidance Document

[G] is for Flow-Based Treatment Control BMPs [G] = 43,560, for Volume-Based Control Treatment BMPs, [G] = 12

[H] is from the Total Credit Percentage as Calculated from Table E.2 above

[I] as obtained from a design procedure sheet from the BMP manufacturer and should be included in Appendix 6

E.4 Treatment Control BMP Selection

Treatment Control BMPs typically provide proprietary treatment mechanisms to treat potential pollutants in runoff, but do not sustain significant biological processes. Treatment Control BMPs must have a removal efficiency of a medium or high effectiveness as quantified below:

- **High**: equal to or greater than 80% removal efficiency
- **Medium**: between 40% and 80% removal efficiency

Such removal efficiency documentation (e.g., studies, reports, etc.) as further discussed in Chapter 3.5.2 of the WQMP Guidance Document, must be included in Appendix 6. In addition, ensure that proposed Treatment Control BMPs are properly identified on the WQMP Site Plan in Appendix 1.

Table E.4 Treatment Control BMP Selection

Selected Treatment Control BMP Name or ID[1]	Priority Pollutant(s) of Concern to Mitigate[2]	Removal Efficiency Percentage[3]

[1] Treatment Control BMPs must not be constructed within Receiving Waters. In addition, a proposed Treatment Control BMP may be listed more than once if they possess more than one qualifying pollutant removal efficiency.
[2] Cross Reference Table E.1 above to populate this column.
[3] As documented in a Co-Permittee Approved Study and provided in Appendix 6.

Section F: Hydromodification

F.1 Hydrologic Conditions of Concern (HCOC) Analysis

Once you have determined that the LID design is adequate to address water quality requirements, you will need to assess if the proposed LID Design may still create a HCOC. Review Chapters 2 and 3 (including Figure 3-7) of the WQMP Guidance Document to determine if your project must mitigate for Hydromodification impacts. If your project meets one of the following criteria which will be indicated by the check boxes below, you do not need to address Hydromodification at this time. However, if the project does not qualify for Exemptions 1, 2 or 3, then additional measures must be added to the design to comply with HCOC criteria. This is discussed in further detail below in Section F.2.

HCOC EXEMPTION 1: The Priority Development Project disturbs less than one acre. The Copermittee has the discretion to require a Project-Specific WQMP to address HCOCs on projects less than one acre on a case by case basis. The disturbed area calculation should include all disturbances associated with larger common plans of development.

Does the project qualify for this HCOC Exemption? ☐ Y ☒ N

If Yes, HCOC criteria do not apply.

HCOC EXEMPTION 2: The volume and time of concentration[1] of storm water runoff for the post-development condition is not significantly different from the pre-development condition for a 2-year return frequency storm (a difference of 5% or less is considered insignificant) using one of the following methods to calculate:

- Riverside County Hydrology Manual
- Technical Release 55 (TR-55): Urban Hydrology for Small Watersheds (NRCS 1986), or derivatives thereof, such as the Santa Barbara Urban Hydrograph Method
- Other methods acceptable to the Co-Permittee

Does the project qualify for this HCOC Exemption? ☐ Y ☒ N

If Yes, report results in Table F.1 below and provide your substantiated hydrologic analysis in Appendix 7.

Table F.1 Hydrologic Conditions of Concern Summary

	2 year – 24 hour		
	Pre-condition	**Post-condition**	**% Difference**
Flow (cubic feet per second)	0.159	1.047	658%
Volume (Cubic Feet)	4,210.70	27,727	658%

[1] Time of concentration is defined as the time after the beginning of the rainfall when all portions of the drainage basin are contributing to flow at the outlet.

HCOC EXEMPTION 3: All downstream conveyance channels to an adequate sump (for example, Prado Dam, Lake Elsinore, Canyon Lake, Santa Ana River, or other lake, reservoir or naturally erosion resistant feature) that will receive runoff from the project are engineered and regularly maintained to ensure design flow capacity; no sensitive stream habitat areas will be adversely affected; or are not identified on the Co-Permittees Hydromodification Susceptibility Maps.

Does the project qualify for this HCOC Exemption? ☒ Y ☐ N

If Yes, HCOC criteria do not apply and note below which adequate sump applies to this HCOC qualifier:

See receiving waters exhibit in Appendix 1 for downstream conveyance to Lake Elsinore.

See Appendix 7 for HCOC Exemption Map.

F.2 HCOC Mitigation

If none of the above HCOC Exemption Criteria are applicable, HCOC criteria is considered mitigated if they meet one of the following conditions:

☐ a. Additional LID BMPS are implemented onsite or offsite to mitigate potential erosion or habitat impacts as a result of HCOCs. This can be conducted by an evaluation of site-specific conditions utilizing accepted professional methodologies published by entities such as the California Stormwater Quality Association (CASQA), the Southern California Coastal Water Research Project (SCCRWP), or other Co-Permittee approved methodologies for site-specific HCOC analysis.

☒ b. The project is developed consistent with an approved Watershed Action Plan that addresses HCOC in Receiving Waters.

☐ c. Mimicking the pre-development hydrograph with the post-development hydrograph, for a 2-year return frequency storm. Generally, the hydrologic conditions of concern are not significant, if the post-development hydrograph is no more than 10% greater than pre-development hydrograph. In cases where excess volume cannot be infiltrated or captured and reused, discharge from the site must be limited to a flow rate no greater than 110% of the pre-development 2-year peak flow.

Be sure to include all pertinent documentation used in your analysis of the items a, b or c in Appendix 7.

Section G: Source Control BMPs

Source control BMPs include permanent, structural features that may be required in your project plans — such as roofs over and berms around trash and recycling areas — and Operational BMPs, such as regular sweeping and "housekeeping", that must be implemented by the site's occupant or user. The MEP standard typically requires both types of BMPs. In general, Operational BMPs cannot be substituted for a feasible and effective permanent BMP. Using the Pollutant Sources/Source Control Checklist in Appendix 8, review the following procedure to specify Source Control BMPs for your site:

1. ***Identify Pollutant Sources*:** Review Column 1 in the Pollutant Sources/Source Control Checklist. Check off the potential sources of Pollutants that apply to your site.

2. ***Note Locations on Project-Specific WQMP Exhibit*:** Note the corresponding requirements listed in Column 2 of the Pollutant Sources/Source Control Checklist. Show the location of each Pollutant source and each permanent Source Control BMP in your Project-Specific WQMP Exhibit located in Appendix 1.

3. ***Prepare a Table and Narrative*:** Check off the corresponding requirements listed in Column 3 in the Pollutant Sources/Source Control Checklist. In the left column of Table G.1 below, list each potential source of runoff Pollutants on your site (from those that you checked in the Pollutant Sources/Source Control Checklist). In the middle column, list the corresponding permanent, Structural Source Control BMPs (from Columns 2 and 3 of the Pollutant Sources/Source Control Checklist) used to prevent Pollutants from entering runoff. **Add additional narrative** in this column that explains any special features, materials or methods of construction that will be used to implement these permanent, Structural Source Control BMPs.

4. ***Identify Operational Source Control BMPs:*** To complete your table, refer once again to the Pollutant Sources/Source Control Checklist. List in the right column of your table the Operational BMPs that should be implemented as long as the anticipated activities continue at the site. Copermittee stormwater ordinances require that applicable Source Control BMPs be implemented; the same BMPs may also be required as a condition of a use permit or other revocable Discretionary Approval for use of the site.

Table G.1 Permanent and Operational Source Control Measures

Potential Sources of Runoff pollutants	Permanent Structural Source Control BMPs	Operational Source Control BMPs
On-site storm drain inlets	Mark all inlets with the words "Only Rain Down the Storm Drain" or similar. Catch Basin Markers may be available from the Riverside County Flood Control and Water Conservation District, call 951.955.1200 to verify.	Maintain and periodically repaint or replace inlet markings. Provide stormwater pollution prevention information to new site owners, lessees, or operators. See applicable operational BMPs in Fact Sheet SC-44, "Drainage System Maintenance,"
Landscape / Outdoor Pesticide Use	Design landscaping to minimize irrigation and runoff, to promote surface infiltration where appropriate, and to minimize the use of fertilizers and pesticides that can contribute to stormwater pollution. Where landscaped areas are used to retain or detain stormwater, specify plants that are tolerant of saturated soil conditions. Consider using pest-resistant plants, especially adjacent to hardscape. To ensure successful establishment, select plants appropriate to site soils, slopes, climate, sun, wind, rain, land use, air movement, ecological consistency, and plant interactions.	Maintain landscaping using minimum or no pesticides. See applicable operational BMPs in Appendix 10. Provide IPM information to new owners, lessees, and operators.
Fire Sprinkler Test Water	Provide a means to drain fire sprinkler test water to the sanitary sewer.	See the note in Fact Sheet SC-41, "Building and Grounds Maintenance," provided in Appendix 10.
Roofing, gutters, and trim	Avoid roofing, gutters, and trim made of copper or other unprotected metals that may leach into runoff.	
Plazas, sidewalks, and parking lots		Sweep plazas, sidewalks, and parking lots regularly to prevent accumulation of litter and debris. Collect debris from pressure washing to prevent entry into the storm drain system. Collect washwater containing any cleaning agent or degreaser and discharge to the sanitary sewer not to a storm drain.
Street Sweeping		See applicable operational BMPs in Appendix 10.

Section H: Construction Plan Checklist

Populate Table H.1 below to assist the plan checker in an expeditious review of your project. The first two columns will contain information that was prepared in previous steps, while the last column will be populated with the corresponding plan sheets. This table is to be completed with the submittal of your final Project-Specific WQMP.

Table H.1 Construction Plan Cross-reference

BMP No. or ID	BMP Identifier and Description	Corresponding Plan Sheet(s)	BMP Location (Lat/Long)
D.4	Bio-Retention Basin	Tentative Tract Map	33.886108, -117.222153

Note that the updated table — or Construction Plan WQMP Checklist — is **only a reference tool** to facilitate an easy comparison of the construction plans to your Project-Specific WQMP. Co-Permittee staff can advise you regarding the process required to propose changes to the approved Project-Specific WQMP.

Section I: Operation, Maintenance and Funding

The Copermittee will periodically verify that Stormwater BMPs on your site are maintained and continue to operate as designed. To make this possible, your Copermittee will require that you include in Appendix 9 of this Project-Specific WQMP:

1. A means to finance and implement facility maintenance in perpetuity, including replacement cost.
2. Acceptance of responsibility for maintenance from the time the BMPs are constructed until responsibility for operation and maintenance is legally transferred. A warranty covering a period following construction may also be required.
3. An outline of general maintenance requirements for the Stormwater BMPs you have selected.
4. Figures delineating and designating pervious and impervious areas, location, and type of Stormwater BMP, and tables of pervious and impervious areas served by each facility. Geo-locating the BMPs using a coordinate system of latitude and longitude is recommended to help facilitate a future statewide database system.
5. A separate list and location of self-retaining areas or areas addressed by LID Principles that do not require specialized O&M or inspections but will require typical landscape maintenance as noted in Chapter 5, pages 85-86, in the WQMP Guidance. Include a brief description of typical landscape maintenance for these areas.

Your local Co-Permittee will also require that you prepare and submit a detailed Stormwater BMP Operation and Maintenance Plan that sets forth a maintenance schedule for each of the Stormwater BMPs built on your site. An agreement assigning responsibility for maintenance and providing for inspections and certification may also be required.

Details of these requirements and instructions for preparing a Stormwater BMP Operation and Maintenance Plan are in Chapter 5 of the WQMP Guidance Document.

Maintenance Mechanism: HOA

Will the proposed BMPs be maintained by a Home Owners' Association (HOA) or Property Owners Association (POA)?

☒ Y ☐ N

Include your Operation and Maintenance Plan and Maintenance Mechanism in Appendix 9. Additionally, include all pertinent forms of educational materials for those personnel that will be maintaining the proposed BMPs within this Project-Specific WQMP in Appendix 10.

Project No. 33591.1

Attention: Mr. Oscar Graham

Subject: Preliminary Geotechnical and Infiltration Feasibility Investigation, Proposed Iris Park Residential Development, APN 312-020-025, Moreno Valley, California.

LOR Geotechnical Group, Inc., is pleased to present this report summarizing our geotechnical investigation for the above referenced project. In summary, it is our opinion that the proposed development is feasible from a geotechnical perspective, provided the recommendations presented in the attached report are incorporated into design and construction.

To provide adequate support for the proposed residential structures, we recommend that a compacted fill mat be constructed beneath footings and slabs. The compacted fill mat will provide a dense, high-strength soil layer to uniformly distribute the anticipated foundation loads over the underlying soils. All undocumented fill material and any loose alluvial materials should be removed from structural areas and areas to receive engineered compacted fill. The data developed during this investigation indicates that removals on the order of approximately 5 to 7 feet will be required within the currently planned development areas. The given removal depths are preliminary. The actual depths of the removals should be determined during the grading operation by observation and/or in-place density testing.

Very low expansion potential, fair R-value quality, poor infiltration characteristics, and a negligible soluble sulfate content generally characterize the onsite soil materials tested.

Project No. 33591.1

INTRODUCTION

During November of 2019, a Preliminary Geotechnical and Infiltration Feasibility Investigation was performed by LOR Geotechnical Group, Inc., for proposed Iris Park residential development of APN 312-020-025 in the City of Moreno Valley, California. The purpose of this investigation was to conduct a technical evaluation of the geologic setting of the site and to provide geotechnical design recommendations for the proposed improvements. The scope of our services included:

- Review of available pertinent geotechnical literature, reports, maps, and agency information pertinent to the study area;
- Interpretation of aerial photographs of the site and surrounding regions dated 1966 through 2018;
- Geologic field reconnaissance mapping to verify the areal distribution of earth units and significance of surficial features as compiled from documents, literature, and reports reviewed;
- A subsurface field investigation to determine the physical soil conditions pertinent to the proposed development;
- Infiltration testing via the constant head test method at two locations within the approximate area proposed for the infiltration of onsite runoff waters;
- Laboratory testing of selected soil samples obtained during the field investigation;
- Development of geotechnical recommendations for site grading and foundation design; and
- Preparation of this report summarizing our findings, and providing conclusions and recommendations for site development.

The approximate location of the site is shown on the attached Index Map, Enclosure A-1, within Appendix A.

To orient our investigation at the site, you provided us with Site Plan, prepared by IDE Arc Architecture & Planning, undated, that showed the proposed development. As noted on that map, the site will be developed with 84 residential lots and the associated interior streets. An infiltration basin is also proposed. The Site Plan was utilized as a base map for our field investigation and is presented as Enclosure A-2, within Appendix A.

PROJECT CONSIDERATIONS

Information furnished to this firm indicates that the proposed project will consist of the construction of 84 single-family residences.

These will likely be one or two stories in height and are anticipated to be of wood frame construction with an exterior plaster veneer. Light to moderate foundation loads are anticipated with such structures. Cuts and fills on the order of a few feet are anticipated to create the planar building pads.

EXISTING SITE CONDITIONS

The subject site consists of a triangular shaped, relatively flat, vacant area of land that is approximately 10 acres in size. At the time of our investigation, vegetation on the site consisted of a light moderate growth of weeds. The topography of the site is planar, with a very gentle fall towards the southeast.

Iris Avenue, a fully improved roadway, bounds the site on the north followed by a tract of single family residences. A tract of single family residences bounds the site on the east. The California Aqueduct easement comprises the western 100 feet of the site with a shopping center and school beyond. South of the site is a tract of single family homes.

AERIAL PHOTOGRAPH ANALYSIS

The aerial photographs reviewed consisted of vertical aerial stereoscopic photographs of varying scales. We reviewed imagery available from Google Earth (2018) and from Historic Aerials (2019).

The site consisted of vacant land which appeared to be dry land farmed with surrounding properties from 1966, the earliest photograph available, to 1978. The 1997 photograph shows the site as vacant land with some stockpiles of fill material in the northeast corner. Numerous dirt paths are visible in this area. The 2006 photograph shows additional smoothed out fill to the west of the previously noted fill. An earthen berm is present on the north and west side of this area. A minor amount of additional end dumped fill is visible in the 2009 photograph.

Our review of the aerial photographs did not reveal any adverse geologic conditions, such as possible faults or landslides, as being present at or within close proximity to the site.

FIELD EXPLORATION PROGRAM

Our subsurface field exploration program was conducted on November 7, 2019 and consisted of drilling 5 exploratory borings with a truck-mounted Mobile B-61 drill rig equipped with 8-inch diameter hollow stem augers. The borings were drilled to depths of approximately 21 to 51.5 feet below the existing ground surface. The approximate locations of our exploratory borings are presented on the attached Site Plan, Enclosure A-2 within Appendix A.

The subsurface conditions encountered in the exploratory borings were logged by a geologist from this firm. Relatively undisturbed and bulk samples were obtained at a maximum depth interval of 5 feet and returned to our geotechnical laboratory in sealed containers for further testing and evaluation. A detailed description of the field exploration program and the boring logs are presented in Appendix B.

LABORATORY TESTING PROGRAM

Selected soil samples obtained during the field investigation were subjected to laboratory testing to evaluate their physical and engineering properties. Laboratory testing included in-place moisture content and dry density, laboratory compaction characteristics, direct shear, sieve analysis, sand equivalent, R-value, consolidation, expansion index, Atterberg limits, and soluble sulfate content. A detailed description of the laboratory testing program and the test results are presented in Appendix C.

GEOLOGIC CONDITIONS

Regional Geologic Setting

The site is located within the south-central portion of Moreno Valley which lies within the northern end of Perris Valley. This area is located on the Perris block, within the northern Peninsular Ranges geologic province of southern California. While the Perris block is considered to be a relatively stable structural block, it is bounded by active faults. The Perris block is underlain predominately by a very large mass of crystalline igneous rocks of Cretaceous age and older metasedimentary and metavolcanic rocks.

The Perris block has a series of erosional surfaces, marked by low topographic relief and capped with unconsolidated alluvial sediments stripped from the surrounding highlands, such as the Box Spring Mountains and the hills around Lake Perris located east of the site.

These were mapped by the California Division of Mines and Geology as being underlain by deposits of relatively unconsolidated, but weakly to moderately indurated younger to older alluvium (Morton and Matti, 2001 and Morton, 2003).

The nearest known active fault zone is the San Jacinto fault zone located approximately 9.8 kilometers (6.1 miles) to the northeast. Other major faults within the region include the Elsinore fault zone located approximately 26 kilometers (16.2 miles) to the southwest, and San Andreas fault zone located approximately 27 kilometers (17 miles) to the northeast. The site and the regional geologic setting are shown on Enclosure A-3 within Appendix A.

Site Geologic Conditions

Fill/Topsoil: As encountered within the majority of our exploratory borings, fill/topsoil materials on the order of 2 feet thick are present across much of the site. The fill materials were noted to be light brown, dry, and loose silty sand. These materials are most likely the result of weed abatement practices (discing).

Fill: As encountered within our exploratory boring placed in the northeast portion of the site, fill materials on the order of 5 feet are present. These materials consisted of dry, loose, silty sand with some debris and are believed to be end dumped fills noted in our review of aerial photographs.

Older Alluvium: Underlying the fill materials at the site, older alluvial materials were encountered within all of our exploratory borings to the maximum depths explored. These units were noted to consist of silty sand and sandy silt, and lessor amounts unit of well graded sand, clayey sand and lean clay with sand. The older alluvial materials were in a relatively loose to medium dense/stiff state upon first encounter, becoming medium dense/very stiff to dense/hard with depth based on our equivalent Standard Penetration Test (SPT) data and in-place density testing. Consolidation testing of the older alluvial materials indicate normal consolidation/hydro-consolidation characteristics at depths of 7 feet and greater.

A detailed description of the subsurface soil conditions as encountered within our exploratory borings is presented on the Boring Logs within Appendix B.

Groundwater Hydrology

Groundwater was encountered within our exploratory borings B-2 at a depth of approximately 33.5 feet below the existing ground surface.

Records for nearby wells which were readily available from the State of California Department of Water Resources online database (CDWR, 2019) and the Western Municipal Water District Cooperative Well Measurement Program (WMWD, 2019) were reviewed as a part of this investigation. In addition, historic groundwater level data was reviewed from a groundwater contour map prepared by the U.S.G.S. (Carson and Matti, 1985).

According to the State of California Department for Water resources online database, the nearest well with available data is State Well Number 03S03W32B001S located to the southeast, approximately 1.4 kilometers (0.9 miles). In this well, groundwater was last measured at a depth of 21 feet below the ground surface on April 26, 2019. The depth to groundwater in the past was noted to vary slightly over time. Data for this well was presented from 2011 to 2019 and the elevation was listed as 1,476 feet above mean sea level.

Groundwater well data from the Cooperative Well Measuring Program, Spring 2019, indicates that the nearest well is the well noted above and no additional relevant information is presented within this database.

As illustrated on Enclosure A-1, the elevation of the site is approximately 1,495 feet above mean sea level. Based on the information above, groundwater is anticipated to lie approximately 35 feet in the general site area.

Surface Runoff

Current surface runoff of precipitation waters across the site is generally as sheet flow to the south-southeast.

Mass Movement

Mass movement features such as landslides, rockfalls, or debris flows within the site vicinity are not known to exist and no evidence of mass movement was observed on the site or in the vicinity during our review of aerial photographs or reconnaissance.

Faulting

No active or potentially active faults are known to exist at the subject site. In addition, the subject site does not lie within a current State of California Earthquake Fault Zone (Hart and Bryant, 2003).

As previously mentioned, the closest known active fault is the San Jacinto Valley segment of the San Jacinto fault zone, located approximately 9.8 kilometers (6.1 miles) to the northeast. In addition, other relatively close active faults include the Glen Ivy segment of the Elsinore fault zone, located approximately 26 kilometers (16.2 miles) to the southwest, and the San Bernardino segment of the San Andreas fault zone located approximately 27 kilometers (17 miles) to the northeast.

The San Jacinto fault zone is a sub-parallel branch of the San Andreas fault zone, extending from the northwestern San Bernardino area, southward into the El Centro region. This fault has been active in recent times with several large magnitude events. It is believed that the San Jacinto fault is capable of producing an earthquake magnitude on the order of 6.5 or greater.

The Elsinore fault zone is one of the largest in southern California. At its northern end it splays into two segments and at its southern end it is cut by the Yuba Wells fault. The primary sense of slip along the Elsinore fault is right lateral strike-slip. It is believed that the Elsinore fault zone is capable of producing an earthquake magnitude on the order of 6.5 to 7.5.

The San Andreas fault is considered to be the major tectonic feature of California, separating the Pacific Plate and the North American Plate. While estimates vary, the San Andreas fault is generally thought to have an average slip rate on the order of 24mm/yr and capable of generating large magnitude events on the order of 7.5 or greater.

Current standards of practice often include a discussion of all potential earthquake sources within a 100 kilometer (62 mile) radius. However, while there are other large earthquake faults within a 100 kilometer (62 mile) radius of the site, none of these are considered as relevant to the site due to their greater distance and/or smaller anticipated magnitudes.

Historical Seismicity

In order to obtain a general perspective of the historical seismicity of the site and surrounding region a search was conducted for seismic events at and around the area within various radii. This search was conducted utilizing the historical seismic search website of the USGS. This website conducts a search of a user selected cataloged seismic events database, within a specified radius and selected magnitudes, and then plots the events onto a map. At the time of our search, the database contained data from January 1, 1932 through November 20, 2019.

In our first search, the general seismicity of the region was analyzed by selecting an epicenter map listing all events of magnitude 4.0 and greater, recorded since 1932, within a 100 kilometer (62 mile)radius of the site, in accordance with guidelines of the California Division of Mines and Geology. This map illustrates the regional seismic history of moderate to large events. As depicted on Enclosure A-4, within Appendix A, the site lies within a relatively active region associated with the San Andreas fault trending northwest and the northwest trending faulting of the Mojave Desert geomorphic province.

In the second search, the micro seismicity of the area lying within a 15 kilometer (9.3 mile) radius of the site was examined by selecting an epicenter map listing events on the order of 1.0 and greater since 1978. In addition, only the “A” events, or most accurate events were selected. Caltech indicates the accuracy of the “A” events to be approximately 1 km. The results of this search is a map that presents the seismic history around the area of the site with much greater detail, not permitted on the larger map. The reason for limiting the events to the last 40± years on the detail map is to enhance the accuracy of the map. Events recorded prior the mid 1970's are generally considered to be less accurate due to advancements in technology. As depicted on this map, Enclosure A-5, the San Jacinto fault zone appear to be the source of numerous events.

In summary, the historical seismicity of the site entails numerous small to medium magnitude earthquake events occurring around the subject site, predominately associated with the presence of the San Jacinto fault zone. Any future developments at the subject site should anticipate that moderate to large seismic events could occur very near the site.

Secondary Seismic Hazards

Other secondary seismic hazards generally associated with severe ground shaking during an earthquake include liquefaction, seiches and tsunamis, earthquake induced flooding, landsliding and rockfalls, and seismic-induced settlement.

Liquefaction: The potential for liquefaction generally occurs during strong ground shaking within granular, loose, sediments where the groundwater is usually less than 50 feet. The County of Riverside has mapped the overall site area as having low liquefaction potential (TLMA, 2019).

Liquefaction is a process in which strong ground shaking causes saturated soils to lose their strength and behave as a fluid (Matti and Carson, 1991). Ground failure associated with liquefaction can result in severe damage to structures. Soil types susceptible to liquefaction include sand, silty sand, sandy silt, and silt, as well as soils having a plasticity

index (PI) less than 7 (Boulanger and Idriss, 2004) and loose soils with a PI less than 12 and a moisture content greater than 85 percent of the liquid limit (Bray and Sancio, 2006). The geologic conditions for increased susceptibility to liquefaction are: 1) shallow groundwater (generally less than 50 feet in depth); 2) the presence of unconsolidated sandy alluvium, typically Holocene in age; and 3) strong ground shaking. All three of these conditions must be present for liquefaction to occur.

Severe seismic shaking may cause dry and non-saturated sands to densify, resulting in settlement expressed at the ground surface. Seismic settlement in dry soils generally occurs in loose sands and silty sands, with cohesive soils being less prone to significant settlement.

A quantitative method using an index called the liquefaction potential index (LPI) was developed and presented by Iwasaki et al. (1978, 1982). The LPI is defined as:

$$LPI = \int_0^{20} F_1 W(z) dz$$

where $W(z) = 10 - 0.5z$, $F_1 = 1 - FS$ for $FS < 1.0$, $F_1 = 0$ for $FS > 1.0$ and z is the depth below the ground surface in meters. The LPI presents the risk of liquefaction damage as a single value with the following indicators of liquefaction-induced damage:

LPI Range and Damage	
LPI Range	**Damage**
LPI = 0	Liquefaction risk is very low.
0 < LPI ≤ 5	Liquefaction risk is low.
5 < LPI ≤ 15	Liquefaction risk is high.
LPI > 15	Liquefaction risk is very high.

The most recent development for quantitative descriptions of liquefaction-induced surface damage, called "liquefaction vulnerability", was made by Tonkin & Taylor (2013) after the Christchurch earthquakes occurred between 2010 and 2011 and was based on field observations and analyses of approximately 7,500 CPT investigations. A new index, the liquefaction severity number (LSN), was proposed and defined as:

$$LSN = \int \frac{\varepsilon_v}{z} dz$$

where ε_v is the calculated volumetric densification strain in the subject layer from Zhang et al. (2002) and z is the depth to the layer of interest in meters below the ground surface. The typical behaviors of sites with a given LSN are summarized in following table.

LSN Ranges and Observed Land Effects

LSN Range	Predominant Performance
0-10	Little to no expression of liquefaction, minor effects
10-20	Minor expression of liquefaction, some sand boils
20-30	Moderate expression of liquefaction, with sand boils and some structural damage
30-40	Moderate to severe expression of liquefaction, settlement can cause structural damage
40-50	Major expression of liquefaction, undulations and damage to ground surface, severe total and differential settlement of structures
>50	Severe damage, extensive evidence of liquefaction at surface, severe total and differential settlements affecting structures, damage to services

Both LPI and LSN indices were calculated for the soil profiles of Exploratory Boring No. B-2. The results indicate that the liquefaction risk of the site is “very low” to "low" per the LPI index of 0. The site exhibits "little to no expression of liquefaction, minor effects" per the LSN index of 0.

The Idriss and Boulanger (2008) and Pradel (1998) methods were used to evaluate liquefaction-induced settlement and dry sand settlement. As input into our calculations a deaggregated modal moment magnitude of 6.5 and an acceleration of 0.553g were utilized for the representative soil profiles as provided in Boring B-2.

The results indicate that a maximum seismic settlement of less than one-half inch can be anticipated. Based on the relative uniformity of soil materials encountered, differential seismic settlement is anticipated to be approximately one-half of the total seismic settlement. The settlement calculated is accumulated from soil layers to a maximum depth of 50 feet and the result of our analysis is provided in Appendix E.

Seiches/Tsunamis: The potential for the site to be affected by a seiche or tsunami (earthquake generated wave) is considered nil due to the absence of any large bodies of water near the site.

Flooding (Water Storage Facility Failure): There are no large water storage facilities located on or upstream near the site which could possibly rupture during an earthquake and affect the site by flooding.

Seismically-Induced Landsliding: Our research, site reconnaissance and review of aerial imagery of the site and vicinity indicates that there are no known or suspected landslides at the site or in close proximity to the site and, therefore, the potential for seismically-induced landslides occurring at the site is considered very low.

Rockfalls: No large, exposed, loose or unrooted boulders that could affect the integrity of the site are present above the site.

Seismically-Induced Settlement: Settlement generally occurs within areas of loose, granular soils with relatively low density. Since the site is underlain by dense/stiff to dense/hard older alluvial materials, the potential for settlement is considered low. In addition, the earthwork operations recommended to be conducted during the development of the site will mitigate any near surface loose soil conditions.

SOILS AND SEISMIC DESIGN CRITERIA (California Building Code 2016)

Section 1613 of Chapter 16 of the 2016 California Building Code (CBC) contains the procedures and definitions for the calculations of the earthquake loads on structures and non structural components that are permanently attached to structures and their supports and attachments.

It should be noted that the classification of use and occupancy of all proposed structures at the site, and thus design requirements, shall be the responsibility of the structural engineer and the building official.

CBC Earthquake Design Summary

The following earthquake design criteria have been formulated for the site utilizing the source referenced above. However, these values should be reviewed and the final design should be performed by a qualified structural engineer familiar with the region.

CBC 2016 SEISMIC DESIGN SUMMARY* Site Location (WGS 84) 33.8872, -117.2226, Occupancy Category II	
Site Class Definition Chapter 20 ASCE 7	D
S_s Mapped Spectral Response Acceleration at 0.2s Period, (Figure 1613.3.1(1))	1.500
S_1 Mapped Spectral Response Acceleration at 1s Period, (Figure 1613.3.3(2))	0.605
F_a Short Period Site Coefficient at 0.2s Period, (Table 1613.3.3(1))	1.0
F_v Long Period Site Coefficient at 1s Period, (Table 1613.3.3(2))	1.5
S_{MS} Adjusted Spectral Response Acceleration at 0.2s Period, (eq .16-37)	1.500
S_{M1} Adjusted Spectral Response Acceleration at 1s Period, (eq .16-38)	0.907
S_{DS} Design Spectral Response Acceleration at 0.2s Period, (eq .16-39)	1.000

*Values obtained from OSHPD online U.S. Seismic Design Maps tool	

INFILTRATION TESTING AND TEST RESULTS

Two constant head infiltration tests were conducted within the general area proposed for the infiltration of runoff waters. Testing consisted of two test holes which were excavated using a hollow stem auger drill rig to depths of approximately 5 feet below the existing ground surface. The holes were 8-inches in diameter. Two inches of gravel was placed in the bottom of the holes and perforated plastic liners were placed into each hole. A 2-inch PVC pipe with a preset water level of 0.5 feet was inserted into each liner. A 5-gallon glass bottle was then inverted over each pipe with a vacuum seal in order to maintain a constant 0.5 feet of water with each hole. The volume of water used in a given time period was recorded at various time intervals to establish the infiltration rates.

Infiltration test results are summarized in the following table:

Test No.	Depth (ft.)*	Infiltration Rate** in/hr
I-1	4	0.10
I-2	4	0.10

* depth measured below existing ground surface
** clear water rate

The results of our infiltration testing are attached as Enclosures D-1 and D-2. The test results indicate poor infiltration characteristics for the soils tested.

CONCLUSIONS

General

This investigation provides a broad overview of the geotechnical and geologic factors which are expected to influence future site planning and development. On the basis of our field investigation and testing program, it is the opinion of LOR Geotechnical Group, Inc., that the proposed development is feasible from a geotechnical standpoint, provided the recommendations presented in this report are incorporated into design and implemented during grading and construction.

The subsurface conditions encountered in our exploratory borings are indicative of the locations explored. The subsurface conditions presented here are not to be construed as being present the same everywhere on the site. If conditions are encountered during the construction of the project which differ significantly from those presented in this report, this firm should be notified immediately so we may assess the impact to the recommendations provided.

Foundation Support

Based upon the field investigation and test data, it is our opinion that the existing fill/topsoil and fill soils will not, in their present condition, provide uniform and/or adequate support for the proposed improvements. Left as is, this condition could cause unacceptable differential and/or overall settlements upon application of the anticipated foundation loads.

To provide adequate support for the proposed structural improvements, we recommend that a compacted fill mat be constructed beneath footings and slabs.

This compacted fill mat will provide a dense, high-strength soil layer to uniformly distribute the anticipated foundation loads over the underlying soils. In addition, the construction of this compacted fill mat will allow for the removal of any undocumented fill soils that are present within the proposed building areas. Conventional foundation systems, using either individual spread footings and/or continuous wall footings, will provide adequate support for the anticipated downward and lateral loads when utilized in conjunction with the recommended fill mat.

Soil Expansiveness

Our laboratory testing found the soils tested to have a very low expansion potential. For very low expansive soils, no specialized construction procedures to resist expansive soil activity are necessary.

Careful evaluation of on-site soils and any import fill for their expansion potential should be conducted during the grading operation.

Sulfate Protection

The results of the soluble sulfate tests conducted on selected subgrade soils expected to be encountered at foundation levels indicate that there is a negligible sulfate exposure to concrete elements in contact with the on site soils per the 2016 CBC. Therefore, no specific recommendations are given for concrete elements to be in contact with the onsite soils.

Infiltration

The results of our field investigation and test data indicates the site soils are not conducive to infiltration or percolation. Therefore, water quality storm water systems should not incorporate on-site infiltration/percolation when determining storm water treatment capacity.

Geologic Mitigations

No special geologic recommendation methods are deemed necessary at this time, other than the geotechnical recommendations provided in the following sections.

Seismicity

Seismic ground rupture is generally considered most likely to occur along pre-existing active faults. Since no known faults are known to exist at, or project into the site, the probability of ground surface rupture occurring at the site is considered nil.

Due to the site's close proximity to the faults described above, it is reasonable to expect a strong ground motion seismic event to occur during the lifetime of the proposed development on the site. Large earthquakes could occur on other faults in the general area, but because of their lesser anticipated magnitude and/or greater distance, they are considered less significant than the faults described above from a ground motion standpoint.

The effects of ground shaking anticipated at the subject site should be mitigated by the seismic design requirements and procedures outlined in Chapter 16 of the California Building Code. However, it should be noted that the current building code requires the minimum design to allow a structure to remain standing after a seismic event, in order to allow for safe evacuation. A structure built to code may still sustain damage which might ultimately result in the demolishing of the structure (Larson and Slosson, 1992).

RECOMMENDATIONS

Geologic Recommendations

No special geologic recommendation methods are deemed necessary at this time, other than the geotechnical recommendations provided in the following sections.

General Site Grading

It is imperative that no clearing and/or grading operations be performed without the presence of a qualified geotechnical engineer. An on-site, pre-job meeting with the owner, the developer, the contractor, and geotechnical engineer should occur prior to all grading related operations. Operations undertaken at the site without the geotechnical engineer present may result in exclusions of affected areas from the final compaction report for the project.

Grading of the subject site should be performed in accordance with the following recommendations as well as applicable portions of the California Building Code, and/or applicable local ordinances.

All areas to be graded should be stripped of significant vegetation and other deleterious materials.

It is our recommendation that any existing fills under any proposed flatwork and/or paved areas be removed and replaced with engineered compacted fill. If this is not done, premature structural distress (settlement) of the flatwork and pavement may occur. Any undocumented fills encountered during grading should be completely removed and cleaned of significant deleterious materials. These may then be reused as compacted fill.

Cavities created by removal of undocumented fill soils and/or subsurface obstructions should be thoroughly cleaned of loose soil, organic matter and other deleterious materials, shaped to provide access for construction equipment, and backfilled as recommended in the following Engineered Compacted Fill section of this report.

Initial Site Preparation

Any and all existing uncontrolled fills and any loose/soft native alluvial soils should be removed from structural areas and areas to receive structural fills. The data developed during this investigation indicates that removals on the order of 5 to 7 feet will be required to encounter competent older alluvium. However, deeper removals may be required locally. Removals should extend horizontally at a distance equal to the depth of the removals plus proposed fill and at least a minimum of 5 feet. The actual depths of removals should be determined during the grading operation by observation and/or by in-place density testing.

Preparation of Fill Areas

After completion of the removals described above and prior to placing fill, the surfaces of all areas to receive fill should be scarified to a depth of at least 6 inches. The scarified soil should be brought to near optimum moisture content and compacted to a relative compaction of at least 90 percent (ASTM D 1557).

Preparation of Foundation Areas

All footings should rest upon a minimum of 24 inches of properly compacted fill material placed over competent natural alluvial soils. In areas where the required fill thickness is not accomplished by the removal of unsuitable soils, the footing areas should be further subexcavated to a depth of at least 24 inches below the proposed footing base grade, with the subexcavation extending at least 5 feet beyond the footing lines. The bottom of this excavation should then be scarified to a depth of at least 6 inches, brought to near

optimum moisture content, and recompacted to at least 90 percent relative compaction (ASTM D 1557) prior to refilling the excavation to grade as properly compacted fill. Fill areas should not be constructed so as to place structures across any area where the maximum depth of fill to minimum depth of fill is greater than a 3:1 ratio.

To provide adequate support, concrete slabs-on-grade should bear on a minimum of 24 inches of compacted soil. The final pad surfaces should be rolled to provide smooth, dense surfaces upon which to place the concrete.

Engineered Compacted Fill

The on-site soils should provide adequate quality fill material, provided they are free from organic matter and other deleterious materials. Unless approved by the geotechnical engineer, rock or similar irreducible material with a maximum dimension greater than 6 inches should not be buried or placed in fills.

Import fill, if required, should be inorganic, non-expansive granular soils free from rocks or lumps greater than 6 inches in maximum dimension. Sources for import fill should be approved by the geotechnical engineer prior to their use.

Fill should be spread in maximum 8-inch uniform, loose lifts, with each lift brought to near optimum moisture content prior to, during and/or after placement, and compacted to a relative compaction of at least 90 percent in accordance with ASTM D 1557.

Based upon the relative compaction of the near surface soils determined during this investigation and the relative compaction anticipated for compacted fill soil, we estimate a compaction shrinkage factor of approximately 10 to 15 percent. Therefore, 1.10 to 1.15 cubic yards of in-place materials would be necessary to yield one cubic yard of properly compacted fill material. Subsidence is anticipated to be 0.10 feet. These values are for estimating purposes only, and are exclusive of losses due to stripping or the removal of subsurface obstructions.

These values may vary due to differing conditions within the project boundaries and the limitations of this investigation. Shrinkage should be monitored during construction. If percentages vary, provisions should be made to revise final grades or adjust quantities of borrow or export.

Short-Term Excavations

Following the California Occupational and Safety Health Act (CAL-OSHA) requirements, excavations 5 feet deep and greater should be sloped or shored. All excavations and shoring should conform to CAL-OSHA requirements.

Short-term excavations 5-feet deep and greater shall conform to Title 8 of the California Code of Regulations, Construction Safety Orders, Section 1504 and 1539 through 1547. Based on our exploratory borings, it appears that Type C soil is the predominant type of soil on the project and all short-term excavations should be based on this type of soil. Deviation from the standard short-term slopes are permitted using Option 4, Design by a Registered Professional Engineer (Section 1541.1).

Short-term slope construction and maintenance are the responsibility of the contractor, and should be a consideration of his methods of operation and the actual soil conditions encountered.

Slope Construction

Preliminary data indicates that cut and fill slopes should be constructed no steeper than two horizontal to one vertical. Fill slopes should be overfilled during construction and then cut back to expose fully compacted soil. A suitable alternative would be to compact the slopes during construction, then roll the final slopes to provide dense, erosion-resistant surfaces.

Slope Protection

Since the site soils are susceptible to erosion by running water, measures should be provided to prevent surface water from flowing over slope faces. Slopes at the project should be planted with a deep rooted ground cover as soon as possible after completion. The use of succulent ground covers such as iceplant or sedum is not recommended. If watering is necessary to sustain plant growth on slopes, the watering system should be monitored to assure proper operation and to prevent over watering.

Foundation Design

If the site is prepared as recommended, the proposed structures may be safely founded on conventional shallow foundations, either individual spread footings and/or continuous wall footings, bearing on a minimum of 24 inches of engineered compacted fill.

All foundations should have a minimum width of 12 inches and should be established a minimum of 12 inches below lowest adjacent grade.

For the minimum width and depth, spread foundations may be designed using an allowable bearing pressure of 1,800 psf. This bearing pressure may be increased by 400 psf for each additional foot of width, and by 400 psf for each additional foot of depth, up to a maximum of 4,000 psf. For example, a footing 3 feet wide and embedded 2 feet will have an allowable bearing pressure of 3,000 psf.

The above values are net pressures; therefore, the weight of the foundations and the backfill over the foundations may be neglected when computing dead loads. The values apply to the maximum edge pressure for foundations subjected to eccentric loads or overturning. The recommended pressures apply for the total of dead plus frequently applied live loads, and incorporate a factor of safety of at least 3.0. The allowable bearing pressures may be increased by one-third for temporary wind or seismic loading. The resultant of the combined vertical and lateral seismic loads should act within the middle one-third of the footing width. The maximum calculated edge pressure under the toe of foundations subjected to eccentric loads or overturning should not exceed the increased allowable pressure. Buildings should be setback from slopes in accordance with the California Building Code.

Resistance to lateral loads will be provided by passive earth pressure and base friction. For footings bearing against compacted fill, passive earth pressure may be considered to be developed at a rate of 400 pounds per square foot per foot of depth. Base friction may be computed at 0.30 times the normal load. Base friction and passive earth pressure may be combined without reduction. These values are for dead load plus live load and may be increased by one-third for wind or seismic loading.

Settlement

Total settlement of individual foundations will vary depending on the width of the foundation and the actual load supported. Maximum settlement of shallow foundations designed and constructed in accordance with the preceding recommendations are estimated to be on the order of 0.5 inch. Differential settlements between adjacent footings should be about one-half of the total settlement. Settlement of all foundations is expected to occur rapidly, primarily as a result of elastic compression of supporting soils as the loads are applied, and should be essentially completed shortly after initial application of the loads.

Building Area Slab-On-Grade

Concrete floor slabs should bear on a minimum of 24 inches of engineered compacted fill placed over competent native materials. The final pad surfaces should be rolled to provide smooth, dense surfaces upon which to place the concrete.

Slabs to receive moisture-sensitive coverings should be provided with a moisture vapor barrier. This barrier may consist of an impermeable membrane. Two inches of sand over the membrane will reduce punctures and aid in obtaining a satisfactory concrete cure. The sand should be moistened just prior to placing of concrete. The slabs should be protected from rapid and excessive moisture loss which could result in slab curling. Careful attention should be given to slab curing procedures, as the site area is subject to large temperature extremes, humidity, and strong winds.

Exterior Flatwork

To provide adequate support, exterior flatwork improvements should rest on a minimum of 12 inches of soil compacted to at least 90 percent (ASTM D 1557).

Flatwork surface should be sloped a minimum of 1 percent away from buildings and slopes, to approved drainage structures.

Wall Pressures

The design of footings for retaining structures should be performed in accordance with the recommendations described earlier under Preparation of Foundation Areas and Foundation Design. For design of retaining wall footings, the resultant of the applied loads should act in the middle one-third of the footing, and the maximum edge pressure should not exceed the basic allowable value without increase.

For design of retaining walls unrestrained against movement at the top, we recommend an equivalent fluid density of 48 pounds per cubic foot (pcf) be used. This assumes level backfill consisting of recompacted, non-expansive, native soils placed against the structures and with the backcut slope extending upward from the base of the stem at 35 degrees from the vertical or flatter.

To avoid overstressing or excessive tilting during placement of backfill behind walls, heavy compaction equipment should not be allowed within the zone delineated by a 45 degree line extending from the base of the wall to the fill surface.

The backfill directly behind the walls should be compacted using light equipment such as hand operated vibrating plates and rollers. No material larger than 3-inches in diameter should be placed in direct contact with the wall.

Wall pressures should be verified prior to construction, when the actual backfill materials and conditions have been determined. Recommended pressures are applicable only to level, non-expansive, properly drained backfill (with no additional surcharge loadings).

If inclined backfills are proposed, this firm should be contacted to develop appropriate active earth pressure parameters. Toe bearing pressure for non-structural walls on soils, not prepared as described earlier under Preparation of Foundation Areas, should not exceed California Building Code values.

Sulfate Protection

The results of the soluble sulfate tests conducted on selected subgrade soils expected to be encountered at foundation levels are presented on Enclosure C.

Based on the test results it appears that there is a negligible sulfate exposure to concrete elements in contact with on site soils. The CBC, therefore, does not recommend special design criteria for concrete elements in conduct with such materials.

Preliminary Pavement Design

Testing and design for preliminary on-site pavement was conducted in accordance with the California Highway Design Manual. Based upon our preliminary sampling and testing, and upon Traffic Index indicated by the City of Moreno Valley Standard Plans (2018), it appears that the structural section tabulated below should provide satisfactory pavement for the subject pavement improvements:

AREA	T.I.	DESIGN R-VALUE	PRELIMINARY SECTION
Local Street	6.0	30	0.35' AC*/0.70' CAB
AC - Asphalt Concrete CAB - Crushed Aggregate Base * City of Moreno Valley minimum			

The above structural section is predicated upon 90 percent relative compaction (ASTM D 1557) of all utility trench backfills and 95 percent relative compaction (ASTM D 1557) of the upper 12 inches of pavement subgrade soils and of any aggregate base utilized.

In addition, the aggregate base should meet specifications for Crushed Aggregate Base.

In areas of the pavement which will receive high abrasion loads due to start-ups and stops, or where trucks will move on a tight turning radius, consideration should be given to installing concrete pads. Such pads should be a minimum of 0.5-foot thick concrete, with a 0.35-foot thick aggregate base. Concrete pads are also recommended in areas adjacent to trash storage areas where heavier loads will occur due to operation of trucks lifting trash dumpsters.

It should be noted that all of the above pavement design was based upon the results of preliminary sampling and testing, and should be verified by additional sampling and testing during construction when the actual subgrade soils are exposed.

Infiltration

Based upon our field investigation and infiltration test data, the site soils are not considered suitable for infiltration or percolation. Therefore water quality storm water systems should not incorporate on-site infiltration/percolation when determining storm water treatment capacity.

Construction Monitoring

Post investigative services are an important and necessary continuation of this investigation. Project plans and specifications should be reviewed by the project geotechnical consultant prior to construction to confirm that the intent of the

recommendations presented herein have been incorporated into the design. Additional expansion index, R-value, and soluble sulfate testing may be required during site rough grading.

During construction, sufficient and timely geotechnical observation and testing should be provided to correlate the findings of this investigation with the actual subsurface conditions exposed during construction. Items requiring observation and testing include, but are not necessarily limited to, the following:

1. Site preparation-stripping and removals.

2. Excavations, including approval of the bottom of excavation prior to filling.

3. Scarifying and recompacting prior to fill placement.

4. Subgrade preparation for pavements and slabs-on-grade.

5. Placement of engineered compacted fill and backfill, including approval of fill materials and the performance of sufficient density tests to evaluate the degree of compaction being achieved.

6. Foundation excavations.

LIMITATIONS

This report contains geotechnical conclusions and recommendations developed solely for use by Passco Pacifica, LLC, and their design consultants, for the purposes described earlier. It may not contain sufficient information for other uses or the purposes of other parties. The contents should not be extrapolated to other areas or used for other facilities without consulting LOR Geotechnical Group, Inc.

The recommendations are based on interpretations of the subsurface conditions concluded from information gained from subsurface explorations and a surficial site reconnaissance. The interpretations may differ from actual subsurface conditions, which can vary horizontally and vertically across the site. If conditions are encountered during the construction of the project which differ significantly from those presented in this report, this firm should be notified immediately in order that we may assess the impact to the recommendations provided.

Due to possible subsurface variations, all aspects of field construction addressed in this report should be observed and tested by the project geotechnical consultant.

If parties other than LOR Geotechnical Group, Inc., provide construction monitoring services, they must be notified that they will be required to assume responsibility for the geotechnical phase of the project being completed by concurring with the recommendations provided in this report or by providing alternative recommendations.

The report was prepared using generally accepted geotechnical engineering practices under the direction of a state licensed geotechnical engineer. No warranty, expressed or implied, is made as to conclusions and professional advice included in this report. Any persons using this report for bidding or construction purposes should perform such independent investigations as deemed necessary to satisfy themselves as to the surface and subsurface conditions to be encountered and the procedures to be used in the performance of work on this project.

TIME LIMITATIONS

The findings of this report are valid as of this date. Changes in the condition of a property can, however, occur with the passage of time, whether they be due to natural processes or the work of man on this or adjacent properties. In addition, changes in the Standards-of-Practice and/or Governmental Codes may occur. Due to such changes, the findings of this report may be invalidated wholly or in part by changes beyond our control. Therefore, this report should not be relied upon after a significant amount of time without a review by LOR Geotechnical Group, Inc. verifying the suitability of the conclusions and recommendations.

Project No. 33591.1

CLOSURE

It has been a pleasure to assist you with this project. We look forward to being of further assistance to you as construction begins. Should conditions be encountered during construction that appear to be different than as indicated by this report, please contact this office immediately in order that we might evaluate these conditions.

Should you have any questions regarding this report, please do not hesitate to contact our office at your convenience.

Respectfully submitted,
LOR Geotechnical Group, Inc.

Description of Geologic Units

Qvof — **Very old alluvial fan deposits (early Pleistocene)**—Mostly well-dissected, well-indurated, reddish-brown sand deposits, containing minor gravel. Commonly contains duripans and locally silcretes. Forms widespread deposits north and south of Moreno Valley, flanking bedrock areas. Deposits on older erosion surfaces lack diagnostic features, and may or may not be alluvial fan deposits

Qyf — **Young alluvial-fan deposits (Holocene and latest Pleistocene)**—Gray-hued cobble- and gravel-sand deposits derived from lithicly diverse sedimentary units present in San Timoteo Badlands. Large alluvial fan on north side of Lakeview Mountains, and several smaller fans in southern part of quadrangle are mainly brown and brownish-gray sand derived entirely from tonalite of Lakeview Mountain pluton. Southeast corner of quadrangle underlain by distal end of large Qyf alluvial fan emanating from Bautista Canyon to southeast; consists of gray-hued, unconsolidated, fine-grained arkosic sand derived from varied metamorphic and granitic lithologies. In vicinity of Laborde and Lamb Canyons, young alluvial fan deposits are divided into four subunits based on sequential terrace development:

APPENDIX B

Field Investigation Program and Boring Logs

APPENDIX B
FIELD INVESTIGATION

Subsurface Exploration

The site was investigated on November 7, 2019 and consisted of advancing 5 exploratory borings to depths between 21.5 feet and 51.5 feet below the existing ground surface. The approximate locations of the borings are shown on Enclosure A-2, within Appendix A.

The drilling exploration was conducted using a truck-mounted Mobile B-61 drill rig equipped with 8-inch diameter hollow stem augers. The soils were continuously logged by our geologist who inspected the site, created detailed logs of the borings, obtained undisturbed, as well as disturbed, soil samples for evaluation and testing, and classified the soils by visual examination in accordance with the Unified Soil Classification System.

Relatively undisturbed samples of the subsoils were obtained at a maximum interval of 5 feet. The samples were recovered by using a California split barrel sampler of 2.50 inch inside diameter and 3.25 inch outside diameter or a Standard Penetration Sampler (SPT) from the ground surface to the total depth explored. The samplers were driven by a 140 pound automatic trip hammer dropped from a height of 30 inches. The number of hammer blows required to drive the sampler into the ground the final 12 inches were recorded and further converted to an equivalent SPT N-value. Factors such as efficiency of the automatic trip hammer used during this investigation (80%), borehole diameter (8"), and rod length at the test depth were considered for further computing of equivalent SPT N-values corrected for field procedures (N60) which are included in the boring logs, Enclosures B-1 through B-5.

The undisturbed soil samples were retained in brass sample rings of 2.42 inches in diameter and 1.00 inch in height, and placed in sealed containers. Disturbed soil samples were obtained at selected levels within the borings and placed in sealed containers for transport to the laboratory.

All samples obtained were taken to our geotechnical laboratory for storage and testing. Detailed logs of the borings are presented on the enclosed Boring Logs, Enclosures B-1 through B-5. A Boring Log Legend and Soil Classification Chart are presented on Enclosures B-i and B-ii, respectively.

APPENDIX C

Laboratory Testing Program and Test Results

APPENDIX C
LABORATORY TESTING

General

Selected soil samples obtained from our borings were tested in our geotechnical laboratory to evaluate the physical properties of the soils affecting foundation design and construction procedures. The laboratory testing program performed in conjunction with our investigation included in-place moisture content and dry density, laboratory compaction characteristics, direct shear, sieve analysis, sand equivalent, R-value, consolidation, expansion index, Atterberg limits, and soluble sulfate content. Descriptions of the laboratory tests are presented in the following paragraphs:

Moisture Density Tests

The moisture content and dry density information provides an indirect measure of soil consistency for each stratum, and can also provide a correlation between soils on this site. The dry unit weight and field moisture content were determined for selected undisturbed samples, in accordance with ASTM D 2922 and ASTM D 2216, respectively, and the results are shown on the Boring Logs, Enclosures B-1 through B-5 for convenient correlation with the soil profile.

Laboratory Compaction

Selected soil samples were tested in the laboratory to determine compaction characteristics using the ASTM D 1557 compaction test method. The results are presented in the following table:

LABORATORY COMPACTION				
Boring Number	**Sample Depth (feet)**	**Soil Description (U.S.G.S.)**	**Maximum Dry Density (pcf)**	**Optimum Moisture Content (percent)**
B-1	0-3	(SM) Silty Sand	134.0	8.5

Direct Shear Tests

Shear tests are performed with a direct shear machine in general accordance with ASTM D 3080 at a constant rate-of-strain (usually 0.04 inches/minute). The machine is designed to test a sample partially extruded from a sample ring in single shear. Samples are tested at varying normal loads in order to evaluate the shear strength parameters, angle of internal friction and cohesion. Samples are tested in a remolded condition (90 percent relative compaction per ASTM D 1557) and soaked, to represent the worst case conditions expected in the field.

The results of the shear tests are presented in the following table:

DIRECT SHEAR TESTS				
Boring Number	**Sample Depth (feet)**	**Soil Description (U.S.G.S.)**	**Angle of Internal Friction (degrees)**	**Apparent Cohesion (psf)**
B-1	0-3	(SM) Silty Sand	28	200

Sieve Analysis

A quantitative determination of the grain size distribution was performed for selected samples in accordance with the ASTM D 422 laboratory test procedure. The determination is performed by passing the soil through a series of sieves, and recording the weights of retained particles on each screen. The results of the sieve analyses are presented graphically on Enclosure C-1.

Sand Equivalent

The sand equivalent of selected soils were evaluated using the California Sand Equivalent Test Method, Caltrans Number 217. The results of the sand equivalent tests are presented with the grain size distribution analyses on Enclosure C-1.

R-Value Test

Soil samples were obtained at probable pavement subgrade level and was tested to determine its R-value using the California R-Value Test Method, Caltrans Number 301. The results of the R-value test is presented on Enclosure C-1.

Consolidation Tests

The apparatus used for the consolidation tests (odometer) is designed to test a one-inch high portion of the undisturbed soil sample as contained in a sample ring. Porous stones and filler paper are placed in contact with the top and bottom of the specimen to permit the addition or release of water. Loads are applied to the test specimen in specified increments, and the resulting axial deformations are recorded. The results are plotted as log of axial pressure versus consolidation or compression, expressed as strain or sample height.

Samples are tested at field and greater-than field moisture contents. The results are shown on Enclosures C-2 through C-5.

Expansion Index Tests

Remolded samples are tested to determine their expansion potential in accordance with the Expansion Index (EI) test. The test is performed in accordance with the Uniform Building Code Standard 18-2. The test results are presented in the following table:

EXPANSION INDEX TESTS				
Boring Number	**Sample Depth (feet)**	**Soil Description (U.S.C.S.)**	**Expansion Index (EI)**	**Expansion Potential**
B-1	0-3	(SM) Silty Sand	11	Very Low

Atterberg Limits

Selected samples of the fine-grained soil units encountered at the site are tested for their Atterberg limits in accordance with ASTM D 4318. The results of these tests are presented on Enclosure C-6.

Soluble Sulfate Content Tests

The soluble sulfate content of selected subgrade soils was evaluated and the concentration of soluble sulfates in the soils was determined by measuring the optical density of a barium sulfate precipitate. The precipitate results from a reaction of barium chloride with water extractions from the soil samples. The measured optical density is correlated with readings on precipitates of known sulfate concentrations. The test results are presented on the following table:

SOLUBLE SULFATE CONTENT TESTS			
Boring Number	**Sample Depth (feet)**	**Soil Description (U.S.G.S.)**	**Sulfate Content (percent by weight)**
B-1	0-3	(SM) Silty Sand	< 0.0085
B-4	0-3	(SM) Silty Sand	< 0.0075
B-5	0-3	(SM) Silty Sand	< 0.0055

Appendix 8: Source Control

Pollutant Sources/Source Control Checklist

STORMWATER POLLUTANT SOURCES/SOURCE CONTROL CHECKLIST

How to use this worksheet (also see instructions in Section G of the WQMP Template):

1. Review Column 1 and identify which of these potential sources of stormwater pollutants apply to your site. Check each box that applies.
2. Review Column 2 and incorporate all of the corresponding applicable BMPs in your WQMP Exhibit.
3. Review Columns 3 and 4 and incorporate all of the corresponding applicable permanent controls and operational BMPs in your WQMP. Use the format shown in Table G.1on page 23 of this WQMP Template. Describe your specific BMPs in an accompanying narrative, and explain any special conditions or situations that required omitting BMPs or substituting alternative BMPs for those shown here.

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
☒ A. **On-site storm drain inlets**	☒ **Locations of inlets.**	☒ **Mark all inlets with the words "Only Rain Down the Storm Drain" or similar. Catch Basin Markers may be available from the Riverside County Flood Control and Water Conservation District, call 951.955.1200 to verify.**	☒ **Maintain and periodically repaint or replace inlet markings.** ☒ **Provide stormwater pollution prevention information to new site owners, lessees, or operators.** ☒ **See applicable operational BMPs in Fact Sheet SC-44, "Drainage System Maintenance," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com** ☒ **Include the following in lease agreements: "Tenant shall not allow anyone to discharge anything to storm drains or to store or deposit materials so as to create a potential discharge to storm drains."**
☐ B. **Interior floor drains and elevator shaft sump pumps**		☐ **State that interior floor drains and elevator shaft sump pumps will be plumbed to sanitary sewer.**	☐ **Inspect and maintain drains to prevent blockages and overflow.**
☐ C. **Interior parking garages**		☐ **State that parking garage floor drains will be plumbed to the sanitary sewer.**	☐ **Inspect and maintain drains to prevent blockages and overflow.**

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
☐ D1. **Need for future indoor & structural pest control**		☐ **Note building design features that discourage entry of pests.**	☐ **Provide Integrated Pest Management information to owners, lessees, and operators.**
☒ D2. **Landscape/ Outdoor Pesticide Use**	☐ **Show locations of native trees or areas of shrubs and ground cover to be undisturbed and retained.** ☒ **Show self-retaining landscape areas, if any.** ☒ **Show stormwater treatment and hydrograph modification management BMPs. (See instructions in Chapter 3, Step 5 and guidance in Chapter 5.)**	**State that final landscape plans will accomplish all of the following.** ☐ **Preserve existing native trees, shrubs, and ground cover to the maximum extent possible.** ☒ **Design landscaping to minimize irrigation and runoff, to promote surface infiltration where appropriate, and to minimize the use of fertilizers and pesticides that can contribute to stormwater pollution.** ☒ **Where landscaped areas are used to retain or detain stormwater, specify plants that are tolerant of saturated soil conditions.** ☒ **Consider using pest-resistant plants, especially adjacent to hardscape.** **To insure successful establishment, select plants appropriate to site soils, slopes, climate, sun, wind, rain, land use, air movement, ecological consistency, and plant interactions.**	☒ **Maintain landscaping using minimum or no pesticides.** ☒ **See applicable operational BMPs in "What you should know for…..Landscape and Gardening"** at http://rcflood.org/stormwater/**Error! Hyperlink reference not valid.** ☒ **Provide IPM information to new owners, lessees and operators.**

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
☒ E. **Pools, spas, ponds, decorative fountains, and other water features.**	☒ **Show location of water feature and a sanitary sewer cleanout in an accessible area within 10 feet. (Exception: Public pools must be plumbed according to County Department of Environmental Health Guidelines.)**	**If the Co-Permittee requires pools to be plumbed to the sanitary sewer, place a note on the plans and state in the narrative that this connection will be made according to local requirements.**	☒ **See applicable operational BMPs in** "Guidelines for Maintaining Your Swimming Pool, Jacuzzi and Garden Fountain" at http://rcflood.org/stormwater/
☐ F. **Food service**	☐ **For restaurants, grocery stores, and other food service operations, show location (indoors or in a covered area outdoors) of a floor sink or other area for cleaning floor mats, containers, and equipment.** ☐ **On the drawing, show a note that this drain will be connected to a grease interceptor before discharging to the sanitary sewer.**	☐ **Describe the location and features of the designated cleaning area.** ☐ **Describe the items to be cleaned in this facility and how it has been sized to insure that the largest items can be accommodated.**	☐ **See the brochure, "**The Food Service Industry Best Management Practices for: Restaurants, Grocery Stores, Delicatessens and Bakeries" at http://rcflood.org/stormwater/ **Provide this brochure to new site owners, lessees, and operators.**
☐ G. **Refuse areas**	☐ **Show where site refuse and recycled materials will be handled and stored for pickup. See local municipal requirements for sizes and other details of refuse areas.** ☐ **If dumpsters or other receptacles are outdoors, show how the designated area will be covered, graded, and paved to prevent run-on and show locations of berms to prevent runoff from the area.** ☐ **Any drains from dumpsters, compactors, and tallow bin areas shall be connected to a grease removal device before discharge to sanitary sewer.**	☐ **State how site refuse will be handled and provide supporting detail to what is shown on plans.** ☐ **State that signs will be posted on or near dumpsters with the words "Do not dump hazardous materials here" or similar.**	☐ **State how the following will be implemented:** **Provide adequate number of receptacles. Inspect receptacles regularly; repair or replace leaky receptacles. Keep receptacles covered. Prohibit/prevent dumping of liquid or hazardous wastes. Post "no hazardous materials" signs. Inspect and pick up litter daily and clean up spills immediately. Keep spill control materials available on-site. See Fact Sheet SC-34, "Waste Handling and Disposal" in the CASQA Stormwater Quality Handbooks at** www.cabmphandbooks.com

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
❑ H. **Industrial processes.**	❑ **Show process area.**	❑ **If industrial processes are to be located on site, state: "All process activities to be performed indoors. No processes to drain to exterior or to storm drain system."**	❑ **See Fact Sheet SC-10, "Non-Stormwater Discharges" in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com** See the brochure "Industrial & Commercial Facilities Best Management Practices for: Industrial, Commercial Facilities" at http://rcflood.org/stormwater/

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
❑ I. Outdoor storage of equipment or materials. (See rows J and K for source control measures for vehicle cleaning, repair, and maintenance.)	❑ Show any outdoor storage areas, including how materials will be covered. Show how areas will be graded and bermed to prevent run-on or run-off from area. ❑ Storage of non-hazardous liquids shall be covered by a roof and/or drain to the sanitary sewer system, and be contained by berms, dikes, liners, or vaults. ❑ Storage of hazardous materials and wastes must be in compliance with the local hazardous materials ordinance and a Hazardous Materials Management Plan for the site.	Include a detailed description of materials to be stored, storage areas, and structural features to prevent pollutants from entering storm drains. Where appropriate, reference documentation of compliance with the requirements of Hazardous Materials Programs for: ▪ Hazardous Waste Generation ▪ Hazardous Materials Release Response and Inventory ▪ California Accidental Release (CalARP) ▪ Aboveground Storage Tank ▪ Uniform Fire Code Article 80 Section 103(b) & (c) 1991 ▪ Underground Storage Tank www.cchealth.org/groups/hazmat/	❑ See the Fact Sheets SC-31, "Outdoor Liquid Container Storage" and SC-33, "Outdoor Storage of Raw Materials " in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
❑ J. **Vehicle and Equipment Cleaning**	❑ **Show on drawings as appropriate:** **(1) Commercial/industrial facilities having vehicle/equipment cleaning needs shall either provide a covered, bermed area for washing activities or discourage vehicle/equipment washing by removing hose bibs and installing signs prohibiting such uses.** **(2) Multi-dwelling complexes shall have a paved, bermed, and covered car wash area (unless car washing is prohibited on-site and hoses are provided with an automatic shut-off to discourage such use).** **(3) Washing areas for cars, vehicles, and equipment shall be paved, designed to prevent run-on to or runoff from the area, and plumbed to drain to the sanitary sewer.** **(4) Commercial car wash facilities shall be designed such that no runoff from the facility is discharged to the storm drain system. Wastewater from the facility shall discharge to the sanitary sewer, or a wastewater reclamation system shall be installed.**	❑ **If a car wash area is not provided, describe any measures taken to discourage on-site car washing and explain how these will be enforced.**	**Describe operational measures to implement the following (if applicable):** ❑ **Washwater from vehicle and equipment washing operations shall not be discharged to the storm drain system.** Refer to "Outdoor Cleaning Activities and Professional Mobile Service Providers" for many of the Potential Sources of Runoff Pollutants categories below. Brochure can be found at http://rcflood.org/stormwater/ ❑**Car dealerships and similar may rinse cars with water only.**

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
❑ K. **Vehicle/Equipment Repair and Maintenance**	❑ **Accommodate all vehicle equipment repair and maintenance indoors. Or designate an outdoor work area and design the area to prevent run-on and runoff of stormwater.** ❑ **Show secondary containment for exterior work areas where motor oil, brake fluid, gasoline, diesel fuel, radiator fluid, acid-containing batteries or other hazardous materials or hazardous wastes are used or stored. Drains shall not be installed within the secondary containment areas.** ❑ **Add a note on the plans that states either (1) there are no floor drains, or (2) floor drains are connected to wastewater pretreatment systems prior to discharge to the sanitary sewer and an industrial waste discharge permit will be obtained.**	❑ **State that no vehicle repair or maintenance will be done outdoors, or else describe the required features of the outdoor work area.** ❑ **State that there are no floor drains or if there are floor drains, note the agency from which an industrial waste discharge permit will be obtained and that the design meets that agency's requirements.** ❑ **State that there are no tanks, containers or sinks to be used for parts cleaning or rinsing or, if there are, note the agency from which an industrial waste discharge permit will be obtained and that the design meets that agency's requirements.**	**In the Stormwater Control Plan, note that all of the following restrictions apply to use the site:** ❑ **No person shall dispose of, nor permit the disposal, directly or indirectly of vehicle fluids, hazardous materials, or rinsewater from parts cleaning into storm drains.** ❑ **No vehicle fluid removal shall be performed outside a building, nor on asphalt or ground surfaces, whether inside or outside a building, except in such a manner as to ensure that any spilled fluid will be in an area of secondary containment. Leaking vehicle fluids shall be contained or drained from the vehicle immediately.** ❑ **No person shall leave unattended drip parts or other open containers containing vehicle fluid, unless such containers are in use or in an area of secondary containment.** Refer to "Automotive Maintenance & Car Care Best Management Practices for Auto Body Shops, Auto Repair Shops, Car Dealerships, Gas Stations and Fleet Service Operations". Brochure can be found at http://rcflood.org/stormwater/ Refer to Outdoor Cleaning Activities and Professional Mobile Service Providers for many of the Potential Sources of Runoff Pollutants categories below. Brochure can be found at http://rcflood.org/stormwater/

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
❑ L. **Fuel Dispensing Areas**	❑ **Fueling areas[6] shall have impermeable floors (i.e., portland cement concrete or equivalent smooth impervious surface) that are: a) graded at the minimum slope necessary to prevent ponding; and b) separated from the rest of the site by a grade break that prevents run-on of stormwater to the maximum extent practicable.** ❑ **Fueling areas shall be covered by a canopy that extends a minimum of ten feet in each direction from each pump. [Alternative: The fueling area must be covered and the cover's minimum dimensions must be equal to or greater than the area within the grade break or fuel dispensing area[1].] The canopy [or cover] shall not drain onto the fueling area.**		❑ **The property owner shall dry sweep the fueling area routinely.** ❑ **See the Fact Sheet SD-30 , "Fueling Areas" in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com**

[6] The fueling area shall be defined as the area extending a minimum of 6.5 feet from the corner of each fuel dispenser or the length at which the hose and nozzle assembly may be operated plus a minimum of one foot, whichever is greater.

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
❑ M. Loading Docks	❑ Show a preliminary design for the loading dock area, including roofing and drainage. Loading docks shall be covered and/or graded to minimize run-on to and runoff from the loading area. Roof downspouts shall be positioned to direct stormwater away from the loading area. Water from loading dock areas shall be drained to the sanitary sewer, or diverted and collected for ultimate discharge to the sanitary sewer. ❑ Loading dock areas draining directly to the sanitary sewer shall be equipped with a spill control valve or equivalent device, which shall be kept closed during periods of operation. ❑ Provide a roof overhang over the loading area or install door skirts (cowling) at each bay that enclose the end of the trailer.		❑ Move loaded and unloaded items indoors as soon as possible. ❑ See Fact Sheet SC-30, "Outdoor Loading and Unloading," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE

Site Design & Landscape Planning SD-10

Design Objectives

- ☑ Maximize Infiltration
- ☑ Provide Retention
- ☑ Slow Runoff
- ☑ Minimize Impervious Land Coverage
- Prohibit Dumping of Improper Materials
- Contain Pollutants
- Collect and Convey

Description

Each project site possesses unique topographic, hydrologic, and vegetative features, some of which are more suitable for development than others. Integrating and incorporating appropriate landscape planning methodologies into the project design is the most effective action that can be done to minimize surface and groundwater contamination from stormwater.

Approach

Landscape planning should couple consideration of land suitability for urban uses with consideration of community goals and projected growth. Project plan designs should conserve natural areas to the extent possible, maximize natural water storage and infiltration opportunities, and protect slopes and channels.

Suitable Applications

Appropriate applications include residential, commercial and industrial areas planned for development or redevelopment.

Design Considerations

Design requirements for site design and landscapes planning should conform to applicable standards and specifications of agencies with jurisdiction and be consistent with applicable General Plan and Local Area Plan policies.

SD-10 Site Design & Landscape Planning

Designing New Installations

Begin the development of a plan for the landscape unit with attention to the following general principles:

- Formulate the plan on the basis of clearly articulated community goals. Carefully identify conflicts and choices between retaining and protecting desired resources and community growth.
- Map and assess land suitability for urban uses. Include the following landscape features in the assessment: wooded land, open unwooded land, steep slopes, erosion-prone soils, foundation suitability, soil suitability for waste disposal, aquifers, aquifer recharge areas, wetlands, floodplains, surface waters, agricultural lands, and various categories of urban land use. When appropriate, the assessment can highlight outstanding local or regional resources that the community determines should be protected (e.g., a scenic area, recreational area, threatened species habitat, farmland, fish run). Mapping and assessment should recognize not only these resources but also additional areas needed for their sustenance.

Project plan designs should conserve natural areas to the extent possible, maximize natural water storage and infiltration opportunities, and protect slopes and channels.

Conserve Natural Areas during Landscape Planning

If applicable, the following items are required and must be implemented in the site layout during the subdivision design and approval process, consistent with applicable General Plan and Local Area Plan policies:

- Cluster development on least-sensitive portions of a site while leaving the remaining land in a natural undisturbed condition.
- Limit clearing and grading of native vegetation at a site to the minimum amount needed to build lots, allow access, and provide fire protection.
- Maximize trees and other vegetation at each site by planting additional vegetation, clustering tree areas, and promoting the use of native and/or drought tolerant plants.
- Promote natural vegetation by using parking lot islands and other landscaped areas.
- Preserve riparian areas and wetlands.

Maximize Natural Water Storage and Infiltration Opportunities Within the Landscape Unit

- Promote the conservation of forest cover. Building on land that is already deforested affects basin hydrology to a lesser extent than converting forested land. Loss of forest cover reduces interception storage, detention in the organic forest floor layer, and water losses by evapotranspiration, resulting in large peak runoff increases and either their negative effects or the expense of countering them with structural solutions.
- Maintain natural storage reservoirs and drainage corridors, including depressions, areas of permeable soils, swales, and intermittent streams. Develop and implement policies and

regulations to discourage the clearing, filling, and channelization of these features. Utilize them in drainage networks in preference to pipes, culverts, and engineered ditches.

- Evaluating infiltration opportunities by referring to the stormwater management manual for the jurisdiction and pay particular attention to the selection criteria for avoiding groundwater contamination, poor soils, and hydrogeological conditions that cause these facilities to fail. If necessary, locate developments with large amounts of impervious surfaces or a potential to produce relatively contaminated runoff away from groundwater recharge areas.

Protection of Slopes and Channels during Landscape Design

- Convey runoff safely from the tops of slopes.
- Avoid disturbing steep or unstable slopes.
- Avoid disturbing natural channels.
- Stabilize disturbed slopes as quickly as possible.
- Vegetate slopes with native or drought tolerant vegetation.
- Control and treat flows in landscaping and/or other controls prior to reaching existing natural drainage systems.
- Stabilize temporary and permanent channel crossings as quickly as possible, and ensure that increases in run-off velocity and frequency caused by the project do not erode the channel.
- Install energy dissipaters, such as riprap, at the outlets of new storm drains, culverts, conduits, or channels that enter unlined channels in accordance with applicable specifications to minimize erosion. Energy dissipaters shall be installed in such a way as to minimize impacts to receiving waters.
- Line on-site conveyance channels where appropriate, to reduce erosion caused by increased flow velocity due to increases in tributary impervious area. The first choice for linings should be grass or some other vegetative surface, since these materials not only reduce runoff velocities, but also provide water quality benefits from filtration and infiltration. If velocities in the channel are high enough to erode grass or other vegetative linings, riprap, concrete, soil cement, or geo-grid stabilization are other alternatives.
- Consider other design principles that are comparable and equally effective.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define “redevelopment” in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of “ redevelopment” must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under “designing new installations” above should be followed.

SD-10 Site Design & Landscape Planning

Redevelopment may present significant opportunity to add features which had not previously been implemented. Examples include incorporation of depressions, areas of permeable soils, and swales in newly redeveloped areas. While some site constraints may exist due to the status of already existing infrastructure, opportunities should not be missed to maximize infiltration, slow runoff, reduce impervious areas, disconnect directly connected impervious areas.

Roof Runoff Controls SD-11

Rain Garden

Design Objectives

- ☑ Maximize Infiltration
- ☑ Provide Retention
- ☑ Slow Runoff
- Minimize Impervious Land Coverage
- Prohibit Dumping of Improper Materials
- ☑ Contain Pollutants
- Collect and Convey

Description

Various roof runoff controls are available to address stormwater that drains off rooftops. The objective is to reduce the total volume and rate of runoff from individual lots, and retain the pollutants on site that may be picked up from roofing materials and atmospheric deposition. Roof runoff controls consist of directing the roof runoff away from paved areas and mitigating flow to the storm drain system through one of several general approaches: cisterns or rain barrels; dry wells or infiltration trenches; pop-up emitters, and foundation planting. The first three approaches require the roof runoff to be contained in a gutter and downspout system. Foundation planting provides a vegetated strip under the drip line of the roof.

Approach

Design of individual lots for single-family homes as well as lots for higher density residential and commercial structures should consider site design provisions for containing and infiltrating roof runoff or directing roof runoff to vegetative swales or buffer areas. Retained water can be reused for watering gardens, lawns, and trees. Benefits to the environment include reduced demand for potable water used for irrigation, improved stormwater quality, increased groundwater recharge, decreased runoff volume and peak flows, and decreased flooding potential.

Suitable Applications

Appropriate applications include residential, commercial and industrial areas planned for development or redevelopment.

Design Considerations

Designing New Installations

Cisterns or Rain Barrels

One method of addressing roof runoff is to direct roof downspouts to cisterns or rain barrels. A cistern is an above ground storage vessel with either a manually operated valve or a permanently open outlet. Roof runoff is temporarily stored and then released for irrigation or infiltration between storms. The number of rain

barrels needed is a function of the rooftop area. Some low impact developers recommend that every house have at least 2 rain barrels, with a minimum storage capacity of 1000 liters. Roof barrels serve several purposes including mitigating the first flush from the roof which has a high volume, amount of contaminants, and thermal load. Several types of rain barrels are commercially available. Consideration must be given to selecting rain barrels that are vector proof and childproof. In addition, some barrels are designed with a bypass valve that filters out grit and other contaminants and routes overflow to a soak-away pit or rain garden.

If the cistern has an operable valve, the valve can be closed to store stormwater for irrigation or infiltration between storms. This system requires continual monitoring by the resident or grounds crews, but provides greater flexibility in water storage and metering. If a cistern is provided with an operable valve and water is stored inside for long periods, the cistern must be covered to prevent mosquitoes from breeding.

A cistern system with a permanently open outlet can also provide for metering stormwater runoff. If the cistern outlet is significantly smaller than the size of the downspout inlet (say ¼ to ½ inch diameter), runoff will build up inside the cistern during storms, and will empty out slowly after peak intensities subside. This is a feasible way to mitigate the peak flow increases caused by rooftop impervious land coverage, especially for the frequent, small storms.

Dry wells and Infiltration Trenches

Roof downspouts can be directed to dry wells or infiltration trenches. A dry well is constructed by excavating a hole in the ground and filling it with an open graded aggregate, and allowing the water to fill the dry well and infiltrate after the storm event. An underground connection from the downspout conveys water into the dry well, allowing it to be stored in the voids. To minimize sedimentation from lateral soil movement, the sides and top of the stone storage matrix can be wrapped in a permeable filter fabric, though the bottom may remain open. A perforated observation pipe can be inserted vertically into the dry well to allow for inspection and maintenance.

In practice, dry wells receiving runoff from single roof downspouts have been successful over long periods because they contain very little sediment. They must be sized according to the amount of rooftop runoff received, but are typically 4 to 5 feet square, and 2 to 3 feet deep, with a minimum of 1-foot soil cover over the top (maximum depth of 10 feet).

To protect the foundation, dry wells must be set away from the building at least 10 feet. They must be installed in solids that accommodate infiltration. In poorly drained soils, dry wells have very limited feasibility.

Infiltration trenches function in a similar manner and would be particularly effective for larger roof areas. An infiltration trench is a long, narrow, rock-filled trench with no outlet that receives stormwater runoff. These are described under Treatment Controls.

Pop-up Drainage Emitter

Roof downspouts can be directed to an underground pipe that daylights some distance from the building foundation, releasing the roof runoff through a pop-up emitter. Similar to a pop-up irrigation head, the emitter only opens when there is flow from the roof. The emitter remains flush to the ground during dry periods, for ease of lawn or landscape maintenance.

Roof Runoff Controls SD-11

Foundation Planting

Landscape planting can be provided around the base to allow increased opportunities for stormwater infiltration and protect the soil from erosion caused by concentrated sheet flow coming off the roof. Foundation plantings can reduce the physical impact of water on the soil and provide a subsurface matrix of roots that encourage infiltration. These plantings must be sturdy enough to tolerate the heavy runoff sheet flows, and periodic soil saturation.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of " redevelopment" must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under "designing new installations" above should be followed.

Efficient Irrigation SD-12

Design Objectives

- ☑ Maximize Infiltration
- ☑ Provide Retention
- ☑ Slow Runoff
- Minimize Impervious Land Coverage
- Prohibit Dumping of Improper Materials
- Contain Pollutants
- Collect and Convey

Description

Irrigation water provided to landscaped areas may result in excess irrigation water being conveyed into stormwater drainage systems.

Approach

Project plan designs for development and redevelopment should include application methods of irrigation water that minimize runoff of excess irrigation water into the stormwater conveyance system.

Suitable Applications

Appropriate applications include residential, commercial and industrial areas planned for development or redevelopment. (Detached residential single-family homes are typically excluded from this requirement.)

Design Considerations

Designing New Installations

The following methods to reduce excessive irrigation runoff should be considered, and incorporated and implemented where determined applicable and feasible by the Permittee:

- Employ rain-triggered shutoff devices to prevent irrigation after precipitation.
- Design irrigation systems to each landscape area's specific water requirements.
- Include design featuring flow reducers or shutoff valves triggered by a pressure drop to control water loss in the event of broken sprinkler heads or lines.
- Implement landscape plans consistent with County or City water conservation resolutions, which may include provision of water sensors, programmable irrigation times (for short cycles), etc.

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

SD-12 Efficient Irrigation

- Design timing and application methods of irrigation water to minimize the runoff of excess irrigation water into the storm water drainage system.
- Group plants with similar water requirements in order to reduce excess irrigation runoff and promote surface filtration. Choose plants with low irrigation requirements (for example, native or drought tolerant species). Consider design features such as:
  - Using mulches (such as wood chips or bar) in planter areas without ground cover to minimize sediment in runoff
  - Installing appropriate plant materials for the location, in accordance with amount of sunlight and climate, and use native plant materials where possible and/or as recommended by the landscape architect
  - Leaving a vegetative barrier along the property boundary and interior watercourses, to act as a pollutant filter, where appropriate and feasible
  - Choosing plants that minimize or eliminate the use of fertilizer or pesticides to sustain growth
- Employ other comparable, equally effective methods to reduce irrigation water runoff.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of " redevelopment" must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under "designing new installations" above should be followed.

Storm Drain Signage SD-13

Design Objectives

- Maximize Infiltration
- Provide Retention
- Slow Runoff
- Minimize Impervious Land Coverage
- ☑ Prohibit Dumping of Improper Materials
- Contain Pollutants
- Collect and Convey

Description

Waste materials dumped into storm drain inlets can have severe impacts on receiving and ground waters. Posting notices regarding discharge prohibitions at storm drain inlets can prevent waste dumping. Storm drain signs and stencils are highly visible source controls that are typically placed directly adjacent to storm drain inlets.

Approach

The stencil or affixed sign contains a brief statement that prohibits dumping of improper materials into the urban runoff conveyance system. Storm drain messages have become a popular method of alerting the public about the effects of and the prohibitions against waste disposal.

Suitable Applications

Stencils and signs alert the public to the destination of pollutants discharged to the storm drain. Signs are appropriate in residential, commercial, and industrial areas, as well as any other area where contributions or dumping to storm drains is likely.

Design Considerations

Storm drain message markers or placards are recommended at all storm drain inlets within the boundary of a development project. The marker should be placed in clear sight facing toward anyone approaching the inlet from either side. All storm drain inlet locations should be identified on the development site map.

Designing New Installations

The following methods should be considered for inclusion in the project design and show on project plans:

- Provide stenciling or labeling of all storm drain inlets and catch basins, constructed or modified, within the project area with prohibitive language. Examples include “NO DUMPING

SD-13 Storm Drain Signage

– DRAINS TO OCEAN" and/or other graphical icons to discourage illegal dumping.

- Post signs with prohibitive language and/or graphical icons, which prohibit illegal dumping at public access points along channels and creeks within the project area.

Note - Some local agencies have approved specific signage and/or storm drain message placards for use. Consult local agency stormwater staff to determine specific requirements for placard types and methods of application.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. If the project meets the definition of "redevelopment", then the requirements stated under " designing new installations" above should be included in all project design plans.

Additional Information

Maintenance Considerations

- Legibility of markers and signs should be maintained. If required by the agency with jurisdiction over the project, the owner/operator or homeowner's association should enter into a maintenance agreement with the agency or record a deed restriction upon the property title to maintain the legibility of placards or signs.

Placement

- Signage on top of curbs tends to weather and fade.

- Signage on face of curbs tends to be worn by contact with vehicle tires and sweeper brooms.

Supplemental Information

Examples

- Most MS4 programs have storm drain signage programs. Some MS4 programs will provide stencils, or arrange for volunteers to stencil storm drains as part of their outreach program.

Bioretention TC-32

Design Considerations

- Soil for Infiltration
- Tributary Area
- Slope
- Aesthetics
- Environmental Side-effects

Description

The bioretention best management practice (BMP) functions as a soil and plant-based filtration device that removes pollutants through a variety of physical, biological, and chemical treatment processes. These facilities normally consist of a grass buffer strip, sand bed, ponding area, organic layer or mulch layer, planting soil, and plants. The runoff's velocity is reduced by passing over or through buffer strip and subsequently distributed evenly along a ponding area. Exfiltration of the stored water in the bioretention area planting soil into the underlying soils occurs over a period of days.

Targeted Constituents

☑	Sediment	■
☑	Nutrients	▲
☑	Trash	■
☑	Metals	■
☑	Bacteria	■
☑	Oil and Grease	■
☑	Organics	■

Legend *(Removal Effectiveness)*

- ● Low
- ▲ Medium
- ■ High

California Experience

None documented. Bioretention has been used as a stormwater BMP since 1992. In addition to Prince George's County, MD and Alexandria, VA, bioretention has been used successfully at urban and suburban areas in Montgomery County, MD; Baltimore County, MD; Chesterfield County, VA; Prince William County, VA; Smith Mountain Lake State Park, VA; and Cary, NC.

Advantages

- Bioretention provides stormwater treatment that enhances the quality of downstream water bodies by temporarily storing runoff in the BMP and releasing it over a period of four days to the receiving water (EPA, 1999).
- The vegetation provides shade and wind breaks, absorbs noise, and improves an area's landscape.

Limitations

- The bioretention BMP is not recommended for areas with slopes greater than 20% or where mature tree removal would

be required since clogging may result, particularly if the BMP receives runoff with high sediment loads (EPA, 1999).

- Bioretention is not a suitable BMP at locations where the water table is within 6 feet of the ground surface and where the surrounding soil stratum is unstable.
- By design, bioretention BMPs have the potential to create very attractive habitats for mosquitoes and other vectors because of highly organic, often heavily vegetated areas mixed with shallow water.
- In cold climates the soil may freeze, preventing runoff from infiltrating into the planting soil.

Design and Sizing Guidelines

- The bioretention area should be sized to capture the design storm runoff.
- In areas where the native soil permeability is less than 0.5 in/hr an underdrain should be provided.
- Recommended minimum dimensions are 15 feet by 40 feet, although the preferred width is 25 feet. Excavated depth should be 4 feet.
- Area should drain completely within 72 hours.
- Approximately 1 tree or shrub per 50 ft^2 of bioretention area should be included.
- Cover area with about 3 inches of mulch.

Construction/Inspection Considerations

Bioretention area should not be established until contributing watershed is stabilized.

Performance

Bioretention removes stormwater pollutants through physical and biological processes, including adsorption, filtration, plant uptake, microbial activity, decomposition, sedimentation and volatilization (EPA, 1999). Adsorption is the process whereby particulate pollutants attach to soil (e.g., clay) or vegetation surfaces. Adequate contact time between the surface and pollutant must be provided for in the design of the system for this removal process to occur. Thus, the infiltration rate of the soils must not exceed those specified in the design criteria or pollutant removal may decrease. Pollutants removed by adsorption include metals, phosphorus, and hydrocarbons. Filtration occurs as runoff passes through the bioretention area media, such as the sand bed, ground cover, and planting soil.

Common particulates removed from stormwater include particulate organic matter, phosphorus, and suspended solids. Biological processes that occur in wetlands result in pollutant uptake by plants and microorganisms in the soil. Plant growth is sustained by the uptake of nutrients from the soils, with woody plants locking up these nutrients through the seasons. Microbial activity within the soil also contributes to the removal of nitrogen and organic matter. Nitrogen is removed by nitrifying and denitrifying bacteria, while aerobic bacteria are responsible for the decomposition of the organic matter. Microbial processes require oxygen and can result in depleted oxygen levels if the bioretention area is not adequately

aerated. Sedimentation occurs in the swale or ponding area as the velocity slows and solids fall out of suspension.

The removal effectiveness of bioretention has been studied during field and laboratory studies conducted by the University of Maryland (Davis et al, 1998). During these experiments, synthetic stormwater runoff was pumped through several laboratory and field bioretention areas to simulate typical storm events in Prince George's County, MD. Removal rates for heavy metals and nutrients are shown in Table 1.

Table 1 Laboratory and Estimated Bioretention Davis et al. (1998); PGDER (1993)

Pollutant	Removal Rate
Total Phosphorus	70-83%
Metals (Cu, Zn, Pb)	93-98%
TKN	68-80%
Total Suspended Solids	90%
Organics	90%
Bacteria	90%

Results for both the laboratory and field experiments were similar for each of the pollutants analyzed. Doubling or halving the influent pollutant levels had little effect on the effluent pollutants concentrations (Davis et al, 1998).

The microbial activity and plant uptake occurring in the bioretention area will likely result in higher removal rates than those determined for infiltration BMPs.

Siting Criteria

Bioretention BMPs are generally used to treat stormwater from impervious surfaces at commercial, residential, and industrial areas (EPA, 1999). Implementation of bioretention for stormwater management is ideal for median strips, parking lot islands, and swales. Moreover, the runoff in these areas can be designed to either divert directly into the bioretention area or convey into the bioretention area by a curb and gutter collection system.

The best location for bioretention areas is upland from inlets that receive sheet flow from graded areas and at areas that will be excavated (EPA, 1999). In order to maximize treatment effectiveness, the site must be graded in such a way that minimizes erosive conditions as sheet flow is conveyed to the treatment area. Locations where a bioretention area can be readily incorporated into the site plan without further environmental damage are preferred. Furthermore, to effectively minimize sediment loading in the treatment area, bioretention only should be used in stabilized drainage areas.

Additional Design Guidelines

The layout of the bioretention area is determined after site constraints such as location of utilities, underlying soils, existing vegetation, and drainage are considered (EPA, 1999). Sites with loamy sand soils are especially appropriate for bioretention because the excavated soil can be backfilled and used as the planting soil, thus eliminating the cost of importing planting soil.

The use of bioretention may not be feasible given an unstable surrounding soil stratum, soils with clay content greater than 25 percent, a site with slopes greater than 20 percent, and/or a site with mature trees that would be removed during construction of the BMP.

Bioretention can be designed to be off-line or on-line of the existing drainage system (EPA, 1999). The drainage area for a bioretention area should be between 0.1 and 0.4 hectares (0.25 and 1.0 acres). Larger drainage areas may require multiple bioretention areas. Furthermore, the maximum drainage area for a bioretention area is determined by the expected rainfall intensity and runoff rate. Stabilized areas may erode when velocities are greater than 5 feet per second (1.5 meter per second). The designer should determine the potential for erosive conditions at the site.

The size of the bioretention area, which is a function of the drainage area and the runoff generated from the area is sized to capture the water quality volume.

The recommended minimum dimensions of the bioretention area are 15 feet (4.6 meters) wide by 40 feet (12.2 meters) long, where the minimum width allows enough space for a dense, randomly-distributed area of trees and shrubs to become established. Thus replicating a natural forest and creating a microclimate, thereby enabling the bioretention area to tolerate the effects of heat stress, acid rain, runoff pollutants, and insect and disease infestations which landscaped areas in urban settings typically are unable to tolerate. The preferred width is 25 feet (7.6 meters), with a length of twice the width. Essentially, any facilities wider than 20 feet (6.1 meters) should be twice as long as they are wide, which promotes the distribution of flow and decreases the chances of concentrated flow.

In order to provide adequate storage and prevent water from standing for excessive periods of time the ponding depth of the bioretention area should not exceed 6 inches (15 centimeters). Water should not be left to stand for more than 72 hours. A restriction on the type of plants that can be used may be necessary due to some plants' water intolerance. Furthermore, if water is left standing for longer than 72 hours mosquitoes and other insects may start to breed.

The appropriate planting soil should be backfilled into the excavated bioretention area. Planting soils should be sandy loam, loamy sand, or loam texture with a clay content ranging from 10 to 25 percent.

Generally the soil should have infiltration rates greater than 0.5 inches (1.25 centimeters) per hour, which is typical of sandy loams, loamy sands, or loams. The pH of the soil should range between 5.5 and 6.5, where pollutants such as organic nitrogen and phosphorus can be adsorbed by the soil and microbial activity can flourish. Additional requirements for the planting soil include a 1.5 to 3 percent organic content and a maximum 500 ppm concentration of soluble salts.

Soil tests should be performed for every 500 cubic yards (382 cubic meters) of planting soil, with the exception of pH and organic content tests, which are required only once per bioretention area (EPA, 1999). Planting soil should be 4 inches (10.1 centimeters) deeper than the bottom of the largest root ball and 4 feet (1.2 meters) altogether. This depth will provide adequate soil for the plants' root systems to become established, prevent plant damage due to severe wind, and provide adequate moisture capacity. Most sites will require excavation in order to obtain the recommended depth.

Planting soil depths of greater than 4 feet (1.2 meters) may require additional construction practices such as shoring measures (EPA, 1999). Planting soil should be placed in 18 inches or greater lifts and lightly compacted until the desired depth is reached. Since high canopy trees may be destroyed during maintenance the bioretention area should be vegetated to resemble a terrestrial forest community ecosystem that is dominated by understory trees. Three species each of both trees and shrubs are recommended to be planted at a rate of 2500 trees and shrubs per hectare (1000 per acre). For instance, a 15 foot (4.6 meter) by 40 foot (12.2 meter) bioretention area (600 square feet or 55.75 square meters) would require 14 trees and shrubs. The shrub-to-tree ratio should be 2:1 to 3:1.

Trees and shrubs should be planted when conditions are favorable. Vegetation should be watered at the end of each day for fourteen days following its planting. Plant species tolerant of pollutant loads and varying wet and dry conditions should be used in the bioretention area.

The designer should assess aesthetics, site layout, and maintenance requirements when selecting plant species. Adjacent non-native invasive species should be identified and the designer should take measures, such as providing a soil breach to eliminate the threat of these species invading the bioretention area. Regional landscaping manuals should be consulted to ensure that the planting of the bioretention area meets the landscaping requirements established by the local authorities. The designers should evaluate the best placement of vegetation within the bioretention area. Plants should be placed at irregular intervals to replicate a natural forest. Trees should be placed on the perimeter of the area to provide shade and shelter from the wind. Trees and shrubs can be sheltered from damaging flows if they are placed away from the path of the incoming runoff. In cold climates, species that are more tolerant to cold winds, such as evergreens, should be placed in windier areas of the site.

Following placement of the trees and shrubs, the ground cover and/or mulch should be established. Ground cover such as grasses or legumes can be planted at the beginning of the growing season. Mulch should be placed immediately after trees and shrubs are planted. Two to 3 inches (5 to 7.6 cm) of commercially-available fine shredded hardwood mulch or shredded hardwood chips should be applied to the bioretention area to protect from erosion.

Maintenance

The primary maintenance requirement for bioretention areas is that of inspection and repair or replacement of the treatment area's components. Generally, this involves nothing more than the routine periodic maintenance that is required of any landscaped area. Plants that are appropriate for the site, climatic, and watering conditions should be selected for use in the bioretention cell. Appropriately selected plants will aide in reducing fertilizer, pesticide, water, and overall maintenance requirements. Bioretention system components should blend over time through plant and root growth, organic decomposition, and the development of a natural

soil horizon. These biologic and physical processes over time will lengthen the facility's life span and reduce the need for extensive maintenance.

Routine maintenance should include a biannual health evaluation of the trees and shrubs and subsequent removal of any dead or diseased vegetation (EPA, 1999). Diseased vegetation should be treated as needed using preventative and low-toxic measures to the extent possible. BMPs have the potential to create very attractive habitats for mosquitoes and other vectors because of highly organic, often heavily vegetated areas mixed with shallow water. Routine inspections for areas of standing water within the BMP and corrective measures to restore proper infiltration rates are necessary to prevent creating mosquito and other vector habitat. In addition, bioretention BMPs are susceptible to invasion by aggressive plant species such as cattails, which increase the chances of water standing and subsequent vector production if not routinely maintained.

In order to maintain the treatment area's appearance it may be necessary to prune and weed. Furthermore, mulch replacement is suggested when erosion is evident or when the site begins to look unattractive. Specifically, the entire area may require mulch replacement every two to three years, although spot mulching may be sufficient when there are random void areas. Mulch replacement should be done prior to the start of the wet season.

New Jersey's Department of Environmental Protection states in their bioretention systems standards that accumulated sediment and debris removal (especially at the inflow point) will normally be the primary maintenance function. Other potential tasks include replacement of dead vegetation, soil pH regulation, erosion repair at inflow points, mulch replenishment, unclogging the underdrain, and repairing overflow structures. There is also the possibility that the cation exchange capacity of the soils in the cell will be significantly reduced over time. Depending on pollutant loads, soils may need to be replaced within 5-10 years of construction (LID, 2000).

Cost

Construction Cost

Construction cost estimates for a bioretention area are slightly greater than those for the required landscaping for a new development (EPA, 1999). A general rule of thumb (Coffman, 1999) is that residential bioretention areas average about $3 to $4 per square foot, depending on soil conditions and the density and types of plants used. Commercial, industrial and institutional site costs can range between $10 to $40 per square foot, based on the need for control structures, curbing, storm drains and underdrains.

Retrofitting a site typically costs more, averaging $6,500 per bioretention area. The higher costs are attributed to the demolition of existing concrete, asphalt, and existing structures and the replacement of fill material with planting soil. The costs of retrofitting a commercial site in Maryland, Kettering Development, with 15 bioretention areas were estimated at $111,600.

In any bioretention area design, the cost of plants varies substantially and can account for a significant portion of the expenditures. While these cost estimates are slightly greater than those of typical landscaping treatment (due to the increased number of plantings, additional soil excavation, backfill material, use of underdrains etc.), those landscaping expenses that would be required regardless of the bioretention installation should be subtracted when determining the net cost.

Perhaps of most importance, however, the cost savings compared to the use of traditional structural stormwater conveyance systems makes bioretention areas quite attractive financially. For example, the use of bioretention can decrease the cost required for constructing stormwater conveyance systems at a site. A medical office building in Maryland was able to reduce the amount of storm drain pipe that was needed from 800 to 230 feet - a cost savings of $24,000 (PGDER, 1993). And a new residential development spent a total of approximately $100,000 using bioretention cells on each lot instead of nearly $400,000 for the traditional stormwater ponds that were originally planned (Rappahanock,). Also, in residential areas, stormwater management controls become a part of each property owner's landscape, reducing the public burden to maintain large centralized facilities.

Maintenance Cost

The operation and maintenance costs for a bioretention facility will be comparable to those of typical landscaping required for a site. Costs beyond the normal landscaping fees will include the cost for testing the soils and may include costs for a sand bed and planting soil.

ORDINANCE NO. 2021-XX

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, APPROVING CHANGE OF ZONE PEN20-0067 TO AMEND THE CITY ZONING ATLAS FROM RESIDENTIAL 5 (R5) DISTRICT TO RESIDENTIAL SINGLE-FAMILY 10 (RS10) DISTRICT FOR THE PROPERTY LOCATED ON THE SOUTH SIDE OF IRIS AVENUE EAST OF PERRIS BOULEVARD (APN 312-020-025)

The City Council of the City of Moreno Valley does ordain as follows:

SECTION 1 GENERAL:

1.1 Passco Pacifica LLC., ("Developer") has filed an application for the approval of Change of Zone PEN20-0067 ("Application") requesting a Change of Zone changing the City's Zoning Atlas from Residential 5 (R5) District to Residential Single-Family 10 (RS10) District for the property located on the south side of Iris Avenue east of Perris Boulevard (APN 312-020-025) ("Site)"; and

1.2 At its December 10, 2020 meeting, the Planning Commission considered the Change of Zone for the Iris Park residential project and recommended approval to the City Council; and

1.3 Pursuant to the provisions of the law, a public hearing was held before the City Council on February 2, 2021, for deliberations and decision.

1.4 The matter was fully discussed, and the public and other agencies were given opportunity to present testimony and documentation.

1.5 An Initial Study has been prepared for the Project for the purpose of compliance with the California Environmental Quality Act (CEQA). Based on the Initial Study including all supporting technical evidence, determined that the project impacts are expected to be less than significant with mitigation, and approval of a Mitigated Negative Declaration is an appropriate environmental determination for the Project.

SECTION 2 FINDINGS:

That based on the content of the foregoing Recitals and the Evidence contained in the Administrative Record as set forth above, the City Council makes the following findings:

(a) The proposed amendment is consistent with the existing goals, objectives, policies and programs of the general plan.
(b) The proposed amendment will not adversely affect the public health, safety or general welfare.

(c) The proposed amendment is consistent with the purposes and intent of this title.

SECTION 3 AMENDMENT OF THE OFFICIAL ZONING ATLAS:

3.1 The City of Moreno Valley Official Zoning Atlas, as adopted by Ordinance No. 359, on April 14, 1992, of the City of Moreno Valley, and as amended thereafter from time to time by the City Council of the City of Moreno Valley, is further amended by placing in effect the zone or zone classification to Page 141 and 155 of the Official Zoning Atlas as shown on the attached map marked "Exhibit A" and included herein by reference and on file in the office of the City Clerk.

SECTION 4 EFFECT OF ENACTMENT:

4.1 Except as specifically provided herein, nothing contained in this ordinance shall be deemed to modify or supersede any prior enactment of the City Council which addresses the same subject addressed herein.

SECTION 5. NOTICE OF ADOPTION:

5.1 Within fifteen days after the date of adoption hereof, the City Clerk shall certify to the adoption of this ordinance and cause it to be posted in three public places within the city.

SECTION 6. EFFECTIVE DATE:

6.1 This ordinance shall take effect thirty days after the date of its adoption.

PEN20-0067 – Change of Zone

Residential 5 (R5) to Residential Single-Family 10 (RS10)

RESOLUTION NUMBER 2021-XX

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, APPROVING CONDITIONAL USE PERMIT PEN20-0065 FOR THE IRIS PARK COMMUNITY, A PLANNED UNIT DEVELOPMENT ASSOCIATED WITH TENTATIVE TRACT MAP 37909, PEN20-0063 LOCATED ON THE SOUTH SIDE OF IRIS AVENUE EAST OF PERRIS BOULEVARD (APN 312-020-025)

WHEREAS, the City of Moreno Valley ("City") is a general law city and a municipal corporation of the State of California; and

WHEREAS, Passco Pacifica LLC., ("Developer") has filed an application for the approval of Conditional Use Permit PEN20-0065 ("Application") for a Planned Unit development associated with Tentative Tract Map 37909, PEN20-0063 ("Project") located on the south side of Iris Avenue east of Perris Boulevard ("Site"); and

WHEREAS, Section 9.02.060 (Conditional Use Permits) of the Moreno Valley Municipal Code acknowledges that the purpose of conditional use permits is to allow the establishment of uses that may have special impacts or uniqueness such that their effect on the surrounding environment cannot be determined in advance of the use being proposed for a particular location and that the conditional use permit application process involves the review of location, design and configuration of improvements related to the project, and the potential impact of the project on the surrounding area based on fixed and established standards; and

WHEREAS, the Application has been evaluated in accordance with Section 9.02.060 (Conditional Use Permits) of the Municipal Code with consideration given to the City's General Plan, Zoning Ordinance, and other applicable laws and regulations; and

WHEREAS, Section 9.02.060 of the Municipal Code imposes conditions of approval upon projects for which a CUP is required, which conditions may be imposed by the Planning Commission to address on-site improvements, off-site improvements, the manner in which the site is used and any other conditions as may be deemed necessary to protect public health, safety and welfare and ensure that the proposed Project will be developed in accordance with the purpose and intent of Title 9 (Planning and Zoning) of the Municipal Code; and

WHEREAS, Staff has presented for the City Council's consideration Conditions of Approval to be imposed upon Conditional Use Permit PEN20-0065 ("CUP"), which conditions have been deemed necessary to protect public health, safety and welfare and ensure that the proposed Project will be developed in accordance with the purpose and intent of Title 9 (Planning and Zoning) of the Municipal Code; and

WHEREAS, pursuant to the provisions of Section 9.02.200 (Public Hearing and Notification Procedures) of the Municipal Code and Government Code section 65905, a public hearing before the Planning Commission was scheduled for November 12, 2020

and notice thereof was duly published and posted, and mailed to all property owners of record within 600 feet of the Site; and

WHEREAS, on November 12, 2020 a duly noticed public hearing was conducted by the Planning Commission where the item was continued to the December 10, 2020 Planning Commission meeting; and

WHEREAS, on December 10, 2020 a public hearing was conducted by the Planning Commission to consider a recommendation that the City Council approve the Conditional Use Permit and after the public hearing the Planning Commission approved Planning Commission Resolution 2020-53, a recommendation that the City Council approve the Conditional Use Permit; and

WHEREAS, on February 2, 2021, a public hearing to consider the Application was duly conducted by the City Council at which time all interested persons were provided with an opportunity to testify and to present evidence; and

WHEREAS, consistent with the requirements of Section 9.02.060 (Conditional Use Permits) of the Municipal Code, at the public hearing the City Council considered Conditions of Approval to be imposed upon Conditional Use Permit PEN20-0065 (CUP), which were prepared by Planning Division staff who deemed said conditions to be necessary to protect public health, safety and welfare and to ensure the proposed Project will be developed in accordance with the purpose and intent of Title 9 (Planning and Zoning) of the Municipal Code; and

WHEREAS, at the public hearing, the City Council considered whether each of the requisite findings specified in Section 9.02.060 of the Municipal Code and set forth herein could be made with respect to the proposed Project as conditioned by the Conditions of Approval; and

WHEREAS, on February 2, 2021 a hearing was conducted by the City Council whereby the City Council approved the Conditional Use Permit and approved the proposed Project.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:

Section 1. **Recitals and Exhibits**

That the foregoing Recitals and attached Exhibits are true and correct and are hereby incorporated by this reference.

Section 2. **Notice**

That pursuant to Government Code section 66020(d)(1), notice is hereby given that the proposed project is subject to certain fees, dedications, reservations and other exactions as provided herein.

Section 3. **Evidence**

That the City Council has considered all of the evidence submitted into the administrative record for the proposed Conditional Use Permit, including, but not limited to, the following:

(a) Moreno Valley General Plan and all relevant provisions contained therein;
(b) Title 9 (Planning and Zoning) of the Moreno Valley Municipal Code and all relevant provisions referenced therein;
(c) Application for the approval of Conditional Use Permit (CUP) PEN20-0065 and all documents, records and contained therein;
(d) Conditions of Approval for CUP PEN20-0065, attached hereto as Exhibit A;
(e) Staff Report prepared for the City Council's consideration and all documents, records and references related thereto, and Staff's presentation at the public hearing;
(f) Testimony and/or comments from Applicant and its representatives during the public hearing; and
(g) Testimony, comments and/or correspondence from all persons that were provided in written format or correspondence, at, or prior to, the public hearing.

Section 4. **Findings**

That based on the foregoing Recitals and the Evidence contained in the Administrative Record as set forth above, the City Council makes the following findings in approving CUP PEN20-0065.

(a) The proposed Project is consistent with the goals, objectives, policies and programs of the General Plan;
(b) The proposed Project complies with all applicable zoning and other regulations;
(c) The proposed Project will not be detrimental to the public health, safety or welfare or materially injurious to properties or improvements in the vicinity; and
(d) The location, design and operation of the proposed Project will be compatible with existing and planned land uses in the vicinity.

Section 5. **Approval**

That based on the foregoing Recitals, Evidence contained in the Administrative Record and Findings set forth above, the City Council hereby approves Conditional Use Permit PEN20-0065 subject to the Conditions of Approval of Conditional Use Permit PEN20-0065, attached hereto as Exhibit A.

Section 6. **Repeal of Conflicting Provisions**

That all the provisions as heretofore adopted by the City Council that are in conflict with the provisions of this Resolution are hereby repealed.

Section 7. **Severability**

That the City Council declares that, should any provision, section, paragraph, sentence or word of this Resolution be rendered or declared invalid by any final court action in a court of competent jurisdiction or by reason of any preemptive legislation, the remaining provisions, sections, paragraphs, sentences or words of this Resolution as hereby adopted shall remain in full force and effect.

Section 8. **Effective Date**

That this Resolution shall take effect immediately upon the date of adoption.

Section 9. **Certification**

That the City Clerk for the City Council shall certify to the passage of this Resolution.

PASSED AND ADOPTED THIS _____ day of _____, 2021.

EXPIRATION DATE:

COMMUNITY DEVELOPMENT DEPARTMENT

Planning Division

1. A change or modification to the land use or the approved site plans may require a separate approval. Prior to any change or modification, the property owner shall contact the City of Moreno Valley Community Development Department to determine if a separate approval is required.

2. Any expansion to this use or exterior alterations will require the submittal of a separate application(s) and shall be reviewed and approved under separate permit(s). (MC 9.02.080)

3. The developer, or the developer's successor-in-interest, shall be responsible for maintaining any undeveloped portion of the site in a manner that provides for the control of weeds, erosion and dust. (MC 9.02.030)

4. All landscaped areas shall be maintained in a healthy and thriving condition, free from weeds, trash and debris. (MC 9.02.030)

5. The site shall be developed in accordance with the approved plans on file in the Community Development Department - Planning Division, the Municipal Code regulations, General Plan, and the conditions contained herein. Prior to any use of the project site or business activity being commenced thereon, all Conditions of Approval shall be completed to the satisfaction of the Planning Official. (MC 9.14.020)

6. Any signs indicated on the submitted plans are not included with this approval. Any signs, whether permanent (e.g. wall, monument) or temporary (e.g. banner, flag), require separate application and approval by the Planning Division. No signs are permitted in the public right of way. (MC 9.12)

7. All site plans, grading plans, landscape and irrigation plans, fence/wall plans, lighting plans and street improvement plans shall be coordinated for consistency with this approval.

Special Conditions

8. Prior to grading plan approval, Basin fencing shall include wrought iron fencing with pilasters.

9. Prior to building final, a basin maintained by an HOA or other private entity, landscape (trees, shrubs and groundcover) and irrigation shall be installed, and maintained by the HOA or other private entity with documentation provided to the Planning Division.

10. Prior to issuance of building permits, final front and street side yard landscape and irrigation plans, and slope landscape plans and basin landscape plans, shall be approved.

11. This approval shall comply with all applicable requirements of the City of Moreno Valley Municipal Code.

12. The grading plans shall show all easements including an easement for trail purposes for the Juan Bautista de Anza trail per the Tentative Tract Map.

13. The site shall be developed in accordance with the approved tentative map on file in the Community Development Department -Planning Division, the Municipal Code regulations, General Plan, and the conditions contained herein. (MC 9.14.020)

14. Prior to building final, the developer/owner or developer's/owner's successor-in-interest shall pay all applicable impact fees, including but not limited to Transportation Uniform Mitigation fees (TUMF), and the City's adopted Development Impact Fees. (Ord)

15. A drought tolerant landscape palette shall be utilized throughout the tract in compliance with the City's Landscape Requirements. (9.17)

16. This tentative map and Conditional Use Permit for the Planned Unit Development shall expire three years after the approval date of this tentative map and conditional use permit unless extended as provided by the City of Moreno Valley Municipal Code; otherwise it shall become null and void and of no effect whatsoever in the event the applicant or any successor in interest fails to properly file a final map before the date of expiration. (MC 9.02.230, 9.14.050, 080)

17. Prior to the issuance of grading permits, mitigation measures contained in the Mitigation Monitoring Program approved with this project shall be implemented as provided therein.

18. Prior to any site disturbance and/or grading plan submittal, and or final map

recordation, a mitigation monitoring fee, as provided by City ordinance, shall be paid by the applicant/owner. No City permit or approval shall be issued until such fee is paid. (CEQA)

19. Prior to issuance of a building permit, the developer/property owner or developer's successor-in-interest shall pay all applicable impact fees due at permit issuance, including but not limited to Multi-species Habitat Conservation Plan (MSHCP) mitigation fees. (Ord.)

20. Prior to approval of any grading plan, local and master-planned multi-use trail easements shall be shown on the rough and precise grading plans in accordance with the City's Master Trail Plan.

21. All undeveloped portions of the site in perpetuity shall be maintained in a manner that provides for the control of weeds, erosion and dust. (MC 9.02.030)

22. Prior to the issuance of building permits, the developer shall provide documentation that contact was made to the U.S. Postal Service to determine the appropriate type and location of mailboxes. Mailboxes shall be clustered and include security lighting per U. S. Postal standards.

23. All site plans, grading plans, landscape and irrigation plans, and street improvement plans shall be coordinated for consistency with this approval.

24. Prior to the start of any construction, temporary security fencing shall be erected. The fencing shall be a minimum of six (6) feet high with locking, gated access and shall remain through the duration of construction. Security shall remain in place until the project is completed or the above conditions no longer exist. (Security fencing is required if there is: construction, unsecured structures, unenclosed storage of materials and/or equipment, and/or the condition of the site constitutes a public hazard).

25. The site has been approved for Tentative Tract Map 37909 (PEN20-0063) to subdivide approximately 10.82 acres into eighty-one single family residential lots including the approval of a Conditional Use Permit (PEN20-0065) for a Planned Unit Development to design and implement the residential community as designed per the approved plans for the Tentative Tract Map 37909 and the Planned Unit Development. The Tentative Tract Map 37909 and the Conditional Use Permit for the Planned Unit Development must be developed in conjunction with each other as approved. A change or modification shall require separate approval.

26. Prior to recordation of the final subdivision map, the following documents shall be submitted to and approved by the Planning Division which shall demonstrate that the project will be developed and maintained in accordance with the intent and purpose of the approval:

a. The document to convey title

b. Deed restrictions, easements, or Covenants, Conditions and Restrictions to be recorded

The approved documents shall be recorded at the same time that the subdivision map is recorded. The documents shall contain provisions for general maintenance of the site, joint access to proposed parcels, open space use restrictions, conservation easements, guest parking, feeder trails, water quality basins, lighting, landscaping and common area use items such as tot lot/public seating areas and other recreation facilities or buildings. The approved documents shall also contain a provision, which provides that they may not be terminated and/or substantially amended without the consent of the City and the developer's successor-in-interest. (MC 9.14.090)

In addition, the following deed restrictions and disclosures shall be included within the document and grant deed of the properties:

a. The developer and homeowners association shall promote the use of native plants and trees and drought tolerant species.

b. All lots designated for open space and or detention basins, shall be included as an easement to, and maintained by a Homeowners Association (HOA) or other private maintenance entity. All reverse frontage landscape areas shall also be maintained by the onsite HOA. Language to this effect shall be included and reviewed within the required Covenant Conditions and Restrictions (CC&Rs) prior to the approval of the final map.

c. Maintenance of any and all common facilities.

d. A conservation easement for lettered lots shall be recorded on the deed of the property and shown on the final map. Said easement shall include access restrictions prohibiting motorized vehicles from these areas.

e. Oleander plants or trees shall be prohibited on open space lots adjacent to multi-use trails.

27. Separate Administrative Plot Plans, including, Design Review (product approval) and Model Home Complex and/or temporary sales trailers, are required for approval of the design of the future single-family homes for Tentative Tract Map 37909.

28. Prior to building final, slope landscape and irrigation shall be installed, certified by the Landscape Architect with documentation provided to the Planning Division with an inspection performed and approved by the Planning Division. Landscaping on lots not yet having dwelling units shall be maintained by the developer weed and disease free. (MC 9.03.040)

Prior to Grading Permit

29. Prior to issuance of any grading permit, all Conditions of Approval and Mitigation Measures shall be printed on the grading plans.

30. Prior to the issuance of grading permits, decorative (e.g. colored/scored concrete or as approve by the Planning Official) pedestrian pathways across circulation aisles/paths shall be provided throughout the development to connect dwellings with open spaces and/or recreational uses with open space and/or parking. and/or the public right-of-way. The pathways shall be shown on the precise grading plan. (GP Objective 46.8, DG)

31. Prior to issuance of grading permits, the developer shall pay the applicable Stephens' Kangaroo Rat (SKR) Habitat Conservation Plan mitigation fee. (Ord)

32. If potential historic, archaeological, Native American cultural resources or paleontological resources are uncovered during excavation or construction activities at the project site, work in the affected area must cease immediately and a qualified person (meeting the Secretary of the Interior's standards (36CFR61)) shall be consulted by the applicant to evaluate the find, and as appropriate recommend alternative measures to avoid, minimize or mitigate negative effects on the historic, prehistoric, or paleontological resource. Determinations and recommendations by the consultant shall be immediately submitted to the Planning Division for consideration, and implemented as deemed appropriate by the Community Development Director, in consultation with the State Historic Preservation Officer (SHPO) and any and all affected Native American Tribes before any further work commences in the affected area.

    If human remains are discovered during grading and other construction excavation, no further disturbance shall occur until the County Coroner has made necessary findings as to origin. If the County Coroner determines that the remains are potentially Native American, the California Native American Heritage Commission shall be notified within 5-days of the published finding to be given a reasonable opportunity to identify the "most likely descendant." The "most likely descendant" shall then make recommendations, and engage in consultations concerning the treatment of the remains (California Public Resources Code 5097.98). (GP Objective 23.3, CEQA).

33. Within thirty (30) days prior to any grading or other land disturbance, a pre-construction survey for Burrowing Owls shall be conducted pursuant to the established guidelines of Multiple Species Habitat Conservation Plan. The pre-construction survey shall be submitted to the Planning Division prior to any disturbance of the site and/or grading permit issuance.

34. Prior to approval of any grading permits, plans for any security gate system shall be submitted to and approved by to the Planning Division.

35. Prior to the issuance of grading permits, the site plan and grading plans shall show decorative hardscape (e.g. colored concrete, stamped concrete, pavers or as approved by the Planning Official) consistent and compatible with the design, color and materials of the proposed development for all driveway ingress/egress locations of the project.

36. Prior to issuance of grading permits, the developer shall submit wall/fence plans to be included in the Building and Safety submittal for review and approval consistent with the approved plans, including a six foot fence on the east boundary , the PUD Development Guidelines, the Landscape Requirements and the Municipal Code.

37. Prior to the issuance of grading permits, a temporary project identification sign shall be erected on the site in a secure and visible manner. The sign shall be conspicuously posted at the site and remain in place until occupancy of the project. The sign shall include the following:

    a. The name (if applicable) and address of the development.
    b. The developer's name, address, and a 24-hour emergency telephone number.

38. Prior to issuance of any building permit, all Conditions of Approval and Mitigation Measures shall be printed on the building plans.

39. Prior to the issuance of building permits, the developer shall provide documentation that contact was made to the U.S. Postal Service to determine the appropriate type and location of mailboxes.

40. 41. Prior to the issuance of building permits, final landscape and irrigation plans shall be submitted for review and approved by the Planning Division for the following:
    a. Areas maintained by the Homeowner's Association including parks, site entry driveways, and other on-site landscaping;
    b. Areas along Iris Avenue;
    c. Trail Easement (per Parks and Community Services design standards); and
    d. Front yards.

    Landscaping is required for the sides and or slopes of all water quality basin and drainage areas, while a hydroseed mix with irrigation is acceptable for the bottom of the basin areas. All detention basins shall include trees, shrubs and groundcover up to the concreted portion of the basin. A solid decorative wall with pilasters, tubular steel fence with pilasters or other fence or wall approved by the Planning Official is required to secure all water quality and detention basins.
    The plans shall be prepared in accordance with the City's Landscape Development

Guidelines and the Planned Unit Development Guidelines.
A detailed, on-site, computer generated, point-by-point comparison lighting plan shall be proved with and integrated into the landscape plan. The plan shall include all project lighting within the community to include street lights, exterior building lights, parking area lighting and park lights. The plan shall indicate the manufacturer's specifications for light fixtures used, shall include style, illumination, location, height and method of shielding per the City's Municipal Code requirements.

41. Prior to issuance of building permits, the Planning Division shall review and approve the location and method of enclosure or screening of transformer cabinets, commercial gas meters and back flow preventers as shown on the final working drawings. Location and screening shall comply with the following criteria: transformer cabinets and commercial gas meters shall not be located within required setbacks and shall be screened from public view either by architectural treatment or landscaping; multiple electrical meters shall be fully enclosed and incorporated into the overall architectural design of the building(s); back-flow preventers shall be screened by landscaping. (GP Objective 43.30)

42. Prior to issuance of a building permit, the developer/property owner or developer's successor-in-interest shall pay all applicable impact fees due at permit issuance, including but not limited to Multi-species Habitat Conservation Plan (MSHCP) mitigation fees. (Ord)

43. Prior to building final, the developer/owner or developer's/owner's successor-in-interest shall pay all applicable impact fees, including but not limited to Transportation Uniform Mitigation fees (TUMF), and the City's adopted Development Impact Fees. (Ord)

44. Prior to issuance of building permits, for projects that will be phased, a phasing plan shall be submitted to and approved by the Planning Division if occupancy is proposed to be phased.

45. Photometric Plans shall be submitted to the Building and Safety Division for review and approval as part of the lighting and electrical building plan submittal.

46. Prior to issuance of any grading permits, mitigation measures contained in the Mitigation Monitoring Program approved with this project shall be implemented as provided therein. A mitigation monitoring fee, as provided by City ordinance, shall be paid by the applicant within 30 days of project approval. No City permit or approval shall be issued until such fee is paid. (CEQA)

Prior to Building Final or Occupancy

47. Prior to building final, all required landscaping and irrigation shall be installed per plan, certified by the Landscape Architect and inspected by the Planning Division. (MC 9.03.040, MC 9.17).

48. Prior to building final, Planning approved/stamped landscape plans shall be provided to the Community Development Department – Planning Division on a CD disk.

49. Prior to building final, all required and proposed fences and walls shall be constructed according to the approved plans on file in the Planning Division. (MC 9.080.070).

Building Division

50. Prior to submittal, all new development, including residential second units, are required to obtain a valid property address prior to permit application. Addresses can be obtained by contacting the Building Safety Division at 951.413.3350.

51. Contact the Building Safety Division for permit application submittal requirements.

52. Any construction within the city shall only be as follows: Monday through Friday seven a.m. to seven p.m(except for holidays which occur on weekdays), eight a.m. to four p.m.; weekends and holidays (as observed by the city and described in the Moreno Valley Municipal Code Chapter 2.55), unless written approval is first obtained from the Building Official or City Engineer.

53. Building plans submitted shall be signed and sealed by a California licensed design professional as required by the State Business and Professions Code.

54. The proposed development shall be subject to the payment of required development fees as required by the City's current Fee Ordinance at the time a building application is submitted or prior to the issuance of permits as determined by the City.

55. The proposed project will be subject to approval by the Eastern Municipal Water District and all applicable fees and charges shall be paid prior to permit issuance. Contact the water district at 951.928.3777 for specific details.

56. All new structures shall be designed in conformance to the latest design standards adopted by the State of California in the California Building Code, (CBC) Part 2, Title 24, California Code of Regulations including requirements for allowable area, occupancy separations, fire suppression systems, accessibility, etc. The current code edition is the 2019 CBC.

57. The proposed project's occupancy shall be classified by the Building Official and must comply with exiting, occupancy separation(s) and minimum plumbing fixture requirements. Minimum plumbing fixtures shall be provided per the 2019 California Plumbing Code, Table 422.1. The occupant load and occupancy classification shall be determined in accordance with the California Building Code.

58. The proposed residential project shall comply with The 2019 California Green Building Standards Code, Section 4.106.4, mandatory requirements for Electric Vehicle Charging Station (EVCS).

59. Prior to permit issuance, every applicant shall submit a properly completed Waste Management Plan (WMP), as a portion of the building or demolition permit process. (MC 8.80.030)

FIRE DEPARTMENT

Fire Prevention Bureau

60. All Fire Department access roads or driveways shall not exceed 12 percent grade. (CFC 503.2.7 and MVMC 8.36.060[G])

61. The Fire Department emergency vehicular access road shall be (all weather surface) capable of sustaining an imposed load of 80,000 lbs. GVW, based on street standards approved by the Public Works Director and the Fire Prevention Bureau. The approved fire access road shall be in place during the time of construction. Temporary fire access roads shall be approved by the Fire Prevention Bureau. (CFC 501.4, and MV City Standard Engineering Plan 108d)

62. The angle of approach and departure for any means of Fire Department access shall not exceed 1 ft drop in 20 ft (0.3 m drop in 6 m), and the design limitations of the fire apparatus of the Fire Department shall be subject to approval by the AHJ. (CFC 503 and MVMC 8.36.060)

63. Prior to issuance of Building Permits, the applicant/developer shall provide the Fire Prevention Bureau with an approved site plan for Fire Lanes and signage. (CFC 501.3)

64. Prior to issuance of Certificate of Occupancy or Building Final, "Blue Reflective Markers" shall be installed to identify fire hydrant locations in accordance with City specifications. (CFC 509.1 and MVLT 440A-0 through MVLT 440C-0)

65. Existing fire hydrants on public streets are allowed to be considered available. Existing fire hydrants on adjacent properties shall not be considered available unless fire apparatus access roads extend between properties and easements are

established to prevent obstruction of such roads. (CFC 507, 501.3) a - After the local water company signs the plans, the originals shall be presented to the Fire Prevention Bureau for signatures. The required water system, including fire hydrants, shall be installed, made serviceable, and be accepted by the Moreno Valley Fire Department prior to beginning construction. They shall be maintained accessible.

66. Final fire and life safety conditions will be addressed when the Fire Prevention Bureau reviews building plans. These conditions will be based on occupancy, use, California Building Code (CBC), California Fire Code (CFC), and related codes, which are in effect at the time of building plan submittal.

67. The Fire Code Official is authorized to enforce the fire safety during construction requirements of Chapter 33. (CFC Chapter 33 & CBC Chapter 33)

68. Fire lanes and fire apparatus access roads shall have an unobstructed width of not less than twenty–four (24) feet and an unobstructed vertical clearance of not less the thirteen (13) feet six (6) inches. (CFC 503.2.1 and MVMC 8.36.060[E])

69. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall install a fire sprinkler system based on square footage and type of construction, occupancy or use. Fire sprinkler plans shall be submitted to the Fire Prevention Bureau for approval prior to installation. (CFC Chapter 9, MVMC 8.36.100[D])

70. Prior to issuance of the building permit for development, independent paved access to the nearest paved road, maintained by the City shall be designed and constructed by the developer within the public right of way in accordance with City Standards. (MVMC 8.36.060, CFC 501.4)

71. The minimum number of fire hydrants required, as well as the location and spacing of fire hydrants, shall comply with the C.F.C., MVMC, and NFPA 24. Fire hydrants shall be located no closer than 40 feet to a building. The size and number of outlets required for the approved fire hydrants are (6" x 4" x 2 ½") (CFC 507.5.1, 507.5.7, Appendix C, NFPA 24-7.2.3, MVMC 912.2.1)

72. During phased construction, dead end roadways and streets which have not been completed shall have a turn-around capable of accommodating fire apparatus. (CFC 503.1 and 503.2.5)

73. If construction is phased, each phase shall provide an approved emergency vehicular access way for fire protection prior to any building construction. (CFC 501.4)

74. Plans for private water mains supplying fire sprinkler systems and/or private fire

hydrants shall be submitted to the Fire Prevention Bureau for approval. (CFC 105 and CFC 3312.1)

75. Prior to issuance of Certificate of Occupancy or Building Final, all residential dwellings shall display street numbers in a prominent location on the street side of the residence in such a position that the numbers are easily visible to approaching emergency vehicles. The numbers shall be located consistently on each dwelling throughout the development. The numerals shall be no less than four (4) inches in height and shall be low voltage lighted fixtures. (CFC 505.1, MVMC 8.36.060[I])

76. Single Family Dwellings. Schedule "A" fire prevention approved standard fire hydrants (6" x 4" x 2 ½") shall be located at each intersection of all residential streets. Hydrants shall be spaced no more than 500 feet apart in any direction so that no point on the street is more than 250 feet from a hydrant. Minimum fire flow shall be 1000 GPM for 1 hour duration of 20 PSI. Where new water mains are extended along streets where hydrants are not needed for protection of structures or similar fire problems, serving one and two-family residential developments, standard fire hydrants shall be provided at spacing not to exceed 1000 feet along the tract boundary for transportation hazards. (CFC 507.3, Appendix B, MVMC 8.36.060).

77. Prior to construction, all traffic calming designs/devices must be approved by the Fire Marshal and City Engineer.

78. Prior to issuance of Building Permits, the applicant/developer shall furnish one copy of the water system plans to the Fire Prevention Bureau for review. Plans shall: a. Be signed by a registered civil engineer or a certified fire protection engineer; b. Contain a Fire Prevention Bureau approval signature block; and c. Conform to hydrant type, location, spacing of new and existing hydrants and minimum fire flow required as determined by the Fire Prevention Bureau. The required water system, including fire hydrants, shall be installed, made serviceable, and be accepted by the Moreno Valley Fire Department prior to beginning construction. They shall be maintained accessible.

79. Prior to construction, all locations where structures are to be built shall have an approved Fire Department access based on street standards approved by the Public Works Director and the Fire Prevention Bureau. (CFC 501.4)

80. Prior to issuance of building permits, plans specifying the required structural materials for building construction in high fire hazard severity zones shall be submitted to the Fire Prevention Bureau for approval. (CFC, 4905)

81. Prior to issuance of Building Permits, plans for structural protection from vegetation fires shall be submitted to the Fire Prevention Bureau for review and approval. Measures shall include, but are not limited to: noncombustible barriers (cement or

block walls), fuel modification zones, etc. (CFC Chapter 49)

PUBLIC WORKS DEPARTMENT

Land Development

82. Aggregate slurry, as defined in Section 203-5 of Standard Specifications for Public Works Construction, shall be required prior to 90% security reduction or the end of the one-year warranty period of the public streets as approved by the City Engineer. If slurry is required, a slurry mix design shall be submitted for review and approved by the City Engineer. The latex additive shall be Ultra Pave 70 (for anionic) or Ultra Pave 65 K (for cationic) or an approved equal per the geotechnical report. The latex shall be added at the emulsion plant after weighing the asphalt and before the addition of mixing water. The latex shall be added at a rate of two to two-and-one-half (2 to 2½) parts to one-hundred (100) parts of emulsion by volume. Any existing striping shall be removed prior to slurry application and replaced per City standards.

83. The developer shall comply with all applicable City ordinances and resolutions including the City's Municipal Code (MC) and if subdividing land, the Government Code (GC) of the State of California, specifically Sections 66410 through 66499.58, said sections also referred to as the Subdivision Map Act (SMA). [MC 9.14.010]

84. The final approved conditions of approval (COAs) issued and any applicable Mitigation Measures by the Planning Division shall be photographically or electronically placed on mylar sheets and included in the Grading and Street Improvement plans.

85. The developer shall monitor, supervise and control all construction related activities, so as to prevent these activities from causing a public nuisance, including but not limited to, insuring strict adherence to the following:
(a) Removal of dirt, debris, or other construction material deposited on any public street no later than the end of each working day.
(b) Observance of working hours as stipulated on permits issued by the Land Development Division.
(c) The construction site shall accommodate the parking of all motor vehicles used by persons working at or providing deliveries to the site.
(d) All dust control measures per South Coast Air Quality Management District (SCAQMD) requirements during the grading operations.
Violation of any condition, restriction or prohibition set forth in these conditions shall subject the owner, applicant, developer or contractor(s) to remedy as noted in City Municipal Code 8.14.090. In addition, the City Engineer or Building Official may suspend all construction related activities for violation of any condition, restriction or

prohibition set forth in these conditions until such time as it has been determined that all operations and activities are in conformance with these conditions.

86. Drainage facilities (e.g., catch basins, water quality basins, etc.) with sump conditions shall be designed to convey the tributary 100-year storm flows. Secondary emergency escape shall also be provided.

87. In the event right-of-way or offsite easements are required to construct offsite improvements necessary for the orderly development of the surrounding area to meet the public health and safety needs, the developer shall make a good faith effort to acquire the needed right-of-way in accordance with the Land Development Division's administrative policy. If unsuccessful, the Developer shall enter into an agreement with the City to acquire the necessary right-of-way or offsite easements and complete the improvements at such time the City acquires the right-of-way or offsite easements which will permit the improvements to be made. The developer shall be responsible for all costs associated with the right-of-way or easement acquisition. [GC 66462.5]

88. The developer shall protect downstream properties from damage caused by alteration of drainage patterns (i.e. concentration or diversion of flow, etc). Protection shall be provided by constructing adequate drainage facilities, including, but not limited to, modifying existing facilities or by securing a drainage easement. [MC 9.14.110]

89. The maintenance responsibility of the proposed storm drain line shall be clearly identified. Storm drain lines within private property will be privately maintained and those within public streets will be publicly maintained.

90. A storm drain manhole shall be placed at the right-of-way line to mark the beginning of the publicly maintained portion of any private storm drain.

91. For single family residential subdivisions, all lots shall drain to the street at a minimum surface grade of 2.0% and on-site drainage shall be conveyed onto the street with subsurface drains at a minimum grade of 0.5% per current City Standards MVSI-152 and MVSI-153A. No cross-lot or over the public sidewalk drainage shall be allowed.

92. This project shall submit civil engineering design plans, reports and/or documents (prepared by a registered/licensed civil engineer) for review and approval by the City Engineer per the current submittal requirements, prior to the indicated threshold or as required by the City Engineer. The submittal consists of, but is not limited to, the following:
    a. Final (Tract) Map (recordation prior to building permit issuance);
    b. Rough grading w/ erosion control plan (prior to grading permit issuance);
    c. Precise grading w/ erosion control plan (prior to grading permit issuance);

d. Public improvement plan (e.g., street/storm drain w/ striping, RCFC storm drain, sewer/water, etc.) (prior to map approval);

e. Final drainage study (prior to map approval);

f. Final WQMP (prior to grading plan approval);

g. Legal documents (e.g., easement(s), dedication(s), etc.) (prior to Building Permit issuance);

h. As-Built revision for all plans (prior to Occupancy release);

93. Water quality best management practices (BMPs) designed to meet Water Quality Management Plan (WQMP) requirements for single-family residential development shall not be used as a construction BMP. Water quality BMPs shall be maintained for the entire duration of the project construction and be used to treat runoff from those developed portions of the project. Water quality BMPs shall be protected from upstream construction related runoff by having proper best management practices in place and maintained. Water quality BMPs shall be graded per the approved design plans and once landscaping and irrigation has been installed, it and its maintenance shall be turned over to an established Homeowner's Association (HOA). The Homeowner's Association shall enter into an agreement with the City for basin maintenance.

94. If improvements associated with this project are not initiated within two (2) years of the date of approval of the Public Improvement Agreement (PIA), the City Engineer may require that the engineer's estimate for improvements associated with the project be modified to reflect current City construction costs in effect at the time of request for an extension of time for the PIA or issuance of a permit. [MC 9.14.210(B)(C)]

Prior to Grading Plan Approval

95. Resolution of all drainage issues shall be as approved by the City Engineer.

96. A final detailed drainage study (prepared by a registered/licensed civil engineer) shall be submitted for review and approved by the City Engineer. The study shall include, but not be limited to: existing and proposed hydrologic conditions as well as hydraulic calculations for all drainage control devices and storm drain lines. The study shall analyze 1, 3, 6 and 24-hour duration events for the 2, 5, 10 and 100-year storm events [MC 9.14.110(A.1)]. A digital (pdf) copy of the approved drainage study shall be submitted to the Land Development Division.

97. The developer shall ensure compliance with the City Grading ordinance, these Conditions of Approval and the following criteria:

a. The project street and lot grading shall be designed in a manner that perpetuates the existing natural drainage patterns with respect to tributary drainage area and outlet points. Unless otherwise approved by the City Engineer, lot lines

shall be located at the top of slopes.

b. Any grading that creates cut or fill slopes adjacent to the street shall provide erosion control, sight distance control, and slope easements as approved by the City Engineer.

c. All improvement plans are substantially complete and appropriate clearance letters are provided to the City.

d. A soils/geotechnical report (addressing the soil's stability and geological conditions of the site) shall be submitted to the Land Development Division for review. A digital (pdf) copy of the soils/geotechnical report shall be submitted to the Land Development Division.

98. Grading plans (prepared by a registered/licensed civil engineer) shall be submitted for review and approved by the City Engineer per the current submittal requirements.

99. For any offsite grading, the developer shall submit written permission from adjacent property owners. If applicable, all areas outside of the project boundaries where grading results in slopes, the developer shall submit recorded slope easements.

100. The developer shall pay all remaining plan check fees.

101. Landscape & Irrigation plans (prepared by a registered/licensed landscape architect) for water quality BMPs shall be submitted for review and approved by the City Engineer per the current submittal requirements, if applicable.

102. A Storm Water Pollution Prevention Plan (SWPPP) shall be prepared in conformance with the State's current Construction Activities Storm Water General Permit. A copy of the current SWPPP shall be kept at the project site and be available for review upon request.

103. For projects that will result in discharges of storm water associated with construction with a soil disturbance of one or more acres of land, the developer shall submit a Notice of Intent (NOI) and obtain a Waste Discharger's Identification number (WDID#) from the State Water Quality Control Board (SWQCB) which shall be noted on the grading plans.

104. The final project-specific Water Quality Management Plan (WQMP) shall be consistent with the conditionally approved P-WQMP, as well as in full conformance with the document: "Water Quality Management Plan - A Guidance Document for the Santa Ana Region of Riverside County" dated October 22, 2012. The F-WQMP shall be submitted and approved prior to application for and issuance of grading permits. At a minimum, the F-WQMP shall include the following: Site Design BMPs; Source Control BMPs, Treatment Control BMPs, Operation and Maintenance requirements for BMPs and sources of funding for BMP implementation.

a. The Applicant has proposed to incorporate the use of Bioretention. Final

design and sizing details of all BMPs must be provided in the first submittal of the F-WQMP. The Applicant acknowledges that more area than currently shown on the plans may be required to treat site runoff as required by the WQMP guidance document and may result in the lost of lot(s).

b. The Applicant shall substantiate the applicable Hydrologic Condition of Concerns (HCOC) in Section F of the F-WQMP. <The HCOC designates that the project will be exempt from mitigation requirements based on Exemption 3>.

c. All proposed LID BMP's shall be designed in accordance with the RCFC&WCD's Design Handbook for Low Impact Development Best Management Practices, dated September 2011.

d. The proposed LID BMP's as identified in the project-specific P-WQMP shall be incorporated into the Final WQMP.

e. The NPDES notes per City Standard Drawing No. MVFE-350-0 shall be included in the grading plans.

f. Post-construction treatment control BMPs, once placed into operation for post-construction water quality control, shall not be used to treat runoff from construction sites or unstabilized areas of the site.

g. Prior to precise grading plan approval, the grading plan shall show any proposed trash enclosure to include a cover (roof) and sufficient size for dual bin (1 for trash and 1 for recyclables). The architecture shall be approved by the Planning Division and any structural approvals shall be made by the Building and Safety Division.

Prior to Grading Permit

105. A receipt showing payment of the Area Drainage Plan (ADP) fee to Riverside County Flood Control and Water Conservation District shall be submitted. [MC 9.14.100(O)]

106. If the developer chooses to construct the project in phases, a Construction Phasing Plan for the construction of on-site public or private improvements shall be submitted for review and approved by the City Engineer.

107. A digital (pdf) copy of all approved grading plans shall be submitted to the Land Development Division.

108. Security, in the form of a cash deposit (preferable), bond or letter of credit shall be submitted as a guarantee of the implementation and maintenance of erosion control measures. At least twenty-five (25) percent of the required security shall be in the form of a cash deposit with the City. [MC 8.21.160(H)]

109. Security, in the form of a cash deposit (preferable), bond or letter of credit shall be submitted as a guarantee of the completion of the grading operations for the project. [MC 8.21.070]

110. The developer shall pay all applicable inspection fees.

111. All necessary permits from Department of Water Resources for grading, storm drain construction, etc. shall be obtained, ifapplicable.

Prior to Map Approval

112. All proposed street names shall be submitted for review and approved by the City Engineer, if applicable. [MC 9.14.090(E.2.k)]

113. A copy of the Covenants, Conditions and Restrictions (CC&R's) shall be submitted for review and approved by the City Engineer. The CC&R's shall include, but not be limited to, access easements, reciprocal access, private and/or public utility easements as may be relevant to the project. In addition, for single-family residential development, bylaws and articles of incorporation shall also be included as part of the maintenance agreement for any water quality BMPs.

114. The developer shall enter into a Cooperative Agreement with the City and Riverside County Flood Control and Water Conservation District establishing the terms and conditions covering the inspection, operation and maintenance of Master Drainage Plan facilities required to be constructed as part of the project.

115. After recordation, a digital (pdf) copy of the recorded map shall be submitted to the Land Development Division.

116. Resolution of all drainage issues shall be as approved by the City Engineer.

117. If the project involves the subdivision of land, maps may be developed in phases with the approval of the City Engineer. Financial security shall be provided for all public improvements associated with each phase of the map. The boundaries of any multiple map increment shall be subject to the approval of the City Engineer. If the project does not involve the subdivision of land and it is necessary to dedicate right-of-way/easements, the developer shall make the appropriate offer of dedication by separate instrument. In either case, the City Engineer may require the dedication and construction of necessary utility, street or other improvements beyond the project boundary, if the improvements are needed for circulation, parking, access, or for the welfare or safety of the public. This approval must be obtained prior to the Developer submitting a Phasing Plan to the California Bureau of Real Estate. [MC 9.14.080(B)(C), GC 66412 & 66462.5]

118. Maps (prepared by a registered civil engineer and/or licensed surveyor) shall be submitted for review and approved by the City Engineer per the current submittal requirements.

119. Under the current permit for storm water activities required as part of the National Pollutant Discharge Elimination System (NPDES) as mandated by the Federal Clean Water Act, this project is subject to the following requirements:

a. Establish a Home Owners Association (HOA) to finance the maintenance of the "Water Quality BMPs". Any lots which are identified as "Water Quality BMPs" shall be owned in fee by the HOA.

b. Dedicate a maintenance easement to the City of Moreno Valley.

c. Execute a maintenance agreement between the City of Moreno Valley and the HOA, which shall be approved by City Council.

d. Provide a certificate of insurance per the terms of the maintenance agreement.

e. Select one of the following options to meet the financial responsibility to provide storm water utilities services for the required continuous operation, maintenance, monitoring system evaluations and enhancements, remediation and/or replacement, all in accordance with Resolution No. 2002-46.

i. Participate in the mail ballot proceeding in compliance with Proposition 218, for the Residential NPDES Regulatory Rate Schedule and pay all associated costs with the ballot process, or

ii. Establish an endowment to cover future maintenance costs for the Residential NPDES Regulatory Rate Schedule.

f. Notify the Special Districts Division of the intent to record the final map 90 days prior to City Council action authorizing recordation of the final map and the financial option selected. The final option selected shall be in place prior to the issuance of certificate of occupancy. [California Government Code & Municipal Code]

120. The developer shall guarantee the completion of all related improvements required for this project by executing a Public Improvement Agreement (PIA) with the City and posting the required security. [MC 9.14.220]

121. All public improvement plans required for this project shall be approved by the City Engineer in order to execute the Public Improvement Agreement (PIA).

122. The developer shall comply with the requirements of the City Engineer based on recommendations of the Riverside County Flood Control District regarding the construction of County Master Plan Facilities.

Prior to Improvement Plan Approval

123. The developer is required to bring any existing access ramps adjacent to and fronting the project to current ADA (Americans with Disabilities Act) requirements. However, when work is required in an intersection that involves or impacts existing access ramps, all access ramps in that intersection shall be retrofitted to comply

with current ADA requirements, unless otherwise approved by the City Engineer.

124. The developer shall submit clearances from all applicable agencies, and pay all applicable plan check fees.

125. The street improvement plans shall comply with current City policies, plans and applicable City standards (i.e. MVSI-160 series, etc.) throughout this project.

126. Any missing or deficient existing improvements along the project frontage within shall be constructed or secured for construction. The City Engineer may require the ultimate structural section for pavement to half-street width plus 18 feet or provide core test results confirming that existing pavement section is per current City Standards; additional signing & striping to accommodate increased traffic imposed by the development, etc.

127. The plans shall indicate any restrictions on trench repair pavement cuts to reflect the City's moratorium on disturbing newly-constructed pavement less than three (3) years old and recently slurry sealed streets less than one (1) year old. Pavement cuts may be allowed for emergency repairs or as specifically approved in writing by the City Engineer. Special requirements shall be imposed for repaving, limits to be determined by the City Engineer.

128. All dry and wet utilities shall be shown on the plans and any crossings shall be potholed to determine actual location and elevation. Any conflicts shall be identified and addressed on the plans. The pothole survey data shall be submitted to Land Development with the public improvement plans for reference purposes only. The developer is responsible to coordinate with all affected utility companies and bear all costs of any utility relocation.

129. Drainage facilities (i.e. catch basins, etc.) with sump conditions shall be designed to convey the tributary 100-year storm flows. Secondary emergency escape shall also be provided.

130. All public improvement plans (prepared by a licensed/registered civil engineer) shall be submitted for review and approved by the City Engineer per the current submittal requirements.

Prior to Encroachment Permit

131. A digital (pdf) copy of all approved improvement plans shall be submitted to the Land Development Division.

132. All applicable inspection fees shall be paid.

133. The plans shall indicate any restrictions on trench repair pavement cuts to reflect the City's moratorium on disturbing newly-constructed pavement less than three (3) years old and recently slurry sealed streets less than one (1) year old. Pavement cuts may be allowed for emergency repairs or as specifically approved in writing by the City Engineer. Special requirements shall be imposed for repaving, limits to be determined by the City Engineer.

134. Any work performed within public right-of-way requires an encroachment permit.

Prior to Building Permit

135. An engineered-fill certification, rough grade certification and compaction report shall be submitted for review and approved by the City Engineer. A digital (pdf) copy of the approved compaction report shall be submitted to the Land Development Division. All pads shall meet pad elevations per approved grading plans as noted by the setting of "blue-top" markers installed by a registered land surveyor or licensed civil engineer.

136. For all subdivision projects, the map shall be recorded (excluding model homes). [MC 9.14.190]

137. A walk through with a Land Development Inspector shall be scheduled to inspect existing improvements within public right of way along project frontage. Any missing, damaged or substandard improvements including ADA access ramps that do not meet current City standards shall be required to be installed, replaced and/or repaired. The applicant shall post security to cover the cost of the repairs and complete the repairs within the time allowed in the public improvement agreement used to secure the improvements.

138. Certification to the line, grade, flow test and system invert elevations for the water quality control BMPs shall be submitted for review and approved by the City Engineer (excluding models homes).

Prior to Occupancy

139. All outstanding fees shall be paid.

140. All required as-built plans (prepared by a registered/licensed civil engineer) shall be submitted for review and approved by the City Engineer per the current submittal requirements.

141. The final/precise grade certification shall be submitted for review and approved by the City Engineer.

142. The developer shall complete all public improvements in conformance with current City standards, except as noted in the Special Conditions, including but not limited to the following:

a. Street improvements including, but not limited to: pavement, base, curb and/or gutter, cross gutters, spandrel, sidewalks, drive approaches, pedestrian ramps, street lights (SL-2), signing, striping, under sidewalk drains, landscaping and irrigation, medians, pavement tapers/transitions and traffic control devices as appropriate.

b. Grind and overlay full street width along the project's frontage shall be required.

c. Storm drain facilities including, but not limited to: storm drain pipe, storm drain laterals, open channels, catch basins and local depressions.

d. City-owned utilities.

e. Sewer and water systems including, but not limited to: sanitary sewer, potable water and recycled water.

f. Under grounding of all existing and proposed utilities adjacent to and on-site. [MC 9.14.130]

g. Relocation of overhead electrical utility lines including, but not limited to: electrical, cable and telephone.

143. For residential subdivisions, punch list work for improvements and capping of streets in that phase shall be completed and approved for acceptance by the City Engineer, prior to the last 20% or last 5% (whichever is greater, unless as otherwise determined by the City Engineer).

144. The applicant shall ensure the following, pursuant to Section XII. I. of the 2010 NPDES Permit:

a. Field verification that structural Site Design, Source Control and Treatment Control BMPs are designed, constructed and functional in accordance with the approved Final Water Quality Management Plan (WQMP).

b. Certification of best management practices (BMPs) from a state licensed civil engineer. An original WQMP BMP Certification shall be submitted for review and approved by the City Engineer.

145. The Developer shall comply with the following water quality related items:

a. Notify the Land Development Division prior to construction and installation of all structural BMPs so that an inspection can be performed.

b. Demonstrate that all structural BMPs described in the approved final project-specific WQMP have been constructed and installed in conformance with the approved plans and specifications;

c. Demonstrate that Developer is prepared to implement all non-structural BMPs described in the approved final project-specific WQMP; and

d. Demonstrate that an adequate number of copies of the approved final project-specific WQMP are available for future owners/occupants.

e. Clean and repair the water quality BMP's, including re-grading to approved civil drawing if necessary.

f. Obtain approval and complete installation of the irrigation and landscaping.

146. Prior to the first occupancy, the developer shall be required to construct Riverside County Flood Control and Water Conservation District's Sunnymead MDP Line M-2 from its current terminus to the project's westerly boundary.

Special Districts Division

147. The ongoing maintenance of any landscaping required to be installed behind the curb shall be the responsibility of the property owner.

148. MAJOR INFRASTRUCTURE FINANCING DISTRICT. This project has been identified to potentially be included in the formation of a special financing district for the construction and maintenance of major infrastructure improvements which may include but are not limited to thoroughfares, bridges, and certain flood control improvements. The property owner(s) shall participate in such district and pay any special tax, assessment, or fee levied upon the project property for such district. At the time of the public hearing to consider formation of or annexation into the district, the qualified elector(s) will not protest the formation or annexation, but will retain the right to object to any eventual tax/assessment/fee that is not equitable should the financial burden of the tax/assessment/fee not be reasonably proportionate to the benefit the affected property obtains from the improvements to be installed and/or maintained. The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org when submitting an application for the first building permit to determine whether the development will be subjected to this condition. If subject to the condition, the special election requires a minimum 90-day process in compliance with the provisions of Article 13C of the California Constitution.

149. The parcel(s) associated with this project have been incorporated into the Moreno Valley Community Services District Zone A (Parks & Community Services) and Zone C (Arterial Street Lighting). All assessable parcels therein shall be subject to annual parcel taxes for Zone A and Zone C for operations and capital improvements.

150. This project is conditioned to provide a funding source for the operation and maintenance of public improvements and/or services associated with new development in that territory. The Developer shall satisfy this condition with one of the options below.

a. Participate in a special election for maintenance/services and pay all associated costs of the election process and formation, if any. Financing may be

structured through a Community Facilities District, Landscape and Lighting Maintenance District, or other financing structure as determined by the City; or

b. Establish an endowment fund to cover the future maintenance and/or service costs.

The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org of its selected financial option prior to City Council action authorizing recordation of the final map for the development. A minimum of 90 days is needed to complete the special election process. This allows adequate time to be in compliance with the provisions of Article 13C of the California Constitution for conducting a special election.

The financial option selected shall be in place prior to the issuance of the first building permit for the project.

151. This project has been conditioned to provide a funding source for the continued maintenance, enhancement, and/or retrofit of parks, open spaces, linear parks, and/or trail systems. The Developer shall satisfy this condition with one of the options below.

a. Participate in a special election for annexation into Community Facilities District No. 1 or other district and pay all associated costs of the special election process and formation, if any; or

b. Establish an endowment fund to cover future maintenance costs for new neighborhood parks.

The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org of its selected financial option prior to City Council action authorizing recordation of the final map for the development. A minimum of 90 days is needed to complete the special election process. This allows adequate time to be in compliance with the provisions of Article 13C of the California Constitution for conducting a special election.

Annexation to CFD No. 1 shall be completed or proof of payment to establish the endowment fund shall be provided prior to the issuance of the first building permit for this project.

152. This project has been identified to be included in the formation of a Community Facilities District for Public Safety services including but not limited to Police, Fire Protection, Paramedic Services, Park Rangers, and Animal Control services. The property owner(s) shall not protest the formation; however, they retain the right to object to the rate and method of maximum special tax. In compliance with

Proposition 218, the property owner shall agree to approve the mail ballot proceeding (special election) for either formation of the CFD or annexation into an existing district that may already be established. The Developer must notify the Special Districts Division at 951.413.3480 or specialdistricts@moval.org of its intent to record the final map for the development 90 days prior to City Council action authorizing recordation of the map. This allows adequate time to be in compliance with the provisions of Article 13C of the California Constitution. (California Government Code Section 53313 et. seq.)

153. Residential (R) If Land Development, a Division of the Public Works Department, requires this project to supply a funding source necessary to provide for, but not limited to, stormwater utilities services for the required continuous operation, maintenance, monitoring, systems evaluation and enhancements of on-site facilities and performing annual inspections of the affected areas to ensure compliance with state mandated storm water regulations, a funding source needs to be established. The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org of its selected financial option for the National Pollution Discharge Elimination System (NPDES) program (see Land Development's related condition). Participating in a special election the process requires a 90 day period prior to City Council action authorizing recordation of the final map for the development and to participate in a special election process. This allows adequate time to be in compliance with the provisions of Article 13D of the California Constitution. California Health and Safety Code Sections 5473 through 5473.8 (Ord. 708 Section 3.1, 2006) & City of Moreno Valley Municipal Code Title 3, Section 3.50.050.)

Transportation Engineering Division

154. Private streets' road width shall be a minimum of 24-feet with no parking allowed on either side. Applicant shall provide signage (NO PARKING) along the streets per current MUTCD standards.

155. The design and proposed location of the project driveways shall conform to City of Moreno Valley Standard No. MVSI-112C-0 for Commercial Driveway Approaches and Section 9.11.080, and Table 9.11.080-14 of the City's Municipal Code - Design Guidelines or as approved by the City Engineer. Applicant needs to show driveways per City Standard, including additional dedications for public improvements.

156. Right-of-way at driveway(s) entrances shall accommodate all public improvements (i.e. curb ramps, utility controllers, etc.); applicant shall provide dedication as required and appropriate. Show driveways per City standards (curb radii, ramps, grades, so for.)

157. Any proposed driveway gate shall be set back at a minimum of 60 feet from the

property line or as determined by the traffic study to provide sufficient storage length in front of the gate for entering traffic. Gate doors shall be rolling type or swing away from Iris Avenue.

1. Shown gate for westerly driveway needs to swing away from Iris Avenue.

2. Main entrance storage length for visitors is not adequate, location of visitor call box needs to be relocated in order to provide at least two (2) cars on the visitor lane.

158. Applicant shall plan to accommodate gates at entrances and provide road width and improvements accordingly.
For main access point, easterly driveway at proposed Street A, the entrance design shall provide the following:

a. Gate shall be set back a minimum of 60 feet from the property line.

b. A turnaround area - Applicant needs to provide vehicle turning template to show adequacy of provided turnaround area.

c. A storage lane with a minimum of 60 feet queuing length for entering traffic.

d. A second storage lane for visitors to stop and use a call box (or other service) for permission to enter the community. Visitor storage lane seems insufficient due to location of call box, relocate call box or propose design with adequate vehicle storage.

e. No Parking signs posted in the turnaround area.

f. A separate pedestrian entry.

g. Presence loop detectors (or another device) within 1 to 2 feet of the gate that ensures that the gate remain open while any vehicle in in the queue.

h. Slide doors or gate doors that swing away from incoming traffic.

i. A median will be required as traffic calming measure into residential development. Median shall be kept within private property and shall not encroach onto public right-of-way.

159. Conditions of approval may be modified or added if a phasing plan is submitted for this development.

160. All project driveways to public streets shall conform to Section 9.11.080, and Table 9.11.080-14 of the City's Development Code – Design Guidelines and City of Moreno Valley Standard Plans No. MVSI-112A~D-0 for commercial driveway approaches.

161. The gated entrance shall be provided with the following, or as approved by the City Traffic Engineer: A- A storage lane with a minimum of 60' provided for queuing. B - A second storage lane for visitors to stop in prior to the gate to utilize a call box (or other device) to receive permission to enter the site. C - Signing and striping for A. and B. D - A turnaround outside the gates of 38' radius. E - No Parking Signs shall be posted in the turnaround areas. F - A separate pedestrian entry. G - Presence loop detectors (or another device) within 1 or 2 feet of the gates that

ensures that the gates remain open while any vehicle is in the queue. All of these items shall be kept in working order.

162. Sight distance at the proposed roadways and driveways shall conform to City of Moreno Valley Standard No. MVSI-164A,B,C-0 at the time of preparation of final grading, landscape, and street improvement plans.

163. During construction activity, developer is responsible for regularly scheduled street sweeping per approved street sweeping schedule.

164. Prior to issuance of a construction permit, construction traffic control plans prepared by a qualified, registered Civil or Traffic engineer may be required for plan approval or as required by the City Traffic Engineer.

165. Prior to final approval of any landscaping or monument sign plans, the project plans shall demonstrate that sight distance at the project driveways conforms to City Standard Plan No. MVSI-164A, B, C-0.

166. Prior to the final approval of the street improvement plans, a signing and striping plan shall be prepared per City of Moreno Valley Standard Plans - Section 4 for all streets within the project area.

167. Prior to issuance of a Building Final or Certificate of Occupancy, all approved street improvements shall be installed to the satisfaction of the City Engineer.

168. Prior to issuance of a Building Final or Certificate of Occupancy, all approved signing and striping shall be installed per current City Standards

PARKS & COMMUNITY SERVICES DEPARTMENT

169. This project is subject to current Quimby Fees.

170. Bikeways shall not be shared with any above ground utilities, blocking total width access.

171. According to the General Plan and City's Juan Bautista de Anza trail plan, project improvements include a Class I Bikeway, walkway, and landscaped area. City shall construct paved Class I bike trail only. Developer shall design and construct landscape and irrigation improvements for the Juan Bautista de Anza trail greenbelt, including lighting along the trail. Landscaping and irrigation shall be maintained by City following acceptance of the public improvements into the City's Community Services District. The greenbelt shall conform to City of Moreno Valley standard plans and specifications, "CalTrans Design Manual," and Department of Water Resources (DWR) requirements. The developer shall comply with the following conditions:

a. Concurrent with the recordation of the final map, an easement for trail purposes shall be dedicated to the City of Moreno Valley Community Services District.

b. Bonds for construction of the landscaping within the project and these COA's shall be provided (per Parks and Community Services criteria) concurrent with the Subdivision Improvements Agreement process.

d. Plans for improvements at the greenbelt shall be submitted and approved by the Director of Parks and Community Services or designee prior to the approval of Precise Grading Plans.

e. Prior to the issuance of any building permits, detailed final plans for the greenbelt, street improvement, and fence or wall shall be reviewed and approved by the Director of the Parks and Community Services Department or his/her designee.

g. Where feasible, walkways from the project may connect to the bikeway/walkway.

f. Landscape improvements shall be surveyed and staked by the developer's Civil Engineer. The landscape improvements shall be inspected and approved by the Director of Parks and Community Services or designee prior to the issuance of any building permits.

g. Eight sets of complete park and/or trail plans shall be submitted to Parks and Community Services for routing. Adjacent landscaping and walls shall be shown on the plans. Final construction plans and details require wet stamped and signed mylars, two sets of bond copies from the City signed mylars, and AutoCAD.dwf and PDF files on CD.

h. Construction of landscape improvements shall begin no later than issuance of 30% building permits and be completed no later than issuance of 70% building permits.

172. All street crossings for Class-I Bikeways shall be signed with approved signage.

173. In order to prevent the delay of building permit issuance, any deviation from materials shall be submitted to Parks and Community Services and approved in writing (at the Department's discretion) 60-days prior to the commencement of construction. Any unauthorized deviation from the approved plan and/or the City's specifications and/or Conditions of Approval may result in the holding of building permits and/or building finals.

174. All inspections shall be requested two (2) working days' in advance from the Parks and Community Services Department at the time of rough and precise grading, fence/wall installation, curb and drainage, flatwork, mulch installation, graffiti coating, soil preparation, irrigation placement, site electrical, weed abatement, planting, and final inspection. Failure to schedule inspections may result in cessation of work and/or re-inspection fees/penalties.

175. This project is subject to current Development Impact Fees. Section 3.38.150 of the City's Municipal Code allows for the developer to receive credits for qualifying public improvements. For consideration of a DIF credit, the developer shall provide an Architect's Cost Estimate. The developer's maximum credit amount is based on the lower of the DIF Study Costs, the Architect's Estimate and the DIF Fee Obligation. Allowance of DIF credits is subject to City review and approval, and is not guaranteed by these Conditions of Approval.

Standard Conditions

176. Detailed final plans (mylars, PDF, and AutoCAD file on a DVD-R) for parks, trails/bikeways, fencing, and adjoining landscaped areas shall be submitted to and approved by the Director of Parks and Community Services, or his/her designee, prior to the issuance of any building permits. All plans are to include a profile showing grade changes.

177. Within the improvements for PCS, the applicant shall show all existing and planned easements on all maps and plans. Easements on City/CSD owned or maintained parks, trails, bikeways, and landscape shall be identified on each of these plans with the instrument number of the recorded easement.

178. Prior to recordation of the Final Map, the applicant shall post security to guarantee construction or modification of parks, trails and/or bikeways for the City/CSD. Copies of said documentation shall be provided to PCS, prior to the approval of the Final Map.

179. Applicable plan check and inspection fees shall be paid, per the approved City fee schedule.

180. A restriction shall be placed on lots that back up to City/CSD owned or maintained parks, trails, bikeways, and landscaped areas, preventing openings or gates accessing the City/CSD owned or maintained property. This shall be documented through Covenants, Conditions, and Restrictions (CC&R's). A copy of the CC&R's with this restriction noted shall be submitted and approved by the Director of Parks and Community Services or his/her designee, prior to the recordation of the Final Map.

181. The following plans require PCS written approval: Tentative tract/parcel maps; rough grading plans (including all Delta changes); Final Map; precise grading plans; street improvement plans; traffic signal plans; fence and wall plans; landscape plans for areas adjacent to bikeways; trail improvement plans. PCS will not approve any permits without review and approval of the above items.

RESOLUTION NUMBER 2021-XX

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, APPROVING TENTATIVE TRACT MAP 37909 (PEN20-0063) FOR THE IRIS PARK COMMUNITY LOCATED ON THE SOUTH SIDE OF IRIS AVENUE EAST OF PERRIS BOULEVARD (APN 312-020-025)

WHEREAS, the City of Moreno Valley ("City") is a general law city and a municipal corporation of the State of California; and

WHEREAS, Passco Pacifica LLC., ("Developer") has filed an application for the approval of Tentative Tract Map 37909, PEN20-0063 ("Application") for a Planned Unit development associated with ("Project") located on the south side of Iris Avenue east of Perris Boulevard ("Site"); and

WHEREAS, the Application has been evaluated in accordance with Chapter 9.14 (Land Divisions) of the Municipal Code with consideration given to the City's General Plan, Zoning Ordinance, and other applicable laws and regulations; and

WHEREAS, Chapter 9.14 of the Municipal Code imposes conditions of approval upon projects for which a Tentative Tract Map is required, which conditions may be imposed by the City Council to address on-site improvements, off-site improvements, the manner in which the site is used and any other conditions as may be deemed necessary to protect public health, safety and welfare and ensure that the proposed Project will be developed in accordance with the purpose and intent of Title 9 ("Planning and Zoning") of the Municipal Code; and

WHEREAS, Staff has presented for the City Council's consideration Conditions of Approval to be imposed upon Tentative Tract Map 37909 PEN20-0063 (TTM), which conditions have been deemed necessary to protect the public health, safety and welfare and ensure that the proposed Project will be developed in accordance with the purpose and intent of Title 9 ("Planning and Zoning") of the Municipal Code; and

WHEREAS, pursuant to the provisions of Section 9.02.200 (Public Hearing and Notification Procedures) of the Municipal Code and Government Code section 65905, a public hearing was scheduled for November 12, 2020 and notice thereof was duly published and posted, and mailed to all property owners of record within 600 feet of the Site; and

WHEREAS, on November 12, 2020 a duly noticed public hearing was conducted by the Planning Commission where the item was continued to the December 10, 2020 Planning Commission meeting; and

WHEREAS, on December 10, 2020, the public hearing to consider the Application was duly conducted by the Planning Commission at which time all interested persons were provided with an opportunity to testify and to present evidence; and

WHEREAS, on December 10, 2020 a hearing was conducted by the Planning Commission to consider a recommendation that the City Council approve the Mitigated Negative Declaration and the Mitigation Monitoring Plan and approve the proposed Project; and

WHEREAS, on December 10, 2020 a hearing was conducted by the Planning Commission whereby the Planning Commission approved Planning Commission Resolution 2020-52, a recommendation that the City Council approve the Tentative Tract Map 37909; and

WHEREAS, on February 2, 2021, the public hearing to consider the Application was duly conducted by the City Council at which time all interested persons were provided with an opportunity to testify and to present evidence; and

WHEREAS, consistent with the requirements of Chapter 9.14 (Land Divisions) of the Municipal Code, at the public hearing the City Council considered Conditions of Approval to be imposed upon Tentative Tract Map 37909 PEN20-0063 (TTM), which conditions were prepared by Planning Division staff who deemed said conditions to be necessary to protect public health, safety and welfare and to ensure the proposed Project will be developed in accordance with the purpose and intent of Title 9 (Planning and Zoning) of the Municipal Code; and

WHEREAS, at the public hearing, the City Council considered whether each of the requisite findings specified in Section 9.14.070 of the Municipal Code as set forth herein could be made with respect to the proposed Project as conditioned by the proposed Conditions of Approval; and

WHEREAS, on February 2, 2021 a hearing was conducted by the City Council whereby the City Council approved the Tentative Tract Map 37909.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:

Section 1. **Recitals and Exhibits**

That the foregoing Recitals and attached Exhibits are true and correct and are hereby incorporated by this reference.

Section 2. **Notice**

That pursuant to Government Code section 66020(d)(1), notice is hereby given that the proposed project is subject to certain fees, dedications, reservations and other exactions as provided herein.

Section 3. **Evidence**

That the City Council has considered all of the evidence submitted into the administrative record for the proposed TTM, including, but not limited to, the following:

(a) Moreno Valley General Plan and all relevant provisions contained therein;
(b) Title 9 (Planning and Zoning) of the Moreno Valley Municipal Code and all relevant provisions referenced therein;
(c) Application for the approval of Tentative Tract Map 37909 (TTM) PEN20-0063 and all documents, records and references contained therein;
(d) Conditions of Approval for CUP PEN20-0063, attached hereto as Exhibit A:
(e) Staff Report prepared for the City Council's consideration and all documents, records and references related thereto, and Staff's presentation at the public hearing;
(f) Testimony and/or comments from Applicant and its representatives during the public hearing; and
(g) Testimony comments and/or correspondence from all persons that were submitted at, or prior to, the public hearing.

Section 4. **Findings**

That based on the foregoing Recitals and the Evidence contained in the Administrative Record as set forth above, the City Council makes the following findings in approving TTM 37909 PEN20-0063.

(a) That the proposed map is consistent with applicable general and specific plans and the zoning ordinance;
(b) That the design or improvement of the proposed subdivision is consistent with applicable general and specific plans;
(c) That the site is physically suitable for the type of development;
(d) That the site of the proposed land division is physically suitable for the proposed density of the development;
(e) That the design of the subdivision or the proposed improvements are not likely to cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat;
(f) That the design of the subdivision or type of improvements is not likely to cause serious public health problems;
(g) That the design of the subdivision or the type of improvements will not conflict with easements, acquired by the public at large, for access through or use of, property within the proposed subdivision;
(h) That the proposed land division is not subject the Williamson Act pursuant to the California Land Conservation Act of 1965;
(i) That the proposed land division and the associated design and improvements are not consistent with applicable ordinances of the City.
(j) That the design of the land division provides, to the extent feasible, for future passive or natural heating and cooling opportunities in the subdivision; and
(k) That the effect of the proposed land division on the housing needs of the region were considered and balanced against the public service needs of the residents of Moreno Valley and available fiscal and environmental resources.

Section 5. **Approval**

That based on the foregoing Recitals, Evidence contained in the Administrative Record and Findings set forth above, the City Council hereby approves TTM PEN20-0063 subject to the Conditions of Approval for TTM PEN20-0063 attached hereto as Exhibit A.

Section 6. **Repeal of Conflicting Provisions**

That all the provisions as heretofore adopted by the City Council that are in conflict with the provisions of this Resolution are hereby repealed.

Section 7. **Severability**

That the City Council declares that, should any provision, section, paragraph, sentence or word of this Resolution be rendered or declared invalid by any final court action in a court of competent jurisdiction or by reason of any preemptive legislation, the remaining provisions, sections, paragraphs, sentences or words of this Resolution as hereby adopted shall remain in full force and effect.

Section 8. **Effective Date**

That this Resolution shall take effect immediately upon the date of adoption.

Section 9. **Certification**

That the City Clerk for the City Council shall certify to the passage of this Resolution.

PASSED AND ADOPTED THIS _____ day of _____, 2021.

COMMUNITY DEVELOPMENT DEPARTMENT

Planning Division

1. A change or modification to the land use or the approved site plans may require a separate approval. Prior to any change or modification, the property owner shall contact the City of Moreno Valley Community Development Department to determine if a separate approval is required.

2. Any expansion to this use or exterior alterations will require the submittal of a separate application(s) and shall be reviewed and approved under separate permit(s). (MC 9.02.080)

3. The developer, or the developer's successor-in-interest, shall be responsible for maintaining any undeveloped portion of the site in a manner that provides for the control of weeds, erosion and dust. (MC 9.02.030)

4. All landscaped areas shall be maintained in a healthy and thriving condition, free from weeds, trash and debris. (MC 9.02.030)

5. The site shall be developed in accordance with the approved plans on file in the Community Development Department - Planning Division, the Municipal Code regulations, General Plan, and the conditions contained herein. Prior to any use of the project site or business activity being commenced thereon, all Conditions of Approval shall be completed to the satisfaction of the Planning Official. (MC 9.14.020)

6. Any signs indicated on the submitted plans are not included with this approval. Any signs, whether permanent (e.g. wall, monument) or temporary (e.g. banner, flag), require separate application and approval by the Planning Division. No signs are permitted in the public right of way. (MC 9.12)

7. All site plans, grading plans, landscape and irrigation plans, fence/wall plans, lighting plans and street improvement plans shall be coordinated for consistency with this approval.

Special Conditions

8. Prior to grading plan approval, Basin fencing shall include wrought iron fencing with pilasters.

9. Prior to building final, a basin maintained by an HOA or other private entity, landscape (trees, shrubs and groundcover) and irrigation shall be installed, and maintained by the HOA or other private entity with documentation provided to the Planning Division.

10. Prior to issuance of building permits, final front and street side yard landscape and irrigation plans, and slope landscape plans and basin landscape plans, shall be approved.

11. This approval shall comply with all applicable requirements of the City of Moreno Valley Municipal Code.

12. The grading plans shall show all easements including an easement for trail purposes for the Juan Bautista de Anza trail per the Tentative Tract Map.

13. The site shall be developed in accordance with the approved tentative map on file in the Community Development Department -Planning Division, the Municipal Code regulations, General Plan, and the conditions contained herein. (MC 9.14.020)

14. Prior to building final, the developer/owner or developer's/owner's successor-in-interest shall pay all applicable impact fees, including but not limited to Transportation Uniform Mitigation fees (TUMF), and the City's adopted Development Impact Fees. (Ord)

15. A drought tolerant landscape palette shall be utilized throughout the tract in compliance with the City's Landscape Requirements. (9.17)

16. This tentative map and Conditional Use Permit for the Planned Unit Development shall expire three years after the approval date of this tentative map and conditional use permit unless extended as provided by the City of Moreno Valley Municipal Code; otherwise it shall become null and void and of no effect whatsoever in the event the applicant or any successor in interest fails to properly file a final map before the date of expiration. (MC 9.02.230, 9.14.050, 080)

17. Prior to the issuance of grading permits, mitigation measures contained in the Mitigation Monitoring Program approved with this project shall be implemented as provided therein.

18. Prior to any site disturbance and/or grading plan submittal, and or final map

recordation, a mitigation monitoring fee, as provided by City ordinance, shall be paid by the applicant/owner. No City permit or approval shall be issued until such fee is paid. (CEQA)

19. Prior to issuance of a building permit, the developer/property owner or developer's successor-in-interest shall pay all applicable impact fees due at permit issuance, including but not limited to Multi-species Habitat Conservation Plan (MSHCP) mitigation fees. (Ord.)

20. Prior to approval of any grading plan, local and master-planned multi-use trail easements shall be shown on the rough and precise grading plans in accordance with the City's Master Trail Plan.

21. All undeveloped portions of the site in perpetuity shall be maintained in a manner that provides for the control of weeds, erosion and dust. (MC 9.02.030)

22. Prior to the issuance of building permits, the developer shall provide documentation that contact was made to the U.S. Postal Service to determine the appropriate type and location of mailboxes. Mailboxes shall be clustered and include security lighting per U. S. Postal standards.

23. All site plans, grading plans, landscape and irrigation plans, and street improvement plans shall be coordinated for consistency with this approval.

24. Prior to the start of any construction, temporary security fencing shall be erected. The fencing shall be a minimum of six (6) feet high with locking, gated access and shall remain through the duration of construction. Security shall remain in place until the project is completed or the above conditions no longer exist. (Security fencing is required if there is: construction, unsecured structures, unenclosed storage of materials and/or equipment, and/or the condition of the site constitutes a public hazard).

25. The site has been approved for Tentative Tract Map 37909 (PEN20-0063) to subdivide approximately 10.82 acres into eighty-one single family residential lots including the approval of a Conditional Use Permit (PEN20-0065) for a Planned Unit Development to design and implement the residential community as designed per the approved plans for the Tentative Tract Map 37909 and the Planned Unit Development. The Tentative Tract Map 37909 and the Conditional Use Permit for the Planned Unit Development must be developed in conjunction with each other as approved. A change or modification shall require separate approval.

26. Prior to recordation of the final subdivision map, the following documents shall be submitted to and approved by the Planning Division which shall demonstrate that the project will be developed and maintained in accordance with the intent and purpose of the approval:

a. The document to convey title

b. Deed restrictions, easements, or Covenants, Conditions and Restrictions to be recorded

The approved documents shall be recorded at the same time that the subdivision map is recorded. The documents shall contain provisions for general maintenance of the site, joint access to proposed parcels, open space use restrictions, conservation easements, guest parking, feeder trails, water quality basins, lighting, landscaping and common area use items such as tot lot/public seating areas and other recreation facilities or buildings. The approved documents shall also contain a provision, which provides that they may not be terminated and/or substantially amended without the consent of the City and the developer's successor-in-interest. (MC 9.14.090)

In addition, the following deed restrictions and disclosures shall be included within the document and grant deed of the properties:

a. The developer and homeowners association shall promote the use of native plants and trees and drought tolerant species.

b. All lots designated for open space and or detention basins, shall be included as an easement to, and maintained by a Homeowners Association (HOA) or other private maintenance entity. All reverse frontage landscape areas shall also be maintained by the onsite HOA. Language to this effect shall be included and reviewed within the required Covenant Conditions and Restrictions (CC&Rs) prior to the approval of the final map.

c. Maintenance of any and all common facilities.

d. A conservation easement for lettered lots shall be recorded on the deed of the property and shown on the final map. Said easement shall include access restrictions prohibiting motorized vehicles from these areas.

e. Oleander plants or trees shall be prohibited on open space lots adjacent to multi-use trails.

27. Separate Administrative Plot Plans, including, Design Review (product approval) and Model Home Complex and/or temporary sales trailers, are required for approval of the design of the future single-family homes for Tentative Tract Map 37909.

28. Prior to building final, slope landscape and irrigation shall be installed, certified by the Landscape Architect with documentation provided to the Planning Division with an inspection performed and approved by the Planning Division. Landscaping on lots not yet having dwelling units shall be maintained by the developer weed and disease free. (MC 9.03.040)

Prior to Grading Permit

29. Prior to issuance of any grading permit, all Conditions of Approval and Mitigation Measures shall be printed on the grading plans.

30. Prior to the issuance of grading permits, decorative (e.g. colored/scored concrete or as approve by the Planning Official) pedestrian pathways across circulation aisles/paths shall be provided throughout the development to connect dwellings with open spaces and/or recreational uses with open space and/or parking. and/or the public right-of-way. The pathways shall be shown on the precise grading plan. (GP Objective 46.8, DG)

31. Prior to issuance of grading permits, the developer shall pay the applicable Stephens' Kangaroo Rat (SKR) Habitat Conservation Plan mitigation fee. (Ord)

32. If potential historic, archaeological, Native American cultural resources or paleontological resources are uncovered during excavation or construction activities at the project site, work in the affected area must cease immediately and a qualified person (meeting the Secretary of the Interior's standards (36CFR61)) shall be consulted by the applicant to evaluate the find, and as appropriate recommend alternative measures to avoid, minimize or mitigate negative effects on the historic, prehistoric, or paleontological resource. Determinations and recommendations by the consultant shall be immediately submitted to the Planning Division for consideration, and implemented as deemed appropriate by the Community Development Director, in consultation with the State Historic Preservation Officer (SHPO) and any and all affected Native American Tribes before any further work commences in the affected area.

    If human remains are discovered during grading and other construction excavation, no further disturbance shall occur until the County Coroner has made necessary findings as to origin. If the County Coroner determines that the remains are potentially Native American, the California Native American Heritage Commission shall be notified within 5-days of the published finding to be given a reasonable opportunity to identify the "most likely descendant." The "most likely descendant" shall then make recommendations, and engage in consultations concerning the treatment of the remains (California Public Resources Code 5097.98). (GP Objective 23.3, CEQA).

33. Within thirty (30) days prior to any grading or other land disturbance, a pre-construction survey for Burrowing Owls shall be conducted pursuant to the established guidelines of Multiple Species Habitat Conservation Plan. The pre-construction survey shall be submitted to the Planning Division prior to any disturbance of the site and/or grading permit issuance.

34. Prior to approval of any grading permits, plans for any security gate system shall be submitted to and approved by to the Planning Division.

35. Prior to the issuance of grading permits, the site plan and grading plans shall show decorative hardscape (e.g. colored concrete, stamped concrete, pavers or as approved by the Planning Official) consistent and compatible with the design, color and materials of the proposed development for all driveway ingress/egress locations of the project.

36. Prior to issuance of grading permits, the developer shall submit wall/fence plans to be included in the Building and Safety submittal for review and approval consistent with the approved plans, the Planned Unit Development Guidelines, the Landscape Requirements and the Municipal Code.

37. Prior to the issuance of grading permits, a temporary project identification sign shall be erected on the site in a secure and visible manner. The sign shall be conspicuously posted at the site and remain in place until occupancy of the project. The sign shall include the following:

    a. The name (if applicable) and address of the development.
    b. The developer's name, address, and a 24-hour emergency telephone number.

38. Prior to issuance of any building permit, all Conditions of Approval and Mitigation Measures shall be printed on the building plans.

39. Prior to the issuance of building permits, the developer shall provide documentation that contact was made to the U.S. Postal Service to determine the appropriate type and location of mailboxes.

40. 41. Prior to the issuance of building permits, final landscape and irrigation plans shall be submitted for review and approved by the Planning Division for the following:
    a. Areas maintained by the Homeowner's Association including parks, site entry driveways, and other on-site landscaping;
    b. Areas along Iris Avenue;
    c. Trail Easement (per Parks and Community Services design standards); and
    d. Front yards.

    Landscaping is required for the sides and or slopes of all water quality basin and drainage areas, while a hydroseed mix with irrigation is acceptable for the bottom of the basin areas. All detention basins shall include trees, shrubs and groundcover up to the concreted portion of the basin. A solid decorative wall with pilasters, tubular steel fence with pilasters or other fence or wall approved by the Planning Official is required to secure all water quality and detention basins.
    The plans shall be prepared in accordance with the City's Landscape Development

Guidelines and the Planned Unit Development Guidelines.
A detailed, on-site, computer generated, point-by-point comparison lighting plan shall be proved with and integrated into the landscape plan. The plan shall include all project lighting within the community to include street lights, exterior building lights, parking area lighting and park lights. The plan shall indicate the manufacturer's specifications for light fixtures used, shall include style, illumination, location, height and method of shielding per the City's Municipal Code requirements.

41. Prior to issuance of building permits, the Planning Division shall review and approve the location and method of enclosure or screening of transformer cabinets, commercial gas meters and back flow preventers as shown on the final working drawings. Location and screening shall comply with the following criteria: transformer cabinets and commercial gas meters shall not be located within required setbacks and shall be screened from public view either by architectural treatment or landscaping; multiple electrical meters shall be fully enclosed and incorporated into the overall architectural design of the building(s); back-flow preventers shall be screened by landscaping. (GP Objective 43.30)

42. Prior to issuance of a building permit, the developer/property owner or developer's successor-in-interest shall pay all applicable impact fees due at permit issuance, including but not limited to Multi-species Habitat Conservation Plan (MSHCP) mitigation fees. (Ord)

43. Prior to building final, the developer/owner or developer's/owner's successor-in-interest shall pay all applicable impact fees, including but not limited to Transportation Uniform Mitigation fees (TUMF), and the City's adopted Development Impact Fees. (Ord)

44. Prior to issuance of building permits, for projects that will be phased, a phasing plan shall be submitted to and approved by the Planning Division if occupancy is proposed to be phased.

45. Photometric Plans shall be submitted to the Building and Safety Division for review and approval as part of the lighting and electrical building plan submittal.

46. Prior to issuance of any grading permits, mitigation measures contained in the Mitigation Monitoring Program approved with this project shall be implemented as provided therein. A mitigation monitoring fee, as provided by City ordinance, shall be paid by the applicant within 30 days of project approval. No City permit or approval shall be issued until such fee is paid. (CEQA)

Prior to Building Final or Occupancy

47. Prior to building final, all required landscaping and irrigation shall be installed per plan, certified by the Landscape Architect and inspected by the Planning Division. (MC 9.03.040, MC 9.17).

48. Prior to building final, Planning approved/stamped landscape plans shall be provided to the Community Development Department – Planning Division on a CD disk.

49. Prior to building final, all required and proposed fences and walls shall be constructed according to the approved plans on file in the Planning Division. (MC 9.080.070).

Building Division

50. Prior to submittal, all new development, including residential second units, are required to obtain a valid property address prior to permit application. Addresses can be obtained by contacting the Building Safety Division at 951.413.3350.

51. Contact the Building Safety Division for permit application submittal requirements.

52. Any construction within the city shall only be as follows: Monday through Friday seven a.m. to seven p.m(except for holidays which occur on weekdays), eight a.m. to four p.m.; weekends and holidays (as observed by the city and described in the Moreno Valley Municipal Code Chapter 2.55), unless written approval is first obtained from the Building Official or City Engineer.

53. Building plans submitted shall be signed and sealed by a California licensed design professional as required by the State Business and Professions Code.

54. The proposed development shall be subject to the payment of required development fees as required by the City's current Fee Ordinance at the time a building application is submitted or prior to the issuance of permits as determined by the City.

55. The proposed project will be subject to approval by the Eastern Municipal Water District and all applicable fees and charges shall be paid prior to permit issuance. Contact the water district at 951.928.3777 for specific details.

56. All new structures shall be designed in conformance to the latest design standards adopted by the State of California in the California Building Code, (CBC) Part 2, Title 24, California Code of Regulations including requirements for allowable area, occupancy separations, fire suppression systems, accessibility, etc. The current code edition is the 2019 CBC.

57. The proposed project's occupancy shall be classified by the Building Official and must comply with exiting, occupancy separation(s) and minimum plumbing fixture requirements. Minimum plumbing fixtures shall be provided per the 2019 California Plumbing Code, Table 422.1. The occupant load and occupancy classification shall be determined in accordance with the California Building Code.

58. The proposed residential project shall comply with The 2019 California Green Building Standards Code, Section 4.106.4, mandatory requirements for Electric Vehicle Charging Station (EVCS).

59. Prior to permit issuance, every applicant shall submit a properly completed Waste Management Plan (WMP), as a portion of the building or demolition permit process. (MC 8.80.030)

FIRE DEPARTMENT

Fire Prevention Bureau

60. All Fire Department access roads or driveways shall not exceed 12 percent grade. (CFC 503.2.7 and MVMC 8.36.060[G])

61. The Fire Department emergency vehicular access road shall be (all weather surface) capable of sustaining an imposed load of 80,000 lbs. GVW, based on street standards approved by the Public Works Director and the Fire Prevention Bureau. The approved fire access road shall be in place during the time of construction. Temporary fire access roads shall be approved by the Fire Prevention Bureau. (CFC 501.4, and MV City Standard Engineering Plan 108d)

62. The angle of approach and departure for any means of Fire Department access shall not exceed 1 ft drop in 20 ft (0.3 m drop in 6 m), and the design limitations of the fire apparatus of the Fire Department shall be subject to approval by the AHJ. (CFC 503 and MVMC 8.36.060)

63. Prior to issuance of Building Permits, the applicant/developer shall provide the Fire Prevention Bureau with an approved site plan for Fire Lanes and signage. (CFC 501.3)

64. Prior to issuance of Certificate of Occupancy or Building Final, "Blue Reflective Markers" shall be installed to identify fire hydrant locations in accordance with City specifications. (CFC 509.1 and MVLT 440A-0 through MVLT 440C-0)

65. Existing fire hydrants on public streets are allowed to be considered available. Existing fire hydrants on adjacent properties shall not be considered available unless fire apparatus access roads extend between properties and easements are

established to prevent obstruction of such roads. (CFC 507, 501.3) a - After the local water company signs the plans, the originals shall be presented to the Fire Prevention Bureau for signatures. The required water system, including fire hydrants, shall be installed, made serviceable, and be accepted by the Moreno Valley Fire Department prior to beginning construction. They shall be maintained accessible.

66. Final fire and life safety conditions will be addressed when the Fire Prevention Bureau reviews building plans. These conditions will be based on occupancy, use, California Building Code (CBC), California Fire Code (CFC), and related codes, which are in effect at the time of building plan submittal.

67. The Fire Code Official is authorized to enforce the fire safety during construction requirements of Chapter 33. (CFC Chapter 33 & CBC Chapter 33)

68. Fire lanes and fire apparatus access roads shall have an unobstructed width of not less than twenty–four (24) feet and an unobstructed vertical clearance of not less the thirteen (13) feet six (6) inches. (CFC 503.2.1 and MVMC 8.36.060[E])

69. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall install a fire sprinkler system based on square footage and type of construction, occupancy or use. Fire sprinkler plans shall be submitted to the Fire Prevention Bureau for approval prior to installation. (CFC Chapter 9, MVMC 8.36.100[D])

70. Prior to issuance of the building permit for development, independent paved access to the nearest paved road, maintained by the City shall be designed and constructed by the developer within the public right of way in accordance with City Standards. (MVMC 8.36.060, CFC 501.4)

71. The minimum number of fire hydrants required, as well as the location and spacing of fire hydrants, shall comply with the C.F.C., MVMC, and NFPA 24. Fire hydrants shall be located no closer than 40 feet to a building. The size and number of outlets required for the approved fire hydrants are (6" x 4" x 2 ½") (CFC 507.5.1, 507.5.7, Appendix C, NFPA 24-7.2.3, MVMC 912.2.1)

72. During phased construction, dead end roadways and streets which have not been completed shall have a turn-around capable of accommodating fire apparatus. (CFC 503.1 and 503.2.5)

73. If construction is phased, each phase shall provide an approved emergency vehicular access way for fire protection prior to any building construction. (CFC 501.4)

74. Plans for private water mains supplying fire sprinkler systems and/or private fire

hydrants shall be submitted to the Fire Prevention Bureau for approval. (CFC 105 and CFC 3312.1)

75. Prior to issuance of Certificate of Occupancy or Building Final, all residential dwellings shall display street numbers in a prominent location on the street side of the residence in such a position that the numbers are easily visible to approaching emergency vehicles. The numbers shall be located consistently on each dwelling throughout the development. The numerals shall be no less than four (4) inches in height and shall be low voltage lighted fixtures. (CFC 505.1, MVMC 8.36.060[I])

76. Single Family Dwellings. Schedule "A" fire prevention approved standard fire hydrants (6" x 4" x 2 ½") shall be located at each intersection of all residential streets. Hydrants shall be spaced no more than 500 feet apart in any direction so that no point on the street is more than 250 feet from a hydrant. Minimum fire flow shall be 1000 GPM for 1 hour duration of 20 PSI. Where new water mains are extended along streets where hydrants are not needed for protection of structures or similar fire problems, serving one and two-family residential developments, standard fire hydrants shall be provided at spacing not to exceed 1000 feet along the tract boundary for transportation hazards. (CFC 507.3, Appendix B, MVMC 8.36.060).

77. Prior to construction, all traffic calming designs/devices must be approved by the Fire Marshal and City Engineer.

78. Prior to issuance of Building Permits, the applicant/developer shall furnish one copy of the water system plans to the Fire Prevention Bureau for review. Plans shall: a. Be signed by a registered civil engineer or a certified fire protection engineer; b. Contain a Fire Prevention Bureau approval signature block; and c. Conform to hydrant type, location, spacing of new and existing hydrants and minimum fire flow required as determined by the Fire Prevention Bureau. The required water system, including fire hydrants, shall be installed, made serviceable, and be accepted by the Moreno Valley Fire Department prior to beginning construction. They shall be maintained accessible.

79. Prior to construction, all locations where structures are to be built shall have an approved Fire Department access based on street standards approved by the Public Works Director and the Fire Prevention Bureau. (CFC 501.4)

80. Prior to issuance of building permits, plans specifying the required structural materials for building construction in high fire hazard severity zones shall be submitted to the Fire Prevention Bureau for approval. (CFC, 4905)

81. Prior to issuance of Building Permits, plans for structural protection from vegetation fires shall be submitted to the Fire Prevention Bureau for review and approval. Measures shall include, but are not limited to: noncombustible barriers (cement or

block walls), fuel modification zones, etc. (CFC Chapter 49)

PUBLIC WORKS DEPARTMENT

Land Development

82. Aggregate slurry, as defined in Section 203-5 of Standard Specifications for Public Works Construction, shall be required prior to 90% security reduction or the end of the one-year warranty period of the public streets as approved by the City Engineer. If slurry is required, a slurry mix design shall be submitted for review and approved by the City Engineer. The latex additive shall be Ultra Pave 70 (for anionic) or Ultra Pave 65 K (for cationic) or an approved equal per the geotechnical report. The latex shall be added at the emulsion plant after weighing the asphalt and before the addition of mixing water. The latex shall be added at a rate of two to two-and-one-half (2 to 2½) parts to one-hundred (100) parts of emulsion by volume. Any existing striping shall be removed prior to slurry application and replaced per City standards.

83. The developer shall comply with all applicable City ordinances and resolutions including the City's Municipal Code (MC) and if subdividing land, the Government Code (GC) of the State of California, specifically Sections 66410 through 66499.58, said sections also referred to as the Subdivision Map Act (SMA). [MC 9.14.010]

84. The final approved conditions of approval (COAs) issued and any applicable Mitigation Measures by the Planning Division shall be photographically or electronically placed on mylar sheets and included in the Grading and Street Improvement plans.

85. The developer shall monitor, supervise and control all construction related activities, so as to prevent these activities from causing a public nuisance, including but not limited to, insuring strict adherence to the following:
(a) Removal of dirt, debris, or other construction material deposited on any public street no later than the end of each working day.
(b) Observance of working hours as stipulated on permits issued by the Land Development Division.
(c) The construction site shall accommodate the parking of all motor vehicles used by persons working at or providing deliveries to the site.
(d) All dust control measures per South Coast Air Quality Management District (SCAQMD) requirements during the grading operations.
Violation of any condition, restriction or prohibition set forth in these conditions shall subject the owner, applicant, developer or contractor(s) to remedy as noted in City Municipal Code 8.14.090. In addition, the City Engineer or Building Official may suspend all construction related activities for violation of any condition, restriction or

prohibition set forth in these conditions until such time as it has been determined that all operations and activities are in conformance with these conditions.

86. Drainage facilities (e.g., catch basins, water quality basins, etc.) with sump conditions shall be designed to convey the tributary 100-year storm flows. Secondary emergency escape shall also be provided.

87. In the event right-of-way or offsite easements are required to construct offsite improvements necessary for the orderly development of the surrounding area to meet the public health and safety needs, the developer shall make a good faith effort to acquire the needed right-of-way in accordance with the Land Development Division's administrative policy. If unsuccessful, the Developer shall enter into an agreement with the City to acquire the necessary right-of-way or offsite easements and complete the improvements at such time the City acquires the right-of-way or offsite easements which will permit the improvements to be made. The developer shall be responsible for all costs associated with the right-of-way or easement acquisition. [GC 66462.5]

88. The developer shall protect downstream properties from damage caused by alteration of drainage patterns (i.e. concentration or diversion of flow, etc). Protection shall be provided by constructing adequate drainage facilities, including, but not limited to, modifying existing facilities or by securing a drainage easement. [MC 9.14.110]

89. The maintenance responsibility of the proposed storm drain line shall be clearly identified. Storm drain lines within private property will be privately maintained and those within public streets will be publicly maintained.

90. A storm drain manhole shall be placed at the right-of-way line to mark the beginning of the publicly maintained portion of any private storm drain.

91. For single family residential subdivisions, all lots shall drain to the street at a minimum surface grade of 2.0% and on-site drainage shall be conveyed onto the street with subsurface drains at a minimum grade of 0.5% per current City Standards MVSI-152 and MVSI-153A. No cross-lot or over the public sidewalk drainage shall be allowed.

92. This project shall submit civil engineering design plans, reports and/or documents (prepared by a registered/licensed civil engineer) for review and approval by the City Engineer per the current submittal requirements, prior to the indicated threshold or as required by the City Engineer. The submittal consists of, but is not limited to, the following:
    a. Final (Tract) Map (recordation prior to building permit issuance);
    b. Rough grading w/ erosion control plan (prior to grading permit issuance);
    c. Precise grading w/ erosion control plan (prior to grading permit issuance);

d. Public improvement plan (e.g., street/storm drain w/ striping, RCFC storm drain, sewer/water, etc.) (prior to map approval);

e. Final drainage study (prior to map approval);

f. Final WQMP (prior to grading plan approval);

g. Legal documents (e.g., easement(s), dedication(s), etc.) (prior to Building Permit issuance);

h. As-Built revision for all plans (prior to Occupancy release);

93. Water quality best management practices (BMPs) designed to meet Water Quality Management Plan (WQMP) requirements for single-family residential development shall not be used as a construction BMP. Water quality BMPs shall be maintained for the entire duration of the project construction and be used to treat runoff from those developed portions of the project. Water quality BMPs shall be protected from upstream construction related runoff by having proper best management practices in place and maintained. Water quality BMPs shall be graded per the approved design plans and once landscaping and irrigation has been installed, it and its maintenance shall be turned over to an established Homeowner's Association (HOA). The Homeowner's Association shall enter into an agreement with the City for basin maintenance.

94. If improvements associated with this project are not initiated within two (2) years of the date of approval of the Public Improvement Agreement (PIA), the City Engineer may require that the engineer's estimate for improvements associated with the project be modified to reflect current City construction costs in effect at the time of request for an extension of time for the PIA or issuance of a permit. [MC 9.14.210(B)(C)]

Prior to Grading Plan Approval

95. Resolution of all drainage issues shall be as approved by the City Engineer.

96. A final detailed drainage study (prepared by a registered/licensed civil engineer) shall be submitted for review and approved by the City Engineer. The study shall include, but not be limited to: existing and proposed hydrologic conditions as well as hydraulic calculations for all drainage control devices and storm drain lines. The study shall analyze 1, 3, 6 and 24-hour duration events for the 2, 5, 10 and 100-year storm events [MC 9.14.110(A.1)]. A digital (pdf) copy of the approved drainage study shall be submitted to the Land Development Division.

97. The developer shall ensure compliance with the City Grading ordinance, these Conditions of Approval and the following criteria:

a. The project street and lot grading shall be designed in a manner that perpetuates the existing natural drainage patterns with respect to tributary drainage area and outlet points. Unless otherwise approved by the City Engineer, lot lines

shall be located at the top of slopes.

b. Any grading that creates cut or fill slopes adjacent to the street shall provide erosion control, sight distance control, and slope easements as approved by the City Engineer.

c. All improvement plans are substantially complete and appropriate clearance letters are provided to the City.

d. A soils/geotechnical report (addressing the soil's stability and geological conditions of the site) shall be submitted to the Land Development Division for review. A digital (pdf) copy of the soils/geotechnical report shall be submitted to the Land Development Division.

98. Grading plans (prepared by a registered/licensed civil engineer) shall be submitted for review and approved by the City Engineer per the current submittal requirements.

99. For any offsite grading, the developer shall submit written permission from adjacent property owners. If applicable, all areas outside of the project boundaries where grading results in slopes, the developer shall submit recorded slope easements.

100. The developer shall pay all remaining plan check fees.

101. Landscape & Irrigation plans (prepared by a registered/licensed landscape architect) for water quality BMPs shall be submitted for review and approved by the City Engineer per the current submittal requirements, if applicable.

102. A Storm Water Pollution Prevention Plan (SWPPP) shall be prepared in conformance with the State's current Construction Activities Storm Water General Permit. A copy of the current SWPPP shall be kept at the project site and be available for review upon request.

103. For projects that will result in discharges of storm water associated with construction with a soil disturbance of one or more acres of land, the developer shall submit a Notice of Intent (NOI) and obtain a Waste Discharger's Identification number (WDID#) from the State Water Quality Control Board (SWQCB) which shall be noted on the grading plans.

104. The final project-specific Water Quality Management Plan (WQMP) shall be consistent with the conditionally approved P-WQMP, as well as in full conformance with the document: "Water Quality Management Plan - A Guidance Document for the Santa Ana Region of Riverside County" dated October 22, 2012. The F-WQMP shall be submitted and approved prior to application for and issuance of grading permits. At a minimum, the F-WQMP shall include the following: Site Design BMPs; Source Control BMPs, Treatment Control BMPs, Operation and Maintenance requirements for BMPs and sources of funding for BMP implementation.

a. The Applicant has proposed to incorporate the use of Bioretention. Final

design and sizing details of all BMPs must be provided in the first submittal of the F-WQMP. The Applicant acknowledges that more area than currently shown on the plans may be required to treat site runoff as required by the WQMP guidance document and may result in the lost of lot(s).

b. The Applicant shall substantiate the applicable Hydrologic Condition of Concerns (HCOC) in Section F of the F-WQMP. <The HCOC designates that the project will be exempt from mitigation requirements based on Exemption 3>.

c. All proposed LID BMP's shall be designed in accordance with the RCFC&WCD's Design Handbook for Low Impact Development Best Management Practices, dated September 2011.

d. The proposed LID BMP's as identified in the project-specific P-WQMP shall be incorporated into the Final WQMP.

e. The NPDES notes per City Standard Drawing No. MVFE-350-0 shall be included in the grading plans.

f. Post-construction treatment control BMPs, once placed into operation for post-construction water quality control, shall not be used to treat runoff from construction sites or unstabilized areas of the site.

g. Prior to precise grading plan approval, the grading plan shall show any proposed trash enclosure to include a cover (roof) and sufficient size for dual bin (1 for trash and 1 for recyclables). The architecture shall be approved by the Planning Division and any structural approvals shall be made by the Building and Safety Division.

Prior to Grading Permit

105. A receipt showing payment of the Area Drainage Plan (ADP) fee to Riverside County Flood Control and Water Conservation District shall be submitted. [MC 9.14.100(O)]

106. If the developer chooses to construct the project in phases, a Construction Phasing Plan for the construction of on-site public or private improvements shall be submitted for review and approved by the City Engineer.

107. A digital (pdf) copy of all approved grading plans shall be submitted to the Land Development Division.

108. Security, in the form of a cash deposit (preferable), bond or letter of credit shall be submitted as a guarantee of the implementation and maintenance of erosion control measures. At least twenty-five (25) percent of the required security shall be in the form of a cash deposit with the City. [MC 8.21.160(H)]

109. Security, in the form of a cash deposit (preferable), bond or letter of credit shall be submitted as a guarantee of the completion of the grading operations for the project. [MC 8.21.070]

110. The developer shall pay all applicable inspection fees.

111. All necessary permits from Department of Water Resources for grading, storm drain construction, etc. shall be obtained, ifapplicable.

Prior to Map Approval

112. All proposed street names shall be submitted for review and approved by the City Engineer, if applicable. [MC 9.14.090(E.2.k)]

113. A copy of the Covenants, Conditions and Restrictions (CC&R's) shall be submitted for review and approved by the City Engineer. The CC&R's shall include, but not be limited to, access easements, reciprocal access, private and/or public utility easements as may be relevant to the project. In addition, for single-family residential development, bylaws and articles of incorporation shall also be included as part of the maintenance agreement for any water quality BMPs.

114. The developer shall enter into a Cooperative Agreement with the City and Riverside County Flood Control and Water Conservation District establishing the terms and conditions covering the inspection, operation and maintenance of Master Drainage Plan facilities required to be constructed as part of the project.

115. After recordation, a digital (pdf) copy of the recorded map shall be submitted to the Land Development Division.

116. Resolution of all drainage issues shall be as approved by the City Engineer.

117. If the project involves the subdivision of land, maps may be developed in phases with the approval of the City Engineer. Financial security shall be provided for all public improvements associated with each phase of the map. The boundaries of any multiple map increment shall be subject to the approval of the City Engineer. If the project does not involve the subdivision of land and it is necessary to dedicate right-of-way/easements, the developer shall make the appropriate offer of dedication by separate instrument. In either case, the City Engineer may require the dedication and construction of necessary utility, street or other improvements beyond the project boundary, if the improvements are needed for circulation, parking, access, or for the welfare or safety of the public. This approval must be obtained prior to the Developer submitting a Phasing Plan to the California Bureau of Real Estate. [MC 9.14.080(B)(C), GC 66412 & 66462.5]

118. Maps (prepared by a registered civil engineer and/or licensed surveyor) shall be submitted for review and approved by the City Engineer per the current submittal requirements.

119. Under the current permit for storm water activities required as part of the National Pollutant Discharge Elimination System (NPDES) as mandated by the Federal Clean Water Act, this project is subject to the following requirements:

a. Establish a Home Owners Association (HOA) to finance the maintenance of the "Water Quality BMPs". Any lots which are identified as "Water Quality BMPs" shall be owned in fee by the HOA.

b. Dedicate a maintenance easement to the City of Moreno Valley.

c. Execute a maintenance agreement between the City of Moreno Valley and the HOA, which shall be approved by City Council.

d. Provide a certificate of insurance per the terms of the maintenance agreement.

e. Select one of the following options to meet the financial responsibility to provide storm water utilities services for the required continuous operation, maintenance, monitoring system evaluations and enhancements, remediation and/or replacement, all in accordance with Resolution No. 2002-46.

i. Participate in the mail ballot proceeding in compliance with Proposition 218, for the Residential NPDES Regulatory Rate Schedule and pay all associated costs with the ballot process, or

ii. Establish an endowment to cover future maintenance costs for the Residential NPDES Regulatory Rate Schedule.

f. Notify the Special Districts Division of the intent to record the final map 90 days prior to City Council action authorizing recordation of the final map and the financial option selected. The final option selected shall be in place prior to the issuance of certificate of occupancy. [California Government Code & Municipal Code]

120. The developer shall guarantee the completion of all related improvements required for this project by executing a Public Improvement Agreement (PIA) with the City and posting the required security. [MC 9.14.220]

121. All public improvement plans required for this project shall be approved by the City Engineer in order to execute the Public Improvement Agreement (PIA).

122. The developer shall comply with the requirements of the City Engineer based on recommendations of the Riverside County Flood Control District regarding the construction of County Master Plan Facilities.

Prior to Improvement Plan Approval

123. The developer is required to bring any existing access ramps adjacent to and fronting the project to current ADA (Americans with Disabilities Act) requirements. However, when work is required in an intersection that involves or impacts existing access ramps, all access ramps in that intersection shall be retrofitted to comply

with current ADA requirements, unless otherwise approved by the City Engineer.

124. The developer shall submit clearances from all applicable agencies, and pay all applicable plan check fees.

125. The street improvement plans shall comply with current City policies, plans and applicable City standards (i.e. MVSI-160 series, etc.) throughout this project.

126. Any missing or deficient existing improvements along the project frontage within shall be constructed or secured for construction. The City Engineer may require the ultimate structural section for pavement to half-street width plus 18 feet or provide core test results confirming that existing pavement section is per current City Standards; additional signing & striping to accommodate increased traffic imposed by the development, etc.

127. The plans shall indicate any restrictions on trench repair pavement cuts to reflect the City's moratorium on disturbing newly-constructed pavement less than three (3) years old and recently slurry sealed streets less than one (1) year old. Pavement cuts may be allowed for emergency repairs or as specifically approved in writing by the City Engineer. Special requirements shall be imposed for repaving, limits to be determined by the City Engineer.

128. All dry and wet utilities shall be shown on the plans and any crossings shall be potholed to determine actual location and elevation. Any conflicts shall be identified and addressed on the plans. The pothole survey data shall be submitted to Land Development with the public improvement plans for reference purposes only. The developer is responsible to coordinate with all affected utility companies and bear all costs of any utility relocation.

129. Drainage facilities (i.e. catch basins, etc.) with sump conditions shall be designed to convey the tributary 100-year storm flows. Secondary emergency escape shall also be provided.

130. All public improvement plans (prepared by a licensed/registered civil engineer) shall be submitted for review and approved by the City Engineer per the current submittal requirements.

Prior to Encroachment Permit

131. A digital (pdf) copy of all approved improvement plans shall be submitted to the Land Development Division.

132. All applicable inspection fees shall be paid.

133. The plans shall indicate any restrictions on trench repair pavement cuts to reflect the City's moratorium on disturbing newly-constructed pavement less than three (3) years old and recently slurry sealed streets less than one (1) year old. Pavement cuts may be allowed for emergency repairs or as specifically approved in writing by the City Engineer. Special requirements shall be imposed for repaving, limits to be determined by the City Engineer.

134. Any work performed within public right-of-way requires an encroachment permit.

Prior to Building Permit

135. An engineered-fill certification, rough grade certification and compaction report shall be submitted for review and approved by the City Engineer. A digital (pdf) copy of the approved compaction report shall be submitted to the Land Development Division. All pads shall meet pad elevations per approved grading plans as noted by the setting of "blue-top" markers installed by a registered land surveyor or licensed civil engineer.

136. For all subdivision projects, the map shall be recorded (excluding model homes). [MC 9.14.190]

137. A walk through with a Land Development Inspector shall be scheduled to inspect existing improvements within public right of way along project frontage. Any missing, damaged or substandard improvements including ADA access ramps that do not meet current City standards shall be required to be installed, replaced and/or repaired. The applicant shall post security to cover the cost of the repairs and complete the repairs within the time allowed in the public improvement agreement used to secure the improvements.

138. Certification to the line, grade, flow test and system invert elevations for the water quality control BMPs shall be submitted for review and approved by the City Engineer (excluding models homes).

Prior to Occupancy

139. All outstanding fees shall be paid.

140. All required as-built plans (prepared by a registered/licensed civil engineer) shall be submitted for review and approved by the City Engineer per the current submittal requirements.

141. The final/precise grade certification shall be submitted for review and approved by the City Engineer.

142. The developer shall complete all public improvements in conformance with current City standards, except as noted in the Special Conditions, including but not limited to the following:

a. Street improvements including, but not limited to: pavement, base, curb and/or gutter, cross gutters, spandrel, sidewalks, drive approaches, pedestrian ramps, street lights (SL-2), signing, striping, under sidewalk drains, landscaping and irrigation, medians, pavement tapers/transitions and traffic control devices as appropriate.

b. Grind and overlay full street width along the project's frontage shall be required.

c. Storm drain facilities including, but not limited to: storm drain pipe, storm drain laterals, open channels, catch basins and local depressions.

d. City-owned utilities.

e. Sewer and water systems including, but not limited to: sanitary sewer, potable water and recycled water.

f. Under grounding of all existing and proposed utilities adjacent to and on-site. [MC 9.14.130]

g. Relocation of overhead electrical utility lines including, but not limited to: electrical, cable and telephone.

143. For residential subdivisions, punch list work for improvements and capping of streets in that phase shall be completed and approved for acceptance by the City Engineer, prior to the last 20% or last 5% (whichever is greater, unless as otherwise determined by the City Engineer).

144. The applicant shall ensure the following, pursuant to Section XII. I. of the 2010 NPDES Permit:

a. Field verification that structural Site Design, Source Control and Treatment Control BMPs are designed, constructed and functional in accordance with the approved Final Water Quality Management Plan (WQMP).

b. Certification of best management practices (BMPs) from a state licensed civil engineer. An original WQMP BMP Certification shall be submitted for review and approved by the City Engineer.

145. The Developer shall comply with the following water quality related items:

a. Notify the Land Development Division prior to construction and installation of all structural BMPs so that an inspection can be performed.

b. Demonstrate that all structural BMPs described in the approved final project-specific WQMP have been constructed and installed in conformance with the approved plans and specifications;

c. Demonstrate that Developer is prepared to implement all non-structural BMPs described in the approved final project-specific WQMP; and

d. Demonstrate that an adequate number of copies of the approved final project-specific WQMP are available for future owners/occupants.

e. Clean and repair the water quality BMP's, including re-grading to approved civil drawing if necessary.

f. Obtain approval and complete installation of the irrigation and landscaping.

146. Prior to the first occupancy, the developer shall be required to construct Riverside County Flood Control and Water Conservation District's Sunnymead MDP Line M-2 from its current terminus to the project's westerly boundary.

Special Districts Division

147. The ongoing maintenance of any landscaping required to be installed behind the curb shall be the responsibility of the property owner.

148. MAJOR INFRASTRUCTURE FINANCING DISTRICT. This project has been identified to potentially be included in the formation of a special financing district for the construction and maintenance of major infrastructure improvements which may include but are not limited to thoroughfares, bridges, and certain flood control improvements. The property owner(s) shall participate in such district and pay any special tax, assessment, or fee levied upon the project property for such district. At the time of the public hearing to consider formation of or annexation into the district, the qualified elector(s) will not protest the formation or annexation, but will retain the right to object to any eventual tax/assessment/fee that is not equitable should the financial burden of the tax/assessment/fee not be reasonably proportionate to the benefit the affected property obtains from the improvements to be installed and/or maintained. The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org when submitting an application for the first building permit to determine whether the development will be subjected to this condition. If subject to the condition, the special election requires a minimum 90-day process in compliance with the provisions of Article 13C of the California Constitution.

149. The parcel(s) associated with this project have been incorporated into the Moreno Valley Community Services District Zone A (Parks & Community Services) and Zone C (Arterial Street Lighting). All assessable parcels therein shall be subject to annual parcel taxes for Zone A and Zone C for operations and capital improvements.

150. This project is conditioned to provide a funding source for the operation and maintenance of public improvements and/or services associated with new development in that territory. The Developer shall satisfy this condition with one of the options below.

a. Participate in a special election for maintenance/services and pay all associated costs of the election process and formation, if any. Financing may be

structured through a Community Facilities District, Landscape and Lighting Maintenance District, or other financing structure as determined by the City; or

b. Establish an endowment fund to cover the future maintenance and/or service costs.

The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org of its selected financial option prior to City Council action authorizing recordation of the final map for the development. A minimum of 90 days is needed to complete the special election process. This allows adequate time to be in compliance with the provisions of Article 13C of the California Constitution for conducting a special election.

The financial option selected shall be in place prior to the issuance of the first building permit for the project.

151. This project has been conditioned to provide a funding source for the continued maintenance, enhancement, and/or retrofit of parks, open spaces, linear parks, and/or trail systems. The Developer shall satisfy this condition with one of the options below.

a. Participate in a special election for annexation into Community Facilities District No. 1 or other district and pay all associated costs of the special election process and formation, if any; or

b. Establish an endowment fund to cover future maintenance costs for new neighborhood parks.

The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org of its selected financial option prior to City Council action authorizing recordation of the final map for the development. A minimum of 90 days is needed to complete the special election process. This allows adequate time to be in compliance with the provisions of Article 13C of the California Constitution for conducting a special election.

Annexation to CFD No. 1 shall be completed or proof of payment to establish the endowment fund shall be provided prior to the issuance of the first building permit for this project.

152. This project has been identified to be included in the formation of a Community Facilities District for Public Safety services including but not limited to Police, Fire Protection, Paramedic Services, Park Rangers, and Animal Control services. The property owner(s) shall not protest the formation; however, they retain the right to object to the rate and method of maximum special tax. In compliance with

Proposition 218, the property owner shall agree to approve the mail ballot proceeding (special election) for either formation of the CFD or annexation into an existing district that may already be established. The Developer must notify the Special Districts Division at 951.413.3480 or specialdistricts@moval.org of its intent to record the final map for the development 90 days prior to City Council action authorizing recordation of the map. This allows adequate time to be in compliance with the provisions of Article 13C of the California Constitution. (California Government Code Section 53313 et. seq.)

153. Residential (R) If Land Development, a Division of the Public Works Department, requires this project to supply a funding source necessary to provide for, but not limited to, stormwater utilities services for the required continuous operation, maintenance, monitoring, systems evaluation and enhancements of on-site facilities and performing annual inspections of the affected areas to ensure compliance with state mandated storm water regulations, a funding source needs to be established. The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org of its selected financial option for the National Pollution Discharge Elimination System (NPDES) program (see Land Development's related condition). Participating in a special election the process requires a 90 day period prior to City Council action authorizing recordation of the final map for the development and to participate in a special election process. This allows adequate time to be in compliance with the provisions of Article 13D of the California Constitution. California Health and Safety Code Sections 5473 through 5473.8 (Ord. 708 Section 3.1, 2006) & City of Moreno Valley Municipal Code Title 3, Section 3.50.050.)

Transportation Engineering Division

154. Private streets' road width shall be a minimum of 24-feet with no parking allowed on either side. Applicant shall provide signage (NO PARKING) along the streets per current MUTCD standards.

155. The design and proposed location of the project driveways shall conform to City of Moreno Valley Standard No. MVSI-112C-0 for Commercial Driveway Approaches and Section 9.11.080, and Table 9.11.080-14 of the City's Municipal Code - Design Guidelines or as approved by the City Engineer. Applicant needs to show driveways per City Standard, including additional dedications for public improvements.

156. Right-of-way at driveway(s) entrances shall accommodate all public improvements (i.e. curb ramps, utility controllers, etc.); applicant shall provide dedication as required and appropriate. Show driveways per City standards (curb radii, ramps, grades, so for.)

157. Any proposed driveway gate shall be set back at a minimum of 60 feet from the

property line or as determined by the traffic study to provide sufficient storage length in front of the gate for entering traffic. Gate doors shall be rolling type or swing away from Iris Avenue.

1. Shown gate for westerly driveway needs to swing away from Iris Avenue.

2. Main entrance storage length for visitors is not adequate, location of visitor call box needs to be relocated in order to provide at least two (2) cars on the visitor lane.

158. Applicant shall plan to accommodate gates at entrances and provide road width and improvements accordingly.
For main access point, easterly driveway at proposed Street A, the entrance design shall provide the following:

a. Gate shall be set back a minimum of 60 feet from the property line.

b. A turnaround area - Applicant needs to provide vehicle turning template to show adequacy of provided turnaround area.

c. A storage lane with a minimum of 60 feet queuing length for entering traffic.

d. A second storage lane for visitors to stop and use a call box (or other service) for permission to enter the community. Visitor storage lane seems insufficient due to location of call box, relocate call box or propose design with adequate vehicle storage.

e. No Parking signs posted in the turnaround area.

f. A separate pedestrian entry.

g. Presence loop detectors (or another device) within 1 to 2 feet of the gate that ensures that the gate remain open while any vehicle in in the queue.

h. Slide doors or gate doors that swing away from incoming traffic.

i. A median will be required as traffic calming measure into residential development. Median shall be kept within private property and shall not encroach onto public right-of-way.

159. Conditions of approval may be modified or added if a phasing plan is submitted for this development.

160. All project driveways to public streets shall conform to Section 9.11.080, and Table 9.11.080-14 of the City's Development Code – Design Guidelines and City of Moreno Valley Standard Plans No. MVSI-112A~D-0 for commercial driveway approaches.

161. The gated entrance shall be provided with the following, or as approved by the City Traffic Engineer: A- A storage lane with a minimum of 60' provided for queuing. B - A second storage lane for visitors to stop in prior to the gate to utilize a call box (or other device) to receive permission to enter the site. C - Signing and striping for A. and B. D - A turnaround outside the gates of 38' radius. E - No Parking Signs shall be posted in the turnaround areas. F - A separate pedestrian entry. G - Presence loop detectors (or another device) within 1 or 2 feet of the gates that

ensures that the gates remain open while any vehicle is in the queue. All of these items shall be kept in working order.

162. Sight distance at the proposed roadways and driveways shall conform to City of Moreno Valley Standard No. MVSI-164A,B,C-0 at the time of preparation of final grading, landscape, and street improvement plans.

163. During construction activity, developer is responsible for regularly scheduled street sweeping per approved street sweeping schedule.

164. Prior to issuance of a construction permit, construction traffic control plans prepared by a qualified, registered Civil or Traffic engineer may be required for plan approval or as required by the City Traffic Engineer.

165. Prior to final approval of any landscaping or monument sign plans, the project plans shall demonstrate that sight distance at the project driveways conforms to City Standard Plan No. MVSI-164A, B, C-0.

166. Prior to the final approval of the street improvement plans, a signing and striping plan shall be prepared per City of Moreno Valley Standard Plans - Section 4 for all streets within the project area.

167. Prior to issuance of a Building Final or Certificate of Occupancy, all approved street improvements shall be installed to the satisfaction of the City Engineer.

168. Prior to issuance of a Building Final or Certificate of Occupancy, all approved signing and striping shall be installed per current City Standards

PARKS & COMMUNITY SERVICES DEPARTMENT

169. This project is subject to current Quimby Fees.

170. Bikeways shall not be shared with any above ground utilities, blocking total width access.

171. According to the General Plan and City's Juan Bautista de Anza trail plan, project improvements include a Class I Bikeway, walkway, and landscaped area. City shall construct paved Class I bike trail only. Developer shall design and construct landscape and irrigation improvements for the Juan Bautista de Anza trail greenbelt, including lighting along the trail. Landscaping and irrigation shall be maintained by City following acceptance of the public improvements into the City's Community Services District. The greenbelt shall conform to City of Moreno Valley standard plans and specifications, "CalTrans Design Manual," and Department of Water Resources (DWR) requirements. The developer shall comply with the following conditions:

a. Concurrent with the recordation of the final map, an easement for trail purposes shall be dedicated to the City of Moreno Valley Community Services District.

b. Bonds for construction of the landscaping within the project and these COA's shall be provided (per Parks and Community Services criteria) concurrent with the Subdivision Improvements Agreement process.

d. Plans for improvements at the greenbelt shall be submitted and approved by the Director of Parks and Community Services or designee prior to the approval of Precise Grading Plans.

e. Prior to the issuance of any building permits, detailed final plans for the greenbelt, street improvement, and fence or wall shall be reviewed and approved by the Director of the Parks and Community Services Department or his/her designee.

g. Where feasible, walkways from the project may connect to the bikeway/walkway.

f. Landscape improvements shall be surveyed and staked by the developer's Civil Engineer. The landscape improvements shall be inspected and approved by the Director of Parks and Community Services or designee prior to the issuance of any building permits.

g. Eight sets of complete park and/or trail plans shall be submitted to Parks and Community Services for routing. Adjacent landscaping and walls shall be shown on the plans. Final construction plans and details require wet stamped and signed mylars, two sets of bond copies from the City signed mylars, and AutoCAD.dwf and PDF files on CD.

h. Construction of landscape improvements shall begin no later than issuance of 30% building permits and be completed no later than issuance of 70% building permits.

172. All street crossings for Class-I Bikeways shall be signed with approved signage.

173. In order to prevent the delay of building permit issuance, any deviation from materials shall be submitted to Parks and Community Services and approved in writing (at the Department's discretion) 60-days prior to the commencement of construction. Any unauthorized deviation from the approved plan and/or the City's specifications and/or Conditions of Approval may result in the holding of building permits and/or building finals.

174. All inspections shall be requested two (2) working days' in advance from the Parks and Community Services Department at the time of rough and precise grading, fence/wall installation, curb and drainage, flatwork, mulch installation, graffiti coating, soil preparation, irrigation placement, site electrical, weed abatement, planting, and final inspection. Failure to schedule inspections may result in cessation of work and/or re-inspection fees/penalties.

175. This project is subject to current Development Impact Fees. Section 3.38.150 of the City's Municipal Code allows for the developer to receive credits for qualifying public improvements. For consideration of a DIF credit, the developer shall provide an Architect's Cost Estimate. The developer's maximum credit amount is based on the lower of the DIF Study Costs, the Architect's Estimate and the DIF Fee Obligation. Allowance of DIF credits is subject to City review and approval, and is not guaranteed by these Conditions of Approval.

Standard Conditions

176. Detailed final plans (mylars, PDF, and AutoCAD file on a DVD-R) for parks, trails/bikeways, fencing, and adjoining landscaped areas shall be submitted to and approved by the Director of Parks and Community Services, or his/her designee, prior to the issuance of any building permits. All plans are to include a profile showing grade changes.

177. Within the improvements for PCS, the applicant shall show all existing and planned easements on all maps and plans. Easements on City/CSD owned or maintained parks, trails, bikeways, and landscape shall be identified on each of these plans with the instrument number of the recorded easement.

178. Prior to recordation of the Final Map, the applicant shall post security to guarantee construction or modification of parks, trails and/or bikeways for the City/CSD. Copies of said documentation shall be provided to PCS, prior to the approval of the Final Map.

179. Applicable plan check and inspection fees shall be paid, per the approved City fee schedule.

180. A restriction shall be placed on lots that back up to City/CSD owned or maintained parks, trails, bikeways, and landscaped areas, preventing openings or gates accessing the City/CSD owned or maintained property. This shall be documented through Covenants, Conditions, and Restrictions (CC&R's). A copy of the CC&R's with this restriction noted shall be submitted and approved by the Director of Parks and Community Services or his/her designee, prior to the recordation of the Final Map.

181. The following plans require PCS written approval: Tentative tract/parcel maps; rough grading plans (including all Delta changes); Final Map; precise grading plans; street improvement plans; traffic signal plans; fence and wall plans; landscape plans for areas adjacent to bikeways; trail improvement plans. PCS will not approve any permits without review and approval of the above items.

Tentative Tract Map No. 37909

LEGAL DESCRIPTION:

THE LAND IS SITUATED IN THE CITY OF MORENO VALLEY, COUNTY OF RIVERSIDE, STATE OF CALIFORNIA, AND IS DESCRIBED AS FOLLOWS:

THE NORTHWEST QUARTER OF THE NORTHWESTQUARTER OF SECTOIN 29, TOWNSHIP 3 SOUTH, RANGE 3 WEST, SAN BERNARDINO MERIDIAN, IN THE CITY OF MORENO VALLEY, COUNTY OF RIVERSIDE, STATE OF CALIFORNIA, ACCORDING TO OFFICIAL PLAT THEREOF.

EXCEPTING THEREFROM THAT CONVEYED TO THE CITY OF MORENO VALLEY BY DEED RECORDED AUGUST 28, 1989 AS INSTRUMENT NO. 89-292505, OFFICIAL RECORDS.

ALSO EXCEPTING THEREFROM ALL OIL, WATER, GAS, HYDROCARBONS, PRECIOUS METALS AND MINERALS OF ANY KIND WHETHER DESCRIBED OR NOT. BELOW A DEPTH OF 500 FEET WITHOUT ANY RIGHT OF SURFACE ENTRY AS RESERVED IN A DEED RECORDED JUNE 13, 1991 AS INSTRUMENT NO. 91-199908 OFFICIAL RECORDS.

ALSO EXCEPTING THEREFROM THAT PORTION SAID LAND CONVEYED TO VAL VERDE UNIFIED SCHOOL DISTRICT BY DEED RECORDED OCTOBER 10, 2002 AS INSTRUMENT NO. 02-566961 OFFICIAL RECORDS

ALSO EXCEPTING THEREFROM, LOT 1, LETTERED LOTS A THROUGH C OF TRACT MAP NO. 29857-1, AS SHOWN ON FILE IN BOOK 422 PAGES 23 AND 24 OF MAPS, RECORDS OF RIVERSIDE COUNTY , CALIFORNIA.

APN: 312-020-025

	MUHLENBERGIA RIGENS	DEER GRASS	1 gal. at 24" O.C.	Moderate
PUBLIC RIGHT-OF-WAY CURB ADJACENT				
	ALOE STRIATA	CORAL ALOE	5 gal. at 24" O.C.	Low
	FESTUCA OVINA GLAUCA	BLUE FESCUE	1 gal. at 12" O.C.	Moderate
	FESTUCA MAIREI	ATLAS FESTUCA	1 gal. at 16" O.C.	Moderate
	LANTANA 'NEW GOLD'	NEW GOLD LANTANA	1 gal. at 24" O.C.	Low
	RAPHIOLEPIS I. 'CLARA'	INDIAN HAWTHORN	5 gal. at 24" O.C.	Moderate
SCREENING OF ABOVE-GROUND UTILITES				
	LIGUSTRUM J. 'TEXANUM	WAX-LEAF PRIVET - COLUMN	15 gal. at 36" O.C.	Moderate
	PRUNUS C. 'BRIGHT & TIGHT'	CAROLINA LAUREL CHERRY	15 gal. at 36" O.C.	Moderate
TURF at COMMUNITY PARK				
	HYBRID BURMUDA 'TIFGREEN'	TURF GRASS	SOD	Low

GENERAL PLANTING NOTES

1. ALL SHRUB AREAS SHALL RECEIVE A 3" MINIMUM LAYER OF BARK MULCH.
2. SCREENING NOTE: SCREENING SHALL BE PROVIDED FOR ALL UTILITIES, INCLUDING TRANSFORMERS AND TELEPHONE BI NO UTILITIES SHALL CONFLICT WITH PLANTING.
3. IRRIGATION DESIGN SHALL COMPLY WITH AB1881 AND ESTIMATED ANNUAL WATER USE (EAWU) WILL NOT EXCEED MAX ANNUAL WATER USE (MAWA) CALCULATIONS.
4. LANDSCAPE WORK SHALL BE IN ACCORDANCE WITH CITY OF MORENO VALLEY DEVELOPMENT STANDARDS AND CODES LANDSCAPE IMPROVEMENTS.
5. TREES WITHIN 6 FEET OF LANDSCAPE SHALL BE INSTALLED WITH APPROVED ROOT CONTROL BARRIER (16 FEET LENGTH EACH TREE)
6. PLANTER AREAS WILL BE ON A DRIP IRRIGATION. TREES WILL BE IRRIGATED BY A DEEP ROOT WATERING BUBBLER.
7. PROVIDE ROOT BARRIER ALONG IRIS AVENUE ADJACENT HARDSCAPES.

IRRIGATION HYDROZONES:

- HYDRO-ZONE 1 - Common Landscape Areas - Enhanced Plant Palette - Sub Surface Irrigation - 48,251 s.f.
- HYDRO-ZONE 2 - Water Quality Planting in Basin - Water Conserving Plant Palette - Overhead Spray - 12,932 s.f.
- HYDRO-ZONE 3 - Synthetic Turf - 1,021 s.f.
- SPECIAL LANDSCAPE AREA - Active Turf Area at Community Park- 6,463 s.f.

TOTAL LANDSCAPE AREA: 68,667 s.f.

WATER CONSERVATION FEATURES

THE FOLLOWING MEASURES WILL BE INCORPORATED INTO THE PROJECT TO CONSERVE WATER:

1. Installation of automatic 'smart' irrigation controller with rain-sensor.
2. The use of low precipitation/low angle irrigation spray heads.
3. The use of low water consuming plants.
4. Soil amendment to achieve good soil moisture retention.
5. Mulching to reduce evapotranspiration from the root zone.
6. Installation of automatic irrigation system to provide deep-root watering to trees is required.

WATER CONSERVATION STATEMENT

PURPOSE: To provide the maintenance staff a mechanical device to distr and ensure plant survival in the most efficient manner and within a time frame erferes with the activities of the community.

The Irrigation system for each hydrozone will be automatic and incorpor emitters, bubblers and high efficiency low angle spray heads at turf only. ne drip may be employed where considered to be effective and feasible. Irrigatic n systems separated to allow for the systems operation in response to orientation a be

Planting will be designed to enhance the visual character of the site and th al elements. Plants shall be grouped with similar water, climatic and soil rec conserve water and create a drought responsive landscape.

Each hydrozone consists of moderate to low water consuming plants. In erate water consuming plants they shall be properly amended to retain moistur growth and to conserve water.

Plant Material within each hydrozone shall be specified in consideration o , east and west exposures.

Soil shall be prepared and emended to provide for maximum moisture re percolation. Planted beds shall be mulched to retain soil moisture and re evapotranspiration.

To avoid wasted water, the controls will be overseen by a flow monitor t t any broken sprinkler heads to stop that station's operation, advancing to the r e station. In the event of pressure supply line breakage, it will completely stop the c he system. All material will be nonferrous, with the exception of the brass p l out of the backflow units. All work will be in the best acceptable manner in acc applicable codes and standards prevailing in the industry.

WATER USE CLASSIFICATION of LAND (WUCOLS):

ECIES

WUCOLS, Water Use Classification of Landscape University of California Cooperative Extension Publication and the water needs of landscape plants.

CROP FACTOR	PERCE
H - HIGH	70% -
M - MEDIUM	40% -
L - LOW	10% -
VL - VERY LOW	< 10%

WATER EFFICIENT LANDSCAPE WORKSHEET

Reference Evapotranspiration (ETo) 56.40 ETAF for MAWA 0.55

DESIGN DEVELOPMENT ROOF PLAN

Tentative Tract Map No. 37909

LEGAL DESCRIPTION:

THE LAND IS SITUATED IN THE CITY OF MORENO VALLEY, COUNTY OF RIVERSIDE, STATE OF CALIFORNIA, AND IS DESCRIBED AS FOLLOWS:

THE NORTHWEST QUARTER OF THE NORTHWESTQUARTER OF SECTOIN 29, TOWNSHIP 3 SOUTH, RANGE 3 WEST, SAN BERNARDINO MERIDIAN, IN THE CITY OF MORENO VALLEY, COUNTY OF RIVERSIDE, STATE OF CALIFORNIA, ACCORDING TO OFFICIAL PLAT THEREOF.

EXCEPTING THEREFROM THAT CONVEYED TO THE CITY OF MORENO VALLEY BY DEED RECORDED AUGUST 28, 1989 AS INSTRUMENT NO. 89-292505, OFFICIAL RECORDS.

ALSO EXCEPTING THEREFROM ALL OIL, WATER, GAS, HYDROCARBONS, PRECIOUS METALS AND MINERALS OF ANY KIND WHETHER DESCRIBED OR NOT. BELOW A DEPTH OF 500 FEET WITHOUT ANY RIGHT OF SURFACE ENTRY AS RESERVED IN A DEED RECORDED JUNE 13, 1991 AS INSTRUMENT NO. 91-199908 OFFICIAL RECORDS.

ALSO EXCEPTING THEREFROM THAT PORTION SAID LAND CONVEYED TO VAL VERDE UNIFIED SCHOOL DISTRICT BY DEED RECORDED OCTOBER 10, 2002 AS INSTRUMENT NO. 02-566961 OFFICIAL RECORDS

ALSO EXCEPTING THEREFROM, LOT 1, LETTERED LOTS A THROUGH C OF TRACT MAP NO. 29857-1, AS SHOWN ON FILE IN BOOK 422 PAGES 23 AND 24 OF MAPS, RECORDS OF RIVERSIDE COUNTY , CALIFORNIA.

APN: 312-020-025

RESOLUTION NUMBER 2021-XX

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, ADOPTING A MITIGATED NEGATIVE DECLARATION AND MITIGATION MONITORING PLAN FOR THE DISTRICT MORENO VALLEY PROJECT LOCATED AT THE SOUTHEAST CORNER OF HEACOCK STREET AND IRONWOOD AVENUE (APN'S 481-020-013, 029, 030, 034, 035, 038)

WHEREAS, the City of Moreno Valley ("City") is a general law city and a municipal corporation of the State of California, and the lead agency for the preparation and consideration of environmental documents for local projects that are subject to requirements of the California Environmental Quality Act (CEQA[1]) and CEQA Guidelines[2]; and

WHEREAS, LCG 10MV, LLC., ("Developer") is seeking approval for the development of The District Moreno Valley Business Park, an approximately 200,000 square foot light industrial building on a 9.96-acre site that includes: 1) a General Plan Amendment (GPA) (PEN20-0139) amending Figure 2-2 "Land Use Map" of the Moreno Valley General Plan to change the land use designation of the Project site from Commercial to Business Park; 2) a Specific Plan Amendment to change the land use designation of the site from SP205 Retail Commercial to SP205 Mixed Use and other minor modifications the Specific Plan; 3) a Plot Plan for an approximately 200,000 square foot light industrial building with associated public improvements located at the southeast corner of Heacock Street and Ironwood Avenue (APN'S 481-020-013, 029, 030, 034, 035, 038); and

WHEREAS, the proposed "Project" shall include not only the General Plan Amendment (GPA) (PEN20-0139), Specific Plan Amendment, and Plot Plan, but also a corresponding amendment to the City's Zoning Atlas to reflect the proposed changes in the zoning classification and/or redistricting associated with the General Plan Amendment and Specific Plan Amendment; and

WHEREAS, Planning Division Staff completed an environmental assessment for the proposed Project, and, based on the assessment, decided to prepare an Initial Study ("IS") and a Mitigated Negative Declaration ("MND") in accordance with Section 6 (ND Procedures) of the City's Rules and Procedures for the Implementation of the California Environmental Quality Act and the requirements of the CEQA Guidelines Sections 15070 – 15075; and

WHEREAS, a Notice of Intent to Adopt a Mitigated Negative Declaration was duly noticed and circulated for public review for a period of 20 days commencing on December 23, 2020, through January 11, 2021; and

[1] Public Resources Code §§ 21000-21177
[2] 14 California Code of Regulations §§15000-15387

WHEREAS, in conformance with CEQA and the CEQA Guidelines, a Mitigation Monitoring Plan ("MMP") that includes a program for reporting on and monitoring Project mitigation measures was prepared for the proposed Project and noticed with the Mitigated Negative Declaration; and

WHEREAS, on January 14, 2021 a hearing was conducted by the Planning Commission to consider a recommendation that the City Council approve the Mitigated Negative Declaration and the Mitigation Monitoring Plan and approve the proposed Project; and

WHEREAS, on January 14, 2021 a hearing was conducted by the Planning Commission whereby the Planning Commission approved Planning Commission Resolution 2021-01, recommending that the City Council approve the Mitigated Negative Declaration and the Mitigation Monitoring Plan and approve the proposed Project; and

WHEREAS, on February 2, 2021 a hearing was conducted by the City Council whereby the City Council approved the Mitigated Negative Declaration and the Mitigation Monitoring Plan and approve the proposed Project; and

WHEREAS, at the conclusion of the public hearing, in the exercise of its own independent judgment, the City Council determined that the Mitigated Negative Declaration and the Mitigation Monitoring Plan would reduce the environmental impacts of the Project to levels of insignificance and that there is no substantial evidence supporting a fair argument that the Project will have a significant effect on the environment.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:

Section 1. **Recitals and Exhibits**

That the foregoing Recitals and attached exhibits are true and correct and are hereby incorporated by this reference.

Section 2. **Evidence**

That the City Council has considered all of the evidence submitted into the Administrative Record for the Mitigated Negative Declaration and Mitigation Monitoring Plan, including, but not limited to, the following:

(a) Initial Study prepared for the proposed Project, attached hereto as Exhibit A;
(b) Notice of Intent to Adopt a Mitigated Negative Declaration/Newspaper Notice, attached hereto as Exhibit B;
(c) Mitigation Monitoring Plan, attached hereto as Exhibit C;

(d) Staff Report prepared for the City Council's consideration and all documents, records and references related thereto, and Staff's presentation at the public hearing; and
(e) Testimony, comments and correspondence from all persons that were provided at, or prior to, the public hearing.

Section 3. **Findings**

That based on the content of the foregoing Recitals and the Evidence contained in the Administrative Record as set forth above, the City Council makes the following findings:

(a) That the City has independently reviewed, analyzed, and considered the Mitigated Negative Declaration and Mitigation Monitoring Plan, and the whole record before it, including, the Initial Study and comments received;
(b) That the proposed mitigation measures will reduce all environmental impacts of the proposed Project to levels of insignificance and there is no substantial evidence supporting a fair argument that the Project will have a significant effect on the environment;
(c) That the Mitigated Negative Declaration and Mitigation Monitoring Plan have been completed in compliance with CEQA and the CEQA Guidelines consistent the City's Rules and Procedures for the Implementation of the California Environmental Quality Act;
(d) That the Mitigated Negative Declaration and Mitigation Monitoring Plan reflect the independent judgment and analysis of the City as lead agency for the proposed Project; and
(e) That the Mitigated Negative Declaration and Mitigation Monitoring Plan are adequate to serve as the required CEQA environmental documentation for the proposed Project.

Section 4. **Adoption**

That based on the foregoing Recitals, Evidence contained in the Administrative Record and Findings, as set forth herein, the City Council adopts the Mitigated Negative Declaration/Initial Study attached hereto as Exhibit A and the Mitigation Monitoring Plan attached hereto as Exhibit C.

Section 5. **Repeal of Conflicting Provisions**

That all the provisions as heretofore adopted by the City Council that are in conflict with the provisions of this Resolution are hereby repealed.

Section 6. **Severability**

That the City Council declares that, should any provision, section, paragraph, sentence or word of this Resolution be rendered or declared invalid by any final court

action in a court of competent jurisdiction or by reason of any preemptive legislation, the remaining provisions, sections, paragraphs, sentences or words of this Resolution as hereby adopted shall remain in full force and effect.

Section 7. **Effective Date**

That this Resolution shall take effect immediately upon the date of adoption.

Section 8. **Certification**

That the City Clerk for the City Council shall certify to the passage of this Resolution.

MITIGATED NEGATIVE DECLARATION

PROJECT NAME: Moreno Valley Business Park

PROJECT APPLICANT: The Applicant for the proposed project is Mr. Ryan Martin, LCG 10MV, LLC, 670 Ledo Way, Los Angeles, CA 90049.

PROJECT LOCATION: The geographic area that is the subject of the proposed amendment (Amendment Number 2) includes a 9.98-acre property located on the southeast corner of Heacock Street and Ironwood Avenue. The affected Assessor Parcel Numbers (APMs) include 481-020-13, 29, 30, 34, 35, 38 and 39.

CITY AND COUNTY: City of Moreno Valley, Riverside County.

PROJECT: The Specific Plan Amendment that is the focus of this Initial Study and Mitigated Negative Declaration (IS/MND) is the *Second Amendment* to the adopted *Moreno Valley Festival Specific Plan (SP-205)*. The original Specific Plan was adopted, and the Environmental Impact Report (EIR) was certified, by the City Council of Moreno Valley on October 27, 1987. *Amendment Number 1* was adopted in 2018 as a means to promote a wider range of land uses and development so as to take advantage of more recent development trends that were occurring since the original Specific Plan was adopted.[1] This IS/MND for Amendment No. 2 also tiers off of the Final EIR that was certified for the *Moreno Valley Festival Specific Plan/EIR (SP-205)*. This current proposed amendment (Amendment Number 2) that is the subject of this IS/MND, expands the geographic area of the Specific Plan's Planning Area 1 to include a 9.98-acre property located on the southeast corner of Heacock Street and Ironwood Avenue. This Specific Plan Amendment Number 2 is contemplating a new light industrial building totaling 220,390 square feet of floor area.

FINDINGS: The environmental analysis provided in the attached Initial Study indicates that the proposed project will not result in any significant adverse unmitigable impacts. For this reason, the City of Moreno Valley determined that a *Mitigated Negative Declaration* is the appropriate CEQA document for the proposed project. The following findings may be made based on the analysis contained in the attached Initial Study:

- The proposed project *will not* have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory.

- The proposed project *will not* have impacts that are individually limited, but cumulatively considerable.

[1] The expanded range of allowable uses will include a Mix of Uses Development (MU), Commercial/Retail Development (CR), Retail Mix of Uses (RMU) and Open Space (OS) designation. The plan amendment will also facilitate the extension of Davis Street in a northerly direction to ultimately re-connect with the segment of Davis Street that extends north of Ironwood Avenue. The overall placement, design, and phasing of future development will be responsive to the employment and community service needs while mitigating the potential impacts on sensitive development that will be located both within and in close proximity to the Planning Area.

- The proposed project *will not* have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly.

The environmental analysis is provided in the attached Initial Study prepared for the proposed project. The project is also described in greater detail in the attached Initial Study.

SECTION 1 INTRODUCTION

1.1 PURPOSE OF INITIAL STUDY

The Specific Plan Amendment that is the focus of this Initial Study and Mitigated Negative Declaration (IS/MND) is the *second amendment* to the adopted *Moreno Valley Festival Specific Plan/EIR (SP-205)*. The original Specific Plan was adopted, and the Environmental Impact Report (EIR) was certified, by the City Council of Moreno Valley on October 27, 1987. *Amendment Number 1* was adopted in 2018 as a means to promote a wider range of land uses and development so as to take advantage of more recent development trends that were occurring since the original Specific Plan was adopted.[2] This current proposed amendment (Amendment Number 2) that is the subject of this IS/MND, expands the geographic area of the Specific Plan's Planning Area 1 to include a 9.98-acre property located on the southeast corner of Heacock Street and Ironwood Avenue. This IS/MND for Amendment No. 2 also tiers off of the Final EIR that was certified for the *Moreno Valley Festival Specific Plan/EIR (SP-205)*. This Specific Plan Amendment Number 2 is contemplating a new light industrial building totaling 220,390 square feet of floor area. The original SP-205 designated the area as *Regional Commercial* in the geographic area that is now included in the expanded Planning Area 1. This Second Amendment is now designating this area as *Mixed Uses*.

During the preparation of the original adopted Moreno Valley Festival Specific Plan (SP 205), consideration was given to all public utility and infrastructure needed to serve the future development contemplated as part of the adopted Specific Plan's implementation. The majority of the needed infrastructure has been installed pursuant to the requirements of the adopted Plan. All future public utility and infrastructure shall be installed according to Title 9 (Land Use and Planning) of the City of Moreno Valley Municipal Code and the requirements of this Plan Amendment. The installation of new infrastructure will be phased as part of the area-wide master planned facilities. The implementation of roadways and infrastructure to service the Planning Area will occur according to development needs.

The adopted Moreno Valley Festival Specific Plan was prepared pursuant to Government Code Section 65450, which grants authority to cities to adopt specific plans for purposes of implementing the goals and policies of their general plans. The Government Code sets forth the minimum requirements and review procedures for specific plans including the provision of a land use plan, infrastructure and public services plan, criteria and standards for development, and implementation measures. The Specific Plan Amendment complies with the City of Moreno Valley's Municipal Code (Chapter 9.13) governing amendments of the specific plans content and procedures for their adoption and enforcement.[3] The adoption and subsequent implementation of the Moreno Valley Festival Specific Plan Amendment Number 2 is considered to be a project under the California Environmental Quality Act (CEQA).[4] The City of Moreno Valley is the designated *Lead Agency* for the proposed "project" and the City will be responsible for the project's environmental review. The project Applicant is LCG 10MV, LLC, 670 Ledo Way, Los Angeles, California 90049.

[2] The expanded range of allowable uses will include a Mix of Uses Development (MU), Commercial/Retail Development (CR), Retail Mix of Uses (RMU) and Open Space (OS) designation. The plan amendment will also facilitate the extension of Davis Street in a northerly direction to ultimately re-connect with the segment of Davis Street that extends north of Ironwood Avenue. The overall placement, design, and phasing of future development will be responsive to the employment and community service needs while mitigating the potential impacts on sensitive development that will be located both within and in close proximity to the Planning Area.

[3] National Engineering Consultants. *Amendment to Specific Plan 205*. Draft dated December 29th, 2015.

[4] California, State of. *Title 14. California Code of Regulations. Chapter 3. Guidelines for the Implementation of the California Environmental Quality Act*. as Amended 1998 (CEQA Guidelines). § 15060 (b).

As part of the proposed project's environmental review, the City of Moreno Valley authorized the preparation of this Initial Study.[5] The primary purpose of CEQA is to ensure that decision-makers and the public understand the environmental implications of a specific action or project. The purpose of this Initial Study is to ascertain whether the proposed project will have the potential for significant adverse impacts on the environment. Pursuant to the CEQA Guidelines, additional purposes of this Initial Study include the following:

- To provide the City of Moreno Valley with information to use as the basis for deciding whether to prepare an environmental impact report (EIR), mitigated negative declaration, or negative declaration for the Plan Amendment;
- To facilitate the project's environmental assessment early in the preparation of this Plan Amendment;
- To eliminate unnecessary EIRs; and,
- To determine the nature and extent of any impacts associated the Plan Amendment.

Although this Initial Study was prepared with consultant support, the analysis, conclusions, and findings made as part of its preparation, fully represent the independent judgment and position of the City of Moreno Valley, in its capacity as the lead agency. The City also determined, as part of this Initial Study's preparation, that a Mitigated Negative Declaration is the appropriate environmental document for the project's environmental review pursuant to CEQA. This Initial Study and the *Notice of Intent to Adopt a Mitigated Negative Declaration* will be forwarded to responsible agencies, trustee agencies, and the public for review and comment. A 30-day public review period will be provided to allow these entities and other interested parties to comment on the proposed project and the findings of this initial study.[6] Questions and/or comments should be submitted to the following contact person:

Julia Descoteaux, Associate Planner
City of Moreno Valley Community Development Department
14177 Frederick Street
Moreno Valley, California 92553

1.2 INITIAL STUDY'S ORGANIZATION

The following annotated outline summarizes the scope and content of this Initial Study:

- S*ection 1 Introduction,* provides the procedural context surrounding this Initial Study's preparation and insight into its composition.
- *Section 2 Project Description,* provides an overview of the existing environment as it relates to the Planning Area and describes the proposed project's physical and operational characteristics.

[5] California, State of. *Title 14. California Code of Regulations. Chapter 3. Guidelines for the Implementation of the California Environmental Quality Act*. as Amended 1998 (CEQA Guidelines).

[6] California, State of. *California Public Resources Code. Division 13, Chapter 2.5. Definitions*. as Amended 200. *Chapter 2.6, Section 2109(b).* 2000.

- *Section 3 Environmental Analysis* includes an analysis of potential impacts associated with the proposed project's construction and the subsequent occupancy.

- *Section 4 Findings* indicates the conclusions of the environmental analysis and the mandatory findings of significance.

- *Section 5 References* identifies the sources used in the preparation of this Initial Study.

THIS PAGE HAS BEEN INTENTIONALLY LEFT BLANK.

SECTION 2 PROJECT DESCRIPTION

2.1 PROJECT OVERVIEW

The proposed "project" is an amendment (Amendment Number 2) that expands the geographic area of the Specific Plan's Planning Area 1 to include a 9.98-acre property located on the southeast corner of Heacock Street and Ironwood Avenue. This Specific Plan Amendment Number 2 is also contemplating a new light industrial building totaling 220,390 square feet of floor area with the expanded Planning Area Number 1. The original SP-205 designated the expanded Planning Area 1 as *Regional Commercial*. This Second Amendment is now designating this area as *Mixed of Uses*.

2.2 PROJECT LOCATION

The geographic area that is subject to the Moreno Valley Festival Specific Plan is located within the corporate boundaries of the City of Moreno Valley in the northwestern portion of the City. The City of Moreno Valley is located approximately 54 miles east of downtown Los Angeles and 80 miles north of San Diego.[7] The City is bounded by unincorporated portions of Riverside County to the north and east; the City of Riverside and unincorporated Riverside County to the west; and the City of Perris to the south.[8]

The location of Moreno Valley in a regional context is shown in Exhibit 2-1. A citywide map is provided in Exhibit 2-2. The larger Planning Area is bounded by Heacock Street to the west; Ironwood Avenue to the north; and the Moreno Valley Freeway (SR-60) to the south. The existing Planning Area is illustrated in Exhibit 2-3. For planning purposes, the original Specific Plan 205 was divided into eight sub-areas that include the following:

- *Existing Planning Area 1* consists of 7.36 acres and is located in the northernmost portion of the larger Specific Plan area. This planning area occupies frontage along the south side of Ironwood Avenue and is located west of the proposed David Street extension. This proposed Amendment Number 2 that is the subject of this IS/MND expands the geographic boundaries of Planning Area Number 1.

- *Existing Planning Area 2* consists of 3.84 acres and is located in the northeastern corner of the larger Specific Plan area. Planning Area 2 occupies frontage along the south side of Ironwood Avenue and is located east of the proposed David Street extension.

- *Existing Planning Area 3* consists of 9.81 acres and is located in the western portion of the larger Specific Plan area.

- *Existing Planning Area 4* consists of 13.92 acres and is located in the central portion of the larger Specific Plan area and is bounded on the north by Planning Area 5; on the west by Davis Street; on the east by single-family residential; and on the south by Hemlock Avenue and Planning Area 7.

LOCAL MAP

Source: Blodgett Baylosis Environmental Planning

- *Existing Planning Area 5* consists of 12.90 acres and is located in the eastern portion of the larger Specific Plan area and is bounded on the north by Planning Area 2; on the west by the proposed Davis Street extension; on the east by single-family residential; and on the south by Planning Area 4. Planning Area 5 is owned by the City of Moreno Valley and is used for storm water retention.

- *Existing Planning Area 6* consists of 6.08 acres and is located in the southwestern portion of the larger Specific Plan area and is bounded on the north by Hemlock Avenue; on the west by Heacock Street; on the east by undeveloped land; and on the south by the Moreno Valley Freeway.

- *Existing Planning Area 7* consists of 6.44 acres and is located in the eastern portion of the larger Specific Plan area and is bounded on the north by Planning Area 4; on the west by Planning Area 4 and Hemlock Avenue; on the east by Nita Drive and Hemlock Avenue; and on the south by Hemlock Avenue.

- *Existing Planning Area 8* consists of 3.44 acres and is located in the southeastern most portion of the larger Specific Plan area. Planning Area 8 is bounded on the north by Hemlock Avenue; on the west by undeveloped land and Hemlock Avenue; on the east by Indian Street; and on the south by the Moreno Valley Freeway.

This current amendment would expand the Specific Plan Area to include a 9.98-acre property located on the southeast corner of Heacock Street and Ironwood Avenue. This added area will be incorporated into the existing *Planning Area 1*. The affected Assessor Parcel Numbers (APMs) within the expanded Planning Area 1 include 481-020-13, 29, 30, 34, 35, 38 and 39. Once the amendment is approved, the revisions will be reflected in the adopted Festival Specific Plan by reference. A map of the entire Moreno Valley Festival Specific Plan is provided in Exhibit 2-4.

2.3 ENVIRONMENTAL SETTING

Newer light industrial development is occurring in those areas located to the south and east of the new expanded Planning Area 1. The larger Festival Specific Planning Area is located in the midst of an urbanized area and is surrounding on all sides by urban development. The land uses and development that surround the Festival Specific Plan Planning Area are outlined below.

- *North of the Plan Amendment Area*. Ironwood Avenue extends along the north side of the Planning Area. Single-family residential units are located further north, along the north side of Ironwood Avenue.[9]

- *South of the Plan Amendment Area*. The Moreno Valley Freeway (SR-60) extends along the south side of the Planning Area. Commercial and residential uses are located further south, along the south side of the aforementioned Freeway.[10]

- *East of the Plan Amendment Area*. Single-family residential units extend along the Planning Area's east side.[11]

[9] Blodgett Baylosis Environmental Planning. *Site survey*. Survey was conducted on August 9, 2017.

EXHIBIT 2-5
AERIAL PHOTOGRAPH OF THE PLANNING AREA
Source: Blodgett Baylosis Environmental Planning

- *West of the Plan Amendment Area*. Heacock Street abuts the Planning Area to the west. Various uses, including a State Farm Insurance office, a Rite Aid, and single-family residential are located further west, along the west side of Heacock Street.[12]

This Second Amendment would expand the Specific Plan Area to include a 9.98-acre property located on the southeast corner of Heacock Street and Ironwood Avenue. This added area will be referred to as the expanded *Planning Area 1*. This Planning Area 1 is currently undeveloped though it has been rough graded and disked for maintenance and fire mitigation. Once the amendment is approved for Planning Area 1, the property will be incorporated into the larger Festival Specific Plan. Photographs of the Planning Area are provided in Exhibits 2-6 and 2-7.

2.4 PROJECT DESCRIPTION

The proposed project involves the adoption and subsequent implementation to the Moreno Valley Festival Specific Plan. This current amendment expands the Planning Area to include a 9.98-acre property located on the southeast corner of Heacock Street and Ironwood Avenue. This property, referred to as *Planning Area 1*, is located in the northwest corner of the Specific Plan area. The Specific Plan is being amended to allow for the development of a 220,390 square foot light industrial building.

The Plan Amendment's adoption, by itself, will not lead to any physical changes to the environment. However, the Plan Amendment's adoption will establish regulations that will govern the use of the land as well as establishing development standards and regulations. The purpose of the Specific Plan Amendment is to provide a comprehensive planning framework to guide future high quality multi-use development that will include a range of land uses that can prosper in the current economic environment. At the same time, the Specific Plan Amendment will ensure that future land uses are compatible with both existing development in the surrounding area and future development that will occur within the Planning Area itself. The Specific Plan Amendment 2 and land use plan for expanded Planning Area 1 provides for the following land use designations described below:

- *Community Commercial (CC Zone)*. The primary purpose of the community commercial (CC) district is to provide for the general shopping needs of area residents and workers with a variety of business, retail, personal and related or similar services.

- *Office Commercial (OC Zone)*. The primary purpose of the office commercial (OC) district is to provide for the establishment of business, corporate and administrative office, as well as commercial services which are supportive to major business developments. Retail facilities which support the office developments are permitted, subject to limitations specified in this section.

- *Office (O Zone)*. The primary purpose of the office (O) district is to provide areas for the establishment of park-like, office-based working environments for general business, corporate, professional, and administrative offices. It is the further intent of this district to provide setbacks, landscaping and architectural treatments that ensure the location of such uses is relatively compatible with residential development in the vicinity.

[12] Blodgett Baylosis Environmental Planning. *Site survey*. Survey was conducted on August 9, 2017.

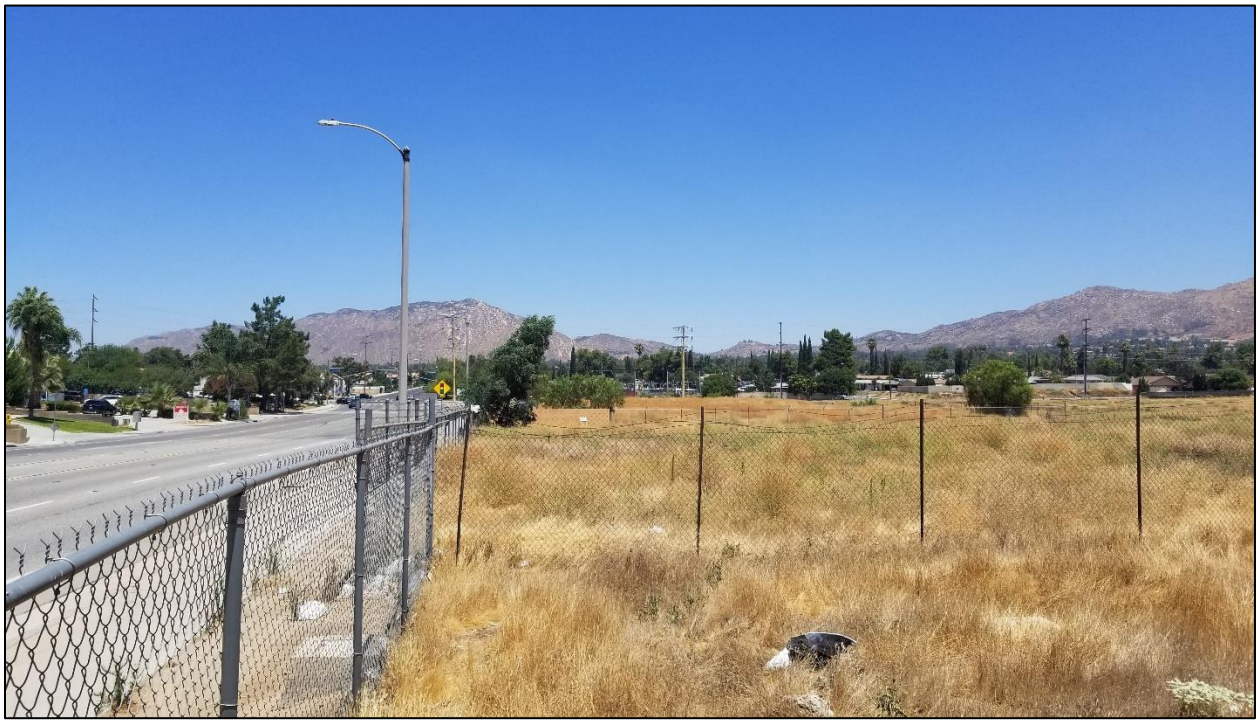

EXHIBIT 2-6
PHOTOGRAPHS OF THE PLANNING AREA

Source: Blodgett Baylosis Environmental Planning

EXHIBIT 2-7
PHOTOGRAPHS OF THE PLANNING AREA
Source: Blodgett Baylosis Environmental Planning

- *Light Industrial (LI Zone).* The primary purpose of the light industrial (LI) district is to provide for light manufacturing, light industrial, research and development, warehousing and distribution and multitenant industrial uses, as well as certain supporting administrative and professional offices and commercial uses on a limited basis. This district is intended as an area for light industrial uses that can meet high performance standards.

- *Business Park (BP Zone).* The primary purpose of the business park (BP) district is to provide for light industrial, research and development, office-based firms and limited supportive commercial in an attractive and pleasant working environment and a prestigious location.

- Open Space (OS). The primary purposes of the open space (OS) district are to provide for low intensity, outdoor-oriented recreational facilities, preserve unique natural and environmentally sensitive areas, and protect and preserve the public health, safety, and welfare.[13]

Table 2-2 indicates the various types of uses that are permitted in the expanded Planning Area 1.

Trade & Vocational Schools *(CC Zone)*	**Permitted Use**
Weight Reduction Centers *(CC Zone)*	**Permitted Use**

Details of specific development projects will be determined by subdivisions and site development plans. In the event of a conflict between the Specific Plan and the City of Moreno Valley Municipal Code, the Specific Plan shall prevail. If the Specific Plan is silent on a particular subject, the Municipal Code shall apply. For purposes of the environmental analysis, certain assumptions were made to provide a maximum potential build-out scenario. This amendment to expand Planning Area No. 1 would allow for the development of a 220,390 square foot light industrial building.

Circulation Plan

The Specific Plan Amendment also includes a comprehensive circulation plan that indicates the location and extent of roadways, pedestrian routes, and other facilities needed to accommodate the future development. The circulation plan outlines a hierarchy of roadways and other facilities that will serve the homes, business, and the employment related uses contemplated as part of the Specific Plan's implementation. The majority of the "backbone" circulation system has been constructed though the extension of Davis Street to Ironwood Avenue will need to be completed.

Infrastructure Plan

The Specific Plan Amendment will also ensure that sufficient facilities are provided to accommodate the development envisioned under the Specific Plan's implementation. The Specific Plan Area contains existing water, sewer, and stormwater infrastructure. These storm drains, water, and sewer lines are located within the streets that comprise the Planning Area's circulation network. Additional storm drains, water, and sewer lines are located within the undeveloped portion of Davis Street.

2.5 DISCRETIONARY ACTIONS

A discretionary action is a decision taken by a government agency (for this project, the government agency is the City of Moreno Valley) that calls for an exercise of judgment in deciding whether to approve a project. As part of the proposed project's implementation, the City will consider the following approvals:

- The approval of the Mitigated Negative Declaration (MND);
- The adoption of the Mitigation Monitoring and Reporting Program (MMRP);
- The adoption of a General Plan Amendment (GPA) to the City of Moreno Valley General Plan;
- The adoption of a Zone Change to the City of Moreno Valley Zoning Ordinance; and,
- The adoption of the Moreno Valley Festival Specific Plan Amendment.

THIS PAGE HAS BEEN INTENTIONALLY LEFT BLANK

SECTION 3 ENVIRONMENTAL ANALYSIS

This section of the Initial Study analyzes the potential environmental impacts that may result from the proposed project's implementation. The issue areas evaluated in this Initial Study include the following:

Aesthetics (Section 3.1);
Agricultural & Forestry Resources (Section 3.2);
Air Quality (Section 3.3);
Biological Resources (Section 3.4);
Cultural Resources (Section 3.5);
Energy (Section 3.6)
Geology & Soils (Section 3.7);
Greenhouse Gas Emissions; (Section 3.8);
Hazards & Hazardous Materials (Section 3.9);
Hydrology & Water Quality (Section 3.10);
Land Use & Planning (Section 3.11);
Mineral Resources (Section 3.12);
Noise (Section 3.13);
Population & Housing (Section 3.14);
Public Services (Section 3.15);
Recreation (Section 3.16);
Transportation (Section 3.17);
Tribal Cultural Resources (Section 3.18);
Utilities (Section 3.19);
Wildfire (Section 3.20); and,
Mandatory Findings of Significance (Section 3.21).

The environmental analysis included in this section reflects the Initial Study Checklist format used by the City of Moreno Valley in its environmental review process. Under each issue area, an analysis of impacts is provided in the form of questions followed by corresponding detailed responses. For the evaluation of potential impacts, questions are stated and an answer is provided according to the analysis undertaken as part of this Initial Study's preparation. To each question, there are four possible responses:

- *No Impact*. The proposed project *will not* have any measurable environmental impact on the environment.

- *Less Than Significant Impact*. The proposed project *may have* the potential for affecting the environment, although these impacts will be below levels or thresholds that the City of Moreno Valley or other responsible agencies consider to be significant.

- *Less Than Significant Impact with Mitigation*. The proposed project *may have* the potential to generate impacts that will have a significant impact on the environment. However, the level of impact may be reduced to levels that are less than significant with the implementation of mitigation measures.

- *Potentially Significant Impact*. The proposed project may result in environmental impacts that are significant.

This Initial Study will assist the City of Moreno Valley in determining as to whether there is a potential for significant adverse impacts on the environment associated with the implementation of the proposed project.

3.1 AESTHETICS

Threshold	Potentially Significant Impact	Less Than Significant Impact with Mitigation	Less Than Significant Impact	No Impact
A. Would the project have a substantial adverse effect on a scenic vista?				✕
B. Would the project substantially damage scenic resources including, but not limited to, trees, rock outcroppings, and historic buildings within a State scenic highway?				✕
C. In non-urbanized areas, would the project substantially degrade the existing visual character or quality of public views of the site and its surroundings (public views are those that are experienced from a publicly accessible vantage point)? If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?				✕
D. Would the project create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?			✕	

ANALYSIS OF ENVIRONMENTAL IMPACTS

A. Would the project have a substantial adverse effect on a scenic vista? ● No Impact.

This current amendment would expand the Specific Plan Area to include a 9.98-acre property located on the southeast corner of Heacock Street and Ironwood Avenue. This added area will be referred to as the expanded *Planning Area 1*. This expanded Planning Area 1 is currently undeveloped though it has been rough graded and disked for maintenance and fire mitigation. The Specific Plan is being amended to allow for the development of a 220,390 square foot light industrial building.

The continued implementation of the Specific Plan Amendment will rely on the various goals, policies, and design standards included in the Specific Plan that will enhance the visual appearance of the existing and future land uses and development within the larger Planning Area. In addition, the Specific Plan includes guidance regarding the design of new development. Section 4.0 of the Specific Plan is concerned with *off-site* design standards while Section 5.0 focuses on *on-site* design standards.[14] The off-street design standards address a number of design criteria that includes landscaping around the edges of the planning area, streetscape design amenities, entryway treatments, and signage. The following off-site design requirements included in the Specific Plan Amendment will be effective in addressing potential aesthetic impacts:

- *General Landscaping Design Guidelines*. The Project Design Guidelines section of the Specific Plan Amendment offers more detailed information for individual project developers (also refer to Title 9 of the City Municipal Code).

[14] National Engineering Consultants. *The Moreno Valley Festival, (Draft) Amendment to Specific Plan 205, Section 4.2.4.* October 10, 2017.

- *General Landscaping Design Guidelines*. All landscape designs shall adhere to the concept depicted in the Landscape (Plan) Figure 4-3 (included in the Specific Plan Amendment).

- *Streetscape Landscaping*. Landscaping along public streets is designed to provide a unified appearance along street frontages, to reinforce the street hierarchy, and to establish identities of place, particularly at intersections within the Planning Area.

- *Streetscape Landscaping*. Implementation of the street landscaping will be executed by the developer during the initial stages of development.

- *Streetscape Landscaping*. Trees will be planted along all existing streets within the Specific Plan Amendment boundaries, where they do not currently exist. In addition, landscape guidelines have been provided for those streets adjacent to the project's boundaries that will require improvements associated with the development.

- *Streetscape Landscaping*. Low growing plant materials will be added to provide year-round color and textural interest. Mounded turf and landscaped berms will be used where appropriate to screen undesirable views, such as parking lots.[15]

- *Parkway Landscaping*. Trees are required along all street frontages. Trees shall be planted in a single row at spacing of 40 feet between each tree (Municipal Code Ordinance. 786 § 2, 2009).

- *Parkway Landscaping*. All street trees within street right of way, unless otherwise noted, are to be 24" box size, with a minimum of eight feet of brown trunk measured from finish grade. Trees in other areas shall be 15 gallon minimum in size but 25% shall be minimum 24" box.

- *Parkway Landscaping*. Landscaping berms along street frontages may be utilized. Maximum slopes may not exceed 2:1. City maintained areas shall not exceed 3:1.

- *Parkway Landscaping*. Shrubs along street frontages are to be utilized where possible (Minimum size at installation is 1 gallon.)

- *Edge Treatments*. There are six discrete edge treatment plans in and around the project. The areas that will be subject to the edge treatment plans include Hemlock Avenue, Heacock Street, Indian Avenue, Ironwood Avenue, Eastern Edge, and SR 60 Freeway.[16]

- *Screening Criteria for Internal Roadways*. All interior roadways shall be lined with sidewalks, landscaping and setbacks from the street as prescribed by the City of Moreno Valley planning standards and elaborated in this Specific Plan.[17]

[15]National Engineering Consultants. *The Moreno Valley Festival, (Draft) Amendment to Specific Plan 205, Section 4.2.4.* October 10, 2017.

[16] Ibid.

[17] Ibid.

- *Entry Themes*. Entrances to Plan Amendment Area shall be enhanced with landscaping, project monument signage and hardscape features.[18]

- *Entry Themes*. The landscape concept for the project shall be introduced through the entry treatments. Medium accent trees combined with low evergreen and flowering accent shrubs will be used consistently throughout the project entries. The foreground will feature a combination of ground cover and annual color.[19]

- *Entry Themes*. The entry signage and elements shall be visually clear to vehicular and pedestrian users, and shall allow the use of digital signage subject that it meets the City of Moreno's requirements.[20]

- *Buffer Treatments*. Landscape buffers are required along the eastern, southern, and northern boundaries of the project site. The master developer will be responsible for implementing the buffer system.

- *Buffer Treatments*. When development is located adjacent to existing residential uses, landscape buffers and water quality management plan (WQMP) basins are recommended to be used as functional buffers for potentially incompatible uses. Refer to sample cross section exhibits below for guidelines.[21]

The Specific Plan Amendment Number 2 will use the *Project Design Guidelines* that were previously adopted for the original Specific Plan (SP-205). The objective of these guidelines was to create projects that contribute to the overall design continuity of the development while maintaining their own sense of individuality. The following general guidelines which address site, architectural, and landscape design apply to all future development within the Planning Area:[22]

- Vehicular and pedestrian entries to the project should be clearly identifiable to visitors through the use of signage, and landscaping.

- Circulation within sites shall be designed to minimize conflicts between service vehicles, automobiles, and pedestrians.

- Neighboring lots should share entry drives wherever possible to create a greater uninterrupted expanse of landscaping.

- Visibility of parking areas along roadways shall be minimized through the use of landscaped berms and screen shrubs wherever possible.

[18] National Engineering Consultants. *The Moreno Valley Festival, (Draft) Amendment to Specific Plan 205, Section 4.2.4.* October 10, 2017..

[19] Ibid.

[20] Ibid.

[21] Ibid.

[22] Ibid.

- Service zones (trash enclosures, loading and outdoor storage areas) shall be located in areas that are least visible to the public. An appropriate screening method shall be used if service zone is exposed to public view.

- All buildings and walkways shall be accessible to the handicapped according to requirements in Title 24 of the California Administrative Code.

- A secondary sidewalk shall be provided within individual sites and connect with the master circulation system, creating a continuous and pleasant link between projects.

- Consideration should be given to ensure safe pedestrian access through parking areas, and from the public street walkways to building entrances.

- Security measures shall be considered in the project's site design, particularly in pedestrian areas. The use of tall, dense shrubbery should be avoided along walkways and adequate lighting should be provided.

Exhibit 3-1 shows the various project design features that mitigate light trespass and alleviate size and massing. The Specific Plan Amendment states that architectural design should express the character of a mixed use, commercial, and retail development center in a manner that is progressive and enduring. Individual creativity and identity are encouraged, but care must be taken to maintain design integrity and compatibility among all projects in order to establish a clear, unified image throughout the Planning Area. General building design guidelines for the various uses are as follows:

- Distinctive architectural design shall be encouraged to create individual building identity. However, buildings must be compatible with adjacent development projects to achieve a sense of architectural continuity.

- Detailing may vary but all materials are to be durable, aesthetically pleasing, and low maintenance.[23]

- The building's scale should be a major determining factor in the architectural design and detailing.

- Long expanses of building walls may be ameliorated by employing a system of overlapping forms and heights.

- The architectural concept must be consistent throughout the individual project with consideration given to all sides.

- Distinctive hardscape and colorful landscaping should be used to identify and accentuate building entries.

All properties within the expanded Planning Area 1 will be required to be developed in conformance with the Specific Plan Amendment. All development will be consistent with the Specific Plan objectives and design guidelines. Details of specific development projects will be determined by subdivisions and site

[23] National Engineering Consultants. *The Moreno Valley Festival, (Draft) Amendment to Specific Plan 205, Section 5.3.1.* October 10, 2017.

development plans. In the event of a conflict between the Specific Plan and the City of Moreno Valley Municipal Code, the Specific Plan will prevail. If the Specific Plan is silent on a particular subject, the Municipal Code will apply. The implementation of the Specific Plan will facilitate development that will not negatively impact any scenic vistas. The most prominent scenic vistas located within the Planning Area include the Box Springs Mountains, located between two to three miles north of the Planning Area, and the San Bernardino Mountains, located 15 miles to the north. The development that is permitted under the Specific Plan will not obstruct views of the aforementioned vistas. The setback and building height standards will prohibit the clustering and placement of new buildings within a certain distance from the public right-of-way, while the maximum height standards will restrict the height of the buildings that will be erected within the Planning Area. As a result, no visual impacts will result from the implementation of the Specific Plan.

B. *Would the project substantially damage scenic resources including, but not limited to, trees, rock outcroppings, and historic buildings within a State scenic highway? ● No Impact.*

According to the California Department of Transportation (Caltrans), neither the SR-60 nor the arterial roadways within the Moreno Valley Festival Specific Plan are designated scenic highways.[24] However, this Freeway is identified as a scenic corridor in the Moreno Valley General Plan. The expanded Planning Area 1 is visually separated from the aforementioned Freeway by the development that is located elsewhere in the Specific Plan area. In addition, the vegetation present within the Planning Area is not considered to be a "scenic resource." The expanded Planning Area 1 does not contain any scenic rock outcroppings.[25] Lastly, the Specific Plan's implementation will not involve the removal of any buildings listed in the State or National Registrar (refer to Section 3.5). As a result, no impacts will occur.

C. *In non-urbanized areas, would the project substantially degrade the existing visual character or quality of public views of the site and its surroundings (public views are those that are experienced from a publicly accessible vantage point)? If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality? ● No Impact.*

The implementation of the Specific Plan Amendment Number 2 will facilitate modern development within an area that underutilized. The Specific Plan Amendment will ensure that all new development adheres to the Specific Plan's design requirements relative to architecture, signage, and landscaping and Zoning requirements governing scenic quality. Therefore, the implementation of the Specific Plan will not degrade the site and surrounding area and no impacts are likely to occur.

D. *Would the project create a new source of substantial light or glare which would adversely affect day or nighttime views in the area? ● Less than Significant Impact.*

Sensitive receptors refer to land uses and/or activities that are especially sensitive to light and typically include homes, schools, playgrounds, hospitals, convalescent homes, and other similar facilities where children or the elderly may congregate. The nearest sensitive receptors to the expanded Planning Area are the single-family residential units located along the west side of Heacock Street and north side Ironwood Avenue. Additional light sensitive receptors are shown in Exhibit 3-2.

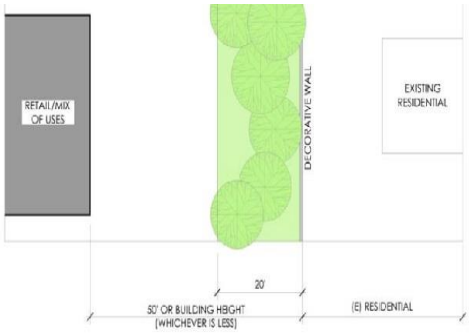
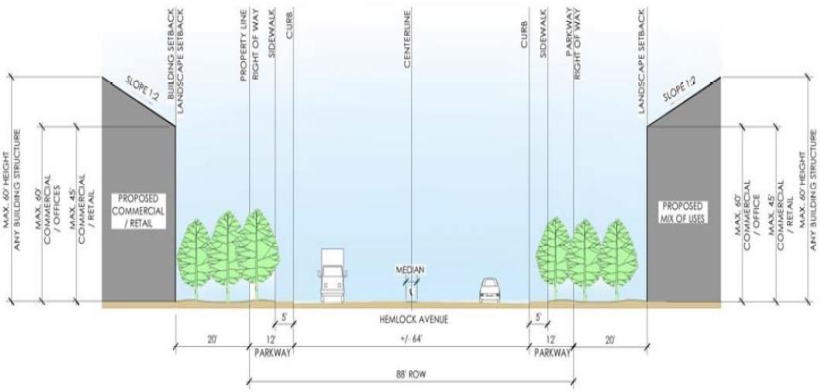
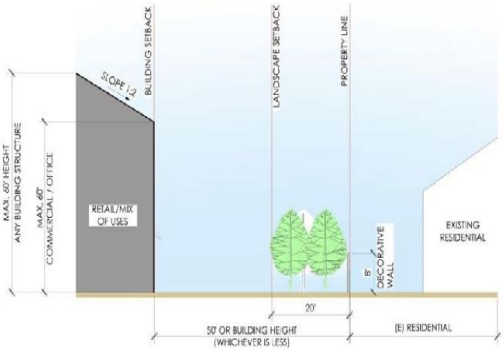
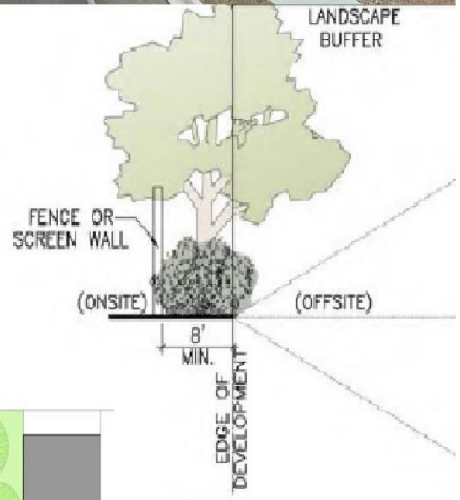
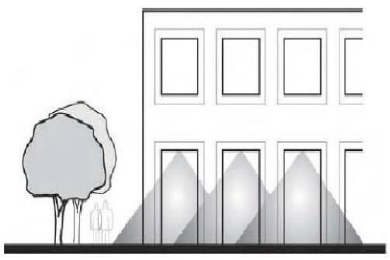
[25] Blodgett Baylosis Environmental Planning. *Site survey*. Survey was conducted on August 9, 2017.











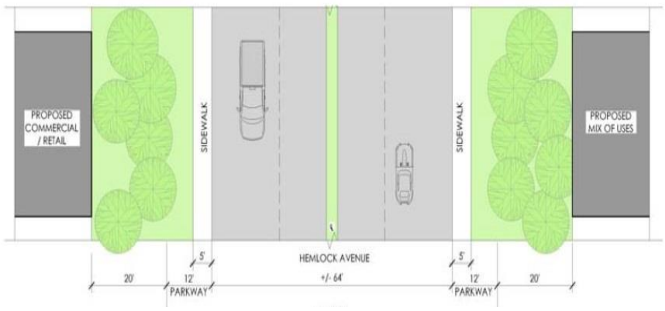


EXHIBIT 3-1
PROJECT DESIGN FEATURES THAT SERVE AS MITIGATION
Source: Amendment to Specific Plan 205

The adoption of the Specific Plan will not directly result in any light spillover or glare impacts. However, the Specific Plan will facilitate new development and the revitalization of the Festival at Moreno Valley shopping center. According to the Specific Plan, exterior lighting is to be provided to enhance the safety and security of motorists, pedestrians, and cyclists. To reinforce identity and unity, all exterior lighting is to be consistent in height, spacing, color, and type of fixture throughout the building site and compatible throughout the Moreno Valley Festival.[26] This new exterior lighting will be installed in accordance with all applicable regulations outlined in Section 9.08.100 of the City's Municipal Code. In addition, the Specific Plan includes the following objectives that should be considered in the installation of new lighting within the Planning Area.[27]

- Exterior lighting is to be provided as a means to enhance the safety and security of motorists, pedestrians, and cyclists.
- Lighting is intended to create a night time character that reinforces the image of the "MVF" as a quality business location.
- The developer will be responsible for installation of light fixtures during the project's initial development phase.
- Street lights per City standards will be installed on all public roads according to the City's recommendations.

With adherence to the above requirements, the potential impacts will be less than significant.

MITIGATION MEASURES

The analysis of aesthetics indicated that no impacts on these resources would occur as part of the proposed Specific Plan's implementation. As a result, no mitigation is required.

3.2 AGRICULTURE & FORESTRY RESOURCES

Environmental Issue Areas Examined	Potentially Significant Impact	Less Than Significant Impact With Mitigation	Less Than Significant Impact	No Impact
A. Would the project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural uses?				✖
B. Would the project conflict with existing zoning for agricultural uses, or a Williamson Act Contract?				✖
C. Would the project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?				✖
D. Would the project result in the loss of forest land or conversion of forest land to a non-forest use?				✖
E. Would the project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to a non-forest use?				✖

ANALYSIS OF ENVIRONMENTAL IMPACTS

A. *Would the project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance, as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?* ● *No Impact.*

This current amendment would expand the Panning Area 1 within the larger Specific Plan Area to include a 9.98-acre property located on the southeast corner of Heacock Street and Ironwood Avenue. This added area will be referred to as the expanded *Planning Area 1*. This portion of Planning Area Number 1 is currently undeveloped though it has been rough graded and disked for maintenance and fire mitigation. The Specific Plan is being amended to allow for the development of a 220,390 square foot light industrial building. There are no areas of Prime Farmland, Unique Farmland, or Farmland of Statewide Importance located within the Planning Area. Furthermore, there are no agricultural uses or activities located within the Planning Area. The City's General Plan Environmental Impact Report indicates that a majority of the important farmlands are concentrated within the underdeveloped eastern portion of the City.[28] As a result, no impacts will occur.

[28] P and D Consultants. *Final Environmental Impact Report - City of Moreno Valley General Plan SCH# 200091075*. Report dated July 2006.

B. Would the project conflict with existing zoning for agricultural use or a Williamson Act contract? ● No Impact.

The adopted Festival Specific Plan (SP 205) does not contemplate agricultural uses nor are there such uses within the Specific Plan Area. The implementation of the Specific Plan will not conflict with existing agricultural operations since there are no agricultural uses located within the expanded Planning Area 1. In addition, none of the properties within the Planning Area are subject to a Williamson Act Contract.[29] As a result, the adoption and subsequent implementation of the Moreno Valley Festival Specific Plan nor the proposed Amendment will not result in any impacts on existing Williamson Act contracts.

C. Would the project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))? ● No Impact.

The area governed by the Moreno Valley Festival Specific Plan is located in the midst of a larger urban area and no forest lands are located within the City or within this portion of Riverside County. As a result, no impacts on forest land or timber resources will result from the proposed project's implementation.

D. Would the project result in the loss of forest land or the conversion of forest land to a non-forest use? ● No Impact.

There are no forest lands present within the larger Specific Plan Planning Area. This conclusion is supported by the field survey that was undertaken for the proposed project. As a result, the adoption and subsequent implementation of the Moreno Valley Festival Specific Plan nor the proposed Amendment will not result in any impacts related to the loss or conversion of existing forest lands. Therefore, no impacts will result from the project's implementation.

E. Would the project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to a non-forest use?● No Impact.

No agricultural activities, farmland uses, or forest uses are located in the geographic area governed by the Moreno Valley Festival Specific Plan.[30] As a result, the adoption and subsequent implementation of the Moreno Valley Festival Specific Plan will not involve the conversion of any existing farmland area to urban uses or the conversion of forest land to non-forest uses. As a result, no impacts are anticipated.

MITIGATION MEASURES

The analysis of agricultural and forestry resources indicated that no impacts on these resources would occur as part of the proposed Specific Plan's implementation.

3.3 AIR QUALITY

Environmental Issue Areas Examined	Potentially Significant Impact	Less Than Significant Impact With Mitigation	Less Than Significant Impact	No Impact
A. Would the project conflict with or obstruct implementation of the applicable air quality plan?				✖
B. Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable Federal or State ambient air quality standard?			✖	
C. Would the project expose sensitive receptors to substantial pollutant concentrations?			✖	
D. Would the project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?				✖

ANALYSIS OF ENVIRONMENTAL IMPACTS

A. *Would the project conflict with or obstruct implementation of the applicable air quality plan? ● No Impact.*

This current amendment would expand the Specific Plan Area to include a 9.98-acre property located on the southeast corner of Heacock Street and Ironwood Avenue. This added area will be referred to as the expanded *Planning Area 1*. This Planning Area 1 is currently undeveloped though it has been rough graded and disked for maintenance and fire mitigation. The Specific Plan is being amended to allow for the development of a 220,390 square foot light industrial building. The South Coast Air Quality Management District (SCAQMD) has established quantitative thresholds for criteria pollutants that include the following:

- *Ozone (O_3)* is a nearly colorless gas that irritates the lungs and damages materials and vegetation. O_3 is formed by photochemical reaction. Los Angeles and the surrounding South Coast Air Basin (SCAB) are designated by the Environmental Protection Agency (EPA) and the California Air Resources Board (CARB) as an extreme ozone *non-attainment area*. [31]

- *Carbon Monoxide (CO)* is a colorless, odorless toxic gas that interferes with the transfer of oxygen to the brain that is produced by the incomplete combustion of carbon-containing fuels emitted as vehicle exhaust. The SCAB is designated as an attainment area for carbon monoxide by the EPA.

- *Nitrogen dioxide (NO_2)* is a yellowish-brown gas that, at high levels, can cause breathing difficulties. NO_2 is formed when nitric oxide (a pollutant from burning processes) combines with oxygen. Although NO_2 concentrations have not exceeded National standards since 1991, NO_2 emissions remain a concern because of their contribution to the formation of O_3 and particulate matter. The SCAB is designated as an attainment area for NO_2 by the EPA.

[31] A non-attainment area refers to a geographic area where the Environmental Protection Agency (EPA) and/or the California Air Resources Board (CARB) have determined that the air quality standards for the criteria pollutants are not being met.

- *Sulfur dioxide* (SO_2) is a colorless, pungent gas formed primarily by the combustion of sulfur-containing fossil fuels. Health effects include acute respiratory symptoms and difficulty in breathing for children. Though SO_2 concentrations have been reduced to levels that are well below State and Federal standards, further reductions in SO_2 emissions are desirable since SO_2 is a precursor to sulfate and PM_{10}. The SCAB is designated as an attainment area for SO_2.

- *PM_{10}* refers to particulate matter less than ten microns in diameter. PM_{10} particulates cause a greater health risk than larger-sized particles since fine particles can more easily cause respiratory irritation. The Federal standards for PM_{10} have been met in most areas within the SCAB.

- *$PM_{2.5}$* refers to particulate matter less than 2.5 microns in diameter. $PM_{2.5}$ also represents a significant health risk because particulate matter of this size may be more easily inhaled, causing respiratory irritation. The annual average concentrations of $PM_{2.5}$ exceeded Federal standards in some areas of the SCAB. As a result, $PM_{2.5}$ continues to be designated non-attainment.

Projects in the South Coast Air Basin (SCAB) generating construction-related emissions that exceed any of the following emissions thresholds are considered to be significant under CEQA: 75 pounds per day or 2.50 tons per quarter of reactive organic compounds; 100 pounds per day or 2.50 tons per quarter of nitrogen dioxide; 550 pounds per day or 24.75 tons per quarter of carbon monoxide; 150 pounds per day or 6.75 tons per quarter of PM_{10}; 55 pounds per day or 2.43 tons per quarter of $PM_{2.5}$; or, 150 pounds per day or 6.75 tons per quarter of sulfur oxides. A project would have a significant effect on air quality if any of the following operational emissions thresholds for criteria pollutants are exceeded: 55 pounds per day of reactive organic compounds; 55 pounds per day of nitrogen dioxide; 550 pounds per day of carbon monoxide; 150 pounds per day of PM_{10}; 55 pounds per day of $PM_{2.5}$; or, 150 pounds per day of sulfur oxides.

The Planning Area located within the SCAB which covers a 6,600-square-mile area within Orange County, the non-desert portions of Riverside County, and San Bernardino County. The SCAB is subject to the Final 2016 Air Quality Management Plan (AQMP), which was jointly prepared with the California Air Resources Board (CARB) and the Southern California Association of Governments (SCAG).[32] The Air Quality Handbook refers to the following criteria as a means to determine a project's conformity with the AQMP:[33]

- *Consistency Criteria 1* refers to a proposed project's potential for resulting in an increase in the frequency or severity of an existing air quality violation or its potential for contributing to the continuation of an existing air quality violation.

- *Consistency Criteria 2* refers to a proposed project's potential for exceeding the assumptions included in the AQMP or other regional growth projections relevant to the AQMP's implementation.

The Plan's potential build out includes up to 220,390 square feet of light industrial or business park mix of uses. As indicated in Tables 3-1 and 3-2, the project's construction and operational emissions are anticipated to be below the thresholds of significance established by the SCAQMD. Therefore, the approval of the Specific Plan Amendment will not violate *Consistency Criteria 1*. In terms of *Consistency Criteria 2*, the potential build-out under the Specific Plan Amendment is within the three alternative build-out

[32] South Coast Air Quality Management District, *Final 2016 Air Quality Plan*, Adopted March 2017.

[33] South Coast Air Quality Management District. *CEQA Air Quality Handbook*. 2016.

projections established for the General Plan. As a result, no impacts related to the implementation of the AQMP are anticipated.

B. Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable Federal or State ambient air quality standard? ● Less than Significant Impact.

The proposed development is conceptual in nature and the timeline for development is not yet known. Individual projects may be proposed upon approval of the Specific Plan amendment, or they may be proposed several years in the future. Therefore, construction timeline of twelve months was used. This construction timeline would include all of the development proposed within the expanded Planning Area 1. For purposes of this IS/MND's air quality analysis, future development within the expanded Planning Area 1 was assumed to be a 220,390 square foot light industrial building. The analysis of daily construction and operational emissions was prepared utilizing the California Emissions Estimator Model (CalEEMod V.2016.3.2). The Specific Plan amendment's potential construction emissions are shown in Table 3-1.

Table 3-1
Estimated Daily Construction Emissions

Construction Phase	ROG	NO_2	CO	SO_2	PM_{10}	$PM_{2.5}$

Source: CalEEMod V.2016.3.2. (the worksheet are included herein in Appendix A)

As indicated previously, the construction emissions presented in Table 3-1 assumed a twelve month construction timeline. In addition, these emissions also assumed the simultaneous development of the entire expanded Planning Area Number 1 as opposed to any incremental construction phasing.

The entire Specific Plan Area is located in a non-attainment area for ozone and particulates. All construction undertaken in the Specific Plan area will be required to adhere to all SCAQMD regulations related to fugitive dust generation and other construction-related emissions. According to SCAQMD Regulation 403, all unpaved demolition and construction areas shall be regularly watered up to three times per day during excavation, grading, and construction as required (depending on temperature, soil moisture, wind, etc.). Watering could reduce fugitive dust by as much as 55 percent. Rule 403 also requires that temporary dust covers be used on any piles of excavated or imported earth to reduce wind-blown dust. In addition, all clearing, earthmoving, or excavation activities must be discontinued during periods of high winds (i.e. greater than 15 mph), so as to prevent excessive amounts of fugitive dust. Finally, the contractors must comply with other SCAQMD regulations governing equipment idling and emissions controls. The aforementioned SCAQMD regulations are standard conditions required for every construction project undertaken in the City as well as in the Cities and Counties governed by the SCAQMD. As shown in Table 3-1, daily construction emissions are not anticipated to exceed the SCAQMD's significance thresholds.

The long-term air quality impacts associated with the proposed project include mobile emissions from vehicular traffic; on-site stationary emissions related to the operation of machinery; and off-site stationary emissions associated with the off-site generation and consumption of energy (natural gas). The analysis of long-term operational impacts summarized in Table 3-2, also used the CalEEMod computer model developed for the SCAQMD. The maximum case build-out of 220,390 square feet of light industrial uses was used to determine the Specific Plan amendment's operational emissions.

Table 3-2
Estimated Operational Emissions in lbs/day

Emission Source	ROG	NO_2	CO	SO_2	PM_{10}	$PM_{2.5}$
Area	15.04	--	0.06	--	--	--
Energy	0.05	0.52	0.43	--	0.03	0.03
Mobile	12.42	53.21	93.68	0.28	83.54	23.08
Total (lbs/day)	**27.52**	**53.73**	**94.19**	**0.28**	**83.58**	**23.12**
Daily Thresholds	**55**	**55**	**550**	**150**	**150**	**55**

Source: CalEEMod V.2016.3.2 (the worksheet are included herein in Appendix A)

As indicated in Table 3-2, the projected long-term emissions are anticipated to be below the thresholds of significance established by the SCAQMD. The operational emissions take into account the number of trips provided in the traffic report. In addition, the uses permitted under the specific plan will serve the local market. Adherence to the mitigation provided in Section 3.7.B will further reduce operational emissions. As a result, the potential impacts are considered to be less than significant.

C. Would the project expose sensitive receptors to substantial pollutant concentrations? ● Less than Significant Impact.

Sensitive populations are more susceptible to the effects of air pollution than the general population. Sensitive populations (sensitive receptors) that are in proximity to localized sources of toxics and CO are of particular concern. Land uses considered sensitive receptors include residences, schools, playgrounds, childcare centers, athletic facilities, long-term health care facilities, rehabilitation centers, convalescent centers, and retirement homes. The nearest sensitive receptors are located along the west side of Heacock Street and along the north side of Ironwood Avenue. Additional sensitive receptors are depicted in Exhibit 3-3.

Most vehicles generate carbon monoxide (CO) as part of the tail-pipe emissions and high concentrations of CO along busy roadways and congested intersections are a concern. The areas surrounding the most congested intersections are often found to contain high levels of CO that exceed applicable standards. Typically, a hot-spot may occur near an intersection that is experiencing severe congestion (a LOS E or LOS F). The SCAQMD stated in its CEQA Handbook that a CO hot-spot would not likely develop at an intersection operating at LOS C or better. Since the Handbook was written, there have been new CO emissions controls added to vehicles and reformulated fuels are now sold in the SCAB. These new automobile emissions controls, along with the reformulated fuels, have resulted in a lowering of both ambient CO concentrations and vehicle emissions. In addition, the total number of vehicle trips that would be generated by the potential new development within the expanded Planning Area 1 would potentially result in 88 morning (AM) peak hour trips and 93 evening (PM) peak hour trips. This net increase in traffic would not be great enough to result in the creation of a carbon monoxide hotspot. As a result, the impacts related to the adoption and subsequent implementation of the Plan Amendment will be less than significant.

D. Would the project create objectionable odors affecting a substantial number of people? ● No Impact.

The SCAQMD has identified those land uses that are typically associated with odor complaints. These uses include activities involving livestock, rendering facilities, food processing plants, chemical plants, composting activities, refineries, landfills, and businesses involved in fiberglass molding.[34] For purposes of analysis, this IS/MND assumes the future development within the expanded Planning Area 1 will consist of light industrial development. The future tenant is not known at this time. However, should any of the future tenants be involved in any odor generating use, the future tenant must be in compliance with all applicable SCAQMD regulations. Furthermore, no odors were observed coming from the uses located within the Planning Area based on the field survey that was undertaken. As a result, no impacts will result.

MITIGATION MEASURES

The analysis presented above indicated that the project's potential air quality impacts are considered to be less than significant. These emissions are further reduced with the implementation of the mitigation presented in Section 3.8.

[34] South Coast Air Quality Management District. *CEQA Air Quality Handbook*. April 1993.

3.4 BIOLOGICAL RESOURCES

Environmental Issue Areas Examined	Potentially Significant Impact	Less Than Significant Impact With Mitigation	Less Than Significant Impact	No Impact
A. Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?		✖		
B. Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?				✖
C. Would the project have a substantial adverse effect on State or Federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?				✖
D. Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory life corridors, or impede the use of native wildlife nursery sites?		✖		
E. Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?				✖
F. Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State habitat conservation plan?				✖

A. *Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?* ● *Less than Significant Impact with Mitigation.*

This current amendment would expand the Specific Plan Area to include a 9.98-acre property located on the southeast corner of Heacock Street and Ironwood Avenue. This added area will be referred to as the expanded *Planning Area 1*. This Planning Area 1 is currently undeveloped though it has been rough graded and disked for maintenance and fire mitigation. The Specific Plan is being amended to allow for the development of a 220,390 square foot light industrial building. Hernandez Environmental Services conducted a literature review and reviewed aerial photographs and topographic maps of the larger Specific Plan Area which included the expanded Planning Area 1. This earlier study is still valid given that conditions within Planning Area 1 relative to natural habitats, have not changed since the earlier study was completed. The Sunnymead quadrangle and adjacent surrounding eight quadrangles were reviewed to identify sensitive species in the California Natural Diversity Data Base (CNDDB). Additional resources reviewed during the literature search included the United States Fish and Wildlife (USFWS) Endangered Species Lists, Forest Service List, and the California Native Plant Society's (CNPS) Rare plant lists to obtain species

information for the project area.[35] In addition, Hernandez Environmental Services conducted field survey of the approximate 49-acre project site on July 13, 2015. The ambient temperature at 9:30 a.m. was 72˚Fahrenheit, sunny, with zero to three mile per hour winds from the northeast. The purpose of the field survey was to document the existing habitat conditions, obtain plant and animal species information, view the surrounding uses, assess the potential for state and federal waters, and assess the potential for wildlife movement corridors, sensitive species, and nesting habitat.[36] The report considered 13 species that are listed as state and/or federally threatened, endangered, or candidate species. These 13 species are also identified for special consideration under the Riverside County MSHCP. The 13 species include the following: *Southern Mountain Yellow-Legged Frog*; *Tricolored Blackbird*; *Burrowing Owl*; *Western Yellow-Billed Cuckoo*; *Southwestern Willow Flycatcher; Bald Eagle*; *Coastal California Gnatcatcher*; *Least Bell's Vireo; Santa Ana Sucker*; and, *Quino Checkerspot Butterfly*.

According to the report, none of the species identified above are likely to be encountered within the Planning Area due to the amount of disturbance that has occurred to accommodate the existing landscaping and development. Hernandez Environmental Services also conducted a Burrowing Owl Survey and prepared a report to summarize the findings. According to the Burrowing Owl Survey, there were no signs of Burrowing Owl habitation within the Planning Area.[37] Species exclusively identified in the Western Riverside MSHCP are listed below:

- *Cooper's Hawk*. Cooper's hawk is a CDFW watch list species and International Union for Conservation of Nature (IUCN) species of least concern. The species foraging habitat includes rivers, and woodlands including willows, cottonwoods, and sycamores. Nesting habitat for this species occurs at the project site in the Eucalyptus trees adjacent to the site. This species is covered by the Western Riverside MSHCP and is considered adequately conserved.

- *Bell's Sage Sparrow*. Bell's sage sparrow is a CDFW watch list species and USFWS bird of conservation concern. The species nests in coastal sage scrub and chaparral. The project site supports some disturbed coastal sage scrub that may serve as habitat. This species is potentially present, though this species is considered adequately conserved.

- *Orange-throat Whiptail*. Orange-throat whiptail is a CDFW species of special concern and IUCN species of least concern. The species inhabits low elevation coastal scrub, chamise-redshank chaparral, mixed chaparral, and valley-foothill hardwood habitat. The project site supports some disturbed coastal sage scrub that may serve as habitat. This species is potentially present. This species is covered by the Western Riverside MSHCP and is considered adequately conserved.[38]

- *Coastal Whiptail*. Coastal whiptail is a CDFW species of special concern and IUCN species of least concern. It is found in a variety of ecosystems, primarily in hot and dry open areas with sparse foliage – chaparral, woodland, and riparian areas. The project site supports habitat for this species.

[35] Hernandez Environmental Services. *General Biological Assessment Report, Moreno Valley Festival.* Report dated November 2015.

[36] Hernandez Environmental Services. *General Biological Assessment Report, Moreno Valley Festival.* Report dated November 2015.

[37] Ibid.

[38] Ibid.

This species is potentially present. This species is covered by the Western Riverside MSHCP and is considered adequately conserved.

- *Red-diamond Rattlesnake*. Red-diamond rattlesnake is a CDFW species of special concern. The species habitat includes coastal sage scrub or chaparral with granite boulders. The project site supports habitat for this species. This species is potentially present. This species is covered by the Western Riverside MSHCP and is considered adequately conserved.

- *California Horned Lark*. California horned lark is a CDFW watch list species and IUCN species of least concern. The species is found in open areas dominated by sparse low herbaceous vegetation or widely scattered low shrubs. The project site supports habitat for this species. This species is potentially present. This species is covered by the Western Riverside MSHCP and is considered adequately conserved.

- *Western Yellow Bat*. Western yellow bat is a CDFW species of special concern and IUCN species of least concern. The species occupies a range of habitats of extremely arid areas including savannas, secluded woodlands, regions dominated by pasture or croplands, and residential areas. It is insectivorous and often roosts in trees. The project site supports limited roosting habitat for this species. This species is potentially present.

- *San Diego Black-tailed Jackrabbit*. San Diego black-tailed jackrabbit is a CDFW species of special concern. The species habitat includes chaparral and coastal sage scrub. The project site supports limited habitat for this species. This species is covered by the Western Riverside MSHCP and is considered adequately conserved.

- *Coast Horned Lizard*. Coast horned lizard is a CDFW species of special concern and IUCN species of least concern. The species inhabits open areas of sandy soils and low vegetation in valleys, foothills, and semiarid mountains. It is found in grasslands, coniferous forests, woodlands, and chaparral, with open areas and patches of loose soil. The project site supports limited habitat for this species. This species is potentially present. This species is covered by the Western Riverside MSHCP and is considered adequately conserved.

- *Lawrence's Goldfinch*. Lawrence's goldfinch is an IUCN species of least concern. The species inhabits open woodlands, chaparral, and weedy fields. The project site supports limited habitat for this species in the basin located adjacent to the eastern project boundary. This species is potentially present.[39]

The implementation of the Specific Plan Amendment for the expanded Planning Area 1 and all subsequent development may have the potential to impact the aforementioned Western Riverside MSHCP species. As a result, the following mitigation is required:

- The proposed project must be consistent with the Western Riverside MSHCP. Payment of the appropriate development mitigation fees will mitigate any impacts to these species.

[39] Hernandez Environmental Services. *General Biological Assessment Report, Moreno Valley Festival.* Report dated November 2015.

- Prior to any land disturbance, a focused pre-construction burrowing owl survey shall be conducted prior to construction in accordance with the Burrowing Owl Survey instructions of the Western Riverside County MSHCP. This survey is to be conducted within 30 days prior to ground disturbance. After the pre-construction burrowing owl survey has been completed, a survey report will be prepared in accordance with the MSHCP 30-day Pre-construction Burrowing Owl Survey Report Format.

Adherence to the above-mentioned mitigation will reduce potential impacts to levels that are less than significant.

B. Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service? ● No Impact.

The property is relatively flat with the exception of an incised gully (previously Bale Creek) that traverses the property from northwest to southeast. The majority of the property is earthen with the exception of a gravel and concrete parking area on the western border and a large storage tank in the southwest corner. The entire property has been previously disturbed and graded. There are a few scattered native trees in the northwest portion of the gully, but the reminder of the property supports non-native vegetation common in previously disturbed habitat surrounded by development. The property is bordered by Ironwood Avenue and developed areas to the north, disturbed habitat to the east and south, and Heacock Street and developed areas to the west. Prior to development the property likely supported an ephemeral channel that drained from northwest to southeast. This is evident from a blue line shown on the United States Geological Survey map of the area and remnants of a channel on site. However, storm drain re-alignment including undergrounding of sewer stormwater Line H in 2009 directed all flow that previously crossed the property into a storm drain that is underground, and north of the property.[40] The underground storm drains collects water from surrounding storm drains and directs it into the Indian Detention Basin that occurs approximately 600 feet to the east.[41]

There are no jurisdictional wetlands or waters features on the property. There are no channel features, or other wetland and water features that hold water on the property. The property was surveyed approximately 3 days after a significant rain event and any surface flow would have been evident. Given the majority of the property has been graded and is generally flat with small tractor tracks rainfall appears to soak into the surface. The property has no channels or storm drains leading onto the property. The property consists of a very small watershed limited to only the water that falls on site. There is not enough surface flow on the property to support even an ephemeral channel. The main gully likely previously supported flow from a storm drain to the northwest. The storm drain has been re-directed and the gully no longer supports a drainage feature.[42] Although there are individual native trees near the western end of the gully (cottonwood and willow) they are not part of a larger riparian system, do not by themselves constitute a wetland community, and are not supported by a wetland community. Rather they are remnants from the channel

[40] Borcher Environmental Management. *Results of the Jurisdictional Wetlands and Waters Assessment for the Heacock/Ironwood Project in Moreno Valley, California*. Letter dated December 27, 2016.

[41] Please refer to Clean Water Act Section 401 Water Quality Certification from the City of Moreno Valley (SARWQCB Project No. 332009-18) for the Ironwood Avenue and Indian Detention Basin Project for more details regarding the storm drain and Indian Detention Basin.

[42] Borcher Environmental Management. *Results of the Jurisdictional Wetlands and Waters Assessment for the Heacock/Ironwood Project in Moreno Valley, California*. Letter dated December 27, 2016.

that likely existed prior to the underground storm drain re-alignment. The new normal condition does not support directed flow or wetland vegetation communities. As a result, no impacts will result.

C. *Would the project have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means? ● No Impact.*

According to wetland delineation survey that was completed for the expanded Planning Area 1, there are no jurisdictional wetlands or waters features on the property. Furthermore, there are no channel features, or other wetland and water features that hold water on the property.[43] The property was surveyed approximately three days after a significant rainstorm and any surface flow would have been evident. Given the majority of the property has been graded and is generally flat with small tractor tracks rainfall appears to percolate into the surface. The property has no channels or storm drains leading onto the property. The property consists of a very small watershed limited to only the water that falls on site. There is not enough surface flow on the property to support even an ephemeral channel. The main gully likely previously supported flow from a storm drain to the northwest. The storm drain has been re-directed and the gully no longer supports a drainage feature. This is evident by the lack of ordinary high water marks (OHWM), bed and bank, and the absence of a non-soil component at the bottom of the gully. Meaning the soils in the bottom of the gully are the similar to those on the surface above rather than sand or other sediments found in creek bottoms.

Soils on the property have been disturbed by past grading and earthwork. The soils are mapped by the United States Department of Agriculture as sandy loams, and are generally well drained. The disturbance to the soils also has created many pockets and pores for rainfall to soak into the surface rather than run off into a channel. There are two outfall structures east of the property that transports water flow in the area from the underground storm drain into the Indian Detention Basin. Although there are individual native trees near the western end of the gully (cottonwood and willow) they are not part of a larger riparian system, do not by themselves constitute a wetland community, and are not supported by a wetland community. Rather they are remnants from the channel that likely existed prior to the underground storm drain re-alignment. The new normal condition does not support directed flow or wetland vegetation communities. As a result, the proposed project's implementation will not result in any impacts on this issue.

D. *Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory life corridors, or impede the use of native wildlife nursery sites? ● Less than Significant Impact with Mitigation*

According to the General Biological Assessment report, the Planning Area contains vegetation that is suitable for nesting and migrating birds. For future projects located within the Specific Plan area, the following mitigation measures will apply:

- Vegetation removal shall be conducted outside of the nesting season for migratory birds to avoid direct impacts. The migratory bird nesting season is between February 1 and September 15.

[43] Borcher Environmental Management. *Results of the Jurisdictional Wetlands and Waters Assessment for the Heacock/Ironwood Project in Moreno Valley, California.* Letter dated December 27, 2016.

- If active nests are found during nesting bird surveys, they shall be flagged and a 200-foot buffer shall be fenced around the nests.

- If vegetation removal will occur during the migratory bird nesting season, between February 1 and September 15, pre-construction nesting bird surveys must be performed within three days prior to vegetation removal.

Adherence to the mitigation measures identified above will reduce potential impacts to levels that are less than significant.

E. Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance? ● No Impact.

Chapter 9.17, Street Trees, of the City's Municipal Code governs the planting of trees within certain major arterials. According to the Code, street trees are installed a minimum of one foot, and a maximum of two feet, on the private side of the property line (single-family residential lots) or in the public right-of-way for all other projects. Should any trees be planted within the public right-of-way, future Applicants must consult with the City to determine the appropriate species of tree that will be planted. In addition, the Moreno Valley Festival Specific Plan also includes a focus on landscaping and tree planting with the new developments. The project site is not located within a Western Riverside County MSHCP Criteria Area. As such, the proposed Project is not required to set aside conservation lands pursuant to the Western Riverside County MSHCP, and the proposed project is not subject to the MSHCP's Habitat Evaluation and Acquisition Negotiation Strategy (HANS) process, or Joint Project Review (JPR). As a result, the adoption and subsequent implementation of the Moreno Valley Festival Specific Plan will not result in any impacts.

F. Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan? ● No Impact.

The entire City is located within the Western Riverside MSHCP. However, the Planning Area is not located within a criteria cell of the MSHCP. The City of Moreno Valley Municipal Code contains provisions for the protection of the Stephens' Kangaroo Rat pursuant to the Stephens' Kangaroo Rat HCP (refer to Title 8, Chapter 8.60 of the Municipal Code). The project site is not located within an identified reserve area for the Stephens' Kangaroo Rat and the species has a low to moderate potential to occur on the project site. In addition, the species was not observed during biological surveys of the project site or the off-site improvement area. Accordingly, the project is exempt from the focused survey requirements for the Stephens' Kangaroo Rat established by the City's Municipal Code. The project Applicant is required to contribute a local development impact and mitigation fee, which requires a fee payment to assist the City in implementing the habitat conservation plan for the Stephens' Kangaroo Rat.

The project Applicant is required to contribute a local mitigation fee to assist the Western Riverside County – Regional Conservation Authority in implementing the Western Riverside County MSHCP reserve system (including the acquisition, management, and long-term maintenance of sensitive habitat areas). With mandatory compliance with standard regulatory requirements (i.e., mitigation fee payment), the proposed Project would not conflict with any City policies or ordinances related to the mitigation fee program associated with Western Riverside County MSHCP.

MITIGATION MEASURES

The analysis indicated that the proposed project may result in impacts to protected species and habitat. As a result, the following mitigation is required:

Mitigation Measure No. 1 (Biological Resources Impacts). The proposed project must be consistent with the Western Riverside MSHCP. Payment of the appropriate development mitigation fees will mitigate any impacts to these species.

Mitigation Measure No. 2 (Biological Resources Impacts). Prior to any land disturbance, a focused pre-construction burrowing owl survey shall be conducted prior to construction in accordance with the Burrowing Owl Survey instructions of the Western Riverside County MSHCP. This survey is to be conducted within 30 days prior to ground disturbance. After the pre-construction burrowing owl survey has been completed, a survey report will be prepared in accordance with the MSHCP 30-day Pre-construction Burrowing Owl Survey Report Format.

Mitigation Measure No. 3 (Biological Resources Impacts). Future developers must consult with the California Department of Fish and Wildlife, the U.S. Army Corps of Engineers, and the Santa Ana Regional Water Quality Control Board to determine the need for permits that must be obtained prior to initiation of construction of a proposed project.

Mitigation Measure No. 4 (Biological Resources Impacts). Prior to the start of construction activity, developers must prepare a Multiple Species Habitat Conservation Program (MSHCP) Determination of Biologically Equivalent or Superior Preservation (DBESP) should a future project affect Western Riverside MSHCP riverine resources.

Mitigation Measure No. 5 (Biological Resources Impacts). Vegetation removal shall be conducted outside of the nesting season for migratory birds to avoid direct impacts. The migratory bird nesting season is between February 1 and September 15.

Mitigation Measure No. 6 (Biological Resources Impacts). If active nests are found during nesting bird surveys, they shall be flagged and a 200-foot buffer shall be fenced around the nests.

Mitigation Measure No. 7 (Biological Resources Impacts). If vegetation removal will occur during the migratory bird nesting season, between February 1 and September 15, pre-construction nesting bird surveys must be performed within three days prior to vegetation removal.

3.5 CULTURAL RESOURCES

Environmental Issue Areas Examined	Potentially Significant Impact	Less Than Significant Impact With Mitigation	Less Than Significant Impact	No Impact
A. Would the project cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5 of the CEQA Guidelines?				✖
B. Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5 of the CEQA Guidelines?		✖		
C. *Would the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?*		✖		

ANALYSIS OF ENVIRONMENTAL IMPACTS

A. Would the project cause a substantial adverse change in the significance of a historical resource as defined in §15064.5 of the State CEQA Guidelines? ● No Impact.

This current amendment would expand the Specific Plan Area to include a 9.98-acre property located on the southeast corner of Heacock Street and Ironwood Avenue. This added area will be referred to as the expanded *Planning Area 1*. This Planning Area 1 is currently undeveloped though it has been rough graded and disked for maintenance and fire mitigation. The Specific Plan is being amended to allow for the development of a 220,390 square foot light industrial building. Historic structures and sites are generally defined by local, State, and Federal criteria. A site or structure may be historically significant if it is protected through a local general plan or historic preservation ordinance. The U.S. Department of the Interior has established specific guidelines and criteria that indicate the manner in which a site, structure, or district is to be identified as having historic significance through a determination of eligibility for listing on the National Register of Historic Places. Significance may be determined if the property is associated with events, activities, or developments that were important in the past, with the lives of people who were important in the past, or represents significant architectural, landscape, or engineering elements. The adoption and subsequent implementation of the Moreno Valley Festival Specific Plan Amendment Number 2 will not involve any removal of historically buildings.

Exhibit 3-4 shows locally designated resources. None of the buildings that are located within the Planning Area, including the existing above ground water reservoir tanks located in the southernmost portion of the expanded Planning Area 1, are included on any list of historic resources compiled by the United States Department of the Interior, National Park Service.[44] In addition, the project area is not present on the list of historic resources identified by the State Office of Historic Preservation (SHPO).[45] This existing reservoir tank is not unique nor is it historically significant. In addition, the tank and its ancillary facilities are in a state of disrepair. As a result, no impacts will occur as part of the property's redevelopment.

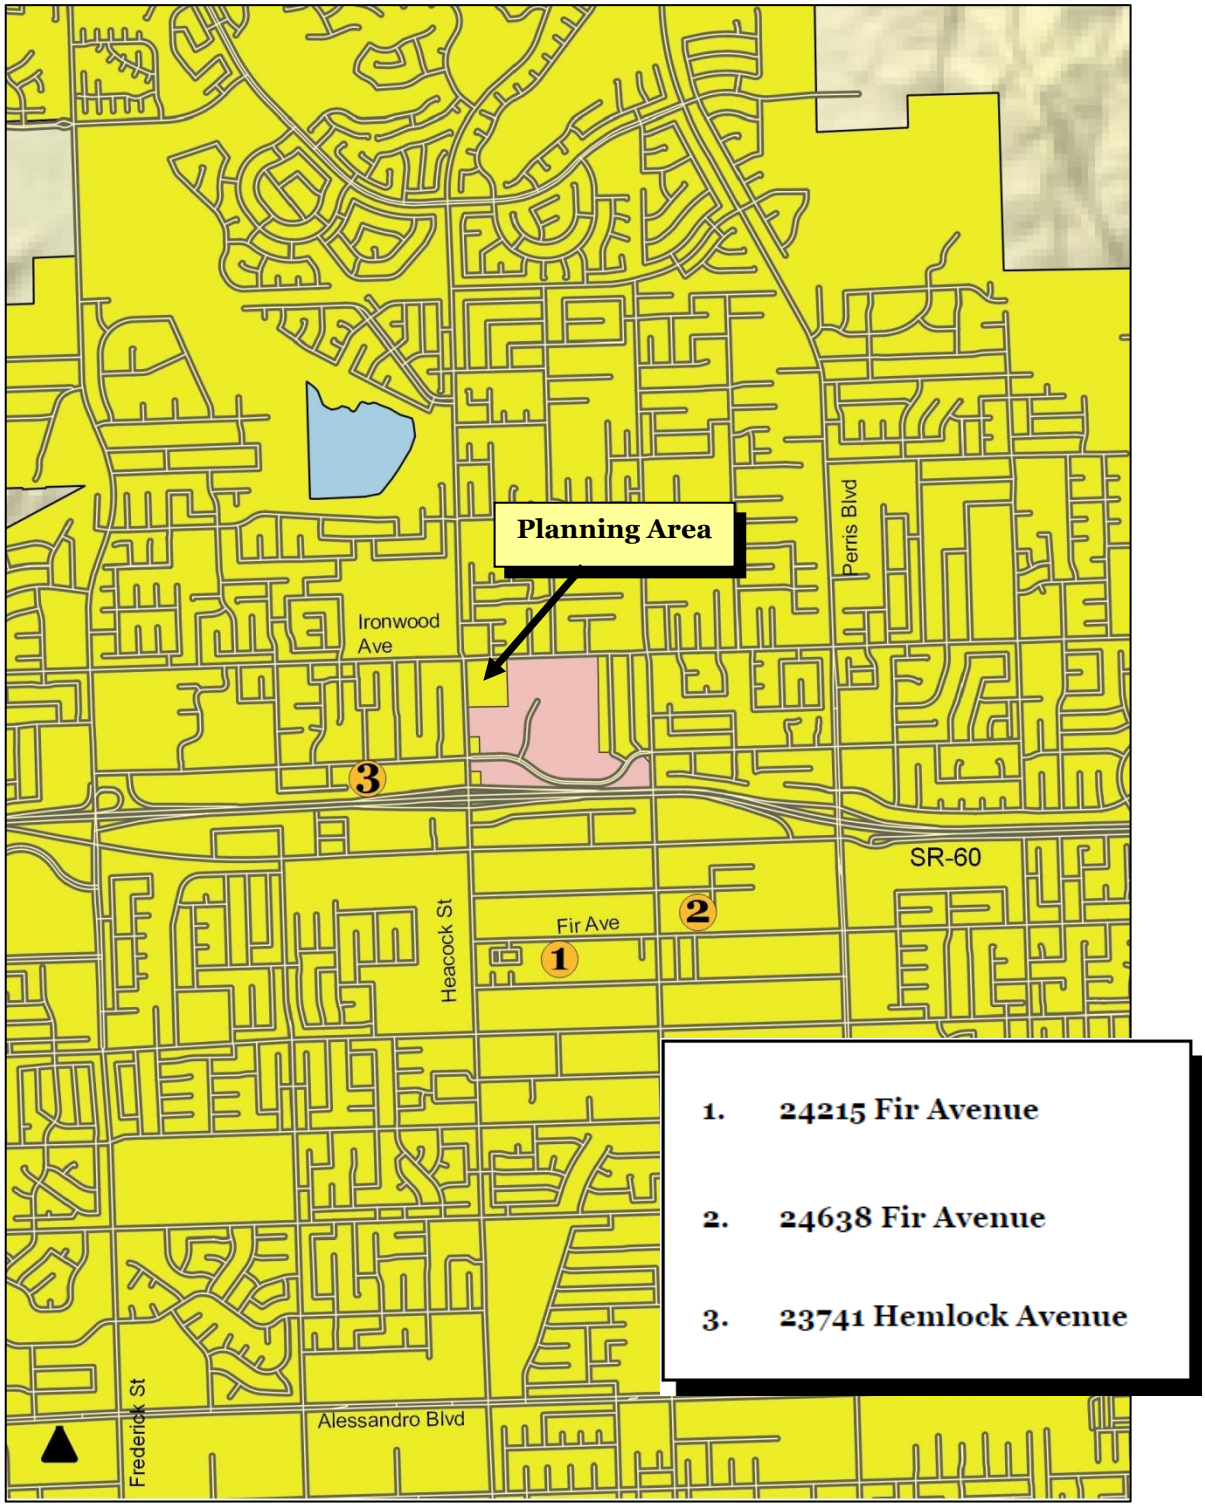

EXHIBIT 3-4
LOCALLY DESIGNATED HISTORICAL RESOURCES
Source: Moreno Valley General Plan

B. Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5 of the State CEQA Guidelines? ● Less than Significant Impact with Mitigation.

Ancestors of the Luiseno and Cahuilla Indian tribes were the first inhabitants of Moreno Valley. The Late Prehistoric Luiseño and Cahuilla peoples who occupied the region were generally believed to be semi-sedentary, meaning that they wintered in villages, then spread out in family groups during the spring and summer months to harvest seeds and acorns. Thus, smaller occupational locations tend to be associated with areas where plentiful milling stations are found. Milling stations are indicated by the presence of bedrock mortars and slicks. Rock art is also found within several complexes. This consists of "pictographs" or painted images and "petroglyphs" or rock engravings.

AB-52 consultation was completed in 2018 and formal requests for consultation were sent to seven tribal bands identified by the Native American Heritage Commission. Responses were received by the City from five tribes. The Pechanga Tribal Band requested a conference call, and mitigation measures were discussed. The same mitigation requested for Amendment Number 1 were also incorporated herein for Amendment Number 2. The Pechanga Tribal Band and Soboba Tribal Band also concurred with the following mitigation measures would continue to be applicable to the potential Amendment Number 2 development:

- Prior to the issuance of a grading permit, the developer shall retain a professional archaeologist to conduct monitoring of all mass grading and trenching activities. The project archaeologist must have the authority to temporarily redirect earthmoving activities in the event that suspected archaeological resources are unearthed during project construction. The project archaeologist, in consultation with the Consulting Tribe(s), the contractor, and the City, must develop a Cultural Resources Management Plan (CRMP) in consultation pursuant to the definition in AB-52 to address the details, timing, and responsibility of all archaeological and cultural activities that will occur on the project site. A consulting tribe is defined as a tribe that initiated the AB-52 tribal consultation process for the project, has not opted out of the AB-52 consultation process, and has completed AB-52 consultation with the City as provided for in Cal Pub Res Code Section 21080.3.2(b)(1) of AB52. Details in the Plan shall include:

    - Project grading and development scheduling;

    - The project archeologist and the Consulting Tribes(s) as defined in this mitigation must attend the pre-grading meeting with the City, the construction manager and any contractors and will conduct a mandatory Cultural Resources Worker Sensitivity Training to those in attendance. The training will include a brief review of the cultural sensitivity of the project and the surrounding area; what resources could potentially be identified during earthmoving activities; the requirements of the monitoring program; the protocols that apply in the event inadvertent discoveries of cultural resources are identified, including who to contact and appropriate avoidance measures until the find(s) can be properly evaluated; and any other appropriate protocols. All new construction personnel that will conduct earthwork or grading activities that begin work on the Project following the initial training must take the Cultural Sensitivity Training prior to beginning work and the project archaeologist and Consulting Tribe(s) shall make themselves available to provide the training on an as-needed basis;

- The protocols and stipulations that the contractor, City, Consulting Tribe(s) and project archaeologist will follow in the event of inadvertent cultural resources discoveries, including any newly discovered cultural resource deposits that shall be subject to a cultural resources evaluation.

- Prior to the issuance of a grading permit, the developer shall secure agreements with the Pechanga Band of Luiseño Indians, the Soboba Band of Luiseño Indians, and the Morongo Band of Mission Indians for tribal monitoring. The developer is also required to provide a minimum of 30 days advance notice to the tribes of all mass grading and trenching activities. The Native American Tribal Representatives shall have the authority to temporarily halt and redirect earth moving activities in the affected area in the event that suspected archaeological resources are unearthed. If the Native American Tribal Representatives suspect that an archaeological resource may have been unearthed, the project archaeologist or the Tribal Representatives shall immediately redirect grading operations in a 100-foot radius around the find to allow identification and evaluation of the suspected resource. In consultation with the Native American Tribal Representatives, the project archaeologist shall evaluate the suspected resource and make a determination of significance pursuant to California Public Resources Code Section 21083.2.

- In the event that Native American cultural resources are discovered during the course of grading (inadvertent discoveries), the following procedures shall be carried out for final disposition of the discoveries:

  - One or more of the following treatments, in order of preference, shall be employed with the tribes. Evidence of such shall be provided to the City of Moreno Valley Planning Department:

    i. Preservation-in-place of the cultural resources, if feasible. Preservation in place means avoiding the resources, leaving them in the place they were found with no development affecting the integrity of the resources.

    ii. Onsite reburial of the discovered items as detailed in the treatment plan required pursuant to the initial mitigation. This shall include measures and provisions to protect the future reburial area from any future impacts in perpetuity. Reburial shall not occur until all legally required cataloging and basic recordation have been completed. No recordation of sacred items is permitted without the written consent of all Consulting Native American Tribal Governments as defined in the first mitigation identified in Section 3.5.2.B.

  - The City shall verify that the following note is included on the Grading Plan: "If any suspected archaeological resources are discovered during ground-disturbing activities and the project archaeologist or Native American Tribal Representatives are not present, the construction supervisor is obligated to halt work in a 100-foot radius around the find and call the project archaeologist and the Tribal Representatives to the site to assess the significance of the find."

- If potential historic or cultural resources are uncovered during excavation or construction activities at the project site, work in the affected area must cease immediately and a qualified person meeting the Secretary of the Interior's standards (36 CFR 61), Tribal Representatives, and all site monitors per the Mitigation Measures, shall be consulted by the City to evaluate the find, and as appropriate recommend alternative measures to avoid, minimize or mitigate negative effects on the historic, or

prehistoric resource. Determinations and recommendations by the consultant shall be immediately submitted to the Planning Division for consideration, and implemented as deemed appropriate by the Community Development Director, in consultation with the State Historic Preservation Officer (SHPO) and any and all Consulting Native American Tribes as defined in previously identified mitigation before any further work commences in the affected area.

- If human remains are discovered, no further disturbance shall occur in the affected area until the County Coroner has made necessary findings as to origin. If the County Coroner determines that the remains are potentially Native American, the California Native American Heritage Commission shall be notified within five-days of the published finding to be given a reasonable opportunity to identify the "most likely descendant". The "most likely descendant" shall then make recommendations, and engage in consultations concerning the treatment of the remains (California Public Resources Code 5097.98). (GP Objective 23.3, CEQA).

Adherence to the aforementioned mitigation will reduce potential impacts to levels that are less than significant.

C. Would the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature? ● Less than Significant Impact with Mitigation.

The Moreno Valley area contains sedimentary rock-units with potential to contain significant nonrenewable paleontological (fossil) resources. These sedimentary units are referred to as the Mt. Eden Formation and the San Timoteo Formation. The Mt. Eden Formation is described as being primarily reddish sandstone and dark green and brown clay with local reddish agglomerate and conglomerate. The age of the fossils contained in the Formation and the dark reddish brown coloration distinguish the Mt. Eden Formation from the younger, green to gray, tan, and red weathering of the San Timoteo Formation. Fossilized fauna include cricetine rodent, horse, and proboscidean (extinct animals related to elephants). The San Timoteo Formation sediments consist of claytons, siltstones, shales, sandstones, gravels, and fanglomerates. Paleontological sites are abundant within the San Timoteo Formation, with vertebrate faunas (animals) and floras (plants) reported. These sites contain a variety of fossilized fauna including horse, peccary, antelope, camel, deer, mastodon, sloth, tortoise, sabertooth cat, bear, and rabbit. The Mt. Eden Formation and the San Timoteo Formation are known to be highly fossiliferous, and have produced abundant and diverse floral and faunal remains ranging in age from as old as 5 million years to 1.3 million years or less.[46] As a result, the following mitigation is required:

- If previously unidentified paleontological resources are unearthed during construction, work shall cease within 50 feet of the find and the project Applicant must retain a qualified paleontologist, approved by the City, to assess the significance of the find. If a find is determined to be significant, the Lead Agency and the paleontologist will determine appropriate avoidance measures or other appropriate mitigation. All significant fossil materials recovered will be, as necessary and at the discretion of the qualified paleontologist, subject to scientific analysis, professional museum curation, and documentation according to current professional standards.

[46] P and D Consultants. *Final Environmental Impact Report - City of Moreno Valley General Plan SCH# 200091075*. Report dated July 2006.

Adherence to the above-mentioned mitigation will reduce potential impacts to levels that are less than significant.

D. Would the project disturb any human remains, including those interred outside of dedicated cemeteries? ● Less than Significant Impact.

There are no cemeteries located near the Planning Area. The nearest cemetery to the Planning Area is Riverside National Cemetery, located more than four miles to the southwest.[47] In the unlikely event that a human burial is encountered, all construction activities shall be halted and Moreno Valley Police Department will be contacted (the department will then contact the County Coroner). In the event of an accidental discovery, Title 14; Chapter 3; Article 5; Section 15064.5 of CEQA will apply in terms of the identification of significant archaeological resources and their salvage. As a result, the potential impacts are considered to be less than significant.

MITIGATION MEASURES

The following mitigation will be effective in minimizing potential impacts to possible cultural resources:

Mitigation Measure No. 8 (Cultural Resources Impacts). Prior to the issuance of a grading permit, the developer shall retain a professional archaeologist to conduct monitoring of all mass grading and trenching activities. The project archaeologist must have the authority to temporarily redirect earthmoving activities in the event that suspected archaeological resources are unearthed during project construction. The project archaeologist, in consultation with the Consulting Tribe(s), the contractor, and the City, must develop a Cultural Resources Management Plan (CRMP) in consultation pursuant to the definition in AB-52 to address the details, timing, and responsibility of all archaeological and cultural activities that will occur on the project site. A consulting tribe is defined as a tribe that initiated the AB-52 tribal consultation process for the project, has not opted out of the AB-52 consultation process, and has completed AB-52 consultation with the City as provided for in Cal Pub Res Code Section 21080.3.2(b)(1) of AB-52. Details in the Plan shall include:

- Project grading and development scheduling;

- The project archeologist and the Consulting Tribes(s) as defined in this mitigation must attend the pre-grading meeting with the City, the construction manager and any contractors and will conduct a mandatory Cultural Resources Worker Sensitivity Training to those in attendance. The training will include a brief review of the cultural sensitivity of the project and the surrounding area; what resources could potentially be identified during earthmoving activities; the requirements of the monitoring program; the protocols that apply in the event inadvertent discoveries of cultural resources are identified, including who to contact and appropriate avoidance measures until the find(s) can be properly evaluated; and any other appropriate protocols. All new construction personnel that will conduct earthwork or grading activities that begin work on the Project following the initial training must take the Cultural Sensitivity Training prior to beginning work and the project archaeologist and Consulting Tribe(s) shall make themselves available to provide the training on an as-needed basis;

[47] Google Earth. Site accessed August 21, 2017.

- The protocols and stipulations that the contractor, City, Consulting Tribe(s) and project archaeologist will follow in the event of inadvertent cultural resources discoveries, including any newly discovered cultural resource deposits that shall be subject to a cultural resources evaluation.

Mitigation Measure No. 9 (Cultural Resources Impacts). Prior to the issuance of a grading permit, the developer shall secure agreements with the Pechanga Band of Luiseño Indians, the Soboba Band of Luiseño Indians, and the Morongo Band of Mission Indians for tribal monitoring. The developer is also required to provide a minimum of 30 days advance notice to the tribes of all mass grading and trenching activities. The Native American Tribal Representatives shall have the authority to temporarily halt and redirect earth moving activities in the affected area in the event that suspected archaeological resources are unearthed. If the Native American Tribal Representatives suspect that an archaeological resource may have been unearthed, the project archaeologist or the Tribal Representatives shall immediately redirect grading operations in a 100-foot radius around the find to allow identification and evaluation of the suspected resource. In consultation with the Native American Tribal Representatives, the project archaeologist shall evaluate the suspected resource and make a determination of significance pursuant to California Public Resources Code Section 21083.2.

Mitigation Measure No. 10 (Cultural Resources Impacts). In the event that Native American cultural resources are discovered during the course of grading (inadvertent discoveries), the following procedures shall be carried out for final disposition of the discoveries:

- One or more of the following treatments, in order of preference, shall be employed with the tribes. Evidence of such shall be provided to the City of Moreno Valley Planning Department:

    i. Preservation-in-place of the cultural resources, if feasible. Preservation in place means avoiding the resources, leaving them in the place they were found with no development affecting the integrity of the resources.

    ii. Onsite reburial of the discovered items as detailed in the treatment plan required pursuant to the initial mitigation. This shall include measures and provisions to protect the future reburial area from any future impacts in perpetuity. Reburial shall not occur until all legally required cataloging and basic recordation have been completed. No recordation of sacred items is permitted without the written consent of all Consulting Native American Tribal Governments as defined in the first mitigation identified in Section 3.5.2.B.

- The City shall verify that the following note is included on the Grading Plan: "If any suspected archaeological resources are discovered during ground-disturbing activities and the project archaeologist or Native American Tribal Representatives are not present, the construction supervisor is obligated to halt work in a 100-foot radius around the find and call the project archaeologist and the Tribal Representatives to the site to assess the significance of the find."

Mitigation Measure No. 11 (Cultural Resources Impacts). If potential historic or cultural resources are uncovered during excavation or construction activities at the project site, work in the affected area must cease immediately and a qualified person meeting the Secretary of the Interior's standards (36 CFR 61), Tribal Representatives, and all site monitors per the Mitigation Measures, shall be consulted by the City to evaluate the find, and as appropriate recommend alternative measures to avoid, minimize or mitigate

negative effects on the historic, or prehistoric resource. Determinations and recommendations by the consultant shall be immediately submitted to the Planning Division for consideration, and implemented as deemed appropriate by the Community Development Director, in consultation with the State Historic Preservation Officer (SHPO) and any and all Consulting Native American Tribes as defined in previously identified mitigation before any further work commences in the affected area.

Mitigation Measure No. 12 (Cultural Resources Impacts). If human remains are discovered, no further disturbance shall occur in the affected area until the County Coroner has made necessary findings as to origin. If the County Coroner determines that the remains are potentially Native American, the California Native American Heritage Commission shall be notified within five-days of the published finding to be given a reasonable opportunity to identify the "most likely descendant". The "most likely descendant" shall then make recommendations, and engage in consultations concerning the treatment of the remains (California Public Resources Code 5097.98). (GP Objective 23.3, CEQA).

Mitigation Measure No. 13 (Cultural Resources Impacts). If previously unidentified paleontological resources are unearthed during construction, work shall cease within 50 feet of the find and the project Applicant must retain a qualified paleontologist, approved by the City, to assess the significance of the find. If a find is determined to be significant, the Lead Agency and the paleontologist will determine appropriate avoidance measures or other appropriate mitigation. All significant fossil materials recovered will be, as necessary and at the discretion of the qualified paleontologist, subject to scientific analysis, professional museum curation, and documentation according to current professional standards.

3.6 ENERGY

Environmental Issue Areas Examined	Potentially Significant Impact	Less Than Significant Impact With Mitigation	Less Than Significant Impact	No Impact
A. Would the project result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources during project construction or operation?			✖	
B. Would the project conflict with or obstruct a State or local plan for renewable energy or energy efficiency?			✖	

ANALYSIS OF ENVIRONMENTAL IMPACTS

A. *Would the project result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources during project construction or operation? ● Less than Significant Impact.*

This current amendment would expand the Specific Plan Area to include a 9.98-acre property located on the southeast corner of Heacock Street and Ironwood Avenue. This added area will be referred to as the expanded *Planning Area 1*. This Planning Area 1 is currently undeveloped though it has been rough graded and disked for maintenance and fire mitigation. The Specific Plan is being amended to allow for the development of a 220,390 square foot light industrial building. The proposed project is projected to consume 3,035 kWh of electricity and 2,935 cubic feet of natural gas on a daily basis. The project Applicant will be required to closely work with the local electrical utility company to identify existing and future strategies that will be effective in reducing energy consumption. As a result, the impact will be less than significant.

B. *Would the project conflict with or obstruct a state or local plan for renewable energy or energy efficiency? ● Less Than Significant Impact.*

On January 12, 2010, the State Building Standards Commission adopted updates to the California Green Building Standards Code (Code) which became effective on January 1, 2011. The California Code of Regulations (CCR) Title 24, Part 11: California Green Building Standards (Title 24) became effective to aid efforts to reduce GHG emissions associated with energy consumption. Title 24 now requires that new buildings reduce water consumption, employ building commissioning to increase building system efficiencies, divert construction waste from landfills, and install low pollutant-emitting finish materials. The proposed project will be required to conform to all pertinent energy conservation requirements. As a result, the potential impacts will be less than significant.

MITIGATION MEASURES

The analysis determined that the proposed project will not result in significant impacts related to energy and mitigation measures are not required.

3.7 GEOLOGY & SOILS

Environmental Issue Areas Examined	Potentially Significant Impact	Less Than Significant Impact With Mitigation	Less Than Significant Impact	No Impact
A. Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault; strong seismic ground shaking; seismic-related ground failure, including liquefaction; or, landslides?			✖	
B. Would the project result in substantial soil erosion or the loss of topsoil?			✖	
C. Would the project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?			✖	
D. Would the project be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (2012), creating substantial direct or indirect risks to life or property?			✖	
E. Would the project have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?				✖

ANALYSIS OF ENVIRONMENTAL IMPACTS

A. *Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault; strong seismic ground shaking; seismic-related ground failure, including liquefaction; or, landslides? ● Less than Significant Impact.*

This current amendment would expand the Specific Plan Area to include a 9.98-acre property located on the southeast corner of Heacock Street and Ironwood Avenue. This added area will be referred to as the expanded *Planning Area 1*. This Planning Area 1 is currently undeveloped though it has been rough graded and disked for maintenance and fire mitigation. The Specific Plan is being amended to allow for the development of a 220,390 square foot light industrial building. The City of Moreno Valley is located in a seismically active region. Earthquakes from several active and potentially active faults in the Southern California region could affect the Planning Area. In 1972, the Alquist-Priolo Earthquake Zoning Act was passed in response to the damage sustained in the 1971 San Fernando Earthquake.[48] The Alquist-Priolo Earthquake Fault Zoning Act's main purpose is to prevent the construction of buildings used for human occupancy on the surface trace of active faults.[49] The City of Moreno Valley is located within an Alquist-

[48] California Department of Conservation. *What is the Alquist-Priolo Act* http://www.conservation.ca.gov /cgs/rghm/ap/ Pages/main.aspx

[49] Ibid.

Priolo Special Studies Zone.[50] The nearest Alquist-Priolo fault is the Claremont Fault located five miles to the east.[51] This fault trace is part of the larger San Jacinto Fault Zone.[52] This fault trace is shown in Exhibit 3-5. The potential impacts in regards to ground shaking and fault rupture are less than significant since the risk is no greater in and around the Planning Area than for the rest of the City.

In addition, conformance with the most recent 2016 Building Code standards will ensure all future development can properly withstand ground shaking and fault rupture. As illustrated in Figure 4-1.1 of the Moreno Valley Hazard Mitigation, the Planning Area is not susceptible to liquefaction.[53] According to the United States Geological Survey, liquefaction is the process by which water-saturated sediment temporarily loses strength and acts as a fluid. Essentially, liquefaction is the process by which the ground soil loses strength due to an increase in water pressure following seismic activity. Lastly, the Planning Area is not at risk for landslides and is at no greater risk for ground shaking and fault rupture than the rest of the City. Therefore, the impacts are expected to be less than significant.

B. Would the project expose people or structures to potential substantial adverse effects, including substantial soil erosion or the loss of topsoil? ● Less than Significant Impact.

A review of the United States Department of Agriculture Web Soil Survey was conducted to determine the type of soils that underlie the Planning Area. According to the results of the Web Soil Survey, the Planning Area contains the following soils associations: Greenfield Sandy Loam; Hanford Coarse Sandy Loam; Monserate Sandy Loam; Ramona Sandy Loam; and Tujunga Loamy Sand. The varying soils within the planning area are shown in Exhibit 3-6.

All of the aforementioned soils possess some level of an erosion risk, ranging from slight to moderate. However, construction activities and the placement of "permanent vegetative cover" will reduce the soil's erosion risk.[54] Deep rooting plants will secure loose topsoil as will the pavement of barren earth. In addition, prior to the approval of all project-specific development proposals, detailed geotechnical investigation, and analysis will be prepared and submitted to the City for review. The results of those studies will be incorporated into the detailed plans for each project. As a result, the potential impacts are considered to be less than significant.

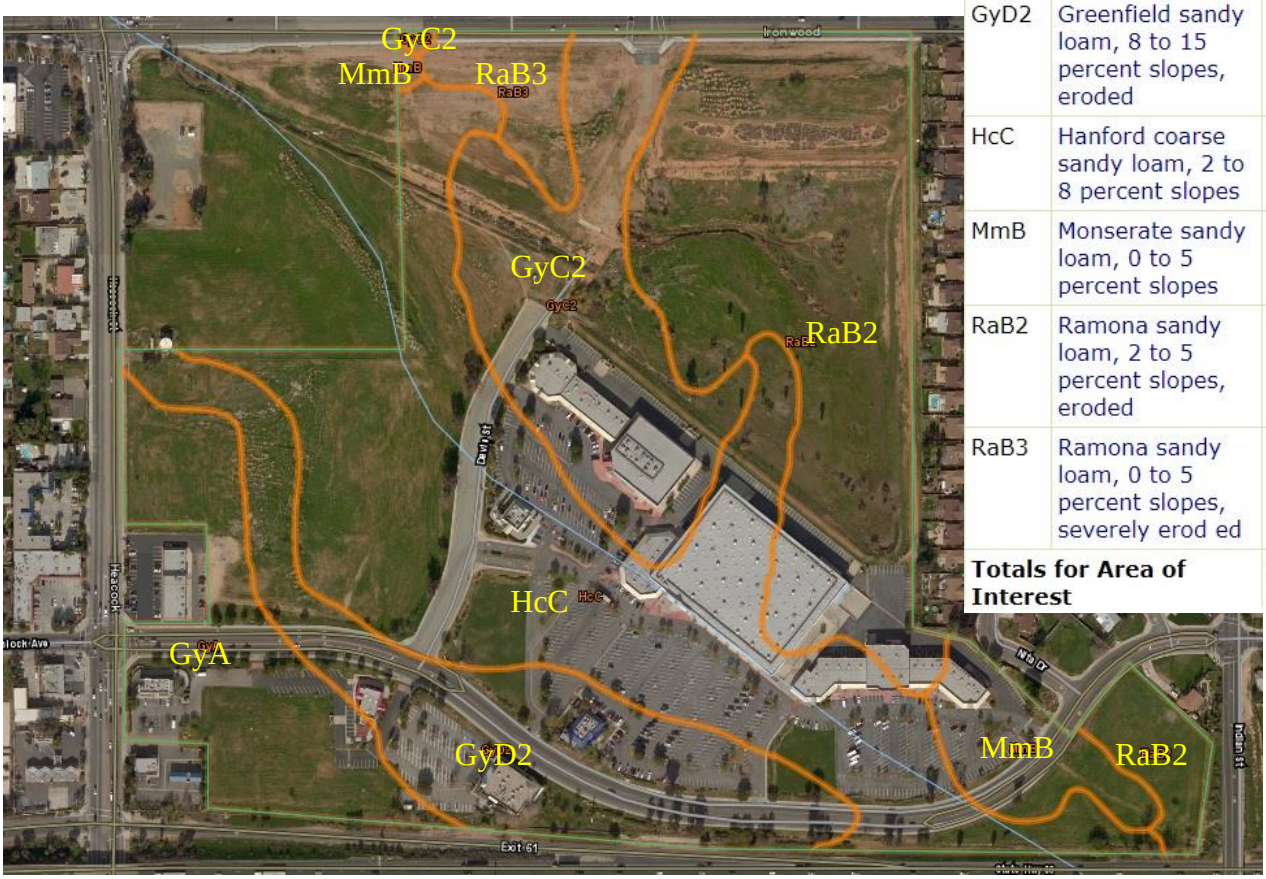

EXHIBIT 3-6
SOILS WITHIN THE PLANNING AREA
Source: Web Soil Survey

C. Would the project expose people or structures to potential substantial adverse effects, including location on a geologic unit or a soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse? ● Less than Significant Impact.

The only soils identified within the Planning Area that are prone to shrinking and swelling are the Monserate soils.[55] Soils that are prone to shrinking and swelling become sticky when wet and expand according to the moisture content present at the time. Monserate soils are located in two specific areas within the Planning Area. These soils become sticky when wet and expand according to the moisture content present at the time. An influx of groundwater may be absorbed by the soils and could lead to lateral spreading, though the impacts are considered to be less than significant since the building will be constructed with the strict adherence to the most pertinent State and City building codes. As indicated above, there are two areas located within the Planning Area that contain soils that are prone to shrinking and swelling. These two areas are also prone to subsidence. Subsidence occurs via soil shrinkage and is triggered by a significant reduction in an underlying groundwater table, thus causing the earth on top to sink.[56] Prior to the approval of all project-specific development proposals, detailed geotechnical investigation and analysis will be prepared and submitted to the City for review.

Grading and other construction activities are not expected to reach the depths required to encounter an underlying groundwater aquifer. In addition, any future development undertaken within the Planning Area will be required to be connected to the City's water lines; therefore, future development will not directly affect underlying groundwater resources. As a result, the potential impacts are anticipated to be less than significant.

D. Would the project result in or expose people to potential impacts, including location on expansive soil, as defined in Uniform Building Code (2010), creating substantial risks to life or property? ● Less than Significant Impact.

The only soils identified within the Planning Area that are prone to shrinking and swelling are the Monserate soils.[57] Shrinking and swelling is influenced by the amount of clay present in the underlying soils.[58] According to the United States Department of Agriculture, clay is present in the composition of Monserate soils.[59] Prior to the approval of all project-specific development proposals, detailed geotechnical investigation, and analysis will be prepared and submitted to the City for review. As a result, the potential impacts are considered to be less than significant.

[59] United States Department of Agriculture Soil Conservation Service. *Report and General Soil Map Riverside County, California*. Revised 1969.

E. Would the project result in or expose people to potential impacts, including soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater? ● No Impact.

No septic tanks will be used as part of any future development. As a result, no impacts associated with the use of septic tanks will occur as part of the proposed project's implementation.

MITIGATION MEASURES

The adoption and subsequent implementation of the Moreno Valley Festival Specific Plan will not lead to any impacts not already identified in the certified EIR that was prepared for the City of Moreno Valley General Plan. As a result, no additional mitigation beyond that which may be required for individual development projects is required.

3.8 GREENHOUSE GAS EMISSIONS

Environmental Issue Areas Examined	Potentially Significant Impact	Less Than Significant Impact With Mitigation	Less Than Significant Impact	No Impact
A. Would the project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?			✖	
B. Would the project conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?			✖	

ENVIRONMENTAL ANALYSIS

A. Would the project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment? ● Less than Significant Impact.

This current amendment would expand the Specific Plan Area to include a 9.98-acre property located on the southeast corner of Heacock Street and Ironwood Avenue. This added area will be referred to as the expanded *Planning Area 1*. This Planning Area 1 is currently undeveloped though it has been rough graded and disked for maintenance and fire mitigation. The Specific Plan is being amended to allow for the development of a 220,390 square foot light industrial building. The State of California requires CEQA documents to include an evaluation of greenhouse gas (GHG) emissions or gases that trap heat in the atmosphere. GHG are emitted by both natural processes and human activities. Examples of GHG that are produced both by natural processes and human activities include carbon dioxide (CO_2), methane (CH_4), and nitrous oxide (N_2O). The accumulation of GHG in the atmosphere regulates the earth's temperature. Without these natural GHG, the Earth's surface would be about 61°F cooler. However, emissions from fossil fuel combustion have elevated the concentrations of GHG in the atmosphere to above natural levels. These man-made GHG will have the effect of warming atmospheric temperatures with the attendant impacts of changes in the global climate, increased sea levels, and changes to the worldwide biome. They major GHG that influence global warming are described below.

- *Water Vapor*. Water vapor is the most abundant GHG present in the atmosphere. While water vapor is not considered a pollutant, while it remains in the atmosphere it maintains a climate necessary for life. Changes in the atmospheric concentration of water vapor is directly related to the warming of the atmosphere rather than a direct result of industrialization. As the temperature of the atmosphere rises, more water is evaporated from ground storage (rivers, oceans, reservoirs, soil). Because the air is warmer, the relative humidity can be higher (in essence, the air is able to "hold" more water when it is warmer), leading to more water vapor in the atmosphere. As a GHG, the higher concentration of water vapor is then able to absorb more thermal indirect energy radiated from the Earth, thus further warming the atmosphere. When water vapor increases in the atmosphere, more of it will eventually also condense into clouds, which are more able to reflect incoming solar radiation. This will allow less energy to reach the Earth's surface thereby affecting surface temperatures.

- *Carbon Dioxide (CO2).* The natural production and absorption of CO2 is achieved through the terrestrial biosphere and the ocean. Manmade sources of CO2 include the burning coal, oil, natural gas, and wood. Since the industrial revolution began in the mid-1700's, these activities have increased the atmospheric concentrations of CO2. Prior to the industrial revolution, concentrations were fairly stable at 280 parts per million (ppm). The International Panel on Climate Change (IPCC Fifth Assessment Report, 2014) Emissions of CO2 from fossil fuel combustion and industrial processes contributed about 78% of the total GHG emissions increase from 1970 to 2010, with a similar percentage contribution for the increase during the period 2000 to 2010.

- *Methane (CH4).* CH4 is an extremely effective absorber of radiation, although its atmospheric concentration is less than that of CO2. Methane's lifetime in the atmosphere is brief (10 to 12 years), compared to some other GHGs (such as CO2, N2O, and Chlorofluorocarbons (CFCs). CH4 has both natural and anthropogenic sources. It is released as part of the biological processes in low oxygen environments, such as in swamplands or in rice production (at the roots of the plants). Over the last 50 years, human activities such as growing rice, raising cattle, using natural gas, and mining coal have added to the atmospheric concentration of methane. Other human-related sources of methane production include fossil-fuel combustion and biomass burning.

- *Nitrous Oxide (N2O).* Concentrations of N2O also began to increase at the beginning of the industrial revolution. In 1998, the global concentration of this GHG was documented at 314 parts per billion (ppb). N2O is produced by microbial processes in soil and water, including those reactions which occur in fertilizer containing nitrogen. In addition to agricultural sources, some industrial processes (fossil fuel-fired power plants, nylon production, nitric acid production, and vehicle emissions) also contribute to its atmospheric load. It is also commonly used as an aerosol spray propellant.

- *Chlorofluorocarbons (CFC).* CFCs are gases formed synthetically by replacing all hydrogen atoms in methane or ethane (C2H6) with chlorine and/or fluorine atoms. CFCs are nontoxic, nonflammable, insoluble, and chemically unreactive in the troposphere (the level of air at the Earth's surface). CFCs have no natural source but were first synthesized in 1928. It was used for refrigerants, aerosol propellants, and cleaning solvents. Due to the discovery that they are able to destroy stratospheric ozone, a global effort to halt their production was undertaken and in 1989 the European Community agreed to ban CFCs by 2000 and subsequent treaties banned CFCs worldwide by 2010. This effort was extremely successful, and the levels of the major CFCs are now remaining level or declining. However, their long atmospheric lifetimes mean that some of the CFCs will remain in the atmosphere for over 100 years.

- *Hydrofluorocarbons (HFC).* HFCs are synthetic man-made chemicals that are used as a substitute for CFCs. Out of all the GHGs, they are one of three groups with the highest global warming potential. The HFCs with the largest measured atmospheric abundances are (in order), HFC-23 (CHF3), HFC-134a (CF3CH2F), and HFC-152a (CH3CHF2). Prior to 1990, the only significant emissions were HFC-23. HFC-134a use is increasing due to its use as a refrigerant. Concentrations of HFC-23 and HFC-134a in the atmosphere are now about 10 parts per trillion (ppt) each. Concentrations of HFC-152a are about 1 ppt. HFCs are manmade and used for applications such as automobile air conditioners and refrigerants.

- *Perfluorocarbons (PFC).* PFCs have stable molecular structures and do not break down through the chemical processes in the lower atmosphere. High-energy ultraviolet rays about 60 kilometers above Earth's surface are able to destroy the compounds. Because of this, PFCs have very long lifetimes, between 10,000 and 50,000 years. Two common PFCs are tetrafluoromethane (CF4) and hexafluoroethane (C2F6). Concentrations of CF4 in the atmosphere are over 70 ppt. The two main sources of PFCs are primary aluminum production and semiconductor manufacturing.

- *Sulfur Hexafluoride (SF6).* SF6 is an inorganic, odorless, colorless, nontoxic, nonflammable gas. SF6 has the highest global warming potential of any gas evaluated; 23,900 times that of CO2. Concentrations in the 1990s were about 4 ppt. Sulfur hexafluoride is used for insulation in electric power transmission and distribution equipment, in the magnesium industry, in semiconductor manufacturing, and as a tracer gas for leak detection.

The SCAQMD has established a threshold of significance of 10,000 metric tons of CO_2E ($MTCO_2E$) per year for new development. Table 3-3 summarizes annual greenhouse gas emissions from build-out of the proposed project. As indicated in Table 3-3, the CO_2E total for the project is 29,636 pounds per day or 13 $MTCO_2E$ per day. This translates into a generation of approximately 4,745 $MTCO_2E$ per year, which is below the single established threshold of 10,000 $MTCO_2E$ for new development. The project's operational GHG emissions were calculated using the CalEEMod V.2016.3.2. The GHG emissions estimates reflect what the land uses that have been identified previously of the same location and description would generate once fully operational. The type of activities that may be undertaken once the project is operational have been predicted and accounted for in the model for the selected land use type.

Table 3-3
Greenhouse Gas Emissions Inventory

Source: CalEEMod.V.2016.3.2

Once operational, the development contemplated under the Specific Plan amendment is projected to fall below the 10,000 MTCO2E per year threshold established for GHG emissions by the SCAQMD. The project's true emissions may be lower if future development that is proposed is smaller than the maximum case build-out. The Moreno Valley Festival Specific will promote in-fill development that will reduce overall VMT. In addition, mitigation measures are provided in the following subsection which will further reduce GHG emissions. Therefore, the potential impacts in regards to GHG emissions are considered to be less than significant.

B. Would the project conflict an applicable plan, policy, or regulation adopted for the purpose of reducing emissions of greenhouse gases? ● Less than Significant Impact.

AB 32 requires the reduction of GHG emissions to 1990 levels, which would require a minimum 28 percent reduction in "business as usual" GHG emissions for the entire State. Additionally, Governor Edmund G. Brown signed into law Executive Order (E.O.) B-30-15 on April 29, 2015, the Country's most ambitious policy for reducing Greenhouse Gas Emissions. Executive Order B-30-15 calls for a 40 percent reduction in

greenhouse gas emissions below 1990 levels by 2030.[60] On October 9, 2012, the Moreno Valley City Council approved the Energy Efficiency and Climate Action Strategy and the related Greenhouse Gas Analysis. The Strategy and Analysis documents and identifies potential programs and policies to reduce overall City energy consumption and increase the use of renewable energy. The Strategy also prioritizes implementation of programs, policies, and projects based upon energy efficiency, cost efficiency, and potential resources. The Greenhouse Gas Analysis provides a more scientific approach and recommends a target to reducing community-wide GHG emissions consistent with the State reduction goals in Assembly Bill (AB) 32, the legislation that provides the basis of the State's climate action initiatives. The Energy Efficiency and Climate Action Strategy contain 124 different strategies that would reduce the City's carbon footprint. In addition, the General Plan includes the following:

- *Chapter 5, Transportation Demand Management 5.3.5*. Transportation Demand Management (TDM) strategies reduce dependence on the single occupant vehicle, and increase the ability of the existing transportation system to carry more people. The goal of TDM is to reduce single occupant vehicle trips during peak hours and modify the vehicular demand for travel. A reduction in peak hour trips and a decrease in non-attainment pollutants can be achieved through the implementation of TDM strategies. Examples of the strategies include: carpooling, telecommuting, flexible work hours, and electronic commerce that enables people to work and shop from home.

- *Policy 6.7.6*. Require building construction to comply with the energy conservation requirements of Title 24 of the California Administrative Code.

- *Policy 7-3*. Maintain a close working relationship with EMWD to ensure that EMWD plans for and is aware of opportunities to use reclaimed water in the City.

- *Policy 7.3.1*. Require water conserving landscape and irrigation systems through development review. Minimize the use of lawn within private developments, and within parkway areas. The use of mulch and native and drought tolerant landscaping shall be encouraged.

- *Policy 7.3.2*. Encourage the use of reclaimed wastewater, stored rainwater, or other legally acceptable non-potable water supply for irrigation.

- *Policy 7-4*. Provide guidelines for preferred planting schemes and specific species to encourage aesthetically pleasing landscape statements that minimize water use.

- *Policy 7.5.1*. Encourage building, site design, and landscaping techniques that provide passive heating and cooling to reduce energy demand.

- *Policy 7.5.2*. Encourage energy efficient modes of transportation and fixed facilities, including transit, bicycle, equestrian, and pedestrian transportation. Emphasize fuel efficiency in the acquisition and use of City-owned vehicles.

- *Policy 7.5.3*. Locate areas planned for commercial, industrial, and multiple family density residential development within areas of high transit potential and access.

[60] Office of Governor Edmund G. Brown Jr. *New California Goal Aims to Reduce Emissions 40 Percent Below 1990 Levels by 2030.* http://gov.ca.gov/news.php?id=18938

- *Policy 7.5.4*. Encourage efficient energy usage in all city public buildings.

- *Policy 7.5.5*. Encourage the use of solar power and other renewable energy systems.

- *Chapter 7 Issues and Opportunities 7.6.2*. The amount of energy consumed in automobile travel can be reduced if commercial and recreational opportunities are located near residential uses. Commuter travel can be minimized if there is a reasonable balance between jobs and housing within the area. Placing high intensity uses along transit corridors can also reduce automobile travel. Reducing residential street width can affect microclimates and reduce the summer cooling needs of adjacent homes. The orientation of buildings can be arranged to affect the amount of heat gain. Shade trees can also cool microclimates and aid in energy conservation. Building construction options are available to reduce energy consumption. Building construction methods include, but are not limited to, insulation of walls and ceilings, insulated windows and solar water heating systems. Many building energy conservation measures have been incorporated into Title 24 of the California Administrative Code and are required of all residential structures.

- *Policy 7.8.1*. Encourage recycling projects by individuals, non-profit organizations, corporations and local businesses, as well as programs sponsored through government agencies.

According to the Specific Plan, construction of the Moreno Valley Festival will be in conformance with California's "Cal-Green" building regulations, the most stringent, environmentally-friendly building code in the United States. Cal-Green is a comprehensive, far-reaching set of regulations which mandate environmentally-advanced building practices and regulations designed to conserve natural resources and reduce greenhouse gas emissions, energy consumption, and water use. The project will incorporate sustainable design features to further reduce its environmental footprint, including but not limited to:

- Reduced water use for landscape irrigation;
- Accommodate the use of alternative means of transportation;
- Use recycled building materials to the extent feasible;
- Use local sources of building materials to the extent feasible; and,
- Minimize the use of impervious paved surfaces throughout the project.[61]

In order to further ensure the project's conformance with the General Plan and the Energy Efficiency and Climate Action Strategy, the following mitigation measures are required:

- The Applicant must install ENERGY STAR appliances wherever appliances are installed.

- The Applicant shall install ENERGY STAR rated light emitting diodes (LEDs) for traffic, street, and outdoor lighting.

- The Applicant must install ENERGY STAR rated Compact Florescent Lights (CFLs) in all indoor areas that require continuous lighting. CFLs should not be used in rooms or areas that are subject to frequent on/off cycling, as the lifespan of CFLs diminishes when there are frequently turned off.

- The Applicant must install light colored "cool" roofs.

[61] National Engineering Consultants. *Amendment to Specific Plan 205*. Draft dated December 29th, 2015.

- The Applicant must install "cool" (lighter colored) pavement throughout the parking areas.
- All landscape planted on-site must be watered by water dispensed through drip irrigation.
- The building contractors shall install bicycle racks consistent with the City's Municipal Code adjacent to each building.
- The building contractors shall install electric vehicle charging stations in the parking areas. Preferential parking spaces for electric vehicles must be provided.

These mitigation measures shall be required for individual projects proposed within the Planning Area. As a result, the potential impacts are considered to be less than significant.

MITIGATION MEASURES

The following mitigation is required to further reduce future projects greenhouse gas emissions impacts:

Mitigation Measure No. 14 (Greenhouse Gases Emissions Impacts). The Applicant must install ENERGY STAR appliances wherever appliances are installed.

Mitigation Measure No. 15 (Greenhouse Gases Emissions Impacts). The Applicant shall install ENERGY STAR rated light emitting diodes (LEDs) for traffic, street, and outdoor lighting.

Mitigation Measure No. 16 (Greenhouse Gases Emissions Impacts). The Applicant must install ENERGY STAR rated Compact Florescent Lights (CFLs) in all indoor areas that require continuous lighting. CFLs should not be used in rooms or areas that are subject to frequent on/off cycling, as the lifespan of CFLs diminishes when there are frequently turned off.

Mitigation Measure No. 17 (Greenhouse Gases Emissions Impacts). The Applicant must install light colored "cool" roofs.

Mitigation Measure No. 18 (Greenhouse Gases Emissions Impacts). The Applicant must install "cool" pavement (lighter colored) throughout the parking areas.

Mitigation Measure No. 19 (Greenhouse Gases Emissions Impacts). All landscape planted on-site must be watered by water dispensed through drip irrigation.

Mitigation Measure No. 20 (Greenhouse Gases Emissions Impacts). The building contractors shall install bicycle racks consistent with the City's Municipal Code adjacent to each building.

Mitigation Measure No. 21 (Greenhouse Gases Emissions Impacts). The building contractors shall install electric vehicle charging stations in the parking areas. Preferential parking spaces for electric vehicles must be provided.

3.9 HAZARDS & HAZARDOUS MATERIALS

Environmental Issue Areas Examined	Potentially Significant Impact	Less Than Significant Impact With Mitigation	Less Than Significant Impact	No Impact
A. Would the project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?			✖	
B. Would the project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?			✖	
C. Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?			✖	
D. Would the project be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?				✖
E. Would the project for a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?				✖
F. Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?				✖
G. Would the project expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires?				✖

ANALYSIS OF ENVIRONMENTAL IMPACTS

A. Would the project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials? ● Less than Significant Impact.

This current amendment would expand the Specific Plan Area to include a 9.98-acre property located on the southeast corner of Heacock Street and Ironwood Avenue. This added area will be referred to as the expanded *Planning Area 1*. This Planning Area 1 is currently undeveloped though it has been rough graded and disked for maintenance and fire mitigation. The Specific Plan is being amended to allow for the development of a 220,390 square foot light industrial building. The project area is not listed on the California Department of Toxic Substances Control's Hazardous Waste and Substances Site database.[62] Furthermore, none of the properties located within the Planning Area are identified on the California Department of Toxic Substances Control's EnviroStor database.[63] In addition, the Planning Area is not identified on any Leaking Underground Storage Tank database (LUST). The United States Environmental

[62] CalEPA. *Cortese List Data Resources*. http://www.calepa.ca.gov/sitecleanup/corteselist/

[63] CalEPA. *EnviroStor Database*. http://www.envirostor.dtsc.ca.gov/public/mapfull.asp?global_id=&x=-119&y=37&zl=18&ms=640,480&mt=m&findaddress=True&city=south%20gate&zip=&county=&federal_superfund=true&state_response=true&voluntary_cleanup=true&school_cleanup=true&ca_site=true&tiered_permit=true&evaluation=true&military_evaluation=true&school_investigation=true&operating=true&post_closure=true&non_operating=true

Protection Agency's multi-system search was consulted to determine whether the Planning Area is identified on any Federal Brownfield list; Federal Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) List; Federal Resource Conservation and Recovery Act (RCRA) Treatment, Storage, and Disposal (TSD) Facilities List; and/or Federal RCRA Generators List. There is one use located within the Planning Area that is identified in the database. This use is located at 24318 Hemlock Avenue Suite G3 and is identified as M and M Cleaners, a former dry cleaning service.[64] M and M Cleaners is listed as a small quantity generator which is typical for dry cleaning services. These uses are required to report to the EPA due to their use, storage, and disposal of hazardous materials such as the solvents used to clean clothing. While no contamination is known to exist onsite, in the event any unknown contamination is encountered during the demolition, grading, and/or site preparation activities, this contamination must also be removed and disposed of in accordance with applicable laws before the City issues any building permit. The mandatory cleanup of potential contamination is considered beneficial since removal of contaminated soils and or the control of possible vapor release is required prior to the start of construction activities. As a result, the potential impacts related to the project's construction are considered to be less than significant.

Once operational, the use of hazardous materials for the new development promoted by the Specific Plan Amendment will largely consist of those commonly found in a commercial setting used in routine maintenance and cleaning. All future tenants will need to comply with all Federal and State regulations regarding hazardous materials. Therefore, the potential construction and operational impacts are considered to be less than significant.

B. *Would the project create a significant hazard to the public or the environment, or result in reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment? ● Less than Significant Impact.*

The proposed Specific Plan Amendment will permit a variety of retail, retail/mix of uses, and mix of uses. Many of these uses, including the business park, are still speculative. In the event that a future tenant is involved in the transport, use, storage, and disposal of hazardous materials, the tenant will be required to comply with Federal and State regulations regarding hazardous materials. The tenant would also be required to comply with the EPA's Hazardous Materials Transportation Act, Title 42, Section 11022 of the United States Code and Chapter 6.95 of the California Health and Safety Code which requires the reporting of hazardous materials when used or stored in certain quantities. Furthermore, the future tenant will be required to file a Hazardous Materials Disclosure Plan and a Business Emergency Plan to ensure the safety of the employees and citizens of Moreno Valley. Any contamination encountered during the demolition, grading, and/or site preparation activities must also be removed and disposed of in accordance with applicable laws before the City issues any building permit. As a result, the potential impacts are anticipated to be less than significant.

C. *Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school? ● Less than Significant Impact.*

[64] United States Environmental Protection Agency. *Environfacts Search Results*. https://oaspub.epa.gov/enviro/multisys2_v2.get_list?facility_uin=110006482573

The Planning Area is not located within a quarter mile of an existing school. The nearest school is Honey Hollow Elementary School, which is located 0.72 miles to the northwest.[65] In the event that a future tenant is involved in the transport, use, storage, and disposal of hazardous materials, the tenant will be required to comply with Federal and State regulations regarding hazardous materials. The tenant would also be required to comply with the EPA's Hazardous Materials Transportation Act, Title 42, Section 11022 of the United States Code and Chapter 6.95 of the California Health and Safety Code which requires the reporting of hazardous materials when used or stored in certain quantities. Furthermore, future tenants will be required to file a Hazardous Materials Disclosure Plan and a Business Emergency Plan to ensure the safety of the employees and citizens of Moreno Valley. Therefore, adherence to all pertinent regulations governing the handling of hazardous materials will reduce potential impacts to levels that are less than significant.

D. Would the project be located on a site, which is included on a list of hazardous material sites compiled pursuant to Government Code Section 65962.5, and, as a result, would it create a significant hazard to the public or the environment? ● No Impact.

The *Cortese List*, also referred to as the Hazardous Waste and Substances Sites List or the California Superfund List, is a planning document used by the State and other local agencies to comply with CEQA requirements that require the provision of information regarding the location of hazardous materials release sites. California Government Code section 65962.5 requires the California Environmental Protection Agency to develop and update the Cortese List on an annual basis. The list is maintained as part of the DTSC's Brownfields and Environmental Restoration Program referred to as EnviroStor. The database currently contains 575 sites, including the Federal Superfund sites. The database was consulted in August of 2017. A search of the Envirostor Hazardous Waste and Substances Site List website was completed to identify whether the Planning Area is listed in the database as a Cortese site.[66] The Planning Area is not included on a hazardous sites list compiled pursuant to California Government Code Section 65962.5.[67] As a result, no impacts will result.

E. Would the project be located within an airport land use plan, or where such a plan has not been adopted, within two miles of a public airport or a public use airport, would the project result in a safety hazard for people residing or working in the Planning Area? ● No Impact.

The Planning Area is not located within two miles of an operational public airport. The March Air Reserve Base is the closest airport to the Planning Area. This airport is located 2.90 miles southwest of the Planning Area. In addition, the Riverside Municipal Airport is located in the City of Riverside approximately 12 miles to the west of the Planning Area. The Planning Area is not located within the Runway Protection Zone (RPZ) for the March Air Reserve Base, and the development envisioned under the Specific Plan will not penetrate the airport's slope. Essentially, the adoption and implementation of the Specific Plan will not introduce a building that will interfere with the approach and take off of airplanes utilizing the aforementioned airport. According to the Land Use Compatibility Plan that was prepared for the March Air

[65] Google Earth. Website accessed August 23, 2017.

[66] California, State of. California Department of Toxic Substances Control Envirostor Hazardous Waste and Substances Site List. http://www.envirostor.dtsc.ca.gov/public/search.asp (Website accessed August 22, 2017).

[67] California, State of, Department of Toxic Substances Control, *DTSC's Hazardous Waste and Substances Site List - Site Cleanup (Cortese List),* 2009.

Reserve Base, the planning area is not located within the RPZ or FAR Part 77 height restriction zone and no impacts will occur.[68]

F. Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan? ● No Impact.

Future development proposals will be reviewed by the City to identify specific provisions for the regulation of construction vehicle ingress and egress to the site during construction as a means to provide continued through-access. As a result, no impacts are associated with the proposed project's implementation.

G. Would the project expose people or structures to a significant risk of loss, injury, or death involving wild lands fire, including where wild lands are adjacent to urbanized areas or where residences are intermixed with wild lands? ● No Impact.

The City of Moreno Valley is subject to both wild lands and urban fires. The natural vegetation in the area is highly prone to fire. The vegetation and geographical landscape consists of rolling hills covered in annual grasses with sage brush with no tree top canopy. The vegetation typically comes on an annual basis from annual rains which occur between the months of January and March.[69] Within the City of Moreno Valley, wildfire poses a threat to the northern and eastern portions of the city, as those areas are within the high fire hazard area. Also, the southeast area contains the largest potential for state land threat, Lake Perris, which is a California State Park that falls under the direct protection of the City of Moreno Valley for structure and wildland protection. Other areas of concern include Box Springs (northwest area), San Timoteo Canyon (north), and Reche Canyon (northeast area). The Planning Area is located outside of a wild lands fire risk zone. Therefore, no impacts will result.

MITIGATION MEASURES

The adoption and subsequent implementation of the Moreno Valley Festival Specific Plan will not lead to any potentially significant impacts in regards to hazards or hazardous materials. Any future industrial tenant will be required to adhere to all pertinent Federal and State regulations governing the handling and use of hazardous materials. As a result, no additional mitigation beyond that which may be required for individual development projects is required.

[68] Riverside County Airport Land Use Commission. *Riverside Municipal Airport Land Use Compatibility Plan*. Adopted March 2005.

[69] City of Moreno Valley. *Local Hazard Mitigation Plan*. Document updated December 2016.

3.10 HYDROLOGY & WATER QUALITY

Environmental Issue Areas Examined	Potentially Significant Impact	Less Than Significant Impact With Mitigation	Less Than Significant Impact	No Impact
A. Would the project violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?			✖	
B. Would the project substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?				✖
C. Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would result in substantial erosion or siltation on- or off-site; substantially increase the rate or amount of surface runoff in a manner in which would result in flooding on- or off-site; create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or, impede or redirect flood flows?				✖
D. In flood hazard, tsunami, or seiche zones, would the project risk release of pollutants due to project inundation?				✖
E. Would the project conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?			✖	

ANALYSIS OF ENVIRONMENTAL IMPACTS

A. Would the project violate any water quality standards or waste discharge requirements? ● Less than Significant Impact.

This current amendment would expand the Specific Plan Area to include a 9.98-acre property located on the southeast corner of Heacock Street and Ironwood Avenue. This added area will be referred to as the expanded *Planning Area 1*. This Planning Area 1 is currently undeveloped though it has been rough graded and disked for maintenance and fire mitigation. The Specific Plan is being amended to allow for the development of a 220,390 square foot light industrial building. Most developments are required to implement a Water Quality Management Plan (WQMP) in accordance with the NPDES Permit Board Order R8-2010-0033. The WQMP for the Santa Ana Region of Riverside County was approved by the Santa Ana Region Water Quality Control Board on October 22, 2012. Projects identified as a 'Priority Development project' are required to prepare a Project-Specific WQMP. The MS4 Permit mandates a Low Impact Development (LID) approach to storm water treatment and management of runoff discharges. The project site should be designed to minimize imperviousness, detain runoff, and infiltrate, reuse or evapotranspirate runoff where feasible. LID Best Management Practices (BMPs) should be used to infiltrate, evapotranspirate, harvest, and use, or treat runoff from impervious surfaces, in accordance with the Design Handbook for Low Impact Development Practices. The project should also ensure that runoff does not create a hydrologic condition of concern. Site design BMPs are intended to create a functional project

design that attempts to mimic the natural hydrologic regime. Methods of accomplishing the site design concepts include:

- Maximize the permeable area;
- Incorporate landscape buffer areas between sidewalks and streets;
- Use natural drainage systems;
- Where soil and conditions are suitable, use perforated pipe or gravel filtration pits for low flow infiltration;
- Construct ponding areas or detention facilities to increase opportunities for infiltration consistent with vector control objectives;
- Sites must be designed to contain and infiltrate roof runoff, or direct roof runoff to vegetative swales or buffer areas, where feasible;
- Where landscaping is proposed, drain impervious sidewalks, walkways, trails, and patios into adjacent landscaping;
- Increase the use of vegetated drainage swales in lieu of underground piping or imperviously lined swales;
- Parking areas may be paved with a permeable surface, or designed to drain into landscaping prior to discharging to the MS4; and,
- Where landscaping is proposed in parking areas, incorporate landscape areas into the drainage design.

Source control BMPs would also be required to be implemented as part of the Final WQMP. Source control BMPs are those measures which can be taken to eliminate the presence of pollutants through prevention. Such measures can be both non-structural and structural. Non-structural source control BMPs include: education for property owners, operators, tenants, occupants, or employees; activity restrictions; irrigation system and landscape maintenance; common area litter control; street sweeping private streets and parking lots; and drainage facility inspection and maintenance. Structural source control BMPs include: stenciling and signage; landscape and irrigation system design; protection of slopes and channels; and properly designing fueling areas, trash storage areas, loading docks, and outdoor material storage areas.

The treatment control BMP strategy for the project is to select Low Impact Development (LID) BMPs that promote infiltration and evapo-transpiration, including infiltration basins, bio detention facilities, and extended detention basins. Generally infiltration BMPs have advantages over other types of BMPs, including reduction of the volume and rate of runoff, as well as full treatment of all potential pollutants potentially contained in the storm water runoff. It is recognized however that infiltration may not be feasible on sites with low infiltration rates, or located on compacted engineered fill. Therefore, prior to final design, infiltration tests shall be performed within the boundaries of the proposed infiltration BMP to confirm the suitability of infiltration. In situations where infiltration BMPs are not appropriate, bio

detention and/or bio treatment BMPs (including extended detention basins, bio swales, and constructed wetlands) that provide opportunity for evapotranspiration and incidental infiltration will be considered. Harvest and use BMPs will also be considered as a Treatment Control BMP to store runoff for later non-potable uses. Ponds may be used to collect storm water runoff for harvest and use. A description of the aforementioned treatment control BMPs is provided below:

- *Infiltration Basins*. An infiltration basin is a flat earthen basin designed to capture the design capture volume. The storm water infiltrates through the bottom of the basin into the underlying soil over a 72-hour drawdown period. Flows exceeding the design capture volume must discharge to a downstream conveyance system. Infiltration basins are highly effective in removing all targeted pollutants from storm water runoff. The use of infiltration basins may be restricted by concerns over groundwater contamination, soil permeability, and clogging at the site. Where this BMP is being used, the soil beneath the basin must be thoroughly evaluated in a geotechnical report since the underlying soils are critical to the basin's long term performance. To protect the basin from erosion, the sides and bottom of the basin must be vegetated, preferably with native or low water use plant species.

- *Bio detention Facility*. Bio detention facilities are shallow, vegetated basins underlain by an engineered soil media. In most cases, the bottom of a bio detention facility is unlined, which also provides an opportunity for infiltration to the extent that the underlying onsite soil can accommodate it. When the infiltration rate of the underlying soil is exceeded, fully bio treated flows are discharged via underdrains. Bio detention facilities therefore will inherently achieve the maximum feasible level of infiltration and evapotranspiration and achieve the minimum feasible (but highly bio treated) discharge to the storm drain system.

- *Extended Detention Basin*. The extended detention basin is designed to detain the design volume of storm water and maximize opportunities for volume losses through infiltration, evaporation, evapotranspiration, and surface wetting. Additional pollutant removal is provided through sedimentation, in which pollutants can attach to sediment accumulated in the basin through the process of settling. Storm water enters the basin through a forebay where any trash, debris, and sediment accumulate for easy removal. Flows from the forebay enter the top stage of the basin which is vegetated with native grasses and interspersed with gravel-filled trenches which together enhance evapotranspiration and infiltration. Water that does not get infiltrated or evapotranspired is conveyed to the bottom stage of the basin. At the bottom stage of the basin, low or incidental dry weather flows will be treated through a media filter and collected in a sub drain structure. Any additional flows will be detained in the basin for an extended period by incorporating an outlet structure that is more restrictive than a traditional detention basin outlet. The restrictive outlet extends the drawdown time of the basin which further allows particles and associated pollutants to settle out before exiting the basin, while maximizing opportunities for additional incidental value losses.

Adherence to the site design concepts, source control BMP, and treatment control BMP recommendations outlined above will reduce potential impacts to levels that are less than significant.

B. Would the project substantially deplete groundwater supplies or interfere substantially with groundwater recharge in such a way that would cause a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of a pre-existing nearby well would drop to a level which would not support existing land uses or planned uses for which permits have been granted)? ● No Impact.

The majority of the City is situated within the Perris North Groundwater Basin, while the easternmost portion of the City is located within the San Jacinto Groundwater Basin. Groundwater depth ranges from approximately 100 feet to 150 feet below ground surface. The California State Department of Water Resources (DWR) has estimated the groundwater basins in the vicinity of the City to have capacity for approximately one million acre-feet of water. The adoption and subsequent implementation of the Specific Plan will not introduce any development that will affect underlying groundwater supplies. As indicated previously, groundwater depth ranges from 100 to 150 feet below ground surface. Grading and other construction related activities will not extend to depths where groundwater may be encountered. In addition, any new development will be connected to the City's water lines and is not anticipated to deplete groundwater supplies through the direct consumption of the water. The Specific Plan calls for the installation of xeriscape landscaping and water efficient appliances to reduce the burden placed on the City's water resources. Future water consumption will be limited to that used for landscaping, restroom use, and routine maintenance and cleaning. Adherence to the required BMPs identified in the Specific Plan will restrict the discharge of contaminated runoff into the local groundwater aquifers. As a result, no impacts are anticipated.

C. Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would result in substantial erosion or siltation on- or off-site; substantially increase the rate or amount of surface runoff in a manner in which would result in flooding on- or off-site; create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or, impede or redirect flood flows? ● No Impact.

The larger Specific Plan Planning Area contains a 12.9-acre detention basin. This detention basin is located north of Planning Area 4 and south of Planning Area 2. The basin would fall under the jurisdiction of the California Department of Fish and Wildlife, United States Army Corps of Engineers (USACE), and the Regional Water Quality Control Board (RWQCB). The basin contains approximately 11.22 acres of CDFW jurisdiction and approximately 9.77 acres of waters of the United States.[70] The development of this detention basin will be prohibited. As stated previously, future projects must integrate BMPs identified in the mandatory WQMP plans. These BMPs will allow stormwater runoff to either percolate into the ground or discharge into the local storm drains. Stormwater runoff will not be discharged into the detention basin. Furthermore, stormwater will not discharge off-site and there will be no impacts regarding off-site erosion or siltation due to off-site stormwater discharge.

[70] Hernandez Environmental Services. *Basin Constraints Analysis*. Report dated February 22, 2016.

D. In flood hazard, tsunami, or seiche zones, would the project risk release of pollutants due to project inundation? ● No Impact.

According to maps obtained at the Federal Emergency Management System Map Service Center, a majority of the Planning Area is not located within a 100-year flood plain.[71] The entire Planning Area, with the exception of the detention basin, is located within Zone X.[72] This flood zone has an annual probability of flooding of less than 0.2 percent and represents areas outside the 500-year flood plain. Thus, properties located in Zone X are not located within a 100-year flood plain.[73] Although the detention basin is located within Zone A, a high risk area with a 1% annual chance of flooding and a 26% chance of flooding over the life of a 30-year mortgage, no impacts will occur since the development of the detention basin will be prohibited. As a result, no impacts related to flood flows are associated with the proposed project's implementation.

According to the General Plan, the potential for dam inundation is considered to be remote. There are two locations of concern situated within the City: the Poorman Reservoir (Pigeon Pass Reservoir) and Lake Perris. Failure of the dam at Poorman Reservoir could result in extensive flooding along the downstream watercourse.[74] Flood waters will be conveyed though an existing channel where they will ultimately flow through the detention basin. The risk of flooding due to dam failure is limited to the period during and immediately after major storms. The reservoir does not retain water throughout the year. Therefore, the likelihood of dam inundation is considered to be less than significant.

Failure of the dam at Lake Perris would only affect a very small area south of Nandina Avenue along the Perris Valley Storm Drain and the Mystic Lake area in the southeast corner of the City.[75] Although the Planning Area is located within the path of potential flood waters, this water will be conveyed through a system of existing channels and detention basins. As a result, the potential impacts are considered to be less than significant. The Planning Area is located between 42 to 70 miles north of the Pacific Ocean and the Planning Area would not be exposed to the effects of a tsunami.[76] A seiche in the Poorman Reservoir is not likely to happen due to the volume of water present. Lastly, the Planning Area will not be subject to mudslides because the Planning Area and surrounding areas are generally level. As a result, no impacts are likely to occur.

E. Would the project conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?? ● Less than Significant Impact.

As indicated previously, future development proposals must include a WQMP. The WQMP shall include measures designed to control pollutants, pollutant loads, and runoff volume to the maximum extent feasible by minimizing impervious surface area and controlling runoff from impervious surfaces through

[71] FEMA. *FEMA's National Flood Hazard Layer (official).* http://fema.maps.arcgis.com/home/webmap/viewer.html?webmap=cbe088e7c8704464aa0fc34eb99e7f30&extent=-117.29161196434968,33.93176642411599,-117.20852785790449,33.95526379253687

[75] Ibid.

[76] Google Earth. Site accessed September 22, 2017.

infiltration, evapo-transpiration, bioretention, and/or rainfall harvest and use. The project applicant shall prepare a WQMP plan which implements set LID standards and practices for stormwater pollution mitigation and provides documentation to demonstrate compliance with the municipal NPDES permit on the plans and permit application submitted to the city. In addition, the proposed project will not create excess runoff that will exceed the capacity of the existing storm water drainage system. All future development will be required to implement operational BMPs identified in the Specific Plan. These operational BMPs will reduce the amount of stormwater runoff discharged into the streets. Implementation of the previously mentioned BMPs will reduce potential impacts to levels that are less than significant.

MITIGATION MEASURES

The adoption and subsequent implementation of the Moreno Valley Festival Specific Plan will not lead to any impacts not already identified in the certified EIR that was prepared for the City of Moreno Valley General Plan. As a result, no additional mitigation beyond that which may be required for individual development projects is required.

3.11 LAND USE & PLANNING

Environmental Issue Areas Examined	Potentially Significant Impact	Less Than Significant Impact With Mitigation	Less Than Significant Impact	No Impact
A. Would the project physically divide an established community?				✖
B. Would the project cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?				✖

ANALYSIS OF ENVIRONMENTAL IMPACTS

A. Would the project physically divide an established community? ● No Impact.

This current amendment would expand the Specific Plan Area to include a 9.98-acre property located on the southeast corner of Heacock Street and Ironwood Avenue. This added area will be referred to as the expanded *Planning Area 1*. This Planning Area 1 is currently undeveloped though it has been rough graded and disked for maintenance and fire mitigation. For purposes of analysis, the expanded Planning Area's potential development has been assumed to be a 220,390 square foot light industrial building. The expanded Planning Area 1 is located in the midst of an urbanized area and is surrounding on all sides by urban development. The land uses and development that surround the larger Specific Plan Planning Area are outlined below:

- *North of the Plan Amendment Area 1.* Ironwood Avenue extends along the north side of the expanded Planning Area 1. Single-family residential units are located further north, along the north side of Ironwood Avenue opposite the Planning Area.[77]

- *South of the Plan Amendment Area 1.* A recently constructed concrete tilt-up building occupies Planning Area 3 located to the south of the expanded Planning Area 1.[78]

- *East of the Plan Amendment Area 1.* A recently constructed concrete tilt-up building occupies the easterly portion of the larger Planning Area 1..[79]

- *West of the Plan Amendment Area 1.* Heacock Street abuts the expanded Planning Area 1 to the west.[80]

The development contemplated under the Moreno Valley Festival Specific Plan Amendment Number 2 will not divide or disrupt an established community since all of the development envisioned under the Specific Plan will be contained within the Planning Area. In addition, the adoption and subsequent implementation of the Specific Plan will not result in incompatible land uses. The Specific Plan contains provisions for

[77] Blodgett Baylosis Environmental Planning. *Site survey*. Survey was conducted on August 9, 2017.

[78] Ibid.

[79] Ibid.

[80] Ibid.

buffers between industrial warehousing/business park type uses and the adjacent single-family units. These buffers will also provide separation between potential residential units and potential industrial uses. Landscaping (also serving as on-site BMPs), block walls, and adequate setbacks are examples of buffers that will maintain stability between the various existing uses and those that are proposed under the Specific Plan. As a result, no impacts will result.

B. Would the project conflict with an applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including but not limited to, a general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect? ● No Impact.

The original SP-205 designated the expanded Planning Area 1 as *Regional Commercial*. This Second Amendment is now designating this area as *Mix of Uses*. The types of uses permitted, conditionally permitted, and prohibited under the Specific Plan are summarized herein in Table 2-2, included in Section 2. The proposed Plan Amendment Number 2's implementation will require the following land use-related discretionary actions:

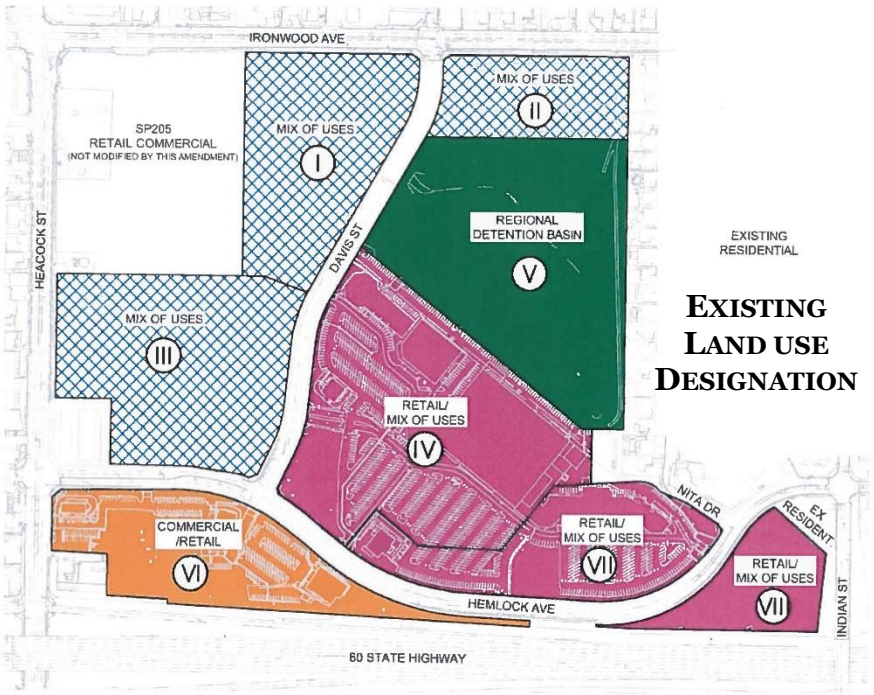
- The adoption of a General Plan Amendment (GPA) to the City of Moreno Valley General Plan to change the land use designation from *Commercial* to *Business Park;*
- The adoption of a Zone Change to the City of Moreno Valley Zoning Ordinance to change the land use designation from SP205 *Regional Commercial* to SP205 *Mix of Uses*; and,
- The adoption of the Moreno Valley Festival Specific Plan Amendment Number 2 to change the land use designation from *Regional Commercial* to *Mix of Uses*.

As indicated above, the current SP-205 land use applicable for the expanded Planning Area 1 is *Regional Commercial*. The proposed Amendment Number 2 would change the land use designation to *Mix of Uses* which allows for a wide range of land uses indicated in Table 2-2. The existing and proposed land use designations for the expanded Planning Area No. 1 is illustrated in Exhibit 3-7. The Moreno Valley Festival Specific Plan Amendment Number 2 would be adopted pursuant to Government Code Section 65450 which grants authority to cities to adopt or amend specific plans for purposes of implementing the goals and policies of their General Plans. The Government Code sets forth the minimum requirements and review procedures for specific plans including the provision of a land use plan, infrastructure and public services plan, criteria and standards for development, and implementation measures.[81] The proposed Specific Plan Amendment Number 2 would permit a comparable range in land uses and development types compared to that previously anticipated under the original SP-205. As a result, no impacts will result from the Plan Amendment's adoption and implementation.

MITIGATION MEASURES

The adoption and subsequent implementation of the Moreno Valley Festival Specific Plan will not lead to any impacts not already identified in the original certified EIR that was prepared for the City of Moreno Valley General Plan. As a result, no additional mitigation beyond that which may be required for individual projects is required.

[81] Blodgett Baylosis Environmental Planning. *Site survey*. Survey was conducted on August 9, 2017.



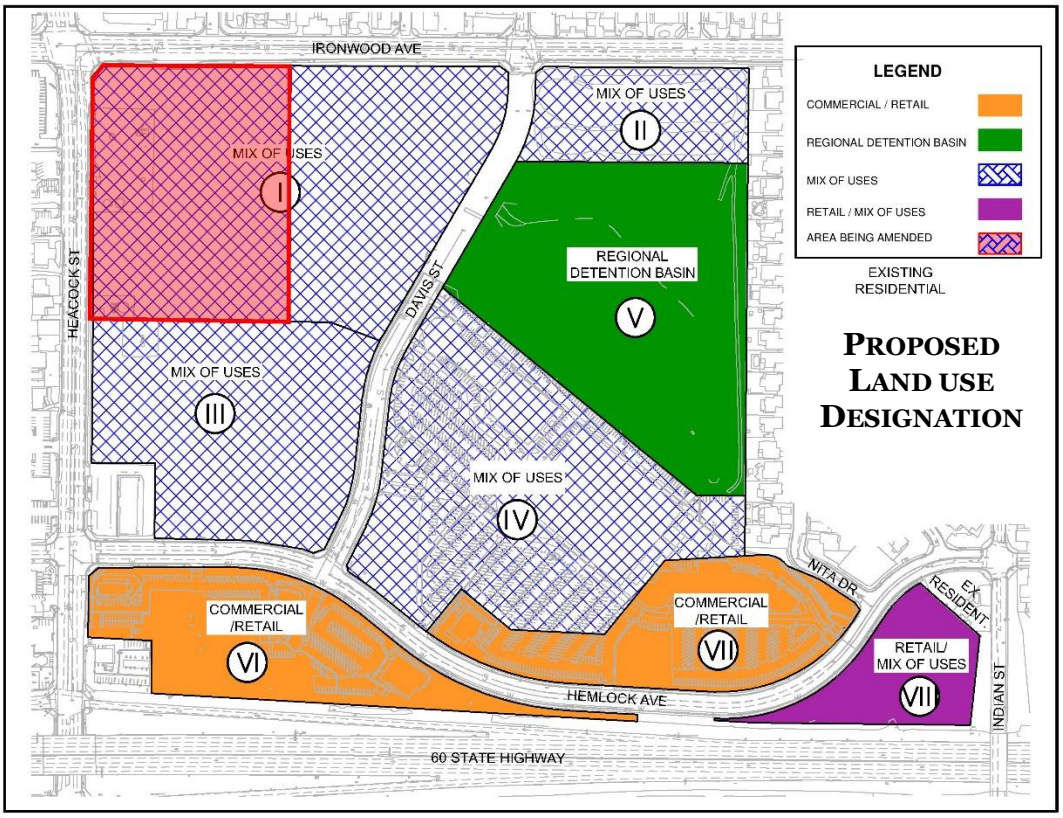


EXHIBIT 3-7
EXISTING AND PROPOSED LAND USE DESIGNATIONS

3.12 MINERAL RESOURCES

Environmental Issue Areas Examined	Potentially Significant Impact	Less Than Significant Impact With Mitigation	Less Than Significant Impact	No Impact
A. Would the project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the State?				✖
B. Would the project result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?				✖

ANALYSIS OF ENVIRONMENTAL IMPACTS

A. Would the project result in the loss of availability of a known mineral resource that would be of value to the region and the residents or the state? ● No Impact.

The expanded Planning Area 1 is not located in a Significant Mineral Aggregate Resource Area (SMARA) nor is it located in an area with active mineral extraction activities. In addition, according to the SMARA study area maps prepared by the California Geological Survey, the City of Moreno Valley is located within the larger San Bernardino SMARA.[82] However, as indicated in the San Bernardino P-C region map, the Planning Area is not located in an area where there are significant aggregate resources present.[83] A review of California Division of Oil, Gas, and Geothermal Resources (DOGGR) well finder indicates that there are no wells located within the Planning Area.[84] The nearest well is located approximately five miles to the northeast along the northeast side of Highland Boulevard in the City of Moreno Valley.[85] This well is presently plugged and abandoned.[86] Since there are no active oil or mineral resource extraction operations present within the Planning Area, no impacts to these resources will occur.

B. Would the project result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan? ● No Impact.

A review of the San Bernardino P-C region map indicated that the Planning Area is not located in a location that contains aggregate extraction operations.[87] Therefore, the project's implementation will not contribute to a loss of availability to locally important mineral resources. Furthermore, the resources and materials

[82] California Department of Conservation. *Southern San Bernardino Production-Consumption (P-C) Region, San Bernardino and Riverside Counties, California.* http://www.conservation.ca.gov/smgb/Misc/Documents/SanBernPlates.pdf (NOTE: The Planning Area is located within the Sunnymead Quadrangle).

[87] Ibid.

that will be utilized for the construction of the proposed project will not include any materials that are considered rare or unique. Thus, no impacts will result with the implementation of the Specific Plan.

MITIGATION MEASURES

The adoption and subsequent implementation of the Moreno Valley Festival Specific Plan Amendment No. 2 will not lead to any impacts not already identified in the certified EIR that was prepared for the City of Moreno Valley General Plan. As a result, no additional mitigation beyond that which may be required for individual development projects is required.

3.13 NOISE

Environmental Issue Areas Examined	Potentially Significant Impact	Less Than Significant Impact With Mitigation	Less Than Significant Impact	No Impact
A. Would the project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?			✖	
B. Would the project result in generation of excessive groundborne vibration or groundborne noise levels?			✖	
C. For a project located within the vicinity of a private airstrip or an airport land use plan, or where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?				✖

ANALYSIS OF ENVIRONMENTAL IMPACTS

A. Would the project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies? ● Less than Significant Impact.

Noise levels may be described using a number of methods designed to evaluate the "loudness" of a particular noise. The most commonly used unit for measuring the level of sound is the decibel (dB). Zero on the decibel scale represents the lowest limit of sound that can be heard by humans. The eardrum may rupture at 140 dB. In general, an increase of between 3.0 dB and 5.0 dB is the ambient noise level that is considered to represent the threshold for human sensitivity. In other words, increases in ambient noise levels of 3.0 dB or less are not generally perceptible to persons with average hearing abilities.

The current noise environment within the area surrounding the Planning Area is dominated by traffic noise emanating from Ironwood Avenue, Heacock Street, Hemlock Avenue, and the Moreno Valley Freeway. A *Sper Scientific* Digital Sound Meter was used to conduct the noise measurements. A series of 100 discrete noise measurements were recorded and the results of the survey are summarized in Table 3-4. Three measurement locations were utilized (refer to Exhibit 3-8). These measurements were taken on a Monday morning at 10:15. Table 3-4 indicates the variation in noise levels over time during the measurement period.[88] As indicated previously, the L_{50} noise level represents the noise level that is exceeded 50% of the time. Half the time the noise level exceeds this level and half the time the noise level is less than this level. The average noise levels during the measurement periods were 57.3 dBA for location 1, 47.7 dBA location 2, and 60.7 dBA for location 3.

[88] Bugliarello, et. al., *The Impact of Noise Pollution,* Chapter 127, 1975.

Table 3-4
Noise Measurement Results

Noise Metric	Noise Level (dBA) Davis Street Terminus – Location 1	Noise Level (dBA) Nita Drive – Location 2	Noise Level (dBA) Heacock Street – Location 3
L_{50} (Noise levels <50% of time)	57.3 dBA	45.9 dBA	61.3 dBA
L_{75} (Noise levels <75% of time)	58.2 dBA	51.7 dBA	67.4 dBA
L_{90} (Noise levels <90% of time)	59.0 dBA	55.1 dBA	71.3 dBA
L_{99} (Noise levels <99% of time)	61.5 dBA	59.1 dBA	76.4 dBA
L_{min} (Minimum Noise Level)	54.3 dBA	40.8 dBA	48.6 dBA
L_{max} (Maximum Noise Level)	62.4 dBA	62.0 dBA	77.7 dBA
Average Noise Level	57.3 dBA	47.7 dBA	60.7 dBA

Source: Blodgett Baylosis Environmental Planning.

Title 11, Chapter 11.80 Noise Regulation, Table 11.80.030-2 illustrates the maximum permitted noise levels established for commercial and residential uses. According to the Table, the maximum permitted noise levels for commercial uses are 65 dBA during the day-time and 60 dBA during the evening hours. For residential, the maximum permitted noise levels are 60 dBA for day-time hours and 55 dBA for evening hours. As indicated previously, the areas adjacent to the surrounding roadways are subject to the highest noise levels, with an average noise reading of 60.7 dBA. Noise sensitive land uses consisting of single-family residential is located north of the Planning Area along the north side of Ironwood Avenue and west of the Planning Area along the west side of Heacock Street.

The types of industrial uses permitted under the Specific Plan consist of business park and warehouse type uses. These uses generally produce noise from roll-up doors, back up alarms, forklift equipment, etc. Operational noise will be sufficiently mitigated by the inclusion of block walls, adequate setbacks, and landscaping. If buildings are situated in a manner that directs operational noise away from sensitive receptors, this noise will be attenuated by the building itself.

As indicated in the previous section, a change in traffic noise levels of between 3.0 dBA and 5.0 dBA is generally considered to be the limit where the change in the ambient noise levels may be perceived by persons with normal hearing. It typically requires a doubling of traffic volumes to register a perceptible change (increase) in traffic noise). The proposed project is anticipated to generate approximately 88 AM peak hour trips, and 93 PM peak hour trips. The proposed project's traffic generation will not result in a doubling of traffic volumes. Finally, the loading docks and activity areas will be located away from the residential uses located on the north side of Ironwood Avenue. In addition, the proposed uses will be required to comply with the City of Moreno Valley Noise Control Ordinance. All of the activities will be enclosed within the new building. In addition, new landscaping will attenuate noise from the parking area. As a result, the potential impacts are considered to be less than significant.

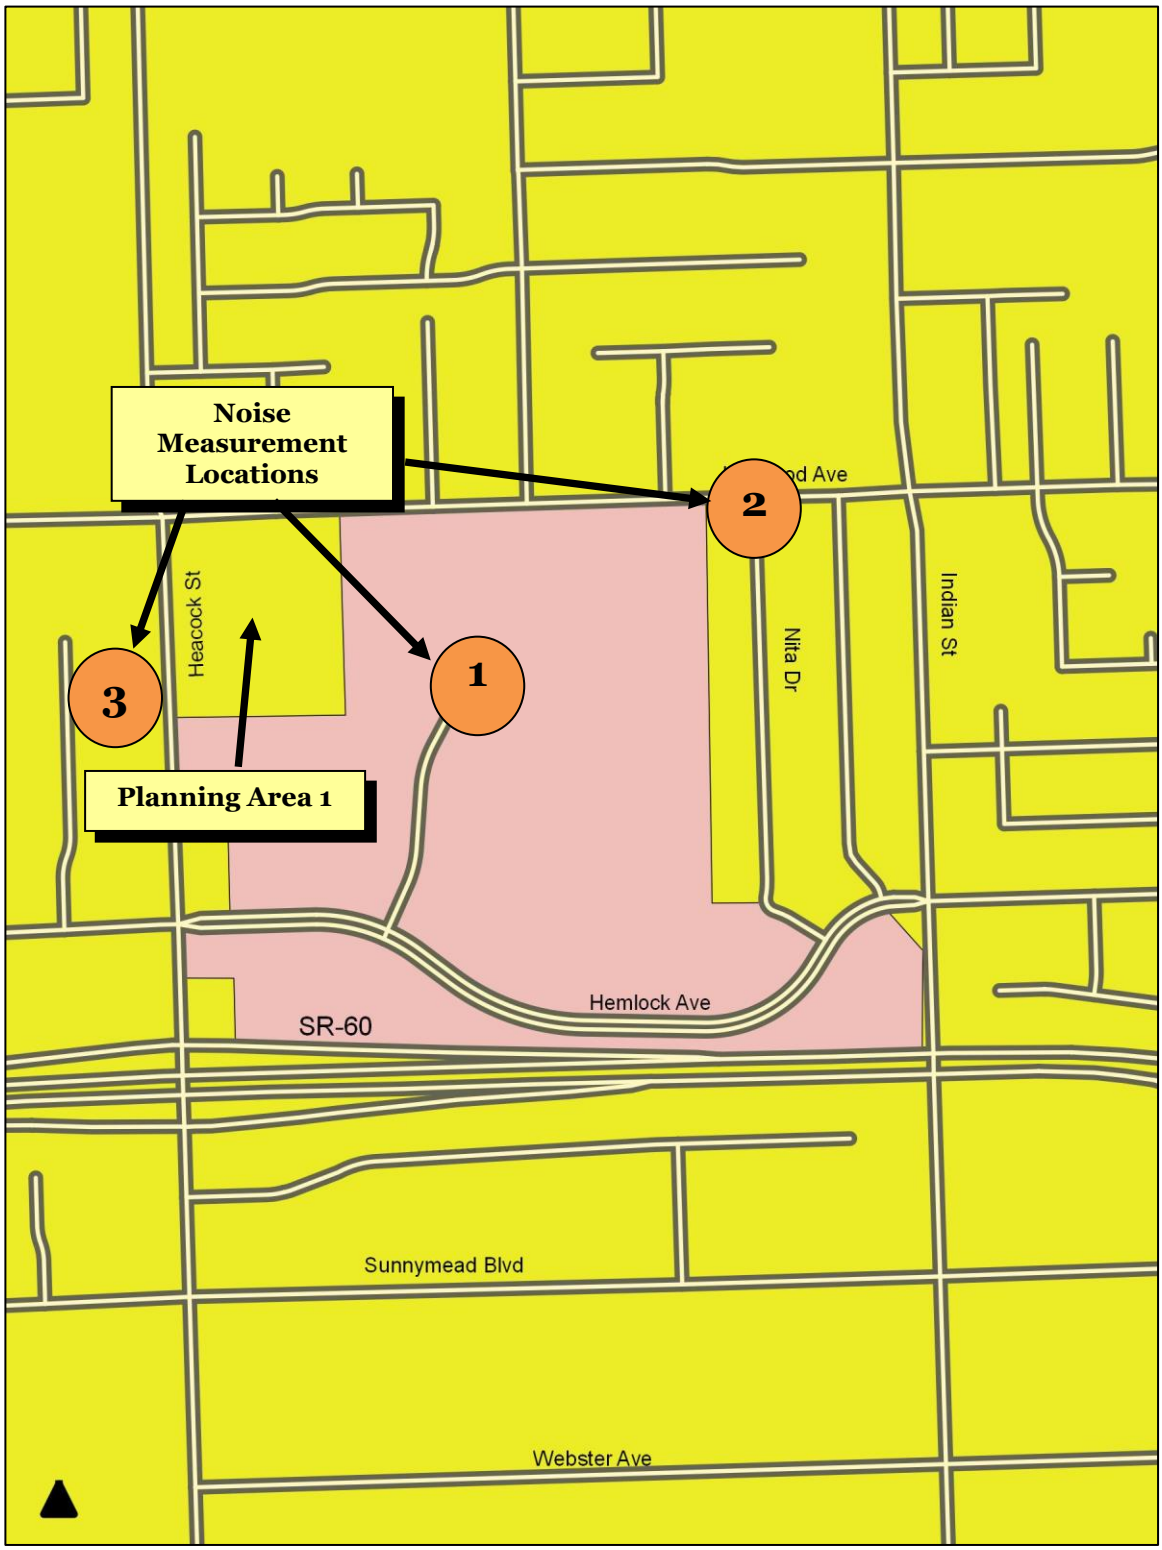

EXHIBIT 3-8
NOISE MEASUREMENT LOCATIONS
Source: Quantum GIS

B. Would the project result in exposure of people to or generation of excessive ground-borne noise levels?
● Less than Significant Impact with Mitigation.

The current noise environment within the Planning Area is dominated by traffic noise emanating from the SR-60 freeway, nearby arterial roadways, and the adjacent uses. Any future development will be required to adhere to the City's noise control requirements. Once operational, future development permitted under the Specific Plan will not generate excessive ground-borne noise because the individual projects will not require the use of equipment capable of creating ground-borne noise (the types of industrial uses that are preferred include warehousing and business park). Future sources of noise will include roadway noise as well as operational noise from the future use. Roadway noise is estimated in the previous subsection. The inclusion of landscape buffers, decorative concrete walls, setbacks, and mitigation including the use of silent alarms will be effective in further reducing potential noise impacts. As a result, the potential impacts are considered to be less than significant.

A change in traffic noise levels of between 3.0 dBA and 5.0 dBA is generally considered to be the limit where the change in the ambient noise levels may be perceived by persons with normal hearing. This requires a doubling of traffic volumes along the adjacent roadways. The implementation of the Planning Area 1 amendment would result in approximately 2,740 net daily trips with 88 net trips in the PM peak hour and 93 net trips during the PM peak hour. The streetscape plan, building design, and other development standards will be effective in attenuating any increased traffic noise. In addition, the future land uses and development will be required to comply with the City's noise control requirements as well as with the mitigation identified in the previous subsection. Adherence to all applicable City noise control requirements will reduce potential impacts to levels that are less than significant.

Composite construction noise is best characterized by Bolt, Beranek, and Newman.[89] In this study, the noisiest phases of construction for non-residential development is presented as 89 dBA as measured at a distance of 50 feet from the construction effort. In later phases during building erection, noise levels are typically reduced from these values and the physical structures further break up line-of-sight noise. However, as a worst-case scenario the 89 dBA value was used as an average noise level for the construction effort. The construction noise levels will decline as one moves away from the noise source. This effect is known as *spreading loss*. In general, the noise level adjustment that takes the spreading loss into account calls for a 6.0 dBA reduction for every doubling of the distance beginning with the initial 50-foot distance.

As indicated previously, there are noise sensitive land uses (single-family residential) located north of the Planning Area along the north side of Ironwood Avenue and west of the Planning Area along the west side of Heacock Street. Due to the presence of the aforementioned sensitive receptors, the following mitigation will be required for all future construction undertaken within the Planning Area:

- The Applicant shall ensure that the contractors conduct demolition and construction activities between the hours of 7:00 AM and 6:00 PM on weekdays and 9:00 AM to 12:00 PM on Saturdays, with no construction permitted on Sundays or Federal holidays.

- The Applicant shall ensure that the contractors use construction equipment that includes working mufflers and other sound suppression equipment as a means to reduce machinery noise.

[89] USEPA, Protective Noise Levels. 1971

- Signs must be installed around the perimeter of the Planning Area that display the name and phone number of the local contact person residents may call to complain about noise. Upon receipt of a complaint, the contractor must respond immediately by reducing noise to meet Code requirements. In addition, copies of all complaints and subsequent communication between the affected residents and contractors must be forwarded to the City's Community Development Department.

- Construction vehicles will be prohibited from traveling along Ironwood Avenue. This mitigation is designed to minimize the number of residential units that may be exposed to noise and vibration.

- The use of any such equipment which is capable of causing ground shaking is not permitted without prior written approval from the Public Works Director, or designee. If ground shaking vibratory equipment is requested and approved, the Contractor is responsible for making any repairs or replacements to facilities damaged due to nearby soils settling or other impacts of vibrating. The Contractor must install vibratory monitoring equipment to monitor for any settlement/damage caused.

- Construction staging must occur over 200 feet from the nearest residential use. The location of staging and queuing areas will be subject to the approval of the Community Development Department prior to the issuance of any building or grading permit.

Adherence to the aforementioned mitigation will reduce potential impacts to levels that are less than significant.

C. *For a project located within the vicinity of a private airstrip or- an airport land use plan, or where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels? ● No Impact.*

The Planning Area is not located within two miles of an operational public airport. The March Air Reserve Base is the closest airport to the Planning Area. This airport is located 2.90 miles southwest of the Planning Area. In addition, the Riverside Municipal Airport is located in the City of Riverside approximately 12 miles to the west of the Planning Area. According to the Land Use Compatibility Plan that was prepared for the March Air Reserve Base, the planning area is not located within the 65, 60, or 55 CNEL boundaries and no impacts will occur.[90] Therefore, the development envisioned under the Specific Plan will not be exposed to noise generated by the approach and take-off of aircraft utilizing the aforementioned airports. As a result, no impacts are anticipated.

MITIGATION MEASURES

The following mitigation will be effective in reducing potential impacts in regards to construction noise:

Mitigation Measure No. 22 (Noise Impacts). The Applicant shall ensure that the contractors conduct demolition and construction activities between the hours of 7:00 AM and 6:00 PM on weekdays and 9:00 AM to 12:00 PM on Saturdays, with no construction permitted on Sundays or Federal holidays.

[90] Riverside County Airport Land Use Commission. *Riverside Municipal Airport Land Use Compatibility Plan*. Adopted March 2005.

Mitigation Measure No. 23 (Noise Impacts). The Applicant shall ensure that the contractors use construction equipment that includes working mufflers and other sound suppression equipment as a means to reduce machinery noise.

Mitigation Measure No. 24 (Noise Impacts). Signs must be installed around the perimeter of the Planning Area that display the name and phone number of the local contact person residents may call to complain about noise. Upon receipt of a complaint, the contractor must respond immediately by reducing noise to meet Code requirements. In addition, copies of all complaints and subsequent communication between the affected residents and contractors must be forwarded to the City's Community Development Department.

Mitigation Measure No. 25 (Noise Impacts). The use of any such equipment which is capable of causing ground shaking is not permitted without prior written approval from the Public Works Director, or designee. If ground shaking vibratory equipment is requested and approved, the Contractor is responsible for making any repairs or replacements to facilities damaged due to nearby soils settling or other impacts of vibrating. The Contractor must install vibratory monitoring equipment to monitor for any settlement/damage caused.

Mitigation Measure No. 26 (Noise Impacts). Construction staging must occur over 200 feet from the nearest residential use. The location of staging and queuing areas will be subject to the approval of the Community Development Department prior to the issuance of any building or grading permit.

3.14 POPULATION & HOUSING

Environmental Issue Areas Examined	Potentially Significant Impact	Less Than Significant Impact With Mitigation	Less Than Significant Impact	No Impact
A. Would the project induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?				✖
B. Would the project displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?				✖

ANALYSIS OF ENVIRONMENTAL IMPACTS

A. Would the project induce substantial population growth in an area, either directly or indirectly (e.g., through projects in an undeveloped area or extension of major infrastructure)? ● No Impact.

This current amendment would expand the Specific Plan Area to include a 9.98-acre property located on the southeast corner of Heacock Street and Ironwood Avenue. This added area will be referred to as the expanded *Planning Area 1*. The Specific Plan is being amended to allow for the development of a 220,390 square foot light industrial building. The Planning Area is located in the midst of an urbanized area and is surrounded on all sides urban development. The adoption and subsequent implementation of the proposed amendment to the expanded Planning Area 1 will not lead to any impacts not already identified in the certified EIR that was prepared for the City of Moreno Valley General Plan.[91] The Specific Plan Amendment does not envision any residential at this time. As a result, no additional mitigation beyond that which may be required for individual development projects is required and no impacts will result.

B. Would the project displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere? ● No Impact.

There are no housing units located within the Planning Area. Much of the Planning Area is now undergoing development as non-residential land uses. As a result, no impacts will occur.

MITIGATION MEASURES

The adoption and subsequent implementation of the Moreno Valley Festival Specific Plan will not lead to any impacts not already identified in the certified EIR that was prepared for the City of Moreno Valley General Plan. As a result, no additional mitigation beyond that which may be required for individual development projects is required.

[91] P and D Consultants. *Final Environmental Impact Report - City of Moreno Valley General Plan SCH# 200091075*. Report dated July 2006.

3.15 PUBLIC SERVICES

Environmental Issue Areas Examined	Potentially Significant Impact	Less Than Significant Impact With Mitigation	Less Than Significant Impact	No Impact
A. Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which would cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for: fire protection; police protection; schools; parks; or other public facilities?			✖	

ANALYSIS OF ENVIRONMENTAL IMPACTS

A. *Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which would cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for: fire protection; police protection; schools; parks; or other public facilities?● Less than Significant Impact.*

This current amendment would expand the Specific Plan Area to include a 9.98-acre property located on the southeast corner of Heacock Street and Ironwood Avenue. This added area will be referred to as the expanded *Planning Area 1*. The Specific Plan is being amended to allow for the development of a 220,390 square foot light industrial building.

Fire Protection Services

Moreno Valley contracts with the Riverside County Fire Department for fire protection and emergency services. Fire Operations is the largest division within the Moreno Valley Fire Department, consisting of 72 sworn staff and two non-sworn staff as of December 2011. The City of Moreno Valley has seven fire stations. The closest first response station to the Planning Area is the Sunnymead Station located 0.43 mile to the east at 24935 Hemlock Avenue. This station as well as other public facilities including schools, parks, and the City's Police Station are shown in Exhibit 3-9.

The retail, retail/mix of uses, and mix of uses once occupied, will be periodically inspected by the Moreno Valley Fire Department. In addition, the Fire Department will review the development plans to ascertain the nature and extent of any additional measures that may be required to meet any Fire Code requirements. The Fire Department currently reviews all new development plans, and future development will be required to conform to all fire protection and prevention requirements, including, but not limited to, building setbacks, emergency access, fire hydrants, interior sprinklers, et cetera. As individual projects are proposed, the Applicants will be responsible for paying all pertinent Fire Department fees and impact fees. As a result, the potential impacts are considered to be less than significant.

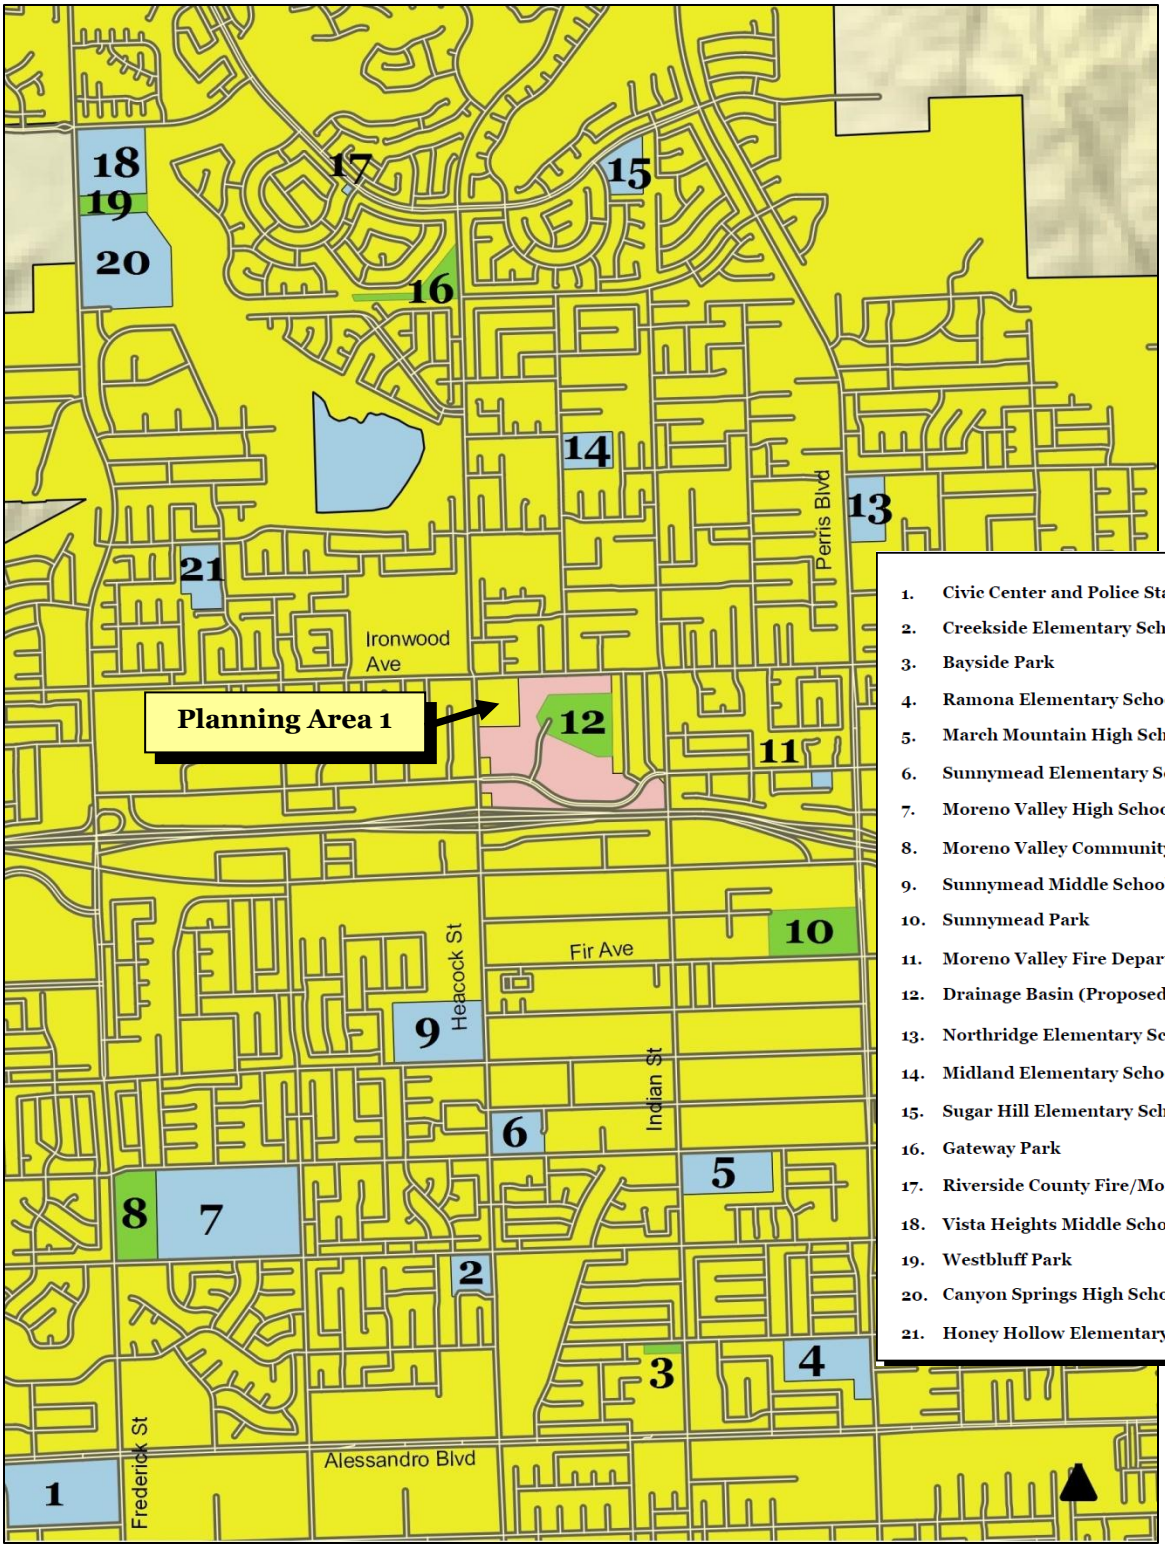

EXHIBIT 3-9
PUBLIC FACILITIES MAP
Source: City of Moreno Valley

Law Enforcement Services

Law enforcement services in Moreno Valley are provided by the Moreno Valley Police Department, a local branch of the Riverside County Sherriff's Department. The Moreno Valley Police Station is located 2.27 miles to the southwest at 22850 Calle San Juan De Dos Lagos. The Moreno Valley Police Department (MVPD) has 162 sworn officers who provide field services in the City. The current officer to population ratio for MVPD is 0.9 officers per 1,000 residents. The average total response time for the period of January 01 to December 31, 2004, was over seven minutes for Priority 1 or emergency calls. As individual development is proposed, the Moreno Valley Police Department will review all development applications to ensure conformity with department requirements. The Moreno Valley General Plan calls for the need to establish defensible space. Defensible space permits the identification of suspicious occurrences or persons, in part by increasing visibility and recognition by neighbors. Where a space is defensible, it is evident to a potential criminal that a crime could be observed and the criminal easily apprehended. Good lighting is a key ingredient of defensible space. The Specific Plan identifies several key policies designed to promote maximum visibility at all hours of the day. These policies are consistent with the General Plan's goal of reducing property crime through the inclusion of defensible space. The following policies outlined in the Specific Plan will be effective in promoting exterior visibility:

- Onsite lighting includes lighting for parking areas, vehicular and pedestrian circulation, building exteriors, service areas, landscaping, security, and special effects.
- Wall-mounted utility lights that cause off-site glare are not permitted. "Shoebox" lights are preferred.
- Parking lot light fixtures shall comply with guidelines provided by owner assigned design review agent.
- Small scale walkway or building entry lighting is encouraged for safety and aesthetic purposes.[92]

The Specific Plan also mandates the inclusion of security cameras. According to the Specific Plan, the location, appearance, and installation of exterior security cameras must be integrated with the architecture. Cameras should be mounted in the following locations:

- Cameras mounted on poles in parking lot (preferred)
- Cameras suspended from soffits (second choice)
- Cameras mounted on building walls with the top of the camera below the top of the parapet (third choice).[93]

Adherence to the policies dictated in the Specific Plan and the recommendations made by the Moreno Valley Police Department will reduce impacts to levels that are less than significant.

[92] National Engineering Consultants. *Amendment to Specific Plan 205*. Draft dated December 29th, 2015.

[93] Ibid.

School Services.

The Planning Area is located within the service boundaries of the Moreno Valley Unified School District and is served by the following schools:

- Midland Elementary School, located 0.52 miles north of the site at 11440 Davis Street;
- Pal Middle School, located 1.41 miles east of the site at 11900 Slawson Avenue; and,
- Canyon Springs High School, located 1.40 miles northwest of the site at 23100 Cougar Canyon Road.

Any additional students indirectly associated with the future development will be accommodated by the aforementioned school district. In order to maintain acceptable student-teacher ratios and class sizes, developers must pay the following developer impact school fees: 60 cents per square foot.[94] As individual projects are proposed, the developers will be required to pay the above-mentioned development impact fees. These fees will generate revenue needed to expand and construct new facilities as well as hire additional staff members. As a result, the following impacts are considered to be less than significant.

Other Governmental Services.

The development envisioned under the Plan is consistent with the growth projections developed for the City by the Southern California Association Governments (SCAG). In addition, any impacts to other governmental services such as libraries, parks, and recreation may be partially offset by the increase in the taxes and an increase in the assessed valuation of the property. As a result, no additional mitigation beyond that which may be required for individual development projects is required. Therefore, the potential impacts are considered to be less than significant.

MITIGATION MEASURES

The adoption and subsequent implementation of the Moreno Valley Festival Specific Plan will not lead to any impacts not already identified in the certified EIR that was prepared for the City of Moreno Valley General Plan. As a result, no additional mitigation beyond that which may be required for individual development projects is required.

[94] Moreno Valley Unified School District. *Developer Impact School Fees*. https://www.mvusd.net/apps/pages/index.jsp?uREC_ID=786774&type=d&pREC_ID=1181763

3.16 RECREATION

Environmental Issue Areas Examined	Potentially Significant Impact	Less Than Significant Impact With Mitigation	Less Than Significant Impact	No Impact
A. Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?			✖	
B. Would the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?			✖	

ANALYSIS OF ENVIRONMENTAL IMPACTS

A. *Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated? ● Less than Significant Impact.*

This current amendment would expand the Specific Plan Area to include a 9.98-acre property located on the southeast corner of Heacock Street and Ironwood Avenue. This added area will be referred to as the expanded *Planning Area 1*. The Specific Plan is being amended to allow for the development of a 220,390 square foot light industrial building. The City of Moreno Valley Parks and Community Services Department operates 40 parks and/or joint-use facilities (531.66 maintained acres) and includes a 9-hole executive golf course, 23 multi-use sports fields, 11 tennis courts, nine basketball courts, 28 play apparatus, and three recreation centers. The adoption and subsequent implementation of the Moreno Valley Festival Specific Plan may lead to an incremental increase in the use of City park and recreational facilities. As individual development is proposed, the future Applicants will be required to pay all pertinent impact fees pursuant to Section 3.40.010 of the City's Municipal Code. The payment of in-lieu fees will ease the burden placed onto the City's park facilities. As a result, the potential impacts are expected to be less than significant.

B. *Would the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?● Less than Significant Impact.*

There are no existing recreational facilities located within the Planning Area. The closest park to the Planning Area is Sunnymead Park, located 0.44 miles to the southeast along the north side of Fir Avenue.[95] The development envisioned under the Specific Plan and within the expanded Planning Area 1 will not affect any recreational facilities directly. As stated previously, future project Applicants will be required to pay all pertinent impact fees. Thus, the potential impacts are considered to be less than significant.

[95] Google Maps. Site accessed August 28, 2017.

MITIGATION MEASURES

The adoption and subsequent implementation of the Moreno Valley Festival Specific Plan will not lead to any impacts not already identified in the certified EIR that was prepared for the City of Moreno Valley General Plan. As a result, no additional mitigation beyond that which may be required for individual development projects is required.

3.17 TRANSPORTATION

Environmental Issue Areas Examined	Potentially Significant Impact	Less Than Significant Impact with Mitigation	Less Than Significant Impact	No Impact
A. Would the project conflict with a plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?		✖		
B. Conflict or be inconsistent with CEQA Guidelines §15064.3 subdivision (b)?			✖	
C. Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?			✖	
D. Would the project result in inadequate emergency access?				✖

ANALYSIS OF ENVIRONMENTAL IMPACTS

A. Would the project conflict with a plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities? ● Less than Significant Impact with Mitigation.

This current amendment would expand the Specific Plan Area to include a 9.98-acre property located on the southeast corner of Heacock Street and Ironwood Avenue. This added area will be referred to as the expanded *Planning Area 1*. The Specific Plan is being amended to allow for the development of a 220,390 square foot light industrial building. Weekday daily, AM and PM peak hour trip generation estimates for the proposed project were developed using trip rates provided in the *Institute of Transportation Engineers (ITE) Trip Generation, 10th Edition, 2017*. Summaries of the trip generation rates and resulting vehicle trips for the proposed project are presented in Table 3-5.

Table 3-5
Proposed Project Trip Generation

	LU	Units	Daily	AM Peak Hour			PM Peak Hour		
				In	Out	Total	In	Out	Total
Trip Rates									
Business Park	Code 770	TSF	12.44	0.24	0.16	0.40	0.19	0.23	0.42
Project Trip Generation									
Planning Area 1									
Business Park	220.239	TSF	2,740	53	35	88	42	51	93

Note: TSF = Thousand Square Feet

As indicated in Table 3-5, the new development envisioned for the expanded Planning Area 1 will potentially result in 2,740 daily trips, 88 morning (AM) peak hour trips, and 93 evening (PM) peak hour trips.

The proposed project land use was screened to determine the need for a VMT analysis based on the procedure in the *City of Moreno Valley Traffic Impact Analysis Guidelines*, June 2020 (TIA Guidelines). The project is not located in a transit priority area (TPA) or low VMT area. The project type screening analysis shows:

- *Retail Use* – The proposed project provides local serving retail. The increase in retail use as a result of the proposed project is 48,021 square-feet. The TIA Guidelines state that local serving retail less than 50,000 square-feet would have a less than significant VMT impact.

- *Hotel Use* – The proposed project provides a local serving hotel. The TIA Guidelines state that local serving hotels would have a less than significant VMT impact.

The proposed project industrial land use would not meet the screening criteria; therefore, a VMT assessment for non-screened industrial development was conducted. The TIA Guidelines have the following CEQA VMT impact thresholds:

- An industrial project would have a significant VMT impact if, in the Existing Plus Project scenario, its net VMT per employee exceeds the City's VMT per employee.

- If a project is consistent with the Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS), then the cumulative impacts shall be considered less than significant.

A specific plan was completed for the proposed project and is considered consistent with the RTP/SCS; therefore, the cumulative VMT impacts are considered less than significant. The VMT assessment for the industrial park land use was based on the RIVTAM/RIVCOM model used to complete the January 2018 TIA for the proposed project. The model was last updated on December 12, 2017 and runs on *TransCAD 5.0 r2 Build 1640*. Table 3-6 provides a summary of the model inputs and outputs as well as the resulting VMT.

Table 3-6
Comparison of Proposed Project and City of Moreno Valley Employees and VMT

	Employees	VMT	VMT per Employee
Proposed Project (Industrial Park)	620[1]	19,282	31.1
City of Moreno Valley	29,064	4,494,865	154.7

1. Employees were estimated using the ratio of trips per square-feet and trips per employees from the Institute of Transportation Engineers (ITE) *Trip Generation Manual*, 10th Edition.

Table 3-6 shows that the proposed project 31.1 VMT per employee is less than the City's 154.7 VMT per employee. The VMT analysis presents shows that the proposed project would have a less than significant VMT impact. No additional mitigation would be required beyond those proposed as part of the January 2018 TIA.

B. Conflict or be inconsistent with CEQA Guidelines §15064.3 subdivision (b)? ● Less than Significant Impact.

The Congestion Management Program (CMP) was first established in 1990 under Proposition 111. Proposition 111 established a process for each metropolitan county in California to designate a Congestion Management Agency (CMA) that would be responsible for development and implementation of the CMP within county boundaries. The Riverside County Transportation Commission (RCTC) was designated as the CMA in 1990, and therefore, prepares the CMP updates in consultation with the Technical Advisory Committee (TAC), which consists of local agencies, the County of Riverside, transit agencies, and sub regional agencies.

The intent of the CMP is to more directly link land use, transportation, and air quality, thereby prompting reasonable growth management programs that will effectively utilize new transportation funds, alleviate traffic congestion and related impacts, and improve air quality. Counties within California have developed CMPs with varying methods and strategies to meet the intent of the CMP legislation. The Riverside County CMP was significantly modified in 1997 to focus on federal Congestion Management System (CMS) requirements as well as incorporate elements of the State CMP requirements. The 1997 CMP also focused on development of an Enhanced Traffic Monitoring System in which real-time traffic count data can be accessed by RCTC to evaluate the condition of the CMS, as well as meet other monitoring requirements at the state and federal levels. This monitoring effort was completed in 2004, which consisted of installing Smart Call Boxes (traffic counters in Call Box equipment) and traffic counters at Caltrans' Traffic Management Center (TMC) sites along the state highway system. Monitoring of the CMP system on local arterials will continue to occur through the Coachella Valley Association of Governments' (CVAG) monitoring program and through local agency monitoring efforts in Western Riverside County. RCTC's adopted minimum Level of Service (LOS) threshold is LOS "E". Therefore, when a CMP street or highway segment falls to "F", a deficiency plan must be required. Preparation of a deficiency plan will be the responsibility of the local agency where the deficiency is located. Other agencies identified as contributors to the deficiency will also be required to coordinate with the development of the plan. The plan must contain mitigation measures, including consideration of Transportation Demand Management (TDM) strategies and transit alternatives, and a schedule for mitigating the deficiency.[96] A list of CMP arterials and highways is presented in Table 2-1 of the 2011 Riverside County Congestion Management Program.[97] According to the Traffic Study that was prepared for the entire Specific Plan project, the future development would not affect any CMP monitored arterial or highway to the extent that would require the completion of a deficiency plan.[98] As a result, the potential impacts will be less than significant.

C. Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?● No Impact.

The development contemplated under the Moreno Valley Festival Specific Plan for the expanded Planning Area 1 will not result in a change or disturbance the traffic geometrics of the surrounding roadways. The mitigation provided for the original Specific Plan will improve intersection performance and safety. This mitigation will also improve site access. Trucks travelling to and from the project site will not travel down

[96] Riverside County Transportation Commission. *2011 Riverside County Congestion Management Program*. Report dated December 14, 2011.

[97] Ibid.

[98] Transpogroup. *Draft Traffic Impact Analysis – Festival at Moreno Valley*. Report dated December 2017.

local residential streets. All trucks will be required to use existing truck routes. The Specific Plan Amendment contains minimum distance requirements for street trees and landscaping. These distance requirements will ensure that no trees obstruct the line-of-sight between a driveway and the adjacent roadways. Trees will be planted on each side of the street within the 12 foot parkway. Examples of the requirements include the following:

- All trees shall be planted at least 10 feet from sidewalks and driveways; and,

- A minimum of 25 feet shall be allowed from any street intersection or street lighting standard, and shall defer to line of sight requirements for distance from intersection per Public Works Standard No. 125 and 126). (Ord. 786 § 2, 2009).

Adherence to the design guidelines contained in the Specific Plan Amendment will reduce potential impacts to levels that are less than significant.

D. Would the project result in inadequate emergency access? ● No Impact.

The future development supported by the Moreno Valley Festival Specific Plan would comply with applicable regulations established by the Riverside County Fire Department and the Moreno Valley Division of Building and Safety, in addition to the standard design requirements of the Uniform Building Code. The Fire Department will review any development plan including all buildings, fences, drive gates, or other features that might affect Fire Department access. This review process, along with the proponent's compliance with the applicable regulations and standards, would ensure that adequate emergency access would be provided. Therefore, no impacts will occur.

MITIGATION MEASURES

The traffic report prepared for the original Specific Plan indicated that the following mitigation measures will be required:

- For the Heacock Street and Westbound SR-60 ramps, the Applicant must optimize the cycle length (90 second cycle length), splits, and offsets and restripe the defacto right-turn lane to a southbound right-turn lane with 50-foot storage and a southbound through lane. This mitigation will improve the LOS to C;

- The Applicant must optimize the cycle length (60 second cycle length), splits, and offsets for the intersection of Davis Street and Ironwood Avenue. This mitigation will yield a LOS B;

- The Applicant must optimize the cycle length (60 second cycle length), splits, and offsets for the intersection of Indian Street and Sunnymead Boulevard. This mitigation will yield a LOS C.

- For the Heacock Street/Ironwood Avenue intersection, the Applicant must restripe the eastbound left turn lanes to provide 150 feet of storage to accommodate 95th percentile queues;

- For the Heacock Street/Ironwood Avenue intersection, the Applicant must restripe the westbound left turn lanes to provide 190 feet of storage to accommodate 95th percentile queues;

- For the Heacock Street/Ironwood Avenue intersection, the Applicant must restripe the northbound left turn lanes to provide 210 feet of storage to accommodate 95th percentile queues;

- For the Heacock Street/Hemlock Avenue intersection, the Applicant must restripe the eastbound left turn lanes to provide 105 feet of storage to accommodate 95th percentile queues;

- For the Heacock Street/Hemlock Avenue intersection, the Applicant must restripe the northbound left turn lanes to provide 170 feet of storage to accommodate 95th percentile queues;

- For the Heacock Street/Hemlock Avenue intersection, the Applicant must restripe the southbound left turn lanes to provide 150 feet of storage to accommodate 95th percentile queues;

- For the Heacock Street/State Route (SR 60) eastbound ramps, the Applicant must restripe 50 feet of the two-way left turn lane north of the Heacock/ SR-60 westbound ramps intersection as a "Freeway Only" lane;

- For the Davis Street/Ironwood Avenue intersection, the Applicant must restripe the eastbound left turn lanes to provide 220 feet of storage to accommodate 95th percentile queues;

- For the Davis Street/Ironwood Avenue intersection, the Applicant must restripe the southbound left turn lanes to provide 145 of feet storage to accommodate 95th percentile queues;

- For the Indian Street/Ironwood Avenue intersection, the Applicant must restripe the eastbound left turn lanes to provide 145 feet of storage to accommodate 95th percentile queues;

- For the Indian Street/Ironwood Avenue intersection, the Applicant must restripe the westbound left turn lanes to provide 140 feet of storage to accommodate 95th percentile queues;

- For the Indian Street/Ironwood Avenue intersection, the Applicant must restripe the northbound left turn lanes to provide 165 feet of storage to accommodate 95th percentile queues;

- For the Indian Street/Ironwood Avenue intersection, the Applicant must restripe the southbound left turn lanes to provide 155 feet of storage to accommodate 95th percentile queues;

- For the Indian Street/Hemlock Avenue intersection, the Applicant must restripe the westbound left turn lanes to provide 110 feet of storage to accommodate 95th percentile queues;

- For the Indian Street/Hemlock Avenue intersection, the Applicant must restripe the northbound left turn lanes to provide 180 feet of storage to accommodate 95th percentile queues;

- For the Indian Street/Sunnymead Boulevard intersection, the Applicant must restripe the eastbound left turn lanes to provide 140 feet of storage to accommodate 95th percentile queues. This might require replacing the concrete island with stripping;

- For the Indian Street/Sunnymead Boulevard intersection, the Applicant must restripe the westbound left turn lanes to provide 115 feet of storage to accommodate 95th percentile queues;

- For the Indian Street/Sunnymead Boulevard intersection, the Applicant must restripe the northbound left turn lanes to provide 200 feet of storage to accommodate 95th percentile queues; and,

- For the Indian Street/Sunnymead Boulevard intersection, the Applicant must restripe the southbound left turn lanes to provide 125 feet of storage to accommodate 95th percentile queues.

3.18 TRIBAL CULTURAL RESOURCES

Environmental Issue Areas Examined	Potentially Significant Impact	Less Than Significant Impact With Mitigation	Less Than Significant Impact	No Impact
A. Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American Tribe, and that is: Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or a resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resource Code Section 5024.1 In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American Tribe5020.1(k)?			X	

ANALYSIS OF ENVIRONMENTAL IMPACTS

A. *Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American Tribe, and that is: Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or a resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resource Code Section 5024.1 In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American Tribe5020.1(k)?● Less than Significant Impact.*

This current amendment would expand the Specific Plan Area to include a 9.98-acre property located on the southeast corner of Heacock Street and Ironwood Avenue. This added area will be referred to as the expanded *Planning Area 1*. This Planning Area 1 is currently undeveloped though it has been rough graded and disked for maintenance and fire mitigation. The Specific Plan is being amended to allow for the development of a 220,390 square foot light industrial building. A Tribal Resource is defined in Public Resources Code section 21074 and includes the following:

- Sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that are either of the following: included or determined to be eligible for inclusion in the California Register of Historical Resources or included in a local register of historical resources as defined in subdivision (k) of Section 5020.1.

- A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Section 5024.1. In applying the criteria set forth in subdivision (c) of Section 5024.1 for the purposes of this paragraph, the lead agency shall consider the significance of the resource to a California Native American tribe.

- A cultural landscape that meets the criteria of subdivision (a) is a tribal cultural resource to the extent that the landscape is geographically defined in terms of the size and scope of the landscape.

- A historical resource described in Section 21084.1, a unique archaeological resource as defined in subdivision (g) of Section 21083.2, or a "non-unique archaeological resource" as defined in subdivision (h) of Section 21083.2 may also be a tribal cultural resource if it conforms with the criteria of subdivision (a).

The mitigation provided in Subsection 3.5.2.B was drafted by the City of Moreno Valley in coordination with the Pechanga and the Soboba. This mitigation was ultimately selected because it is comprehensive and calls for an archaeologist to monitor all mass grading and trenching activities. Adherence to the aforementioned mitigation will minimize the potential impacts to levels that are less than significant.

Two of the responses to the AB-52 consultation, Morongo Band of Mission Indians and the Rincon Band of Luiseño Indians requested that a copy of the Cultural Resources Report that included the results of a records search at the Riverside County Archaeological Information Center (AIC) at the University of California, Riverside. A comprehensive survey of the entire City was undertaken as part of the Citywide General Plan Update which included the preparation of an Environmental Impact Report and Master Environmental Assessment. The General Plan EIR included a citywide inventory of both historic and archaeological resources. The proposed project site was not identified as being either historically or culturally significant and the California Historic Resources Inventory Search (CHRIS) for the City. The citywide inventory is included in Appendix E. The mitigation identified in Section 3.5.2.B will mitigate any potentially significant impacts related to the disturbance of soils and the potential impact on cultural resources.

As part of the AB-52 consultation with the tribal representatives, review of the project was completed. AB-52 consultation was mailed out to seven individuals identified by the NAHC. The project team has received five responses from various tribes including the San Manuel Band of Mission Indians; the Morongo Band of Mission Indians; the Soboba Band of Luiseno Indians; the Pechanga Band of Luiseno Indians; and the Rincon Band of Luiseño Indians. The tribes each requested consultation and separate mitigation measures. The mitigation provided in Subsection 3.5.2.B was drafted by the City of Moreno Valley in coordination with the Pechanga and the Soboba. This mitigation was ultimately selected because it is comprehensive and calls for an archaeologist to monitor all mass grading and trenching activities. A summary of the AB-52 responses is provided in Appendix E. Adherence to the aforementioned mitigation will minimize the potential impacts to levels that are less than significant.

MITIGATION MEASURES

According to the City's General Plan EIR, at least 190 prehistoric archaeological locations have been reported within the City of Moreno Valley. There is a possibility that mass grading and trenching operations could unearth previously unidentified tribal resources. The possibility of encountering tribal resources was taken into account during the consultation with the Pechanga and the Soboba. As a result, mitigation was provided in Subsection 3.5 to minimize the risk of disturbance to tribal cultural resources.

3.19 UTILITIES

Environmental Issue Areas Examined	Potentially Significant Impact	Less Than Significant Impact With Mitigation	Less Than Significant Impact	No Impact
A. Would the project require or result in the relocation or construction of new or expanded water, wastewater treatment or stormwater drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?			✖	
B. Would the project have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?			✖	
C. Would the project result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?			✖	
D. Would the project generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?			✖	
E. Would the project comply with Federal, State, and local management and reduction statutes and regulations related to solid waste?				✖

ANALYSIS OF ENVIRONMENTAL IMPACTS

A. Would the project require or result in the relocation or construction of new or expanded water, wastewater treatment or stormwater drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects? ● Less than Significant Impact.

This current amendment would expand the Specific Plan Area to include a 9.98-acre property located on the southeast corner of Heacock Street and Ironwood Avenue. This added area will be referred to as the expanded *Planning Area 1*. This Planning Area 1 is currently undeveloped though it has been rough graded and disked for maintenance and fire mitigation. The Specific Plan is being amended to allow for the development of a 220,390 square foot light industrial building. The Moreno Valley Festival Specific Plan area is within the Middle and Lower San Jacinto River watershed which is part of the larger Santa Ana River watershed. The stormwater runoff within the Sunnymead Drainage Area generally flows in a southeasterly direction and the subarea boundary ends at the Perris Valley Storm Drain. The Riverside County Flood Control and Water Conservation District (RCFCWCD) is the responsible agency for the project area's regional flood control system. The Planning Area flanks an existing City-owned detention basin located in the eastern portion of the Planning Area. An earthen channel extends southeast which collects stormwater runoff north of Ironwood Avenue and conveys this water through the corner of Ironwood Avenue and Heacock Boulevard before ultimately discharging to the aforementioned detention basin. There are two 102 inch Storm Drain Lines that extend along Ironwood Avenue and south along Davis Street which also discharge to the detention basin. The detention basin outlet is conveyed by a 12 foot by 4.5 foot Reinforced Concrete Box which connects to Perris Storm Drain and discharges into Canyon Lake. The watershed

drainage continues southwest to Lake Elsinore downstream and eventually flows northwest to the Santa Ana River.[99]

The implementation of the Specific Plan will result in an increase in the amount of impervious surfaces within the Planning Area. In the absence of mitigation, the impervious surfaces (internal driveways, parking areas, etc.) that would be constructed as part of the site's development could lead to the presence of debris, leaves, soils, oil/grease, and other pollutants within the vicinity. Thus, future development proposals must include Water Quality Management Plan (WQMP). The WQMP shall include measures designed to control pollutants, pollutant loads, and runoff volume to the maximum extent feasible by minimizing impervious surface area and controlling runoff from impervious surfaces through infiltration, evapotranspiration, bioretention, and/or rainfall harvest and use. The project applicant shall prepare a WQMP which implements set standards and practices for stormwater pollution mitigation and provides documentation to demonstrate compliance with the municipal NPDES permit on the plans and permit application submitted to the City. Additional storm drain improvements will need to be added for the project. A system of underground drainage lines and detention basins will convey the storm water runoff and manage the increased flow due to the proposed development. Site specific projects shall be consistent with this concept plan. The construction of new storm drains and stormwater BMPs would not cause any adverse impacts to the environment that have not already been analyzed in this document. Since the inclusion of site specific BMPs is mandatory, these BMPs are included in the overall analysis of future development. As a result, the potential impacts are considered to be less than significant.

B. *Would the project have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years? ● Less than Significant Impact.*

Eastern Municipal Water District (EMWD) provides water service to the Moreno Valley Festival, receiving its water from Metropolitan Water District (MWD) and local groundwater wells. Future development undertaken within the Planning Area will have adequate water supply from Eastern Municipal Water District. There is an existing 16 inch water main along Hemlock Avenue, a 16 inch water main along Davis Street, and a 12 inch water main passes through current Festival Development.[100] The implementation of the Specific Plan and any subsequent development that may result will not require the construction of new water treatment facilities or the expansion of existing facilities. The amount of water that will be consumed by the development envisioned under the Specific Plan will be adequately handled by the EMWD. Furthermore, there is adequate treatment capacity available at the Moreno Valley Regional Water Reclamation Facility (MVRWRF).

The MVRWRF presently handles 10.6 million gallons per day. The Facility has a current capacity of 16 million gallons per day though with programmed upgrades it will have an ultimate capacity of 41 million gallons per day.[101] This MVRWRF also has the ability to divert about two million gallons per day to the Perris facility. Therefore, the implementation of the Specific Plan and the development of the land uses

[99] National Engineering Consultants. *Amendment to Specific Plan 205.* Draft dated December 29th, 2015.

[100] Ibid.

[101] Eastern Municipal Water District. *Moreno Valley Regional Water Reclamation Facility*. https://www.emwd.org/home/showdocument?id=1423

envisioned under the Specific Plan will not require the construction of new wastewater treatment facilities or the expansion of existing facilities.

As indicated previously, the EMWD provides potable water, recycled water, and wastewater services to an area of approximately 555 square miles in western Riverside County. EMWD is both a retail and wholesale agency, serving a retail population of 546,146 people and a wholesale population of 215,075 people. The majority of EMWD's supplies are imported water purchased through MWD from the State Water Project (SWP) and the Colorado River Aqueduct (CRA). Imported water is delivered to EMWD either as potable water treated by MWD, or as raw water that EMWD can either treat at one of its two local filtration plants or deliver as raw water for non-potable uses.[102]

EMWD's local supplies include groundwater, desalinated groundwater, and recycled water. Groundwater is pumped from the Hemet/San Jacinto and West San Jacinto areas of the San Jacinto Groundwater Basin. Groundwater in portions of the West San Jacinto Basin is high in salinity and requires desalination for potable use. EMWD owns and operates two desalination plants that convert brackish groundwater from the West San Jacinto Basin into potable water.[103] Table 3-7, shows the projected water demand for the future development envisioned under the Specific Plan. According to the Table, future development for the expanded Planning Area 1 is anticipated to consume approximately 30,841 gallons of water on a daily basis.

Table 3-7
Water Consumption (gals/day)

Use	Unit	Factor	Generation
Business Park	220,290 sq.ft.	0.14 gal/day/sq.ft	30,841 gals/day
Total			**30,841 gals/day**

Source: Blodgett Baylosis Environmental Planning.

According to the EMWD's 2015 Urban Water Management Plan which is the most recent, demand for water will reach 197,901 acre-feet per year by the year 2020. The EMWD is estimated to have a projected supply of 197,901 acre-feet per year of water. The projected supply of water will be just enough to meet the projected demand. As a result, all future development proposals must include water efficient appliances and fixtures, drought tolerant landscaping, and the use of drip irrigation. These methods of water conservation were reiterated as mitigation in Section 3.7. Thus, the potential impacts are considered to be less than significant.

C. *Would the project result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments? ● Less than Significant Impact.*

Wastewater service in Moreno Valley is provided by the Eastern Municipal Water District (EMWD), which serves most of the City and surrounding areas, and the Edgemont Community Services District, which provides service to a small area in southwestern Moreno Valley. The EMWD operates over 356 miles of sewer mains (12 inches and above) and six sewage lift stations to provide wastewater collection services within the City. All wastewater is collected and conveyed to the Moreno Valley Regional Water Reclamation Facility (MVRWRF) located in the southwestern portion of the City. The MVRWRF presently handles 10.6

[102] RMC Water and Environment. *Eastern Municipal Water District 2015 Urban Water Management Plan*. Plan dated June 2016.

[103] Ibid.

million gallons per day. The Facility has a current capacity of 16 million gallons per day though with programmed upgrades it will have an ultimate capacity of 41 million gallons per day.[104] This MVRWRF also has the ability to divert about two million gallons per day to the Perris facility. The primary trunk sewer line serving the Moreno Valley Festival area is located in Heacock Street. This trunk sewer line continues in a southerly direction in Heacock Street and the east along Mariposa Avenue conveying wastewater to the MVRWRF. As individual projects are proposed, review of the local sewer lines' capacity will be undertaken. A preliminary analysis of the amount of sewage that will be generated by the development envisioned under the Specific Plan is included in Table 3-8. According to the Table, future development is anticipated to result in the generation of 24,232 gallons of wastewater per day.

Table 3-8
Wastewater (Effluent) Generation (gals/day)

Use	Unit	Factor	Generation
Business Park	220,290 sq.ft.	0.11 gal/day/sq.ft	24,232 gals/day
Total			**24,232 gals/day**

Source: Blodgett Baylosis Environmental Planning.

As indicated previously, a review of the local sewer lines will be completed as individual projects are proposed. As indicated previously, the project will result in a generation of 24,232 gallons of wastewater per day. The proposed development will connect with an existing sewer line in Davis Street and Hemlock Avenue. The future wastewater generation will be within the treatment capacity of the Moreno Valley Regional Water Reclamation Facility. In addition, this projected effluent generation does not take into account the water conserving plumbing fixtures that will be installed. No new treatment facilities or expanded entitlements will be required. As a result, the impacts are anticipated to be less than significant.

D. Would the project generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals? ● Less than Significant Impact.

According to the City's General Plan, solid waste generated within the planning area is primarily deposited in the Riverside County Waste Management Department's (RCWMD) Badlands Landfill, located approximately 6.43 miles northeast of the Planning Area. However, the City's trash hauler can also use other County landfills in the area such as the Lamb Canyon Landfill and El Sobrante Landfill. Waste Management of Inland Empire currently provides waste pickup in Moreno Valley. The Badlands Landfill presently accepts up to 4,800 tons per day of solid waste. This landfill has a remaining capacity of 15,749,799 cubic yards of waste.[105] The El Sobrante Landfill is a Class-III landfill that currently accepts up to 70,000 tons per week. This landfill has a remaining capacity of 209 million cubic yards.[106] Table 3-9 shows the solid waste generation anticipated under the Specific Plan Amendment for the expanded Planning Area 1.

[104] Eastern Municipal Water District. *Moreno Valley Regional Water Reclamation Facility*. https://www.emwd.org/home/showdocument?id=1423

[105] CalRecycle. *Facility/Site Summary Details: Bandlands Sanitary Landfill*. http://www.calrecycle.ca.gov/SWFacilities/Directory/33-AA-0006/Detail/

[106] Waste Management. *El Sobrante Landfill*. https://www.wmsolutions.com/pdf/factsheet/El_Sobrante_Landfill.pdf

Table 3-9
Solid Waste Generation (gals/day)

Use	Unit	Factor	Generation
Business Park	220,290 sq.ft.	6 lbs/day/sq.ft	1,322 lbs./day
Total			**1,322 Lbs./day**

Source: Blodgett Baylosis Environmental Planning.

As indicated in the Table, future development envisioned under the Plan is anticipated to result in the generation of approximately 1,322 pounds of solid waste per day. The potential impacts are anticipated to be less than significant since the goals, policies, and implementation programs contained within the Plan will also further mitigate the potential impacts from future development within the Planning Area.

E. Would the project comply with Federal, State, and local statutes and regulations related to solid waste? ● No Impact.

The future development supported by the Moreno Valley Festival Specific Plan, like all other development in Moreno Valley, will be required to adhere to city and county ordinances with respect to waste reduction and recycling. As a result, no impacts related to State and local statutes governing solid waste are anticipated.

MITIGATION MEASURES

The adoption and subsequent implementation of the Moreno Valley Festival Specific Plan Amendment for the expanded Planning Area 1 will not lead to any impacts not already identified in the certified EIR that was prepared for the City of Moreno Valley General Plan. In addition, the goals, policies, and implementation programs contained within the Specific Plan will also further mitigate the potential impacts from new development contemplated as part of the implementation of the General Plan and the Moreno Valley Festival Specific Plan.[107] As a result, no additional mitigation beyond that which may be required for individual development projects is required.

3.20 WILDFIRE

Environmental Issue Areas Examined	Potentially Significant Impact	Less Than Significant Impact With Mitigation	Less Than Significant Impact	No Impact
A. If located in or near State responsibility areas or lands classified as very high fire hazard severity zones, would the project substantially impair an adopted emergency response plan or emergency evacuation plan?				✖
B. If located in or near State responsibility areas or lands classified as very high fire hazard severity zones, would the project due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?				✖
C. If located in or near State responsibility areas or lands classified as very high fire hazard severity zones, would the project require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?				✖
D. If located in or near State responsibility areas or lands classified as very high fire hazard severity zones, would the project expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?				✖

ANALYSIS OF ENVIRONMENTAL IMPACTS

A. *If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project substantially impair an adopted emergency response plan or emergency evacuation plan? ● No Impact.*

The project site is located in the midst of an urbanizing area. Both improved and unimproved streets serve the project site and the surrounding area. Furthermore, the proposed project would not involve the closure or alteration of any existing evacuation routes that would be important in the event of a wildfire. As a result, no impacts will occur. At no time during construction will adjacent streets be completely closed to traffic. All construction staging must occur on-site. Furthermore, the proposed project would not involve the closure or alteration of any existing evacuation routes that would be used in the event of a wildfire. As a result, no impacts will occur.

B. *If located in or near state responsibility areas or lands classified as very high fire hazard severity zones would the project due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire? ● No Impact.*

The proposed project site may be exposed to particulate emissions generated by wildland fires in the mountains (the site located approximately 20 miles north of the San Gabriel and San Bernardino Mountains). However, the potential impacts would not be exclusive to the project site since criteria pollutant emissions from wildland fires may affect the entire City as well as the surrounding cities and

unincorporated county areas. As a result, no impacts will occur.

C. *If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment? ● No Impact.*

The project will include the extension of new utility lines such as gas lines, water lines, etc. on to the site only. These utilities lines will be located below ground surface. As a result, no impacts will occur.

D. *If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes? ● No Impact.*

There is no risk from wildfire within the project site or the surrounding area given the project site's distance from any area that may be subject to a wildfire event. Therefore, the project will not expose future employees or guests to flooding or landslides facilitated by runoff flowing down barren and charred slopes and no impacts will occur.

MITIGATION MEASURES

The analysis of wildfires impacts indicated that less than significant impacts would result from the proposed project's approval and subsequent implementation. As a result, no mitigation is required.

3.21 MANDATORY FINDINGS OF SIGNIFICANCE

Environmental Issue Areas Examined	Potentially Significant Impact	Less Than Significant Impact With Mitigation	Less Than Significant Impact	No Impact
A. Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?				✖
B. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?				✖
C. Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?				✖

The following findings can be made regarding the Mandatory Findings of Significance set forth in Section 15065 of the CEQA Guidelines based on the results of this environmental assessment:

- The proposed project *will not* have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory. As indicated in Section 3.1 through 3.20, the proposed project will not result in any significant unmitigable environmental impacts.

- The proposed project *will not* have impacts that are individually limited, but cumulatively considerable. The proposed project is relatively small and the attendant environmental impacts will not lead to a cumulatively significant impact on any of the issues analyzed herein.

- The proposed project *will not* have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly. As indicated in Section 3.1 through 3.20, the proposed project will not result in any significant unmitigable environmental impacts.

SECTION 4 CONCLUSIONS

4.1 FINDINGS

The Initial Study determined that the proposed project is not expected to have significant adverse environmental impacts. The following findings can be made regarding the Mandatory Findings of Significance set forth in Section 15065 of the CEQA Guidelines based on the results of this Initial Study:

- The proposed project *will not* have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of an endangered, rare or threatened species or eliminate important examples of the major periods of California history or prehistory.
- The proposed project *will not* have impacts that are individually limited, but cumulatively considerable.
- The proposed project *will not* have environmental effects which will cause substantially adverse effects on human beings, either directly or indirectly.

4.2 MITIGATION MONITORING

In addition, pursuant to Section 21081(a) of the Public Resources Code, findings must be adopted by the decision-maker coincidental to the approval of a Negative Declaration. These findings shall be incorporated as part of the decision-maker's findings of fact, in response to AB-3180 and in compliance with the requirements of the Public Resources Code. In accordance with the requirements of Section 21081(a) and 21081.6 of the Public Resources Code, the City of Moreno Valley can make the following additional findings: a mitigation monitoring and reporting program will be required.

Appendix B to Initial Study
Utility Worksheets

INTRODUCTION TO UTILITY SCREENING TABLES

The following worksheets are used to evaluated the potential impacts of a project.

Table 1 Definition of Project

This Table is used to establish the proposed development parameters that are used the calculation of utilities usage. The independent variable to be entered is identified by shading. For residential development, the number of housing units should be entered in the shaded area. For non-residential development, the total floor area of development should be entered in the shaded area.

Tables 2 Summary of Project Impacts

Consumption/Generation Rates. This table indicates the development's projected electrical consumption, natural gas consumption, water consumption, effluent generation, and solid waste generation. No modifications should be made to this table.

Tables 3 through 7 Calculation of Project Impacts

Tables 3 through 7 indicate the results of the analysis.

Table 3 Electrical Consumption - This Table calculates the projected electrical consumption for new development. Default generation rates provided in the shaded areas may be changed.

Table 4 Natural Gas Consumption - This Table calculates the projected natural gas useagefor new development. Default generation rates provided in the shaded areas may be changed.

Table 5 Water Consumption - This Table calculates the projected water consumption ratesfor new development. Default generation rates provided in the shaded areas may be changed.

Table 6 Sewage Generation - This Table calculates the projected effluent generation rates for new development. Default generation rates provided in the shaded areas may be changed.

Table 7 Solid Waste Generation - This Table calculates the projected waste generation for new development. Default generation rates provided in the shaded areas may be changed.

Table 1 Project Name: Moreno Valley Business Park (Expanded Planning Area No.1)

Definition of Project Parameters - Enter independent variable (no. of units or floor area) in the shaded area. The independent variable to be entered is the number of units (for residential development) or the gross floor area (for non-residential development).

Land Use	Independent	Factor
Residential Uses	**Variable**	**Total Units**
Single-Family Residential	No. of Units	0
Medium Density Residential	No. of Units	0

Summary

Hernandez Environmental Services (HES) was contracted by Moreno Valley Festival to prepare a General Biological Assessment (GBA) and Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) Consistency Analysis for a 49-acre proposed project site. The proposed project consists of a commercial/retail and mixed use development. The project site consists of Assessor Parcel Numbers (APNs) 481-020-017, 481-020-019, 481-020-022, 481-020-023, 481-020-028, 481-020-028, 481-090-009, 481-090-018, 481-090-020, 481-090-021, 481-090-022, 481-090-029, 481-090-032, and 481-090-033.

On July 13, 2015, Juan Hernandez, Principal Biologist for HES, conducted a field survey of the approximate 49-acre project site. The project site contains seven habitat types: 23.4 acres of developed habitat, 20.2 acres of disturbed non-native vegetation habitat, 3.20 acres of disturbed non-native grasses habitat, 1.15 acres of disturbed coastal sage scrub, 0.87 acres of ornamental vegetation habitat, 0.16 acres of streambed, and 0.07 acres of mulefat habitat. The project site also contains approximately 0.16 acres of streambed, and 0.07 acres of mulefat habitat for a total of 0.23 acre of riparian habitat. No wildlife movement corridors were found to be present on the project site. The 20.2 acres of disturbed non-native vegetation habitat, and the 3.20 acres of disturbed non-native grasses habitat, is suitable for burrowing owl. Focused surveys were performed in compliance with TLMA requirements. No burrowing owl were found.

The proposed project is expected to impact 23.4 acres of developed habitat, 20.2 acres of disturbed non-native vegetation habitat, 3.20 acres of disturbed non-native grasses habitat, 1.15 acres of disturbed coastal sage scrub, 0.87 acres of ornamental vegetation habitat, 0.16 acres of streambed, and 0.07 acres of mulefat habitat.

The project site was found to have the potential for San Bernardino aster to occur. This species is not covered under the Western Riverside MSHCP but through participation in the plan, and the land acquisition and preservation by the plan, this species would be adequately covered. Cooper's Hawk, Bell's Sage Sparrow, Coastal horned lizard, Orange-throat Whiptail, Coastal Whiptail, Red-diamond Rattlesnake, California Horned Lark, San Diego Black-tailed Jackrabbit are fully covered species under the Western Riverside MSHCP. The proposed project must be consistent with the Western Riverside MSHCP. Payment of the appropriate development mitigation fees will mitigate any impacts to these species. Further, it is recommended that three days prior to any ground disturbing activities or vegetation removal, a qualified biological monitor should conduct a preconstruction survey to identify any sensitive biological resources to flag for avoidance. Any reptile species that may be present within the project area shall be relocated outside of the impact areas.

Due to the presence of suitable nesting bird habitat on the project site, it is recommended that vegetation removal be conducted during the non-nesting season for migratory birds to avoid direct impacts. The migratory bird nesting season is between February 1 and September 15. If vegetation removal will occur during the migratory bird nesting season, between February 1 and September 15, it is recommended that pre-construction nesting bird surveys be performed within three days prior to vegetation removal.

Impacts to approximately 0.16 acres of streambed, and 0.07 acres of mulefat habitat for a total of 0.23 acre of riparian habitat will require consultation with the California Department of Fish and Wildlife, the U.S. Army Corps of Engineers, and the Santa Ana Regional Water Quality Control Board to determine the need for permits that must be obtained prior to initiation of construction of the proposed project. In addition, the loss of Western

Riverside MSHCP riverine resources will require preparation of an MSHCP Determination of Biologically Equivalent or Superior Preservation (DBESP).

1.0 Introduction

Hernandez Environmental Services (HES) was contracted by Moreno Valley Festival to prepare a General Biological Assessment (GBA) and Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) Consistency Analysis for a 49-acre proposed project site, which is comprised of Assessor's Parcel Numbers (APNs) 481-020-017, 481-020-019, 481-020-022, 481-020-023, 481-020-028, 481-020-028, 481-090-009, 481-090-018, 481-090-020, 481-090-021, 481-090-022, 481-090-029, 481-090-032, and 481-090-033. The proposed project consists of a commercial/retail and mixed use development.

1.1 Project Site Location

The project site is located in the City of Moreno Valley in Riverside County at the southeast intersection of Heacock Street and Ironwood Avenue (Figure 1). The southern boundary is defined by the Moreno Valley Freeway (CA-60). The project site consists of 15 parcels totaling approximately 49.0 acres. Approximately 27.21 acres are developed with the existing Festival Shopping Center and commercial development south of Hemlock Avenue; the remaining 22.39 acres are undeveloped and vacant (Figure 2). The site is located within the United States Geological Survey (USGS) 7.5-Minute Topographic Map Sunnymead Quadrangle. The approximate center point is 33°56'28"N, 117°14'33"W.

1.2 Project Description

The proposed project is the development of the Moreno Valley Festival (Figure 3). The plan area includes approximately 49.0 acres; a portion of the site is currently developed with the Festival Shopping Center on the north side of Hemlock Street and with a fast food establishment and miscellaneous commercial development on the south side of Hemlock Street.

The purpose of this GBA and Western Riverside County MSHCP Consistency Analysis is to identify any potential biological resources that may be present on or adjacent to the project site.

2.0 Methodology

2.1 Literature Review

HES conducted a literature review and reviewed aerial photographs and topographic maps of the project site and surrounding areas. The Sunnymead quad and adjacent surrounding eight quads were used to identify sensitive species in the California Natural Diversity Data Base (CNDDB). Additional resources reviewed during the literature search included the United States Fish and Wildlife (USFWS) Endangered Species Lists, Forest Service List, and the California Native Plant Society's (CNPS) Rare plant lists to obtain species information for the project area.

2.2 Field Survey

On July 13, 2015, Juan Hernandez, Principal Biologist for HES, conducted a field survey of the approximate 49-acre project site. The ambient temperature at 9:30 a.m. was 72˚ Fahrenheit, sunny, with zero to three mile per hour winds from the northeast. The purpose of the field survey was to document the existing habitat conditions, obtain plant and animal species information, view the surrounding uses, assess the potential for state and federal waters, and assess the potential for wildlife movement corridors, sensitive species, and nesting habitat.

The entire project site was surveyed. Linear transects spaced approximately 50 feet apart were walked for 100 percent coverage. All species observed were recorded and are listed in Appendix A. Global Positioning System (GPS) waypoints were taken to delineate specific habitat types, species locations, and any other information that would be useful for the assessment of the property.

3.0 Existing Conditions and Results

3.1 Environmental Setting

The project site is located in a heavily urbanized area in the City of Moreno Valley. The project site has residential homes to the north, residential homes to the east, residential homes to the west, and CA-60 and commercial properties to the south. The project site has been heavily disturbed and no quality native habitat remains onsite. Portions of the property have already been developed with commercial/retail buildings. Other portions of the property consist of vacant, disked lots. The elevation of the project site varies from 1,674 feet above sea level (ASL) to 1,641feeet ASL. There is a small, disturbed, non-meandering ephemeral drainage located in the northwest portion of the property. The drainage crosses the project site from west to east and empties into Indian Basin.

3.2 Soils

The Natural Resources Conservation Service Web Soil Survey identified eight (8) soil types within the GBA 62.50-acre study area. The following soil types are identified in the Soil Survey: Greenfield sandy loam(GyA), 0 to 2 percent slope; Greenfield sandy loam (GyC2), 2 to 8 percent slopes eroded,; Greenfield sandy loam (GyD2), 8 to 15 percent slopes, eroded; Hanford coarse sandy loam (HcC), 2 to 8 percent slopes; Monserate sandy loam, 0 to 5 percent slopes; Ramona sandy loam(RaB2), 2 to 5 percent slopes, eroded; Ramona sandy loam(RaB3), 0 to 5 percent slopes, severely eroded; Tujunga loamy sand (TvC), channeled, 0 to 8 percent slopes. Tujunga Loamy Sand (TvC), channeled 0 to 8 percent slope, is the only hydric soil in the study area. Refer to Appendix D.

3.3 Plant and Habitat Communities

The project site contains seven habitat types: 23.4 acres of developed habitat, 20.2 acres of disturbed non-native vegetation habitat, 3.20 acres of disturbed non-native grasses habitat, 1.15 acres of disturbed coastal sage scrub, 0.87 acres of ornamental vegetation habitat, 0.16 acres of streambed, and 0.07 acres of mulefat habitat (Figure 4).

Table 1
Onsite Habitat

Developed Habitat	Disturbed Non-native Vegetation Habitat	Disturbed Non-native Grasses Habitat	Disturbed Coastal Sage Scrub	Ornamental Vegetation Habitat	Streambed Habitat	Mulefat Habitat
23.4 Acres	20.2 Acres	3.20 Acres	1.15 Acres	0.87 Acres	0.16 Acres	0.07 Acres

The following is a description of each habitat type:

3.3.1 Developed Habitat

Approximately 23.4 acres of developed habitat exists on the project site. The developed habitat contains existing commercial and retail buildings and the majority of the buildings are currently being utilized. This habitat also included parking lot areas, and contain no native habitat and wildlife value.

3.3.2 Disturbed Non-native Vegetation Habitat

The project site contains approximately 20.2 acres of disturbed non-native vegetation habitat. This habitat type has been disturbed and native vegetation has been removed by disking or other anthropomorphic activities. Dominant plant species found in this habitat type consist of black mustard (*Brassia nigra*), mustard (*Brassica tournefortii*), tacalote (*Centaurea melitensis*), bullthistle (*Cirsium vulgare*), field bindweed (*Convolvulus arvensis*), heron's bill (*Erodium cicutarium*), horehound (*Marrubium vulgare*), tree tabacco (*Nicotiana glauca*), castor bean (*Ricinus communis*), and Russian thistle (*Salsola tragus*).

3.3.3 Disturbed Non-native Grasses Habitat

The project site contains approximately 3.20 acres of disturbed non-native grasses habitat. This habitat type has been disturbed and native vegetation has been removed by disking or other anthropomorphic activities. Dominant plant species found in this habitat type consist of slim oats (*Avena barbata*), ripgut

brome (*Bromus diandrus*), soft chess (*Bromus hordeaceus*), foxtail (*Bromus madritensis*), foxtail barley (*Hordeum murinum*), and common barley (*Hordeum vulgare*).

3.3.4 Disturbed Coastal Sage Scrub Habitat

The project site contains approximately 1.15 acres of disturbed coastal sage scrub habitat. This habitat type has shrubs commonly associated with coastal sage scrub, but shows evidence of having been disturbed in the past. The coastal sage scrub does not look very well developed, and has sections were it has obviously been disturbed by anthropomorphic activities. Dominant vegetation in this habitat type include: brittlebush (*Encelia farinosa*), California buckwheat (*Eriogonum fasciculatum*), lotus (*Acmispon strigosus*), gord (*Cucurbita foetidissima*), tarweed (*Deinandra fasciculata*), black sage (*Salvia mellifera*) and telegraph weed (*Heterotheca grandifolia*).

3.3.5 Ornamental Vegetation Habitat

The project site contains approximately 0.87 acres of ornamental vegetation habitat. This habitat type has been created and is composed entirely of non-native trees and shrubs. Common species associated with this habitat type are eucalyptus (*Eucalyptus* sp.), oleander (*Nerium oleander*), and Peruvian pepper tree (*Schinus molle*).

3.3.6 Streambed Habitat

The project site contains approximately 0.16 acres of streambed habitat. This habitat is characterized by sandy streambed with small amounts of native and non-native vegetation. Vegetation species associated with this habitat include: Mexican fan palm (Washingtonia robusta), tree tabacco, horseweed (*Erigeron canadensis*), heliotrope (Heliotropium curassavicum), sunflower (Helianthus annus), and tamarisk (*Tamarix sp*.).

3.3.6 Mulefat Habitat

The project site contains approximately 0.07 acres of mulefat habitat. The ephemeral drainage contains small patches of areas dominated by mulefat (Baccharis salicifolia).

4.0 Sensitive Biological Resources

4.1 Threatened and Endangered Species

A total of 51 sensitive species of plants and 54 sensitive species of animals have the potential to occur on or within the vicinity of the GBA study area. These include those species listed or candidates for listing by the U. S. Fish and Wildlife Service (USFWS), California Department of Fish and Wildlife (CDFW) and California Native Plant Society (CNPS). All habitats with the potential to be used by

sensitive species was evaluated during the site visit and a determination has been made for the presence or probability of presence within this report. This section will address those species listed as Candidate, Rare, Threatened, or Endangered under the state and federal endangered species laws or directed to be evaluated under the Western Riverside Multiple Species Habitat Conservation Plan (MSHCP). Sensitive species which have a potential to occur will also be discussed in this section. All other special status species are addressed within Appendix B.

4.1.1 Threatened and Endangered Plants

A total of 11 plant species were identified as state and/or federally listed as Threatened, Endangered, or Candidate. All species have a rank of 1B.1 or 1B.2 in the CNPS Rare Plan Inventory. The GBA survey area is not located within the Western Riverside MSHCP narrow endemic plant overlay and a habitat assessment for narrow endemic plants was not required; however, several of the species identified below are covered species under the MSHCP.

Munz's Onion

Munz's onion (*Allim munzii*) is federally listed as Endangered and State listed as Threatened; the species rank is 1B.1 in the CNPS rare plant inventory. The species is found in grassy openings in coastal-sage scrub vegetation at elevations ranging from 300-900m. Its blooming period is from April to May. The project site has been disked and there is no suitable habitat for this species. **This species is not present.**

San Diego Ambrosia

San Diego Ambrosia (*Ambrosia pumila*) is a federally listed Endangered species and is a rank 1B.1 species in the CNPS rare plant inventory. The species is found in disturbed sites at elevations ranging from 50 – 600 m. Its blooming period is from April to July. The project site has been disked and the disturbed habitat may be suitable for this species. **This species is not present.**

Marsh Sandworth

Marsh sandworth (*Arenaria paludicola*) is federally and State listed as Endangered and is ranked as 1B.1 in the CNPS rare plant inventory. The species is found in wet meadows and marshes at elevations less than 300 meters. The species blooms from late spring into summer. The project site has been disked and the disturbed is not suitable for this species. The basin area on the east side of the property is regularly maintained and does not support suitable habitat for marsh sandworth. **This species is not present.**

San Jacinto Valley Crownscale

San Jacinto Valley crownscale (*Atriplex coronata* var. *notatior*) is a federally listed Endangered species and is ranked as 1B.1 in the CNPS rare plant inventory. The species is found in alkaline flats at elevations ranging from 400-500 meters. Its blooming period is April to August. The project site has been disked and the disturbed habitat is not suitable for this species. **This species is not present.**

Nevin's Barberry

Nevin's barberry (*Berberis nevinii*) is a federally and State listed endangered species and is a rank 1B.1 species in the CNPS rare plant inventory. The species is found in sandy to gravelly soils, washes, and chaparral habitats at elevations less than 650 meters. It blooms from March to May. The project site has been disked and the disturbed habitat is not suitable for this species. **This species is not present.**

Thread-leaved Brodiaea

Tread-leaved brodiaea (*Brodiaea filifolia*) is a federally listed Threatened and State listed Endangered species. The species is ranked 1B.1 in the CNPS rare plant inventory. This species occurs in grassland habitats and vernal pools at elevations ranging from 25 to 860 meters. Its blooming period is from March to June. The project site has been disked and the disturbed habitat is not suitable for this species. The basin area on the east side of the property is regularly maintained and does not support suitable habitat for thread-leaved brodiaea. **This species is not present.**

Salt Marsh Bird's-Beak

Salt marsh bird's-beak (*Chloropyron maritimum* ssp. *maritimum*) is a federally and State listed Endangered species and is ranked 1B.2 in the CNPS rare plant inventory. This species occurs in coastal salt marsh habitat at elevations less than 10 meters. Its blooming period is from May to October. The project site has been disked and the disturbed habitat is not suitable for this species. **This species is not present.**

Slender-Horned Spineflower

Slender-horned spineflower (*Dodecahema leptoceras*) is a federally and State listed Endangered species and is ranked 1B.1 in the CNPS rare plant inventory. This species occurs in sand or gravel soils at elevations ranging from 200 to 700 meters. Its flowering period is from May to June. The project site does not support suitable habitat for this species. **This species is not present.**

Santa Ana River Woollystar

Santa Ana River Woollystar (*Eriastrum densifolium* ssp. *sanctorum*) is a federally and state listed Endangered species and is ranked 1B.1 in the CNPS rare plant inventory. This species occurs in washes, floodplains, and dry riverbeds at elevations less than 500 meters. Its blooming period is from May to September. The project site does not support suitable habitat for this species. **This species is not present.**

Gambel's Water Cress

Gambel's water cress (*Nasturtium gambelii*) is a federally listed Endangered and State listed Threatened species; it is ranked 1B.1 in the CNPS rare plant inventory. This species occurs in marshes, streambanks, and lake margins at elevations less than 350 meters. Its blooming period is from May to August. The project site does not support suitable habitat for this species. **This species is not present.**

Spreading Navarretia

Spreading navarretia (*Navarretia fossalis*) is a federally listed Threatened species and is ranked 1B.1 in the CNPS rare plant inventory. This species is found in vernal pools and ditches at elevations ranging from 30 to 1300 meters. Its blooming period is from April to June. The project site does not support habitat suitable for this species. **This species is not present.**

4.1.2 Threatened and Endangered Animals

A total of 13 animal species listed as state and/or federally Threatened, Endangered, or Candidate or for special consideration under the Riverside County MSHCP will be reviewed in this section. Sensitive species which have a potential to occur will also be discussed in this section. All sensitive species identified within CNDDB were evaluated; a complete list of species is included in Appendix B.

Southern Mountain Yellow-Legged Frog

Southern mountain yellow-legged frog (*Rana muscosa*) is a federally and state listed endangered species. Additionally the species is listed as a CDFW Species of Special Concern. Populations of the species is southern California occupy a wide elevational range from 1,200 feet to 7,500 feet. Habitat includes rocky, shaded streams with cool waters originating from springs and snowmelt. The project site does not support suitable habitat for this species. **This species is not present.**

Tricolored Blackbird

Tricolored bird (*Agelaius tricolor*) is State listed as endangered and listed by the CDFW as a Species of Special Concern. The species occupies freshwater marshes with canopies of willows (*Salix* spp.) and other riparian trees and require open accessible water and suitable foraging space. The project site does not support suitable nesting habitat for the species. **This species is not present.**

Burrowing Owl

Burrowing owl (*Athene cunicularia*) is a CDFW Species of Special Concern and a MSHCP covered species. The species lives in dry open areas with no trees and short grass. Focused surveys for the species were completed and returned negative. **This species is not present.**

Western Yellow-Billed Cuckoo

Western yellow-billed cuckoo (*Coccyzus americanus occidentalis*) is federally listed as threatened and state listed as Endangered. It is found in riparian habitat with vegetation such as willow and willow-cottonwood thickets with heavy underbrush. The species is restricted to cottonwood-dominated forests. The project site does not support suitable habitat for this species. **This species is not present.**

Southwestern Willow Flycatcher

Southwestern willow flycatcher (*Empidonax trailii extimus*) is federally and state listed as endangered. The species breeds in dense riparian habitats along rivers, streams, or other wetlands. Vegetation can be dominated by dense growths of willows, seepwillow (*Baccharis* sp.), tamarisk (*Tamarix* sp.) or other large trees. The project site does not support nesting habitat for this species. **This species is not present.**

Bald Eagle

Bald eagle (*Halieaeetus leucocephalus*) is State listed as endangered and is a delisted federal species. The species is fully protected under the regulations of the CDFW. It is found around wetlands, open water areas with an abundance of fish. It nests and roosts in large trees. The project site does not support suitable habitat for this species. **The species is not present.**

Coastal California Gnatcatcher

Coastal Californiagnatcatcher (*Polioptila californica californica*) is a federally listed threatened species and CDFW species of Special Concern. The species range is limited to the California coast and is found only in coastal sage scrub. The project site does not support suitable habitat for this species. **This species is not present.**

Least Bell's Vireo

Least Bell's vireo (*Vireo belii pusillus*) is a federally and State listed endangered species. It is found in riparian forests, riparian scrub, and riparian woodlands. The project site does not support suitable habitat for this species. **This species is not present.**

Santa Ana Sucker

Santa Ana sucker (*Catostomus santaanae*) is a federally listed threatened species and CDFW species of special concern. The species is restricted to southern California rivers. The project site does not support suitable habitat for this species. **This species is not present.**

Quino Checkerspot Butterfly

Quino checkerspot butterfly (*Euphydryas editha quino*) is a federally listed endangered species. Vegetation types that support the Quino checkerspot butterfly include coastal sage scrub, open chaparral, juniper woodland, and native grassland. Suitability of habitat is affected by soil and climatic conditions, as well as other ecological and physical factors. The species range is limited to Riverside and San Diego Counties. The project site does not support suitable habitat for this species. **This species is not present.**

Delhi Sands Flower-Loving Fly

Delhi sands flower-loving fly (*Rhaphimidas terminatus abdominalis*) is a federally listed endangered species. Its habitat is limited to dunes containing sandy soils of the Delhi series. The project site does not support suitable habitat for this species. **This species is not present.**

Stephens' Kangaroo Rat

Stephens' Kangaroo Rat (*Dipodomys stephensi*) is a federally listed endangered species and state listed threatened species. The species is found in coastal sage scrub, and in valley and foothill grasslands. The project site does not support suitable habitat for this species. **This species is not present.**

Lesser Long-Nosed Bat

Lesser long-nosed bat (*Leptonycteris yerbabuenae*) is a federally listed endangered species. This species requires suitable roost sites and extensive populations of columnar cacti and agaves. The project site does not support suitable habitat for this species. **This species is not present.**

4.2 Species with other Special Status Listings

Species which are listed as California Species of Special Concern or are on the CDFW List of Rare plants have all been evaluated and the results can be reviewed within Appendix B. Any of these species that have the potential to be present or are considered present within the project area will have mitigation measures to avoid or minimize impacts in the Recommendations section of this report.

4.3 Critical Habitats

The project site is not located within critical habitat as designated by the USFWS. Critical habitat for the coastal California gnatcatcher occurs approximately three miles to the north and more than four miles to the west of the project site. There is no critical habitat immediately adjacent to the project site.

4.4 Nesting Birds

The project site does have shrubs and trees that can support nesting song birds or raptors. The 23.4 acres of developed habitat, 20.2 acres of disturbed non-native vegetation habitat, 3.20 acres of disturbed non-native grasses habitat, 1.15 acres of disturbed coastal sage scrub, 0.87 acres of ornamental vegetation habitat, 0.16 acres of streambed, and 0.07 acres of mulefat habitat are considered habitat that can be utilized by nesting birds and raptors during the nesting bird season of February 1 through September 15.

4.5 Wildlife Movement Corridors

The project site is too isolated by residential and commercial structures to function as a wildlife movement corridor. There are no major riparian areas or canyons that can function as a corridor for wildlife. The project site also has a high amount of anthropomorphic disturbances to adequately function as a wildlife movement corridor.

4.6 Western Riverside Multiple Species Habitat Conservation Plan

4.6.1 Section 6.1.2 Protection of Species Associated with Riparian/Riverine Areas and Vernal Pools

The project site contains approximately 0.16 acres of streambed, and 0.07 acres of mulefat habitat for a total of 0.23 acre of riparian habitat. This habitat is also regulated under Section 1602 of the California Department of Fish and Game Code for the protection of lake or streams and under Section 404 and 401 of the Clean Water Act. This habitat is also considered riparian/riverine areas as defined in Section 6.1.2 of the Western Riverside MSHCP. Any project impacts to this habitat will need to be in compliance with Section 6.1.2 of the Western Riverside MSHCP. No vernal pools were observed within the project boundaries.

4.6.2 Section 6.1.3 Protection of Narrow Endemic Plant Species

The project site is not located within the narrow endemic plants overlay of the MSHCP and there are no habitat assessment requirements for narrow endemic plant species as identified in the MSHCP

4.6.3 Section 6.1.4 Guidelines Pertaining to the Urban/Wildlands Interface

The project site is not located within a Western Riverside MSHCP linkage or criteria cell. Therefore, the project is not subject to Section 6.1.4 pertaining to urban/wildlands interface.

4.6.4 Section 6.3.2 Guidelines Additional Survey Needs and Procedures

Riverside County Transportation and Land Management (TLMA) requires a habitat assessment for burrowing owl. If habitat is present than focused burrowing owl surveys as described in the Western Riverside MSHCP *Burrowing Owl Survey Instructions*. The 20.2 acres of disturbed non-native vegetation habitat, and the 3.20 acres of disturbed non-native grasses habitat, is suitable for burrowing owl. Focused surveys were performed in compliance with TLMA requirements. No burrowing owl were found.

4.7 Other City, County, Regional, State, or Federal Conservation Plans

The project site is located within an independent cell group of the Reche Canyon/Badlands area plan of the Western Riverside MSHCP.

4.8 State and Federal Jurisdictional Drainages

The project site contains approximately 0.16 acres of streambed, and 0.07 acres of mulefat habitat for a total of 0.23 acre of riparian habitat. This habitat is regulated under Section 1602 of the California Department of Fish and Game Code for the protection of lake or streams and under Section 404 and 401 of the Clean Water Act. No vernal pools were observed within the project boundaries.

4.9 Oak Trees

The project site does not contain oak trees.

5.0 Project Impacts

5.1 Impacts to Existing Habitats

The proposed project is expected to impact 23.4 acres of developed habitat, 20.2 acres of disturbed non-native vegetation habitat, 3.20 acres of disturbed non-native grasses habitat, 1.15 acres of disturbed coastal sage scrub, 0.87 acres of ornamental vegetation habitat, 0.16 acres of streambed, and 0.07 acres of mulefat habitat (Figure 5).

5.2 Impacts to Sensitive Species

One species was identified to the potential to occur on site. Project activities were evaluated to determine the potential for impacts to these species.

San Bernardino Aster

The San Bernardino Aster (*Symphyotrichum defoliatum*) is a CNPS 1B.2 listed plant that is found in grasslands or disturbed habitats. It blooms between the months of July and November. The project site contains habitat for this species.

Cooper's Hawk

Cooper's hawk (*Accipiter cooperii hawk*) is a CDFW watch list species and International Union for Conservation of Nature (IUCN) species of least concern. The species foraging habitat includes rivers, and woodlands including willows, cottonwoods, and sycamores. Nesting habitat for this species occurs at the project site in the Eucalyptus trees adjacent to the site. This species is covered by the Western Riverside MSHCP and is considered adequately conserved.

Bell's Sage Sparrow

Bell's sage sparrow (*Artemisiospiza belli belli*) is a CDFW watch list species and USFWS bird of conservation concern. The species nests in coastal sage scrub and chaparral. The project site supports

some disturbed coastal sage scrub that may serve as habitat. This species is potentially present. This species is covered by the Western Riverside MSHCP and is considered adequately conserved.

Orange-throat Whiptail

Orange-throat whiptail (*Aspidoscelis typerythra*) is a CDFW species of special concern and IUCN species of least concern. The species inhabits low elevation coastal scrub, chamise-redshank chaparral, mixed chaparral, and valley-foothill hardwood habitat. The project site supports some disturbed coastal sage scrub that may serve as habitat. This species is potentially present. This species is covered by the Western Riverside MSHCP and is considered adequately conserved.

Coastal Whiptail

Coastal whiptail (*Aspidoscelis hyperythra*) is a CDFW species of special concern and IUCN species of least concern. It is found in a variety of ecosystems, primarily in hot and dry open areas with sparse foliage – chaparral, woodland, and riparian areas. The project site supports habitat for this species. This species is potentially present. This species is covered by the Western Riverside MSHCP and is considered adequately conserved.

Red-diamond Rattlesnake

Red-diamond rattlesnake (*Crotalus ruber*) is a CDFW species of special concern. The species habitat includes coastal sage scrub or chaparral with granite boulders. The project site supports habitat for this species. This species is potentially present. This species is covered by the Western Riverside MSHCP and is considered adequately conserved.

California Horned Lark

California horned lark (*Eremophila alpestris actia*) is a CDFW watch list species and IUCN species of least concern. The species is found in open areas dominated by sparse low herbaceous vegetation or widely scattered low shrubs. The project site supports habitat for this species. This species is potentially present. This species is covered by the Western Riverside MSHCP and is considered adequately conserved.

Western Yellow Bat

Western yellow bat (*Lasiurus xanthinus*) is a CDFW species of special concern and IUCN species of least concern. The species occupies a range of habitats of extremely arid areas including savannas, secluded woodlands, regions dominated by pasture or croplands, and residential areas. It is insectivorous and often roosts in trees. The project site supports limited roosting habitat for this species. This species is potentially present.

San Diego Black-tailed Jackrabbit

San Diego black-tailed jackrabbit is a CDFW species of special concern. The species habitat includes chaparral and coastal sage scrub. The project site supports limited habitat for this species. This species

is potentially present. This species is covered by the Western Riverside MSHCP and is considered adequately conserved.

Coast Horned Lizard

Coast horned lizard (*Phrynosoma blainvillii*) is a CDFW species of special concern and IUCN species of least concern. The species inhabits open areas of sandy soils and low vegetation in valleys, foothills and semiarid mountains. It is found in grasslands, coniferous forests, woodlands, and chaparral, with open areas and patches of loose soil. The project site supports limited habitat for this species. This species is potentially present. This species is covered by the Western Riverside MSHCP and is considered adequately conserved.

Lawrence's Goldfinch

Lawrence's goldfinch (*Spinus lawrencei*) is an IUCN species of least concern. The species inhabits open woodlands, chaparral, and weedy fields. The project site supports limited habitat for this species in the basin located adjacent to the eastern project boundary. This species is potentially present.

5.3 Nesting Birds

The project site does have shrubs and trees that can support nesting song birds or raptors. The 23.4 acres of developed habitat, 20.2 acres of disturbed non-native vegetation habitat, 3.20 acres of disturbed non-native grasses habitat, 1.15 acres of disturbed coastal sage scrub, 0.87 acres of ornamental vegetation habitat, 0.16 acres of streambed, and 0.07 acres of mulefat habitat are considered habitat that can be utilized by nesting birds and raptors during the nesting bird season. Potential impacts to nesting birds may occur if ground disturbing activities or vegetation removal occur during the bird nesting season of February 1 through September 15.

5.4 Impacts to Critical Habitat

The project is not located within designated federal critical habitat. No impact to critical habitat would occur.

5.5 Impacts to Wildlife Movement Corridors

No impacts to wildlife movement corridors is expected.

5.6 Conflict with Local Policies or Ordinances Protecting Biological Resources

Project is expecting removal of trees and will have to comply with City of Moreno Valley Landscape Ordinance Municipal Code § 9.17.030.

5.7 Conflict with the Provisions of an Adopted Habitat Conservation Plan, Natural Community Conservation Plan, or Other Approved Local, Regional, or State Habitat Conservation Plan

The project is within the Western Riverside MSHCP. If Western Riverside MSHCP guidelines and requirements are followed, no conflicts are expected.

5.8 State and Federal Drainages

The project site will impact approximately 0.16 acres of streambed, and 0.07 acres of mulefat habitat for a total of 0.23 acre of riparian habitat. This habitat is regulated under Section 1602 of the California Department of Fish and Game Code for the protection of lake or streams and under Section 404 and 401 of the Clean Water Act. No impacts to vernal pools are expected.

5.9 Impacts to Section 6.1.2 Protection of Species Associated with Riparian/Riverine Areas and Vernal Pools

The project site is expected to impact approximately 0.16 acres of streambed, and 0.07 acres of mulefat habitat for a total of 0.23 acre of riparian habitat. This habitat is also regulated under Section 1602 of the California Department of Fish and Game Code for the protection of lake or streams and under Section 404 and 401 of the Clean Water Act. This habitat is also considered riparian/riverine areas as defined in Section 6.1.2 of the Western Riverside MSHCP. Any project impacts to this habitat will need to be in compliance with Section 6.1.2 of the Western Riverside MSHCP. No vernal pools were observed within the project boundaries.

5.10 Impacts to Section 6.1.3 Protection of Narrow Endemic Plant Species

The project site is not located within the narrow endemic plant overlay of the MSHCP; therefore, no impacts to narrow endemic plants are expected.

5.11 Impacts to Section 6.1.4 Guidelines Pertaining to the Urban/Wildlands Interface

The project site is not located within a Western Riverside MSHCP linkage or criteria cell. Therefore, the project is not subject to Section 6.1.4 pertaining to urban/wildlands interface.

5.12 Impacts to Section 6.3.2 Guidelines Additional Survey Needs and Procedures

Riverside County Transportation and Land Management (TLMA) requires a habitat assessment for burrowing owl. If habitat is present than focused burrowing owl surveys as described in the Western Riverside MSHCP *Burrowing Owl Survey Instructions*. The 20.2 acres of disturbed non-native vegetation habitat, and the 3.20 acres of disturbed non-native grasses habitat, is suitable for burrowing owl and focused surveys were performed in compliance with TLMA requirements. Focused burrowing

owl surveys were conducted in the months of June, July, and August and no burrowing owl were found. No impacts are expected.

5.11 Impacts to Oak Trees

No impacts to oak trees will occur.

6.0 Recommendations

In order to mitigate any potential impacts from project activities, the project should incorporate the following recommendations.

6.1 San Bernardino Aster

This species is not covered under the Western Riverside MSHCP but through participation in the plan, and the land acquisition and preservation by the plan, this species would be adequately covered.

6.2 Western Riverside MSHCP Covered Species

- Cooper's Hawk, Bell's Sage Sparrow, Coastal horned lizard, Orange-throat Whiptail, Coastal Whiptail, Red-diamond Rattlesnake, California Horned Lark, San Diego Black-tailed Jackrabbit are fully covered species under the Western Riverside MSHCP. The proposed project must be consistent with the Western Riverside MSHCP. Payment of the appropriate development mitigation fees will mitigate any impacts to these species. A fee schedule can be found in the Local Development Mitigation Fee Schedule for Fiscal Year 2015.

- Three days prior to any ground disturbing activities or vegetation removal, a qualified biological monitor should conduct a preconstruction survey to identify any sensitive biological resources to flag for avoidance. Any reptile species that may be present within the project area shall be relocated outside of the impact areas.

6.3 Nesting birds

- It is recommended that vegetation removal be conducted outside of the nesting season for migratory birds to avoid direct impacts. The migratory bird nesting season is between February 1 and September 15.

- If vegetation removal will occur during the migratory bird nesting season, between February 1 and September 15, it is recommended that pre-construction nesting bird surveys be performed within three days prior to vegetation removal.

- If active nests are found during nesting bird surveys, they shall be flagged and a 200-foot buffer shall be fenced around the nests.

- A biological monitor shall visit the site once a week during ground disturbing activities to ensure all fencing is in place and no sensitive species are being impacted.

6.4 State and Federal Drainages

- The project proponent shall consult with the California Department of Fish and Wildlife, the U.S. Army Corps of Engineers, and the Santa Ana Regional Water Quality Control Board to determine the need for permits that must be obtained prior to initiation of construction of the proposed project.
- The loss of Western Riverside MSHCP riverine resources will require preparation of an MSHCP Determination of Biologically Equivalent or Superior Preservation (DBESP).

7.0 Certification

*"**CERTIFICATION**: I hereby certify that the statements furnished above and in the attached exhibits present the data and information required for this biological evaluation, and that the facts, statements, and information presented are true and correct to the best of my knowledge and belief."*

Appendix A Species List

Plant List

Acmispon strigosus	Lotus
Amaranthus sp.	Pigweed
Ambrosia psilostachya	Western ragweed
Avena barbata	Oats
Baccharis salicifolia	Mulefat
Brassica nigra	Black mustard
Brassica tournefortii	Common mustard
Bromus diandrus	Ripgut brome
Bromus hordeaceus	soft chess
Bromus madritensis	Foxtail
Chamaesyce prostata	Prostate spurge
Centaurea melitensis	Tacalote
Cirsium vulgare	Bull thistle
Convolvulus arvensis	Field bindweed
Cucurbita foetidissima	Gord
Datura stramonium	Jimson weed
Deinandra fasciculata	Tarweed
Encelia farinosa	Brittlebush
Erigeron canadensis	Horseweed
Eriogonum fasciculatum	California buckwheat
Erodium cicutarium	Filaree
Eucalyptus sp.	Eucalyptus
Helianthus petiolaris	Sunflower
Hirschfeldia incana	Mustard

Hordeum murinum	Foxtail barley
Hordeum vulgare	Barley
Isocoma menziesii	Goldenbush
Malva parviflora	Cheeseweed
Marrubium vulgare	Horehound
Nerium oleander	Oleander
Nicotina glauca	Tree tabacco
Ricinus communis	Castor bean
Rumex crispus	Curly dock
Salix laevigata	Red Willow
Salix lasiolepsis	Arroyo Willow
Salsola tragus	Russian Thistle
Salvia apiana	White sage
Salvia mellifera	Black sage
Sambucus mexicana	Mexican elderberry
Schinus molle	Peruvian pepper tree
Tribulus terrestris	Puncture vine
Trichostema lanceolatum	Vinegar weed
Washingtonia robusta	Mexican Fan palm

Animal List

Aphelocoma californiaca	Western scrub jay
Buteo jamaicensis	Red-tailed Hawk
Calypte anna	Anna's hummingbird
Canis latrans	Coyote
Corvus corax	Raven
Corvus brachyrhynchos	Crow
Hirundo rustica	Barn swallow
Mimus polyglottos	Mocking bird

Passer domesticus	House Sparrow
Sayornis nigricans	Black phoebe
Sceloporus occidentalis	Western fence lizard
Streptopelia decaocto	Euroasian collard dove
Sylvilagus audubonii	Desert cottontail
Thomomys bottae	Botha's pocket gopher
Tyrannus verticalis	Western kingbird
Zenaida macroura	Mourning dove

APPENDIX B

Plants

Scientific Name	Common Name	Federal Listing	State Listing	CNPS Listing	Other Status	Habitat	Potential for Presence
Abronia villosa var. aurita	chaparral sand-verbena	None	None	1B.1	BLM_S-Sensitive | USFS_S-Sensitive	Sandy places in coastal-sage scrub, chaparral; Elevation: < 1600 m. Flowering Time: Mar--Aug	**Habitat too disturbed, disked, and no sandy areas. Not present.**
Allium munzii	Munz's onion	Endangered	Threatened	1B.1	SB_RSABG-Rancho Santa Ana Botanic Garden	Grassy openings in coastal-sage scrub; Elevation: 300--900 m. Flowering Time: Apr--May	**Habitat too disturbed and disked. Not present.**
Ambrosia pumila	San Diego ambrosia	Endangered	None	1B.1		Disturbed sites; Elevation: 50--600 m. Flowering Time:Apr--Jul	**Not inside narrow endemic plant survey area. Not present.**
Arenaria paludicola	marsh sandwort	Endangered	Endangered	1B.1	SB_SBBG-Santa Barbara Botanic Garden	Wet meadows, marshes; Elevation: < 300 m. Flowering Time: Late spring—summertime	**Project area too disturbed. Basin is maintained. Not present.**
Astragalus hornii var. hornii	Horn's milk-vetch	None	None	1B.1	BLM_S-Sensitive	Salty flats, lake shores; Elevation: 60--300 m. Flowering Time: May--Sep	**No habitat present. Not present.**
Astragalus pachypus var. jaegeri	Jaeger's milk-vetch	None	None	1B.1	BLM_S-Sensitive | SB_RSABG-Rancho Santa Ana Botanic Garden | USFS_S-Sensitive	Rocky or sandy areas; Elevation: 450--1200 m. Flowering Time: Dec--Jun	**Habitat too disturbed and disked Not present.**
Atriplex coronata var. notatior	San Jacinto Valley crownscale	Endangered	None	1B.1	SB_RSABG-Rancho Santa Ana Botanic Garden	Alkaline flats; Elevation: 400--500 m. Flowering Time: Apr--Aug	**No habitat present. Not present.**

Atriplex parishii	Parish's brittlescale	None	None	1B.1	USFS_S-Sensitive	Alkaline or clay soils; Elevation: < 470 m. Flowering Time: Jun--Oct	**No habitat present. Not present.**
Atriplex serenana var. davidsonii	Davidson's saltscale	None	None	1B.2		Bluffs; Elevation: < 200 m. Flowering Time: Apr--Oct	**No habitat present. Not present.**
Berberis nevinii	Nevin's barberry	Endangered	Endangered	1B.1	SB_RSABG-Rancho Santa Ana Botanic Garden | SB_SBBG-Santa Barbara Botanic Garden	Sandy to gravelly soils, washes, chaparral; Elevation: < 650 m. Flowering Time: Mar--May	**No habitat present. Not present.**
Brodiaea filifolia	thread-leaved brodiaea	Threatened	Endangered	1B.1	SB_RSABG-Rancho Santa Ana Botanic Garden	Grassland, vernal pools; Elevation: 25--860 m. Flowering Time: Mar--Jun	**Project area too disturbed. Basin is maintained. Not present.**
California macrophylla	round-leaved filaree	None	None	1B.1	BLM_S-Sensitive | SB_RSABG-Rancho Santa Ana Botanic Garden | SB_SBBG-Santa Barbara Botanic Garden	Open sites, grassland, scrub; Elevation: < 1200 m. Flowering Time: Mar--Jul	**Habitat too disturbed and disked Not present.**
Calochortus plummerae	Plummer's mariposa-lily	None	None	4.2	SB_RSABG-Rancho Santa Ana Botanic Garden	Dry, rocky chaparral, yellow-pine forest; Elevation: < 1700 m. Flowering Time: May--Jul	**No habitat present. Not present.**

Canyon Live Oak Ravine Forest	Canyon Live Oak Ravine Forest	None	None				**Not Present.**
Carex comosa	bristly sedge	None	None	2B.1		Wet places; Elevation: < 400 m. Flowering Time: Jul--Sep	**No habitat present. Not present.**
Caulanthus simulans	Payson's jewelflower	None	None	4.2	USFS_S-Sensitive	Chaparral, scrub, pinyon/juniper woodland; Elevation: 400--2200 m. Flowering Time: Mar--Jun	**Habitat too disturbed and disked Not present.**
Chloropyron maritimum ssp. maritimum	salt marsh bird's-beak	Endangered	Endangered	1B.2	SB_RSABG-Rancho Santa Ana Botanic Garden	Coastal salt marsh; Elevation: < 10 m. Flowering Time: May--Oct	**No habitat present. Not present.**
Chorizanthe parryi var. parryi	Parry's spineflower	None	None	1B.1	BLM_S-Sensitive | SB_RSABG-Rancho Santa Ana Botanic Garden | USFS_S-Sensitive	Sand; Elevation: 90--800 m. Flowering Time: May--Jun	**No habitat present. Not present.**
Chorizanthe polygonoides var. longispina	long-spined spineflower	None	None	1B.2	BLM_S-Sensitive | SB_RSABG-Rancho Santa Ana Botanic Garden	Sand; Elevation: 30--1500 m. Flowering Time: Apr--Jun	**No habitat present. Not present.**
Chorizanthe xanti var. leucotheca	white-bracted spineflower	None	None	1B.2	BLM_S-Sensitive | USFS_S-Sensitive	Sand or gravel; Elevation: 400--1300 m. Flowering Time: Apr--Jun	**No habitat present. Not present.**

Cuscuta obtusiflora var. glandulosa	Peruvian dodder	None	None	2B.2		On herbs including Alternanthera, Dalea, Lythrum, Polygonum, Xanthium; Elevation: +- < 500 m. Time: Jul--Oct	**No habitat present. Not present.**
Dodecahema leptoceras	slender-horned spineflower	Endangered	Endangered	1B.1	SB_RSABG-Rancho Santa Ana Botanic Garden	Sand or gravel; Elevation: 200--700 m. Flowering Time: May--Jun	**No habitat present. Not present.**
Eriastrum densifolium ssp. sanctorum	Santa Ana River woollystar	Endangered	Endangered	1B.1	SB_RSABG-Rancho Santa Ana Botanic Garden	Washes, floodplains, dry riverbeds; Elevation: < 500 m. Flowering Time: May--Sep	**No habitat present. Not present.**
Galium californicum ssp. primum	Alvin Meadow bedstraw	None	None	1B.2	BLM_S-Sensitive | USFS_S-Sensitive	Shade, lower elevations in Jeffrey-, Coulter-pine forests; Elevation: 1350--1700 m. Flowering Time: Mar--Jul	**No habitat present. Not present.**
Harpagonella palmeri	Palmer's grapplinghook	None	None	4.2	SB_RSABG-Rancho Santa Ana Botanic Garden	Dry, semi-barren sites in chaparral, coastal scrub, grassland; Elevation: < 1000m. Bioregional . Flowering Time: Mar--Apr	**Habitat too disturbed and disked Not present.**
Helianthus nuttallii ssp. parishii	Los Angeles sunflower	None	None	1A		Marshes; Elevation: < 500 m. Flowering Time: Aug--Oct	**No habitat present. Not present.**
Horkelia cuneata var. puberula	mesa horkelia	None	None	1B.1	USFS_S-Sensitive	Dry, sandy, coastal chaparral; Elevation: 70--870 m. Flowering Time: Mar--Jul	**Habitat too disturbed and disked Not present.**
Imperata brevifolia	California satintail	None	None	2B.1	SB_SBBG-Santa Barbara Botanic Garden | USFS_S-Sensitive	Wet springs, meadows, streambanks, floodplains; Elevation: < 500 m. Bioregional Distribution: Flowering Time: Sep--May	**Site is too high in elevation for this species. Not present.**

Lasthenia glabrata ssp. coulteri	Coulter's goldfields	None	None	1B.1	BLM_S-Sensitive | SB_RSABG-Rancho Santa Ana Botanic Garden	Saline places, vernal pools; Elevation: < 1000 m.Flowering Time: Apr--May	**No habitat present. Not present.**
Lepidium virginicum var. robinsonii	Robinson's pepper-grass	None	None	4.3		Chaparral, coastal sage scrub, bollms Jan-July.	**Habitat too disturbed and disked Not present.**
Lycium parishii	Parish's desert-thorn	None	None	2B.3		Sandy to rocky slopes, canyons; Elevation: < 1000 m. Flowering Time: Mar--Apr	**No habitat present. Not present.**
Monardella macrantha ssp. hallii	Dicots	None	None	1B.3	SB_RSABG-Rancho Santa Ana Botanic Garden | USFS_S-Sensitive	Chaparral, woodland; Elevation: 600--2000 m. Flowering Time: May--Aug	**No habitat present. Not present.**
Myosurus minimus ssp. apus	Dicots	None	None	3.1		Vernal pools, flowers May-June.	**No habitat present. Not present.**
Nama stenocarpum	mud nama	None	None	2B.2		Intermittently wet areas; Elevation: < 810 m. Flowering Time: Mar--Oct	**No habitat present. Not present.**
Nasturtium gambelii	Gambel's water cress	Endangered	Threatened	1B.1	SB_RSABG-Rancho Santa Ana Botanic Garden | SB_SBBG-Santa Barbara Botanic Garden	Marshes, streambanks, lake margins; Elevation: < 350 m. Flowering Time: May--Aug	**No habitat present. Not present.**

Navarretia fossalis	spreading navarretia	Threatened	None	1B.1	SB_RSABG-Rancho Santa Ana Botanic Garden	Vernal pools, ditches; Elevation: 30--1300 m. Flowering Time: Apr--Jun	**No habitat present. Not present.**
Ribes divaricatum var. parishii	Parish's gooseberry	None	None	1A		Moist woodland; Elevation: 60--310 m. Flowering Time: Mar--Apr Note: Possibly extinct.	**No habitat present. Not present.**
Riversidian Alluvial Fan Sage Scrub	Riversidian Alluvial Fan Sage Scrub	None	None				**Not Present.**
Sidalcea hickmanii ssp. parishii	Parish's checkerbloom	None	Rare	1B.2	BLM_S-Sensitive | SB_RSABG-Rancho Santa Ana Botanic Garden | SB_SBBG-Santa Barbara Botanic Garden | USFS_S-Sensitive	Chaparral, woodland, open conifer forest; Elevation: 1000--2200 m. Flowering Time: Jun--Aug	**No habitat present. Not present.**
Sidalcea neomexicana	Salt Spring checkerbloom	None	None	2B.2	USFS_S-Sensitive	Alkaline springs, marshes; Elevation: generally < 1500 m. Flowering Time: Apr--Jun	**No habitat present. Not present.**
Southern Coast Live Oak Riparian Forest	Southern Coast Live Oak Riparian Forest	None	None				**Not Present.**
Southern Cottonwood Willow Riparian Forest	Southern Cottonwood Willow Riparian Forest	None	None				**Not Present.**

Southern Riparian Forest	Southern Riparian Forest	None	None				**Not Present.**
Southern Riparian Scrub	Southern Riparian Scrub	None	None				**Not Present.**
Southern Sycamore Alder Riparian Woodland	Southern Sycamore Alder Riparian Woodland	None	None				**Not Present.**
Southern Willow Scrub	Southern Willow Scrub	None	None				**Not Present.**
Sphenopholis obtusata	prairie wedge grass	None	None	2B.2		Wet meadows, streambanks, ponds; Elevation: 240--2870 m. Flowering Time: Apr--Jun	**No habitat present. Not present.**
Streptanthus campestris	southern jewelflower	None	None	1B.3	BLM_S-Sensitive | USFS_S-Sensitive	Open, rocky conifer forest, chaparral, woodland; Elevation: 900--2300 m. Flowering Time: May--Jun	**No habitat present. Not present.**
Symphyotrichum defoliatum	San Bernardino aster	None	None	1B.2	BLM_S-Sensitive | USFS_S-Sensitive	Grassland, disturbed places; Elevation: < 2050 m. Flowering Time: Jul--Nov	**Potentially present.**
Tortula californica	California screw moss	None	None	1B.2	BLM_S-Sensitive	sandy, soil, chenopod scrub, and valley foothill grasslands.	**No habitat present. Not present.**
Trichocoronis wrightii var. wrightii	Wright's trichocoronis	None	None	2B.1		Moist places, drying riverbeds; Elevation: < 500 m. Flowering Time: May--Sep	**Site is too high in elevation for this species. Not present.**

Animals

Scientific Name	Common Name	Federal Listing	State Listing	Other Status	Habitat	Potential for Presence
Accipiter cooperii	Cooper's hawk	None	None	CDFW_WL-Watch List | IUCN_LC-Least Concern	Rivers with sandy banks, willows, cottonwoods, and sycamores; loose, gravelly areas of streams in drier parts of range.	Nesting habitat present in Eucalyptus trees on and adjacent to project area.
Agelaius tricolor	tricolored blackbird	None	Endangered	BLM_S-Sensitive | CDFW_SSC-Species of Special Concern | IUCN_EN-Endangered | NABCI_RWL-Red Watch List | USFWS_BCC-Birds of Conservation Concern	Nests in freshwater marsh habitat wit Typha sp. And willows being dominant.	**No habitat for this species. Not present.**
Aimophila ruficeps canescens	southern California rufous-crowned sparrow	None	None	CDFW_WL-Watch List	on steep, dry, rocky hillsides with plenty of grasses and a scattering of shrubs and small trees, such as sagebrush or scrub oaks. Recently burned areas can provide good, open habitat. The birds tend to avoid areas of dense shrubs.	**No habitat for this species. Not present.**

Anniella pulchra pulchra	silvery legless lizard	None	None	CDFW_SSC-Species of Special Concern | USFS_S-Sensitive	Occurs in moist warm loose soil with plant cover. Moisture is essential. Occurs in sparsely vegetated areas of beach dunes, chaparral, pine-oak woodlands, desert scrub, sandy washes, and stream terraces with sycamores, cottonwoods, or oaks. Leaf litter under trees and bushes in sunny areas and dunes stabilized with bush lupine and mock heather often indicate suitable habitat. Often can be found under surface objects such as rocks, boards, driftwood, and logs.	**No habitat for this species. Not present.**
Antrozous pallidus	pallid bat	None	None	BLM_S-Sensitive | CDFW_SSC-Species of Special Concern | IUCN_LC-Least Concern | USFS_S-Sensitive | WBWG_H-High Priority	The pallid bat is usually found in rocky, mountainous areas and near water. They are also found over more open, sparsely vegetated grasslands, and they seem to prefer to forage in the open.	**No habitat for this species. Not present.**

Aquila chrysaetos	golden eagle	None	None	BLM_S-Sensitive | CDF_S-Sensitive | CDFW_FP-Fully Protected | CDFW_WL-Watch List | IUCN_LC-Least Concern | USFWS_BCC-Birds of Conservation Concern	Golden Eagles live in open and semiopen country featuring native vegetation across most of the Northern Hemisphere. They avoid developed areas and uninterrupted stretches of forest. They are found primarily in mountains up to 12,000 feet, canyonlands, rimrock terrain, and riverside cliffs and bluffs. Golden Eagles nest on cliffs and steep escarpments in grassland, chapparal, shrubland, forest, and other vegetated areas.	**No habitat for this species. Not present.**
Artemisiospiza belli belli	Bell's sage sparrow	None	None	CDFW_WL-Watch List | USFWS_BCC-Birds of Conservation Concern	Nests in coastal sage scrub and chaparral.	**Some very disturbed coastal sage scrub is present. Potentially present.**
Asio otus	long-eared owl	None	None	CDFW_SSC-Species of Special Concern | IUCN_LC-Least Concern	require a combination of grassland or other open country for foraging, and dense tall shrubs or trees for nesting and roosting. Pine stands and windbreaks or shelterbelts are favored winter roost habitat.	**No habitat for this species. Not present.**

Aspidoscelis hyperythra	orangethroat whiptail	None	None	CDFW_SSC -Species of Special Concern | IUCN_LC-Least Concern | USFS_S-Sensitive	This species inhabits low-elevation coastal scrub, chamise-redshank chaparral, mixed chaparral, and valley-foothill hardwood habitat	**Some very disturbed coastal sage scrub is present. Potentially present.**
Aspidoscelis tigris stejnegeri	coastal whiptail	None	None		Found in a variety of ecosystems, primarily hot and dry open areas with sparse foliage - chaparral, woodland, and riparian areas.	**Some habitat may be present. Potentially present.**
Athene cunicularia	burrowing owl	None	None	BLM_S-Sensitive | CDFW_SSC -Species of Special Concern | IUCN_LC-Least Concern | USFWS_BCC-Birds of Conservation Concern	Lives in dry, open areas with no trees and short grass.	**Surveys for this species were conducted on no burrowing owl were found. Not present.**
Buteo regalis	ferruginous hawk	None	None	CDFW_WL-Watch List | IUCN_LC-Least Concern | USFWS_BCC-Birds of Conservation Concern	Open country, primarily prairies, plain and badlands, breeding in trees near streams or on steep slopes, sometimes on mounds in open desert.	**No nesting habitat for this species. Not present.**

Buteo swainsoni	Swainson's hawk	None	Threatened	BLM_S-Sensitive | IUCN_LC-Least Concern | USFWS_BCC-Birds of Conservation Concern	Swainson's Hawks favor open habitats for foraging.	**No nesting habitat for this species. Not present.**
Campylorhynchus brunneicapillus sandiegensis	coastal cactus wren	None	None	CDFW_SSC-Species of Special Concern | USFS_S-Sensitive | USFWS_BCC-Birds of Conservation Concern	Coastal sage scrub with thickets of Opuntia sp.	**No nesting habitat for this species. Not present.**
Catostomus santaanae	Santa Ana sucker	Threatened	None	AFS_TH-Threatened | CDFW_SSC-Species of Special Concern | IUCN_VU-Vulnerable	Flowing perennial or intermittent southern California streams.	**No habitat for this species. Not present.**
Chaetodipus fallax fallax	northwestern San Diego pocket mouse	None	None	CDFW_SSC-Species of Special Concern	shrublands that vary from sparse desert shrublands to dense coastal scrub. Tends to be more abundant where rocks or shrubs provide cover. Lives in a variety of habitats: desert slopes, agave, rocky areas, coastal sage scrub, etc.	**No habitat for this species. Not present.**

					dry shrublands, desert, and near-desert areas. They are found among scattered rocks and boulders or on talus slopes. Preferred habitat is often on south-facing hillsides at elevations from sea level to over 2,000 meters. Rosy boas are rarely found far from rock cover. They seem to prefer habitats near free water, such as canyon or desert streams, but are not restricted to such areas.	
Charina trivirgata	rosy boa	None	None	IUCN_LC-Least Concern | USFS_S-Sensitive		**No habitat for this species. Not present.**
Coccyzus americanus occidentalis	western yellow-billed cuckoo	Threatened	Endangered	BLM_S-Sensitive | NABCI_RWL-Red Watch List | USFS_S-Sensitive | USFWS_BCC-Birds of Conservation Concern	Breeding habitat primarily consists of large blocks, or contiguous areas, of riparian habitat, particularly cottonwood–willow riparian woodlands.	**No habitat for this species. Not present.**
Crotalus ruber	red-diamond rattlesnake	None	None	CDFW_SSC-Species of Special Concern | USFS_S-Sensitive	Coastal sage scrub or chaparral with granite boulders.	**Some habitat may be present. Potentially present.**
Diadophis punctatus modestus	San Bernardino ringneck snake	None	None	USFS_S-Sensitive	Prefers moist habitats, including wet meadows, rocky hillsides, gardens, farmland, grassland, chaparral, mixed coniferous forests, woodlands.	**No habitat for this species. Not present.**

Dipodomys stephensi	Stephens' kangaroo rat	Endangered	Threatened	IUCN_EN-Endangered	Typical habitat includes sparsely vegetated areas (perennial cover less than 30%) with loose, friable, well-drained soil (generally at least 0.5 m deep) and flat or gently rolling terrain.	**No habitat for this species. Not present.**
Elanus leucurus	white-tailed kite	None	None	BLM_S-Sensitive | CDFW_FP-Fully Protected | IUCN_LC-Least Concern	Commonly found in savanna, open woodlands, marshes, desert grassland, partially cleared lands, and cultivated fields.	**No nesting habitat for this species. Not present.**
Empidonax traillii extimus	southwestern willow flycatcher	Endangered	Endangered	NABCI_RWL-Red Watch List	Riparian forests.	**No nesting habitat for this species. Not present.**
Emys marmorata	western pond turtle	None	None	BLM_S-Sensitive | CDFW_SSC-Species of Special Concern | IUCN_VU-Vulnerable | USFS_S-Sensitive	Found in ponds, lakes, streams, large rivers, slow-moving sloughs, and quiet waters. The turtles prefer aquatic habitats with exposed areas for basking, with aquatic vegetation, such as algae and other water plants, but they also live in clear waters, especially where there is cover such as boulders or fallen trees in the waterThe western pond turtle also spends significant amounts of time in upland terrestrial habitats and has been found more than one kilometre from water.	**No nesting habitat for this species. Not present.**

Eremophila alpestris actia	California horned lark	None	None	CDFW_WL-Watch List | IUCN_LC-Least Concern	Open areas dominated by sparse low herbaceous vegetation or widely scattered low shrubs. Nests in hollow on ground often next to grass tuft or clod of earth or manure.	**Habitat for this species is present. Potentially present.**
Eumops perotis californicus	western mastiff bat	None	None	BLM_S-Sensitive | CDFW_SSC-Species of Special Concern | WBWG_H-High Priority	present only where there are significant rock features offering suitable roosting habitat. It is found in a variety of habitats, from desert scrub to chaparral to oak woodland and into the ponderosa pine belt.	**No habitat for this species. Not present.**
Euphydryas editha quino	quino checkerspot butterfly	Endangered	None	XERCES_CI-Critically Imperiled	The larvae may use either Plantago erecta or Castilleja exserta, both of which may be common in meadows and upland sage scrub/chapparal habitat.	**No habitat for this species. Not present.**
Gila orcuttii	arroyo chub	None	None	AFS_VU-Vulnerable | CDFW_SSC-Species of Special Concern | USFS_S-Sensitive	southern California coastal drainages.	**No habitat for this species. Not present.**

Haliaeetus leucocephalus	bald eagle	Delisted	Endangered	BLM_S-Sensitive | CDF_S-Sensitive | CDFW_FP-Fully Protected | IUCN_LC-Least Concern | USFS_S-Sensitive | USFWS_BCC-Birds of Conservation Concern	generally found close to water	**No habitat for this species. Not present.**
Icteria virens	yellow-breasted chat	None	None	CDFW_SSC-Species of Special Concern | IUCN_LC-Least Concern	Riparian forests.	**No habitat for this species. Not present.**
Lampropeltis zonata (parvirubra)	California mountain kingsnake (San Bernardino population)	None	None	BLM_S-Sensitive | CDFW_SSC-Species of Special Concern | IUCN_LC-Least Concern | USFS_S-Sensitive	Found in diverse habitats including coniferous forest, oak-pine woodlands, riparian woodland, chaparral, manzanita, and coastal sage scrub. Wooded areas near a stream with rock outcrops, talus or rotting logs that are exposed to the sun are good places to find this snake.	**No habitat for this species. Not present.**

Lanius ludovicianus	loggerhead shrike	None	None	CDFW_SSC -Species of Special Concern | IUCN_LC-Least Concern | USFWS_BCC-Birds of Conservation Concern	Open country with scattered shrubs and trees is the typical habitat of Loggerhead Shrike, but the species can also be found in more heavily wooded habitats with large openings and in very short habitats with few or no trees.	**No habitat for this species. Not present.**
Lasiurus xanthinus	western yellow bat	None	None	CDFW_SSC -Species of Special Concern | IUCN_LC-Least Concern | WBWG_H-High Priority	This species occupies a range of habitats of extremely arid areas to dry areas. It inhabits savannas, secluded woodlands, regions dominated by pasture or croplands, and even tolerates residential areas. It is insectivorous. It often roosts in trees.	**Very limited roosting habitat for this species. Potentially present.**
Leptonycteris yerbabuenae	lesser long-nosed bat	Endangered	None	IUCN_VU-Vulnerable | WBWG_H-High Priority	This bat roosts in caves and mines, often in colonies of several thousand.	**No habitat for this species. Not present.**
Lepus californicus bennettii	San Diego black-tailed jackrabbit	None	None	CDFW_SSC -Species of Special Concern	Chaparral and coastal sage scrub.	**Very limited habitat for this species. Potentially present.**
Neotoma lepida intermedia	San Diego desert woodrat	None	None	CDFW_SSC -Species of Special Concern	Chaparral and coastal sage scrub.	**No habitat for this species. Not present.**

Nyctinomops femorosaccus	pocketed free-tailed bat	None	None	CDFW_SSC -Species of Special Concern | IUCN_LC-Least Concern | WBWG_M-Medium Priority	Roosts in caves, rock crevices in cliff faces, and man-made structures.	**No habitat for this species. Not present.**
Onychomys torridus ramona	southern grasshopper mouse	None	None	CDFW_SSC -Species of Special Concern	Believed to inhabit flat, sandy, valley floor habitats	**No habitat for this species. Not present.**
Perognathus longimembris brevinasus	Los Angeles pocket mouse	None	None	CDFW_SSC -Species of Special Concern	includes lower elevation grassland, alluvial sage scrub, and coastal sage scrub.	**No habitat for this species. Not present.**
Phrynosoma blainvillii	coast horned lizard	None	None	BLM_S-Sensitive | CDFW_SSC -Species of Special Concern | IUCN_LC-Least Concern	Inhabits open areas of sandy soil and low vegetation in valleys, foothills and semiarid mountains. Found in grasslands, coniferous forests, woodlands, and chaparral, with open areas and patches of loose soil. Often found in lowlands along sandy washes with scattered shrubs and along dirt roads, and frequently found near ant hills.	**Very limited habitat for this species. Potentially present.**
Plegadis chihi	white-faced ibis	None	None	CDFW_WL-Watch List | IUCN_LC-Least Concern	Found in marsh habitat.	**No habitat for this species. Not present.**

Polioptila californica californica	coastal California gnatcatcher	Threatened	None	CDFW_SSC -Species of Special Concern | NABCI_YWL-Yellow Watch List	Coastal sage scrub.	**No habitat for this species. Not present.**
Rana muscosa	southern mountain yellow-legged frog	Endangered	Endangered	CDFW_SSC -Species of Special Concern | IUCN_EN-Endangered | USFS_S-Sensitive	Rocky stream courses in southern California perennial or intermittent streams.	**No habitat for this species. Not present.**
Rhaphiomidas terminatus abdominalis	Delhi Sands flower-loving fly	Endangered	None		Habitat consists of Delhi sands.	**No habitat for this species. Not present.**
Rhinichthys osculus ssp. 3	Santa Ana speckled dace	None	None	AFS_TH-Threatened | CDFW_SSC -Species of Special Concern | USFS_S-Sensitive	Cobble and rock southern California intermittent and perennial streams.	**No habitat for this species. Not present.**
Setophaga petechia	yellow warbler	None	None	CDFW_SSC -Species of Special Concern | USFWS_BCC-Birds of Conservation Concern	Riparian scrub and thickets.	**No habitat for this species. Not present.**

Spea hammondii	western spadefoot	None	None	BLM_S-Sensitive | CDFW_SSC-Species of Special Concern | IUCN_NT-Near Threatened	Upland coastal sage scrub and needs vernal or seasonal pools to breed.	**No habitat for this species. Not present.**
Spinus lawrencei	Lawrence's goldfinch	None	None	IUCN_LC-Least Concern | NABCI_YWL-Yellow Watch List | USFWS_BCC-Birds of Conservation Concern	Open woodlands, chaparral, and weedy fields.	**Very limited habitat for this species in the basin. Potentially present.**
Streptocephalus woottoni	Riverside fairy shrimp	Endangered	None	IUCN_EN-Endangered	Vernal pool habitat.	**No habitat for this species. Not present.**
Taxidea taxus	American badger	None	None	CDFW_SSC-Species of Special Concern | IUCN_LC-Least Concern	Coastal sage scrub, chaparral, mountain woodlands, desert habitat.	**No habitat for this species. Not present.**

Thamnophis hammondii	two-striped garter snake	None	None	BLM_S-Sensitive | CDFW_SSC-Species of Special Concern | IUCN_LC-Least Concern | USFS_S-Sensitive	Generally found around pools, creeks, cattle tanks, and other water sources, often in rocky areas, in oak woodland, chaparral, brushland, and coniferous forest.	**No habitat for this species. Not present.**
Vireo bellii pusillus	least Bell's vireo	Endangered	Endangered	IUCN_NT-Near Threatened | NABCI_YWL-Yellow Watch List	Riparian areas dominated by mulefat and willows.	**No habitat for this species. Not present.**

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:15,800.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL: http://websoilsurvey.nrcs.usda.gov
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Western Riverside Area, California
Survey Area Data: Version 7, Sep 17, 2014

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Jan 14, 2015—Jan 21, 2015

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

1.0 INTRODUCTION

1.1 Project Location

The project site is located in the City of Moreno Valley in Riverside County at the southeast intersection of Heacock Street and Ironwood Avenue (Figure 1). The southern boundary is defined by the Moreno Valley Freeway (CA-60). The project site consists of 15 parcels totaling approximately 49.0 acres. Approximately 27.21 acres are developed with the existing Festival Shopping Center and commercial development south of Hemlock Avenue; the remaining 22.39 acres are undeveloped and vacant (Figure 2). The site is located within the United States Geological Survey (USGS) 7.5-Minute Topographic Map Sunnymead Quadrangle. The approximate center point is 33°56'28"N, 117°14'33"W.

1.2 Project Description

The Moreno Valley Festival project consists of a commercial/retail and mixed use development (Figure 3). The plan area includes approximately 49.0 acres; a portion of the site is currently developed with the Festival Shopping Center on the north side of Hemlock Street and with a fast food establishment and miscellaneous commercial development on the south side of Hemlock Street.

1.3 Environmental Setting

The project site is located in a heavily urbanized area in the City of Moreno Valley. The project site has residential homes to the north, residential homes to the east, residential homes to the west, and CA-60 and commercial properties to the south. The project site has been heavily disturbed and no quality native habitat remains onsite. Portions of the property have already been developed with commercial/retail buildings. Other portions of the property consist of vacant, disked lots. The elevation of the project site varies from 1,674 feet above sea level (ASL) to 1,641feeet ASL. There is a small, disturbed, non-meandering ephemeral drainage located in the northwest portion of the property. The drainage crosses the project site from west to east and empties into Indian Basin.

1.4 Purpose of Jurisdictional Delineation

The purpose of this jurisdictional delineation is to:

- Determine if any state or federal jurisdictional waters are present within the project site boundaries;
- Quantify any impacts to jurisdictional waters due to the proposed project, if possible;
- Determine if the project will require state or federal permits for impacts to

jurisdictional waters; and

- Recommend mitigation measures to offset impacts to state or federal jurisdictional waters.

2.0 REGULATORY BACKGROUND

2.1 California Department of Fish and Wildlife Section 1602 of the California Fish and Game Code

The California Department of Fish and Wildlife (CDFW) is responsible for conserving, protecting, and managing California's fish, wildlife, and native plant resources. To meet this responsibility, the California Fish and Game Code (F&GC) requires that the CDFW be consulted if a proposed development project has the potential to detrimentally affect a stream, and thereby, wildlife resources that depend upon a stream for continued viability (F&GC Division 2, Chapter 5, Section 1600- 1616). A Section 1602 Lake or Streambed Alteration Agreement is required should the CDFW determine that the proposed project may do one or more of the following:

- Substantially divert or obstruct the natural flow of any river, stream, or lake;
- Substantially change or use any material from the bed, channel, or bank of any river, stream, or lake; or
- Deposit debris, waste, or other materials that could pass into any river, stream, or lake.

For the purposes of clarification, a stream is defined by the CDFW as "a body of water that flows perennially or episodically and that is defined by the area in which water currently flows, or has flowed, over a given course during the historic hydrologic regime, and where the width of its course can reasonably be identified by physical or biological indicators." The historic hydrologic regime is defined as circa 1800 to the present (CDFW 2010).

2.2 Regional Water Quality Control Board Clean Water Act Section 401/Porter Cologne Act

The Regional Water Quality Control Board (RWQCB) regulates activities pursuant to Section 401(a)(1) of the federal Clean Water Act, as well as the Porter Cologne Act (Water Code Section 13260). Section 401 of the Clean Water Act specifies that certification from the State is required for any project requesting a federal license or permit to conduct any activities including, but not limited to, the construction or operation of facilities that may result in any discharge into navigable waters. The certification shall originate from the State in which the discharge

originates from, or will originate from, or, if appropriate, from the interstate water pollution control agency having jurisdiction over the navigable water at the point where the discharge originates or will originate. Any such discharges will comply with the applicable provisions of sections 301, 302, 303, 306, and 307 of the Clean Water Act. The Porter Cologne Water Quality Control Act requires "any person discharging waste, or proposing to discharge waste, within any region that could affect the waters of the state to file a report of discharge." Discharge of fill material into "waters" of the State, which does not fall under the jurisdiction of the United States Army Corps of Engineers (USACE) pursuant to Section 401 of the Clean Water Act, may require authorization through application of waste discharge requirements or through waiver of waste discharge requirements.

2.2.1 Santa Ana Region Basin Plan

The Santa Ana Region Basin Plan (Basin Plan) reflects, incorporates, and implements applicable portions of a number of national and statewide water quality plans and policies, including the California Water Code and the Clean Water Act, by establishing water quality standards for groundwater and surface waters of the region. The Basin Plan recognizes and reflects regional differences in existing water quality, the beneficial uses of the region's ground and surface waters, and local water quality conditions and problems. The Basin Plan includes an implementation plan design the actions by the Regional Board and others that are necessary to achieve and maintain the water quality standards.

The term "water quality standards," as used in the federal Clean Water Act, includes both the beneficial uses of specific waterbodies and the levels of quality which must be met and maintained to protect those uses.

The project site is located within Hydrologic Unit 802.11 and within the Perris North groundwater management zone of the Santa Ana Regional Water Quality Control Board Basin Plan. The following Beneficial Uses are identified to occcur in the Perris North groundwater management zone:

MUN	**Municipal and Domestic Supply** waters are used for community, military, municipal or individual water supply systems. These uses may include, but are not limited to, drinking water supply.
AGR	**Agricultural Supply** waters are used for farming, horticulture or ranching. These uses may include but are not limited to, irrigation, stock watering, and support of vegetation for range grazing.
IND	**Industrial Service Supply** waters are used for industrial activities that do not depend primarily on water quality. These uses may include but are not limited to, mining, cooling water supply, hydraulic conveyance, gravel washing, fire protection and oil well repressurization.
PROC	**Industrial Process Supply** waters are used for industrial activities that depend primarily on water quality. These uses may include, but are not limited to, process water supply and all uses of water related to product manufacture or food preparation.

2.3 United States Army Corps of Engineers Clean Water Act Section 404

The USACE regulates "discharge of dredged or fill material" into wetlands and "waters of the United States" (WUS).

2.3.1 Waters of the United States

The term WUS is defined as:

- All waters currently used, or used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters subject to the ebb and flow of the tide;
- All interstate waters including interstate wetlands;
- All other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, wetlands, sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds; the use, degradation, or destruction of which could affect foreign commerce including any such waters, (1) which could be used by interstate or foreign travelers for recreational or other purposes; or (2) from which fish or shellfish are, or could be, taken and sold in interstate or foreign commerce; or (3) which are used or could be used for industries in interstate commerce.
- All other impoundments of waters otherwise defined as WUS under the definition;

Hernandez Environmental Services
29376 North Lake Drive
Lake Elsinore, California 92530
909.772.9009

- Tributaries of waters identified above;
- The territorial seas; and
- Wetlands adjacent to waters (other than waters that are themselves wetlands) identified in the paragraphs above (33 Code of Federal Regulations [CFR] Part 328.3(a)).

2.3.2 Wetlands

According to the USACE manual (USACE 1987), wetlands are defined as "those areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances, do support a prevalence of vegetation typically adapted for life in saturated soil conditions."

Wetlands are delineated using three parameters: hydrophytic vegetation, wetland hydrology, and hydric soils. According to the USACE, indicators for all three parameters must be present to qualify a wetland. The definition of a wetland includes the phrase "under normal circumstances," because there are situations in which the vegetation of a wetland has been removed or altered as a result of a recent natural event or human activities (USACE 1987).

Atypical situations and problem areas may lack one or more of the three criteria and still be considered wetlands. Background information on the previous condition of the area and/or field observations may indicate that the site meets the wetland criteria prior to disturbance. Additional delineation procedures would be employed if normal circumstances did not occur on a site. For the project survey area, atypical situations or problem areas do not occur, as normal circumstances are present.

2.3.3 Vernal Pools

On November 25, 1997, the USACE issued Regional General Condition #1: Vernal Pool Notification, to address discharge of dredged or fill material into any vernal pool. In that special public notice, the USACE defines vernal pools as:

> Wetlands that seasonally pond in small depressions as a result of a shallow, relatively impermeable layer that restricts downward percolation of water. The dominant water source for vernal pools is precipitation with pools typically filling after fall and winter rains and evaporating during spring and summer. These seasonal ponds are fragile, easily disturbed ecosystems that provide habitat for indigenous specialized assemblages of flora and fauna, including several species,

which are either proposed or already federally listed as threatened or endangered. (USACE 1997)

The USACE included a list of vernal pool "indicator species" in the 1997 notice. The presence of any one of the indicators could be used to bypass the normal hydric soil, wetland hydrology, and hydrophytic vegetation requirements to identify a jurisdictional vernal pool.

2.3.4 Regulatory Definition

In accordance with Section 404 of the Clean Water Act, the term "fill" is defined as material placed in WUS where the material has the effect of:

- Replacing any portion of a WUS with dry land; or
- Changing the bottom elevation of any portion of a WUS.

Examples of such fill material include, but are not limited to: rock, sand, soil, clay, plastics, construction debris, wood chips, overburden from mining or other excavation activities, and materials used to create any structure or infrastructure in the WUS. The term fill material does not include trash or garbage.

The definition of "discharge of dredged material" is defined as any addition of dredged material into, including redeposit of dredged material other than incidental fallback within, the WUS. The term includes, but is not limited to, the following:

- The addition of dredged material to a specified discharge site located in WUS;
- The runoff or overflow, associated with a dredging operation, from a contained land or water disposal area; and
- Any addition, including redeposit other than incidental fallback, of dredged material, including excavated material, into WUS which is incidental to any activity, including mechanized land clearing, ditching, channelization, or other excavation.

The term discharge of dredged material does not include the following:

- Discharges of pollutants into WUS resulting from the onshore subsequent processing of dredged material that is extracted for any commercial use (other than fill). These discharges are subject to section 402 of the Clean Water Act even though the extraction and deposit of such material may require a permit from the Corps or applicable State.

- Activities that involve only the cutting or removing of vegetation above the ground (e.g., mowing, rotary cutting, and chain-sawing) where the activity neither substantially disturbs the root system nor involves mechanized pushing, dragging, or other similar activities that redeposit excavated soil material.
- Incidental fallback.

3.0 METHODOLOGY

3.1 Literature Review

Prior to the site visit, a literature review was conducted to aid in determining the potential for permanent, intermittent, or ephemeral drainages, wetlands, and riparian vegetation. Project background documents, topographic maps, satellite imaging, soils maps, and land use maps were examined to establish an accurate project area location, project description, potential for on-site drainages and wetlands, records of on-site vegetation, watershed, soils, and surrounding land uses.

3.2 Field Survey

On August 26, 2015, Hernandez Environmental Services conducted a field survey of the project areas in order to delineate jurisdictional drainages and wetland resources associated with jurisdictional drainages.

Jurisdictional drainages were identified by looking for features such as a bed, bank, or channel. Where riparian vegetation was present, the drip line of the outer edge of the vegetation was used as the measuring criteria. Furthermore, the presence of an ordinary high water mark (OHWM) was recorded. The OHWM is defined as:

> On non-tidal rivers, the line on the shore established by the fluctuations of water and indicated by the physical characteristics such as a clear, natural line impressed on the bank; shelving; changes in the character of soil; destruction of terrestrial vegetation; the presence of litter and debris; or other appropriate means that consider the characteristics of the surrounding area.

Where the presence of an OHWM was evident, a measurement was taken for the width of the OHWM and recorded. Areas measured were also recorded using a hand-held GPS for accurate location reference.

Where changes in plant community composition were apparent, the area was examined for the possibility of wetlands. Whether or not adjacent to WUS, the potential wetland area was evaluated for the presence of the three wetland indicators: hydrology, hydric soils, and hydrophytic vegetation. The guidelines followed are those established in the 1987 USACE Manual.

4.0 RESULTS

A description of the soil types, the local hydrology, and the major vegetation types observed in each of the project areas are presented below.

4.1 Soils

The Natural Resources Conservation Service Web Soil Survey identified eight (8) soil types within the GBA 62.50-acre study area. The following soil types are identified in the Soil Survey: Greenfield sandy loam(GyA), 0 to 2 percent slope; Greenfield sandy loam (GyC2), 2 to 8 percent slopes eroded,; Greenfield sandy loam (GyD2), 8 to 15 percent slopes, eroded; Hanford coarse sandy loam (HcC), 2 to 8 percent slopes; Monserate sandy loam, 0 to 5 percent slopes; Ramona sandy loam(RaB2), 2 to 5 percent slopes, eroded; Ramona sandy loam(RaB3), 0 to 5 percent slopes, severely eroded; Tujunga loamy sand (TvC), channeled, 0 to 8 percent slopes. Tujunga Loamy Sand (TvC), channeled 0 to 8 percent slope, is the only hydric soil in the study area. Refer to Appendix A.

4.2 Hydrology

Under existing conditions a culvert outlets under Ironwood Avenue to the project site's northwest corner. Ephemeral drainage flows from this culvert outlet diagonally across the project site to a 12.9-acre detention basin (Indian Detention Basin) located immediately adjacent to the project site on the north of the existing Festival Shopping Center parking lot. Flows from Indian Detention Basin continue beyond the basin and enters the Perris Valley Storm Drain. The Perris Valley Storm Drain enters the San Jacinto River Which enters Canyon Lake and Lake Elsinore. Eventually flow from the project site enters the Santa Ana River and the Pacific Ocean.

4.3 Jurisdictional Areas

Jurisdiction has been delineated for the following agencies:

4.3.1 California Department of Fish and Wildlife

The project site contains approximately 0.23 acres of ephemeral drainage. Approximately 0.16 acre of the drainage is characterized by sandy streambed with small amounts of native and non-native vegetation. Vegetation species associated with this habitat include: Mexican fan palm (Washingtonia robusta), tree tabacco, horseweed (*Erigeron canadensis*), heliotrope (Heliotropium curassavicum), sunflower (Helianthus annus), and tamarisk (*Tamarix sp.*). Approximately 0.07 acres of the ephemeral drainage is characterized by riparian habitat dominated by mulefat (Baccharis salicifolia). The entire 0.23 acre ephemeral drainage would be under the jurisdiction of Section 1602 of the California Department of Fish and Game Code Lake and Streambed Alteration Agreement Program.

4.3.2 United States Army Corps of Engineers

The ephemeral drainage was determined to be a non-relatively permanent water that has no adjacent wetlands and flows directly or indirectly into a traditional navigable water. Approximately 0.20 acres of the ephemeral drainage are considered waters of the United States, which would be regulated under the Section 404 of the Clean Water Act and the United States Army Corps of Engineers. These waters were determined by identifying the ordinary high water mark within the banks of the ephemeral drainage. These waters eventually flow into the Pacific Ocean, but prior flow into Canyon Lake and Lake Elsinore.

4.3.3 Santa Ana Regional Water Quality Control Board

The ephemeral drainage was determined to be a non-relatively permanent water that has no adjacent wetlands and flows directly or indirectly into a traditional navigable water. Approximately 0.20 acres of the ephemeral drainage are considered waters of the United States, which would be regulated under Section 401 of the Clean Water Act and the Santa Ana Regional Water Quality Control Board. Any 404 permit issued for these waters would also require a 401 certification.

Table 1
Jurisdictional Areas

	CDFW	USACE	RWQCB
Jurisdictional Areas (Acres)	0.23	0.20	0.20

5.0 IMPACTS

Direct impacts to jurisdictional waters and wetlands are summarized in Table 2 and shown in Figures 4 and 5.

Table 2
Project Impacts to Jurisdictional Areas

	CDFW	USACE	RWQCB
Jurisdictional Area Impacts (Acres)	0.23	0.20	0.20

5.1 Impacts to California Department of Fish and Game Jurisdictional Areas

Development of the Moreno Valley Festival would result in direct impacts to 0.23 acres of state jurisdictional waters.

5.2 Jurisdictional Impacts to Waters of the United States Regulated Under Section 404 of the Clean Water Act

Development of the Moreno Valley Festival would result in direct impacts to 0.20 acres of waters of the United States, which were determined to be a non-relatively permanent water that has no adjacent wetlands and flows directly or indirectly into a traditional navigable water. These waters were determined by identifying the ordinary high water mark within the banks of the ephemeral drainage. These waters eventually flow into the Pacific Ocean, but prior flow into Canyon Lake and Lake Elsinore.

Hernandez Environmental Services
29376 North Lake Drive
Lake Elsinore, California 92530
909.772.9009

5.3 Jurisdictional Impacts to Waters of the United States Regulated Under Section 401 of the Clean Water Act

Development of the Moreno Valley Festival would result in direct impacts to 0.20 acres of waters of the United States, which were determined to be a non-relatively permanent water that has no adjacent wetlands and flows directly or indirectly into a traditional navigable water. These waters were determined by identifying the ordinary high water mark within the banks of the ephemeral drainage. These waters eventually flow into the Pacific Ocean, but prior flow into Canyon Lake and Lake Elsinore. A 401 Clean Water Act Certification from the Santa Ana Regional Water Quality Control Board would be required prior to the issuance of a 404 permit.

6.0 MITIGATION RECOMENDATIONS

USACE, CDFW, and RWQCB jurisdictional waters are regulated by federal, state, and local governments under a no-net-loss policy, and all impacts are considered significant and should be avoided to the greatest extent possible. Unavoidable and authorized impacts would require mitigation through habitat creation, enhancement, or preservation as determined by a qualified restoration biologist in consultation with the regulatory agencies during the permitting process. Any impacts to USACE, CDFW, and RWQCB jurisdictional waters would require a Section 404 permit authorization from the USACE, a 1600 Streambed Alteration Agreement from the CDFW, and a 401 State Water Quality Certification from the RWQCB. Mitigation for impacts, if any, to jurisdictional resources will be addressed in a mitigation plan to be submitted for approval with the permit application packages.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:15,800.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL: http://websoilsurvey.nrcs.usda.gov
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Western Riverside Area, California
Survey Area Data: Version 7, Sep 17, 2014

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Jan 14, 2015—Jan 21, 2015

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Appendix E to Initial Study
Basin Constraints Analysis

Hernandez Environmental Services

Memorandum

Date: February 22, 2016

To: Moreno Valley Festival, LTD

From: Juan J Hernandez, Principal Biologist

Subject: Constraints Analysis for Indian Basin, City of Moreno Valley, Riverside County, California

This memorandum provides the methods and results of a constraints analysis performed for the Indian Basin, located in the City of Moreno Valley. This analysis will describe the potential presence of listed federal and/or state listed species and their habitat, federal and/or state jurisdictional streams, lakes, or wetlands, compliance with the Western Riverside Multiple Species Habitat Conservation Plan (MSHCP) and recommendations for future actions that may be necessary to identify or mitigate potential impacts.

Location

The project site is located south of Ironwood Avenue and northeast of Davis Street within the City of Moreno Valley, Riverside County, California (Figure 1). Indian Basin consists of approximately 13.1 acres surrounded by vacant lands to the north and west, residential development to the east, and commercial/retail development to the south (Figure 2). The surrounding lands are proposed to be developed with the commercial/retail and mixed use Moreno Valley Festival. The site is located within the United States Geological Survey (USGS) 7.5-Minute Topographic Map *Sunnymead* Quadrangle. The approximate center point is 33°56'41.29"N, 117°14'15.99"W.

Literature Review

Hernandez Environmental Services (HES) conducted a literature review and reviewed aerial photographs and topographic maps of the project site and surrounding areas. The *Sunnymead* quadrangle and adjacent surrounding eight quadrangles were used to identify sensitive species in the California Natural Diversity Data Base (CNDDB). Additional resources reviewed during the literature search included the United States Fish and Wildlife (USFWS) Endangered Species Lists, Forest Service List, and the California Native Plant Society's (CNPS) Rare plant lists to obtain species information for the project area.

Literature Review

On July 13, 2015, Juan Hernandez, Principal Biologist for HES, conducted a field survey of the approximate 13.1-acre basin site. The ambient temperature at 9:30 a.m. was 72° Fahrenheit, sunny, with zero to three mile per hour winds from the northeast. The purpose of the field survey was to document the existing habitat conditions, obtain plant and animal species information, view the surrounding uses, assess the potential for state and federal waters, and assess the potential for wildlife movement corridors, sensitive species, and nesting habitat.

The entire project site was surveyed, including the basin. Linear transects spaced approximately 50 feet apart were walked for 100 percent coverage. All species observed were recorded and are listed in Appendix A. Global Positioning System (GPS) waypoints were taken to delineate specific habitat types, species locations, and any other information that would be useful for the assessment of the property.

Results

Habitat

Indian Basin contains approximately 7.14 acres of yerba mansa (*Anemopsis californica*), 2.09 acres of mixed willow (*Salix* sp.) habitat, 3.05 acres of disturbed non-native vegetation habitat, 0.65 acres of *Tamarix* sp. Habitat, and 0.17 acres of cattail (*Typha* sp.) habitat.

Plants

The following two sensitive plant species and two sensitive habitats have a potential to exist or are present withing the Indian Basin:

- Bristly sage (*Carex comosa*), a CNPS 2B.1 plant;
- Mud nama (*Nama stenocarpum*), a CNPS 2B.2 plant; and,
- Southern willow scrub is present/southern riparian scrub is present.

Animals

The following sensitive animal species have a potential to exist or are present withing the Indian Basin:

- Cooper's hawk (*Accipiter cooperii*), is a California Department of Fish and Wildlife (CDFW) Species of Special Concern (SSC);
- Tricolored blackbird (*Agelaius tricolor*), is a state endangered bird species;
- Burrowing owl (*Athene cunicularia*), is a CDFW SSC;
- Western pond turtle (Emys marmorata), is a CDFW SSC;

- Yellow-breasted chat (*Icteria virens*), is a CDFW SSC;
- Yellow warbler (*Setophaga petechia*), is a CDFW SSC;
- Western spadefoot toad (*Spea hammondii*), is a CDFW SSC;
- Lawrence's goldfinch (*Spinus lawrencei*), is a CDFW SSC;
- Least Bell's vireo (*Vireo bellii pusillus*), is a state and federal endangered species.

Nesting Bird Habitats

Indian basin contains nesting habitat for migratory song birds and raptors. Nesting bird surveys would need to be conducted if project related impacts will occur between February 1 through September 15.

Jurisdictional Waters

Indian Basin would fall under the jurisdiction of the CDFW, United States Army Corps of Engineers (USACE), and the Regional Water Quality Control Board (RWQCB). **The basin contains approximately 11.22 acres of CDFW jurisdiction and approximately 9.77 acres of waters of the United States.** A wetland delineation was performed and no hydric soils were found. Therefore, the basin would not be considered a federal wetland.

Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP)

The Indian Basin falls within the Reche Canyon/Badlands Area Plan of the Western Riverside County MSHCP. Participation in the MSHCP would serve as a Habitat Conservation Plan pursuant to Section 10(a)(1)(B) of the federal Endangered Species Act of 1973 (FESA), as well as a Natural Communities Conservation Plan (NCCP) under the NCCP Act of 2001. The United States Fish and Wildlife Service (USFWS) and California Department of Fish and Game (CDFG) (hereafter, "Wildlife Agencies") have authority to regulate the “Take” of Threatened, Endangered, and rare Species. Under the Western Riverside County MSHCP, the Wildlife Agencies will grant "Take Authorization" for otherwise lawful actions such as public and private development that may incidentally “Take” or harm individual species or their habitat outside of the Western Riverside County MSHCP Conservation Area in exchange for the assembly and management of a coordinated MSHCP Conservation Area.

Under Sections 6.1.2 Protection of Species Associates with Riparian/Riverine Areas and Vernal Pools, Indian Basin would be excluded as a Riparian/Riverine resource because the basin is a result of human actions to create open waters, or a result of the alteration of natural stream courses. Areas demonstrating characteristics as described above which are artificially created are not included in the definition of a Riparian/Riverine resource. However, Indian Basin does contain habitat that could be suitable for least Bell's vireo, a state and federally endangered bird species. Participation in the plan would grant take authorization; however, focused surveys for this species would have to be performed. If the species is present, a Determination of Biologically Equivalent or Superior Preservation (DBESP) would be required.

Section 6.3.2 Additional Survey Needs and Procedures

Indian Basin is within a portion of the Western Riverside County MSHCP Plan Area that requires additional surveys for burrowing owl. Burrowing owl surveys were performed for the surrounding Moreno Valley Festival proposed project areas. No owl were found during surveys.

Recommendations

If impacts to Indian Basin are unavoidable, the following is recommended:

- Participation in the Riverside County MSHCP;
- Conduct focused surveys for least Bell's vireo;
- Any impacts to the basin would require a CDFW Section 1602 Streambed Alteration Agreement;
- Any impacts to the waters of the United States located within the basin would require a Section 404 of the Clean Water Act Permit administered by the USACE;
- Any impacts to waters of the United States would require a Clean Water Act 401 Water Quality Certification from the RWQCB;
- Impacts to 11.22 acres of CDFW jurisdictional resources may require approximately 33.7 acres of compensatory mitigation;
- Impacts to 9.77 acres of waters of the United States may require approximately 29.3 acres of compensatory mitigation;
- If least Bell's vireo are found, a DBESP would be required; and,
- Focused burrowing owl surveys would need to be performed for the basin.

Certification

I hereby certify that the statements furnished above and in the attached exhibits present data and information required for this biological evaluation, and that the facts, statements, and information presented are true and correct to the best of my knowledge and belief.

Appendices

I. Introduction

The purpose of this Traffic Impact Analysis (TIA) is to identify potential traffic-related impacts associated with the Festival at Moreno Valley proposed Specific Plan (project) located in the City of Moreno Valley (City). The project proposes to modify the existing 180,000 square feet of retail land use to a business park and retail uses.

The project is bounded by the SR 60 Freeway to the South, Ironwood Avenue to the North, Heacock Street to the West, and Nita Drive to the East. Currently, some of the parcels are vacant while others have some retail uses. In the City's latest adopted land use plan, the area designations include commercial, open space, and office uses.

This TIA has been prepared consistent with the City's *Traffic Impact Analysis Preparation Guide* (August 2007). A *Scoping Agreement for Traffic Analysis Study* has been prepared by Transpo and was approved by the City in November 2017. The Scoping Agreement is provided in Appendix A. The Lead Agency of the proposed project is the City of Moreno Valley.

Purpose and Objectives of the Traffic Study

The purpose of this traffic study is to evaluate the traffic and circulation impacts of the proposed project. The objectives of this traffic study include:

- Documentation of existing traffic conditions and future traffic conditions corresponding to the "Existing plus Project" scenario (consisting of existing year 2017 plus project conditions), "Near-Term Year 2022" (five-year horizon consisting of existing plus ambient growth plus cumulative projects) With and Without Project conditions, and a "Buildout Year 2040" (consisting of the General Plan Buildout Year) With and Without Project conditions.
- Determination of additional circulation system features and system management actions needed to achieve the City's levels of service requirements with implementation of the proposed project.

Site Location and Study Area

Figure 1 illustrates the project site location, while Figure 2 illustrates the project study area and traffic control. Regional access to the project site is provided by State Route 60 (SR 60) via its interchange with Heacock Street. Local access is provided by Heacock Street, Hemlock Avenue, and Ironwood Avenue. Per Scoping Agreement, the study area intersections and roadway segments are as follows:

Study Area Intersections

1. Heacock Street (NS) at Ironwood Avenue (EW)
2. Heacock Street (NS) at Project Access (EW)
3. Heacock Street (NS) at Hemlock Avenue (EW)
4. Heacock Street (NS) at SR 60 Freeway WB Ramps (EW)
5. Heacock Street (NS) at SR 60 Freeway EB Ramps (EW)
6. Project Access (NS) at Hemlock Avenue (EW)
7. Davis Street (NS) at Hemlock Avenue (EW)
8. Project Access (NS) at Hemlock Avenue (EW)
9. Project Access (NS) at Hemlock Avenue (EW)
10. Project Access (NS) at Hemlock Avenue (EW)
11. Nita Drive (NS) at Hemlock Avenue (EW)
12. Davis Street (NS) at Ironwood Avenue (EW)
13. Indian Street (NS) at Ironwood Avenue (EW)
14. Indian Street (NS) at Hemlock Avenue(EW)
15. Indian Street (NS) at Sunnymead Boulevard (EW)

Study Area Roadway Segments

1. Heacock Street – Ironwood Avenue to Hemlock Avenue
2. Heacock Street – Hemlock Avenue to SR 60 Freeway WB Ramps
3. Indian Street – Ironwood Avenue to Hemlock Avenue
4. Indian Street south of Hemlock Avenue
5. Ironwood Avenue west of Heacock Street
6. Ironwood Avenue – Heacock Street to Indian Street
7. Ironwood Avenue east of Indian Street
8. Hemlock Avenue west of Heacock Street
9. Hemlock Avenue – Heacock Street to Indian Street
10. Hemlock Avenue east of Indian Street

All study area intersections and roadway segments are within the jurisdiction of the City.

Project Description

The proposed project will include the development of 348,000 square feet of business park and 365,000 square feet of retail over eight planning areas as illustrated in the site plan Figure 3. Existing uses on the site include shopping centers, restaurants, and an auto service shop. Per the City's Adopted Land Use Map the area is zoned as mostly as Commercial and Open Space with an Office zoning to the southeast corner of Ironwood Avenue and Davis Street. The open space is shown in Planning Area 5 (refer to Figure 3) and is retained as such under proposed project conditions.
Existing and proposed land uses are shown in Table 1. The proposed project opening year is 2022 and no project phasing is assumed.

Table 1. Existing and Proposed Land Uses

Planning Area	Existing Uses		Proposed Uses	
	Type of Use	Size	Type of Use	Size
1			Business Park	135,000 sf
2			Business Park	35,000 sf
3			Business Park	178,000 sf
			Retail	15,000 sf
4	Shopping (Retail) Center	162,250 sf	Retail	255,000 sf
	Fast Food Restaurant with Drive Through (Yoshinoya)	3,900 sf		
5	Open Space		Open Space	
6	Fast Food Restaurant with Drive Through (Arby's)	2,700 sf	Retail	35,000 sf
	Fast Food Restaurant without Drive Through (KFC)	2,700 sf		
	Auto Service (Jiffy Lube)	3 Service Positions		
	High-Turnover Sit-down Restaurant (Centanario)	8,800 sf		
7	Shopping (Retail) Center	33,675 sf	Retail	40,000 sf
8			Retail	20,000 sf

Methodology

Intersections

Per City TIA guidelines, the study area intersections were analyzed under the latest version of the *Highway Capacity Manual* (HCM) "Operations" methodology using the *Synchro* level of service (LOS) software program which is consistent with the HCM 2010 methodology. The HCM 2010 methodology determines the control delay a driver may experience at the intersection. If an intersection could not be analyzed using the HCM 2010 methodology because of a particular intersection configuration (e.g., U-turn movements), the HCM 2000 methodology was used.

The degree of congestion at an intersection is described by the level of service, which ranges from LOS A to LOS F, with LOS A representing free-flow conditions with little delay and LOS F representing over-saturated traffic flow throughout the peak hour. A complete description of the meaning of level of service can be found in the Highway Research Board Special Report 209, *Highway Capacity Manual* (HCM 2000). Brief descriptions of the six levels of service for signalized and unsignalized intersections based on the HCM methodology are shown in Table 2.

Table 2. Level of Service Definitions for Intersections

Level of Service	Control Delay in Seconds (signalized)	Control Delay in Seconds (unsignalized)
A	0.0 – 10.0 seconds	0.0 – 10.0 seconds
B	10.1 – 20.0 seconds	10.1 – 15.0 seconds
C	20.1 – 35.0 seconds	15.1 – 25.0 seconds
D	35.1 – 55.0 seconds	25.1 – 35.0 seconds
E	55.1 – 80.0 seconds	35.1 – 50.0 seconds
F	80.1 seconds or greater	50.1 seconds or greater

Table 3 below provides detailed descriptions of each level of service

Table 3. Level of Service (LOS) Descriptions

LOS	Description
A	No approach phase is fully utilized by traffic, and no vehicle waits longer than one red indication. Typically, the approach appears quite open, turns are made easily, and nearly all drivers find freedom of operation.
B	This service level represents stable operation, where an occasional approach phase is fully utilized and a substantial number are nearing full use. Many drivers begin to feel restricted within platoons of vehicles.
C	This level still represents stable operating conditions. Occasionally drivers may have to wait through more than one red signal indication, and backups may develop behind turning vehicles. Most drivers feel somewhat restricted, but not objectionably so.
D	This level encompasses a zone of increasing restriction approaching instability at the intersection. Delays to approaching vehicles may be substantial during short peaks within the peak period; however, enough cycles with lower demand occur to permit periodic clearance of developing queues, thus preventing excessive backups.
E	Capacity occurs at the upper end of this service level. It represents the most vehicles that any particular intersection approach can accommodate. Full utilization of every signal cycle is seldom attained no matter how great the demand.
F	This level describes forced flow operations at low speeds, where volumes exceed capacity. These conditions usually result from queues of vehicles backing up from a restriction downstream. Speeds are reduced substantially, and stoppages may occur for short or long periods of time due to the congestion. In the extreme case, both speed and volume can drop to zero.

Roadway Segments

Per City TIA guidelines, Table 4 provides the LOS criteria for roadway segments based on daily traffic volumes.

Table 4. Level of Service Definitions for Roadway Segments

Roadway	A	B	C	D	E
6-lane Divided Arterial	33,900	39,400	45,000	50,600	56,300
4-lane Divided Arterial	22,500	26,300	30,000	33,800	37,500
4-lane Undivided Arterial	15,000	17,500	20,000	22,500	25,000
2-lane Industrial Collector	7,500	8,800	10,000	11,300	12,500
2-lane Undivided Residential	n/a	n/a	n/a	n/a	2,000

Significance Criteria

The City's significance threshold is based on the *City of Moreno Valley General Plan* (July 2006) which states:

- *LOS D is applicable to intersections and roadway segments that are adjacent to freeway on/off ramps, and/or adjacent land uses. LOS C is applicable to all other intersections and roadway segments. Boundary intersections are assumed to be LOS D.*

Therefore, if the project causes an intersection to operate below the minimum standard, the project would cause a significant project-specific impact at that intersection, and specific mitigation measures must be developed to improve the intersection's LOS back to pre-project levels.

Traffic Analysis Scenarios

This traffic study analyzed the following traffic scenarios:

Existing Condition

Existing traffic volumes were collected at the study intersections and roadway segments in August 2017 during a typical weekday. The existing traffic scenario constitutes the environmental setting in accordance with the *California Environmental Quality Act* (CEQA) analysis at the time that the hearing body reviews the proposed project.

Existing with-Project Condition

The Existing with-Project Condition traffic was developed by adding the proposed project traffic to the Existing Condition traffic volumes. This scenario was the basis for determining project-specific impacts and mitigation measures under existing conditions.

Near Term Year 2022 Baseline Condition

Per City requirements, the Near Term year of analysis would be 2022, a five-year horizon from the existing traffic condition. The proposed project is anticipated to be built and occupied by year 2022. Near-Term year traffic in this scenario was forecast for 2022 by applying an annual ambient growth rate (2% per year per the City's Scoping Agreement) to the existing traffic volumes. In addition to the ambient growth rate, traffic from approved and pending projects (i.e. cumulative projects) in the project's vicinity was added.

Near Term Year 2022 with-Project Condition

The Near Term Year 2022 with-Project Condition traffic was developed by adding the proposed project traffic to the Near-Term Year Baseline Condition. This scenario was also the basis for determining project-specific impacts and mitigation measures for the Near Term Year.

General Plan Buildout Baseline Condition

General Plan Buildout (2040) without Project traffic conditions were derived from the Moreno Valley Transportation Analysis Model which in turn is based-upon the Riverside Transportation Analysis Model (RivTAM) refined to represent General Plan Buildout conditions for the City of Moreno Valley. Traffic volumes for street segments in the study area were obtained from the 2007 and 2035 TransCAD model data sets to establish annual growth rates for each approach leg of the study intersection. Separate growth rates were developed for AM and PM peak period model data volumes. These annual growth rates were applied to the 2017 turning movement counts to forecast traffic growth to 2040 conditions. Consistent with all travel demand model post-processing methods, the forecasts were checked for reasonableness and adjusted if necessary. For example, model adjustments were made to better balance forecasted volume growth between adjacent study intersections.

General Plan Buildout with-Project Condition

The General Plan Buildout with-Project traffic forecasts were determined by adding the project traffic to the General Plan Buildout Baseline (without project) traffic forecasts from the Transportation Analysis Model. The General Plan Buildout traffic forecasts used in the traffic analysis were refined with existing peak hour traffic count data collected at intersection analysis locations.

II. Area Conditions

The following section describes the existing traffic conditions in the project study area. Existing traffic volumes were collected at the study intersections and roadway segments in August 2017 during a typical weekday.

Street System

As mentioned earlier regional access to the project site is provided by State Route 60 (SR 60) via its interchange with Heacock Street. In the project vicinity, the SR 60 consists of two general purpose lanes and one carpool lane per direction. Local access is provided by Heacock Street, Hemlock Avenue, and Ironwood Avenue.

Characteristics of the existing street system in the proposed project vicinity are summarized in Table 5. The roadway classifications are as per the City of Moreno Valley General Plan Circulation Element. Cross-sections described are those in the vicinity of the project and they might vary at intersections to accommodate turning lanes.

Heacock Street is a muti-modal corridor with pedestrian, bicycle, auto, and transit uses. It is also designated as a truck route while at the same time having Class 2 bicycle lanes on both sides between Ironwood Ave and the SR 60 ramps.

Table 5. Street Characteristics

	Heacock St	Ironwood Ave	Indian St	Hemlock Ave	Davis St
Classification	Arterial	Minor Arterial	Minor Arterial	-	-
Traffic Cross-section	4 lanes + TWLT	4 lanes + TWLT	2 lanes	Varies[3]	2 lanes + TWLT[4]
Posted Speed Limit	35	40	35	30	-
Truck Route	Yes	Yes[5]	No	No	No
Transit	RTA 11	RTA 11	-	RTA 11	-
Bicycle Lanes	Class 2	Class 3	Class 3	-	-
Sidewalks	Both Sides	Both Sides	SB Only	Both Sides	Both Sides

1. TWLT: Two Way Left Turn
2. ADT: Average Daily Traffic
3. The cross-section of Hemlock in 4 lanes divided west of Davis St and two lanes with a TWLT east of Davis St. West of Indian St the TWLT is converted to a median
4. Davis St is not paved to the north of the existing development
5. Ironwood Ave is a truck route between Perris Blvd and Pigeon Pass Rd

Transit

Riverside Transit Agency (RTA) Route 11 buses run in the immediate vicinity of the project site. Buses serving this route run in either of two loops, clockwise or counterclockwise, starting from and terminating at the Moreno Valley Mall.

The major destinations served by this route include in addition to the Mall, Festival at Moreno Valley, the Post Office, Kaiser Medical Offices, Riverside County Superior Court, City Hall, and Moreno Valley High School.

In the immediate vicinity of the project Route 11 runs on Heacock St south of Hemlock Ave, on Hemlock Ave, and on Ironwood Ave. Bus stops are in the vicinity of the Hemlock/Davis, Hemlock/Indian, Indian/Ironwood and Ironwood/Heacock intersections.

Service frequencies are about one bus every hour on both weekdays and weekends. Weekday operations are between 5 AM and 10 PM and weekend operations are between 8.30 AM and 8.30 PM.

Pedestrian and Bicycle Systems

As presented in Table 5, sidewalks exist on both side of most streets in the immediate vicinity of the project with the exception of Indian Street where sidewalks are only available in the southbound direction.
Davis St currently does not connect to Ironwood Avenue and until the connection is established as part of this project, pedestrian accessibility will be served mainly by Heacock St and Nira Dr.
Standard pedestrian crosswalks (consisting of two solid parallel lines) are available at all the study area signalized intersections where pedestrian crossings are permitted.

Bicycle lanes described in Table 5 are as per the City's Bicycle Master Plan. Class 2 bike lanes are on-street paths that are located along the edge of a street with a striped lane denoting this bike path. Class 3 bike routes also are located along a street edge, but are not striped. These paths are identified by street signs only.
In the immediate project vicinity Heacock St is the only Class 2 facility while Ironwood Ave and Indian St are designated as Class 3 facilities. The Bicycle Master Plan recommends the following in the project vicinity:

- Class 2 bike lane along Hemlock between Indian St and Heacock St
- Class 2 bike lane along Heacock St (south of Hemlock Ave)
- Class 2 bike lane along Ironwood Ave
- Class 3 bike route along Davis St

Traffic Volumes

Existing traffic volumes were collected at the study intersections and roadway segments in August 2017.
Figure 4 shows the existing AM and PM peak hour traffic volumes at the study intersections, while Figure 5 shows the existing daily traffic volumes on the study area roadway segments. The raw traffic volume count sheets are provided in Appendix B.

Levels of Service

Intersection Operations

Level of Service Analysis

Based on the analysis methodology described in Section I, the existing AM and PM peak hour traffic volumes were input into the *Synchro* LOS software to determine the existing intersection delay and LOS values. Table 6 presents the results of the existing intersection LOS analysis, while the LOS calculation sheets are provided in Appendix C.

Table 6. Existing Without-Project Weekday Peak Hour Intersection LOS

Intersection	Traffic Control	City's LOS Standard	AM Peak		PM Peak	
			LOS[1]	Delay[2]	LOS[1]	Delay[2]
1. Heacock Street/Ironwood Avenue	Signal	LOS D	C	26.9	C	28.0

13. Indian Street/Ironwood Avenue	Signal	LOS D	C	32.1	C	25.9
14. Indian Street/Hemlock Avenue	Signal	LOS D	C	22.3	C	22.1
15. Indian Street/Sunnymead Boulevard	Signal	LOS D	C	21.2	C	27.3

1. Level of Service
2. Delay measured in seconds/vehicle
3. Delay and LOS are based on Highway Capacity Manual 2010
4. Signal = Traffic Signal (evaluated using the HCM Methodology)
5. TWSC = Two Way Stop Controlled (evaluated using the HCM Methodology)
6. OWSC = One Way Stop Controlled (evaluated using the HCM Methodology)

Based on the existing LOS analysis, all study area intersections are currently operating with a satisfactory LOS as per City's standards during both peak hours.

Queuing Analysis

A queuing analysis was conducted at the study area intersections to determine if the left turn pocket (storage) lengths are able to accommodate queues. The 95th percentile queue calculations were calculated using Synchro for the weekday AM and weekday PM peak hours and results summary is presented in Table 7 with detailed calculation in Appendix C.
Table 7 shows that the existing 95th percentile queue lengths exceed storage space. It should be noted that the 95th percentile queue is not necessarily ever observed, it is simply based on statistical calculations. In other words, if traffic was observed for 100 cycles, the 95th percentile queue would be the queue experienced with the 95th busiest cycle (or 5% of the time). It is however used by many jurisdictions as the basis for calculating storage lengths.

As shown in Table 7, the queue lengths of various intersection approaches exceed the existing pocket length under existing conditions. Mitigation measures are presented in Section V.

Table 7. Existing Without-Project Weekday Peak Hour Queuing Analysis

	SBL	90	68	77	No	No

1. Calculated using Synchro – bold numbers indicate where Synchro yielded "95th percentile volume exceeds capacity, queue maybe longer." The queues were evaluated in Simtraffic at these locations.

Signal Warrant Analysis

The signal warrant analysis as per the latest edition of the Federal Highway Administration's (FHWA) Manual on Uniform Traffic Control Devices (MUTCD), was used for all study area intersections. No unsignalized intersection was found to meet the warrants for signalization. Detailed worksheets are provided in Appendix C.

Roadway Segments

Based on the analysis methodology described in Section I, the existing daily traffic volumes at the study area roadway segments were compared to the City's roadway segment LOS values presented in Table 4 above. Table 8 presents the results of the existing roadway segment LOS analysis.

Based on the existing roadway segment analysis, all study area roadway segments currently operate with LOS D or better.

Table 8. Existing Condition Roadway Segment LOS Summary

Roadway Segment	Existing Classification	Number of Lanes	Divided/ Undivided	ADT[1]	LOS Standard[2]	Maximum Capacity ADT[3]	V/C	LOS	Exceeds Threshold ?

1. ADT: Average Daily Traffic
2. LOS based on City of Moreno Valley Roadway Segment LOS Values (Table 4)
3. Based on City of Moreno Valley Guidelines daily service volume standards table (LOS E). Four Lane Divided Arterial and Two Lane Industrial Collector used as classifications.
4. Roadway classification and LOS standard not listed in City Guidelines, assumed to be Minor Arterial, Two Lane Industrial Collector, with LOS Standard C.

III. Project Future Traffic

This section describes the project trip generation, distribution, and assignment. These have been agreed upon with the City prior to embarking on the TIA and documented in the scoping agreement included in Appendix A.

Trip Generation

Weekday daily, AM and PM peak hour trip generation estimates for the proposed project were developed using trip rates provided in the *Institute of Transportation Engineers (ITE) Trip Generation, 10th Edition, 2017*. Summaries of the trip generation rates and resulting vehicle trips for the proposed project are presented in Table 9.

Comparison to Specific Plan 205

The total trip generation of the project (before accounting for internal capture, pass-by or existing uses) was found to be 18,108 daily trips with 482 trips in the AM Peak (298 inbound and 185 outbound) and 1,537 trips in the PM Peak (735 inbound and 802 outbound). These trip generation numbers are compared to the approved Festival at Moreno Valley Specific Plan 205 trip generation numbers (Greiner Engineering Study 1986) and the results are illustrated in Table 10. As shown in Table 9, the current proposed specific plan generates less trips than the Specific Plan 205 to the order of 214 trips Daily and 900 trips in the PM Peak (note that AM Peak period was not assessed in the Greiner Engineering Study).

Internal Trip Capture and Pass-by

Internal capture was calculated using methodology from NCHRP 684 Mixed Use Spreadsheet which yields an internal trip capture of 7% in the AM peak and 4% in PM Peak and Daily.
Pass-by trip rates for the retail component of the project were estimated at 34% during PM peak hour and 17% during the AM peak hour and Daily based on the *Institute of Transportation Engineers (ITE), Trip Generation, 10th Edition, 2017*. These calculation sheets were submitted with the scoping agreement and approved by the City.

Net New Trips

The existing land uses were provided by the Client and the net new trips of the project are calculated by accounting for the existing uses as shown in Table 11. The net new trips generated by the project are calculated to be 7,612 daily trips with 527 trips in the PM Peak (231 inbound and 295 outbound). During the AM peak the project would produce less trips than existing conditions whereby the project is forecasted to remove 78 trips from the street system (21 inbound and 56 outbound).

2. Internal capture calculated using methodology from NCHRP 684 Mixed Use Spreadsheet
3. Pass-by trip rates (35% during PM peak hour, 17% for AM peak hour and Daily) from the Institute of Transportation Engineers, Trip Generation, 10th Edition, 2017. Land Use Code 820 - Shopping Center.
4. Pass-by trip rates (49% during PM peak hour, 25% for AM peak hour and Daily) from the Institute of Transportation Engineers, Trip Generation, 10th Edition, 2017. Land Use Code 934 - Fast Food Restaurant with Drive Through.
5. Pass-by trip rates (40% during PM peak hour, 20% for AM peak hour and Daily) from the Institute of Transportation Engineers, Trip Generation, 10th Edition, 2017. Land Use Code 932 - High Turnover Sit-down Restaurant.

Trip Distribution and Assignment

Regional and local trip distribution percentages for the proposed project were based on logical peak hour commute patterns and approved in the City's Scoping Agreement. Figure 6 and Figure 7 illustrate the Retail outbound and inbound trip distribution percentages respectively, while Figure 8 and Figure 9 illustrate the outbound and inbound trip distribution percentages for the Business Park component of the project respectively. The trip distribution percentages at each intersection were applied to the proposed project's weekday AM and PM peak hour trip generation estimates to calculate the project trip assignment. The resulting weekday AM, and PM peak hour trip assignments are also shown on Figure 10.

Background Cumulative Traffic

Ambient Growth Rate

Traffic Conditions prior to the time that the proposed development is completed will be estimated by increasing the existing traffic counts by a growth rate of 2% per year. The ambient growth rate will be applied from 2017 till 2022.

Cumulative Projects

The cumulative project list includes reasonably foreseeable development projects which are either approved or being processed concurrently in the study. A list of these projects was compiled in collaboration with the City's Planning Department (Economic Development) and location of each cumulative project is shown in Figure 11, while the trip generation of each cumulative project is shown in Table 12.
The cumulative project trips where then distributed and assigned on the study area intersections as shown in Figure 12.

Near Term and General Plan Traffic Forecasts

A "buildup" and "buildout" analysis were carried out. The "buildup" scenario corresponds to Near Term Year 2022 and was used to approximate the Opening Year Cumulative traffic forecasts. The "buildup" approach combines existing traffic counts with a background ambient growth factor to forecast the Near Term Year 2022 background traffic conditions. The Opening Year Cumulative traffic forecasts include background traffic, traffic generated by other cumulative development projects within the study area, and the traffic generated by the proposed Project. The 2022 roadway network is similar to the existing conditions roadway network with the exception of future roadways and intersections proposed to be developed by the Project.
The "buildout" approach is used to forecast the General Plan Buildout Without and With Project conditions of the study area. The Moreno Valley Transportation Analysis Model (based on RivTam) was used for this analysis.

IV. Traffic Analysis

This section describes analysis results for existing with-project, Near Term Year (2022) baseline, Near Term Year (2022) with-project conditions and the General Plan build-out (2040) without and with project conditions. Operations for existing conditions were illustrated earlier in Section II and also are summarized in this section as part of the comparison to existing plus project conditions.
Operations for both intersections and roadway segments are described along with signal warrant analysis. Mitigation measures are discussed in Section V.

Existing With-Project

Intersection Operations

Level of Service Analysis

Intersection with-project traffic volumes were obtained by adding the project trip assignments (shown in Figure 10) during the AM and PM peak hours to the existing volumes at the intersection. Figure 13 illustrates the existing with-project traffic volumes at the study area intersections. An intersection operations analysis was conducted for the study area to evaluate the Existing with-Project weekday AM and PM peak hour conditions with the project. Intersection operations were calculated using the LOS methodology described previously. Table 13 provides a comparison between the Existing without and with-project conditions for the weekday AM and PM peak hours. Detailed LOS worksheets are included in Appendix C.

As shown in the Table 13, the Davis Street/Hemlock Avenue intersection is forecast to operate at LOS F during the PM peak hour with the project. The addition of project traffic is expected to increase the delay at the intersection leading to a LOS F under Existing with-Project PM peak hour conditions. This increase is considered a significant impact per the City's unsignalized intersection significance criteria (LOS C). Mitigation measures are discussed in the following section.

Queuing Analysis

A queuing analysis was conducted at the study area intersections to determine if the left turn pocket (storage) lengths are able to accommodate queues. The 95th percentile queue calculations were calculated using Synchro for the weekday AM and weekday PM peak hours and results summary is presented in Table 14 with detailed calculation in Appendix C.

Table 13 shows that the existing 95th percentile queue lengths that exceed storage space under Existing with-Project conditions. As mentioned earlier, the 95th percentile queue is not necessarily ever observed, it is simply based on statistical calculations. It is however used by many jurisdictions as the basis for calculating storage lengths. When Synchro yielded "95th percentile volume exceeds capacity, queue maybe longer", the queues were evaluated in Simtraffic. Mitigation measures are illustrated in Section V.

1. Calculated using Synchro – bold numbers indicate where Synchro yielded "95th percentile volume exceeds capacity, queue maybe longer." The queues were evaluated in Simtraffic at these locations.

Signal Warrant Analysis

The signal warrant analysis as per the latest edition of the Federal Highway Administration's (FHWA) Manual on Uniform Traffic Control Devices (MUTCD), was used for all study area intersections. It was found that the Hemlock Ave / Davis St intersection meets the 8-Hour, 4-Hour, and Peak-Hour signal warrants and as such signalization is recommended. The detailed worksheets are provided in Appendix C.

Roadway Operations

Based on the analysis methodology described in Section I, the existing with-project traffic daily traffic volumes at the study area roadway segments were compared to the City's roadway segment LOS values (presented in Table 4) and the existing traffic daily volumes LOS values. Table 15 presents the results of the existing with-project roadway segment LOS analysis.

Based on the existing with-project roadway segment analysis, all study area roadway segments currently operate with LOS D or better.

Table 15. Existing Condition Roadway Segment LOS Summary

Roadway Segment	Existing Classification	Maximum Capacity ADT[3]	Existing ADT[1]	Existing V/C Ratio	Existing LOS[2]	Existing with-Project ADT[5]	Existing with-Project V/C Ratio	Existing with Project LOS[2]	V/C Ratio Change	Impact

2. LOS based on City of Moreno Valley Roadway Segment LOS Values (Table 4)
3. Based on City of Moreno Valley Guidelines daily service volume standards table (LOS E). Four Lane Divided Arterial and Two Lane Industrial Collector used as classifications.
4. Roadway classification and LOS standard not listed in City Guidelines, assumed to be Minor Arterial, Two Lane Industrial Collector, with LOS Standard C.

Near Term Year (2022) Without-Project

Intersection Operations

Level of Service Analysis

Traffic volumes for the Near Term Year (2022) without-project (baseline) scenario where obtained by adding existing traffic, ambient growth (assuming 2% growth per year) and cumulative traffic volumes. Figure 14 shows the AM and PM Near Term Year (2022) AM and PM traffic volumes at study area intersections and Table 16 illustrates the Peak Hour Level of Service Analysis.

As shown in the table, the Heacock Street/State Route (SR 60) WB Ramps intersection as well as the Indian Street/Sunnymead Boulevard are forecast to operate at LOS E during the PM peak hour without the project. Both intersections are considered to be sub-standard per the City's guidelines.

Table 16. Near Term Year Without-Project Weekday Peak Hour Intersection LOS

2. Delay measured in seconds/vehicle
3. Delay and LOS are based on Highway Capacity Manual 2010
4. Signal = Traffic Signal (evaluated using the HCM Methodology)
5. TWSC = Two Way Stop Controlled (evaluated using the HCM Methodology)
6. OWSC = One Way Stop Controlled (evaluated using the HCM Methodology)

Queuing Analysis

A queuing analysis was conducted at the study area intersections to determine if the left turn pocket (storage) lengths are able to accommodate queues. The 95th percentile queue calculations were calculated using Synchro for the weekday AM and weekday PM peak hours and results summary is presented in Table 17 with detailed calculation in Appendix C.

Table 17 shows that the existing 95th percentile queue lengths exceed storage space under Existing with-Project conditions. Mitigation measures are presented in Section V.

1. Calculated using Synchro –bold numbers indicate where Synchro yielded "95th percentile volume exceeds capacity, queue maybe longer." The queues were evaluated in Simtraffic at these locations.

Signal Warrant Analysis

The signal warrant analysis as per the latest edition of the Federal Highway Administration's (FHWA) Manual on Uniform Traffic Control Devices (MUTCD), was used for all study area intersections. No unsignalized intersection was found to meet the warrants for signalization under without-project conditions. The signal warrant analysis sheets are provided in Appendix C.

Roadway Operations

Roadway traffic volumes were calculated by adding existing volumes to ambient growth and cumulative projects daily volumes. Based on the analysis methodology described in Section I, the Near Term Year (2022) without-project traffic daily traffic volumes at the study area roadway segments yield the LOS values illustrated in Table 18.

Based on the Near Term Year (2022) without-project segment analysis, all study area roadway segments currently operate with LOS D or better with the exception of Heacock Street between Hemlock and the SR 60 WB Ramps and Indian Street South of Hemlock Avenue which operate at a LOS E.

Table 18. Near Term Year With-out Project Roadway Segment LOS Summary

Roadway Segment	Existing Classification	Maximum Capacity ADT[3]	LOS Standard[2]	ADT[1]	V/C	LOS	Exceeds Threshold?
1. Heacock Street - Ironwood Avenue to Hemlock Avenue	Arterial	37,500	LOS D	29,320	0.782	C	No
2. Heacock Street - Hemlock Avenue to SR 60 WB Ramps	Arterial	37,500	LOS D	34,101	0.909	**E**	**Yes**
3. Indian Street - Ironwood Avenue to Hemlock Avenue	Minor Arterial	12,500	LOS D	9,206	0.737	C	No
4. Indian Street - South of Hemlock Avenue	Minor Arterial	12,500	LOS D	11,507	0.921	**E**	**Yes**
5. Ironwood Avenue - West of Heacock Street	Minor Arterial	37,500	LOS C	18,329	0.489	A	No
6. Ironwood Avenue - Heacock Street to Davis Street	Minor Arterial	37,500	LOS C	15,284	0.408	A	No
7. Ironwood Avenue - East of Indian Street	Minor Arterial	37,500	LOS C	15,618	0.416	A	No
8. Hemlock Avenue - West of Heacock Street[4]	Minor Arterial	12,500	LOS C	7,450	0.596	A	No
9. Hemlock Avenue - Heacock Street to Davis Street[4]	Minor Arterial	37,500	LOS C	6,439	0.172	A	No
10. Hemlock Avenue - East of Indian Street[4]	Minor Arterial	12,500	LOS C	6,873	0.550	A	No

1. ADT: Average Daily Traffic Calculated by growing existing volumes by 2% per year and adding cumulative projects traffic
2. LOS based on City of Moreno Valley Roadway Segment LOS Values (Table 4)
3. Based on City of Moreno Valley Guidelines daily service volume standards table (LOS E). Four Lane Divided Arterial and Two Lane Industrial Collector used as classifications.
4. Roadway classification and LOS standard not listed in City Guidelines, assumed to be Minor Arterial, Two Lane Industrial Collector, with LOS Standard C.

Near Term Year (2022) With-Project

Intersection Operations

Level of Service Analysis

Traffic volumes for the Near Term Year (2022) with-project scenario where obtained by adding project traffic volumes (shown in Figure 10) to the Near Term (2022) without-project volumes. Figure 15 shows the AM and PM Near Term Year (2022) with-project AM and PM traffic volumes at study area intersections and Table 19 illustrates the Peak Hour intersection Level of Service Analysis.

As shown in the table, the Heacock Street/State Route (SR 60) WB Ramps intersection as well as the Davis Street/Hemlock Avenue are forecast to operate at LOS F during the PM peak hour with project. Davis Street/Ironwood Avenue are Indian Street/Sunnymead Boulevard are forecast to operate at LOS D and LOS E respectively during the PM peak hour with project. All these intersections are considered to be sub-standard per the City's guidelines. Mitigation measure will be discussed in the following section.

Queuing Analysis

A queuing analysis was conducted at the study area intersections to determine if the left turn pocket (storage) lengths are able to accommodate queues. The 95th percentile queue calculations were calculated using Synchro for the weekday AM and weekday PM peak hours and results summary is presented in Table 20 with detailed calculation in Appendix C.

Table 20 shows that the existing 95th percentile queue lengths exceed storage space under Near Term with-Project conditions. Mitigations are presented in the following section.

1. Calculated using Synchro –bold numbers indicate where Synchro yielded "95th percentile volume exceeds capacity, queue maybe longer." The queues were evaluated in Simtraffic at these locations.

Signal Warrant Analysis

The signal warrant analysis as per the latest edition of the Federal Highway Administration's (FHWA) Manual on Uniform Traffic Control Devices (MUTCD), was used for all study area intersections. It was found that the Hemlock Ave / Davis St intersection meets the 8-Hour, 4-Hour, and Peak-Hour signal warrants and as such signalization is recommended. The signal warrant analysis sheets are provided in Appendix C.

Roadway Operations

Based on the analysis methodology described in Section I, the Near Term Year (2022) with-project traffic daily traffic volumes at the study area roadway segments were compared to the City's roadway segment LOS values and the with-out project traffic daily volumes LOS values. Table 21 presents the results of the Near Term Year (2022) with-project roadway segment LOS analysis.

Table 21 shows that, all study area roadway segments operate with an acceptable LOS except Heacock Street (Hemlock Avenue to SR 60 WB Ramps) and Indian Street (South of Hemlock Avenue). Mitigation measures are illustrated in Section V.

Table 21. Near Term Year Roadway Segment LOS Summary

Roadway Segment	Existing Classification	Maximum Capacity ADT[3]	Near Term With-out Project ADT[1]	Near Term With-out Project V/C Ratio	Near Term With-out Project LOS[2]	Near Term With Project ADT[5]	Near Term with-Project V/C Ratio	Near Term with-Project LOS[2]	V/C Ratio Change	Impact

General Plan Buildout Year (2040) Without-Project

Intersection Operations

Traffic volumes for the General Plan Buildout Year (2040) without-project (baseline) scenario where obtained from the Moreno Valley Transportation Analysis Model. The model results were post-processed using the 2007 model data, the existing 2017 traffic counts, and the 2035 model outputs. Figure 16 shows the AM and PM General Plan Buildout Year (2040) without-project AM and PM traffic volumes at study area intersections and Table 22 illustrates the Peak Hour Level of Service Analysis.

As shown in the table, the Indian Street/Ironwood Avenue is forecast to operate at LOS E during the AM peak hour with-out the project (City's LOS Standard is D). Indian Street/Ironwood and Indian Street/Sunnymead Boulevard are forecast to operate at LOS E during the AM and PM peak hour respectively with-out the project (City's LOS Standard is D). Mitigation measures will be discussed in the following section.

Table 22. General Plan Buildout Year Without-Project Peak Hour Intersection LOS

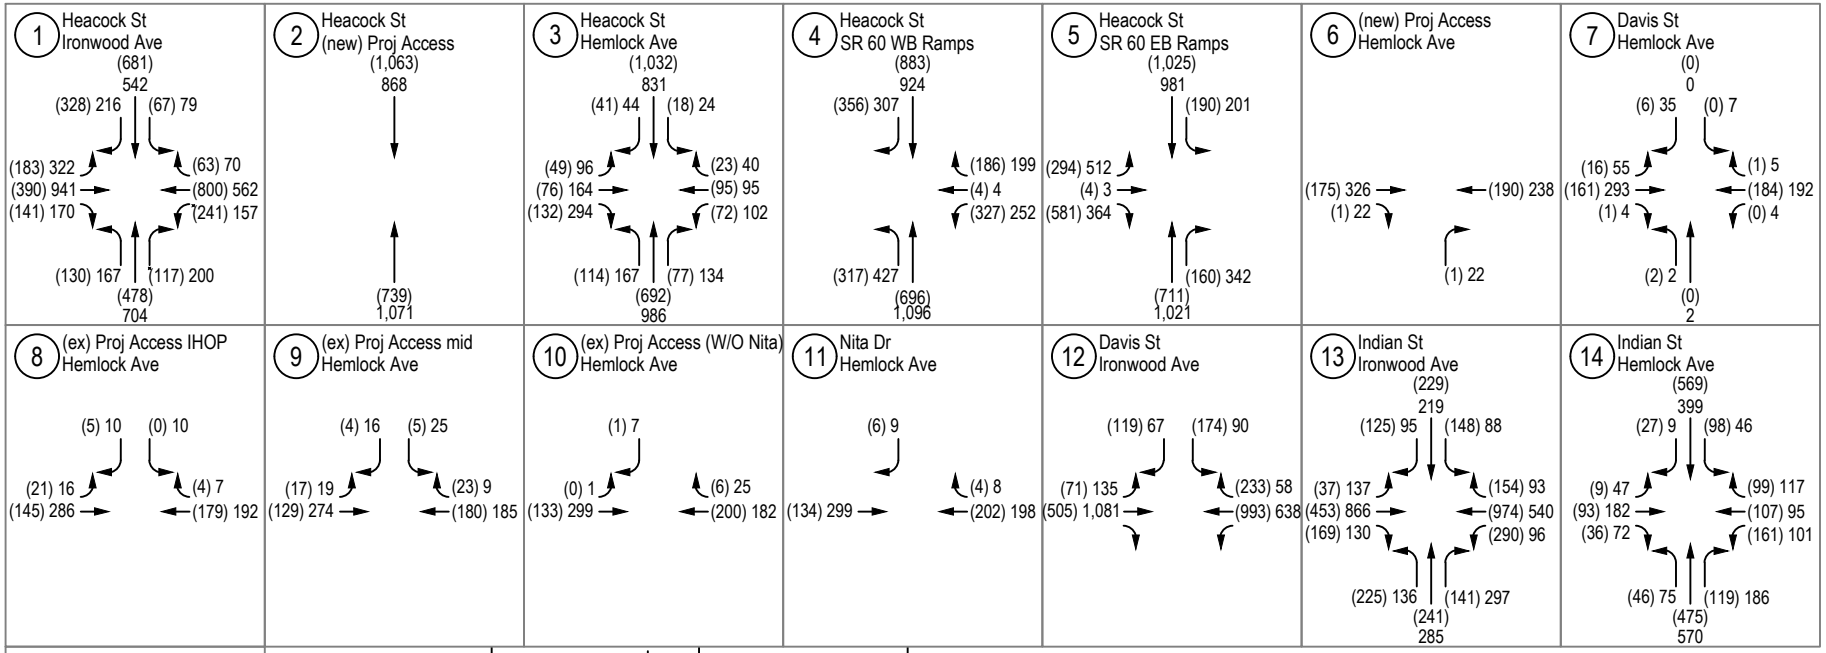
6. OWSC = One Way Stop Controlled (evaluated using the HCM Methodology)

Queuing Analysis

A queuing analysis was conducted at the study area intersections to determine if the left turn pocket (storage) lengths are able to accommodate queues. The 95th percentile queue calculations were calculated using Synchro for the weekday AM and weekday PM peak hours and results summary is presented in Table 23 with detailed calculations in Appendix C.



General Plan Build-out (2040) Baseline AM and PM Peak Hour Traffic Volumes

FIGURE 16

Festival at Moreno Valley

transpogroup
WHAT TRANSPORTATION CAN BE.

Table 23 shows that the build-out year 95th percentile queue lengths exceed storage space under without-Project conditions. As mentioned earlier, the 95th percentile queue is not necessarily ever observed, it is simply based on statistical calculations. It is however used by many jurisdictions as the basis for calculating storage lengths. Mitigation measures are presented in the following section.

Table 23. General Plan Without-Project Weekday Peak Hour Queuing Analysis

1. Calculated using Synchro –bold numbers indicate where Synchro yielded "95th percentile volume exceeds capacity, queue maybe longer." The queues were evaluated in Simtraffic at these locations.

Signal Warrant Analysis

The signal warrant analysis as per the latest edition of the Federal Highway Administration's (FHWA) Manual on Uniform Traffic Control Devices (MUTCD), was used for all study area intersections. No unsignalized intersection was found to meet the warrants for signalization. The signal warrant analysis sheets are provided in Appendix C.

Roadway Operations

Roadway traffic volumes were also obtained from the Moreno Valley Transportation Analysis Model. The model plots are presented in Appendix D. Based on the analysis methodology described in Section I, the General Plan Buildout Year (2040) without-project traffic daily traffic volumes at the study area roadway segments yield the LOS values illustrated in Table 24.

Table 24 shows that, all study area roadway segments operate with an acceptable LOS except for Indian Street between Ironwood and Hemlock and south of Hemlock.

Table 24. General Plan With-out Project Roadway Segment LOS Summary

Roadway Segment	Existing Classification	Maximum Capacity ADT[3]	LOS Standard[2]	ADT[1]	V/C	LOS	Exceeds Threshold?
1. Heacock Street - Ironwood Avenue to Hemlock Avenue	Arterial	37,500	LOS D	26,600	0.709	B	No
2. Heacock Street - Hemlock Avenue to SR 60 WB Ramps	Arterial	37,500	LOS D	32,700	0.872	D	No
3. Indian Street - Ironwood Avenue to Hemlock Avenue	Minor Arterial	12,500	LOS D	18,400	1.472	F	**Yes**
4. Indian Street - South of Hemlock Avenue	Minor Arterial	12,500	LOS D	20,600	1.648	F	**Yes**
5. Ironwood Avenue - West of Heacock Street	Minor Arterial	37,500	LOS C	24,900	0.664	B	No
6. Ironwood Avenue - Heacock Street to Davis Street	Minor Arterial	37,500	LOS C	21,200	0.565	A	No
7. Ironwood Avenue - East of Indian Street	Minor Arterial	37,500	LOS C	23,400	0.624	B	No
8. Hemlock Avenue - West of Heacock Street[4]	Minor Arterial	12,500	LOS C	4,900	0.392	A	No
9. Hemlock Avenue - Heacock Street to Davis Street[4]	Minor Arterial	37,500	LOS C	20,900	0.557	A	No
10. Hemlock Avenue - East of Indian Street[4]	Minor Arterial	12,500	LOS C	5,800	0.464	A	No

1. ADT: Average Daily Traffic calculated by growing the 2017 volumes using the model growth rates derived from 2007 and 2035 model volumes
2. LOS based on City of Moreno Valley Roadway Segment LOS Values (Table 4)
3. Based on City of Moreno Valley Guidelines daily service volume standards table (LOS E). Four Lane Divided Arterial and Two Lane Industrial Collector used as classifications.
4. Roadway classification and LOS standard not listed in City Guidelines, assumed to be Minor Arterial, Two Lane Industrial Collector, with LOS Standard C.

General Plan Buildout Year (2040) With-Project

Intersection Operations

Traffic volumes for the General Plan Buildout Year (2040) with-project scenario where obtained by adding project traffic volumes (shown in Figure 10) to the General Plan Buildout Year (2040) without-project volumes. Figure 17 shows the AM and PM General Plan Buildout Year (2040) with-project AM and PM traffic volumes at study area intersections and Table 25 illustrates the Peak Hour intersection Level of Service Analysis.

As shown in the table, the Davis Street/Hemlock Avenue and Indian Street/Sunnymead Blvd intersections are forecast to operate at LOS F during the PM peak hour with project. Heacock Street/Hemlock Avenue, the Project Access (w/o Nita Dr)/Hemlock Avenue and Indian Street/Ironwood Avenue intersections are also forecast to operate at sub-standard levels of services during the peak hour periods with project. Mitigation measures will be discussed in the following section.

Queuing Analysis

A queuing analysis was conducted at the study area intersections to determine if the left turn pocket (storage) lengths are able to accommodate queues. The 95th percentile queue calculations were calculated using Synchro for the weekday AM and weekday PM peak hours and results summary is presented in Table 26 with detailed calculation in Appendix C.

Table 26 shows that the existing 95th percentile queue lengths exceed storage space under the General Plan with-Project conditions.

Signal Warrant Analysis

The signal warrant analysis as per the latest edition of the Federal Highway Administration's (FHWA) Manual on Uniform Traffic Control Devices (MUTCD), was used for all study area intersections. It was found that the Hemlock Ave / Davis St intersection meets the 8-Hour, 4-Hour, and Peak-Hour signal warrants and as such signalization is recommended. It was also found that the 4-Hour warrants for the Middle Access and Hemlock (Intersection 9) are also met. The signal warrant analysis sheets are provided in Appendix C.

Roadway Operations

Based on the analysis methodology described in Section I, the General Plan Buildout Year (2040) with-project traffic daily traffic volumes at the study area roadway segments were compared to the City's roadway segment LOS values in Table 4 and the with-out project traffic daily volumes LOS values. Table 27 presents the results of the General Plan Buildout Year (2040) with-project roadway segment LOS analysis.
Based on the capacity analysis, all study area roadway segments operate with an acceptable LOS except for Indian Street (south and north of Hemlock) as well as Heacock St between Hemlock Ave and SR 60 WB Ramps.

1. ADT: Average Daily Traffic
2. LOS based on City of Moreno Valley Roadway Segment LOS Values (Table 4)
3. Based on City of Moreno Valley Guidelines daily service volume standards table (LOS E). Four Lane Divided Arterial and Two Lane Industrial Collector used as classifications.
4. Roadway classification and LOS standard not listed in City Guidelines, assumed to be Minor Arterial, Two Lane Industrial Collector, with LOS Standard C.

V. Mitigation Measures

This section provides a summary of recommended mitigation measures necessary to address the cumulative traffic impacts. A summary of the operationally deficient study area intersections and roadway segments and recommended improvements required to achieve acceptable circulation system operational conditions are described below. It is important to note that Cumulative impacts are deficiencies that would not be directly caused by the project. The project would, however, contribute traffic to these deficient facilities along with other cumulative development projects, resulting in a cumulatively considerable impact.

The recommended mitigation measures necessary to reduce project impacts to less-than-significant are discussed below.

Intersections

Level of Service Mitigations

Based on the traffic analysis presented in the earlier sections, the following four intersections were observed to perform at a LOS below the City's standards.

1. Davis Street and Hemlock Avenue under all with-Project scenarios in the PM Peak Hour

A warrant analysis was performed for this intersection and it was found that the 8-hour, 4-hour, and peak-hour warrants are all met. As such it is recommended that this intersection be signalized. Installing a signal improved the LOS at this intersection to LOS B during the PM peak hours for all scenarios (cycle length is assumed at 60 seconds as per the City's guidelines). Signal warrant worksheets and LOS worksheets are attached in Appendix C.

Mitigation: It is recommended to install a traffic signal at the Davis Street / Hemlock Avenue intersection.

2. Heacock Street and SR 60 WB Ramps under Near Term with-Project scenario in the PM Peak Hour

Mitigation: Optimizing the cycle length (90s cycle length), splits, and offsets and restriping the defacto right-turn lane to a SB right-turn lane with 50ft storage and a SB through lane improves the LOS to C

3. Davis Street and Ironwood Avenue under the Near Term PM peak hour scenario can be mitigated by optimizing the cycle length. LOS worksheets are attached in Appendix C.

Mitigation: Optimizing the cycle length (60s cycle length), splits, and offsets yields a LOS B

4. Indian Street and Sunnymead Blvd under the Near Term PM peak and the General Plan PM peak hour scenarios. Under the Near Term Conditions this could be mitigated by optimizing the cycle length (80s cycle length), splits, and offsets and yields a LOS C. Under the General Plan Conditions, restriping of the defacto right-turn lanes in the EB and a WB directions to provide 50ft right turn pocket lanes yield a LOS D. Analysis worksheets are provided in Appendix C.

Mitigation: Optimizing the cycle length (80s cycle length), splits, and offsets yields under Near Term (2022) conditions and restriping to provide a EBR and a WBR turn lanes under General Plan (2040) conditions

5. Heacock St Hemlock Ave under the General Plan Build-out with-project PM peak yields a LOS E. Restriping the defacto right-turn to provide a SBR lane yields a LOS D. Analysis worksheets are provided in Appendix C.

Mitigation: Restripe the defacto SB right-turn lane to provide a right turn pocket lane

6. Project Access (w/o Nita Dr)/Hemlock Avenue (Intersection 10) under the General Plan Build-out with-project PM peak yields a LOS D. Converting to an all-way-stop control brings the LOS back to C. Analysis worksheets are provided in Appendix C.

Mitigation: Convert to an all-way stop control

7. Indian Street/Ironwood Avenue under the General Plan Build-out with-project AM peak yields a LOS E. Increasing the cycle length to 120s (maximum length per Moreno Valley standards) yields a LOS D. Analysis worksheets are provided in Appendix C.

Mitigation: Optimizing the cycle length (120s cycle length), splits, and offsets yields a LOS D

Queuing Mitigations

Based on the queuing analysis, Table 28 presents a set of recommended measures to address storage lengths at the various approaches of the study area intersections. It is important to note that much of the analysis is based on the 95th percentile queue lengths which has a low (5%) probability of occurring.

Table 28. General Plan Build-out With-Project Weekday Peak Hour Queuing Analysis

Intersection	Movement	Existing Pocket Length (ft)	Maximum Queue Length[1] (ft)	Proposed Mitigation to accommodate 95th percentile queues
1. Heacock Street/Ironwood Avenue	EBL	90	149	Restripe left turn lanes to provide 150 ft storage
	WBL	135	193	Restripe left turn lanes to provide 200 ft storage
	NBL	140	208	Restripe left turn lanes to provide 210 ft storage
	SBL	100	131	Restripe left turn lanes to provide 135 ft storage
3. Heacock Street/Hemlock Avenue	EBL	70	171	Restripe left turn lanes to provide 175 ft storage
	NBL	100	170	Restripe left turn lanes to provide 170 ft storage
4. Heacock Street/State Route (SR 60) WB Ramps	NBL	200	264	A storage lane is provided south of the Heacock/ SR 60 EB ramps intersection. No further mitigation is recommended.
5. Heacock Street/State Route (SR 60) EB Ramps	EBL	0	403	Length of the left tun lane is over 600ft. No further mitigation is recommended.
	SBL	190	226	Restripe 50ft of the TWLT lane north of the Heacock/ SR 60 WB ramps intersection as “Freeway Only” lane.
12. Davis Street/Ironwood Avenue	EBL	150	210	Restripe left turn lanes to provide 210 ft storage
	SBL	40	122	Restripe left turn lanes to provide 125 ft storage
13. Indian Street/Ironwood Avenue	EBL	95	148	Restripe left turn lanes to provide 150 ft storage
	WBL	100	140	Restripe left turn lanes to provide 140 ft storage
	NBL	110	156	Restripe left turn lanes to provide 105 ft storage
	SBL	80	126	Restripe left turn lanes to provide 130 ft storage.
14. Indian Street/Hemlock Avenue	WBL	80	100	Restripe left turn lanes to provide 100 ft storage
	NBL	145	196	Restripe left turn lanes to provide 200 ft storage
	SBL	100	126	Restripe left turn lanes to provide 130 ft storage
15. Indian Street/Sunnymead Boulevard	EBL	90	141	Restripe left turn lanes to provide 145 ft storage to accommodate 95th percentile queues. This might require replacing the concrete island with stripping.
	WBL	100	153	Restripe left turn lanes to provide 155 ft storage
	NBL	145	205	Restripe left turn lanes to provide 205 ft storage
	SBL	90	145	Restripe left turn lanes to provide 145 ft storage

1. Maximum for all scenarios

Roadway Operations

The roadway capacity analysis identified three segments that do not meet the City LOS standards. These segments are:

1. Heacock Street from Hemlock Avenue to SR 60 WB Ramps in the Near Term Year with-out and with-Project as well as General Plan with-Project conditions
2. Indian Street from Ironwood Avenue to Hemlock Avenue in the Near Term Year with-Project as well as General Plan with-out and with-Project conditions
3. Indian Street South of Hemlock Avenue in the Near Term Year with-out and with-Project as well as General Plan with-out and with-Project conditions

As noted in both the City of Moreno Valley's traffic study guidelines, these roadway capacities are "rule of thumb" estimates for planning purposes and are affected by such factors as intersections (spacing, configuration and control features), degree of access control, roadway grades, design geometrics (horizontal and vertical alignment standards), sight distance, vehicle mix (truck and bus traffic) and pedestrian and bicycle traffic. In other words, while using average daily traffic (ADT) for planning purposes is suitable with regards to evaluating potential volume to capacity with future forecasts, it is not suitable for operational analysis because it does not account for the factors listed previously. As such, where the ADT based roadway segment analysis indicates a deficiency (unacceptable LOS), a review of the more detailed peak hour intersection analysis and progression analysis are undertaken. The more detailed peak hour intersection analysis explicitly accounts for factors that affect roadway capacity. Therefore, roadway segment widening is typically only recommended if the peak hour intersection analysis indicates the need for additional through lanes.

However, examining the intersections on both ends of these roadway segments shows that the operations of the intersections is within acceptable level of service standards. As such roadway segment widening does not appear necessary to address the deficiencies at the identified roadway segments based on the peak hour intersection operations analysis along these roadway segments.

Traffic Calming Options for Davis Street

It is our understanding that once Davis Street is completed, thereby connecting Hemlock Avenue to Ironwood Avenue, it will provide an alternative for traffic trying to avoid Heacock St which in turn could potentially contribute to increased speeds along Davis St and cut-through traffic.
As such we are recommending traffic calming measures that could be implemented in case the need arises because of excessive speeds or cut-through traffic.
It should be noted that traffic calming has impacts not only on vehicular travel, but can also provide preferential corridors for cyclists and pedestrians. This is especially important for Davis Street which is envisioned in the City's Bicycle Master Plan as a Class 3 bicycle route.

Since the 660 ft section of Davis Street just south of Ironwood is yet to be constructed and knowing that the existing Davis Street has a 54 ft width curb to curb (travel lanes at 20 ft and a 14 ft two-way-left-turn-lane), we offer the following traffic calming options to be considered:

1. Providing parallel parking on both sides of Davis could reduce the street width between intersections (where parking is introduced) from 20 ft per direction to 12 ft per direction which changes both the perception and the function of the street. It is important to note that this option needs to be studied further to address turning movements at access points.
2. As the project develops providing mid-block crossing(s) on Davis Street might be desirable to connect the various uses (business park to commercial/retail/restaurants). These should come with necessary signage, striping and possibly curb bulb-ous where mid-block crossing(s) are needed

3. Speed feedback signs could be installed along Davis St. These signs display the speed at which a vehicle is traveling in contrast with the posted speed limit for the area. These units have been proven to be effective in reducing vehicular speeds in many areas.
4. Other measures such as raised medians, curb extensions, street trees and landscaping could be used for traffic calming. This is especially applicable as the new section is constructed. Speed humps have been used in residential areas but given the anticipated truck traffic in this area they might not provide the best results, however, speed tables could be also used as an option if speeding becomes an issue.

Hemlock Ave and Davis Street Classifications

To ensure that the proposed changes in land use (leading to additional truck traffic) will not significantly impact the structural integrity of the existing street segments within the specific plan area, an analysis of the pavement section on certain segments of Hemlock Avenue and Davis Street should be prepared for future plot plans in Planning Areas 1, 2, and 3 and any needed improvements are recommended to be completed per the Conditions of Approval of those plot plans.

Appendix A:Scoping Agreement

MORENO VALLEY

SCOPING AGREEMENT FOR TRAFFIC ANALYSIS STUDY

Date: October 30, 2017

This letter acknowledges the City of Moreno Valley Transportation Engineering Division requirements for the traffic impact analysis of the following project.

Case No.	PEN16-0015
Project Name:	Moreno Valley Festival
Project Address:	East of Heacock Street between Ironwood Avenue and Hemlock Avenue
Project Description:	348,000 SF of business park and 325,000 SF of commercial retail.
Related Cases:	PA15-0053, PA15-0054, P15-124

	Consultant	Developer
Name:	Transpo Group, Inc.	BlackRidge Real Estate Group, LLC
Address:	603 North Park Center Drive Suite 108 Santa Ana, CA 92705	16901 Millikan Avenue Irvine, CA 92606
Telephone:	949-656-7925	303-419-6780

I. Background

The proposed specific plan will review modifying the existing 180,000 square feet of retail land use to a business park and retail uses.
The project site will have access to Ironwood Avenue from Davis Street, Hemlock Avenue from Davis Street, Heacock Avenue via new project access drive and retail project accesses.

II. Trip Geographic Distribution and Assignment*

N: *% **S:** *% **E:** *% **W:** *%

***Please see attached trip distribution diagram.**

III. Site Trip Generation Forecast

A. ITE Trip Generation Manual (*10th Edition, 2017*)
B. AM Peak: 7:00-9:00 AM (based upon existing 24-hour traffic counts)
C. PM Peak: 4:00-6:00 PM (based upon existing 24-hour traffic counts)
D. Intersection and link acceptable Level of Service "D" for some intersections and links and Level of Service "C" for others based upon the current City policy. **** Please see attached trip generation tables.**

IV. Specific Project Issues to be Analyzed

A. The focus of this traffic study will be on addressing the adequacy of site access and identifying specific near-term and future circulation improvements required in the study area to maintain acceptable peak hour and daily Levels of Service (LOS).
B. The traffic study shall address the project traffic impacts at all study intersections listed in Section VI and provide appropriate mitigation measures if applicable. Peak-hour traffic signal warrants shall be evaluated for all intersections that are not currently signalized.

C. The traffic study shall include a section that discusses the difference in trip generation between the previous proposed or existing use and the proposed project.
D. Assess adequacy of non-motorized transportation between project and surrounding area.
E. Provide traffic calming options for Davis Street, between Ironwood Ave and Hemlock Ave.
F. The traffic study shall review the current roadway classifications of Hemlock Avenue and Davis Street within the Specific Plan and recommend the appropriate roadway classifications (per current City standards) for these streets to support commercial truck traffic generated by warehousing and manufacturing facilities.
G. Using Synchro software, the traffic study shall provide a Queuing Analysis section to determine the 95th percentile queues and the minimum requirement of storage length for the left-turn lanes of all studied intersections based on forecasted E+P (V.B), Opening Year + Project (V.D) and GP Buildout (V.E) traffic volumes.

V. Study of Horizon Years

A. Existing
B. Existing + Project
C. Existing + Ambient Growth + Cumulative (Assume growth rate of 2% per year)
D. Existing + Ambient Growth + Cumulative + Project
E. General Plan Build Out (with and without project) – Buildout data will be obtained from City's traffic forecast model

*****Opening year should have five (5) year minimum horizon**

VI. Facilities to be Studied

A. Intersections

1. Heacock Street (NS) at Ironwood Avenue (EW)
2. Heacock Street (NS) at Project Access (EW)
3. Heacock Street (NS) at Hemlock Avenue (EW)
4. Heacock Street (NS) at SR-60 Freeway WB Ramps (EW)
5. Heacock Street (NS) at SR-60 Freeway EB Ramps (EW)
6. Project Access (NS) at Hemlock Avenue (EW)
7. Davis Street (NS) at Hemlock Avenue (EW)
8. Project Access (NS) at Hemlock Avenue (EW)
9. Project Access (NS) at Hemlock Avenue (EW)
10. Project Access (NS) at Hemlock Avenue (EW)
11. Nita Drive (NS) at Hemlock Avenue (EW)
12. Davis Street (NS) at Ironwood Avenue (EW)
13. Indian Street (NS) at Ironwood Avenue (EW)
14. Indian Street (NS) at Hemlock Avenue(EW)
15. Indian Street (NS) at Sunnymead Boulevard (EW)

B. Roadway Segments

1. Heacock Street – Ironwood Avenue to Hemlock Avenue
2. Heacock Street – Hemlock Avenue to SR-60 Freeway WB Ramps
3. Indian Street – Ironwood Avenue to Hemlock Avenue
4. Indian Street south of Hemlock Avenue
5. Ironwood Avenue west of Heacock Street
6. Ironwood Avenue – Heacock Street to Indian Street
7. Ironwood Avenue – east of Indian Street
8. Hemlock Avenue west of Heacock Street
9. Hemlock Avenue – Heacock Street to Indian Street
10. Hemlock Avenue – east of Indian Street

VII. Deliverables

A. Draft traffic impact study (2 copies) and a PDF file (on flash drive)
B. Final traffic impact study (4 copies) and a PDF file (on flash drive)

A signed copy of this Scoping Agreement must be included in the submitted draft and final traffic impact studies. All draft and final traffic impact studies shall be delivered with the appropriate review fee to the Permit Technician, Land Development Division, Moreno Valley City Hall, 14177 Frederick Street, Moreno Valley, CA 92552. Please contact the Land Development Division at 951-413-3110 prior to the delivery of the traffic study.

If you have any questions regarding this *Scoping Agreement*, please contact Eric Lewis at (951) 413-3140.

Recommended By:

Rawad Hani, P.E.
Transpo Group, Inc.

Approved By:

Eric Lewis, P.E., T.E.
City Traffic Engineer

NOTE: This scoping agreement was reviewed and approved based on the information submitted by Transpo Group on 10/30/2017. Transpo Group and the project applicant acknowledge that any changes to the project (zoning, size, type of use, number or location of access points, project phasing, etc.) after 10/30/2017 may require this scoping agreement to be revised and resubmitted for review and approval by the City of Moreno Valley.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Level of Service (LOS) Method: Delay (HCM 2000).
Roundabout LOS Method: Same as Signalised Intersections.
Vehicle movement LOS values are based on average delay per movement
Intersection and Approach LOS values are based on average delay for all vehicle movements.
Roundabout Capacity Model: SIDRA Standard.
SIDRA Standard Delay Model is used. Control Delay includes Geometric Delay.
Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).
HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

CITY OF MORENO VALLEY
PLANNING COMMISSION

VIA TELECONFERENCE ONLY
PURSUANT TO COVID-19
GOVERNOR EXECUTIVE ORDER N-29-20

NOTICE OF PUBLIC HEARING AND ENVIRONMENTAL NOTICE OF AVAILABILITY

NOTICE IS HEREBY GIVEN that a teleconferenced Public Hearing will be held by the Planning Commission of the City of Moreno Valley on the date and time set forth below:

Date and Time:	January 14, 2021 at 7:00 p.m.
Location:	**VIA TELECONFERENCE ONLY** **Go to http://morenovalleyca.iqm2.com/Citizens/default.aspx for instructions.**
Item:	PEN20-0139 General Plan Amendment; PEN20-0138 Specific Plan Amendment; and PEN20-0137 Plot Plan
Applicant:	LCG 10MV, LLC
Property Owner:	SCNDSC, LLC
APN:	481-020-013, 029, 030, 034, 035 & 038
Location:	Southeast corner of Heacock Street and Ironwood Avenue
Proposal:	Applicant is requesting approval of the following entitlements for a 10-acre site: 1) a General Plan Amendment (GPA) amending the City's General Plan from Commercial to Business Park, 2); a Specific Plan Amendment from SP205 Retail Commercial to SP 205 Mixed Use; and 3) a Plot Plan for an approximately 200,000 square foot light industrial building.

Council District: 1

Environmental Determination: The project has been evaluated against the criteria set forth in the California Environmental Quality Act (CEQA) and CEQA Guidelines and staff has determined that a Mitigated Negative Declaration is the appropriate environmental document for the proposed project.

The Draft Initial Study/Mitigated Negative Declaration is being circulated for public review by responsible and trustee agencies and other interested parties for a review period commencing December 23, 2020, through January 11, 2021. The documents can be obtained in electronic format via email by request. The final document may be inspected by appointment at the Community Development Department at 14177 Frederick Street, Moreno Valley, California by calling (951) 413-3206 during normal business hours (7:30 a.m. to 5:30 p.m., Monday through Thursday).

PUBLIC TESTIMONY: All interested parties will be provided an opportunity to submit oral testimony during the teleconferenced public hearing and/or provide written testimony during or prior to or at the teleconferenced public hearing. The application file and related environmental documents may be inspected by appointment at the Community Development Department at 14177 Frederick Street, Moreno Valley, California by calling (951) 413-3206 during normal business hours (7:30 a.m. to 5:30 p.m., Monday through Thursday).

COVID-19 – IMPORTANT NOTICES: Please note that due to the COVID-19 pandemic situation, staff will attempt to make reasonable arrangements to ensure accessibility to inspect the aforementioned records. **In addition, special instructions on how to effectively participate in the teleconferenced Public Hearing, as approved by Governor Executive Order No. N-25-20, will be posted at http://morenovalleyca.iqm2.com/Citizens/default.aspx and will be described in the Planning Commission agenda.**

PLEASE NOTE: The Planning Commission may consider and approve changes to the proposed items under consideration during the teleconferenced Public Hearing.

GOVERNMENT CODE § 65009 NOTICE: If you challenge any of the proposed actions taken by the Planning Commission in court, you may be limited to raising only those issues you or someone else raised during the teleconferenced Public Hearing described in this notice, or in written correspondence deliv

Planning Division of the City of Moreno Valley during or prior to, the teleconferenced Public Hearing.

ACCESSIBILITY: Upon request and in compliance with the Americans with Disabilities Act of 1990, any person with a disability who requires a modification or accommodation in order to participate in a meeting should direct such request to Guy Pegan, ADA Coordinator, at (951) 413-3120 at least 48 hours before the meeting. The 48-hour notification will enable the City to make reasonable arrangements to ensure accessibility to this meeting.

STAFF CONTACT: If you have questions regarding this public hearing, please contact Julia Descoteaux, Associate Planner, by telephone at (951) 413-3209 or via email at planning@moval.org.

TABLE OF CONTENTS

1. OVERVIEW OF THE PROJECT

The Specific Plan Amendment that is the focus of this Initial Study and Mitigated Negative Declaration (IS/MND) is the *second amendment* to the adopted *Moreno Valley Festival Specific Plan/EIR (SP-205)*. The original Specific Plan was adopted, and the Environmental Impact Report (EIR) was certified, by the City Council of Moreno Valley on October 27, 1987. *Amendment Number 1* was adopted in 2018 as a means to promote a wider range of land uses and development so as to take advantage of more recent development trends that were occurring since the original Specific Plan was adopted.[1] This current proposed amendment (Amendment Number 2) that is the subject of this IS/MND, expands the geographic area of the Specific Plan's Planning Area 1 to include a 9.98-acre property located on the southeast corner of Heacock Street and Ironwood Avenue. This IS/MND for Amendment No. 2 also tiers off of the Final EIR that was certified for the *Moreno Valley Festival Specific Plan/EIR (SP-205)*. This Specific Plan Amendment Number 2 is contemplating a new light industrial building totaling 220,390 square feet of floor area. The original SP-205 designated the area as *Regional Commercial* in the geographic area that is now included in the expanded Planning Area 1. This Second Amendment is now designating this area as *Mixed Uses*.

2. FINDINGS OF THE ENVIRONMENTAL ASSESSMENT

The Initial Study prepared for the project indicated that the project's construction and subsequent occupation are not expected to result in significant adverse environmental impacts upon implementation of the required mitigation measures. The following Mandatory Findings of Significance can be made as set forth in Section 15065 of the CEQA Guidelines, as amended, based on the results of this environmental assessment:

- The proposed project *will not* have the potential to degrade the quality of the environment;
- The proposed project *will not* have the potential to achieve short-term goals to the disadvantage of long-term environmental goals;
- The proposed project *will not* have impacts, that are individually limited, but cumulatively considerable; and,
- The proposed project *will not* have environmental effects that will adversely affect humans, either directly or indirectly.

3.FINDINGS RELATED TO MITIGATION MONITORING

Section 21081(a) of the Public Resources Code states that findings must be adopted by the decision-makers coincidental to the approval of a Mitigated Negative Declaration. These findings shall be incorporated as part

[1] The expanded range of allowable uses will include a Mix of Uses Development (MU), Commercial/Retail Development (CR), Retail Mix of Uses (RMU) and Open Space (OS) designation. The plan amendment will also facilitate the extension of Davis Street in a northerly direction to ultimately re-connect with the segment of Davis Street that extends north of Ironwood Avenue. The overall placement, design, and phasing of future development will be responsive to the employment and community service needs while mitigating the potential impacts on sensitive development that will be located both within and in close proximity to the Planning Area.

of the decision-maker's findings of fact, in response to AB-3180. In accordance with the requirements of Section 21081(a) and 21081.6 of the Public Resources Code, the following additional findings may be made:

- A mitigation reporting or monitoring program will be required;
- Site plans and/or building plans, submitted for approval by the responsible monitoring agency, shall include the required standard conditions; and,
- An accountable enforcement agency or monitoring agency shall be identified for the mitigations adopted as part of the decision-maker's final determination.

4. MITIGATION MEASURES

The analysis indicated that the proposed project may result in impacts to protected species and habitat. As a result, the following mitigation is required:

Mitigation Measure No. 1 (Biological Resources Impacts). The proposed project must be consistent with the Western Riverside MSHCP. Payment of the appropriate development mitigation fees will mitigate any impacts to these species.

Mitigation Measure No. 2 (Biological Resources Impacts). Prior to any land disturbance, a focused pre-construction burrowing owl survey shall be conducted prior to construction in accordance with the Burrowing Owl Survey instructions of the Western Riverside County MSHCP. This survey is to be conducted within 30 days prior to ground disturbance. After the pre-construction burrowing owl survey has been completed, a survey report will be prepared in accordance with the MSHCP 30-day Pre-construction Burrowing Owl Survey Report Format.

Mitigation Measure No. 3 (Biological Resources Impacts). Future developers must consult with the California Department of Fish and Wildlife, the U.S. Army Corps of Engineers, and the Santa Ana Regional Water Quality Control Board to determine the need for permits that must be obtained prior to initiation of construction of a proposed project.

Mitigation Measure No. 4 (Biological Resources Impacts). Prior to the start of construction activity, developers must prepare a Multiple Species Habitat Conservation Program (MSHCP) Determination of Biologically Equivalent or Superior Preservation (DBESP) should a future project affect Western Riverside MSHCP riverine resources.

Mitigation Measure No. 5 (Biological Resources Impacts). Vegetation removal shall be conducted outside of the nesting season for migratory birds to avoid direct impacts. The migratory bird nesting season is between February 1 and September 15.

Mitigation Measure No. 6 (Biological Resources Impacts). If active nests are found during nesting bird surveys, they shall be flagged and a 200-foot buffer shall be fenced around the nests.

Mitigation Measure No. 7 (Biological Resources Impacts). If vegetation removal will occur during the migratory bird nesting season, between February 1 and September 15, pre-construction nesting bird surveys must be performed within three days prior to vegetation removal.

The following mitigation will be effective in minimizing potential impacts to possible cultural resources:

Mitigation Measure No. 8 (Cultural Resources Impacts). Prior to the issuance of a grading permit, the developer shall retain a professional archaeologist to conduct monitoring of all mass grading and trenching activities. The project archaeologist must have the authority to temporarily redirect earthmoving activities in the event that suspected archaeological resources are unearthed during project construction. The project archaeologist, in consultation with the Consulting Tribe(s), the contractor, and the City, must develop a Cultural Resources Management Plan (CRMP) in consultation pursuant to the definition in AB-52 to address the details, timing, and responsibility of all archaeological and cultural activities that will occur on the project site. A consulting tribe is defined as a tribe that initiated the AB-52 tribal consultation process for the project, has not opted out of the AB-52 consultation process, and has completed AB-52 consultation with the City as provided for in Cal Pub Res Code Section 21080.3.2(b)(1) of AB-52. Details in the Plan shall include:

- Project grading and development scheduling;

- The project archeologist and the Consulting Tribes(s) as defined in this mitigation must attend the pre-grading meeting with the City, the construction manager and any contractors and will conduct a mandatory Cultural Resources Worker Sensitivity Training to those in attendance. The training will include a brief review of the cultural sensitivity of the project and the surrounding area; what resources could potentially be identified during earthmoving activities; the requirements of the monitoring program; the protocols that apply in the event inadvertent discoveries of cultural resources are identified, including who to contact and appropriate avoidance measures until the find(s) can be properly evaluated; and any other appropriate protocols. All new construction personnel that will conduct earthwork or grading activities that begin work on the Project following the initial training must take the Cultural Sensitivity Training prior to beginning work and the project archaeologist and Consulting Tribe(s) shall make themselves available to provide the training on an as-needed basis;

- The protocols and stipulations that the contractor, City, Consulting Tribe(s) and project archaeologist will follow in the event of inadvertent cultural resources discoveries, including any newly discovered cultural resource deposits that shall be subject to a cultural resources evaluation.

Mitigation Measure No. 9 (Cultural Resources Impacts). Prior to the issuance of a grading permit, the developer shall secure agreements with the Pechanga Band of Luiseño Indians, the Soboba Band of Luiseño Indians, and the Morongo Band of Mission Indians for tribal monitoring. The developer is also required to provide a minimum of 30 days advance notice to the tribes of all mass grading and trenching activities. The Native American Tribal Representatives shall have the authority to temporarily halt and redirect earth moving activities in the affected area in the event that suspected archaeological resources are unearthed. If the Native American Tribal Representatives suspect that an archaeological resource may have been unearthed, the project archaeologist or the Tribal Representatives shall immediately redirect grading operations in a 100-foot radius around the find to allow identification and evaluation of the

suspected resource. In consultation with the Native American Tribal Representatives, the project archaeologist shall evaluate the suspected resource and make a determination of significance pursuant to California Public Resources Code Section 21083.2.

Mitigation Measure No. 10 (Cultural Resources Impacts). In the event that Native American cultural resources are discovered during the course of grading (inadvertent discoveries), the following procedures shall be carried out for final disposition of the discoveries:

- One or more of the following treatments, in order of preference, shall be employed with the tribes. Evidence of such shall be provided to the City of Moreno Valley Planning Department:

    i. Preservation-in-place of the cultural resources, if feasible. Preservation in place means avoiding the resources, leaving them in the place they were found with no development affecting the integrity of the resources.

    ii. Onsite reburial of the discovered items as detailed in the treatment plan required pursuant to the initial mitigation. This shall include measures and provisions to protect the future reburial area from any future impacts in perpetuity. Reburial shall not occur until all legally required cataloging and basic recordation have been completed. No recordation of sacred items is permitted without the written consent of all Consulting Native American Tribal Governments as defined in the first mitigation identified in Section 3.5.2.B.

- The City shall verify that the following note is included on the Grading Plan: "If any suspected archaeological resources are discovered during ground-disturbing activities and the project archaeologist or Native American Tribal Representatives are not present, the construction supervisor is obligated to halt work in a 100-foot radius around the find and call the project archaeologist and the Tribal Representatives to the site to assess the significance of the find."

Mitigation Measure No. 11 (Cultural Resources Impacts). If potential historic or cultural resources are uncovered during excavation or construction activities at the project site, work in the affected area must cease immediately and a qualified person meeting the Secretary of the Interior's standards (36 CFR 61), Tribal Representatives, and all site monitors per the Mitigation Measures, shall be consulted by the City to evaluate the find, and as appropriate recommend alternative measures to avoid, minimize or mitigate negative effects on the historic, or prehistoric resource. Determinations and recommendations by the consultant shall be immediately submitted to the Planning Division for consideration, and implemented as deemed appropriate by the Community Development Director, in consultation with the State Historic Preservation Officer (SHPO) and any and all Consulting Native American Tribes as defined in previously identified mitigation before any further work commences in the affected area.

Mitigation Measure No. 12 (Cultural Resources Impacts). If human remains are discovered, no further disturbance shall occur in the affected area until the County Coroner has made necessary findings as to origin. If the County Coroner determines that the remains are potentially Native American, the California Native American Heritage Commission shall be notified within five-days of the published finding to be given a reasonable opportunity to identify the "most likely descendant". The "most likely descendant" shall then make recommendations, and engage in consultations concerning the treatment of the remains (California Public Resources Code 5097.98). (GP Objective 23.3, CEQA).

Mitigation Measure No. 13 (Cultural Resources Impacts). If previously unidentified paleontological resources are unearthed during construction, work shall cease within 50 feet of the find and the project Applicant must retain a qualified paleontologist, approved by the City, to assess the significance of the find. If a find is determined to be significant, the Lead Agency and the paleontologist will determine appropriate avoidance measures or other appropriate mitigation. All significant fossil materials recovered will be, as necessary and at the discretion of the qualified paleontologist, subject to scientific analysis, professional museum curation, and documentation according to current professional standards.

The following mitigation is required to further reduce future projects greenhouse gas emissions impacts:

Mitigation Measure No. 14 (Greenhouse Gases Emissions Impacts). The Applicant must install ENERGY STAR appliances wherever appliances are installed.

Mitigation Measure No. 15 (Greenhouse Gases Emissions Impacts). The Applicant shall install ENERGY STAR rated light emitting diodes (LEDs) for traffic, street, and outdoor lighting.

Mitigation Measure No. 16 (Greenhouse Gases Emissions Impacts). The Applicant must install ENERGY STAR rated Compact Florescent Lights (CFLs) in all indoor areas that require continuous lighting. CFLs should not be used in rooms or areas that are subject to frequent on/off cycling, as the lifespan of CFLs diminishes when there are frequently turned off.

Mitigation Measure No. 17 (Greenhouse Gases Emissions Impacts). The Applicant must install light colored "cool" roofs.

Mitigation Measure No. 18 (Greenhouse Gases Emissions Impacts). The Applicant must install "cool" pavement (lighter colored) throughout the parking areas.

Mitigation Measure No. 19 (Greenhouse Gases Emissions Impacts). All landscape planted on-site must be watered by water dispensed through drip irrigation.

Mitigation Measure No. 20 (Greenhouse Gases Emissions Impacts). The building contractors shall install bicycle racks consistent with the City's Municipal Code adjacent to each building.

Mitigation Measure No. 21 (Greenhouse Gases Emissions Impacts). The building contractors shall install electric vehicle charging stations in the parking areas. Preferential parking spaces for electric vehicles must be provided.

The following mitigation will be effective in reducing potential impacts in regards to construction noise:

Mitigation Measure No. 22 (Noise Impacts). The Applicant shall ensure that the contractors conduct demolition and construction activities between the hours of 7:00 AM and 6:00 PM on weekdays and 9:00 AM to 12:00 PM on Saturdays, with no construction permitted on Sundays or Federal holidays.

Mitigation Measure No. 23 (Noise Impacts). The Applicant shall ensure that the contractors use construction equipment that includes working mufflers and other sound suppression equipment as a means to reduce machinery noise.

Mitigation Measure No. 24 (Noise Impacts). Signs must be installed around the perimeter of the Planning Area that display the name and phone number of the local contact person residents may call to complain about noise. Upon receipt of a complaint, the contractor must respond immediately by reducing noise to meet Code requirements. In addition, copies of all complaints and subsequent communication between the affected residents and contractors must be forwarded to the City's Community Development Department.

Mitigation Measure No. 25 (Noise Impacts). The use of any such equipment which is capable of causing ground shaking is not permitted without prior written approval from the Public Works Director, or designee. If ground shaking vibratory equipment is requested and approved, the Contractor is responsible for making any repairs or replacements to facilities damaged due to nearby soils settling or other impacts of vibrating. The Contractor must install vibratory monitoring equipment to monitor for any settlement/damage caused.

Mitigation Measure No. 26 (Noise Impacts). Construction staging must occur over 200 feet from the nearest residential use. The location of staging and queuing areas will be subject to the approval of the Community Development Department prior to the issuance of any building or grading permit.

The traffic report prepared for the original Specific Plan indicated that the following mitigation measures will be required:

- For the Heacock Street and Westbound SR-60 ramps, the Applicant must optimize the cycle length (90 second cycle length), splits, and offsets and restripe the defacto right-turn lane to a southbound right-turn lane with 50-foot storage and a southbound through lane. This mitigation will improve the LOS to C;

- The Applicant must optimize the cycle length (60 second cycle length), splits, and offsets for the intersection of Davis Street and Ironwood Avenue. This mitigation will yield a LOS B;

- The Applicant must optimize the cycle length (60 second cycle length), splits, and offsets for the intersection of Indian Street and Sunnymead Boulevard. This mitigation will yield a LOS C.

- For the Heacock Street/Ironwood Avenue intersection, the Applicant must restripe the eastbound left turn lanes to provide 150 feet of storage to accommodate 95th percentile queues;

- For the Heacock Street/Ironwood Avenue intersection, the Applicant must restripe the westbound left turn lanes to provide 190 feet of storage to accommodate 95th percentile queues;

- For the Heacock Street/Ironwood Avenue intersection, the Applicant must restripe the northbound left turn lanes to provide 210 feet of storage to accommodate 95th percentile queues;

- For the Heacock Street/Hemlock Avenue intersection, the Applicant must restripe the eastbound left turn lanes to provide 105 feet of storage to accommodate 95th percentile queues;

- For the Heacock Street/Hemlock Avenue intersection, the Applicant must restripe the northbound left turn lanes to provide 170 feet of storage to accommodate 95th percentile queues;

- For the Heacock Street/Hemlock Avenue intersection, the Applicant must restripe the southbound left turn lanes to provide 150 feet of storage to accommodate 95th percentile queues;

- For the Heacock Street/State Route (SR 60) eastbound ramps, the Applicant must restripe 50 feet of the two-way left turn lane north of the Heacock/ SR-60 westbound ramps intersection as a "Freeway Only" lane;

- For the Davis Street/Ironwood Avenue intersection, the Applicant must restripe the eastbound left turn lanes to provide 220 feet of storage to accommodate 95th percentile queues;

- For the Davis Street/Ironwood Avenue intersection, the Applicant must restripe the southbound left turn lanes to provide 145 of feet storage to accommodate 95th percentile queues;

- For the Indian Street/Ironwood Avenue intersection, the Applicant must restripe the eastbound left turn lanes to provide 145 feet of storage to accommodate 95th percentile queues;

- For the Indian Street/Ironwood Avenue intersection, the Applicant must restripe the westbound left turn lanes to provide 140 feet of storage to accommodate 95th percentile queues;

- For the Indian Street/Ironwood Avenue intersection, the Applicant must restripe the northbound left turn lanes to provide 165 feet of storage to accommodate 95th percentile queues;

- For the Indian Street/Ironwood Avenue intersection, the Applicant must restripe the southbound left turn lanes to provide 155 feet of storage to accommodate 95th percentile queues;

- For the Indian Street/Hemlock Avenue intersection, the Applicant must restripe the westbound left turn lanes to provide 110 feet of storage to accommodate 95th percentile queues;

- For the Indian Street/Hemlock Avenue intersection, the Applicant must restripe the northbound left turn lanes to provide 180 feet of storage to accommodate 95th percentile queues;

- For the Indian Street/Sunnymead Boulevard intersection, the Applicant must restripe the eastbound left turn lanes to provide 140 feet of storage to accommodate 95th percentile queues. This might require replacing the concrete island with stripping;

- For the Indian Street/Sunnymead Boulevard intersection, the Applicant must restripe the westbound left turn lanes to provide 115 feet of storage to accommodate 95th percentile queues;

- For the Indian Street/Sunnymead Boulevard intersection, the Applicant must restripe the northbound left turn lanes to provide 200 feet of storage to accommodate 95th percentile queues; and,

- For the Indian Street/Sunnymead Boulevard intersection, the Applicant must restripe the southbound left turn lanes to provide 125 feet of storage to accommodate 95th percentile queues.

5. MITIGATION MONITORING

The monitoring and reporting on the implementation of these measures, including the period for implementation, monitoring agency, and the monitoring action are identified in Table 1 provided on the following pages.

Table 1
Mitigation-Monitoring Program

Measure	Enforcement Agency	Monitoring Phase
Mitigation Measure No. 1 (Biological Resources Impacts). The proposed project must be consistent with the Western Riverside MSHCP. Payment of the appropriate development mitigation fees will mitigate any impacts to these species.	Community Development Department. ● *(The Applicant is responsible for implementation)*	*Prior to the issuance of Building Permits.* ● Mitigation ends at the completion of the construction phase.
Mitigation Measure No. 2 (Biological Resources Impacts). Prior to any land disturbance, a focused pre-construction burrowing owl survey shall be conducted prior to construction in accordance with the Burrowing Owl Survey instructions of the Western Riverside County MSHCP. This survey is to be conducted within 30 days prior to ground disturbance. After the pre-construction burrowing owl survey has been completed, a survey report will be prepared in accordance with the MSHCP 30-day Pre-construction Burrowing Owl Survey Report Format.	Community Development Department. ● *(The Applicant is responsible for implementation)*	*Prior to the start of ground disturbing activities.* ● Mitigation ends at the completion of the construction phase.
Mitigation Measure No. 3 (Biological Resources Impacts). Future developers must consult with the California Department of Fish and Wildlife, the U.S. Army Corps of Engineers, and the Santa Ana Regional Water Quality Control Board to determine the need for permits that must be obtained prior to initiation of construction of a proposed project.	Community Development Department and the California Department of Fish and Wildlife, the U.S. Army Corps of Engineers, and the Santa Ana Regional Water Quality Control Board. ● *(The Applicant is responsible for implementation)*	*Prior to the start of ground disturbing activities.* ● Mitigation ends at the completion of the construction phase.
Mitigation Measure No. 4 (Biological Resources Impacts). Prior to the start of construction activity, developers must prepare a Multiple Species Habitat Conservation Program (MSHCP) Determination of Biologically Equivalent or Superior Preservation (DBESP) should a future project affect Western Riverside MSHCP riverine resources.	Community Development Department and the Western Riverside County Regional Conservation Authority. ● *(The Applicant is responsible for implementation)*	*Prior to the start of ground disturbing activities.* ● Mitigation ends at the completion of the construction phase
Mitigation Measure No. 5 (Biological Resources Impacts). Vegetation removal shall be conducted outside of the nesting season for migratory birds to avoid direct impacts. The migratory bird nesting season is between February 1 and September 15.	Community Development Department. ● *(The Applicant is responsible for implementation)*	*Prior to the start of ground disturbing activities.* ● Mitigation ends at the completion of the construction phase.

Table 1
Mitigation-Monitoring Program (continued)

Measure	Enforcement Agency	Monitoring Phase
Mitigation Measure No. 6 (Biological Resources Impacts). If active nests are found during nesting bird surveys, they shall be flagged and a 200-foot buffer shall be fenced around the nests.	Community Development Department. ● *(The Applicant is responsible for implementation)*	*Prior to the start of ground disturbing activities.* ● Mitigation ends at the completion of the construction phase.
Mitigation Measure No. 7 (Biological Resources Impacts). If vegetation removal will occur during the migratory bird nesting season, between February 1 and September 15, pre-construction nesting bird surveys must be performed within three days prior to vegetation removal.	Community Development Department. ● *(The Applicant is responsible for implementation)*	*Three days prior to the start of vegetation removal.* ● Mitigation ends at the completion of the construction phase.
Mitigation Measure No. 8 (Cultural Resources Impacts). Prior to the issuance of a grading permit, the developer shall retain a professional archaeologist to conduct monitoring of all mass grading and trenching activities. The project archaeologist must have the authority to temporarily redirect earthmoving activities in the event that suspected archaeological resources are unearthed during project construction. The project archaeologist, in consultation with the Consulting Tribe(s), the contractor, and the City, must develop a Cultural Resources Management Plan (CRMP) in consultation pursuant to the definition in AB-52 to address the details, timing, and responsibility of all archaeological and cultural activities that will occur on the project site. A consulting tribe is defined as a tribe that initiated the AB-52 tribal consultation process for the project, has not opted out of the AB-52 consultation process, and has completed AB-52 consultation with the City as provided for in Cal Pub Res Code Section 21080.3.2(b)(1) of AB52.	Community Development Department ● *(The Applicant is responsible for implementation)*	*Prior to the issuance of a grading permit.* ● Mitigation ends at the completion of the construction phase.
Mitigation Measure No. 9 (Cultural Resources Impacts). Prior to the issuance of a grading permit, the developer shall secure agreements with the Pechanga Band of Luiseño Indians, the Soboba Band of Luiseño Indians, and the Morongo Band of Mission Indians for tribal monitoring. The developer is also required to provide a minimum of 30 days advance notice to the tribes of all mass grading and trenching activities. The Native American Tribal Representatives shall have the authority to temporarily halt and redirect earth moving activities in the affected area in the event that suspected archaeological resources are unearthed. If the Native American Tribal Representatives suspect that an archaeological resource may have been unearthed, the project archaeologist or the Tribal Representatives shall immediately redirect grading operations in a 100-foot radius around the find to allow identification and evaluation of the suspected resource. In consultation with the Native American Tribal Representatives, the project archaeologist shall evaluate the suspected resource and make a determination of significance pursuant to California Public Resources Code Section 21083.2	Community Development Department, Pechanga Band of Luiseño Indians, Soboba Band of Luiseño Indians, and Morongo Band of Mission Indians. ● *(The Applicant is responsible for implementation)*	*Prior to the issuance of a grading permit.* ● Mitigation ends at the completion of the construction phase.

Table 1
Mitigation-Monitoring Program (continued)

Measure	Enforcement Agency	Monitoring Phase
Mitigation Measure No. 10 (Cultural Resources Impacts). In the event that Native American cultural resources are discovered during the course of grading (inadvertent discoveries), the following procedures shall be carried out for final disposition of the discoveries: ● One or more of the following treatments, in order of preference, shall be employed with the tribes. Evidence of such shall be provided to the City of Moreno Valley Planning Department: i. Preservation-in-place of the cultural resources, if feasible. Preservation in place means avoiding the resources; leaving them in the place they were found with no development affecting the integrity of the resources. ii. Onsite reburial of the discovered items as detailed in the treatment plan required pursuant to the initial mitigation. This shall include measures and provisions to protect the future reburial area from any future impacts in perpetuity. Reburial shall not occur until all legally required cataloging and basic recordation have been completed. No recordation of sacred items is permitted without the written consent of all Consulting Native American Tribal Governments as defined in the first mitigation identified in Section 3.5.2.B. ● The City shall verify that the following note is included on the Grading Plan: "If any suspected archaeological resources are discovered during ground-disturbing activities and the project archaeologist or Native American Tribal Representatives are not present, the construction supervisor is obligated to halt work in a 100-foot radius around the find and call the project archaeologist and the Tribal Representatives to the site to assess the significance of the find."	Community Development Department. ● *(The Applicant is responsible for implementation)*	*During project construction.* ● Mitigation ends at the completion of the construction phase.
Mitigation Measure No. 11 (Cultural Resources Impacts). If potential historic or cultural resources are uncovered during excavation or construction activities at the project site, work in the affected area must cease immediately and a qualified person meeting the Secretary of the Interior's standards (36 CFR 61), Tribal Representatives, and all site monitors per the Mitigation Measures, shall be consulted by the City to evaluate the find, and as appropriate recommend alternative measures to avoid, minimize or mitigate negative effects on the historic, or prehistoric resource. Determinations and recommendations by the consultant shall be immediately submitted to the Planning Division for consideration, and implemented as deemed appropriate by the Community Development Director, in consultation with the State Historic Preservation Officer (SHPO) and any and all Consulting Native American Tribes as defined in previously identified mitigation before any further work commences in the affected area.	Community Development Department. ● *(The Applicant is responsible for implementation)*	*During project construction.* ● Mitigation ends at the completion of the construction phase.

Table 1
Mitigation-Monitoring Program (continued)

Measure	Enforcement Agency	Monitoring Phase
Mitigation Measure No. 12 (Cultural Resources Impacts). If human remains are discovered, no further disturbance shall occur in the affected area until the County Coroner has made necessary findings as to origin. If the County Coroner determines that the remains are potentially Native American, the California Native American Heritage Commission shall be notified within five-days of the published finding to be given a reasonable opportunity to identify the "most likely descendant". The "most likely descendant" shall then make recommendations, and engage in consultations concerning the treatment of the remains (California Public Resources Code 5097.98). (GP Objective 23.3, CEQA).	Community Development Department. ● *(The Applicant is responsible for implementation)*	*During project construction.* ● Mitigation ends at the completion of the construction phase.
Mitigation Measure No. 13 (Cultural Resources Impacts). If previously unidentified paleontological resources are unearthed during construction, work shall cease within 50 feet of the find and the project Applicant must retain a qualified paleontologist, approved by the City, to assess the significance of the find. If a find is determined to be significant, the Lead Agency and the paleontologist will determine appropriate avoidance measures or other appropriate mitigation. All significant fossil materials recovered will be, as necessary and at the discretion of the qualified paleontologist, subject to scientific analysis, professional museum curation, and documentation according to current professional standards.	Community Development Department. ● *(The Applicant is responsible for implementation)*	*During project construction.* ● Mitigation ends at the completion of the construction phase.
Mitigation Measure No. 14 (Greenhouse Gases Emissions Impacts). The Applicant must install ENERGY STAR appliances wherever appliances are installed.	Community Development Department and the Building Official. ● *(The Applicant is responsible for implementation)*	*Prior to the issuance of a Certificate of Occupancy.* ● Mitigation to continue over the project's operational lifetime.
Mitigation Measure No. 15 (Greenhouse Gases Emissions Impacts). The Applicant shall install ENERGY STAR rated light emitting diodes (LEDs) for traffic, street, and outdoor lighting.	Community Development Department and the Building Official. ● *(The Applicant is responsible for implementation)*	*Prior to the issuance of a Certificate of Occupancy.* ● Mitigation to continue over the project's operational lifetime.
Mitigation Measure No. 16 (Greenhouse Gases Emissions Impacts). The Applicant must install ENERGY STAR rated Compact Florescent Lights (CFLs) in all indoor areas that require continuous lighting. CFLs should not be used in rooms or areas that are subject to frequent on/off cycling, as the lifespan of CFLs diminishes when there are frequently turned off.	Community Development Department and the Building Official. ● *(The Applicant is responsible for implementation)*	*Prior to the issuance of a Certificate of Occupancy.* ● Mitigation to continue over the project's operational lifetime.

Table 1
Mitigation-Monitoring Program (continued)

Measure	Enforcement Agency	Monitoring Phase
Mitigation Measure No. 17 (Greenhouse Gases Emissions Impacts). The Applicant must install light colored "cool" roofs.	Community Development Department and the Building Official. ● *(The Applicant is responsible for implementation)*	*Prior to the issuance of a Certificate of Occupancy.* ● Mitigation to continue over the project's operational lifetime.
Mitigation Measure No. 18 (Greenhouse Gases Emissions Impacts). The Applicant must install "cool" pavement (lighter colored) throughout the parking areas.	Community Development Department and the Building Official. ● *(The Applicant is responsible for implementation)*	*Prior to the issuance of a Certificate of Occupancy.* ● Mitigation to continue over the project's operational lifetime.
Mitigation Measure No. 19 (Greenhouse Gases Emissions Impacts). All landscape planted on-site must be watered by water dispensed through drip irrigation.	Community Development Department and the Building Official. ● *(The Applicant is responsible for implementation)*	*Prior to the issuance of a Certificate of Occupancy.* ● Mitigation to continue over the project's operational lifetime.
Mitigation Measure No. 20 (Greenhouse Gases Emissions Impacts). The building contractors shall install bicycle racks consistent with the City's Municipal Code adjacent to each building.	Community Development Department and the Building Official. ● *(The Applicant is responsible for implementation)*	*Prior to the issuance of a Certificate of Occupancy.* ● Mitigation to continue over the project's operational lifetime.
Mitigation Measure No. 21 (Greenhouse Gases Emissions Impacts). The building contractors shall install electric vehicle charging stations in the parking areas. Preferential parking spaces for electric vehicles must be provided.	Community Development Department and the Building Official. ● *(The Applicant is responsible for implementation)*	*Prior to the issuance of a Certificate of Occupancy.* ● Mitigation to continue over the project's operational lifetime.
Mitigation Measure No. 22 (Noise Impacts). The Applicant shall ensure that the contractors conduct demolition and construction activities between the hours of 7:00 AM and 6:00 PM on weekdays and 9:00 AM to 12:00 PM on Saturdays, with no construction permitted on Sundays or Federal holidays.	Community Development Department and Code Enforcement. ● *(The Applicant is responsible for implementation)*	*During project construction.* ● Mitigation ends at the completion of the construction phase.

Table 1
Mitigation-Monitoring Program (continued)

Measure	Enforcement Agency	Monitoring Phase
Mitigation Measure No. 23 (Noise Impacts). The Applicant shall ensure that the contractors use construction equipment that includes working mufflers and other sound suppression equipment as a means to reduce machinery noise.	Community Development Department and Code Enforcement. ● *(The Applicant is responsible for implementation)*	*During project construction.* ● Mitigation ends at the completion of the construction phase.
Mitigation Measure No. 24 (Noise Impacts). Signs must be installed around the perimeter of the Planning Area that display the name and phone number of the local contact person residents may call to complain about noise. Upon receipt of a complaint, the contractor must respond immediately by reducing noise to meet Code requirements. In addition, copies of all complaints and subsequent communication between the affected residents and contractors must be forwarded to the City's Community Development Department.	Community Development Department. ● *(The Applicant is responsible for implementation)*	*During project construction.* ● Mitigation ends at the completion of the construction phase.
Mitigation Measure No. 25 (Noise Impacts). The use of any such equipment which is capable of causing ground shaking is not permitted without prior written approval from the Public Works Director, or designee. If ground shaking vibratory equipment is requested and approved, the Contractor is responsible for making any repairs or replacements to facilities damaged due to nearby soils settling or other impacts of vibrating. The Contractor must install vibratory monitoring equipment to monitor for any settlement/damage caused.	Community Development Department. ● *(The Applicant is responsible for implementation)*	*During project construction.* ● Mitigation ends at the completion of the construction phase.
Mitigation Measure No. 26 (Noise Impacts). Construction staging must occur over 200 feet from the nearest residential use. The location of staging and queuing areas will be subject to the approval of the Community Development Department prior to the issuance of any building or grading permit.	Community Development Department and Code Enforcement. ● *(The Applicant is responsible for implementation)*	*During project construction.* ● Mitigation ends at the completion of the construction phase.
Previous traffic mitigation still applicable. For the Heacock Street and Westbound SR-60 ramps, the Applicant must optimize the cycle length (90 second cycle length), splits, and offsets and restripe the defacto right-turn lane to a southbound right-turn lane with 50-foot storage and a southbound through lane. This mitigation will improve the LOS to C.	Public Works Department. ● *(The Applicant is responsible for implementation)*	*Prior to the issuance of a Certificate of Occupancy.* ● Mitigation to continue over the project's operational lifetime.
Previous traffic mitigation still applicable. The Applicant must optimize the cycle length (60 second cycle length), splits, and offsets for the intersection of Davis Street and Ironwood Avenue. This mitigation will yield a LOS B.	Public Works Department. ● *(The Applicant is responsible for implementation)*	*Prior to the issuance of a Certificate of Occupancy.* ● Mitigation to continue over the project's operational lifetime.

ORDINANCE NO. 2021-XX

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, APPROVING SPECIFIC PLAN AMENDMENT PEN20-0138 TO AMEND THE LAND USE DESIGNATION OF THE 9.96-ACRE PROJECT SITE WITHIN THE MORENO VALLEY FESTIVAL SPECIFIC PLAN 205 FROM SP205 RETAIL COMMERCIAL TO SP205 MIXED USE FOR THE PROPERTY LOCATED ON THE SOUTHEAST CORNER OF HEACOCK STREET AND IRONWOOD AVENUE (481-020-013, 029, 030, 034, 035 & 038) AND THE NECESSARY AND CORRESPONDING AMENDMENTS TO THE CITY'S ZONING ATLAS

The City Council of the City of Moreno Valley does ordain as follows:

SECTION 1 GENERAL:

1.1 LCG 10MV LLC., ("Developer") has filed an application for the approval of Specific Plan Amendment PEN20-0138 ("Application") to amend the Moreno Valley Festival Specific Plan 205 from SP205 Retail Commercial to SP205 Mixed Use for the project located on the southeast corner of Heacock Street and Ironwood Avenue (APN 481-020-013, 029, 030, 034, 035 & 038) ("Site"), which shall also require any necessary and corresponding amendment to the City's Zoning Atlas to reflect the proposed changes in the zoning classification and/or redistricting associated with the Specific Plan Amendment; and

1.2 At its January 14, 2021 meeting, the Planning Commission considered the Specific Plan Amendment for The District Moreno Valley project and recommended approval to the City Council; and

1.3 Pursuant to the provisions of the law, a public hearing was held before the City Council on February 2, 2021, for deliberations and decision.

1.4 The matter was fully discussed, and the public and other agencies were given opportunity to present testimony and documentation.

1.5 An Initial Study has been prepared for the Project for the purpose of compliance with the California Environmental Quality Act (CEQA). Based on the Initial Study including all supporting technical evidence, it was determined that the project impacts are expected to be less than significant with mitigation, and approval of a Mitigated Negative Declaration is an appropriate environmental determination for the Project.

SECTION 2 EVIDENCE:

That the City Council has considered all of the evidence submitted into the administrative record for the Specific Plan Amendment, including, but not limited to, the following:

(a) Moreno Valley General Plan and all relevant provisions contained therein;
(b) Title 9 (Planning and Zoning) of the Moreno Valley Municipal Code and all relevant provisions referenced therein;
(c) The Specific Plan Amendment to amend the Land Use Designation of the 9.96-acre Project site within the Moreno Valley Festival Specific Plan 205 from SP205 Retail Commercial to SP205 Mixed Use and all other relevant provisions contained therein as shown on Exhibit A;
(d) Application for the approval of a Specific Plan Amendment PEN20-0138 and all documents, records and references contained therein;
(e) Staff Report prepared for the City Council's consideration and all documents, records and references related thereto, and Staff's presentation at the public hearing;
(f) Testimony and/or comments from Applicant and its representatives during the public hearing; and
(g) Testimony comments and/or correspondence from all persons that were provided in written format or correspondence, at, or prior to, the public hearing.

SECTION 3 FINDINGS:

That based on the foregoing Recitals and the Evidence contained in the Administrative Record as set forth above, the City Council hereby finds as follows:

(a) The proposed Specific Plan Amendment is consistent with the existing goals, objectives, policies and programs of the General Plan;
(b) The proposed Specific Plan Amendment will not adversely affect the public health, safety or general welfare; and
(c) The proposed Specific Plan Amendment is consistent with the purposes and intent of Title 9.

SECTION 4 AMENDMENT OF THE OFFICIAL SPECIFIC PLAN 205:

4.1 Specific Plan 205, approved and certified by the City of Moreno Valley on October 27, 1987, amended February 15, 2018, is further amended by placing in effect the zone or zone classification to Page 59 of the Specific Plan and thereafter where applicable, as shown on the attached map marked "Exhibit A" and included herein by reference and on file in the office of the City Clerk.

SECTION 5 EFFECT OF ENACTMENT:

4.1 Except as specifically provided herein, nothing contained in this ordinance shall be deemed to modify or supersede any prior enactment of the City Council which addresses the same subject addressed herein.

SECTION 6 NOTICE OF ADOPTION:

5.1 Within fifteen days after the date of adoption hereof, the City Clerk shall certify to the adoption of this ordinance and cause it to be posted in three public places within the city.

SECTION 7 EFFECTIVE DATE:

6.1 This ordinance shall take effect thirty days after the date of its adoption.

The Festival Specific Plan (SP 205) – Specific Plan Amendment
PEN20-0138

SP 205 Mix of Uses (MU)

Moreno Valley Festival Specific Plan (SP 205)

RESOLUTION NUMBER 2021-XX

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, APPROVING PLOT PLAN PEN20-0137 FOR A LIGHT INDUSTRIAL BUILDING AND ASSOCIATED IMPROVEMENTS LOCATED ON THE SOUTHEAST CORNER OF HEACOCK STREET AND IRONWOOD AVENUE (481-020-013, 029, 030, 034, 035, & 038)

WHEREAS, the City of Moreno Valley ("City") is a general law city and a municipal corporation of the State of California; and

WHEREAS, LCG 10MV LLC., ("Developer") has filed an application for the approval of Plot Plan PEN20-0137 ("Application") for an approximately 220,390 square foot light industrial building with associated public improvements ("Project") located at the southeast corner of Heacock Street and Ironwood Avenue (APN'S 481-020-013, 029, 030, 034, 035, & 038) ("Site"); and

WHEREAS, Section 9.02.070 (Plot Plan) of the Moreno Valley Municipal Code acknowledges that the purpose of plot plans is to provide a mechanism by which all new construction of industrial, commercial or multiple-family residential can be reviewed when not subject to other discretionary review processes which have review authority over project design; and

WHEREAS, the Application has been evaluated in accordance with Section 9.02.070 (Plot Plan) of the Municipal Code with consideration given to the City's General Plan, Specific Plan 205, Zoning Ordinance, and other applicable laws and regulations; and

WHEREAS, Section 9.02.070 of the Municipal Code imposes conditions of approval upon projects for which a Plot Plan is required, which conditions may be imposed by the City Council to address on-site improvements, off-site improvements, the manner in which the site is used and any other conditions as may be deemed necessary to protect the public health, safety and welfare and ensure that the proposed Project will be developed in accordance with the purpose and intent of Title 9 ("Planning and Zoning") of the Municipal Code; and

WHEREAS, Staff has presented for the City Council's consideration Conditions of Approval to be imposed upon Plot Plan PEN20-0137, which conditions have been deemed necessary to protect the public health, safety and welfare and ensure that the proposed Project will be developed in accordance with the purpose and intent of Title 9 (Planning and Zoning) of the Municipal Code; and

WHEREAS, pursuant to the provisions of Section 9.02.200 (Public Hearing and Notification Procedures) of the Municipal Code and Government Code section 65905, a public hearing before the Planning Commission was scheduled for January 14, 2021, and

notice thereof was duly published and posted, and mailed to all property owners of record within 600 feet of the Site; and

WHEREAS, on January 14, 2021, the public hearing to consider the Application was duly conducted by the Planning Commission at which time all interested persons were provided with an opportunity to testify and to present evidence; and

WHEREAS, on January 14, 2021 a hearing was conducted by the Planning Commission to consider a recommendation that the City Council approve the Plot Plan; and

WHEREAS, on January 14, 2021 a hearing was conducted by the Planning Commission whereby the Planning Commission approved Planning Commission Resolution 2021-04, a recommendation that the City Council approve the Plot Plan; and

WHEREAS, consistent with the requirements of Section 9.02.070 (Plot Plan) of the Municipal Code, at the public hearing the City Council considered Conditions of Approval to be imposed upon Plot Plan PEN20-0137, which conditions were prepared by Planning Division staff who deemed said conditions to be necessary to protect the public health, safety and welfare and to ensure the proposed Project will be developed in accordance with the purpose and intent of Title 9 ("Planning and Zoning") of the Municipal Code; and

WHEREAS, at the public hearing, the City Council considered whether each of the requisite findings specified in Section 9.02.070 of the Municipal Code and set forth herein could be made with respect to the proposed Project as conditioned by Conditions of Approval; and

WHEREAS, on February 2, 2021, on February 2, 2021 a hearing was conducted by the City Council whereby the City Council approved the Specific Plan 205 Amendment.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:

Section 1. **Recitals and Exhibits**

That the foregoing Recitals and attached Exhibits are true and correct and are hereby incorporated by this reference.

Section 2. **Notice**

That pursuant to Government Code section 66020(d)(1), notice is hereby given that the proposed project is subject to certain fees, dedications, reservations and other exactions as provided herein.

Section 3. **Evidence**

That the City Council has considered all of the evidence submitted into the administrative record for the proposed Plot Plan, including, but not limited to, the following:

(a) Moreno Valley General Plan and all other relevant provisions contained therein;
(b) Title 9 (Planning and Zoning) of the Moreno Valley Municipal Code, Specific Plan 205, and all other relevant provisions referenced therein;
(c) Application for the approval of Plot Plan PEN20-0137 and all documents, records and references contained therein;
(d) Conditions of Approval for Plot Plan PEN20-0137, attached hereto as Exhibit A;
(e) Staff Report prepared for the City Council's consideration and all documents, records and references related thereto, and Staff's presentation at the public hearing;
(f) Testimony and/or comments from Applicant and its representatives during the public hearing; and
(g) Testimony and/or comments from all persons that was provided in written format or correspondence, at, or prior to, the public hearing.

Section 4. **Findings**

That based on the foregoing Recitals and the Evidence contained in the Administrative Record as set forth above, the City Council makes the following findings in approving Plot Plan PEN20-0137

(a) The proposed project is consistent with the goals, objectives, policies and programs of the general plan;
(b) The proposed project complies with all applicable zoning and other regulations;
(c) The proposed project will not be detrimental to the public health, safety or welfare or materially injurious to properties or improvements in the vicinity;
(d) The location, design and operation of the proposed project will be compatible with existing and planned land uses in the vicinity.

Section 5. **Approval**

That based on the foregoing Recitals, Evidence contained in the Administrative Record and Findings set forth above, the City Council approves Plot Plan PEN20-0137 subject to the Conditions of Approval for Plot Plan PEN20-0137 attached hereto as Exhibit A.

Section 6. **Repeal of Conflicting Provisions**

That all the provisions as heretofore adopted by the City Council that are in conflict with the provisions of this Resolution are hereby repealed.

Section 7. **Severability**

That the City Council declares that, should any provision, section, paragraph, sentence or word of this Resolution be rendered or declared invalid by any final court action in a court of competent jurisdiction or by reason of any preemptive legislation, the remaining provisions, sections, paragraphs, sentences or words of this Resolution as hereby adopted shall remain in full force and effect.

Section 8. **Effective Date**

That this Resolution shall take effect immediately upon the date of adoption.

Section 9. **Certification**

That the City Clerk for the City Council shall certify to the passage of this Resolution.

PASSED AND ADOPTED THIS _____ day of _____, 2021.

CONDITIONS OF APPROVAL

CITY OF MORENO VALLEY
CONDITIONS OF APPROVAL
Plot Plan (PEN20-0137)

EFFECTIVE DATE:
EXPIRATION DATE:

COMMUNITY DEVELOPMENT DEPARTMENT

Planning Division

1. A change or modification to the land use or the approved site plans may require a separate approval. Prior to any change or modification, the property owner shall contact the City of Moreno Valley Community Development Department to determine if a separate approval is required.

2. Any expansion to this use or exterior alterations will require the submittal of a separate application(s) and shall be reviewed and approved under separate permit(s). (MC 9.02.080)

3. The developer, or the developer's successor-in-interest, shall be responsible for maintaining any undeveloped portion of the site in a manner that provides for the control of weeds, erosion and dust. (MC 9.02.030)

4. This approval shall expire three years after the approval date of this project unless used or extended as provided for by the City of Moreno Valley Municipal Code; otherwise it shall become null and void and of no effect whatsoever. Use means the beginning of substantial construction contemplated by this approval within the three-year period, which is thereafter pursued to completion, or the beginning of substantial utilization contemplated by this approval. (MC 9.02.230)

5. All landscaped areas shall be maintained in a healthy and thriving condition, free from weeds, trash and debris. (MC 9.02.030)

6. This project is located within Specific Plan 205. The provisions of the specific plan, the design manual, their subsequent amendments, and the Conditions of Approval shall prevail unless modified herein. (MC 9.13)

7. The site shall be developed in accordance with the approved plans on file in the Community Development Department - Planning Division, the Municipal Code regulations, General Plan, and the conditions contained herein. Prior to any use of the project site or business activity being commenced thereon, all Conditions of Approval shall be completed to the satisfaction of the Planning Official. (MC 9.14.020)

8. Any signs indicated on the submitted plans are not included with this approval. Any signs, whether permanent (e.g. wall, monument) or temporary (e.g. banner, flag), require separate application and approval by the Planning Division. No signs are permitted in the public right of way. (MC 9.12)

9. All site plans, grading plans, landscape and irrigation plans, fence/wall plans, lighting plans and street improvement plans shall be coordinated for consistency with this approval.

Special Conditions

10. The site has been approved for an approximately 222,000 square foot light industrial building with associated on-site and off-site improvements. A change or modification shall require separate approval.

Prior to Building Permit

11. Prior to issuance of any building permit, all Mitigation Measures and Conditions of Approval shall be printed on the building plans.

12. Prior to the issuance of building permits, the developer shall provide documentation that contact was made to the U.S. Postal Service to determine the appropriate type and location of mailboxes.

13. Prior to the issuance of building permits, if proposed, covered trash enclosures shall be included in the Planning review of the Fence and Wall plan included in the building plan submittal. The trash enclosure(s), including the roof materials, shall be compatible with the architecture, color and materials of the building(s) design. Trash enclosure areas shall include landscaping on three sides unless it is located in the truck court. Approved design plans shall be included in a Building submittal (Fence and Wall or building design plans). (GP Objective 43.6, DG)

14. Prior to issuance of any building permits, final landscaping and irrigation plans shall be submitted for review and approved by the Planning Division. After the third plan check review for landscape plans, an additional plan check fee shall apply. The plans shall be prepared in accordance with the City's Landscape Requirements and shall include:

    a. Finger and end planters with required step outs and curbing shall be provided every 12 parking stalls as well as at the terminus of each aisle.

    b. Drought tolerant landscape shall be used. No sod shall be installed.

c. Street trees shall be provided every 40 feet on center in the right of way.

d. On-site trees shall be planted at an equivalent of one (1) tree per thirty (30) linear feet of the perimeter of a parking lot and per thirty linear feet of a building dimension for the portions of the building visible from a parking lot or right of way. Trees may be massed for pleasing aesthetic effects.

e. Enhanced landscaping shall be provided at all driveway entries, street corner locations and adjacent to the building. The review of all utility boxes, transformers etc. shall be coordinated to provide adequate screening from public view.

f. All site perimeter and parking lot landscape and irrigation shall be installed prior to the release of certificate of any occupancy permits for the site.

15. Prior to issuance of a building permit, the developer/property owner or developer's successor-in-interest shall pay all applicable impact fees due at permit issuance, including but not limited to Multi-species Habitat Conservation Plan (MSHCP) mitigation fees. (Ord)

16. Prior to building final, the developer/owner or developer's/owner's successor-in-interest shall pay all applicable impact fees, including but not limited to Transportation Uniform Mitigation fees (TUMF), and the City's adopted Development Impact Fees. (Ord)

17. Prior to or at building plan check submittal, the elevation plans shall include decorative lighting sconces on all sides of the buildings of the complex facing a parking lot, courtyard or plaza, or public right of way or open space to provide up-lighting and shadowing on the structures. Include drawings of the sconce details for each building within the elevation plans, approved by the Planning Division prior to building permit issuance.

18. Included with the Building Plan submittal, two copies of a detailed, on-site, computer generated, point-by-point comparison lighting plan, including exterior building, parking lot, and landscaping lighting, shall be submitted for review and approval prior to the issuance of a building permit. The lighting plan shall be generated on the plot plan and shall be integrated with the final landscape plan. The plan shall indicate the manufacturer's specifications for light fixtures used, shall include style, illumination, location, height and method of shielding per the City's Municipal Code requirements. (MC 9.08.100, 9.16.280)

19. Prior to issuance of building permits, screening details shall be addressed on the building plans for roof top equipment submitted for Planning Division review and approval through the building plan check process. All equipment shall be

completely screened so as not to be visible from public view, and the screening shall be an integral part of the building.

20. Prior to issuance of any grading permit, all Mitigation Measures and Conditions of Approval shall be printed on the grading plans.

21. Prior to issuance of any grading permits, mitigation measures contained in the Mitigation Monitoring Program approved with this project shall be implemented as provided therein. A mitigation monitoring fee, as provided by City ordinance, shall be paid by the applicant within 30 days of project approval. No City permit or approval shall be issued until such fee is paid. (CEQA)

22. Prior to issuance of grading permits, the developer shall pay the applicable Stephens' Kangaroo Rat (SKR) Habitat Conservation Plan mitigation fee. (Ord)

23. If potential historic, archaeological, Native American cultural resources or paleontological resources are uncovered during excavation or construction activities at the project site, work in the affected area must cease immediately and a qualified person (meeting the Secretary of the Interior's standards (36CFR61)) shall be consulted by the applicant to evaluate the find, and as appropriate recommend alternative measures to avoid, minimize or mitigate negative effects on the historic, prehistoric, or paleontological resource. Determinations and recommendations by the consultant shall be immediately submitted to the Planning Division for consideration, and implemented as deemed appropriate by the Community Development Director, in consultation with the State Historic Preservation Officer (SHPO) and any and all affected Native American Tribes before any further work commences in the affected area.

    If human remains are discovered during grading and other construction excavation, no further disturbance shall occur until the County Coroner has made necessary findings as to origin. If the County Coroner determines that the remains are potentially Native American, the California Native American Heritage Commission shall be notified within 5-days of the published finding to be given a reasonable opportunity to identify the "most likely descendant." The "most likely descendant" shall then make recommendations, and engage in consultations concerning the treatment of the remains (California Public Resources Code 5097.98). (GP Objective 23.3, CEQA).

24. Within thirty (30) days prior to any grading or other land disturbance, a pre-construction survey for Burrowing Owls shall be conducted pursuant to the established guidelines of Multiple Species Habitat Conservation Plan. The pre-construction survey shall be submitted to the Planning Division prior to any disturbance of the site and/or grading permit issuance.

25. Prior to the issuance of grading permits, the site plan and grading plans shall show

decorative hardscape (e.g. colored concrete, stamped concrete, pavers or as approved by the Planning Official) consistent and compatible with the design, color and materials of the proposed development for all driveway ingress/egress locations of the project.

26. Prior to issuance of grading permits, the developer shall submit wall/fence plans to the Planning Division for review and approval in accordance with the Municipal Code and Specific Plan fence and wall requirements.

27. Prior to the issuance of grading permits, a temporary project identification sign shall be erected on the site in a secure and visible manner. The sign shall be conspicuously posted at the site and remain in place until occupancy of the project. The sign shall include the following:

    a. The name (if applicable) and address of the development.
    b. The developer's name, address, and a 24-hour emergency telephone number.

Prior to Building Final or Occupancy

28. Prior to building final, all required landscaping and irrigation shall be installed per plan, certified by the Landscape Architect and inspected by the Planning Division. (MC 9.03.040, MC 9.17).

29. Prior to building final, Planning approved/stamped landscape plans shall be provided to the Community Development Department – Planning Division on a CD disk.

30. Prior to building final, all required and proposed fences and walls shall be constructed according to the approved plans on file in the Planning Division. (MC 9.080.070).

Building Division

31. The proposed non-residential project shall comply with the latest Federal Law, Americans with Disabilities Act, and State Law, California Code of Regulations, Title 24, Chapter 11B for accessibility standards for the disabled including access to the site, exits, bathrooms, work spaces, etc.

32. Prior to submittal, all new development, including residential second units, are required to obtain a valid property address prior to permit application. Addresses can be obtained by contacting the Building Safety Division at 951.413.3350.

33. Contact the Building Safety Division for permit application submittal requirements.

34. Any construction within the city shall only be as follows: Monday through Friday seven a.m. to seven p.m(except for holidays which occur on weekdays), eight a.m. to four p.m.; weekends and holidays (as observed by the city and described in the Moreno Valley Municipal Code Chapter 2.55), unless written approval is first obtained from the Building Official or City Engineer.

35. Building plans submitted shall be signed and sealed by a California licensed design professional as required by the State Business and Professions Code.

36. The proposed development shall be subject to the payment of required development fees as required by the City's current Fee Ordinance at the time a building application is submitted or prior to the issuance of permits as determined by the City.

37. The proposed project will be subject to approval by the Eastern Municipal Water District and all applicable fees and charges shall be paid prior to permit issuance. Contact the water district at 951.928.3777 for specific details.

38. All new structures shall be designed in conformance to the latest design standards adopted by the State of California in the California Building Code, (CBC) Part 2, Title 24, California Code of Regulations including requirements for allowable area, occupancy separations, fire suppression systems, accessibility, etc.

39. The proposed non-residential project shall comply with California Green Building Standards Code, Section 5.106.5.3, mandatory requirements for Electric Vehicle Charging Station (EVCS).

40. The proposed project's occupancy shall be classified by the Building Official and must comply with exiting, occupancy separation(s) and minimum plumbing fixture requirements. Minimum plumbing fixtures shall be provided per the California Plumbing Code, Table 422.1. The occupant load and occupancy classification shall be determined in accordance with the California Building Code.

41. Prior to permit issuance, every applicant shall submit a properly completed Waste Management Plan (WMP), as a portion of the building or demolition permit process. (MC 8.80.030)

42. All new buildings 10,000 square feet and over, shall include building commissioning in the design and construction processes of the building project to verify that the building systems and components meet the owner's or owner representative's project requirements (OPR). All requirements in The California Green Building Standards Code, sections 5.410.2 - 5.410.2.6 must be met.

ECONOMIC DEVELOPMENT DEPARTMENT (EDD)

43. New Moreno Valley businesses may work with the Economic Development Department to coordinate job recruitment fairs.

44. New Moreno Valley businesses may adopt a "First Source" approach to employee recruitment that gives notice of job openings to Moreno Valley residents for one week in advance of the public recruitment.

45. New Moreno Valley businesses are encouraged to hire local residents.

46. New Moreno Valley businesses are encouraged to provide a job fair flyer and/or web announcement to the City in advance of job recruitments, so that the City can assist in publicizing these events.

47. New Moreno Valley businesses may utilize the workforce recruitment services provided by the Moreno Valley Employment Resource Center ("ERC").

    The ERC offers no cost assistance to businesses recruiting and training potential employees. Complimentary services include:

    • Job Announcements
    • Applicant testing / pre-screening
    • Interviewing
    • Job Fair support
    • Training space

FIRE DEPARTMENT

Fire Prevention Bureau

48. All Fire Department access roads or driveways shall not exceed 12 percent grade. (CFC 503.2.7 and MVMC 8.36.060[G])

49. The Fire Department emergency vehicular access road shall be (all weather surface) capable of sustaining an imposed load of 80,000 lbs. GVW, based on street standards approved by the Public Works Director and the Fire Prevention Bureau. The approved fire access road shall be in place during the time of construction. Temporary fire access roads shall be approved by the Fire Prevention Bureau. (CFC 501.4, and MV City Standard Engineering Plan 108d)

50. The angle of approach and departure for any means of Fire Department access shall not exceed 1 ft drop in 20 ft (0.3 m drop in 6 m), and the design limitations of the fire apparatus of the Fire Department shall be subject to approval by the AHJ. (CFC 503 and MVMC 8.36.060)

51. Prior to construction, all locations where structures are to be built shall have an approved Fire Department access based on street standards approved by the Public Works Director and the Fire Prevention Bureau. (CFC 501.4)

52. Prior to issuance of Building Permits, the applicant/developer shall provide the Fire Prevention Bureau with an approved site plan for Fire Lanes and signage. (CFC 501.3)

53. Prior to issuance of Certificate of Occupancy or Building Final, "Blue Reflective Markers" shall be installed to identify fire hydrant locations in accordance with City specifications. (CFC 509.1 and MVLT 440A-0 through MVLT 440C-0)

54. Prior to issuance of building permits, plans specifying the required structural materials for building construction in high fire hazard severity zones shall be submitted to the Fire Prevention Bureau for approval. (CFC, 4905)

55. Prior to issuance of Certificate of Occupancy or Building Final, all commercial buildings shall display street numbers in a prominent location on the street side and rear access locations. The numerals shall be a minimum of twelve inches in height. (CFC 505.1, MVMC 8.36.060[I])

56. Existing fire hydrants on public streets are allowed to be considered available. Existing fire hydrants on adjacent properties shall not be considered available unless fire apparatus access roads extend between properties and easements are established to prevent obstruction of such roads. (CFC 507, 501.3) a - After the local water company signs the plans, the originals shall be presented to the Fire Prevention Bureau for signatures. The required water system, including fire hydrants, shall be installed, made serviceable, and be accepted by the Moreno Valley Fire Department prior to beginning construction. They shall be maintained accessible.

57. Final fire and life safety conditions will be addressed when the Fire Prevention Bureau reviews building plans. These conditions will be based on occupancy, use, California Building Code (CBC), California Fire Code (CFC), and related codes, which are in effect at the time of building plan submittal.

58. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall install a fire alarm system monitored by an approved Underwriters Laboratory listed central station based on a requirement for monitoring the sprinkler system, occupancy or use. Fire alarm panel shall be accessible from exterior of building in an approved location. Plans shall be submitted to the Fire Prevention Bureau for approval prior to installation. (CFC Chapter 9 and MVMC 8.36.100)

59. The Fire Code Official is authorized to enforce the fire safety during construction requirements of Chapter 33. (CFC Chapter 33 & CBC Chapter 33)

60. Fire lanes and fire apparatus access roads shall have an unobstructed width of not less than twenty–four (24) feet and an unobstructed vertical clearance of not less the thirteen (13) feet six (6) inches. (CFC 503.2.1 and MVMC 8.36.060[E])

61. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall install a fire sprinkler system based on square footage and type of construction, occupancy or use. Fire sprinkler plans shall be submitted to the Fire Prevention Bureau for approval prior to installation. (CFC Chapter 9, MVMC 8.36.100[D])

62. Prior to issuance of the building permit for development, independent paved access to the nearest paved road, maintained by the City shall be designed and constructed by the developer within the public right of way in accordance with City Standards. (MVMC 8.36.060, CFC 501.4)

63. Prior to issuance of a Certificate of Occupancy or Building Final, a "Knox Box Rapid Entry System" shall be provided. The Knox-Box shall be installed in an accessible location approved by the Fire Code Official. All exterior security emergency access gates shall be electronically operated and be provided with Knox key switches for access by emergency personnel. (CFC 506.1)

64. The minimum number of fire hydrants required, as well as the location and spacing of fire hydrants, shall comply with the C.F.C., MVMC, and NFPA 24. Fire hydrants shall be located no closer than 40 feet to a building. A fire hydrant shall be located within 50 feet of the fire department connection for buildings protected with a fire sprinkler system. The size and number of outlets required for the approved fire hydrants are (6" x 4" x 2 ½" x 2 ½") (CFC 507.5.1, 507.5.7, Appendix C, NFPA 24-7.2.3, MVMC 912.2.1)

65. Fire Department access driveways over 150 feet in length shall have a turn-around as determined by the Fire Prevention Bureau capable of accommodating fire apparatus. (CFC 503 and MVMC 8.36.060, CFC 501.4)

66. During phased construction, dead end roadways and streets which have not been completed shall have a turn-around capable of accommodating fire apparatus. (CFC 503.1 and 503.2.5)

67. If construction is phased, each phase shall provide an approved emergency vehicular access way for fire protection prior to any building construction. (CFC 501.4)

68. Prior to issuance of Building Permits, plans for structural protection from vegetation

fires shall be submitted to the Fire Prevention Bureau for review and approval. Measures shall include, but are not limited to: noncombustible barriers (cement or block walls), fuel modification zones, etc. (CFC Chapter 49)

69. Plans for private water mains supplying fire sprinkler systems and/or private fire hydrants shall be submitted to the Fire Prevention Bureau for approval. (CFC 105 and CFC 3312.1)

70. The Fire Prevention Bureau is required to set a minimum fire flow for the remodel or construction of all commercial buildings per CFC Appendix B and Table B105.1. The applicant/developer shall provide documentation to show there exists a water system capable of delivering said waterflow for 2 hour(s) duration at 20-PSI residual operating pressure. The required fire flow may be adjusted during the approval process to reflect changes in design, construction type, or automatic fire protection measures as approved by the Fire Prevention Bureau. Specific requirements for the project will be determined at time of submittal. (CFC 507.3, Appendix B)

71. Dead-end streets and/or fire apparatus access roads in excess of 150 feet in length shall be provided with an approved turnaround for fire apparatus.

72. Prior to construction, all traffic calming designs/devices must be approved by the Fire Marshal and City Engineer.

73. Prior to building construction, dead end roadways and streets which have not been completed shall have a turnaround capable of accommodating fire apparatus. (CFC 503.2.5)

74. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall be responsible for obtaining underground and/or above ground tank permits for the storage of combustible liquids, flammable liquids, or any other hazardous materials from both the County of Riverside Community Health Agency Department of Environmental Health and the Fire Prevention Bureau. (CFC 105)

75. Prior to issuance of Building Permits, the applicant/developer shall furnish one copy of the water system plans to the Fire Prevention Bureau for review. Plans shall: a. Be signed by a registered civil engineer or a certified fire protection engineer; b. Contain a Fire Prevention Bureau approval signature block; and c. Conform to hydrant type, location, spacing of new and existing hydrants and minimum fire flow required as determined by the Fire Prevention Bureau. The required water system, including fire hydrants, shall be installed, made serviceable, and be accepted by the Moreno Valley Fire Department prior to beginning construction. They shall be maintained accessible.

PUBLIC WORKS DEPARTMENT

Land Development

76. Aggregate slurry, as defined in Section 203-5 of Standard Specifications for Public Works Construction, shall be required prior to 90% security reduction or the end of the one-year warranty period of the public streets as approved by the City Engineer. If slurry is required, a slurry mix design shall be submitted for review and approved by the City Engineer. The latex additive shall be Ultra Pave 70 (for anionic) or Ultra Pave 65 K (for cationic) or an approved equal per the geotechnical report. The latex shall be added at the emulsion plant after weighing the asphalt and before the addition of mixing water. The latex shall be added at a rate of two to two-and-one-half (2 to 2½) parts to one-hundred (100) parts of emulsion by volume. Any existing striping shall be removed prior to slurry application and replaced per City standards.

77. The developer shall comply with all applicable City ordinances and resolutions including the City's Municipal Code (MC) and if subdividing land, the Government Code (GC) of the State of California, specifically Sections 66410 through 66499.58, said sections also referred to as the Subdivision Map Act (SMA). [MC 9.14.010]

78. The final approved conditions of approval (COAs) issued and any applicable Mitigation Measures by the Planning Division shall be photographically or electronically placed on mylar sheets and included in the Grading and Street Improvement plans.

79. The developer shall monitor, supervise and control all construction related activities, so as to prevent these activities from causing a public nuisance, including but not limited to, insuring strict adherence to the following:
(a) Removal of dirt, debris, or other construction material deposited on any public street no later than the end of each working day.
(b) Observance of working hours as stipulated on permits issued by the Land Development Division.
(c) The construction site shall accommodate the parking of all motor vehicles used by persons working at or providing deliveries to the site.
(d) All dust control measures per South Coast Air Quality Management District (SCAQMD) requirements during the grading operations.
Violation of any condition, restriction or prohibition set forth in these conditions shall subject the owner, applicant, developer or contractor(s) to remedy as noted in City Municipal Code 8.14.090. In addition, the City Engineer or Building Official may suspend all construction related activities for violation of any condition, restriction or prohibition set forth in these conditions until such time as it has been determined that all operations and activities are in conformance with these conditions.

80. Drainage facilities (e.g., catch basins, water quality basins, etc.) with sump conditions shall be designed to convey the tributary 100-year storm flows. Secondary emergency escape shall also be provided.

81. In the event right-of-way or offsite easements are required to construct offsite improvements necessary for the orderly development of the surrounding area to meet the public health and safety needs, the developer shall make a good faith effort to acquire the needed right-of-way in accordance with the Land Development Division's administrative policy. If unsuccessful, the Developer shall enter into an agreement with the City to acquire the necessary right-of-way or offsite easements and complete the improvements at such time the City acquires the right-of-way or offsite easements which will permit the improvements to be made. The developer shall be responsible for all costs associated with the right-of-way or easement acquisition. [GC 66462.5]

82. If improvements associated with this project are not initiated within two (2) years of the date of approval of the Public Improvement Agreement (PIA), the City Engineer may require that the engineer's estimate for improvements associated with the project be modified to reflect current City construction costs in effect at the time of request for an extension of time for the PIA or issuance of a permit. [MC 9.14.210(B)(C)]

83. The developer shall protect downstream properties from damage caused by alteration of drainage patterns (i.e. concentration or diversion of flow, etc). Protection shall be provided by constructing adequate drainage facilities, including, but not limited to, modifying existing facilities or by securing a drainage easement. [MC 9.14.110]

84. Public drainage easements, when required, shall be a minimum of 25 feet wide and shall be shown on the map and plan, and noted as follows: "Drainage Easement – no structures, obstructions, or encroachments by land fills are allowed." In addition, the grade within the easement area shall not exceed a 3:1 (H:V) slope, unless approved by the City Engineer.

85. The maintenance responsibility of the proposed storm drain line shall be clearly identified. Storm drain lines within private property will be privately maintained and those within public streets will be publicly maintained.

86. The proposed private storm drain system shall connect to the existing RCFC&CWD. A storm drain manhole shall be placed at the right-of-way line to mark the beginning of the publicly maintained portion of this storm drain.

87. This project shall submit civil engineering design plans, reports and/or documents (prepared by a registered/licensed civil engineer) for review and approval by the City Engineer per the current submittal requirements, prior to the indicated threshold

or as required by the City Engineer. The submittal consists of, but is not limited to, the following:

a. Rough grading w/ erosion control plan (prior to grading permit issuance);

b. Precise grading w/ erosion control plan (prior to Building permit issuance);

c. Public Improvement Plan (e.g., STREET/STORM DRAIN w/ STRIPING, RCFC STORM DRAIN, SEWER/WATER, etc.) (prior to Encroachment Permit Issuance);

d. Final drainage study (prior to grading plan approval);

e. Final WQMP (prior to grading plan approval);

f. Legal Documents (e.g., EASEMENT(s),DEDICATION(s), LOT LINE ADJUSTMENT, VACATION, etc.) (prior to BUILDING PERMIT ISSUANCE);

g. As-Built revision for all plans (prior to Occupancy release);

Prior to Grading Plan Approval

88. Resolution of all drainage issues shall be as approved by the City Engineer.

89. A final detailed drainage study (prepared by a registered/licensed civil engineer) shall be submitted for review and approved by the City Engineer. The study shall include, but not be limited to: existing and proposed hydrologic conditions as well as hydraulic calculations for all drainage control devices and storm drain lines. The study shall analyze 1, 3, 6 and 24-hour duration events for the 2, 5, 10 and 100-year storm events [MC 9.14.110(A.1)]. A digital (pdf) copy of the approved drainage study shall be submitted to the Land Development Division.

90. Emergency overflow areas shall be shown at all applicable drainage improvement locations in the event that the drainage improvement fails or exceeds full capacity. This may include, but not be limited to, the southeast corner of the property.

91. A final project-specific Water Quality Management Plan (WQMP) shall be submitted for review and approved by the City Engineer, which:

a. Addresses Site Design Best Management Practices (BMPs) such as minimizing impervious areas, maximizing permeability, minimizes directly connected impervious areas to the City's street and storm drain systems, and conserves natural areas;

b. Incorporates Source Control BMPs and provides a detailed description of their implementation;

c. Describes the long-term operation and maintenance requirements for BMPs requiring maintenance; and

d. Describes the mechanism for funding the long-term operation and maintenance of the BMPs.

A copy of the final WQMP template can be obtained on the City's Website or by contacting the Land Development Division. A digital (pdf) copy of the approved final project-specific Water Quality Management Plan (WQMP) shall be submitted to the Land Development Division.

92. The developer shall ensure compliance with the City Grading ordinance, these Conditions of Approval and the following criteria:

a. The project street and lot grading shall be designed in a manner that perpetuates the existing natural drainage patterns with respect to tributary drainage area and outlet points. Unless otherwise approved by the City Engineer, lot lines shall be located at the top of slopes.

b. Any grading that creates cut or fill slopes adjacent to the street shall provide erosion control, sight distance control, and slope easements as approved by the City Engineer.

c. All improvement plans are substantially complete and appropriate clearance letters are provided to the City.

d. A soils/geotechnical report (addressing the soil's stability and geological conditions of the site) shall be submitted to the Land Development Division for review. A digital (pdf) copy of the soils/geotechnical report shall be submitted to the Land Development Division.

93. Grading plans (prepared by a registered/licensed civil engineer) shall be submitted for review and approved by the City Engineer per the current submittal requirements.

94. The developer shall select Low Impact Development (LID) Best Management Practices (BMPs) designed per the latest version of the Water Quality Management Plan (WQMP) - a guidance document for the Santa Ana region of Riverside County.

95. The developer shall submit recorded slope easements from adjacent property owners in all areas where grading resulting in slopes is proposed to take place outside of the project boundaries. For all other offsite grading, written permission from adjacent property owners shall be submitted.

96. The developer shall pay all remaining plan check fees.

97. Landscape & Irrigation plans (prepared by a registered/licensed landscape architect) for water quality BMPs shall be submitted for review and approved by the City Engineer per the current submittal requirements, if applicable.

98. A Storm Water Pollution Prevention Plan (SWPPP) shall be prepared in conformance with the State's current Construction Activities Storm Water General Permit. A copy of the current SWPPP shall be kept at the project site and be available for review upon request.

99. Any proposed trash enclosure shall include a solid cover (roof) and sufficient size for dual bin (one for trash and one for recyclables). The architecture shall be approved by the Planning Division and any structural approvals shall be made by the Building & Safety Division.

100. For projects that will result in discharges of storm water associated with construction with a soil disturbance of one or more acres of land, the developer shall submit a Notice of Intent (NOI) and obtain a Waste Discharger's Identification number (WDID#) from the State Water Quality Control Board (SWQCB) which shall be noted on the grading plans.

101. Prior to precise grading plan approval, the grading plans shall clearly show that the parking lot conforms to City standards. The parking lot shall be 5% maximum, 1% minimum, 2% maximum at or near any disabled parking stall and travel way. Ramps, curb openings and travel paths shall all conform to current ADA standards as outlined in Department of Justice's "ADA Standards for Accessible Design", Excerpt from 28 CFR Part 36. (www.usdoj.gov) and as approved by the City's Building and Safety Division.

Prior to Grading Permit

102. A receipt showing payment of the Area Drainage Plan (ADP) fee to Riverside County Flood Control and Water Conservation District shall be submitted. [MC 9.14.100(O)]

103. If the developer chooses to construct the project in phases, a Construction Phasing Plan for the construction of on-site public or private improvements shall be submitted for review and approved by the City Engineer.

104. The developer shall pay current DIF fees adopted by the City Council. [Ord. 695 § 1.1 (part), 2005] [MC 3.38.030, 040, 050]

105. A digital (pdf) copy of all approved grading plans shall be submitted to the Land Development Division.

106. Security, in the form of a cash deposit (preferable), bond or letter of credit shall be submitted as a guarantee of the implementation and maintenance of erosion control measures. At least twenty-five (25) percent of the required security shall be in the form of a cash deposit with the City. [MC 8.21.160(H)]

107. Security, in the form of a cash deposit (preferable), bond or letter of credit shall be submitted as a guarantee of the completion of the grading operations for the project. [MC 8.21.070]

108. The developer shall pay all applicable inspection fees.

109. The developer shall pay current Transportation Uniform Mitigation Fee (TUMF), as adopted by the City Council. [Ord. 835 § 2.1, 2012] [MC 3.44.060]

Prior to Improvement Plan Approval

110. The developer is required to bring any existing access ramps adjacent to and fronting the project to current ADA (Americans with Disabilities Act) requirements. However, when work is required in an intersection that involves or impacts existing access ramps, all access ramps in that intersection shall be retrofitted to comply with current ADA requirements, unless otherwise approved by the City Engineer.

111. The developer shall submit clearances from all applicable agencies, and pay all applicable plan check fees.

112. The street improvement plans shall comply with current City policies, plans and applicable City standards (i.e. MVSI-160 series, etc.) throughout this project.

113. The design plan and profile shall be based upon a centerline, extending beyond the project boundaries a minimum distance of 300 feet at a grade and alignment approved by the City Engineer.

114. The hydrology study shall be designed to accept and properly convey all off-site drainage flowing onto or through the site. In the event that the City Engineer permits the use of streets for drainage purposes, the provisions of current City standards shall apply. Should the quantities exceed the street capacity or the use of streets be prohibited for drainage purposes, as in the case where one travel lane in each direction shall not be used for drainage conveyance for emergency vehicle access on streets classified as minor arterials and greater, the developer shall provide adequate facilities as approved by the City Engineer. [MC 9.14.110 A.2]

115. All public improvement plans (prepared by a licensed/registered civil engineer) shall be submitted for review and approved by the City Engineer per the current submittal requirements.

116. Any missing or deficient existing improvements along the project frontage within Heacock Street and Ironwood Avenue shall be constructed or secured for construction. The City Engineer may require the ultimate structural section for pavement to half-street width plus 18 feet or provide core test results confirming that existing pavement section is per current City Standards; additional signing & striping to accommodate increased traffic imposed by the development, etc.

117. For non-subdivision projects, all street dedications shall be free of encumbrances, irrevocably offered to the public and shall continue in force until the City accepts or abandons such offers, unless otherwise approved by the City Engineer.

118. The plans shall indicate any restrictions on trench repair pavement cuts to reflect the City's moratorium on disturbing newly-constructed pavement less than three (3)

years old and recently slurry sealed streets less than one (1) year old. Pavement cuts may be allowed for emergency repairs or as specifically approved in writing by the City Engineer. Special requirements shall be imposed for repaving, limits to be determined by the City Engineer.

119. All dry and wet utilities shall be shown on the plans and any crossings shall be potholed to determine actual location and elevation. Any conflicts shall be identified and addressed on the plans. The pothole survey data shall be submitted to Land Development with the public improvement plans for reference purposes only. The developer is responsible to coordinate with all affected utility companies and bear all costs of any utility relocation.

Prior to Encroachment Permit

120. A digital (pdf) copy of all approved improvement plans shall be submitted to the Land Development Division.

121. All applicable inspection fees shall be paid.

122. For non-subdivision projects, execution of a Public Improvement Agreement (PIA) and/or security (in the form of a cash deposit or other approved means) may be required as determined by the City Engineer. [MC 9.14.220]

123. The plans shall indicate any restrictions on trench repair pavement cuts to reflect the City's moratorium on disturbing newly-constructed pavement less than three (3) years old and recently slurry sealed streets less than one (1) year old. Pavement cuts may be allowed for emergency repairs or as specifically approved in writing by the City Engineer. Special requirements shall be imposed for repaving, limits to be determined by the City Engineer.

124. Any work performed within public right-of-way requires an encroachment permit.

Prior to Building Permit

125. An engineered-fill certification, rough grade certification and compaction report shall be submitted for review and approved by the City Engineer. A digital (pdf) copy of the approved compaction report shall be submitted to the Land Development Division. All pads shall meet pad elevations per approved grading plans as noted by the setting of "blue-top" markers installed by a registered land surveyor or licensed civil engineer.

126. For non-subdivision projects, the developer shall enter into a Cooperative Agreement with the City and Riverside County Flood Control and Water Conservation District establishing the terms and conditions covering the inspection,

operation and maintenance of Master Drainage Plan facilities required to be constructed as part of the project.

127. For non-subdivision projects, the developer shall guarantee the completion of all related public improvements required for this project by executing a Public Improvement Agreement (PIA) with the City and posting the required security. [MC 9.14.220]

128. For non-subdivision projects, the developer shall comply with the requirements of the City Engineer based on recommendations of the Riverside County Flood Control District regarding the construction of County Master Plan Facilities.

129. For Commercial/Industrial projects, the owner may have to secure coverage under the State's General Industrial Activities Storm Water Permit as issued by the State Water Resources Control Board.

130. For non-subdivision projects, all street dedications shall be free of encumbrances, irrevocably offered to the public and shall continue in force until the City accepts or abandons such offers, unless otherwise approved by the City Engineer.

131. A walk through with a Land Development Inspector shall be scheduled to inspect existing improvements within public right of way along project frontage. Any missing, damaged or substandard improvements including ADA access ramps that do not meet current City standards shall be required to be installed, replaced and/or repaired. The applicant shall post security to cover the cost of the repairs and complete the repairs within the time allowed in the public improvement agreement used to secure the improvements.

132. Certification to the line, grade, flow test and system invert elevations for the water quality control BMPs shall be submitted for review and approved by the City Engineer (excluding models homes).

133. Prior to building permit issuance, the developer shall construct or secure the construction of any missing or deficient improvements along the project frontage within Ironwood Avenue, including the ultimate structural section for pavement to half-street plus 18 feet or provide to the City Engineer the results of a coring test confirming that said pavement section has previously been completed per City Standard No. MVSI-104A-0 (modified). The City Engineer may require additional signing and striping for the frontage improvements to accommodate increased traffic imposed by the development.

134. Prior to building permit issuance, the developer shall construct or secure the construction of any missing or deficient improvements along the project frontage within Heacock Street, including the ultimate structural section for pavement to half-street plus 18 feet or provide to the City Engineer the results of a coring test

confirming that said pavement section has previously been completed per City Standard No. MVSI-104A-0. The City Engineer may require additional signing and striping for the frontage improvements to accommodate increased traffic imposed by the development.

Prior to Occupancy

135. All outstanding fees shall be paid.

136. All required as-built plans (prepared by a registered/licensed civil engineer) shall be submitted for review and approved by the City Engineer per the current submittal requirements.

137. The final/precise grade certification shall be submitted for review and approved by the City Engineer.

138. For commercial, industrial and multi-family projects, in compliance with Proposition 218, the developer shall agree to approve the City of Moreno Valley NPDES Regulatory Rate Schedule that is in place at the time of certificate of occupancy issuance. Under the current permit for storm water activities required as part of the National Pollutant Discharge Elimination System (NPDES) as mandated by the Federal Clean Water Act, this project is subject to the following requirements:

a. Select one of the following options to meet the financial responsibility to provide storm water utilities services for the required continuous operation, maintenance, monitoring system evaluations and enhancements, remediation and/or replacement, all in accordance with Resolution No. 2002-46.

i. Participate in the mail ballot proceeding in compliance with Proposition 218, for the Common Interest, Commercial, Industrial and Quasi-Public Use NPDES Regulatory Rate Schedule and pay all associated costs with the ballot process; or

ii. Establish an endowment to cover future City costs as specified in the Common Interest, Commercial, Industrial and Quasi-Public Use NPDES Regulatory Rate Schedule.

b. Notify the Special Districts Division of the intent to request building permits 90 days prior to their issuance and the financial option selected. The financial option selected shall be in place prior to the issuance of certificate of occupancy. [California Government Code & Municipal Code]

139. The developer shall complete all public improvements in conformance with current City standards, except as noted in the Special Conditions, including but not limited to the following:

a. Street improvements including, but not limited to: pavement, base, curb and/or gutter, cross gutters, spandrel, sidewalks, drive approaches, pedestrian ramps, street lights (MVU: SL-2), signing, striping, under sidewalk drains,

landscaping and irrigation, medians, pavement tapers/transitions and traffic control devices as appropriate.

b. Storm drain facilities including, but not limited to: storm drain pipe, storm drain laterals, open channels, catch basins and local depressions.

c. City-owned utilities.

d. Sewer and water systems including, but not limited to: sanitary sewer, potable water and recycled water.

e. Under grounding of all existing and proposed utilities adjacent to and on-site. [MC 9.14.130]

f. Relocation of overhead electrical utility lines including, but not limited to: electrical, cable and telephone.

140. For commercial, industrial and multi-family projects, a “Stormwater Treatment Device and Control Measure Access and Maintenance Covenant”, "Maintenance Agreement for Water Quality Improvements located in the public right-of-way" and a "Declaration of Restrictive Covenants (encroachment on City easement)" shall be recorded to provide public notice of the maintenance requirements to be implemented per the approved final project-specific WQMP. A boilerplate copy of the covenants and agreements can be obtained by contacting the Land Development Division.

141. The applicant shall ensure the following, pursuant to Section XII. I. of the 2010 NPDES Permit:

a. Field verification that structural Site Design, Source Control and Treatment Control BMPs are designed, constructed and functional in accordance with the approved Final Water Quality Management Plan (WQMP).

b. Certification of best management practices (BMPs) from a state licensed civil engineer. An original WQMP BMP Certification shall be submitted for review and approved by the City Engineer.

142. The Developer shall comply with the following water quality related items:

a. Notify the Land Development Division prior to construction and installation of all structural BMPs so that an inspection can be performed.

b. Demonstrate that all structural BMPs described in the approved final project-specific WQMP have been constructed and installed in conformance with the approved plans and specifications;

c. Demonstrate that Developer is prepared to implement all non-structural BMPs described in the approved final project-specific WQMP; and

d. Demonstrate that an adequate number of copies of the approved final project-specific WQMP are available for future owners/occupants.

e. Clean and repair the water quality BMP's, including re-grading to approved civil drawing if necessary.

f. Obtain approval and complete installation of the irrigation and landscaping.

Special Conditions

143. Prior to building permit issuance, the Developer shall guarantee the construction of the following improvements by entering into a public improvement agreement and posting security. The improvements shall be completed prior to occupancy of the first building or as otherwise determined by the City Engineer.

a. Pavement core samples of existing pavement shall be taken and findings submitted to the City for review and consideration of pavement improvements. The City will determine the adequacy of the existing pavement structural section. If the existing pavement structural section is found to be adequate, the developer shall be required to perform a full street-width two (2) inch grind and rubberize asphalt overlay to Heacock Street and Ironwood Avenue along the project's frontage, as required by the City Engineer. If the existing pavement section is found to be inadequate, the Developer shall replace the pavement to meet or exceed the City's pavement structural section standard. Removal/relocation and/or undergrounding of any power poles with overhead utility lines less than 115,000 volts.

b. A 4-foot minimum pedestrian right-of-way dedication behind any driveway approach per City Standard MVSI-112C-0, on Heacock Street and Ironwood Avenue.

Special Districts Division

144. NEW STREET LIGHT INSTALLATION FEES. Prior to the issuance of the first building permit for this project, the Developer shall pay New Street Light Installation Fees for all applicable Residential and Arterial Street Lights required for this development. Payment shall be made to the City of Moreno Valley and collected by the Land Development Division. Fees are based upon the Advanced Energy fee rate in place at the time of payment, as set forth in the current Listing of City Fees, Charges, and Rates adopted by City Council. The Developer shall provide a copy of the receipt to the Special Districts Division (specialdistricts@moval.org). Any change in the project which may increase the number of street lights to be installed will require payment of additional Advanced Energy fees at the then current fee. Questions may be directed to the Special Districts Division at 951.413.3480 or specialdistricts@moval.org.

145. This project is conditioned for a proposed district to provide a funding source for the operation and maintenance of public improvements and/or services associated with new development in that territory. The Developer shall satisfy this condition with one of the options outlined below.

a. Participate in a special election for maintenance/services and pay all associated costs of the election process and formation, if any. Financing may be structured through a Community Facilities District, Landscape and Lighting Maintenance District, or other financing structure as determined by the City; or

b. Establish an endowment fund to cover the future maintenance and/or service costs.

The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org when submitting the application for building permit issuance. If the first building permit is pulled prior to formation of the district, this condition will not apply. If the district has been or is in the process of being formed the Developer must inform the Special Districts Division of its selected financing option (a. or b. above). The option for participating in a special election requires 90 days to complete the special election process. This allows adequate time to be in compliance with the provisions of Article 13C of the California Constitution.

The financial option selected shall be in place prior to the issuance of the first certificate of occupancy for the project.

146. This project is conditioned to provide a funding source for the following special financing program(s):

a. Street Lighting Services for capital improvements, energy charges, and maintenance.

The Developer's responsibility is to provide a funding source for the capital improvements and the continued maintenance. The Developer shall satisfy this condition with one of the options below.

i. Participate in a special election (mail ballot proceeding) and pay all associated costs of the special election and formation, if any. Financing may be structured through a Community Services District zone, Community Facilities District, Landscape and Lighting Maintenance District, or other financing structure as determined by the City; or

ii. Establish a Property Owner's Association (POA) or Home Owner's Association (HOA) which will be responsible for any and all operation and maintenance costs

The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org of its selected financial option when submitting the application for building permit issuance. The option for participating in a special election requires approximately 90 days to complete the special election process. This allows adequate time to be in compliance with the provisions of Article 13C of

the California Constitution.

The financial option selected shall be in place prior to the issuance of the first certificate of occupancy for the project.

147. Commercial (BP) If Land Development, a Division of the Public Works Department, requires this project to supply a funding source necessary to provide for, but not limited to, stormwater utilities services for the continuous operation, remediation and/or replacement, monitoring, systems evaluations and enhancement of on-site facilities and performing annual inspections of the affected areas to ensure compliance with state mandated stormwater regulations, a funding source needs to be established. The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org of its selected financial option for the National Pollution Discharge Elimination System (NPDES) program when submitting the application for the first building permit issuance (see Land Development's related condition). Participating in a special election the process requires a 90 day period prior to the City's issuance of a building permit. This allows adequate time to be in compliance with the provisions of Article 13D of the California Constitution. (California Health and Safety Code Sections 5473 through 5473.8 (Ord. 708 Section 3.1, 2006) & City of Moreno Valley Municipal Code Title 3, Section 3.50.050.)

148. This project has been identified to be included in the formation of a Community Facilities District (Mello-Roos) for Public Safety services, including but not limited to Police, Fire Protection, Paramedic Services, Park Rangers, and Animal Control services. The property owner(s) shall not protest the formation; however, they retain the right to object to the rate and method of maximum special tax. In compliance with Proposition 218, the property owner shall agree to approve the mail ballot proceeding (special election) for either formation of the CFD or annexation into an existing district. The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org when submitting the application for building permit issuance to determine the requirement for participation. If the first building permit is pulled prior to formation of the district, this condition will not apply. If the condition applies, the special election will require a minimum of 90 days prior to issuance of the first building permit. This allows adequate time to be in compliance with the provisions of Article 13C of the California Constitution. (California Government Code Section 53313 et. seq.)

149. The ongoing maintenance of any landscaping required to be installed behind the curb shall be the responsibility of the property owner.

150. MAJOR INFRASTRUCTURE FINANCING DISTRICT. This project has been identified to potentially be included in the formation of a special financing district for the construction and maintenance of major infrastructure improvements which may

include but are not limited to thoroughfares, bridges, and certain flood control improvements. The property owner(s) shall participate in such district and pay any special tax, assessment, or fee levied upon the project property for such district. At the time of the public hearing to consider formation of or annexation into the district, the qualified elector(s) will not protest the formation or annexation, but will retain the right to object to any eventual tax/assessment/fee that is not equitable should the financial burden of the tax/assessment/fee not be reasonably proportionate to the benefit the affected property obtains from the improvements to be installed and/or maintained. The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org when submitting an application for the first building permit to determine whether the development will be subjected to this condition. If subject to the condition, the special election requires a minimum 90-day process in compliance with the provisions of Article 13C of the California Constitution.

151. Street Light Authorization forms for all street lights that are conditioned to be installed as part of this project must be submitted to the Special Districts Division for approval, prior to street light installation. The Street Light Authorization form can be obtained from the utility company providing electric service to the project, either Moreno Valley Utility or Southern California Edison. For questions, contact the Special Districts Division at 951.413.3480 or specialdistricts@moval.org.

152. The parcel(s) associated with this project have been incorporated into the Moreno Valley Community Services District Zone A (Parks & Community Services) and Zone C (Arterial Street Lighting). All assessable parcels therein shall be subject to annual parcel taxes for Zone A and Zone C for operations and capital improvements.

153. PARKS MAINTENANCE FUNDING. Prior to applying for the 1st Building Permit, the qualified elector (e.g. property owner) must initiate the process (i.e. pay the annexation fee or fund an endowment) to provide an ongoing funding source for the continued maintenance, enhancement, and or retrofit of parks, open spaces, linear parks, and/or trails systems, and programs.

This condition must be fully satisfied prior to issuance of the 1st Certificate of Occupancy. This condition will be satisfied with the successful annexation/formation (i.e. special election process) into a special financing district and payment of all costs associated with the special election process. Annexation into a special financing district requires an annual payment of the annual special tax, assessment, or fee levied against the property tax bill, or other lawful means, of the parcels of the project for such district. At the time of the public hearing to consider annexation into or formation of the district, the qualified elector(s) will not protest the annexation or formation, but will retain the right to object to any eventual tax/assessment/fee that is not equitable should the financial burden of the tax/assessment/fee not be

reasonably proportionate to the benefit the affected property receives from the improvements to be installed and/or maintained or services provided. The special election requires a minimum 90-day process in compliance with the provisions of Article 13C of the California Constitution, Proposition 218, or other applicable legislation, and consistent with the scheduling for City Council meetings.

Alternatively, the condition can be satisfied by the Developer funding an endowment in an amount sufficient to yield an annual revenue stream that meets the annual obligation. The Developer must contact Special Districts Administration at 951.413.3470 or at SDAdmin@moval.org to satisfy this condition.

Transportation Engineering Division

154. All project driveways shall conform to Section 9.11.080, and Table 9.11.080-14 of the City's Development Code – Design Guidelines and City of Moreno Valley Standard Plans No. MVSI-112A~D-0 for commercial driveway approaches.

155. Each gated entrance shall be provided with the following: A storage lane with a minimum of 75 feet queuing length for entering traffic. Signing and striping. A separate pedestrian entry. All of these features must be kept in working order.

156. The first parking stall/drive aisle juncture shall be 60 feet from the property line per Municipal Code Section 9.11.080 - A.18 or as approved by the City Engineer.

157. Sight distance at the proposed roadways and driveways shall conform to City of Moreno Valley Standard No. MVSI-164A,B,C-0 at the time of preparation of final grading, landscape, and street improvement plans.

158. Heacock Street is designated as an Arterial Road (100' RW/76' CC) per City of Moreno Valley Standard MVSI-104A-0. Any improvements undertaken by this project shall be consistent with the City's standards for this facility or as approved by the City Engineer.

159. Ironwood Avenue is designated as a Minor Arterial Road (88' RW/64' CC) per City of Moreno Valley Standard MVSI-105A-1. Any improvements undertaken by this project shall be consistent with the City's standards for this facility or as approved by the City Engineer.

160. Communication conduit along the project frontages may be required per City Standard Plan No. MVSI-186-0.

161. Prior to issuance of an encroachment permit for work within the public right-of-way, construction traffic control plans prepared by a qualified, registered Civil or Traffic Engineer shall be required for plan approval by the City Traffic Engineer.

162. Prior to final approval of the landscape plans and construction plans for any type of fencing or monument sign, the project plans shall be demonstrate that sight distance at the project driveway conforms to City Standard Plan No. MVSI-164A-0 through MVSI-164C-0. Trees, plants, shrubs, fence and monument sign shall not be located in an area that obstructs the drivers' line of sight.

163. All proposed on-site traffic signing and striping shall be accordance with the latest California Manual on Uniform Traffic Control Devices (CAMUTCD)

164. Prior to the final approval of the street improvements plans, a signing and striping plan shall be prepared per City of Moreno Valley Standard Plans - Section 4 for all streets along the project frontages. Signing and striping plans shall be prepared per the latest edition of the California Manual on Uniform Traffic Control Devices (CAMUTCD) and current City of Moreno Valley Standard Plans by a qualified registered Civil or traffic Engineer.

165. Prior to issuance of a Building Final or Certificate of Occupancy, all approved signing and striping shall be installed per current City Standards and the approved plans.

PROPOSED INCENTIVES FOR INCREASED COVERAGE

1. LOT CONSOLIDATION (AS INDICATED PER CIVIL DWGS)
2. RECIPROCAL DRIVEWAY ACCESS
3. PEDESTRIAN BUILDING ORIENTATION
4. PUBLIC ART: T.B.D.
5. SUSTAINABLE FEATURES/LEED CHECKLIST FOR CERTIFICATION
6. LANDMARK INTERSECTION
7. BUSINESS RETENTION

FIRE DEPARTMENT NOTES:

1. THE MOTORIZED DRIVEWAY GATES SHALL BE PROVIDED WITH A SYSTEM THAT AUTOMATICALLY OPENS THE GATES REMOTELY BY SIGNAL PREEMPTION FROM AN APPROACHING EMERGENCY FIRE APPARATUS VEHICLE UPON INSTALLATION OF THE SYSTEM, FUNCTIONAL TESTING SHALL BE WITNESSED BY THE RIVERSIDE COUNTY FIRE DEPARTMENT. (MORENO VALLEY FIRE CODE 503.6.1)
2. THE MOTORIZED GATES SHALL BE EQUIPPED WITH KNOX BOX SWITCHES ON BOTH THE PRIVATE PROPERTY SIDE AND THE PUBLIC ACCESS SIDE OF THE GATES. IF VEHICLE SENSOR LOOPS ARE PROVIDED TO OPERATE THE GATES AUTOMATICALLY FROM THE INGRESS DIRECTION, THEN THE KEY SWITCHES ARE ONLY REQUIRED ON THE INGRESS SIDE. (CFC 503.6)

PROJECT DESCRIPTION

THE PROJECT SITE IS LOCATED AT THE SOUTHEAST CORNER OF HEACOCK STREET AND IRONWOOD AVENUE ON 9.89 ACRES OF LAND WITHIN THE MORENO VALLEY FESTIVAL SPECIFIC PLAN 205, IN THE CITY OF MORENO VALLEY. THE PROJECT PROPOSES TO CONSTRUCT ONE INDUSTRIAL CONCRETE TILT-UP BUILDING.

A LOT MERGER IS BEING PROPOSED TO CONSOLIDATE THE EXISTING SIX LOTS.

LEGAL DESCRIPTION:

(APN 481-020-013, 029, 030, 035 & 038)

THE LAND REFERRED TO HEREIN BELOW IS SITUATED IN THE CITY OF MORENO VALLEY, IN THE COUNTY OF RIVERSIDE, STATE OF CALIFORNIA, AND IS DESCRIBED AS FOLLOWS:

LOTS 1, 2, 3 AND 4 OF SUNNYMEAD ORCHARD FARMS TRACT, IN THE CITY OF MORENO VALLEY, COUNTY OF RIVERSIDE, STATE OF CALIFORNIA, AS SHOWN BY MAP ON FILE IN BOOK 14, PAGES 12 AND 13 OF MAPS, RIVERSIDE COUNTY RECORDS.

TOGETHER WITH THE SOUTHERLY 10 FEET OF IRONWOOD AVENUE, AS VACATED BY ORDER OF THE BOARD OF SUPERVISORS OF RIVERSIDE COUNTY, DATED JUNE 4, 1928 ON FILE IN SUPERVISOR'S MINUTE BOOK 20, PAGE 398, A CERTIFIED COPY OF WHICH WAS RECORDED JUNE 7, 1928 IN BOOK 768, PAGE 387 OF DEEDS.

EXCEPTING THEREFROM THAT PORTION AS DESCRIBED IN THE DEED TO THE COUNTY OF RIVERSIDE, RECORDED JULY 19, 1966 AS INSTRUMENT NO. 73738 OF OFFICIAL RECORDS.

ALSO EXCEPTING THEREFROM THAT PORTION OF LOT 1 AS CONVEYED TO EASTERN MUNICIPAL WATER DISTRICT, A PUBLIC AGENCY, AS CONTAINED IN DEED RECORDED NOVEMBER 2, 2015 AS INSTRUMENT NO. 2015-0481000 OF OFFICIAL RECORDS OF SAID COUNTY.

GENERAL NOTES

1. PROPERTY ADDRESS: SOUTHEAST CORNER OF HEACOCK STREET AND IRONWOOD AVENUE
2. APN's 481-020-013, 029, 030, 035 & 038
3. LEGAL DESCRIPTION: SEE LEFT HEREON.
4. BUILDING FOOTPRINT AREA: 217,390 SF
   BUILDING AREA: 220,390
5. PROPOSED USE: INDUSTRIAL WAREHOUSE/OFFICE FACILITY
   ZONING: MU (MIX OF USES) – MORENO VALLEY FESTIVAL SP 205
   BUILDING SETBACKS: IRONWOOD AVENUE – 30 FEET
   HEACOCK STREET – 20 FEET

   THE SUBJECT PROPERTY IS LOCATED WITHIN ZONE X, PER FEMA FLOOD INSURANCE RATE MAP 06065C0753G DATED 08/28/2008 AND AS AMENDED BY LOMR 09-09-0818P EFFECTIVE 4/30/09 & LOMR 12-09-0582P EFFECTIVE 1\31\13

   ZONE X OTHER AREAS – AREAS DETERMINED TO BE OUTSIDE THE 0.2% ANNUAL FLOODPLAIN.
6. AERIAL TOPOGRAPHY PROVIDED BY AEROTECH MAPPING, PROJECT IRONWOOD, COMPILED FROM AERIAL PHOTOGRAPHY DATED 06/24/14.
   ACCURACY OF AERIAL TOPOGRAPHY:
   HORIZONTAL: 1"=40'
   VERTICAL: 1' CONTOUR INTERVAL

Subject: Warehouses on Heacock and Ironwood

Warning: External Email – Watch for Email Red Flags!

i am totally opposed to allowing them to build more warehouses on this property. The original plan was for mixed use and we were told it would be something like a Riverside Plaza or Canyon Crest Shopping Center.

What they built is very disappointing. They have no landscaping, no setback from the street and the buildings are ugly. There is no respect for the nearby neighborhoods. I can't imagine how bad the traffic will be when the trucks arrive.

Please vote NO on additional warehouses at this location.

Subject: No to anymore huge buildings on Heacock and Ironwood.

Warning: External Email – Watch for Email Red Flags!

I'm so furious over the development of the the property on the land bordered by Heacock, Ironwood & Elder and now another building is proposed-hell no! Building giant warehouses in the middle of the city is an idiotic decision. The area would have been much better suited for the development of a downtown area with retail, restaurants and entertainment as was discussed several years ago. We don't need more warehouse distribution type buildings because we are already surrounded by mostly empty ones now. The residents who have lived in this area don't appreciate the added big rig and vehicle traffic they bring nor do we want the added air pollution they will creat. NO to developers building such buildings!

Subject: Another ugly building

Warning: External Email – Watch for Email Red Flags!

This is ridiculous and the sad part is that I know it doesn't really matter what I, or hundreds of others say. MV only cares about money. They cater to the developers. We need so much in this town. Places to shop. Restaurants. What we don't need is more blight. We don't need more traffic on our main streets in town. And we don't need hard working people looking out their doors of their home which should be their sanctuary, just to look at ugly gray walls. Do you know how many warehouse type buildings are around her that are new but have never been occupied? What a waste. Elected officials. Spend your time cleaning our city and making it an inviting area people want to come to. What has happened to this city is disgraceful.

Re: Public Hearing Case Numbers, Resolution Number2021-01, PEN20-137, PEN20-138 & PEN20-139

Comments:

I do not think that the proposal for the property change from Commercial to Business Park should be approved. There have already been 4 Business Park buildings built on adjacent properties. I feel this property would better serve the City of Moreno Valley and immediate area with retail type shops. The adjacent properties have ruined the view of the residential properties along Ironwood between Davis and Heacock Streets.

It appears that the City of Moreno Valley is using the original General Biological Assessment Report and the Jurisdictional Delineation Report, Prepared By Hernandez Environmental Services (prepared November 2015) report that was done for the original adjacent projects which the report shows the proposed property as existing and was not included in the original reports I cannot tell if the preparer of the original report was consulted on the amendment being proposed.

The Traffic Impact Analysis report by Transpo Group for case number PEM-0015 specifically excluded the property per figure 3 packet page 294. I believe that the traffic increase from this project will have an effect on Ironwood and Heacock. There are times of the day that traffic exiting will not be able to turn south on Heacock or West on Ironwood which will lead to traffic congestion on east bound Ironwood. Traffic will also be cutting through the neighborhood north of the project on Tabor and Kernwood. This is already an issue with people trying to beat the signal at

Ironwood and Heacock. Maybe if project is approved speed humps could be installed on Tabor and Kernwood to slow the traffic down.

In closing I do not think the City of Moreno Valley should allow / approve Business Park type building to be built on so many properties throughout the city especially the inner city areas.

Dear Planning Commissioners of the Great City of Moreno Valley

SCNDSC LLC are owners of the SEC of Ironwood and Heacock. The LLC consists of Principals from Rich Development and Principals from Pacific Retail Partners. We have a combined experience of over 120 years in retail Development of over 50 million square feet of retail projects in the Western United States. We attempted to develop a neighborhood serving shopping center.

We worked well with City Manager Mike Lee and your fine development support staff.
We have spent over 5 years trying to bring retail to this property. We have held many meetings with retailers, retail real estate brokers and architects to try to match the market demand for the subject property. In our 5 years of attempting to build such a product, it was determined that such retailer demand does not exist due to the many retailers already located in the marketplace. Unfortunately the demand for retail at this site does not exist. We are frustrated, as we prefer to develop and hold for the long term.

We have been approached by many industrial users and developers interested in the property. After many meetings and offers and site plans prepared, we feel that the Ledo Capital team in front of you tonight offers the best project for the property.

Thank you
