**PUBLIC COMMENTS ON ANY SUBJECT ON THE AGENDA AND NOT ON THE AGENDA UNDER THE JURISDICTION OF THE CITY COUNCIL**

Bob Palomarez

1. Commended Police and Fire for their holiday gift giving programs, and ongoing annual efforts.
2. Congratulated Elena Baca Santa Cruz for her District 1 candidacy.
3. Suggested that item A.12 funds be used to support Fire, Police, seniors and the homeless.

Fred Banuelos

1. Inquired on the absence of Council Members Marquez and Cabrera at the 12/21/2021 Regular City Council Meeting.
2. Thanked Council Member Delgado, and Mayor Gutierrez for providing information on how to get in contact with Caltrans on trash issues.
3. Expressed disappointment towards Mayor Gutierrez, Council Member Delgado, and Council Member Cabrera for their comments pertaining to the Moreno Valley Trade Center project. Credited Council Member Marquez for voting against continuation of the project.
4. Expressed support for the new police motorcycles.

Linda Thomas

1. Expressed frustration and disappointment towards Council Member Marquez's actions pertaining to their vehicle accident. She provided images of the vehicle accident damages and recounted the details of said accident.

Elmer Thomas

1. Called for the resignation or recall of Council Members Marquez and Cabrera.
2. Appreciated Caltrans's immediate action on the clean-up of the 60 Freeway and Perris Blvd. Expressed appreciation towards Council Member Delgado and Mayor Gutierrez for providing the residents with instructions on how to report matters to Caltrans.
3. Expressed his disdain toward Council Member Cabrera for nominating Council Member Marquez as Mayor Pro Tem.
4. Expressed frustration and disappointment towards Council Member Marquez's actions pertaining to their vehicle accident.
5. Critical towards Council Member Marquez for his lack of response pertaining to the Temecula cheerleader incident and the George Floyd incident.

Louise Palomarez

1. Critical of Council Members Cabrera and Marquez for the Jempson appointment.
2. Expressed frustration on the absence of Council Member Marquez, and Council Member Cabrera at the last meeting.
3. Asked Mayor Gutierrez to adjourn the meeting in memory of Mayor Pro Tem Victory Baca.
4. Critical of Council Member Marquez for being absent at this meeting.
5. Denounced LaDonna Jempson’s use of discretionary funds.

Roy Bleckert

1. Expressed optimism for the new 2022 year.
2. Claimed his public records request response regarding the political coup set to take over the City of Moreno Valley was incomplete. Then recounted a conversation he had with Former Council Member Richard Steward connecting the incomplete response as tacit agreement.
3. Stated that residents should not trust elected officials.

JOINT CONSENT CALENDARS (SECTIONS A-E)

Interim City Attorney Quintanilla reported on A.6 as follows:

1. A 2-year contract extension to July 2025;
2. 15% annual salary increase, made retroactive to July 2021; and
3. 5% annual salary adjustment, commencing July 2022 and every anniversary year.

Item A.6 was voted on separately:

Council Member Cabrera requested to comment on A.6

Council Member Delgado requested to comment on A.6

Mayor Gutierrez commented on A.6

Consent Calendar:

Council Member Cabrera also requested to comment on items, A.12, A.14, A.15, B.5, and B.7.

Council Member Delgado also requested to comment on items, A.15, and B.5

<b>RESULT:</b>	<b>APPROVED [UNANIMOUS]</b>
<b>MOVER:</b>	Ulises Cabrera, Council Member
<b>SECONDER:</b>	Ed Delgado, Council Member
<b>AYES:</b>	Ed Delgado, Dr. Yxstian A. Gutierrez, Ulises Cabrera
<b>ABSENT:</b>	David Marquez

Authorize the transfer of \$62,385 from the Equipment Replacement Fund 7510 to General Fund 1010, to add to the budgeted amount of \$375 in General Fund Account 1010-60-67-40210-660322, totaling \$62,760 to use for the purchase of two 2022 BMW R 1250 RT-P police motorcycles and related emergency equipment.

A.8. VEHICLE DONATION TO THE RIVERSIDE COUNTY FIRE DEPARTMENT (RESO. NO. 2022-02) (Report of: Fire Department)

**Recommendation:**

Adopt Resolution No. 2021-02 acknowledging the 2003 KME 100’ Aerial Ladder Fire Truck, Asset No. 400180 with Vehicle Identification Number 1K9AF422883N058613 is surplus property and has been donated to Riverside County Fire Department, which was planned as part of the new Ladder Truck purchase this year.

Minutes Acceptance: Minutes of Jan 4, 2022 6:00 PM (CONSENT CALENDAR-CITY COUNCIL)

- A.9. COVID-19 PANDEMIC RESOLUTIONS EXTENDING THE LOCAL STATE OF EMERGENCY AND CERTAIN EMERGENCY MEASURES (RESO. NO. 2022-03) (Report of: Financial & Management Services)

**Recommendations:**

That the City Council adopt Resolution No. 2022-03 Extending the Local State of Emergency and Certain Emergency Measures related to the Local, State and National Declarations of a State of Emergency related to the COVID-19 Pandemic.

- A.10. SECOND READING AND ADOPTION OF ORDINANCE NO. 983, AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, ADDING CHAPTER 6.03 (MANDATORY ORGANIC WASTE DISPOSAL REDUCTION REQUIREMENTS) (Report of: Financial & Management Services)

**Recommendation:**

Conduct the second reading by title only and adopt Ordinance No. 983.

- A.11. RECEIVE THE ANNUAL AB1600 COMPLIANCE REPORT FOR FISCAL YEAR 2020-21 (Report of: Financial & Management Services)

**Recommendations:**

1. Receive and file the Annual AB 1600 Compliance Report for FY 2020-21 in compliance with California Government Code sections 66006 and 66001.
2. Approve the finding that staff has demonstrated a continuing need to hold unexpended Development Impact Fees.

- A.12. ACCEPT THE U.S. DEPARTMENT OF THE TREASURY AMERICAN RESCUE PLAN ACT (ARPA) FUNDS (RESO. NO. 2022-04) (Report of: Financial & Management Services)

**Recommendations:**

1. Authorize the City Manager or designee to enter into, execute, and deliver American Rescue Plan Act (ARPA) award and compliance documents.

2. Designate the City Manager or designee as authorized signatory to execute ARPA documents on behalf of the City of Moreno Valley.
3. Accept the U.S. Treasury Direct Allocation of ARPA funds in the amount of \$48,481,233.
4. Accept staff recommendation for allocation of ARPA funds.
5. Authorize a budget amendment as set forth in the fiscal impact section.
6. Adopt Resolution No. 2022-04.

Council Member Cabrera stated as follows:

1. Item A.12 is the receipt of the ARPA funds from the federal government.
2. Recounted that this item had been in discussions for several months; approximately forty-five million dollars for a two-year period.
3. Asserted that federal legislature issued the funds in response to the COVID-19 pandemic.
4. Affirmed that the City will be using the funds for Police and Fire Safety.

A.13. PAYMENT REGISTER - OCTOBER 2021 (Report of: Financial & Management Services)

**Recommendation:**

1. Receive and file the Payment Register.

A.14. COLLEGE PROMISE MEMORANDUM OF UNDERSTANDING (AGMT. NO. 2022-02) (Report of: Economic Development)

**Recommendation:**

1. Approve the Memorandum of Understanding (MOU) between the City of Moreno Valley (City) and the Riverside Community College District Foundation acting on behalf of Moreno Valley College (College) allowing for the allocation of \$100,000 to support the College Promise Initiative for two academic years.
2. Authorize the City Manager to execute the MOU and all necessary documents with the College.

Council Member Cabrera expressed support and commended the continuation of this \$100,000, 2-years MOU, between the City and MVC.

- A.15. APPROVAL OF A RESOLUTION AUTHORIZING THE CITY MANAGER TO EXECUTE REIMBURSEMENT AGREEMENT FOR PUBLIC STREET CONSTRUCTION (RESO. NO. 2022-05 & AGMT. NO. 2022-07) (Report of: Public Works)

**Recommendation:**

1. Approve Resolution No. 2022-05, a Resolution of the City Council of the City of Moreno Valley, California, Authorizing the City Manager to Execute a Reimbursement Agreement with HF Logistics SKX-T2, LLC (Developer) for Construction of a Roundabout Located at the Intersection of Redlands Boulevard and Eucalyptus Avenue.

Council Member Delgado stated as follows:

1. Verified with City staff that the agreement reimbursement would not cost the City taxpayer dollars.
2. Michael Lloyd, Public Works Director/City Engineer affirmed that only funds accrued through adjacent development would be used, no city funds.

Council Member Cabrera stated as follows:

1. Explained the agreement was necessary because the Development Nexus Study conducted 12 years ago did not include a roundabout of this size. Therefore, staff could not bring the item forth as a routine DIF agreement.
2. Affirmed that no City funds would be used to pay for the developer for the roundabout; only new developers adjacent to the area would be required to pay the developer.

- A.16. ADOPT RESOLUTION NO. 2022-06, A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, APPROVING THE 2022 WILDFIRE MITIGATION PLAN FOR MORENO VALLEY UTILITY (RESO. NO. 2022-06) (Report of: Public Works)

**Recommendation:**

Adopt Resolution No. 2022-06, a Resolution of the City Council of the City of Moreno Valley, California, to adopt the Annual Wildfire Mitigation Plan.

- A.17. APPROVAL OF AGREEMENT WITH INVOICE CLOUD, INC. FOR CUSTOMER PAYMENT PROCESSING SERVICES FOR MORENO VALLEY UTILITY (AGMT. NO. 2022-03) (Report of: Public Works)

**Recommendations:**

1. Approve Agreement No. 2022-03 with Invoice Cloud, Inc. for customer payment processing services for Moreno Valley Utility, funded by MVU Professional Services (Fund 6010); and

2. Authorize the City Manager to execute the Agreement subject to approval by the City Attorney.

A.18. AUTHORIZATION TO AWARD A PROFESSIONAL CONSULTANT SERVICES AGREEMENTS TO TRANSTECH ENGINEERS, INC. AND HR GREEN PACIFIC, INC. FOR TRANSPORTATION PLANNING SERVICES (AGMT. NOS. 2022-04 & 2022-05) (Report of: Public Works)

**Recommendations:**

1. Approve the Agreements for Transportation Planning Services with Transtech Engineers, Inc. (AGMT. NO. 2022-04) and HR Green Pacific, Inc. (AGMT. NO. 2022-05), funded by the fee collected from the development plan review (Fund 1010); and
2. Authorize the City Manager to execute the Agreements with Transtech Engineers, Inc. and HR Green Pacific, Inc., which include executing subsequent Amendments or Extensions to the Agreements, and the authority to authorize associated purchase orders in accordance with the terms of the Agreements, subject to the approval of the City Attorney; and
3. Authorize Purchase Order with Transtech Engineers, Inc. for a not-to-exceed amount of \$150,000 using existing funds already approved in the Public Works Operating Budget; and
4. Authorize Purchase Order with HR Green Pacific, Inc. for a not-to-exceed amount of \$100,000 using existing funds already approved in the Public Works Operating Budget.

A.19. AUTHORIZATION TO AWARD A CONSTRUCTION CONTRACT TO CHRISP COMPANY FOR THE SIGNING AND STRIPING IMPROVEMENTS ON IRONWOOD AVENUE AND ON KITCHING STREET, PROJECT NOS. 808 0019 AND 808 0020 (AGMT. NO. 2022-06) (Report of: Public Works)

**Recommendations:**

1. Award a construction contract to Chrisp Company to provide signing and striping as well as traffic control services, and authorize the City Manager to execute the Agreement with Chrisp Company in the amount of \$103,344.75 (\$89,865.00 bid amount plus a 15% contingency) funded by HSIP grant (Fund 2301); and
2. Authorize the issuance of a Purchase Order to Chrisp Company, the amount of \$103,344.75 (\$89,865.00 bid amount plus a 15% contingency) when the Agreement has been signed by all parties for the signing and striping improvements on Ironwood Ave. and Kitching St.; and

3. Authorize the Public Works Director/City Engineer to execute any subsequent change orders to the contract, but not exceeding the total contingency of \$13,479.75, subject to the approval of the City Attorney.

A.20. AUTHORIZATION TO SUBMIT A LETTER OF INTENT TO APPLY FOR THE CALIFORNIA VIOLENCE INTERVENTION AND PREVENTION (CalVIP) GRANT PROGRAM (Report of: City Manager)

**Recommendation:**

1. Authorize City Manager, City Attorney and Chief Financial Officer to draft and submit a letter of intent to apply for the California Violence intervention and Prevention (CalVIP) Grant Program.
2. Authorize City Manager, City Attorney and Chief Financial Officer to seek a Community-Based Organization (CBO) partner(s) to assist the City in qualifying for the grant and negotiate a Memorandum of Understanding with CBO for Council approval no later than February 1, 2022.

A.21. 2022 CITY COUNCIL COMMISSION, BOARD, AND INTER-AGENCY APPOINTMENTS (Report of: City Clerk)

**Recommendation: That the City Council:**

1. Ratify the appointments to the various committees and regional bodies as noted on the 2022 Council Committee Participation List – terms end December 31, 2022.

**B. CONSENT CALENDAR-COMMUNITY SERVICES DISTRICT**

B.1. ORDINANCES - READING BY TITLE ONLY - THE MOTION TO ADOPT AN ORDINANCE LISTED ON THE CONSENT CALENDAR INCLUDES WAIVER OF FULL READING OF THE ORDINANCE.

**Recommendation:** Waive reading of all Ordinances.

B.2. MINUTES - SPECIAL MEETING OF NOVEMBER 18, 2021 4:00 PM (See A.2)

**Recommendation:** Approve as submitted.

B.3. MINUTES - SPECIAL MEETING (CLOSED SESSION) OF NOVEMBER 18, 2021 5:00 PM (See A.3)

**Recommendation:** Approve as submitted.

- B.4. MINUTES - REGULAR MEETING OF DECEMBER 7, 2021 6:00 PM (See A.4)

**Recommendation:** Approve as submitted.

- B.5. AUTHORIZE RENEWAL APPLICATION AND ACCEPT FUNDING FOR AFTER SCHOOL EDUCATION AND SAFETY (ASES) GRANT FOR FISCAL YEARS 2022/23 THROUGH 2024/25 (Report of: Parks & Community Services)

**Recommendation:**

1. Authorize the City Manager to submit a renewal application and accept funding for After School Education and Safety (ASES) Grant funds for fiscal years 2022/23 through 2024/25.

Council Member Cabrera highlighted the ASES grant and the City's after school programs.

Council Member Delgado concurred with Council Member Cabrera, and was pleased about the ASES grant after school programs.

- B.6. SECOND READING AND ADOPTION OF ORDINANCE NO. CSD 56, AN ORDINANCE OF THE MORENO VALLEY COMMUNITY SERVICES DISTRICT OF THE CITY OF MORENO VALLEY DESIGNATING THE FUTURE ANNEXATION AREA FOR ITS COMMUNITY FACILITIES DISTRICT NO. 2021-01 (PARKS MAINTENANCE) AND TAKING CERTAIN RELATED ACTIONS (Report of: Financial & Management Services)

**Recommendation:**

Conduct the second reading by title only and adopt Ordinance No. CSD 56.

- B.7. AUTHORIZE FISCAL YEAR 2022-23 CONTINUED FUNDING APPLICATION FOR CHILD DEVELOPMENT PROGRAM FUNDS FROM THE CALIFORNIA DEPARTMENT OF SOCIAL SERVICES AND ACCEPT FUNDING TO OPERATE CHILD CARE SERVICES FOR FISCAL YEAR 2022-23 AND ADOPT A RESOLUTION TO CERTIFY APPROVAL OF THE GOVERNING BOARD (RESO. NO. CSD 2022-01) (Report of: Parks & Community Services)

**Recommendations:**

1. Authorize the submission of a Continued Funding Application for Child Care Development Program Funds from the California Department of Social Services for fiscal year 2022-23; and
2. Upon approval of the Continued Funding Application, authorize acceptance of child development program funds in the approved

amount and any subsequent amendments for Fiscal Year (FY) 2022-23 from the California Department of Social Services for the purpose of providing school age child care and development services and authorize the Chief Financial Officer (CFO) to make minor modifications to the budget, based on the final contract amount (which could be more or less than estimated); and

3. Adopt Resolution No. CSD 2022-01. A resolution of the Moreno Valley Community Services District of the City of Moreno Valley, California, certifying approval of the governing board to enter into this transaction with the California Department of Social Services for providing child care and development services and to authorize designated personnel to sign contract documents for FY 2022-23.

Council Member Cabrera highlighted the child development program grant, and the benefit it bestows to the community.

### C. CONSENT CALENDAR - HOUSING AUTHORITY

- C.1. ORDINANCES - READING BY TITLE ONLY - THE MOTION TO ADOPT AN ORDINANCE LISTED ON THE CONSENT CALENDAR INCLUDES WAIVER OF FULL READING OF THE ORDINANCE.

**Recommendation:** Waive reading of all Ordinances.

- C.2. MINUTES - SPECIAL MEETING OF NOVEMBER 18, 2021 4:00 PM (See A.2)

**Recommendation:** Approve as submitted.

- C.3. MINUTES - SPECIAL MEETING (CLOSED SESSION) OF NOVEMBER 18, 2021 5:00 PM (See A.3)

**Recommendation:** Approve as submitted.

- C.4. MINUTES - REGULAR MEETING OF DECEMBER 7, 2021 6:00 PM (See A.4)

**Recommendation:** Approve as submitted.

- C.5. APPROVAL OF RESOLUTIONS DECLARING HOUSING AUTHORITY OWNED PROPERTY IS DESIGNATED AS SURPLUS LAND AND NOT NECESSARY FOR THE AUTHORITY'S USE AT THIS TIME, FINDING THAT SUCH DECLARATION IS EXEMPT FROM ENVIRONMENTAL REVIEW UNDER THE CALIFORNIA ENVIRONMENTAL QUALITY ACT, AND TAKING RELATED ACTIONS IN CONFORMANCE WITH THE SURPLUS LAND ACT, CALIFORNIA GOVERNMENT CODE § 54221 (RESO. NOS. HA 2022-01 & HA 2022-02) (Report of: Financial & Management Services)

**Recommendations: That the City Council and Housing Authority:**

1. Adopt Resolution HA 2022-01. A resolution of the City Council of the City of Moreno Valley, California, declaring pursuant to California Government Code § 54221 that the real property (APN 482-161-026) located north of Cottonwood Avenue on the east side of Indian Street is designated as surplus land and not necessary for the Authority's use at this time, finding that such declaration is exempt from environmental review under the California Environmental Quality Act, and taking related actions.
2. Adopt Resolution HA 2022-02. A resolution of the City Council of the City of Moreno Valley, California, declaring pursuant to California Government Code § 54221 that the real property (APN 481-270-058) located on Eucalyptus Avenue east of Heacock Street is designated as surplus land and not necessary for the Authority's use at this time, finding that such declaration is exempt from environmental review under the California Environmental Quality Act, and taking related actions.

**Recommendation:** Approve as submitted.

- E.4. MINUTES - REGULAR MEETING OF DECEMBER 7, 2021 6:00 PM (See A.4)

**Recommendation:** Approve as submitted.

## F. PUBLIC HEARINGS

- F.1. PUBLIC HEARING FOR ONE NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM MAIL BALLOT PROCEEDING (Report of: Financial & Management Services)

**Recommendations: That the City Council:**

1. Conduct the Public Hearing and accept public testimony for the mail ballot proceeding for the National Pollutant Discharge Elimination System (NPDES) Common Interest, Commercial, Industrial, and Quasi-Public Use Regulatory Rate to be applied to the property tax bill of the parcel identified herein (Judith Flores, located at 24095 Sunnymead Blvd).
2. Direct the City Clerk to open and count the returned NPDES ballot;

<b>RESULT:</b>	<b>APPROVED [UNANIMOUS]</b>
<b>MOVER:</b>	Ed Delgado, Council Member
<b>SECONDER:</b>	Ulises Cabrera, Council Member
<b>AYES:</b>	Ed Delgado, Dr. Yxstian A. Gutierrez, Ulises Cabrera
<b>ABSENT:</b>	David Marquez

Assistant City Manager/Chief Financial Officer/City Treasurer Brian Mohan provided the staff report.

**Recommendations: That the City Council**

3. Verify and accept the results of the mail ballot proceeding as maintained by the City Clerk on the Official Tally Sheet and if approved, set the rate and impose the applicable NPDES Regulatory Rate on the Assessor's Parcel Number as mentioned;
4. Receive and file the Official Tally Sheet with the City Clerk's office.

**RESULT:** APPROVED [UNANIMOUS]  
**MOVER:** Ulises Cabrera, Council Member  
**SECONDER:** Ed Delgado, Council Member  
**AYES:** Ed Delgado, Dr. Yxstian A. Gutierrez, Ulises Cabrera  
**ABSENT:** David Marquez

- F.2. INTRODUCE AND CONDUCT THE FIRST READING OF AN ORDINANCE AMENDING VARIOUS SECTIONS OF TITLE 9 PLANNING AND ZONING INCLUDING CHAPTER 9.02 PERMITS AND APPROVALS, CHAPTER 9.03 RESIDENTIAL DISTRICTS, CHAPTER 9.05 INDUSTRIAL DISTRICTS, CHAPTER 9.07 SPECIAL DISTRICTS, CHAPTER 9.08 GENERAL DEVELOPMENT STANDARDS, CHAPTER 9.09 SPECIFIC USE DEVELOPMENT STANDARDS, CHAPTER 9.11 PARKING, PEDESTRIAN AND LOADING REQUIREMENTS, CHAPTER 9.14 LAND DIVISIONS, CHAPTER 9.15 DEFINITIONS, CHAPTER 9.16 DESIGN GUIDELINES, AND CHAPTER 9.17 LANDSCAPE AND WATER EFFICIENCY REQUIREMENTS (ORD. NO. 984) (Report of: Community Development)

Community Development Director Mancha provided the staff report.

Council Member Cabrera stated as follows:

1. Announced his support for the incorporation of LEED silver certification or equivalent requirements to industrial projects over 50,000 sq. ft.
2. Commended staff for the inclusion of security plans of future commercial/ shopping centers.
3. Commended Caltrans clean-up efforts.

**Recommendations: That the City Council:**

1. Introduce and conduct the first reading of Ordinance No. 984 amending Sections 9.02.200, 9.02.230, 9.03.040, 9.03.050, 9.05.040, 9.07.080, 9.08.150, 9.08.260, 9.08.270, 9.08.280, 9.09.130, 9.11.040, 9.14.050, 9.15.030, 9.16.150, and 9.17.040 to Title 9 of the City of Moreno Valley Municipal Code to provide updates that comply with State requirements related to housing and housing production, streamline Code requirements to provide flexibility and clarity regarding existing requirements, and to streamline certain processes, and provide for other minor clarifications and clean-up items; and
2. Schedule the second reading and adoption of Ordinance No. 984 for the next regular Council meeting.

**RESULT:** APPROVED [UNANIMOUS]  
**MOVER:** Ed Delgado, Council Member  
**SECONDER:** Ulises Cabrera, Council Member  
**AYES:** Ed Delgado, Dr. Yxstian A. Gutierrez, Ulises Cabrera  
**ABSENT:** David Marquez

**G. GENERAL BUSINESS - NONE****H. ITEMS REMOVED FROM CONSENT CALENDARS FOR DISCUSSION OR SEPARATE ACTION – NONE****I. REPORTS****I.1. CITY COUNCIL REPORTS – NONE****I.2. CITY MANAGER'S REPORT**

**CLOSING COMMENTS AND/OR REPORTS OF THE CITY COUNCIL, COMMUNITY SERVICES DISTRICT, CITY AS SUCCESSOR AGENCY FOR THE COMMUNITY REDEVELOPMENT AGENCY, HOUSING AUTHORITY, PUBLIC FINANCING AUTHORITY, AND THE BOARD OF LIBRARY TRUSTEES.**

Council Member Cabrera

1. Wished Everyone a Happy New Year.
2. Responded to Jeff Banuelos, explained his December 21, 2021 Council Meeting absence was due in part on a family emergency.
3. Recounted the difficulties and successes of 2021.
4. Commended Dr. Cooper of Unity of The Faith Christian Outreach Ministries Inc. for the December toy drive, and Christmas tree giveaway.
5. Commended non-profit organization Power Speaks Louder, led by Britney Hunter for their toy giveaway, and applauded their weekly food giveaways.
6. Enjoyed pairing up with Station 58 and Fire Explores for the annual Spark of Love event.
7. Thanked Trendy Chef, Steven Moore, for conducting three free cooking classes to Moreno Valley youths.
8. Announced that the LULAC state chapter has incorporated Moreno Valley as a local chapter.
9. Recounted getting married and having his first child in 2021.

Council Member Delgado

1. Hoped that everyone had a Merry Christmas and Happy New Year.
2. Announced creating a video which highlights various Moreno Valley departments, including the Animal Shelter, and the BERC.
3. Announced that City Manager Mike Lee launched the donkey poop clean-up program on December 15.
4. Recounted the Spark of Love Event at Fire Station 58.
5. Thanked staff for the shopping center clean up that took place in District 2.
6. Toured the City Yard facility, expressed pride of the various City programs such as Graffiti Removal, Illegal Dumping, Street Stripping, and tree trimming.
7. Enjoyed visiting each crossing guard to thank them for the important work they do.
8. Announced his upcoming meetings with DonkeyLand, and Caltrans; announced the cancellation of Coffee with Ed.
9. Encouraged everyone to be kind in 2022.

Mayor Gutierrez

1. Wished everyone a Happy Holiday and New Year.
2. Recognized the Holiday Home Lighting Display Contest Winners.
3. Highlighted 2021 accomplishments: Public Works for filling nearly 5,000 potholes, passing of the historic budget, fifty-million dollars for road improvements, the We've Got You Covered Program, the MoVal Rescue Programs, the Amphitheatre, Mayor's Telephone Townhall, and the BERC for helping 16,000 job seekers in 2021.

**ADJOURNMENT**

There being no further business to come before the City Council, Mayor Gutierrez adjourned the meeting at 7:00 p.m. in the Memory of Mayor Pro Tem Baca.

## Report to City Council

---

**TO:** Mayor and City Council

**FROM:** Pat Jacquez-Nares, City Clerk

**AGENDA DATE:** January 18, 2022

**TITLE:** COUNCIL DISCRETIONARY EXPENDITURE REPORTS FOR FISCAL YEAR 2021/2022 FROM JULY 1, 2021 THROUGH NOVEMBER 30, 2021

---

### **RECOMMENDED ACTION**

#### **Recommendation:**

1. Receive and file the Fiscal Year 2021/2022 Council Discretionary Expenditure Report for July 1, 2021 through November 30, 2021.

### **SUMMARY**

This staff report is prepared at the request of the City Council to provide transparency with respect to the expenditure of City funds from City Council Discretionary Expenditure Accounts. These reports are for each Council Member's year to date expenditures for Fiscal Year 2021/2022, for July 1, 2021 through November 30, 2021. Each Council District receives an annual budget allocation of \$3,000 and the Mayor receives an annual budget allocation of \$6,000.

With the adoption of the current fiscal year budget and pursuant to Resolution No. 2021-31, unused monies from Fiscal Year 2020/2021 has been carried over to the current Fiscal Year as approved by the City Manager. The Discretionary Expenditure Reports will reflect the amended budget amount in a future period.

The expenditure reports are included routinely in the City Council agenda as an additional means of distributing reports on activities to the Council and public. The reports are to be posted to the City's website following Council approval. The monthly reports provide unaudited information and are reconciled to the City's general ledger. Following the end of the Fiscal Year, the financial information shall be reviewed as part of the City's independent financial audit.

**NOTIFICATION**

Posting of the agenda as required by the Brown Act.

**PREPARATION OF STAFF REPORT**

Prepared By:  
Jasmin Rivera  
Management Assistant

## Report to City Council

---

**TO:** Mayor and City Council

**FROM:** Manuel A. Mancha, Community Development Director

**AGENDA DATE:** January 18, 2022

**TITLE:** SECOND READING AND ADOPTION OF ORDINANCE NO. 984, AMENDING VARIOUS SECTIONS OF TITLE 9 PLANNING AND ZONING INCLUDING CHAPTER 9.02 PERMITS AND APPROVALS, CHAPTER 9.03 RESIDENTIAL DISTRICTS, CHAPTER 9.05 INDUSTRIAL DISTRICTS, CHAPTER 9.07 SPECIAL DISTRICTS, CHAPTER 9.08 GENERAL DEVELOPMENT STANDARDS, CHAPTER 9.09 SPECIFIC USE DEVELOPMENT STANDARDS, CHAPTER 9.11 PARKING, PEDESTRIAN AND LOADING REQUIREMENTS, CHAPTER 9.14 LAND DIVISIONS, CHAPTER 9.15 DEFINITIONS, CHAPTER 9.16 DESIGN GUIDELINES, AND CHAPTER 9.17 LANDSCAPE AND WATER EFFICIENCY REQUIREMENTS.

---

### **RECOMMENDED ACTION**

#### **Recommendation:**

Staff recommends that the City Council conduct the second reading by title only and adopt Ordinance No. 984.

### **SUMMARY**

This report recommends adoption of Ordinance No 984, introduced at the City Council meeting of January 4, 2022, approving amendments to Title 9 "Planning and Zoning."

### **DISCUSSION**

This item is the second reading of the Ordinance amending various sections of Municipal Code Title 9 (Planning and Zoning) of the Moreno Valley Municipal Code that address the following matters:

- Updates to comply with new State requirements related to housing and increasing housing production, such as adopting a comprehensive update of standards for Accessory Dwelling Units and Density Bonus requirements.
- Amendments to streamline requirements to provide flexibility and clarity regarding existing requirements and to streamline certain processes.
- Other minor clarifications and clean-up items.

### **ALTERNATIVES**

1. Conduct the second reading by title only and adopt Ordinance No. 984. Staff recommends this alternative.
2. Provide revisions to the draft Ordinance and have staff returns with the revised draft for another adoption process.
3. Provide alternate direction to staff.

### **FISCAL IMPACT**

There are no fiscal impacts anticipated from the approval and adoption of this Ordinance. However, it is anticipated that the proposed modifications will streamline business and development regulations, which would be expected to have a positive impact on business and development and thus positive fiscal impact to the City.

### **NOTIFICATION**

The agenda was posted in accordance with the Brown Act.

### **PREPARATION OF STAFF REPORT**

Prepared By:  
Chris Ormsby, AICP  
Senior Planner

Department Head Approval:  
Manuel A. Mancha  
Community Development Director

Concurred By:  
Sean Kelleher  
Planning Official

### **CITY COUNCIL GOALS**

**Positive Environment.** Create a positive environment for the development of Moreno Valley's future.

**Community Image, Neighborhood Pride and Cleanliness.** Promote a sense of community pride and foster an excellent image about our City by developing and executing programs which will result in quality development, enhanced neighborhood preservation efforts, including home rehabilitation and neighborhood restoration.

**CITY COUNCIL STRATEGIC PRIORITIES**

- 1. Economic Development
- 2. Public Safety
- 3. Library
- 4. Infrastructure
- 5. Beautification, Community Engagement, and Quality of Life
- 6. Youth Programs

**ATTACHMENTS**

on the left hand side of this document for the necessary attachment.

- 1. Ordinance 984
- 2. Exhibit A to Ordinance 984 - Density Bonus Table

**APPROVALS**

Budget Officer Approval	<u>✓ Approved</u>	1/10/22 7:03 AM
City Attorney Approval	<u>✓ Approved</u>	
City Manager Approval	<u>✓ Approved</u>	1/10/22 8:53 AM

**ORDINANCE NO. 984**

**AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, AMENDING VARIOUS SECTIONS WITHIN TITLE 9 (PLANNING AND ZONING), INCLUDING CHAPTER 9.02 (PERMITS AND APPROVALS), CHAPTER 9.03 (RESIDENTIAL DISTRICTS), CHAPTER 9.05 (INDUSTRIAL DISTRICTS), CHAPTER 9.07 (SPECIAL DISTRICTS), CHAPTER 9.08 (GENERAL DEVELOPMENT STANDARDS), CHAPTER 9.09 (SPECIFIC USE DEVELOPMENT STANDARDS), CHAPTER 9.11 (PARKING, PEDESTRIAN AND LOADING REQUIREMENTS), CHAPTER 9.14 (LAND DIVISIONS), CHAPTER 9.15 (DEFINITIONS), CHAPTER 9.16 (DESIGN GUIDELINES), AND CHAPTER 9.17 (LANDSCAPE AND WATER EFFICIENCY REQUIREMENTS)**

**WHEREAS**, the City of Moreno Valley is a General Law city organized pursuant to Article XI of the California Constitution; and

**WHEREAS**, pursuant to the authority granted the City by Article XI, Section 7 of the California Constitution, the City has the police power to adopt regulations designed to promote the public convenience or the general prosperity, as well as regulations designed to promote the public health and safety; and

**WHEREAS**, the proposed Municipal Code Amendments as set forth in this Ordinance revises various sections of Title 9 Planning and Zoning; and

**WHEREAS**, the proposed Municipal Code Amendments include revisions to certain provisions of Chapter 9.02 (Permits and Approvals), Chapter 9.03 (Residential Districts), Chapter 9.05 (Industrial Districts), Chapter 9.07 (Special Districts), Chapter 9.08 (General Development Standards), Chapter 9.09 (Specific Use Development Standards), Chapter 9.11 (Parking, Pedestrian and Loading Requirements), Chapter 9.14 (Land Divisions), Chapter 9.15 (Definitions), Chapter 9.16 (Design Guidelines), and Chapter 9.17 (Landscape and Water Efficiency Requirements); and

**WHEREAS**, the intent of the revisions is to provide some flexibility and clarity regarding existing requirements and to streamline certain entitlement procedures in order to promote economic development within the City as well as provide updates consistent with recent changes in State law, which include the updated sections related to accessory dwelling units and density bonus; and

**WHEREAS**, the proposed Municipal Code Amendments will also make it less costly for the public with respect to processing certain entitlements; and

**WHEREAS**, the proposed Municipal Code Amendments are exempt from the California Environmental Quality Act in that the proposed updates addressing accessory dwelling units qualify as a statutory exemption under Section 15282(h) of the California Environmental Quality Act Guidelines, and all of the other proposed amendments are exempt from the California Environmental Quality Act in accordance with Section 15061(b)(3) of the CEQA Guidelines in that the amendments involve general policy and procedure making, and it can be seen with certainty that there is no possibility that the amendments will have a significant effect on the environment.

**NOW THEREFORE, THE CITY COUNCIL OF THE CITY OF MORENO VALLEY DOES ORDAIN AS FOLLOWS:**

**Section 1. RECITALS**

That the above recitals are true and correct and are incorporated herein as though set forth at length herein.

**Section 2. AUTHORITY**

That this Ordinance is adopted pursuant to the authority granted by Article 11, Section 7 of the Constitution of the State of California and California Government Code Section 37100 and it is not intended to be duplicative of state law, or be preempted by state legislation.

**Section 3. AMENDMENT OF TITLE 9 (ZONING) OF THE MORENO VALLEY MUNICIPAL**

That Title 9 (Zoning) of the Municipal Code is hereby amended as follows:

**9.02.200 Public hearing and notification procedures.**

- A. Purpose. This section defines procedures for conducting public hearings for applications pursuant to this title unless otherwise specified in this title. The purpose of this section is to ensure public awareness and full and open public discussion and debate regarding proposed actions pursuant to this title.
- B. Public Hearing Date.
  - 1. Where required by state law, and unless otherwise specified in this title, a public hearing on any application shall be scheduled before the planning commission, on the earliest appropriate date.
  - 2. A public hearing upon an application shall be heard before the appropriate hearing body when:
    - a. The community development director has determined that the application complies with all applicable ordinances and requirements of the city; and
    - b. All procedures required by the city's rules and procedures for the implementation of the California Environmental Quality Act to hear a matter has been completed.
- C. Notice of Hearing. Whenever a public hearing is prescribed in this title, notice of public hearings shall be given by:
  - 1. Publication in a newspaper of general circulation within the city at least ten (10) calendar days prior to the public hearing;
  - 2. Mailing, at least ten (10) calendar days prior to the public hearing, to all owners of property within a radius of six hundred (600) feet from the exterior boundaries of the property involved in the application. For this purpose, the last known name and address of each property owner, as contained in the records of the latest equalized Riverside County assessor rolls, shall be used. If the number of owners to whom notice would be mailed or delivered pursuant to this subsection is greater than one

thousand (1,000), in lieu of mailed or delivered notice, notice may be provided by placing a display advertisement of at least one-eighth page in at least one newspaper of general circulation in the city at least ten (10) days prior to the hearing;

3. Mailing, at least ten (10) calendar days prior to the public hearing, or delivering at least ten (10) calendar days prior to the public hearing, to each local agency expected to provide water, sewer, schools, or other essential services or facilities to the project whose ability to provide those facilities and services may be significantly affected;
4. Mailing, at least ten (10) calendar days prior to the public hearing, or delivering at least ten (10) calendar days prior to the public hearing, to the owner of the subject real property or to the owner's duly authorized agent, to the project applicant and the applicant's authorized representative, if any;
5. Mailing, at least ten (10) calendar days prior to the public hearing, to any person who has filed a written request with the community development director and has provided the community development director with a self-addressed stamped envelope for that purpose;
6. For a proposed conversion of residential real property to a condominium project, community apartment project, or stock cooperative project, such notice shall also be given by mail to each tenant of the subject property, and, in addition to notice of the time and place of the public hearing, shall include notification of the tenant's right to appear and the right to be heard;
7. Whenever a hearing is held regarding a permit for a drive-through or modification of an existing drive-through facility permit, the City shall provide notice to the blind, aged, and disabled communities in order to facilitate their participation in any hearing on, or appeal of the denial of, a drive-through facility permit. This shall include a notice sent to the City Senior Center and other agencies and non-profit entities that provide services to the blind, aged, and disabled communities within the City.
8. The community development director may require that additional notice of the hearing be given in any other manner deemed necessary or desirable by the director or the director's representative to ensure that all notice requirements provided by law for the proposal are complied with;
9. The public review period for a draft EIR shall not be less than thirty (30) days nor should it be longer than sixty (60) days, except under unusual circumstances. When a draft EIR is submitted to the State Clearinghouse for review by state agencies, the public review period shall not be less than forty-five (45) days, unless a shorter period, not less than thirty (30) days, is approved by the State Clearinghouse.  
The public review period for a proposed negative declaration or mitigated negative declaration shall be not less than twenty (20) days. When a proposed negative declaration or mitigated negative declaration is submitted to the State Clearinghouse for review by state agencies, the public review period shall not be less than thirty (30) days, unless a shorter period, not less than twenty (20) days, is approved by the State Clearinghouse;
10. All notices of public hearings shall include a description of the project, the identity

of the hearing body or officer(s), shall describe the property, and the date, time and place of the scheduled hearing, a statement that application and associated documents and environmental review are available for public inspection at a specified location, and the manner in which additional information and/or testimony may be received.

- D. Conduct of Public Hearings.
  - 1. Public hearings held pursuant to the provisions of this title shall be held according to such public hearing rules as the planning commission and city council may, from time to time, adopt.
  - 2. The chairperson of the planning commission and mayor may require that witnesses be sworn.
- E. Proceeding Before the City Council. Where the authority for approval is not vested solely with the city council, the decision of the planning commission is considered final and no decision by the city council is required unless an appeal is filed or, prior to the end of the appeal period, the city council assumes jurisdiction by the request of any member thereof.

### **9.02.230 Lapse of approvals and extensions of time.**

- A. Lapse of Approvals: Projects Not Subject to the Subdivision Map Act. Approvals for projects not subject to the Subdivision Map Act shall lapse and become void thirty-six (36) months from the approval date, unless a different expiration date is specifically established as a condition of approval to the extent permitted by law. The project approval shall not lapse while a valid building permit is in effect in reliance upon the approved entitlement and substantial construction has been commenced and diligently pursued toward completion or the approved use has fully commenced. Construction and/or occupancy of each phase of a multiple phase project shall automatically extend the date of expiration for three years, but not beyond nine years from the original date of approval. Additional extensions may be granted as provided in subsection (C)(3) of this section.
- B. Lapse of Approvals: Projects Subject to the Subdivision Map Act. Approved or conditionally approved tentative parcel or tract maps, including vesting tentative parcel or tract maps, shall expire thirty-six (36) months from the approval date.
- C. Extensions of Time.
  - 1. Authority. An extension of time may be granted for projects approved under Section 9.02.030 of this chapter, where substantial construction has not yet commenced or has not been completed or where the property has not yet been occupied and the approved use fully commenced. Except as otherwise provided herein, authority for approval of an extension of time shall be vested with the community development director. The planning commission shall review an extension of time application when:
    - a. The applicant requests review by the planning commission; or
    - b. There is a proposed change to the conditions of approval which would conflict with the original conditions of approval and/or the original environmental determination for the project.
  - 2. Submittal of Extension Requests.

- a. Extension requests for projects not subject to the Subdivision Map Act shall only be considered if filed with the community development department no more than sixty (60) days prior to the expiration date of the permit or approval.
- b. A subdivider may request an extension for projects subject to the Subdivision Map Act by written application to the community development director in accordance with the provisions of the Subdivision Map Act and Chapter 9.14 of this title.
- 3. Time Limits on Extensions. One or more extensions of three years or less may be allowed, except that land divisions shall not be extended more than six years or as otherwise provided by law.
- 4. Circumstances Under Which Extensions May be Granted. An extension of time of a project may be granted if all incurred city fees have been paid and the decision-making authority can make the required findings specified in this title for approval of such a project. This shall not necessarily be construed to prohibit approval of an extension of time for a project that is nonconforming with respect to design standards. Extensions of approved land divisions shall be reviewed in accordance with Section 9.14.080(C) of this title.

**9.03.040 Residential site development standards.**

The following standards shall apply to land and permitted or conditionally permitted buildings and structures located within the herein described residential districts. The standards stated herein are not intended to prevent more restrictive private site development standards contained in the covenants, conditions and restrictions or other private consensual restrictions imposed on any property or dwelling unit. However, in no case shall private deed or other property restrictions be applied or recognized so as to permit a lesser standard than the minimum standards established in this title or to otherwise revise the standards established by this title.

**A. Rural Residential Requirements.**

- 1. Slope-Density-Natural Area Relationship. The maximum density (du/ac) and the minimum percent of a site to remain in a natural state shall be determined by a slope analysis applied to the Slope-Density-Natural Area Table, as defined below.
  - a. Slope-Density-Natural Area Table 9.03.040-4.

Slope Class	Allowable Density (DU/Acre)	Amount of Open Space Required
Greater than 25%	0.05 (1 du/20 ac)	60%
15.1% to 25%	0.10 (1 du/10 ac)	50%
10% to 15%	0.20 (1 du/5 ac)	35%
Less than 10%	0.40 (1 du/2.5 ac)	n/a

- b. Slope analysis calculations and mapping shall be provided by the applicant as described under subsection C of this section. The slope analysis shall be certified by a qualified civil engineer or licensed surveyor.
- c. The total number of dwelling units permitted within a project area shall be the sum of the allowable dwelling units within each slope class. For example, if ten

(10) acres of the project falls within the ten (10) to fifteen (15) percent slope class and five acres falls within the 15.1 percent to twenty-five (25) percent slope class, then the total permitted yield shall be two dwelling units (10 ac x 0.10 du/ac plus 5 ac x 0.20 du/ac).

- 2. Minimum Lot Size. Minimum lot size shall be one dwelling unit per 2.5 acres within a slope category of ten (10) percent or less unless determined to be reduced by an approved slope analysis. Based on the outcome of a slope analysis, minimum lot size within the rural residential district may be reduced to twenty thousand (20,000) square feet, or the minimum lot size of the adjacent zone, whichever is greater, if clustered on slopes of less than ten (10) percent and the lots are part of a project that preserves the steeper slope classes as natural open space by dedication to an appropriate governmental entity, open space easement, transfer of development rights or other means approved by the city. The ongoing maintenance of such open space areas shall be ensured through a mechanism approved by the city.
- 3. Subdivision Design and Future Land Divisions.
  - a. Subdivisions shall be compatible with the surrounding development pattern. A subdivision shall be considered compatible if the lots created along the outside boundary of the project are no smaller than the average lot size within three hundred (300) feet of the project boundary. Parcels greater than five acres in area shall be excluded from the calculations when determining the average lot size within three hundred (300) feet of the project boundary.
  - b. Subdivisions shall be designed in such a way as to transfer development density to the lower slope classes and preserve the steeper slopes for very low density and/or open space. Subdivisions created in this way are prohibited from further division so as not to circumvent the density transfer and the purpose of the district. This restriction shall be binding on the subdivider and subsequent land owners. Therefore, this restriction shall be secured by development agreement or other type of recorded deed restriction approved by the city.
- 4. Building Height. Dwellings and other accessory structures shall not exceed thirty (30) feet in overall height, provided that on slopes of less than ten (10) percent, the overall height shall not exceed thirty-five (35) feet.
- 5. Setbacks and Other Site Development Criteria. Front, side and rear setbacks and other site development standards not specifically referenced in this section shall be subject to the following standards:

Lot Size	Standards
Under 40,000 s.f.	R2 district standards
40,000 s.f. or greater	R1 district standards

- 6. Grading within the rural residential district shall be performed as described under the hillside residential requirements, subsection (B)(6) of this section.
- B. Hillside Residential Requirements.
- 1. Slope-Density-Natural Area Relationship. The maximum density (du/ac) and the percent of a site to remain in a natural state shall be determined by a slope analysis applied to the Slope-Density-Natural Area Table, as defined below.

Attachment: Ordinance 984 [Revision 1] (5666 : SECOND READING AND ADOPTION OF ORDINANCE NO. 984)

a. Slope-Density-Natural Area Table 9.03.040-5.

Slope Class	Allowable Density (DU/Acre)	Minimum Amount of Open Space Required
Greater than 25%	0.10 (1 du/10 ac)	60%
15.1% to 25%	0.25 (1 du/4 ac)	50%
10% to 15%	0.50 (1 du/2 ac)	35%
Less than 10%	1.00 (1 du/ac)	n/a

- b. Slope analysis calculations and mapping shall be provided by the applicant as described under subsection C of this section. The community development director may require the slope analysis to be certified by a qualified civil engineer or licensed surveyor.
  - c. The total number of dwelling units permitted within a project area shall be the sum of the allowable dwelling units within each slope class. For example, if ten (10) acres of the project falls within the 15.1 percent to twenty-five (25) percent slope class and five acres falls within the greater than twenty-five (25) percent slope class, then the total permitted yield shall be three dwelling units (10 ac x 0.25 du/ac plus 5 ac x 0.10 du/ac).
2. Minimum Lot Size. Minimum lot size shall be one acre within a slope category of ten (10) percent or less unless determined to be reduced by an approved slope analysis. Based on the outcome of a slope analysis, the lot size within the hillside residential district may be reduced to ten thousand (10,000) square feet or the minimum lot size of the adjacent zone, whichever is greater, if clustered on slopes of less than ten (10) percent and the lots are part of a project that preserves the steeper slope classes as natural open space by dedication to an appropriate governmental entity, open space easement, transfer of development rights or other means approved by the city. The ongoing maintenance of such open space areas shall be ensured through a mechanism approved by the city.
  3. Subdivision Design and Future Land Divisions.
    - a. Subdivisions shall be compatible with the surrounding development pattern. A subdivision shall be considered compatible if the lots created along the outside boundary of the project are no smaller than the average lot size within three hundred (300) feet of the project boundary. Parcels greater than five acres in area shall be excluded from the calculations when determining the average lot size within three hundred (300) feet of the project boundary.
    - b. Subdivisions shall be designed in such a way as to transfer development density to the lower slope classes and preserve the steeper slopes for very low density and/or open space. Subdivisions created in this way are prohibited from further division so as not to circumvent the density transfer and the purpose of the district. This restriction shall be binding on the subdivider and subsequent land owners. Therefore, this restriction shall be secured by development agreement or other type of recorded deed restriction approved by the city.
  4. Building Height. Dwellings and other accessory structures shall not exceed thirty (30) feet in overall height, provided that on slopes of less than ten (10) percent, the overall height shall not exceed thirty-five (35) feet.

Attachment: Ordinance 984 [Revision 1] (5666 : SECOND READING AND ADOPTION OF ORDINANCE NO. 984)

5. Setbacks and Other Site Development Criteria. Front, side and rear setbacks and other site development standards not specifically referenced in this section shall be subject to the following standards:

Lot Size	Standards
Less than 20,000 s.f.	R-3 district standards
20,000 s.f. to 40,000 s.f.	R-2 district standards
40,000 s.f. or greater	R-1 district standards

6. Grading of any site shall be minimized and shall conform to the provisions contained in the city of Moreno Valley design guidelines, Ch. 9.16, under Applications for hillside development, Article IV, Sections 9.16.170 through 9.16.230 of this title, and the following standards:

Slope Class	Standards
15.1—25%	Padded building sites may be allowed, but maximum use of custom foundations and split level designs shall be employed to reduce the need for large, padded building areas.
Above 25%	Mass grading is not permitted. Special hillside architectural and design techniques are expected in order to conform to the natural landform. Homes constructed on lots within this terrain shall use custom, multiple-level foundations.
For all areas	All graded areas shall be protected from wind and water erosion through acceptable slope stabilization methods such as planting, walls or jute netting.

C. Slope Calculations. For the purposes of this section, the following method will be used to determine slope.

1. "Slope" is defined as the relationship between the change in elevation (rise) of the land and the horizontal distance (run) over which that change in elevation occurs. The percent of any given slope is determined by dividing the rise by the run on the natural slope of land, multiplied by one hundred (100).
2. a. For the purpose of determining the amount and location of land falling into each slope category, the applicant shall submit to the community development department, at the time of application, a base topographic map of the subject site prepared and signed by a registered civil engineer or licensed land surveyor. Such a map shall have a scale of not less than one inch to two hundred (200) feet and a contour interval of not more than ten (10) feet.
- b. This base topographic map shall include all adjoining properties within three hundred (300) feet of the site boundaries. Slope bands in the range of less than ten (10) percent, ten (10) to fifteen (15) percent, fifteen (15) to twenty-five (25) percent, and greater than twenty-five (25) percent shall be delineated on the topographic map. The map shall be accompanied by a tabulation of the land area in each slope category specified in acres. The exact method for computing the percent slope and area by percent slope category is to be sufficiently described and presented so that a review can readily be made.
3. Slope Mapping Method.

- a. The percent slope of any particular piece of land shall be plotted on the map as described in this subsection.
  - b. In preparing a slope map, those portions of ravines, ridges and terraces of less area generally sloping at twenty-five (25) percent slope or greater, shall be regarded as part of the bordering twenty-five (25) percent slope or greater band.
- D. General Residential Requirements. The following tables sets forth minimum site development standards for residential development projects in the specified residential districts. In addition, projects must comply with the special development standards enumerated in this section, the performance standards included in Chapter 9.10 and any other applicable city ordinances, policies and standards.

**Table 9.03.040-6  
Residential Site Development Standards  
Single-Family Standards**

Attachment: Ordinance 984 [Revision 1] (5666 : SECOND READING AND ADOPTION OF ORDINANCE NO. 984)

Requirement	R1	R2	RA2	R3	R5	RS10
1. Maximum density (DUs* per net acre)	1	2	2	3	5	10
2. Minimum lot size (sq. ft. net area)	40K**	20K	20K	10K	7,200	4,500
3. Minimum lot width, in feet	150	100	100	90	70	45
Cul-de-sac/knuckle lot frontage	50	50	50	50	50	45
4. Minimum lot depth, in feet	170	120	120	100	100	85
5. Minimum front yard setback	25	25	25	25	20	20
Front-facing garages						10
Buildings other than front-facing garages						10
6. Minimum side yard setback, in feet***						
a. Interior side yard	See Note 1	See Note 1	See Note 1	See Note 1	See Note 2	See Note 3
b. Street side yard	20	20	20	15	15	10
7. Minimum rear yard setback, in feet***	40	35	35	30	15	15
8. Maximum lot coverage	25%	30%	30%	40%	40%	50%
9. Maximum building and structure height, in feet	Two stories not to exceed 35 feet.					
10. Minimum dwelling size (sq. ft.)	1500	1500	1500	1250	1250	1000
11. Minimum distance between buildings, in feet (including main DUs and accessory structures)	20	15	15	10	10	10
12. Floor area ratio						
a. One-story home	.25	.30	.30	.40	.40	.50
b. Multi-story home	.50	.60	.60	.70	.70	.75

\* The term "DUs" means dwelling units.  
 \*\* The term "K" means thousands.  
 \*\*\* See Section 9.08.030 regarding accessory structures and room additions.

**Notes to Residential Site Development Standards Table 9.03.040-6.**

1. Combined interior side yard setbacks of twenty (20) feet shall be provided with a minimum of five feet on one side.
2. Combined interior side yard setbacks of fifteen (15) feet shall be provided with a minimum of five feet on one side.
3. In the RS10 district the minimum street side setback shall be ten (10) feet. The interior side setback shall be five feet, except in the case of zero lot line developments with houses placed on an interior side lot line. When a house is placed on an interior side lot line, the other minimum side yard setback shall be ten (10) feet. Where applicable, an easement at least five feet in width shall be provided along the common lot line. The easement shall guarantee the right to use and occupy the easement for a roof overhang(s), stormwater drainage and for building maintenance and repair.
4. The minimum front yard setback from private streets within the R1, R2 and R3 districts shall be fifty-five (55) feet measured from the center line of the street. The minimum front yard setback from private streets within the R5 district shall be fifty (50) feet measured from the center line of said street.

**Table 9.03.040-7  
 Residential Site Development Standards  
 Multifamily Standards**

Attachment: Ordinance 984 [Revision 1] (5666 : SECOND READING AND ADOPTION OF ORDINANCE NO. 984)

Requirement	R10	R15	R20	R30
1. Maximum density (DUs*/net acre)	10	15	20	30
2. Minimum lot size (net area in sq. ft.)**	1 acre	1 acre	1 acre	1 acre
3. Minimum lot width in ft.	200	200	200	200
4. Minimum lot depth in ft.	175	175	175	175
5. Minimum front yard setback, in ft.	20	25	30	30
6. Minimum side yard setback, in ft.				
Interior side yard	10	10	10	10 ft. plus 2 ft. for every 5 ft. in height over 30 ft.
Street side yard	20	20	20	20
7. Minimum rear yard setback, in ft.	15	20	25	10 ft. plus 2 ft. for every 5 ft. in height over 30 ft.
8. Maximum lot coverage	40%	45%	50%	50%
9. Maximum building and structure height, in ft.	50 feet			
10. Minimum dwelling size (sq. ft.)	See Note 1			
11. Minimum distance between buildings, in ft. (including main DUs and accessory structures)	20	20	20	20
12. Floor area ratio	.75	.75	.75	1.0

\* The term "DUs" means dwelling units.

\*\* Minimum lot size only applies to newly subdivided multi-family lots; existing lots can be developed under the multi-family development standards

**E. Special Single-Family Residential Development Standards.**

1. In any residential district, front yard setbacks in subdivision developments may be reduced by twenty (20) percent provided the mean of all such setbacks in the development is not less than the minimum required for the district.
2. In the R2, RA2, R3 and R5 districts, developments of five or more dwelling units shall include front and street side yard landscaping and shall consist predominantly of plant materials, except for necessary walks, drives and fences.
3. In the RS10 district, driveways and fire hydrants shall be designed and located to maximize on-street parking opportunities in front of each residence.
4. Within the RS10 district, small lot single-family subdivisions on less than fifteen (15) gross acres shall provide landscaping and decorative walls along the street side of corner lots and at least two of the following amenities throughout the project:
  - a. Front porches;
  - b. Automatic garage door openers;
  - c. Electronic security systems.
5. Within the RS10 district, small lot single-family subdivisions on fifteen (15) gross acres or more shall include usable common open space encompassing a minimum of ten (10) percent of each development. Usable common open space does not include individually owned lots, parking areas, nor vehicular rights-of-way. Usable

Attachment: Ordinance 984 [Revision 1] (5666 : SECOND READING AND ADOPTION OF ORDINANCE NO. 984)

common open space is open space and/or recreational amenities under joint (common) ownership, including, but not necessarily limited to, landscaped areas, trails, playgrounds, tennis courts, swimming pools and recreational buildings. A homeowners' association shall be established to provide continual maintenance of the commonly owned facilities.

6. For all developments within the R5 land use district, a buffer of lots held to the development standards of the R3 land use district shall be included for all portions of a subdivision located adjacent to lower density single-family residential land use districts, including the R1, R2, RA-2, and RR zones.
  7. In all residential districts, air conditioners, heating, cooling and ventilating equipment and all other mechanical, lighting or electrical devices shall be operated so that noise levels do not exceed sixty (60) dBA (Ldn) at the property line. Additionally, such equipment, including roof-mounted installation, shall be screened from surrounding properties and streets and shall not be located in the required front yard or street side yard. All equipment shall be installed and operated in accordance with other applicable city ordinances.
- F. Special Multiple-Family Residential Development Standards.
1. In the R10, R15, R20 and R30 districts, buildings exceeding one story in height shall maintain a minimum building setback of fifty (50) feet from any single-family district. Any single-story building within the R10, R15, R20 or R30 district shall maintain a minimum setback of twenty (20) feet from any single-family district.
  2. In any residential district, front yard setbacks in subdivision developments may be reduced by twenty (20) percent provided the mean of all such setbacks in the development is not less than the minimum required for the district.
  3. In all residential districts, air conditioners, heating, cooling and ventilating equipment and all other mechanical, lighting or electrical devices shall be operated so that noise levels do not exceed sixty (60) dBA (Ldn) at the property line. Additionally, such equipment, including roof-mounted installation, shall be screened from surrounding properties and streets and shall not be located in the required front yard or street side yard. All equipment shall be installed and operated in accordance with other applicable city ordinances.
  4. In the RS10, R10, R15, R20 and R30 districts, developments of five or more dwelling units shall include front and street side yard landscaping and shall consist predominantly of plant materials, except for necessary walks, drives and fences.
  5. In the RS10, R10, R15, R20 and R30 districts, a minimum of thirty-five (35) percent of the net site area, exclusive of private patio and yard areas, shall be landscaped. Turf shall not exceed fifty (50) percent of this area. Required setback areas and outdoor recreation areas may be counted toward this minimum. Landscaping shall consist predominately of plant materials to include water efficient native plants, except for necessary walks and fences. Landscape areas shall be designed to promote water retention and allow runoff from impervious surfaces. Hardscape areas are recommended to be constructed with pervious surfaces where feasible to reduce run off.
  6. Where a multiple-family project abuts property in a single-family district, a decorative masonry wall at least six feet in height and screening landscaping within a planter of at least five-foot interior width shall be erected and maintained between

such uses and the single-family district. Decorative walls composed of block, brick, stone, stucco-treated masonry or concrete panels are acceptable. The community development director may approve alternative materials, provided that the materials are decorative and comparable to masonry walls or concrete panels in durability and ability to attenuate light and sound.

- 7. Parking for each use shall comply with the requirements of Chapter 9.11 of this title.
- 8. In the R30 District, Landscape Trees. One tree per twenty (20) linear feet of building dimension for the portions of building visible from parking lot or ROW and one tree per twenty (20) linear feet of perimeter planter areas.
- 9. In the R30 district, for a development of three acres or greater, up to sixty (60) percent of the units may be in buildings with three or four stories, fifty (50) feet maximum height subject to planning commission approval.

**Table 9.03.040-8**

<b>Designation</b>	<b>Minimum Density*</b>	<b>Maximum Density</b>
R10	8 units/acre	10 units/acre
R15	12 units/acre	15 units/acre
R20	16 units/acre	20 units/acre
R30	24 units/acre	30 units/acre

\* Eighty (80) percent of allowable density must be achieved by all multiple-family residential developments.

**G. General Multiple-Family Guidelines.**

- 1. Opposing garages or carports should be turned to avoid the monotony of alley-like parking corridors.
- 2. Parking areas should be staggered and landscaped to add visual interest, and opportunities for accent treatments.
- 3. Parking spaces within multifamily areas shall be located within two hundred fifty (250) feet of the dwellings they serve.
- 4. Multifamily parking lots shall be limited to two double aisles of cars to help reduce expanses of paving. Parking lots shall provide openings in curbs to convey surface drainage into landscape areas for water quality, retention and absorption.
- 5. Open parking areas should be clustered and treated as landscaped plazas and courts.
- 6. Landscaping shall be used around the perimeter of the lot, as well as within the lot, reducing paved area and providing for a more pedestrian oriented site.
- 7. No more than four units for a two-story structure should be served by one entry.
- 8. Each multiple-family unit shall have at least one hundred and fifty (150) square feet of private open space per downstairs unit and a minimum of one hundred (100) square feet of private open space per upstairs unit. Private open space may consist of a fenced yard area, patio or balcony. Fenced yards and patios shall have a minimum dimension of at least eight feet. Balconies shall be at least five feet deep.
- 9. Common open space at a minimum of three hundred (300) square feet per each residential dwelling in the project is required.

Attachment: Ordinance 984 [Revision 1] (5666 : SECOND READING AND ADOPTION OF ORDINANCE NO. 984)

10. Individual units should have a porch or porch-like space at the front door.
11. Trash enclosures shall be located to provide a maximum walking distance of two hundred fifty (250) feet from the units they serve.
12. Trash enclosures shall include solid roofs and be designed to be compatible with the project's architecture.
13. Trash enclosures shall not be located on dead end drive aisles, unless adequate turnaround is provided for collection vehicles.
14. There shall be at least one double-bin trash enclosure for every forty-eight (48) residential units.
15. Mail boxes should be located at various places on the site and treated to match the building's architecture, avoiding the institutional and monumental "gang box" appearance, while conforming to post office guidelines.
16. Drive aisles should be curved and should incorporate landscaping and paving treatments to reduce vehicle speed. Landscaping treatments may include pinched planters and a mix of canopy and vertical trees. Paving treatments may include interlocking paver bands or etchings across drives. Speed bumps or Botts' dots are not an acceptable alternative.
17. Freestanding structures, like gazebos or pergolas, should be located to define activity areas at pathway intersections or in secluded landscape areas.
18. Drive aisles shall be at least twenty-four (24) feet wide for two-way traffic and shall be at least twenty (20) feet wide for one-way traffic.
19. Buffer setbacks and landscaping shall be provided along all property lines. Buffers may also be appropriate within the complex, separating recreational areas from units and limiting lines of sight between balconies and into parking areas.
20. Multiple-family projects warrant special design considerations, including:
  - a. Intimate, shaded outdoor seating areas;
  - b. A network of pathways, providing interesting walking experiences;
  - c. Gentle slopes for outdoor pathways and ramps to entry doors and between floors;
  - d. Convenient and attractive access to transit, including porte cocheres, information kiosks, seating areas and water elements;
  - e. Security;
  - f. Direct ambulance access (senior housing projects);
  - g. Parking close to units;
  - h. Elevators (senior housing projects).
21. Buildings shall provide for a variety of colors and architectural features to break up the massing of buildings and provide visual interest.
22. Multifamily units shall be clustered to minimize grading and to help maintain the natural landscape.
23. Multifamily projects shall be designed for the needs of the intended residents. For example, children's needs would require open space, tot lots, handrails, and enclosed yards on ground floor units. Disabled or elderly needs would require ramps, parking close to units, minimum and gradual elevation changes and elevators.
24. Architectural features should be used to increase privacy from nearby units and common or public spaces.

25. Roof forms should be mixed and combined to vary the perception of building height, to differentiate units and to add interest to building mass. The long, straight roofline of a single gable is not permitted.
26. A diagram of the complex showing the location of the viewer and the building designations shall be positioned at each visitor entrance of a multiple-family development.
27. Buildings shall provide for a variety of colors and architectural features to break up the massing of buildings and provide visual interest.

### **9.03.050 Density bonus program for affordable housing.**

- A. Purpose and Intent. This section is adopted pursuant to the provisions of California Government Code Sections 65915 through 65918, as they now exist or may hereafter be amended. The purpose of adopting this section is to encourage affordable housing by providing the incentive of increased density and such other incentives provided in this chapter. The provisions of this chapter are intended to comply with California Government Code Sections 65915 through 65918. In the event that any provision of this chapter conflicts with California Government Code Sections 65915 through 65918, state law shall control over the conflicting provision.
- B. Applicability. A housing development as defined in this section and Government Code section 65915 shall be eligible for a density bonus and other incentives that are provided by State Density Bonus Law when the applicant agrees to construct low, very-low, senior or moderate income housing units or units intended to serve transitional foster youth, disabled veterans, and lower income students as specified in this Section, and State Density Bonus Law.
- C. Application Requirements. A density bonus may be approved pursuant to an application for approval of a density bonus, provided the request complies with the provisions of this chapter. An application for a density bonus incentive, concession, waiver, or modifications of development standards pursuant to this Chapter shall be submitted with the first application for approval of a housing development and processed concurrently with all other applications required for the housing development. The application shall be submitted on a form prescribed by the City and shall include at least the following information:
  1. A site plan that identifies all units in the project including the location of the affordable units and the bonus units.
  2. A narrative briefly describing the housing development and shall include information on:
    - a. The number of units permitted under the General Plan;
    - b. The total number of units proposed in the project including the floor area, and the number of bedrooms and bathrooms associated with each dwelling unit. Density bonus units shall have at least the same distribution of bedrooms as the market rate units in the development. Density bonus units shall be constructed concurrently with the construction of market rate units;
    - c. Target income of affordable housing units and proposals for ensuring affordability;
    - d. The number of bonus units requested based on Section E.3 of this Chapter

3. Description of any requested incentives, concessions, waivers or modifications of development standards. For all incentives and concessions that are not included within the menu of incentives/concessions set forth in Sections G and H, the application shall include a pro forma providing evidence that the requested incentives and concessions result in identifiable, financially sufficient, and actual cost reductions. The cost of reviewing any required pro forma or other financial data submitted as part of the application in support of a request for an incentive/concession or waiver/modification of developments standard, including, but not limited to, the cost to the City of hiring a consultant to review said financial data, shall be borne by the developer. The pro forma shall include all of the following items:
    - a. The actual cost reduction achieved through the incentive;
    - b. Evidence that the cost reduction allows the applicant to provide affordable units or affordable sales prices; and
    - c. Other information requested by the Community Development Director. The Community Development Director may require any pro forma include information regarding capital costs, equity investment, debt service, projected revenues, operating expenses, and such other information as is required to evaluate the pro forma.
  4. Any such additional information in support of a request for a density bonus as may be requested by the Community Development Director.
- D. Eligibility for Bonus. A developer of a housing development containing five or more units may qualify for a density bonus and at least one other incentive as provided by this chapter if the developer does one of the following:
1. Agrees to construct and maintain at least five (5) percent of the units dedicated to very low income households;
  2. Agrees to construct and maintain at least 10 percent of the units dedicated to lower income households;
  3. Agrees to construct and maintain at least 10 percent of the units in a common interest development (as defined in Section 4100 of the California Civil Code) dedicated to moderate income households, provided that all units in the development are offered to the public for purchase;
  4. Agrees to construct and maintain a senior citizen housing development, as defined in Section 9.09.150 of this chapter, or a mobile home park that limits residency based on age requirements for housing for older persons pursuant to Section 798.76 or 799.5 of the California Civil Code;
  5. Land Donations. An applicant for a tentative subdivision map, parcel map, or other residential development approval that donates land to the City in accordance with Government Code Section 65915(g) shall be eligible for a density bonus in accordance with the terms and conditions of Government Code Section 65915(g);
  6. Includes a qualifying child care facility as described in the "Child care facility requirements" Section J of this Section in addition to providing housing as described in subsections 1 through 3 of this section;
  7. Agree to construct and maintain at least 10 percent of the units of a housing development for transitional foster youth, as defined in Section 66025.9 of the California Education Code; disabled veterans, as defined in Section 18541 of the

California Government Code; or homeless persons, as defined in the federal McKinney-Vento Homeless Assistance Act (42 U.S.C. Sec. 11301 et seq.), dedicated to very low income households;

8. Agrees to construct and maintain at least 20 percent of the units for lower income students in a student housing development dedicated for full-time students at accredited colleges pursuant to the "Student Housing" Section of this Section; or
9. Agrees to construct and maintain 100 percent of the units, including total units and density bonus units, but exclusive of a manager's unit or units, dedicated to lower income households, except that no more than 20 percent of the units, including total units and density bonus units, may be dedicated to moderate income households.
10. Religious institution affiliated housing development projects (RIAHD) may qualify for a density bonus under California Government Code section 65915. For RIAHD parking requirements, see Section 9.11.040.D.

E. Density Bonus Calculation and Allowance.

1. State Law Preemption. Pursuant to state law, the granting of a density bonus or the granting of a density bonus together with an incentive(s) shall not be interpreted, in and of itself, to require a general plan amendment, specific plan amendment, rezone, or other discretionary approvals.
2. Density Bonus Calculation. An applicant must choose a density bonus from only one applicable affordability category and may not combine categories with the exception of child care facilities or land donation, which may be combined with an affordable housing development. All density calculations resulting in fractional units will be rounded up to the next whole number.
3. Density Bonus Allowance. In calculating the number of units required for very low, lower and moderate income households, the density bonus units shall not be included. The maximum bonus allowed for a 100 percent affordable project is 80 percent, unless it is located within a half-mile of a major transit stop and then there is no limit to density. A housing development that satisfies all applicable provisions of this section shall be allowed the following applicable density bonuses:
  - a. Very Low Income per California Government Code §65915(f)(2)
  - b. Lower Income per California Government Code §65915(f)(1)
  - c. Moderate Income per California Government Code §65915(f)(4)
 The Community Development Department has on file a Density Bonus Chart consistent with the Government Code sections above.
4. Senior Citizen Housing Development. The density bonus for a senior citizen housing development is addressed in Section 9.09.150 (Senior Housing) of Chapter 9.09 (Specific Use Development Standards).
5. Child Care Facility. A project (whether a housing, commercial, or industrial project) is eligible for a density bonus for a child care facility when in compliance with Section 9.03.050 of this chapter and California Government Code Section 65917.5.
6. Conversion of Apartments to Condominiums. A project is eligible for a 25 percent density bonus for the conversion of apartments to condominiums when in compliance with California Government Code Section 65915.5.
7. Foster Youth, Disabled Veterans, and Homeless Persons. The density bonus for

a housing development for transitional foster youth, disabled veterans, or homeless persons shall be 20 percent.

- 8. Students. The density bonus for a student housing development that provides housing for students consistent with Section K of this section shall be 35 percent. Twenty percent of the units granted by the density bonus shall be used for lower income students.
- 9. One Hundred Percent Affordable. The density bonus for a 100 percent affordable housing development consistent with subsection D.9 (Eligible for Bonus) of this Section shall be 80 percent of the number of units for lower income households. Except that, if the affordable housing development is located within one-half mile of a major transit stop, maximum density requirements shall not apply.
- F. Continued Affordability. Prior to issuance of a building permit, the developer/property owner must enter into a density bonus housing agreement with the city for at least 55 years by recorded document (Government Code 65915 (c)). Such agreement shall be recorded and shall be binding on the property owner and any successors-in-interest. In addition, a density bonus project must comply with specific requirements for any existing units that are to be demolished as outlined in Section 9.03.050 (P) Additional details regarding requirements for continued affordability and the density bonus housing agreement are included in Section 9.03.050 (O).
- G. Incentives available to housing projects.  
Incentives are available to a housing developer as follows:

Number of Incentives/Concessions	Very Low Income Percentage	Lower Income Percentage	Moderate Income Percentage
1	5%	10%	10%
2	10%	17%	20%
3	15%	24%	30%
4	100% Low/Very Low/Mod (20% Moderate allowed)	100% Low/Very Low/Mod (20% Moderate allowed)	100% Low/Very Low/Mod (20% Moderate allowed)

If the project is located within one-half mile of a major transit stop, the applicant shall also receive a height increase of up to three additional stories, or 33 feet.

- H. Available Incentives/Concessions. A qualifying project may be entitled up to four incentives, depending on the percentage of affordable housing that will be included within the development.
  - 1. A concession falls within three categories (Section 65915(k)(1, 2 &3)):
    - a. Reduction in the site development standards of this Development Code (e.g., site coverage, off-street parking requirements, reduced lot dimensions, and/or setback requirements);
    - b. Approval of mixed use zoning in conjunction with the housing project if commercial, office, industrial, or other land uses will reduce the cost of the housing development and if such uses are compatible with the housing project and the existing or planned development in the area.; and/or
    - c. Other regulatory incentives or concessions proposed by the developer or the

- City that will result in identifiable and actual cost reductions.
2. Additional Incentive/Concession. The developer may receive a fifty (50) percent reduction of the development impact fee and the park land impact mitigation fee for the units affordable to very low income households and a twenty-five (25) percent reduction for those units affordable to lower income households.
- I. Parking Requirements. If an applicant qualifies for a density bonus pursuant to this chapter, reduced parking requirements are available for projects qualifying for a density bonus pursuant to this ChapterSection. The parking requirement is inclusive of accessible and guest parking for the entire housing development, but shall not include on-street parking spaces in the count towards the parking requirement. In calculating the number of parking spaces required for a development, if the total number of parking spaces is other than a whole number, the number shall be rounded up to the next whole number.
1. Except as otherwise provided in this subsection, the following parking requirements shall apply:
    - a. Zero to one bedroom: one on-site parking space.
    - b. Two to three bedrooms: one and one-half on-site parking spaces.
    - c. Four or more bedrooms: two and one-half on-site parking spaces.
  2. If the housing development includes at least 20 percent lower income units or at least 11 percent very low income units, is located within one-half mile of a major transit stop, and there is unobstructed access to the major transit stop from the development, then the parking requirement shall be reduced from one-half on-site parking space per bedroom to one-half on-site parking space per unit.
  3. If a housing development consists solely of rental units, exclusive of a manager's unit or units, with an affordable housing cost to lower income families, as provided in Section 50052.5 of the California Health and Safety Code, then no parking spaces shall be required as long as the development meets either of the following criteria:
    - a. The development is located within one-half mile of a major transit stop and there is unobstructed access to the major transit stop from the development; or
    - b. The development is a for-rent housing development for individuals who are 62 years of age or older that complies with Sections 51.2 and 51.3 of the California Civil Code and the development has either paratransit service or unobstructed access, within one-half mile, to fixed bus route service that operates at least eight times per day.
  4. If a housing development consists solely of rental units, exclusive of a manager's unit or units, with an affordable housing cost to lower income families, as provided in Section 50052.5 of the California Health and Safety Code, and the development is either a special needs housing development, as defined in Section 51312 of the California Health and Safety Code, or a supportive housing development, as defined in Section 50675.14 of the California Health and Safety Code, then no parking spaces shall be required. A development that is a special needs housing development shall have either paratransit service or unobstructed access, within one-half mile, to fixed bus route service that operates at least eight times per day.

Number of Bedrooms	Required Parking Spaces per Unit* **
0 to 1 bedroom	1
2 to 3 bedrooms	1.5
4 or more bedrooms	2.5
Projects with at least 20% low-income units, or at least 11% very low-income units***	0.5
100% affordable housing projects ****	No requirement
* If the total number of spaces required results in a fractional number, it shall be rounded up to the next whole number.	
** If a residential or mixed residential/commercial development project includes the required percentage of low, very low-income, or includes a minimum 10 percent transitional foster youth, veteran, or homeless persons units, or provides for-rent housing for individuals who are 62 years of age or older, or is a special needs housing development and is located within one-half mile of a major transit stop where there is unobstructed access to a major transit stop from the development, then, upon the request of the developer, a parking ratio not to exceed 0.5 spaces per bedroom shall apply to the residential portion of the development.	
*** Must be located within one-half mile of a major transit stop, with unobstructed access to the major transit stop from the development.	
**** Must be located within one-half mile of a major transit stop, with unobstructed access to the major transit spot from the development OR for individuals 62 years of age or older and has either paratransit service or unobstructed access within one-half mile, to fixed bus route service that operates at least eight times per day.	

J. Child Care Facilities.

1. Child Care Facility Density Bonus. When an applicant proposes to construct a housing development that is eligible for a density bonus under subsection D. (Eligibility for bonus) of this Section and California Government Code Section 65917.5, and includes a child care facility that will be located on the premises or adjacent to the housing development, the City shall grant either:
  - a. An additional density bonus that is an amount of square feet of residential space that is equal to or greater than the square footage of the child care facility or
  - b. An additional incentive that contributes significantly to the economic feasibility of the construction of the child care facility.
2. Child Care Facility Requirements. The City shall require, as a condition of approving the housing development, that the following occur:
  - a. The child care facility shall remain in operation for a period of time that is as long as or longer than the period of time during which the affordable units are required to remain affordable per this chapter; and
  - b. Of the children who attend the child care facility, the children of very low income households, lower income households or families of moderate income households shall equal a percentage that is equal to or greater than the percentage of affordable units in the housing development that are required for very low, lower or families of moderate income households.
3. Child Care Facility Criteria. The City shall not be required to provide a density

Attachment: Ordinance 984 [Revision 1] (5666 : SECOND READING AND ADOPTION OF ORDINANCE NO. 984)

bonus or incentive for a child care facility if it finds, based upon substantial evidence, that the community has adequate child care facilities.

K. Student Housing.

1. Student Housing Density Bonus Requirements. In order for a student housing development to be eligible for a density bonus under subsection D.8 of this Section, the student housing development must meet the following requirements:
  - a. All units in the student housing development shall be used exclusively for undergraduate, graduate, or professional students enrolled full time at an institution of higher education accredited by the Western Association of Schools and Colleges or the Accrediting Commission for Community and Junior Colleges. The developer shall, as a condition of receiving a certificate of occupancy, provide evidence to the City that the developer has entered into an operating agreement or master lease with one or more institutions of higher education for the institution or institutions to occupy all units of the student housing development with students from that institution or institutions.
  - b. Twenty percent of the density bonus units will be used for lower income students. For purposes of this clause, "lower income students" means students who have a household income and asset level that does not exceed the level for Cal Grant A or Cal Grant B award recipients as set forth in paragraph (1) of subdivision (k) of Section 69432.7 of the California Education Code.
  - c. The rent provided in the applicable units of the development for lower income students shall be calculated at 30 percent of 65 percent of the area median income for a single-room occupancy unit type.
  - d. The development will provide priority for the applicable affordable units for lower income students experiencing homelessness.
2. Definition of Units. For purposes of calculating a density bonus granted for a student housing development, the term "unit" means one rental bed and its pro rata share of associated common area facilities.

L. General Guidelines.

1. Location of Bonus Units. As required by California Government Code Section 65915(i), the location of density bonus units within the qualifying housing development may be at the discretion of the developer, and need not be in the same area of the project where the units for the lower income households are located as long as the density bonus units are located within the same housing development.
2. Preliminary Review. A developer may submit to the Community Development Director a preliminary proposal for the development of housing pursuant to this chapter prior to the submittal of any formal application for a density bonus. Within 90 days of receipt of a written proposal, the City will notify the housing developer in writing of either: (1) any specific requirements or procedures under this chapter, which the proposal has not met; or (2) the proposal is sufficient for preparation of an application for density bonus.
3. Infrastructure and Supply Capacity. Criteria to be considered in analyzing the requested bonus will include the availability and capacity of infrastructure (water, sewer, road capacity, etc.) and water supply to accommodate the additional density.

- M. Findings for Approval for Density Bonus and/or Incentive(s).
1. Density Bonus Approval. The following finding shall be made by the Approving Authority in order to approve a density bonus request:
    - a. The density bonus request meets the requirements of this chapter.
  2. Density Bonus Approval with Incentive(s). The following findings shall be made by the Approving Authority in order to approve a density bonus and incentive(s) request:
    - a. The density bonus request meets the requirements of this chapter;
    - b. The incentive is required in order to provide affordable housing; and
    - c. Approval of the incentive(s) will have no specific adverse impacts upon health, safety, or the physical environment or on any real property that is listed in the California Register of Historical Resources and for which there is no feasible method to satisfactorily mitigate or avoid the specific adverse impact without rendering the development unaffordable to very low, low, and moderate income households.
  3. Denial of a Request for an Incentive(s). The Approving Authority shall make at least one of the following findings prior to disallowing an incentive (in the case where an accompanying density bonus may be approved, or in the case of where an incentive(s) is requested for senior housing or child care facility):
    - a. That the incentive is not necessary in order to provide for affordable housing costs as defined in subsection Q (definitions) of this Section, or for rents for the targeted units to be set as specified in subsection S (definitions) of this Section.
    - b. That the incentive would result in specific adverse impacts upon health, safety, or the physical environment or on any real property that is listed in the California Register of Historical Resources and for which there is no feasible method to satisfactorily mitigate or avoid the specific adverse impact without rendering the development unaffordable to very low, low, and moderate income households.
    - c. That the incentive would be contrary to state or federal law.
- N. Affordability Requirements.
1. The maximum monthly housing cost for density bonus units, including a monthly allowance for utilities plus rent for rental units or house payments for for-sale units, shall be set at or below the rates described below:
    - a. Density bonus units affordable to very low income households: thirty (30) percent of fifty (50) percent of the area monthly median income for Riverside/San Bernardino Counties adjusted by the number of bedrooms according to regulations of the California Department of Housing and Community Development.
    - b. Density bonus units affordable to lower income households: thirty (30) percent of sixty (60) percent of the area monthly median income for Riverside/San Bernardino Counties adjusted by the number of bedrooms according to regulations of the California Department of Housing and Community Development.
  2. The monthly allowance for utilities shall be the utility allowance calculated by the Department of Housing and Urban Development (HUD) for County Housing Authorities.
  3. The monthly house payments for for-sale units described in subsection (G)(1) of

this section includes the sum of principal and interest on a thirty (30) year fixed rate mortgage for ninety (90) percent of the sales price, loan insurance, property taxes and assessments, fire and casualty insurance, property maintenance and repairs, and the fair share cost for maintenance of amenities owned in common such as landscaping and swimming pools.

4. Housing costs, affordable sales prices, and occupancy requirements, will be governed by a deed restriction which shall take precedence over all other covenants, liens and encumbrances of the property on which the units are constructed.
- O. Affordable Housing Agreement Required.
1. General Requirements. No density bonus pursuant to Section 9.03.050 shall be granted unless and until the affordable housing developer, or designee enters into an affordable housing agreement and, if applicable, an equity sharing agreement, with the City or its designee pursuant to and in compliance with this section (Government Code Section 65915(c)). The agreements shall be in the form provided by the City, which shall contain terms and conditions mandated by, or necessary to implement, state law and this chapter. The affordable housing agreement shall be recorded prior to issuance of a building permit for a rental project or prior to final map recordation for an ownership project which includes a map. The Community Development Director is hereby authorized to enter into the agreements authorized by this section on behalf of the City upon approval of the agreements by the City Attorney for legal form and sufficiency.
  2. Low- or Very Low-Income Affordable Housing Component.
    - a. The affordable housing developer of a qualified housing development based upon the inclusion of low-income and/or very low-income affordable units shall enter into an agreement with the City to maintain the continued affordability of the affordable units for 55 years (for rental units) or 30 years (for for-sale units), or a longer period if required by the construction or mortgage financing assistance program, mortgage insurance program or rental subsidy program (Government Code Section 65915(c)(1)). The agreement shall establish specific compliance standards and specific remedies available to the City if such compliance standards are not met. The agreement shall specify the number of lower-income affordable units by number of bedrooms; standards for qualifying household incomes or other qualifying criteria, such as age; standards for maximum rents or sales prices; the person responsible for certifying tenant or owner incomes; procedures by which vacancies will be filled and units sold; required annual report and monitoring fees; restrictions imposed on lower-income affordable units on sale or transfer; and methods of enforcing such restrictions, and any other information that may be required based on the City's review.
    - b. Rental Units. Rents for the low-income and very low-income affordable units that qualified the housing development for the density bonus pursuant to Section 9.180.030 shall be set and maintained at an affordable rent (Government Code Section 65915(c)(1)). The agreement shall set rents for the lower-income density bonus units at an affordable rent as defined in California Health and Safety Code Section 50053, except for developments meeting the

- criteria of Government Code Section 65915(b)(1)(G), for which rents for all units in the development, including both base density and density bonus units, shall be as follows:
- i. The rent for at least 20 percent of the units in the development shall be set at an affordable rent, as defined in Section 50053 of the Health and Safety Code.
  - ii. The rent for the remaining units in the development shall be set at an amount consistent with the maximum rent levels for a housing development that receives an allocation of state or federal low-income housing tax credits from the California Tax Credit Allocation Committee.
- c. The agreement shall require that owner-occupied units be made available at an affordable housing cost as defined in Health and Safety Code Section 50052.5.
  - d. For-Sale Units. Owner-occupied low-income and very low-income affordable units that qualified the housing development for the density bonus pursuant to Section 9.180.030 shall be available at an affordable housing cost (Government Code Section 65915(c)(2)). The affordable housing developer of a qualified housing development based upon a very low- or low-income minimum affordable component shall enter into an equity sharing agreement with the City or the master or non-affordable housing developer. The agreement shall be between the City and the buyer, or between developer and the buyer if the developer is the seller of the unit. The City shall enforce the equity sharing agreement unless it is in conflict with the requirements of another public funding source or law (Government Code Section 65915(c)(2)). The equity sharing agreement shall include at a minimum the following provisions:
    - i. Upon resale, the seller of the unit shall retain the value of any improvements, the down payment and the seller's proportionate share of appreciation. The City shall recapture any initial subsidy, as defined in subparagraph (b), and its proportionate share of appreciation, as defined in subparagraph (c), which amount shall be used within five years for any of the purposes described in subdivision (e) of Section 33334.2 of the Health and Safety Code that promote homeownership.
    - ii. For purposes of this section, the City's initial subsidy shall be equal to the fair market value of the home at the time of initial sale minus the initial sale price to the very low-income household, plus the amount of any down payment assistance or mortgage assistance. If upon resale the market value is lower than the initial market value, the value at the time of the resale shall be used as the initial market value.
    - iii. For purposes of this subdivision, the City's proportionate share of appreciation shall be equal to the ratio of the City's initial subsidy to the fair market value of the home at the time of initial sale.
3. Moderate Income Affordable Housing Component.
    - a. The affordable housing developer of a qualified housing development based upon the inclusion of moderate-income affordable units in a common interest development shall enter into an agreement with the City ensuring that:
      - i. The initial occupants of the moderate-income affordable units that are

directly related to the receipt of the density bonus are persons and families of a moderate-income household.

- ii. The units are offered at an affordable housing cost (Government Code Section 65915(c)(2)).
  - iii. The affordable housing developer of a qualified housing development based upon a moderate-income minimum affordable component shall enter into an equity sharing agreement with the City or the master or non-affordable housing developer (Government Code Section 65915(c)(2)). The agreement shall be between the City and the buyer or between the developer and the buyer if the developer is the seller of the unit. The City shall enforce the equity sharing agreement unless it is in conflict with the requirements of another public funding source or law (Government Code Section 65915(c)(2)). The equity sharing agreement shall include at a minimum the following provisions:
    - iv. Upon resale, the seller of the unit shall retain the value of improvements, the down payment and the seller's proportionate share of appreciation. The City shall recapture any initial subsidy, as defined in subparagraph (b), and its proportionate share of appreciation, as defined in subparagraph (c), which amount shall be used within five years for any of the purposes described in Health and Safety Code Section 33334.2(e) that promote homeownership (Government Code Section 65915(c)(2)(A)).
    - v. The City's initial subsidy shall be equal to the fair market value of the unit at the time of initial sale minus the initial sale price to the moderate-income household, plus the amount of any down payment assistance or mortgage assistance. If upon resale the market value is lower than the initial market value, the value at the time of the resale shall be used as the initial market value (Government Code Section 65915(c)(2)(B)).
    - vi. The City's proportionate share of appreciation shall be equal to the ratio of the City's initial subsidy to the fair market value of the unit at the time of initial sale (Government Code Section 65915(c)(2)(C)).
- P. Ineligible Projects - Required Replacement of Affordable Units.
1. An applicant shall be ineligible for a density bonus or any other incentives or concessions under this section if:
    - a. The development is proposed on any property that includes any existing affordable rental dwelling units occupied by lower or very low income households; or
    - b. If such affordable dwelling units have been vacated or demolished in the five-year period preceding the application, and
    - c. Such affordable dwelling units have been subject to a recorded covenant, ordinance, or law that restricts rents to levels affordable to persons and families of lower or very low income. However, an applicant may establish eligibility if the proposed housing development replaces those units, and either of the following applies:
      - i. The proposed housing development, in addition to the units replaced pursuant to this paragraph, contains affordable units at the percentages set forth in subsection E.

- ii. Each unit in the development, exclusive of a manager's unit or units, is affordable to, and occupied by, either a lower or very low income household.
- 2. The number and type of required replacement units shall be determined as follows:
  - a. For a development containing any occupied dwelling units, the development must contain at least the same number of replacement dwelling units, of equivalent size and bedrooms, and must be made affordable to and occupied by persons and families in the same or a lower income category as the occupied dwelling units. For unoccupied dwelling units in the development, the replacement dwelling units shall be made affordable to and occupied by persons and families in the same or lower income category as the last household in occupancy. If the income category of the last household is unknown, it is presumed, unless proven otherwise, that the dwelling units were occupied by lower income renter households in the same proportion of lower income renter households to all renter households within Riverside/San Bernardino Counties as determined by the California Department of Housing and Community Development, and replacement dwelling units shall be provided in that same percentage.
  - b. If all of the dwelling units are vacant or have been demolished within the five years preceding the application, the development must contain at least the same number of replacement dwelling units, of equivalent size and bedrooms, as existed at the highpoint of those units in the five year period preceding the application, and must be made affordable to and occupied by persons and families in the same or a lower income category as those in occupancy at that same time. If the income categories are unknown for the highpoint, it is presumed, unless proven otherwise, that the dwelling units were occupied by very low income and low income renter households in the same proportion of very low income and low income renter households to all renter households within Riverside/San Bernardino Counties as determined by the California Department of Housing and Community Development, and replacement dwelling units shall be provided in that same percentage.
- Q. Definitions. For the purpose of this section, the following definitions shall apply unless the context clearly indicates or requires a different meaning.
  - 1. "Approving authority" is as defined in the Moreno Valley Municipal Code Title 9, Zoning Section 9.02.030.
  - 2. "Child care facility" is defined as a child day care facility other than a family day care home, including, but not limited to, infant centers, preschools, extended day care facilities, and school-age child care centers.
  - 3. "Density bonus" is defined as an increase in density over the otherwise maximum allowable residential density under the applicable general plan designation as of the date of filing of an application for density bonus with the City or, if elected by the applicant, a lesser percentage of density increase. A density bonus request shall be considered as a component of a qualified housing development.
  - 4. "Housing development" is defined as a development project for five or more residential units, including mixed-use developments, constructed within a parcel. For the purposes of this chapter, "housing development" also includes a subdivision or common interest development as defined in Section 4100 of the

Civil Code and consists of residential units or unimproved residential lots. A density bonus shall be permitted in geographic areas of the housing development other than the areas where the affordable units are located, so long as the density bonus units are located on the same parcel.

5. "Incentive" is defined as a reduction in site development standards or a modification of zoning code requirements or architectural design requirements that exceed the minimum building standards approved by the California Building Standards Commission. An incentive can be requested by the applicant for purposes of reducing the cost of development to make the project financially feasible. The term "incentive" includes the term "concession" as that term is used in California Government Code Sections 65915 through 65918.
  6. "Located within one-half mile of a major transit stop" means that any point on a proposed development, for which an applicant seeks a density bonus, other incentives or concessions, waivers or reductions of development standards, or a vehicular parking ratio pursuant to this section, is within one-half mile of any point on the property on which a major transit stop is located, including any parking lot owned by the transit authority or other local agency operating the major transit stop.
  7. "Lower income" is defined as less than 80 percent of the area median income, as defined by Section 50079.5 of the California Health and Safety Code.
  8. "Lower income unit" is defined as a unit with an affordable rent or payment that does not exceed 30 percent of 60 percent of area median income adjusted for family size appropriate for the unit.
  9. "Major transit stop" is defined as a site containing any of the following: (1) an existing rail or bus rapid transit station; (2) a ferry terminal served by either a bus or rail transit service; or (3) the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods.
  10. "Moderate income" is defined as less than 120 percent of the area median income, as defined in Section 50093 of the California Health and Safety Code.
  11. "Moderate income unit" is defined as a unit with an affordable rent or payment that does not exceed 35 percent of 120 percent of area median income adjusted for family size appropriate for the unit.
  12. "Unobstructed access to a major transit stop" means a resident is able to access the major transit stop without encountering natural or constructed impediments. "Natural or constructed impediments" includes, but is not limited to, freeways, rivers, mountains, and bodies of water, but does not include residential structures, shopping centers, parking lots, or rails used for transit.
  13. "Very low income" is defined as less than 50 percent of the area median income, as defined in Section 50105 of the California Health and Safety Code.
  14. "Very low income unit" is defined as a unit with an affordable rent or payment that does not exceed 30 percent of 50 percent of the area median income, adjusted for family size appropriate for the unit.
- R. Interpretation. If any portion of this subsection conflicts with State Density Bonus Law or other applicable state law, state law shall supersede this subsection. Any ambiguities in this section shall be interpreted to be consistent with State Density

Bonus Law.

**9.05.040 Industrial site development standards.**

**A. General Requirements.**

1. The following table sets forth minimum property development standards for all land, buildings and structures constructed within the specified industrial districts. All sites shall conform to the dimensions set forth in this section. A development or center may, however, be a combination of many parcels totaling at least the required site size, but its design must be integrated and unified.
2. In addition, projects must comply with the special requirements enumerated in subsection B, the performance standards included in Chapter 9.10 and any other applicable city ordinances, policies and programs.

**Table 9.05.040-8  
Industrial Site Development  
Minimum Standards**

<b>Requirement</b>	<b>BP/LI<sup>1</sup></b>	<b>BPX</b>	<b>I</b>
Minimum site area (in acres)	1	1	5
Minimum site width (in feet)	200	200	300
Minimum site depth (in feet)	200	200	300
Minimum front building setback area (in feet)	20	20	20
Minimum interior side building setback area (in feet)*	*(see note below)	*(see note below)	—
Minimum street side building setback area (in feet)	20	20	20
Minimum rear building setback area (in feet)*	*(see note below)	*(see note below)	—
<sup>1</sup> See Special Site Development Standards Section 9.05.040(B)(9) for unique separation requirements for structures greater than 50,000 square feet in building area.			
* Structures shall be constructed on the property line or a minimum of three feet from the property line.			

**B. Special Site Development Standards.**

1. When any industrial district abuts a property in any residential district, a minimum building setback equal to the building height, but not less than twenty (20) feet shall be required from such residential district. Further, the ten (10) feet of such setback nearest the district boundary line shall be landscaped.
2. Where off-street parking areas industrial districts are visible from any street, screening in the form of a landscaped earthen berm, shrubs, or decorative wall three feet in height shall be erected between the required landscape area and the parking area.
3. In all industrial districts, required front building setback areas shall be landscaped. The landscaping shall consist predominantly of plant materials except for necessary walks and drives.
4. Except as otherwise permitted, a street side building setback area in any industrial district shall be used only for landscaping, pedestrian walkways, driveways or off-street parking. Where off-street parking in any industrial district is located within

building setback areas, a minimum landscaped area ten (10) feet in depth shall be provided between the property line and parking area, with an additional minimum landscaped area ten (10) feet in depth required between the parking area and the building.

5. Except as otherwise permitted, required rear and interior side building setback areas in any industrial district shall be used only for landscaping, pedestrian walkways, driveways, off-street parking or loading, recreational activities or facilities, and similar accessory activities.
6. Parking for each use shall comply with the requirements of Chapter 9.11 and this title.
7. The land uses planned for each development shall be specified on the approved site plans. No use shall be established unless the development where it is located has adequate parking facilities to accommodate such use and any planned uses that share parking facilities with such use.
8. In the BP, LI and I districts, the retail sales of goods produced or warehoused in connection with a manufacturing, assembly or warehouse use may be conducted, provided that no more than fifteen (15) percent of the gross floor area of the space occupied by such use is devoted to retail sales. Any merchandise storage or display areas to which the public has access shall be considered as committed to the percentage of building area used for retail purposes.
9. In the LI district, industrial and warehouse, structures greater than fifty thousand (50,000) square feet in building area shall be separated from any residential district as determined by an air quality and noise impact analysis. The minimum separation distance for such uses shall be two hundred fifty (250) feet between the residential district and the truck court or loading area.
10. The parcelization of a business complex for marketing, financing or other purpose shall not establish separate privileges with respect to the maximum percentage of floor area specified in this section with respect to the BPX district.
11. Industrial buildings larger than 50,000 square feet shall be designed and constructed to meet the equivalent level of LEED Silver.

#### **9.07.080 Primary animal keeping overlay (PAKO).**

- A. Purpose and Intent. The primary purpose of the primary animal keeping overlay district is to maintain animal keeping and the rural character of the areas noted within the overlay district and designate a portion of the parcel for medium and large animal keeping.
- B. Applicability. The primary animal keeping overlay (PAKO) district and standards shall apply to animal keeping activities in the RR (rural residential), R1 (residential-1) and RA2 (residential agricultural-2) land use districts only within an area bounded by Nason Street to the west, Theodore Street to the east, the city limit line to the north and Cottonwood Avenue to the south.
- C. Zoning Map Designation. The primary animal keeping overlay district shall be designated on the zoning map by the symbol "PAKO."
- D. Development Standards.
  1. Lots within the designated animal keeping overlay district shall include a primary

animal keeping area (PAKA) of three thousand (3,000) square feet. The PAKA may be located in the rear, side or front yard, subject to the standards within this section. PAKAs within the front yard will only be allowed when the main habitable structure maintains a minimum setback of seventy-five (75) feet from the front property line. PAKAs on individual lots shall be grouped together and placed immediately adjacent to those located on an adjoining lot. If unique site constraints exist on a lot, the PAKA may be located on another portion of the lot as approved by the community development director.

2. No non-animal related structures shall be allowed in the PAKA. Animal-related structures located within the PAKA shall not exceed forty (40) percent of the PAKA.
3. A dedicated primary animal keeping area (PAKA) shall be recorded on each newly created lot and included within the project CC&Rs if applicable.
4. All PAKAs shall have a twenty (20) foot minimum setback from any habitable structure.
5. All PAKAs shall be located on flat usable land with a slope no greater than four percent.
6. A minimum width of fifteen (15) feet shall be provided for vehicle access on one side of the lot, with clear access to the PAKA.
7. PAKAs that are developed at a lower or higher grade than the residence pad shall include an access ramp with a slope no greater than twenty-five (25) percent, and a minimum travel width of twelve (12) feet.
8. Lots within the PAKO shall adhere to the minimum lot standards within the underlying zoning district, including planned unit developments (PUDs).
9. Developments within the PAKO shall include feeder trails on one side of the street.
10. The above standards only apply to newly created residential subdivisions within the primary animal keeping overlay (PAKO) district. Specific primary animal keeping areas (PAKAs) shall be designated on all tentative maps and recorded on all final subdivision maps.

#### **9.08.260 Shopping cart containment and retrieval requirements.**

- A. General Provisions. The provisions in this chapter are applicable to new businesses with ten (10) or more shopping carts established after the adoption of the ordinance codified in this section and to existing businesses with ten (10) or more shopping carts which have experienced a change in ownership after the adoption of the ordinance codified in this section.
  1. A change of ownership shall include all sales, transfers, leases, assignments, mergers, consolidations, or other business transactions that result sale of a corporation, limited partnership to another corporate entity. Corporate name changes or minor reorganizations do not classify as a change in ownership and are therefore exempt from code provisions within this chapter.
  2. This chapter shall not apply to any conditions expressly allowed or authorized by federal or state law or any other provision of this code.
  3. Violations of this chapter shall be treated as strict liability offenses regardless of intent.
- B. Cart Containment and Retrieval Plan. Except as otherwise provided in this chapter,

every business that provides shopping carts to customers for use on their premises shall develop, implement and comply with the provisions of a written plan approved by the city to prevent customers from removing shopping carts from the premises of such business without authorization of the owner and to provide for the retrieval of removed or abandoned shopping carts which have been removed from the premises of the retail establishment (the “plan”), and shall demonstrate compliance with all other purposes and provisions of this chapter. The plan, at a minimum, shall include the following elements:

1. Owner Information. The name of the owner; the physical address where the retail establishment is conducted; and the name, address, and telephone number(s) of the owner and all on-site managers, including any changes of such persons.
2. Cart Inventory. The number of carts to be used or located on the premises.
3. Signs Affixed to Carts. Every shopping cart made available for use by customers shall have a sign permanently affixed to it that identifies the owner of the cart; notifies the public that the unauthorized removal of the cart from the premises of the retail establishment, or the unauthorized possession of the cart, is a violation of state law, and lists a valid telephone number and address for returning the cart removed from the premises to the owner.
4. Notice to Customers. Conspicuous signs shall be placed and maintained on the premises near all customer entrances, exits and cart storage areas, warning customers that removal of shopping carts from the premises is prohibited by state law. All signs shall be in English and Spanish.
5. Prevention Measures. A description of the specific measures that the business owner will implement to prevent removal of any cart from the business premises. Permissible measures are identified in subsection G.
6. Mandatory Cart Retrieval Operations. The procedure by which the business owner or qualified cart retrieval service will search, find and return carts removed from the business premises. The cart retrieval operation must demonstrate that carts will be actively located within one mile of the business premises and respond to complaints from the public or notifications from city enforcement personnel in a manner which results in the retrieval of carts within twenty-four (24) hours of receiving the notification. If a business owner contracts with a cart retrieval service, the retrieval service must be a city licensed and approved service, and shall not place limits on daily loads or days per week to retrieve carts within the city. The owner shall provide written authorization to all retrieval personnel, which authorization shall be carried by each such person while performing cart retrieval services on behalf of the owner and shall be provided to any enforcement personnel upon request. Each vehicle used by retrieval personnel shall bear conspicuous signs on the vehicle identifying either the name of the business for which such retrieval service is being performed or, if applicable, the name of the cart retrieval service with which the business has contracted for such services.
7. Employee Training. The business owner shall implement and maintain a periodic training program for its new and existing employees designed to educate such employees concerning the requirements of the plan and the provisions of state law prohibiting the unauthorized removal of shopping carts from the premises of the retail establishment. The plan shall expressly describe the employee training

- program.
8. Daily Cart Confinement. All shopping carts located on the premises of the business (other than a business open for business twenty-four (24) hours per day) shall be collected at the end of each business day by employees of the business and shall be collectively confined in a secure manner in the cart confinement area, as designated in the approved plan, until the commencement of the next business day. All shopping carts located on the premises of any business open for business twenty-four (24) hours per day, other than carts then currently in use by a customer or patron, shall be collected by employees of the business and returned to the cart confinement area, as designated in approved plan, at least once per calendar day between the hours of nine p.m. and midnight on each day the retail establishment is open for business. The provisions of this subsection shall not apply to any shopping carts located within an enclosed building.
  9. Collaboration with Other Businesses. Two or more businesses located within the same shopping or retail center or sharing a common parking area may collaborate and submit a single plan.
  10. Additional Information. Any other information deemed appropriate by the community development director to ensure compliance with this chapter and specified within the plan application.
- C. Exemptions. The requirements of this chapter shall not apply to any business which provides a total of less than ten (10) shopping carts for use by the customers of such business.
- D. Plan Submission and Approval. Unless otherwise expressly exempt by this chapter, each new business, any existing business relocating to a different location within the city, and any business with a change in ownership to an unrelated entity shall submit a proposed plan complying with the requirements of subsection B to the community development director, and obtain approval thereof by the city, prior to the commencement of business or issuance of a certificate of occupancy. Each proposed plan shall be accompanied by a processing and inspection fee in an amount as set by resolution of the city council.
1. If approved, the plan shall be implemented no later than ninety (90) days from the date of notification to the owner of the approval. An inspection by enforcement personnel shall be made of the premises to confirm compliance at the conclusion of the ninety (90) day period.
  2. The decision of the community development director shall be made in writing and notice thereof shall be transmitted to the owner of the business by first-class mail, or by personal delivery. The owner may appeal the decision in the time and manner provided in Section 9.02.240.
- E. Standards for Denials. The community development director may deny a plan based upon any of the following grounds:
1. Implementation of the plan would violate provisions of the building, zoning, health, safety, fire, police or other municipal codes, or any county, state, or federal law that substantially affects public health, welfare or safety;
  2. The plan fails to include all the information required by this chapter;
  3. The plan is insufficient or inadequate to prevent removal of carts from the owner's premises;

4. The plan fails to address any special or unique conditions, due to the geographical location of the premises, as they relate to cart retention and prevention efforts;
  5. Implementation of the plan would violate a term or condition of another city policy or requirement of this code;
  6. The owner has knowingly made a false statement of fact, or omits a fact required to be revealed in an application for a plan, or in any addendum or report or other information required to be provided regarding the plan.
  7. If the plan is rejected as incomplete or inadequate, the community development director shall indicate the areas of incompleteness or inadequacy.
- F. Plan Modification. At any time subsequent to the approval of a plan, the owner may request a modification of a previously approved plan to address a change in circumstances, an unanticipated physical or economic impact of the plan, or a need to modify an ineffective plan. Each proposed amendment shall be accompanied by a processing fee in an amount as set by resolution of the city council.
- G. Penalties. Any required business owner, property owner, and/or business representative that fails to submit a plan, implement plan measures or implement any required modifications to the plan by the city within the time frames specified within this chapter shall be subject to penalties including, but not limited to, criminal action, civil action or other judicial or administrative proceedings.
- H. Containment Methods. All shopping carts shall be contained or controlled within the boundaries of the store premises, which refers to the lot area, maintained, managed and/or utilized by the business, which may include the building, parking lot and adjacent walkways where the business' shopping carts are permitted.
1. Bollards. Bollards or posts may be installed near exits to prevent the removal of carts from the business as long as they do not interfere with fire lanes, handicapped access, or conflict with federal, state and local laws, including municipal, building and zoning code.
  2. Wheel Locking Mechanisms. Equipping shopping carts with a locking or stopping mechanism that is used in conjunction with an electronic or magnetic barrier along the perimeter of the store premises. The wheel locking or stopping mechanism must activate when the shopping cart crosses the electronic or magnetic barrier.
  3. Coin Operated Machines. Businesses may opt to utilize coin operated machinery to charge patrons a deposit for the cart which is refunded upon return of the cart.
  4. Customer Service Representative. The business may employ customer service representatives to assist customers by delivering merchandise to patrons' vehicles and thus not allowing carts to be removed from the premises.
  5. Security. The business may employ security personnel to patrol the premises and prevent carts from being removed from the property.
  6. Other Methods. The project may use other methods of containment as long as the systems or methods are approved by the community development director and effectively will contain or control shopping carts to the store premises.
- I. Containment System Design. All structures, including bollards and wheel locking mechanisms, associated with the containment system must be harmonious and compatible with the project submittal and city design and development standards.

### 9.08.150 Screening requirements.

- A. Screening of Commercial, Industrial, Public and Quasi-Public Uses. Whenever a building or structure is constructed or enlarged on any property zoned for commercial, industrial, public or quasi-public purposes, which abuts a residential zone, appropriate screening is erected and maintained along the property line of the parcel.
  - 1. Screening consists of a decorative masonry wall sufficient for sound attenuation with a minimum height of six feet, as measured from the commercial or industrial side of the wall at the property line. If the wall is either greater or less than six feet in height on the residential side, landscaping may be required on that side of the wall, as necessary. Decorative walls of block, brick, stone, stucco-treated masonry, or concrete panels are acceptable. The community development department director may approve alternative materials, provided that the materials are comparable to masonry walls or concrete panels in durability and ability to attenuate light and sound.
- B. Screening and Storage Areas. Where permitted, all outdoor storage of materials, wares, crates, bottles or similar items necessary to, or part of a permitted use within an industrial, commercial or special district are screened from view on at least three sides by a solid, impact-resistant wall, not less than six feet in height, and on the fourth side by a similar gate, not less than five feet in height. Alternate materials or designs may be approved by the community development department director.
- C. Screening of Refuse Storage Areas. Trash/waste enclosure design standards shall be designed to be consistent with all City applicable standards, and shall:
  - 1. Be located a minimum of thirty-five (35) feet from any residential structures or as otherwise approved by the community development department director;
  - 2. Provide a minimum planter dimension of three feet on three sides of the enclosure walls, and accommodate climbing vines and screening shrubs within the planter area;
  - 3. Be constructed to include a solid roof cover;
  - 4. Be designed using materials and colors aesthetically compatible with the project.

### 9.08.270. Security Plan and On-site Security Requirements

- A. For newly constructed commercial centers larger than two (2) acres and multi-family projects of fifty-one (51) dwelling units or more, a detailed security plan shall be submitted to the City for review and approval prior to building permit.
- B. At a minimum, the security plan shall include the following to ensure security of the site.
  - 1. Security surveillance cameras and a video recording system must be installed to monitor all doors into and out of the buildings on the site, the parking lot, loading areas, and all exterior sides of the property adjacent to the public rights-of-way. The cameras and recording system must be of adequate quality, color rendition, and resolution to allow the identification of any individual present on the site.
  - 2. Professionally and centrally monitored fire, sprinkler, robbery, and burglar alarm systems must be installed as required and maintained in good working condition. The alarm system must include a private security company that is required to

respond to every alarm.

- C. Through the security plan, the City may require details regarding staffing and deployment of security for a commercial center larger than two (2) acres, and if deemed necessary for the purposes of security, the City may require that the property owner maintain the services of a private security company to monitor the buildings and parking areas based on the specific facts and circumstances associated with the site.

#### **9.08.280 Maintenance of Parkways by Property Owners.**

- A. The owner of any lot fronting any portion of a parkway, or sidewalk, or other public right-of-way or City owned property, shall maintain such parkway, sidewalk and right-of-way including all landscaping in a condition that will not interfere with the public safety and convenience and the use of the parkway, sidewalk, and right-of-way.
- B. In conjunction with all new development projects involving an entitlement on a Divided Major Arterial, Divided Arterial, Arterial, Minor Arterial or Industrial Collector, the City shall require an encroachment permit to require that developers maintain landscape areas per approved plans that are within the right-of-way, and also maintain any areas along their frontages (e.g. Caltrans right-of-way) (see Section 9.17.140 Freeway frontage) that are not required to be landscaped by the project conditions of approval. The encroachment permit shall be reviewed and approved by the City prior to issuance of a grading permit.
- C. Landscape plans required by Title 9 shall show any areas along the project frontage, and shall identify either landscaping or maintenance responsibility within the Caltrans right-of-way if the project includes frontage along Caltrans right-of-way.

#### **9.09.130 Accessory Dwelling Units (ADUs).**

- A. Purpose and Intent. The purpose of these standards is to ensure:
1. Accessory dwelling units (ADU) and Junior Accessory dwelling units (JADU) as defined herein are a permitted accessory use. This chapter establishes standards for the construction and occupancy of ADUs and JADUs. The standards herein serve to ensure ADUs and JADUs are constructed in a manner that is consistent with the requirements and allowances of State law, and contribute to a suitable living environment for all.
  2. General Plan Consistency. ADUs and JADUs are a residential use consistent with the existing general plan and zoning designation. This section furthers the goals, objectives, and policies of the General Plan Housing Element.
  3. Applicability. Under State law, the City must allow for ADUs and JADUs. However, the approval of ADUs may be based on the adequacy of water and sewer services as well as impacts on traffic flow and public safety. A local homeowner's association cannot prohibit the construction of an ADU or a JADU. This section addresses all requirements of State law regarding ADUs.
- B. Approval Authority. Approval of an ADU or JADU within a residential, mixed-use zone, or Specific Plan zone allowing residential or mixed use is considered a ministerial action and the approval authority is the community development director. Approval of

an accessory dwelling unit is subject to all applicable requirements established within this chapter as well as all building, fire, engineering, flood, water quality, environmental codes, standards, and permitting fees established by the city. Any limits on where ADUs are permitted may only be based on the adequacy of water and sewer service, and the impacts on traffic flow and public safety. If the proposal is not consistent with the requirements of State law and this section then the application does not qualify as an ADU and will be processed as a second unit either under an Administrative Plot Plan for a single-family dwelling unit, or through an Amended Plot Plan for additional multiple-family dwelling units. If a JADU has already been constructed within the primary dwelling, this will not preclude submittal of an application for an accessory dwelling unit that is consistent with all the standards of this section and State law. An application for a JADU may be submitted that meets all the requirement of this section even if an ADU already has been constructed.

C. Application and Processing.

1. Applications for the following types of ADU's that meet all the requirements of this section shall be ministerial and reviewed and processed with a building permit subject to conditions of approval.
  - a. Single-family Internal ADU within previously permitted existing space or within a new single family residence; or
  - b. Single-family attached or detached ADU; or
  - c. Junior ADU.

The building plan check application will include all of the items in D.3 below.

2. Applications for multiple family ADUs consistent with this section: Applications for multiple family ADUs either detached or within an existing permitted structure or dwelling, shall be made to the community development department and shall be permitted ministerially with approval of both an administrative plot plan and building permit. The Administrative Plot Plan will include all of the items in D.3 below.
3. With regard to evaluating whether the ADU meets the standards of this section, the building permit application or Administrative Plot Plan application, as applicable, shall include the following:
  - a. A detailed description and scaled, dimensioned floor plan of the proposed ADU, clearly illustrating the bedroom(s), bathroom(s), kitchen and other features or other proposed habitable areas;
  - b. A detailed description and scaled, dimensioned elevation of the proposed ADU, clearly illustrating the exterior entrance of the ADU;
  - c. A scaled, dimensioned site plan of the property clearly illustrating the location of all improvements on site (existing primary residence, garage, driveway(s), fences/walls, accessory structures, public right-of-way improvements, etc.) and where the ADU shall be located;
  - d. The scaled, dimensioned site plan of the property shall note the use(s) of all buildings existing on site.
4. Applications shall be permitted ministerially if there is an existing single-family or multifamily dwelling on the lot and all applicable requirements and development standards of this chapter are met and no variances are required. If the permit application to create an ADU or JADU is submitted with a permit application to create a new single-family dwelling on the lot, the City will not act on the permit

application for the ADU or JADU until the City acts on the permit application to create the new single-family dwelling. If the application has been deemed complete, the ADU or JADU shall be deemed approved if the city has not acted on the completed application within 60 days. If the applicant requests a delay, the 60-day time period shall be tolled for the period of the delay.

- D. Development Standards and Requirements. Accessory dwelling units shall comply with the following development standards as described below and as shown in Tables 1 and 2:
1. Permitted ADUs: An ADU is permitted if the lot is zoned for single-family, multifamily use, or mixed use allowing for residential use, and contains an existing, single-family structure or multi-family structure.
    - a. Existing Single-family Structure/Primary Dwelling Unit - For an existing single-family structure, one ADU and one JADU is permitted. An ADU may be detached or attached. A JADU must be contained within the space of an existing single-family structure.
    - b. Existing Multi-family Structure – Within an existing multi-family structure, up to 25 percent of the existing multi-family units may be ADUs, or one unit, whichever is greater; Two accessory dwelling units detached from the multifamily dwelling are permitted subject to a height limit of 16 feet and 4 foot rear and side setbacks.
  2. Lot Size: There is no minimum lot size required if the ADU meets the setbacks described in this section.
  3. ADU Size:
    - a. Minimum: The minimum unit size for a JADU per State law is 150 SF. There is no minimum unit size for other ADU structures provided that the ADU is in compliance with State laws including building and health and safety codes.
    - b. Maximum: For the conversion of an accessory building per State law, there is no maximum square footage, provided the ADU is within the walls of the existing accessory building. For these uses, up to 150 SF can be added for ingress/egress subject to State law.
    - c. Detached ADUs for single-family or multi-family: The maximum unit size shall be 850 SF for an efficiency or one bedroom, and 1,000 square feet for two bedrooms.
    - d. Attached ADUs: If there is an existing single-family dwelling on the site, the attached ADU shall be no larger in size than 850 SF for an efficiency or one bedroom, and no larger than 1,000 square feet for a two bedroom. For multi-family, the ADU shall be no more than 800 square feet.
    - e. Lot Coverage/Floor area ratio/Open space – If all of the following standards are satisfied for an attached ADU or detached ADU, lot coverage, floor area ratio, and open space requirements would not apply. All other development standards as described in this section would apply. (See Tables 1 and 2)
    - f. Up to 800 square foot accessory unit; and
    - g. No more than 16 feet in height; and
    - h. Four foot side, corner, and rear yard setbacks.
    - i. For all other ADUs allowed by this section, lot coverage, floor area ratio, and open space requirements of the underlying zone would apply.

4. ADU/JADU height:
    - a. Detached ADUs: For a detached primary dwelling unit on a site, the ADU is permitted to be at least 16 feet in height. Above 16 feet, the ADU may not exceed the height of the existing primary dwelling unit on the site. A detached multi-family ADU may not exceed 16 feet in height.
    - b. Attached ADUs: For JADUs and Internal ADUs, the height limits are not applicable, except the height limit of residential zone would apply if constructed in conjunction with a new single-family residence. An attached multi-family unit would only be permitted within the walls of the existing structure; therefore, a height limit would not apply.
  5. Setbacks:
    - a. Front setbacks: ADUs shall comply with the front setback requirement of the underlying zone; the front setback does not apply to an internal ADU or JADU.
    - b. Side and Rear Yard Setbacks: Setbacks for ADUs are summarized in Tables 1 and 2. Setbacks would generally not apply to JADUs or internal ADUs entirely contained within an existing dwelling unit; however, if constructed in conjunction with a new single-family residence then the setbacks for the underlying zone would apply. Setbacks would not apply to an existing accessory building converted into an ADU.
    - c. Corner (Street Side) Setbacks: The corner setback for a new detached ADU is 10 feet except that the corner setback may be as little as four feet if satisfying a 10 foot setback would not allow for construction of an ADU on the site. If the required setback is less than 10 feet, then the height of the detached ADU may not exceed 16 feet.
    - d. If constructed in conjunction with a single-family residence, the street side setbacks for the underlying zone would apply. The street side setback requirement is not applicable to a JADU, an attached ADU entirely contained within an existing dwelling unit, or an attached ADU which may be constructed at a setback equal to that of the primary dwelling, but no less than four feet.
  6. Distance between Structures: The standard for distance between structures of the underlying residential zone will apply where feasible, but if necessary, will be adjusted to accommodate an ADU that is 800 square feet or less, 16 feet in height, and with rear and side setbacks of no less than four feet. Any accommodation for the distance between structures will need to be evaluated for consistency with building codes for protection of public safety and approved by the Community Development Director or designee.
  7. The ADU shall include permanent provisions for living, sleeping, eating, cooking, and sanitation, and shall include a kitchen and bathroom.
- E. Design Requirements:
1. ADUs shall be located at the rear or the side of the existing single-family dwelling unless it is demonstrated that the only feasible location is to place the ADU in front of the single-family dwelling due to extraordinary or physical constraints of the lot.
  2. The entrance to an attached ADU shall be separate from the entrance to the primary dwelling unit and shall be located and designed in a manner as to eliminate an obvious indication of two or three units in the same structure.
  3. All exterior changes shall be architecturally compatible with existing structures with

- regard to wall covering material, wall texture, and colors. When a garage is converted, the garage door shall be removed, and framed-in wall shall include architectural details and finishes compatible with the residence(s) on the site.
4. When a garage is converted into an ADU, a landscaped area with a depth of at least two feet shall be provided for the area adjacent to where the garage door with some exceptions. If the application can demonstrate that this is infeasible, the requirement can be waived by the Community Development Director.
  5. Plans that demonstrate an unobstructed pathway extending from a street to one entrance of the ADU are desirable prior to approval of an ADU application; however, is not a mandatory requirement for an ADU.
  6. If a manufactured home is the proposed structure for the ADU, at a minimum, it should still be compatible with the primary dwelling unit on the site with regard to wall covering material, wall texture, and colors.
  7. ADUs, when converted from existing accessory buildings, are permitted without additional restrictions provided the structure has independent exterior access and side and rear setbacks sufficient for fire safety, provided that no more than 150 square feet is added for ingress/egress subject to the requirements of State law.
  8. Outside stairways serving ADUs should not be located on any building elevation facing a public street; and when unavoidable, the design of the stairway shall mute/mitigate any potential negative aesthetic impact and maintain the character of the existing single-family residence.

**Table 1: Accessory Dwelling Units - New construction and conversion of accessory buildings**

	<b>Conversion of Accessory Building per State law</b>	<b>New construction</b>	
		Detached ADU (single-family)	Detached ADU (multi-family)
<b>Required Main Use on the Lot</b>	Existing single-family dwelling	Existing or proposed single-family dwelling	Existing multi-family dwelling
<b>Minimum dwelling size</b>	None	Determined based on compliance with building and health and safety codes	Determined based on compliance with building and health and safety codes
<b>Unit size maximum</b>	None, plus 150 SF maximum addition for ingress/egress subject to all this section	No greater than 850 SF for an efficiency or one bedroom; For two or more bedrooms: No greater than 1,000 square feet.	For multi-family, no greater than 850 SF for an efficiency or one bedroom; For two or more bedrooms: No greater than 1,000 square feet.
<b>ADU Height/Story Limit</b>	None	At least 16 feet is permitted, but above 16 feet the ADU may not exceed the height of the existing primary dwelling on the site.	16 feet
<b>ADU Front setback</b>	Not applicable	Front setback standard of the underlying zone applies.	Front setback standard of the underlying zone applies.
<b>ADU Minimum Side and Rear Yard Setbacks</b>	Not applicable	If ADU is 16 feet or less in height: 4 feet for interior side yard and rear	4 feet for interior side yard and rear
		If ADU is more than 16 feet in height: Interior side and rear yard	

Attachment: Ordinance 984 [Revision 1] (5666 : SECOND READING AND ADOPTION OF ORDINANCE NO. 984)

		setbacks of the underlying zone would apply.	
<b>Corner setback (Street side)</b>	Not applicable	10 feet*	10 feet*
<b>Minimum Distance between Structures (Primary Dwelling and ADU)</b>	Not applicable	The standard of the underlying zone will apply where feasible, however, the City must still accommodate an ADU of up to at least 800 square foot or less, 16 feet in height, and with four foot rear and/or side yard setbacks	
<b>Parking</b>	None	See parking requirements under this section, Item H.	

\* The setback may be as little as four feet if necessary to accommodate an ADU that satisfies the State's requirements. If the required setback is less than 10 feet, then the height of the ADU may not be more than 16 feet.

**Table 2: Junior and Attached Accessory Dwelling Units**

	<b>Junior ADU per State law</b>	<b>Internal ADU (Proposed ADU contained within Existing SFD)</b>	<b>Attached ADU (addition to residence)</b>	<b>Attached Multiple family ADUs per State law</b>
<b>Minimum Unit size</b>	150 SF	Determined based on compliance with building and health and safety codes		
<b>Unit Size maximum</b>	500 SF	No greater than 850 SF for an efficiency or one bedroom; For two or more bedrooms: No greater than 1,000 square feet.		No more than 800 square feet.
<b>ADU/JADU height limit</b>	Not applicable, except height limit of the underlying zone would apply if constructed in conjunction with new single-family residence	Not applicable, except height limit of residential zone would apply if constructed in conjunction with new single-family residence	For an addition, height can be equal to the existing height of the single-family residence, or 16 feet whichever is greater; building height of the underlying zone would apply if constructed in conjunction with a new single-family residence	16 feet
<b>Front Setback</b>	Not applicable; JADU must be within walls of primary dwelling unit	Front setback standard of the underlying zone applies.		
<b>ADU/JADU min. Side and Rear Yard Setbacks</b>	Not applicable, setbacks of the underlying zone would apply if constructed in conjunction with new single-family residence	Not applicable, setbacks of the underlying zone would apply if constructed in conjunction with new single-family residence	An attached ADU shall meet the requirements of the underlying zone, except that if the attached ADU is 800 square feet or less and no taller than 16 feet, the side setbacks may be four feet.	4 feet for ADU portion if new building or addition
<b>Corner (Street side setback)</b>	Not applicable, except setbacks of the underlying zone would apply if constructed in conjunction with a new	Not applicable, except setbacks would apply if constructed in conjunction with new single-family residence	10 feet*	10 feet*

Attachment: Ordinance 984 [Revision 1] (5666 : SECOND READING AND ADOPTION OF ORDINANCE NO. 984)

	single-family residence		
<b>Parking</b>	Parking is not required for a JADU constructed within the existing area of the primary dwelling, but may be required if the garage is converted to a JADU subject to the requirements in H. of this section.	See parking requirements under this section, Item H.	

\* The setback may be as little as four feet if necessary to accommodate an ADU that satisfies the State's requirements. If the required setback is less than 10 feet, then the height of the ADU may not be more than 16 feet.

**F. Parking Requirements**

1. Parking requirements, consistent with Chapter 9.11 of this title:
  - a. Unless the JADU or ADU is exempt from parking requirements as described in F.2, one parking space is required per accessory dwelling unit or per bedroom of an accessory dwelling unit, whichever is less, and may be provided through tandem parking on a driveway unless specific findings are made that parking in setback areas or tandem parking is not feasible based upon specific site or regional topographical or fire and life safety conditions.
  - b. Parking is allowed in rear and side setback areas, and in a paved driveway in the front setback area if parking in the rear and side setback areas is not possible, provided that all other development standards are satisfied including minimum front yard landscaping standards.
  - c. When a garage, carport, or covered parking structure is demolished in conjunction with the construction of an accessory dwelling unit, the off-street parking spaces will not be required to be replaced.
2. Parking Exemptions. Additional parking spaces are not required for ADUs, nor for JADUs in any of the instances listed in a. thorough e. below. Further, JADUs within the living area of the primary dwelling unit are exempt from all parking requirements, but the standards in F.1 would apply if a garage is converted to a JADU.
  - a. The ADU is located within one-half mile of a public transportation stop along a prescribed route according to a fixed schedule; or
  - b. The ADU is located within one block of a car share parking spot; or
  - c. The ADU is located in a historic district listed in or formally determined eligible for listing in the National Register of Historic Places and the California Register of Historical Resources or as a city historic preservation overlay zone; or
  - d. When on-street parking permits are required but not offered to the occupant of the accessory dwelling unit; or
  - e. The accessory dwelling unit is part of the existing dwelling unit or an existing accessory structure.

G. JADU Requirements - As specified in State law, there are specific requirements that apply only to Junior Accessory Dwelling Units. The development standards for JADUs are summarized in Table 2. The standards and requirements for JADUs are as follows.

Attachment: Ordinance 984 [Revision 1] (5666 : SECOND READING AND ADOPTION OF ORDINANCE NO. 984)

1. JADUs must be constructed entirely within the walls of the primary structure and have their own entrance
  2. The JADU cannot exceed 500 square feet.
  3. JADUs are limited to one per residential lot if a single-family residence is already constructed on a lot.
  4. The owner must record a deed restriction stating that the JADU cannot be sold separately from the single-family residence.
  5. The owner shall execute a Covenant and Agreement in a form acceptable to the City to document that either the primary dwelling unit or accessory dwelling unit will be owner occupied.
  6. The JADU must include an efficiency kitchen which includes a sink, cooking appliance, counter surface, and storage cabinets that meet minimum building code standards; no gas or 220V circuits are allowed.
  7. The JADU may share a bath with the primary residence or may have its own bath.
  8. An interior entry into the single-family residence is not required.
  9. The JADU is to be considered part of the single-family residence for purposes of fire and life protection ordinances and regulations, such as sprinklers and smoke alarms.
  10. Additional parking may only be required if a garage is converted into a JADU as described in F above.
  11. Water, sewer and power connection fees may not be required.
- H. Fees – ADUs shall be subject to all development fees specified by city ordinances or resolutions for ADUs. Impact fees may not be imposed on JADUs and ADUs smaller than 750 square feet. For ADUs greater than 750 square feet, local agencies must assess an impact fee that correlates to square footage of primary residence. ADUs shall not be considered new residential uses for purpose of calculating utility connection fees or capacity charges, including water or sewer service.
- I. Enforcement – Upon application and approval, the City must delay enforcement against a qualifying substandard ADU for five years to allow the owner to address the violation, so long as the violation is not a health and safety issue, as determined by the Community Development Department.
- J. ADUs cannot be sold or otherwise conveyed separately from the primary dwelling, except if a qualified nonprofit corporation whose mission is to provide units to low-income households, completes a deed restricted sale consistent with State law.
- K. An accessory dwelling unit created pursuant to this Municipal Code section shall only be rented for a period of longer than 30 days as specified in State law.

#### **9.11.040 Off-street parking requirements.**

- A. Automobile Parking Requirements. Off-street automobile parking shall be provided in accordance with the requirements of this chapter. The following tables set forth the required off-street parking requirements and certain notations for various residential, commercial, industrial, public and quasi-public uses. Parking provided above required off-street must be constructed with permeable surfaces and/or enhanced landscaped retention and absorption areas.

**Table 9.11.040A-12  
Off-Street Parking Requirements**

Residential Uses	Requirement	Covered Parking	Notes
Single-family	2/unit	Within an enclosed garage	
Accessory dwelling unit	1/bedroom		The accessory dwelling unit shall provide a minimum of one parking space per bedroom in addition to the parking required for the main dwelling, except as exempted by state law (refer to Section 9.09.130 Accessory dwelling units). Spaces may be provided as uncovered and/or tandem parking on a driveway.
Duplex	2/unit	Within an enclosed garage	
3 or more units: Studio 1 bedroom 2 bedrooms 3+ bedrooms	1.25/unit 1.5/unit 2.0/unit 2.5/unit	1 covered/unit 1 covered/unit 1 covered/unit 2 covered/unit	Guest parking is required for all units at 0.25 spaces/unit. Guest parking is included in the minimum required parking standard.

Residential Uses	Requirement	Covered Parking	Notes
Senior housing: Studio 1 bedroom + bedrooms	1.0/unit 1.25/unit 1.5/unit	1 covered/unit 1 covered/unit 1 covered/unit	Guest parking is required for all units at 0.25 spaces/unit. Guest parking is included in the minimum required parking standard. Alternate parking requirements may be permitted subject to approval of a parking study pursuant to Section 9.11.070(A) of this chapter.
Mobile home parks	2.5/unit		Tandem spaces may be used to meet resident parking requirements.
Residential care homes	Parking requirements shall be determined by the community development director subject to an approved parking study.		
Live-work units (residential component)	2/unit	2 covered/unit	Guest parking is required for all units at 0.25 spaces/unit. Guest parking is NOT included in the minimum required parking standard and can be shared with the business aspect of the "live-work" parking standard.
Residential component of mixed-use project	See multiple-family requirements in this table	See multiple-family requirements in this table	Guest parking is required for all units at 0.25 spaces/unit. Guest parking is included in the minimum required parking standard and may be shared with the nonresidential component. Alternate parking requirements may be permitted subject to approval of a parking study pursuant to Section 9.11.070(A) of this chapter.

**Table 9.11.040B-12  
Off-Street Parking Requirements**

Commercial Uses	Requirement	Notes
General retail (unless specified elsewhere)	1/225 sq. ft. of gross floor area	
Automobile, boat, mobile home, or trailer sales, retail nurseries, or other similar outdoor commercial activities	1/2,000 sq. ft. of display area	1. Display area shall include all office, service and repair, or other related activities and areas that are accessible to the public. 2. No required off-street parking spaces shall be used for display, sales, service or repair of vehicles.
Automobile service stations, repair and service facilities	2 spaces + 4/service bay for 4 or less bays and 2/service bay for 5 or more bays	Any related retail activities shall be subject to the general retail parking standards (mini-markets, tire sales, and the like).
Automobile washing and waxing establishments: Self-serve Automated	2 spaces + 2/washing stall 10 + 1 per 2 employees	
Business and professional offices	1/250 sq. ft. of gross floor area	
Banks, savings and loans and medical/dental offices	1/225 sq. ft. of gross floor area	
Day care center	1/employee + 1/500 sq. ft. of gross floor area	Special design requirements shall apply for bus loading or parent drop-off points.

Commercial Uses	Requirement	Notes
Eating and drinking establishments	1/100 sq. ft. of gross floor area up to 6,000 sq. ft. 1/75 sq. ft. of gross floor area over 6,000 sq. ft.	A minimum of 10 spaces required for stand-alone use. No additional parking required if outdoor dining area comprises no more than 15% of the interior gross floor area of the primary food service use; if outdoor dining area is over 15%, 1 space for every 60 sq. ft. or 1 space for every 3 seats, whichever is greater.
Eating and drinking establishments within shopping centers of 25,000 sq. ft. of building area or greater	1/225 sq. ft. of gross floor area up to 15% of the shopping center gross building square footage	
Hotel/motel	1/guest room	
Kennels	2 spaces/1,000 sq. ft.	2 spaces/1,000 sq. ft. of indoor animal enclosure.
Veterinary hospital and clinic	1/200 sq. ft. of gross floor area	
Mortuaries	1/4 seats + funeral procession queue capacity for 5 cars	
Nail salons	1 space/2 work stations	
Schools, private: Business and trade College Elementary/junior high Senior high	10 spaces + 24/classroom 10 spaces + 30/classroom 10 spaces + 2/classroom 10 spaces + 10/classroom	
Storage lots and mini-warehouses	1/100 storage spaces and 2/caretaker residence	2 spaces minimum.

Commercial Uses	Requirement	Notes
Medical and health services: Convalescent and nursing homes	1/3 beds	
Homeless shelter	1/4 beds	
Hospitals	1/bed	
Residential care facilities	see Residential Uses, Section 9.11.040 Table 9.11.040A-12	
Recreation: Arcades	1/75 sq. ft. of gross floor area	
Bowling and billiards	5/alley + 2/billiard table	
Commercial stables	1/5 horse capacity for boarding on-site	
Golf course	6/hole	
Golf driving range	1/tee	
Golf, miniature	3/hole	
Health club	1/100 sq. ft. of gross floor area	
Parks—public and private	To be determined by the approval authority based upon an approved parking study.	
Skating rink	1/100 sq. ft. of gross floor area	
Tennis, handball and racquetball facilities	3/court	
Theaters	1/3 fixed seats	

**Table 9.11.040C-12  
Off-Street Parking Requirements**

Industrial Uses	Requirement	Notes
Manufacturing	1/500 sq. ft. of gross floor area	Trailer parking: parking stalls for trailers shall be provided at a ratio of 1 stall per truck loading dock door. This is in addition to the loading parking stall already provided at the dock door.
Research and development	1/350 sq. ft. of gross floor area	
Warehouse and distribution	1/1,000 sq. ft. of gross floor area for the first 20,000 sq. ft.; 1/ea. 2,000 sq. ft. of gross floor area for the second 20,000 sq. ft.; 1/ea. 4,000 sq. ft. of gross floor area for areas in excess of the initial 40,000 sq. ft.	

**Table 9.11.040D-12  
Off-Street Parking Requirements**

Public and Quasi-Public Uses	Requirement	Notes
Libraries, museums and galleries	1/300 sq. ft. of gross floor area	
Public utility facilities without an office on-site	2/employee on the largest shift + 1/company vehicle	A minimum of 2 spaces shall be required.
Auditorium, places of public assembly and places of worship	1/3 fixed seats or 1/35 sq. ft. of gross floor area of the assembly area or 1 space for every 4.5 lineal feet of benches/pews, whichever is greater	

Public and Quasi-Public Uses	Requirement	Notes
Government offices	To be determined by a parking study approved by the community development director	

B. Schedule of Accessible Parking Requirements. The following requirements for accessible parking are intended to be consistent with the state requirements. Any conflicting provisions or future changes in state or federal requirements shall preempt the standards for provision of accessible parking spaces contained in this title.

1. Accessible parking for residential uses shall be provided at a rate of one space for each dwelling unit that is designed for accessibility and occupancy by the disabled, unless an adjustment is allowed, based on a parking study approved by the community development director.
2. Accessible parking for outpatient units and facilities providing medical care and other services for persons with mobility impairments shall be provided at a rate of ten (10) percent of the total number of parking spaces provided serving such outpatient unit or facility. Accessible parking for units and facilities that specialize in treatment or services for persons with mobility impairments shall be provided at a rate of twenty (20) percent of the total number of parking spaces provided serving each such unit or facility.
3. Accessible parking spaces for other uses shall be provided at the following rates:

No. of Automobile Spaces Provided	No. of Accessible Spaces Provided
1—25	1
26—50	2
51—75	3
76—100	4
101—150	5
151—200	6
201—300	7
301—400	8
401—500	9
501—1,000	2% of total spaces
1,001 and over	20 plus 1 for each 100 spaces or fraction thereof over 1,001

4. Each accessible parking space shall be fourteen (14) feet wide, striped to provide a nine-foot wide parking area and a five-foot wide loading area (access aisle) and shall be a minimum of eighteen (18) feet in length. If two accessible spaces are located adjacent to each other, they may share the five-foot wide loading area, resulting in a width of twenty-three (23) feet for the two spaces. One in every eight handicapped spaces, but not less than one, shall be van accessible; served by a loading area not less than eight feet wide. If two van accessible parking spaces are located adjacent to each other, they may share a common eight-foot wide loading area.
5. When less than five parking spaces are provided, at least one shall be fourteen (14) feet wide, striped to provide a nine-foot parking area and a five-foot loading area. Such space shall not be required to be reserved or identified exclusively for

- use by persons with disabilities.
6. Accessible parking spaces serving a particular building shall be located on the shortest accessible route of travel from adjacent parking to an accessible entrance. In parking facilities that do not serve a particular building, accessible parking shall be located on the shortest accessible route of travel to an accessible pedestrian entrance of the parking facility. In buildings with multiple accessible entrances with adjacent parking, accessible parking spaces shall be dispersed and located closest to the accessible entrances.
  7. In each parking area, a bumper or curb shall be provided and located to prevent encroachment of cars over the required width of walkways. The space shall be so located that persons with disabilities are not compelled to wheel or walk behind cars other than their own. Pedestrian ways that are accessible to people with disabilities shall be provided from each such parking space to the related facilities, including curb cuts or ramps as needed. Ramps shall not encroach into any parking space, with the exception that ramps located at the front of accessible parking spaces may encroach into the length of such spaces when such encroachment does not limit the capability of a person with a disability to leave or enter their vehicle, thus providing equivalent facilitation. Where the building official determines that compliance with any regulation of this subsection would create an unreasonable hardship, a waiver may be granted when equivalent facilitation is provided.
  8. The slope of an accessible parking stall shall be the minimum possible and shall not exceed one-quarter inch per foot (2.083% gradient) in any direction.
  9. Notwithstanding the off-street parking requirements of subsection A of this section, the number of parking spaces that are not accessible may be reduced to the extent necessary for modification of an existing facility to comply with the requirements described in this subsection.
  10. Where provided, one passenger drop-off and loading zone shall provide an access aisle at least five feet wide and twenty (20) feet long adjacent and parallel to the vehicle pull up space. Such zones shall be located on a surface with a slope not exceeding one vertical in fifty (50) horizontal and shall be located on an accessible route of travel to the entrance of the facility. If there are curbs between the access aisle and the vehicle pull-up space, then a curb ramp shall be provided. Valet parking facilities shall provide a passenger loading zone, as described herein.
- C. Low Emitting Fuel Efficient Carpool/Vanpool Vehicle Parking. Eight percent of required parking shall be designated for any combination of low-emitting, fuel efficient and carpool/vanpool vehicles for all new nonresidential development.
- D. Parking requirements for religious institution affiliated housing development projects (RIAHD).
1. Notwithstanding any provisions of this Title or any adopted specific plan to the contrary, the parking requirements for a religious institution affiliated housing development project are subject to the provisions of Government Code section 65913.6, as amended.
  2. "Religious institution affiliated housing development project" (RIAHD) is defined as a housing development project that meets all of the following requirements:
    - a. The housing development project is located on one or more contiguous parcels

- that are each owned, entirely, whether directly or through a wholly owned company or corporation, by a religious institution.
- b. The housing development project qualifies as being near collocated religious-use parking by being on or adjacent to a parcel with religious-use parking or by being located within one-tenth of a mile of a parcel that contains religious-use parking.
  - c. Qualifies for a density bonus under Government Code section 65915.
3. Allows up to 50 percent elimination of total religious-use parking spaces available for a Religious Institution Affiliated Housing Development project.
  4. No replacement requirement of religious-use parking spaces for a Religious Institution Affiliated Housing Development project proposes to eliminate, provided the reduction does not exceed 50 percent.
  5. Allows the remaining religious-use parking spaces to count toward number of parking spaces required for the Religious Institution Affiliated Housing Development project.
  6. Prohibits the reduction in parking spaces from reducing the minimum parking standards below one space per unit unless the Religious Institution Affiliated Housing Development project is within one-half mile of a high-quality transit corridor or a major transit stop, or a car share vehicle within one block of parcel.
    - a. High-quality transit corridor means a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours.
    - b. Major transit stop includes existing rail or bus rapid transit station, ferry terminal served by either bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods.
    - c. Car sharing means a model of vehicle rental where users can rent vehicles for short periods of time and users are members that have been preapproved to drive.

#### **9.14.050 Processing of tentative maps.**

##### **A. Filing of Tentative Map.**

1. Action Following Filing. For purposes of this section, the fifty (50) day limitation for action after filing of the tentative map shall commence after certification of the environmental impact report, adoption of a negative declaration, or a determination that the project is exempt from the requirements of Division 13 (commencing with Section 21,000) of the Public Resources Code.
2. Submittal Requirements. All tentative maps shall be submitted to the community development department and shall be accompanied by the appropriate fee as set by the city council and shall comply with this chapter.
3. Additional Information. Within thirty (30) days of the date on which the map is submitted, the community development department shall determine whether any additional information is required, and the applicant or representative shall be so notified. Once the information required to complete the review of the tentative map is provided, the community development department shall accept the map as complete for filing. Additional information which may be required shall include, but

- is not limited to, data necessary to complete environmental review, flood and drainage studies, sewage disposal information, and circulation studies.
- B. Fee for Flood Protection Study.
1. A flood protection study fee as set forth by city council shall be paid upon the submittal of the tentative map if required by the city engineer.
  2. No charge shall be made for a flood protection study on a revised tentative map filed within two years of the original filing.
  3. There shall be no flood protection study fee for reverting subdivided lands to acreage.
- C. Map Distribution. Upon the submittal of the tentative map to the community development department, one copy thereof shall be forwarded to each member of the appropriate advisory agency and to each of the following:
1. City engineer/public works department;
  2. Fire department;
  3. School district(s);
  4. California Department of Transportation (if applicable);
  5. Flood control district (if applicable);
  6. Eastern municipal water district and local sewer/water servers as applicable to the property involved;
  7. Riverside County health department;
  8. Police department;
  9. Parks and recreation department;
  10. Any other public agency, as appropriate.
- D. Review by Project Review Committee.
1. All tentative maps shall be reviewed by the project review committee (PRC). The land divider and any representative shall be notified of the date and time of the meeting, at which time the land divider shall review the proposed map with the committee.
  2. Upon completion of its review, the PRC shall prepare minutes and transmit a copy thereof to the land divider and his representative.
- E. Consideration by the Advisory Agency.
1. Tract Maps and Parcel Maps. Except as described herein, a public hearing shall be held before the planning commission and its report thereon shall be made. Notice of the hearing shall be given, as provided in Section 9.02.200 of this title, and shall be subject to the major development review process contained in Section 9.02.030(B) of this title. After closing the hearing, the planning commission shall approve, conditionally approve or disapprove the proposed tentative map. The community development director may approve, conditionally approve or disapprove a tentative parcel map without a public hearing on land zoned and developed for residential, mixed use, commercial or industrial purposes. Notice shall be given, as provided in Section 9.02.200(C) of this title.
  2. Notice of the decision shall be filed with the city clerk and a copy thereof mailed to the land divider or authorized agent and any interested party requesting a copy.
- F. Consideration of Tentative Maps by the City Council. The decision of the planning commission is final eleven (11) days after the planning commission decision is required unless:

1. An appeal is filed within ten (10) days of the planning commission action;
  2. A member of the city council requests that the city council assume jurisdiction of the matter within ten (10) days of the planning commission action; or
  3. The tentative map requires prior approval of a general plan amendment, zone change, or other approval vested solely with the city council. If the planning commission decision is appealed or the city council assumes jurisdiction, a public hearing on the matter shall be held not more than thirty (30) days thereafter.
- G. Appeal of Actions of Advisory Agency.
1. Appeal of Action of the Planning Commission.
    - a. The land divider or any interested party may appeal the decision of the planning commission on a tentative subdivision or parcel map to the city council. Any such appeal shall be filed with the city clerk within ten (10) days after the decision of the planning commission. The appeal shall be filed in writing, stating the basis for the appeal, and shall be accompanied by the applicable fee, as required by the city.
    - b. Upon filing of the appeal, the city clerk shall set the matter for a public hearing on a date within thirty (30) days after the date of the filing of the appeal and shall give notice of the public hearing, as required by law. Upon conclusion of the hearing, the city council shall render its decision on the appeal within seven days, declaring its findings therefore, and it may sustain, modify, reject or overrule any actions or rulings of the planning commission.
  2. Appeal of Action of the Community Development Director.
    - a. The land divider or any interested party may appeal the decision of the community development director to the planning commission. Any such appeal shall be filed with the community development director within ten (10) days after the decision. The appeal shall be filed in writing, stating the basis for the appeal, and shall be accompanied by the applicable fee, as required by the city.
    - b. Upon filing of the appeal, the community development director shall set the matter for a public hearing on a date within thirty (30) days after the date of the filing of the appeal and shall give notice of the public hearing in the same manner, as required by law. Upon conclusion of the hearing, the planning commission shall render its decision on the appeal within seven days.
- H. Extension of Time for Processing. All time limits specified in this title for reporting and acting on tentative maps may be extended by the mutual consent of the land divider and the advisory agency or city council, but in no event may the extensions exceed the maximum applicable period permitted by state law.
- I. Failure to Receive Notice. Failure to receive notice of a hearing shall not invalidate the action taken by the advisory agency, or the city council.
- J. Waiver of Final Parcel Map. Upon request of the land divider, the city engineer may waive the requirement that a final parcel map be prepared if the city engineer finds that the proposed land division complies with the requirements as to:
1. Area;
  2. Improvement and design;
  3. Flood water drainage control;
  4. Appropriate improved public roads;
  5. Sanitary disposal facilities;

6. Water supply availability;
7. Environmental protection;
8. Adequate existing survey control; and
9. All other provisions of this and other applicable ordinances of the city and the Subdivision Map Act.”

### 9.15.030 Definitions.

“Abutting” means having district boundaries or lot lines in common.

“Access corridor” means a portion of the lot providing access from a street and having a minimum dimension less than the required lot width.

“Access rights” mean the right, claims, title or privilege of access, by pedestrians or vehicles, to a public road or way.

“Access road” means a graded road with such improvements and of such width, as required in Chapter 9.14 of this title, which provides access from a division of land to an existing maintained street or highway.

“Accessory building” means any subordinate building or portions of the main building, the use of which is incidental to that of the main building on the same lot or premises, and which is used exclusively by the occupants of the main building.

“Accessory dwelling unit” means an attached or a detached residential dwelling unit, which provides complete independent living facilities for one or more persons and is located on a lot with a proposed or existing primary residence. It shall include permanent provisions for living, sleeping, eating, cooking, and sanitation on the same parcel that the existing single-family or multifamily dwelling is or will be situated.

“Accessory structure” means a structure that is accessory or incidental to a dwelling on the same lot.

“Accessory structure used for living purposes” means an accessory structure which is habitable space, as defined by the International Building Code.

“Accessory use” means any use customarily incidental to, related and clearly subordinate to a principal use established on the same lot or premises.

Acreage (Adjusted Net). “Adjusted net acreage” means the land area which remains after dedication of ultimate rights-of-way for: (1) exterior boundary streets; (2) flood control rights-of-way; and (3) public parks developed to meet minimum standards. Major utility easements and rights-of-way may not be counted as adjusted net acreage. Areas devoted to park land or active recreational uses may be counted as adjusted net acreage only if such public facilities are proposed over and above the minimum park land requirements.

“Active recreational uses” mean facilities occurring on level or gently sloping land to a maximum slope of ten (10) percent which are designed to provide individual or group activities of an active nature, including, but not limited to, sports fields, court games, swimming pools, children’s play areas, picnic areas, golf courses, and recreational community gardening. Active recreational uses do not include natural open space, nature study areas, open space for buffer areas, slopes greater than ten (10) percent, riding and hiking trails, scenic overlooks, water courses, drainage areas or water bodies.

“Adjoining” means district boundaries or lot lines in common.

“Advisory agency” means the city of Moreno Valley planning commission for all tentative Schedule “A,” “B,” “C,” “D,” “E,” “F,” “G,” “H” and “I” maps, and for such other purposes as the context so indicates.

“Alley” means a secondary means of access to property and is located at the rear or side of the property. Minimum right-of-way width shall be twenty (20) feet.

“Alter” means to make a change in the supporting members of a structure, such as bearing walls, columns, beams or girders, which will prolong the life of the structure. In case of a sign, “alter” means a change of all or a portion of the copy, message or sign legend or face, except on signs designed to advertise changing messages.

“Ambient level” means the general noise level one finds in a certain area at a given time.

Animal (Exotic or Wild). “Exotic” or “wild animals” mean and include lions, tigers, bears, simians, cougars, badgers, wolves, coyotes, foxes, lynx, peacock, monkey or any venomous or otherwise dangerous reptile or any other dangerous or carnivorous wild animal, or any wild animal, as defined in Section 2116 of the Fish and Game Code of the state of California, or any other animal determined to be dangerous or potentially dangerous by the city community development director.

Animal (Large). “Large animals” mean and include equine, bovine and similar sized animals, as determined by the city community development director.

Animal (Medium). “Medium animals” mean and include sheep, goats and similar sized animals, as determined by the city community development director.

Animal (Small). “Small animals” mean and include rabbits, chinchillas, guinea pigs and other similar sized animals, as determined by the city community development director.

“Antenna” means a device used to transmit and/or receive radio or electromagnetic waves between terrestrially and orbitally based structures.

Antenna, Commercial. “Commercial antenna” means an antenna or satellite dish used in conjunction with a business, commercial enterprise, trade, calling, vocation, profession, occupation, or other means of livelihood, whether or not carried on for gain or profit, including, but not limited to, public utilities, wireless telephone communications or private-owned or publicly supported AM or FM radio stations, cable television operations or television broadcast stations, but excluding standard television receive only antennas.

Antenna, Noncommercial. “Noncommercial antenna” means an antenna or satellite dish not used in conjunction with a business, or commercial enterprise.

Antenna, Satellite Dish. “Satellite dish antenna” means a transmitting and receiving antenna, typically parabolic, disc or double convex shaped with an active element external to the disc that communicates by line of sight with another similar antenna or an orbiting satellite.

“Apartment” means one or more rooms with private bath and kitchen facilities comprising an independent self-contained dwelling unit in a building containing more than two dwelling units.

“Applicant” means an owner applying for a city permit pursuant to this title.

“Approved access” means one of the following:

1. A dedicated right-of-way;
2. An offer to dedicate to the city of Moreno Valley, or an offer to dedicate to the county of Riverside for which the city of Moreno Valley is a successor in interest, a width as established by the circulation element of the Moreno Valley general plan or any adopted specific plan or highway right-of-way standards and a strip of land at least twelve

(12) feet in width which expressly grants to the owner of the subdivision or development and any successors in interest the right to use the easement without limit as to the quantity of vehicular traffic from each lot or use created by the owners or successors in interest to improved roadways in the city road system, both of which abut or connect to a publicly maintained roadway or connect to existing traveled roads where a prescriptive right by user exists for public use;

3. An offer to dedicate to the city of Moreno Valley, or an offer to dedicate to the county of Riverside for which the city of Moreno Valley is a successor in interest, or to the public in general, an easement for public road, highway and public utility purposes, of a width as established by the circulation element. The offer to dedicate to the public in general can be accepted by public use, but the easement for road construction thereon shall not become a city roadway until and unless the city council, by appropriate resolution, has caused such roadway to be accepted into the city road system; or

4. An existing traveled way where a prescriptive right by user has been established for public use by a court decree.

“Approved fire hydrant” means an appliance meeting city of Moreno Valley standards and approved by the water company and fire department having jurisdiction for use as a fire hydrant.

“Arcades” mean a place of business where more than four electronic, video or coin-operated games are operated for compensation.

“Architectural features” mean any portion of the outer surface of a structure, including, but not limited to, the kind, color and texture of the building material, the type and style of all windows, doors, lights, signs, walls, fences, awnings and canopies, screens, sculptures, decoration, roof shape and materials, and other fixtures appurtenant to a structure.

“Architectural projection” means a marquee, fireplace chimney, porch, canopy or similar projection of a building.

“Arterial” means a highway intended to serve through traffic, where access rights are restricted and intersections with other streets or highways may be limited. Minimum right-of-way width shall be one hundred (100) feet.

“Attendant parking” means parking facilities where a lot attendant parks vehicles for drivers. This term is used interchangeably with “valet parking.”

“Authorized agent” means a person bearing written authority from the property owner to act on behalf of and to bind the property owner.

“Automobile service station” or “gasoline service station” means a retail place of business engaged in supplying goods and services essential to the normal operation of automobiles, whose primary use is the dispensing of automotive fuel and motor oil.

Automotive and Light Truck Repair (Major). “Major automotive and light truck repair” means activities typically including, but not necessarily limited to, automotive and light truck repair, heavy automobile and truck repair, such as transmission and engine repair, automotive painting and body work, and the installation of major accessories.

Automotive and Light Truck Repair (Minor). “Minor automotive and light truck repair” means activities, including, but not necessarily limited to, automotive and light truck repair, the retail sale of goods and services for automotive vehicles and light trucks (less than six thousand (6,000) pounds), and the cleaning and washing of automotive vehicles. Uses typically include, but are not necessarily limited to, brake, muffler and tire shops and

automotive drive-through car washes. Heavier automobile repair such as transmission and engine repair and auto body shops shall not be included in this land use type.

“Aviary” means an outside enclosure within which small birds (excluding poultry or fowl, as defined) are kept and raised.

“Awning” means a permanent or temporary structure attached to and wholly supported by a building, and installed over or in front of openings or windows in a building, and consisting of a fixed or movable frame and a top of canvas or other similar material covering the entire space enclosed between the frame and the building.

“Banner,” “flag,” “pennant” or “balloon” means any cloth, bunting, plastic, paper or similar material used for advertising purposes attached to, pinned on, or hung from any structure, staff, pole, line, framing, vehicle or other object.

“Barrier strip” means a strip of land one foot or more in width dedicated to the city of Moreno Valley for street purposes and access control at the end of a dead end street or along the side of a part-width dedicated street or other public right-of-way.

“Bars” means an establishment serving alcoholic beverages for on-site consumption as the primary use, including bars, cocktail lounges, pubs, saloons, and taverns and in which the service of food is only incidental to the consumption of such beverages.

“Bars, with Limited Live Entertainment” means a bar or tavern that provides incidental entertainment, such as musical performances, where the performance area does not exceed seventy-five (75) square feet and customer dancing does not occur. The use shall instead be classified as a nightclub if the performance area exceeds seventy-five (75) square feet or customer dancing occurs. Live entertainment does not include a sexually oriented business.

“Base flood” means the flood having a one percent chance of being equaled or exceeded in any given year; this is sometimes referred to as a one hundred-year flood.

“Bicycle check-in parking system” means a parking system wherein the bicycle is delivered to, and left with, attendant(s) with provision for identifying the bicycle’s owner. The stored bicycles are accessible only to the attendant(s).

“Bicycle locker” means a fully enclosed space accessible only to the owner or operator of the bicycle.

“Bicycle-monitored parking” means an area for the parking of bicycles which is under constant surveillance.

“Bicycle-restricted access parking” means Class 3 facilities within a locked room or locked enclosure accessible only to the owners or operators of bicycles parked within, or Class 2 facilities within the common locked garage area(s) of a multiple-family residential development which is accessible only to residents of the units for which the garage is provided.

“Bicycle way” means an area either within or outside the right-of-way of a dedicated street where bicycle travel is the designated use.

Billboard. See “Outdoor advertising display.”

“Block” means the aggregate of lots, pedestrian passages, and rear alleys, circumscribed on all sides by streets.

“Block length” means the linear dimension of a block along one of its street frontages.

“Block perimeter” means the aggregate dimension of a block along all of its street frontages.

“Boarding or rooming house” means a building containing a dwelling unit where lodging is provided with or without meals for compensation. Notwithstanding this definition, no single-family residence lawfully operating pursuant to a state license under the California Health and Safety Code, that is otherwise exempt from local zoning regulations, shall be considered a boarding or rooming house for purposes of this code.

“Bridge” means the construction of or addition to a bridge identified in the circulation element of the general plan or is part of a major thoroughfare and spans a waterway, railway, freeway or canyon.

“Building façade line” means the vertical plane along a lot where the building’s front façade is actually located. See Figure 9.15.030-1 (Build-to-Zone).

“Building face” means the area of a building elevation, front, rear or side, in which a business is located.

“Building frontage” means the side of a building which contains the main entrance for pedestrian ingress and egress. If more than one main entrance exists, the one that more nearly faces or is oriented to the street of highest classification as portrayed on the current general plan of circulation shall be considered the building frontage. If all streets are of the same classification, the side of the building with the smallest lineal dimension containing a main entrance shall be considered the building frontage.

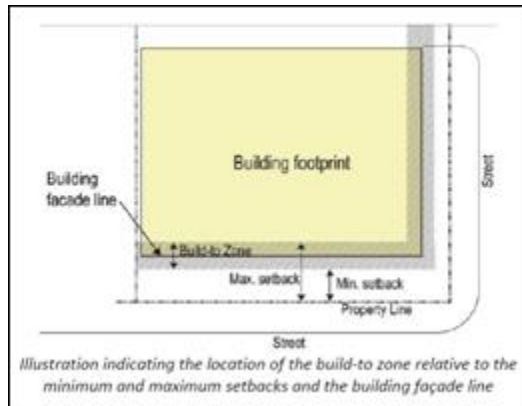

“Building height” means the vertical distance from the grade to the highest point of the coping of a flat roof or to the deck line of a mansard roof or to the highest point of the highest gable of a pitch or hip roof, but exclusive of vents, air conditioners, chimneys or other such incidental appurtenances.

“Building site” means a legally created parcel or contiguous parcels of land in single or joint ownership, which provides the area and the open spaces required by this title for location of a building or structure, exclusive of all vehicular and pedestrian rights-of-way and all other easements that prohibit the surface use of the property by the owner thereof.

“Building space” means a building or portion of a building used by one business or other user interest without direct interior connections to other business interests.

“Build-to-zone” means the area between the minimum and maximum setbacks within which the principal building’s front façade (building façade line) is to be located. See Figure 9.15.030-1 (Build-to-Zone).

**Figure 9.15.030-1  
Build-to-Zone**

Attachment: Ordinance 984 [Revision 1] (5666 : SECOND READING AND ADOPTION OF ORDINANCE NO. 984)

“Business complex” means a group of buildings and/or parcels planned or constructed as an integrated entity, with shared access and internal circulation.

“Business directory sign” means a sign located in a multitenant complex which lists each business and address located therein.

“Business identification sign” means an on-site sign which identifies the business located therein.

“Cabana” means any portable, demountable or permanent cabin, small house, room, enclosure, or other building or structure erected, constructed or placed on a mobilehome space and used in conjunction with a mobilehome. Such structure shall not be used for sleeping purposes.

“Cannabis” means all parts of the Cannabis sativa Linnaeus, Cannabis indica, or Cannabis ruderalis, whether growing or not; the seeds thereof; the resin, whether crude or purified, extracted from any part of the plant; and every compound, manufacture, salt, derivative, mixture, or preparation of the plant, its seeds, or resin. “Cannabis” also means the separated resin, whether crude or purified, obtained from cannabis. “Cannabis” does not include the mature stalks of the plant, fiber produced from the stalks, oil or cake made from the seeds of the plant, any other compound, manufacture, salt, derivative, mixture, or preparation of the mature stalks (except the resin extracted therefrom), fiber, oil, or cake, or the sterilized seed of the plant which is incapable of germination. For the purpose of this title, “cannabis” does not mean “industrial hemp” as defined by Section 11018.5 of the Health and Safety Code.

“Cannabis cultivation” means any activity involving the planting, growing, harvesting, drying, curing, grading, or trimming of cannabis.

“Cannabis dispensary” means any activity involving the retail sale of cannabis or cannabis products from a retailer.

“Cannabis distribution” means the procurement, sale, and transport of cannabis and cannabis products between licensees.

“Cannabis distribution center” means a location that provides the procurement, sale, and transport of cannabis and cannabis products between entities licensed by the state of California.

“Cannabis manufacturing” means a location that produces, prepares, propagates, or compounds cannabis or cannabis products, directly or indirectly, by extraction methods, independently by means of chemical synthesis, or by a combination of extraction and chemical synthesis, and is owned and operated by a person issued a valid commercial cannabis business permit for manufacturing from the city of Moreno Valley and, a valid state license as required for manufacturing of cannabis products.

“Cannabis microbusiness” means a location with a combination of at least three of the following four commercial cannabis activities: manufacturing, cultivation (limited to ten thousand (10,000) square feet), distribution, and dispensary.

“Cannabis testing” means a laboratory, facility, or entity that offers or performs tests of cannabis or cannabis products and that is both: (1) accredited by an accrediting body that is independent from all other persons involved in commercial cannabis activity in the state; and (2) licensed by the Bureau of Cannabis Control.

“Can sign” means an internally illuminated sign consisting of a metal cabinet and a sign face(s) made, in part, of a translucent material such as plexiglass.

“Canopy” means all areas occupied by any portion of a cannabis plant, inclusive of all vertical planes, whether contiguous or noncontiguous on any one site.

“Canopy” means a small roof or awning attached to and supported by the wall of a structure.

“Canopy or awning sign” means a sign painted, placed or installed on any awning or canopy.

“Carport” means a permanently roofed structure with not more than three enclosed sides used for means automobile shelter and storage.

Catteries.

1. “Commercial catteries” mean any building, structure, enclosure or premises whereupon, or within which five or more cats are kept or maintained primarily for financial profit for the purpose of boarding, breeding, training, marketing, hire or any other similar purpose.

2. “Noncommercial catteries” mean any building, structure, enclosure or premises whereupon, or within which, five or more cats are kept or maintained, but not primarily for financial profit.

“Child day care facility” means a facility, licensed by the state of California, which provides nonmedical care to children under eighteen (18) years of age in need of personal services, supervision or assistance essential for sustaining the activities of daily living or for the protection of the individual on less than a twenty-four (24) hour basis. Child day care facility includes day care centers and family day care homes.

“City” means the city of Moreno Valley.

“City council” means the city council of the city of Moreno Valley.

“City standards” mean standard drawings as prepared or adopted by the public works director/city engineer, showing the nature of various items of improvement work to be constructed and/or made a part of the improvement agreement.

“Collection facility” means a center for the acceptance, by donation, redemption, or purchase, of recyclable materials from the public. Collection facilities may include the following:

1. Reverse vending machine(s);
2. Small collection facilities which occupy an area of not more than five hundred (500) square feet, and may include:
  - a. A mobile recycling unit,
  - b. Bulk reverse vending machines or a grouping of reverse vending machines occupying more than fifty (50) square feet,
  - c. Kiosk type units, which may include permanent structures,
  - d. Unattended containers placed for the donation of recyclable materials;
3. Large collection facilities which may occupy an area of more than five hundred (500) square feet and may include permanent structures.

“Collector street” means a street which is intended to serve intensive residential land use, multiple-family dwellings, or to convey traffic through a subdivision to roads of equal capacity or greater. It may also serve as a cul-de-sac in industrial or commercial use areas but shall not exceed six hundred sixty (660) feet in length when so used. Minimum right-of-way width shall be sixty-six (66) feet.

“Commercial-ready space” means ground floor interior space constructed with a minimum height as established in Section 9.07.096 (Building frontage type standards) that may be

used for either residential or nonresidential uses. The intent of commercial-ready space is to provide flexibility so that a space can be converted between residential and nonresidential uses in response to market demand.

“Communication and telecommunication facilities” mean and include cable television reception facilities, cellular telephone facilities, centers for employee telecommuting, communication receiving and broadcasting facilities and the like.

“Communication facilities” mean communication towers, equipment structures, monopoles, and the necessary appurtenances.

“Community development director” means the community development director of the city of Moreno Valley.

“Community noise equivalent level (CNEL)” means the average noise level during a twenty-four (24) hour day, in decibels, weighted to account for the lower tolerance of people to noise during evening (seven p.m. to ten p.m.) and night (ten p.m. to seven a.m.) hours relative to daytime hours, and shall be computed as prescribed by Title 25 of the Administrative Code of the state of California.

“Community services district” means a community services district which has the power to construct and maintain streets, landscaping, or other public improvements as appropriate with the context used.

Compatible.

1. The term “compatible” means capable of coexisting in harmony or without significant conflict. A compatible land use will not cause a significant detriment to the use, economic value, habitability and enjoyment of residents, owners, workers, and/or patrons of any land uses in the surrounding and adjacent area. In terms of building design, compatible means consistent or in harmony with existing and planned development.

2. Elements to be considered in the evaluation of compatibility include, without limitation by this enumeration, style, mass, bulk, size, use, occupancy, improvements, character, scale, texture, color and other principles of design described in the city of Moreno Valley design guidelines.

“Comprehensive general plan” means the comprehensive general plan of the city of Moreno Valley, including all elements thereof, as adopted by the city of Moreno Valley.

“Condominium” means an estate in real property consisting of an undivided interest in common in portion of real property, coupled with a separate interest in space called a unit, the boundaries of which are described on a recorded final map, parcel map or condominium plan in sufficient detail to locate all boundaries thereof, and as more specifically defined by California Civil Code Section 1351(f).

“Construction sign” means a temporary sign announcing a future use or a project under construction and identifying parties participating in the project.

“Contractor’s storage yard” means a use providing for storage and/or distribution of supplies or construction of materials required in connection with a business activity, public utility service, transportation service, or similar activity.

“Contractor’s storage yard with office” means a use providing for storage and/or distribution of supplies or construction of materials required in connection with a business activity, public utility service, transportation service, or similar activity. The use shall also include a permanent structure on a foundation for office use on the site.

“Convalescent home” means a facility licensed by the State Department of Public Health, the State Department of Social Welfare, or the county of Riverside, which provides bed

and ambulatory care for patients with postoperative convalescent, chronically ill or dietary problems, and persons aged or infirm unable to care for themselves; but not including alcoholics, drug addicts, or persons with mental or contagious diseases or afflictions.

“Convenience sign” means a sign which conveys information such as “restrooms,” “no parking,” “entrance,” or minor business identification for directional purposes, and is designed to be viewed on site by pedestrians and/or motorists.

“Convenience store” means any retail establishment offering for sale prepackaged food products, household items, and other goods commonly associated with the same and having a gross floor area of less than five thousand (5,000) square feet.

“Copy” means any words, letters, numbers, figures, designs or other symbolic representations incorporated into a sign.

Copy Area. See “Sign copy area.”

“Cul-de-sac street” means a road open at one end only, with special provisions for turning around, and the further extension of which is precluded by the land division design.

“Day care center” means any child day care facility, licensed by the state of California, other than a family day care home, and includes infant care centers, preschools, and extended day care facilities.

“dBA” means a number in decibels read from a sound level meter with the meter using the “A” weighting filter. The “A” weighting filter de-emphasizes very low and very high frequency sounds in a manner similar to the response of the human ear.

“Dead end street” means a street open at one end only, without provisions for turning around and which may be further extended into adjoining property.

“Density” means the number of dwelling units per net acre.

“Department of Transportation” means the Department of Transportation of the state of California.

Design (Land Divisions). For purposes of Chapter 9.14 of this title, “design” means:

1. Street alignments, grades and widths;
2. Drainage and sanitary facilities and utilities, including alignments and grades thereof;
3. Location and size of all required easements and rights-of-way;
4. Fire roads and firebreaks;
5. Lot size and configuration;
6. Traffic access;
7. Grading;
8. Land to be dedicated for park or recreational purposes; and
9. Such other specific physical requirements in the plan and configuration of the entire land division as may be necessary to insure consistency with or implementation of the comprehensive general plan and any applicable specific plan.

“Directional sign” means a sign used to direct and control vehicular or pedestrian traffic and is located upon the same parcel of land as the use that it is intended to serve. A subdivision directional sign shall not be included in this category.

“Discontinued use” means a business or activity that has ceased operation at any given location for a continuous period of at least sixty (60) days.

“District” means a portion of the city within which the use of land and structures and the location, height and bulk of structures are governed by this title.

“Divided arterial” means a divided highway primarily for through traffic to which access from abutting property shall be kept at a minimum. Intersections with other streets or highways shall be limited to approximately one-quarter mile intervals. Minimum right-of-way width shall be one hundred ten (110) feet.

“Divided highway” means a roadway with two roadbeds.

“Divided major arterial” means a six-lane divided highway primarily for through traffic serving property zoned for major industrial, commercial and multiple residential uses where anticipated traffic volumes exceed four-lane capacity. Access from other streets or highways shall be limited to approximately one-quarter mile intervals. Minimum right-of-way width shall be one hundred thirty-four (134) feet.

“Dormitory” means a building intended or used principally for housing students, where such building is related to an educational institution.

Dwelling (Multifamily Attached). “Attached multifamily dwelling” means a building containing two or more dwelling units.

Dwelling (Single-family). “Single-family dwelling” means a building containing one dwelling unit.

“Dwelling unit” means a building or mobile home or portion thereof, which contains living facilities for not more than one family, within which one family has interior access to all parts of the dwelling. In the case of residential care facilities with shared eating, cooking or sanitation facilities, a dwelling unit is a building or portion thereof that contains living facilities for ten (10) or less persons.

“Edge of a right-of-way” means a measurement from the limit of the public right-of-way measured along a line equidistant from and parallel to the centerline of the freeway or highway.

“Educational institutions” means public and other institutions conducting regular academic instruction at kindergarten, elementary, secondary or collegiate levels, and including graduate schools, universities, research institutions and religious institutions. Such institutions must either offer general academic instruction equivalent to the standards prescribed by the State Board of Education, or confer degrees as a college or university of undergraduate or graduate standing, or conduct academic or scientific research, or give religious instruction. The definition does not include commercial or trade schools.

“Efficiency unit” means an attached unit for occupancy by no more than two persons which have a minimum floor area of one hundred fifty (150) square feet and which may also have partial kitchen or bathroom facilities, as allowed in Section 17958.1 of the Health and Safety Code.

“Emergency shelters” (California Health and Safety Code Section 50801(e)) means housing with minimal supportive services for homeless persons that is limited to occupancy of six months or less by a homeless person. No individual or household may be denied emergency shelter because of an inability to pay.

Entertainment (Live). “Live entertainment,” when used in this title in connection with the performing arts and other methods of live performances by entertainers, shall apply to the following activities where they occur on a scheduled basis three or more days during a calendar year on the site of a use other than a public or semi-public use:

1. A musical, theatrical or dance recital performed by one or more persons, regardless of whether performers are compensated;

2. Any form of dancing by patrons or guests at a business establishment; or
3. A fashion show, except when conducted within an enclosed building used primarily for manufacture or sale of clothing.

“Environmental constraint note” means any note or notes required by the conditions of approval to be shown on an environmental constraint sheet and reference made thereto on the final map. This shall be required when constraints involving (but not limited to) any of the following are conditioned by the advisory agency or city council: archaeological sites, geologic mapping, grading, building, building setback lines, flood hazard zones, seismic lines and setbacks, fire protection, water availability or sewage disposal, and signalization mitigation.

“Environmental constraint sheet” means a duplicate of the final map on which are shown the environmental constraint notes. This sheet shall be filed simultaneously with the final map, with the city engineer and labeled “ENVIRONMENTAL CONSTRAINT SHEET” in the top margin. Applicable items will be shown under a heading labeled environmental constraint notes. The environmental constraint sheet shall contain the statement:

THE ENVIRONMENTAL CONSTRAINT INFORMATION SHOWN ON THIS MAP SHEET IS FOR INFORMATIONAL PURPOSES DESCRIBING CONDITIONS AS OF THE DATE OF FILING, AND DERIVED FROM PUBLIC RECORDS OR REPORTS AND DOES NOT IMPLY THE CORRECTNESS OR SUFFICIENCY OF THOSE RECORDS OR REPORTS BY THE PREPARER OF THIS MAP SHEET.

“Environmental impact report (EIR)” means a report complying with the requirements of and as defined by the California Environmental Quality Act (CEQA) and its implementing state guidelines. This term is synonymous with an environmental impact statement (EIS) as defined in federal law.

“Exploration” means the search for minerals by geological, geophysical, geochemical or other recognized techniques. These include, but are not limited to, sampling, assaying, drilling or any surface or underground works needed to determine the type, extent or quantity of minerals present.

“Expressway” means a highway for through traffic to which access from abutting property is restricted. Intersections with other streets or highways shall be limited to approximately one-half mile intervals.

Fascia Sign. See “Wall sign.”

“Family” means one or more individuals occupying a dwelling unit and living as a single household unit.

“Family day care home” means a home, licensed by the state of California, which regularly provides care, protection and supervision of children, in the provider’s own home, for periods of less than twenty-four (24) hours per day, while the parents or guardians are away, and includes the following:

1. “Large family day care home” which means a home which provides family day care to seven to twelve (12) children, including children who reside at the home;
2. “Small family day care home” means a home which provides family day care to six or fewer children, including children who reside at the home.

Farm Projects (Future Farmers, 4-H or Similar Projects). “Farm projects” means not more than two cattle, horses, sheep, goats or similar farm animals on parcels not less than twenty thousand (20,000) square feet in size, and other small animals on smaller lots as

specified in this title, being fattened or trained in connection with the education of a person as a member of a recognized farm education organization.

“Farmworker housing” means housing that is occupied by farmworkers or farmworkers and their households. Farmworker housing is allowed in all multiple-family zones (R-10, R-15, R-20, and R-30).

“Finance and conveyance map” means a map used to parcelize undivided land, parcel maps, or tract maps for non-build reasons.

“Fire chief” means the chief of the fire protection agency or of any other applicable district, agency or department of the city or designee having jurisdiction for fire protection purposes in the area in which a land division is located.

“Flood” or “flooding” means a general and temporary condition of partial or complete inundation of normally dry land areas from:

1. The overflow of inland or tidal waters; or
2. The unusual and rapid accumulation of run-off of surface waters from any source.

“Flood control engineer” means the person as determined by the area in which a land division is located, as follows:

1. Within the boundaries of the Riverside County flood control and water conservation district, it means the chief engineer of that district.
2. In other instances, it means the city engineer or designee.

“Flood hazard area” means an area having special flood, mudslide (i.e., mudflow) and/or flood-related erosion hazards, as shown on a sectional district map, flood insurance rate map (FIRM) or flood boundary and floodway map.

“Flood insurance rate map (FIRM)” and “flood boundary and floodway map” mean the official maps on which the Federal Insurance Administration has delineated both the areas of special flood hazards and the risk premium zones applicable to the community.

“Flood insurance study” means the official report provided in which the Federal Insurance Administration has provided flood profiles, as well as the boundaries and the water surface elevations of the base floods.

“Flood related erosion” means the collapse or subsidence of land along the shore of a lake or other body of water or adjacent to a stream as a result of erosion or undermining, caused by waves or currents of water exceeding anticipated cyclical levels or suddenly caused by an unusually high water unanticipated force of nature, such as a flash flood or by an abnormal tidal surge, or by some similarly unusual and unforeseeable event which results in flooding.

“Floodplain” means the land area adjacent to a watercourse, and/or other land areas susceptible to being inundated by water from any source (see definition of “Flood” or “flooding”).

“Floodway” means the channel of a river or other watercourse and that part of the floodplain reasonably required to discharge the design flood without cumulatively increasing the water surface elevation more than one foot at any point assuming equal conveyance reduction outside the channel from the two sides of the floodplain.

Floor Area (Gross). “Gross floor area” means the total enclosed area of all floors of a building measured to the inside face of the exterior walls but excluding area used exclusively for vehicle parking or loading.

Floor Area (Net). “Net floor area” means the total building floor area excluding garages, hallways, lobbies, elevators and other common spaces.

“Floor area ratio (FAR)” means the mathematical relation between volume of building and unit of land expressed as the ratio of gross floor area of all structures on a lot to total lot area. See Table 9.07.095-10 (Mixed-Use Overlay District Development Standards) for FAR figures applicable to the mixed-use overlay districts. See Figure 9.15.030-2 (Floor Area Ratio).

**Figure 9.15.030-2  
Floor Area Ratio**

“Freestanding sign” means any sign which is supported by one or more columns or uprights embedded in the ground, and which is not attached to any building or structure. Freestanding sign shall be architecturally integrated with the primary use on-site.

**Figure 9.15.030-3  
Freestanding Sign**

Attachment: Ordinance 984 [Revision 1] (5666 : SECOND READING AND ADOPTION OF ORDINANCE NO. 984)

“Freeway” means a highway upon which there are no abutter’s rights of access, and which provides separated grades at intersecting streets.

Frontage Road (Major, Secondary and Residential). “Major, secondary and/or residential frontage road” mean an auxiliary street adjacent to freeways, expressways, and flood control channels and other rights-of-way which is used primarily to provide public access to adjacent property. Minimum right-of-way width shall be in accordance with the appropriate city standards.

“Future tenant identification sign” means a temporary sign for an approved project which identifies a future use of a site or building.

“Garage” means a permanently roofed and enclosed structure with a garage door which is intended to be used for automobile shelter and storage.

Garage (Subterranean). “Subterranean garage” means a visually enclosed structure or portion of a structure intended to be used for the storage of automobiles, the maximum height of which is no greater than two and one-half feet measured from the existing grade.

“General local street” means a through street serving fifty (50) or more single-family lots or lot sizes of less than seven thousand two hundred (7,200) square feet. It may also serve as a private interior street in an industrial park. Minimum right-of-way width shall be sixty (60) feet.

Grade (Existing). “Existing grade” means the surface of the ground or pavement at a stated location as it exists prior to disturbance in preparation for a project regulated by this title.

Grade (Finish). “Finish grade” means the final grade of the site which conforms to the approved plan.

“Grand opening sign” means a temporary sign for a promotional activity used for the original opening of a business at a particular location, within thirty (30) days after occupancy, to inform the public of its location and contribution to the community. Existing businesses may qualify for an original opening if the ownership and the name of the business is changed. “Grand opening” does not mean an annual or occasional promotion of retail sales by a business or opening of a related store at another location.

“Guest room” means any rented or leased room which is used or designed to provide sleeping accommodations for one or more guests in apartments, hotels, motels, private clubs, lodges and fraternal organizations. In a suite of rooms, each room that provides access to a common hall or direct access to the outside area shall be considered as one guest room.

“Handicapped housing” means multiple-family housing in which all of the dwelling units serve physically handicapped persons. Handicapped housing is characterized by doors, elevators, bathroom and kitchen facilities designed to accommodate physically handicapped persons. Handicapped housing does not include residential care facilities licensed by the state of California.

“Hardscape” refers to the solid, hard elements in landscape design that stay the same for years. Examples of hardscape designs include patios, decks, driveways, walkways, stairs, water features, retaining or garden walls and outdoor kitchens. Many different materials are used in hardscape designs including concrete, brick, slate and flagstone.

“Hazardous fire area” means any land which is covered with grass, grain, brush or forest, whether privately or publicly owned, which is so situated or is of such inaccessible location

that a fire originating upon such land would present an abnormally difficult job of suppression or would result in great and unusual damage through fire or resulting erosion.

“Health officer” means the health officer of Riverside County.

“Height” means a vertical dimension measured from existing grade unless otherwise specified.

“Highway” or “street” means a right-of-way within which improvements are constructed for the conveyance of vehicular, pedestrian and other permitted traffic and includes all highways, streets, roads and alleys. Such rights-of-way and improvements shall be in conformity with city of Moreno Valley standards and specifications.

“Homeless shelter” means a facility operated by a provider, other than a “community care facility,” as defined in the California Health and Safety Code Section 1502, which provides temporary emergency shelter and/or an intake office for homeless persons. An intake office is a facility where homeless persons contact the provider and make arrangements for obtaining shelter. A provider is a government agency or a private nonprofit organization which provides temporary emergency shelter for the homeless and that meets all of the applicable requirements contained in the California Health and Safety Code and the California Administrative Code.

“Home occupation” means an occupation conducted in a dwelling unit, in a residential district that is incidental to the principal residential use of a lot or site.

Hot Tub. See “Swimming pools, hot tubs and spas.”

“Hotel” means any structure, or any portion of any structure, which is occupied or intended or designed for use or occupancy by transients, including but not limited to dwelling, lodging or sleeping purposes, and includes any hotel, inn, tourist home or house, motel, studio hotel, bachelor hotel, lodging house, rooming house, apartment house, time-share project or facility, dormitory, public or private club, mobilehome or house trailer at a fixed location, or other similar structure or portion thereof, duplex, triplex, single-family dwelling units except any private dwelling house or other individually owned single-family dwelling house unit rented only occasionally (infrequently) and incidentally to the normal occupancy by the owner or his family; provided, that the burden of establishing that the housing or facility is a hotel as defined herein shall be upon the owner or operator thereof who shall file with the tax administrator such information as the tax administrator may require, to establish and maintain such status.

“Household pet” means animals which are kept exclusively inside the residence, except dogs and cats, and for which no outside cages or shelters are required. These include, but are not limited to snakes, birds (other than fowls), guinea pigs, and other animals which are not offensive to a residential neighborhood by nature of noise, odor or other objectionable features.

Illumination (Direct). “Direct illumination” means illumination by means of light that travels directly from its source to the viewer’s eye.

Illumination (Indirect). “Indirect illumination” means illumination by means only of light cast upon a surface from a source from which the light does not travel directly to the viewer’s eye.

“Impound yard” means any property used for the temporary storage of vehicles which have been legally removed or impounded at the direction of a peace officer or by judicial order, as prescribed by law. This definition shall not be construed to include vehicle repair, dismantling, salvage or wrecking activities, nor the sale of vehicles or parts.

“Improvement” means any street work surveys and monuments and utilities to be installed, or agreed to be installed, by the land divider on the land to be used for public or private streets, highways, and easements as are necessary for the general use of the lot owners in the subdivision and local neighborhood traffic and drainage needs as a condition precedent to the approval and acceptance of the final map thereof. Improvement also means such other specific improvements or types of improvements, the installation of which, either by the land divider, public agencies, private utilities, by any other entity approved by the city of Moreno Valley or its designated officer or entity, or by any combination thereof, is necessary to insure consistency with, or implementation of, the general plan and any applicable specific plan.

“Improvement agreement,” as herein referred to, means the formal subdivision improvement agreements entered into with the city council of the city of Moreno Valley by the subdivider or developer, as completed and executed by both parties. Such agreements to set forth all requirements for improvement of the subject subdivision, including roads, water supply systems, drainage systems and devices, sewers, monuments or other work as set forth therein.

“Improvement standards” mean the standards set forth in this and other city ordinances or regulations related to the development of land as a subdivision or parcel map division.

“Industrial collector” means a three-lane interior, circulatory street with a continuous left turn lane with at least one end connecting to a road of greater capacity. Minimum right-of-way width shall be seventy-eight (78) feet.

Integration of Uses. Potential ways to integrate uses allowed in mixed-use development include:

1. Vertical Integration. A mix of nonresidential uses (i.e., commercial, retail, and/or office) located on the ground floor with residential dwelling units located above.
2. Horizontal Integration. A mix of nonresidential uses located on the primary street frontage of a lot and residential uses located at the rear of a lot.

“Interior sign” means a sign inside any business that cannot be seen from outside of the building in which the business is located or located more than three feet of the window.

“Internal ADU” is fully contained within the existing space of the primary structure or an accessory dwelling unit.

“Junior Accessory dwelling unit (JADU)” means a residential dwelling unit of no more than 500 square feet that is completely contained within the space of an existing residential structure. A junior accessory dwelling unit may include separate sanitation facilities, or may share sanitation facilities with the existing structure.

“Junk” means an article in poor condition due to deterioration or disrepair.

Kennel (Commercial). “Commercial kennel” means any property maintained for the purpose of boarding, breeding, raising or training dogs or cats over the age of four months for a fee or for sale.

Kennel (Noncommercial). “Noncommercial kennel” means any property where four or more dogs or cats, over the age of four months, are kept or maintained for the use and enjoyment of the occupant for noncommercial purposes.

“Land divisions” shall be as defined by California Government Code Sections 66410 et seq., commonly known as the Subdivision Map Act, Division 2, Subdivision, Article 2, Definitions.

“Land project” means a land division, as defined in Section 11000.5 of the Business and Professions Code.

“Land use approval” means an approval granted at the discretion of the community development director in connection with a building plan, landscape plan or other requested approval certifying that the proposal complies with applicable city ordinances, regulations and any applicable project conditions and where the findings are made by the community development director pursuant to Section 9.02.170(C) of this title.

“Land use ordinance” means the city of Moreno Valley development code as amended.

“License” means a state license issued under this title, and includes an A-license and an M-license, as well as a testing laboratory license.

“Licensee” means any person holding a license under this title, regardless of whether the license held is an A-license, M-license, or a testing laboratory license.

Lighting (Minimum Maintained). “Minimum maintained lighting” means a method of measuring light at the ground level.

**Figure 9.15.030-4  
Lighting (Minimum Maintained)**

“Light trespass” means any artificial light or glare from a light fixture onto neighboring property that interferes with viewing of the night sky, or eliminates the ability to have darkness on the adjacent property, or shines into neighboring windows, properties or structures.

“Livestock” means and includes cows, bulls, calves and heifers, except pigs.

“Live-work” means a structure or complex of structures that integrates space for both residential and nonresidential uses within individual units.

“Live-work unit” means a unit with both residential and nonresidential uses and where neither use is subordinate to the other.

Lodge Hall. A “lodge hall” consists of a building where a nonprofit fraternal organization holds meetings and social gatherings. A fraternal organization is a group of people formally organized for a common interest and generally characterized by membership qualifications, payment of fees or dues, a constitution and by-laws.

“Lot” means a designated parcel, tract or area of land established by plot, subdivision or as otherwise permitted by law, to be used, developed or built upon as a unit.

“Lot area” means the area within the lot lines after dedication. See “Acreage (adjusted net).”

Lot (Corner). “Corner lot” means a site bounded by two or more streets that have an angle of intersection of not more than one hundred thirty-five (135) degrees. The front yard of a corner lot shall adjoin the narrowest street property line.

“Lot coverage” means the ratio between the ground floor area of the building or buildings and the lot area. Lot coverage shall be exclusive of steps, chimneys, unenclosed and unroofed terraces and patios.

“Lot depth” means the horizontal distance between the midpoint of the front lot line and midpoint of the rear lot line.

Lot (Double Frontage). “Double frontage lot” means a lot having frontage on two parallel streets, or which fronts upon two streets which do not intersect at the boundaries of the lot.

Lot (Flag). “Flag lot” means a lot with access to a street by a portion of the lot not meeting the requirement of the code for lot width, but having a dimension of at least thirty-five (35) feet at its narrowest point.

Lot (Interior). “Interior lot” means a lot other than a corner lot.

Lot (Key). “Key lot” means the first interior lot to the rear of a reversed corner lot.

Lot (Reversed Corner). “Reversed corner lot” means a corner lot having a side lot line which is substantially a continuation of the front lot line of a lot to its rear.

Lot or Property Line (Front). “Front lot line” or “front property line” means, in the case of an interior lot, a line separating the lot from the street. In the case of a corner lot, the front lot line shall be the narrowest frontage separating the lot from the street.

Lot or Property Line (Rear). “Rear lot line” or “rear property line” means any lot line that is not a front lot line or a side lot line. In the case of a triangular or otherwise irregularly shaped lot, a line or lines ten (10) feet in length entirely within the lot, parallel to and a maximum distance from the front lot line.

Lot or Property Line (Side). The side property line shall be determined as those two lines which intersect the rear line of the required front yard setback and extend to the rear property line(s) of the lot. In the case of an irregularly shaped lot, only the two lines which intersect the rear line of the required front yard setback line shall be side property lines.

**Figure 9.15.030-5  
Lot/Property Line**

Attachment: Ordinance 984 [Revision 1] (5666 : SECOND READING AND ADOPTION OF ORDINANCE NO. 984)

“Lot line adjustment” means a minor alteration, as approved by the city engineer, to adjust a lot line or lot lines. It is not a subdivision or resubdivision procedure and is intended to be used only in those situations where the provisions of the Subdivision Map Act and this title applicable to subdivisions and resubdivisions do not apply.

“Lot width” means the average horizontal distance between the side lot lines, measured at right angles to the lot depth at a point midway between the front and rear lot lines.

“Major thoroughfare” means those roads designated as an expressway, divided major arterial, modified divided major arterial, divided arterial, arterial and minor arterial as described in this title and reflected in the circulation element of the general plan and whose primary purpose is to carry the through traffic and provide a network connecting to or which is part of the state highway system.

“Manufactured home” means a factory built home as permitted by California law.  
Manufacturing (Custom).

1. “Custom manufacturing” activities include, but are not limited to assembly, manufacturing, processing, packaging, treatment or fabrication of custom made products. These types of businesses do not utilize raw materials for their finished products, but rather, may utilize semi-finished types of manufactured materials for their custom made-to-order products. The finished products are ready for use or consumption and may include on-site wholesale and warehousing of the goods produced. Uses may include, but are not limited to manufacturing and warehousing of apparel products; art objects; jewelry; household furniture; small instruments (musical, electrical or photographic); stationery and related products; signs and advertising displays; stained glass products; leather products; and assembly of bicycle parts.

2. “Custom manufacturing” activities do not produce odors, noise, vibration, hazardous waste material or particulates which would adversely affect other uses in the structures or on the same site.

Manufacturing (General). “General manufacturing” activities include, but are not limited to assembly, manufacturing, compounding of materials, packaging, treatment or fabrication of materials and products which require frequent large container truck traffic or the transport of heavy, bulky items. Products are semi-finished to become a component for further manufacturing, fabrication and/or assembly. These types of businesses are usually directed to interplant transfer, or to order from industrial uses, rather than direct sale to the end consumer. Uses may include, but not be limited to canned foods, furniture and fixtures, converted paper and paper board products, textile products, plastic products made from purchased plastic, resin or rubber products, fabricated metal products made from sheet metals, electrical and electronic machinery, equipment and supplies, accounting, computing and office machines. Activities may only produce noise, odors, vibrations, illumination or particulates that have been mitigated so as not to affect the persons residing in or conducting business in the vicinity.

Manufacturing (Light). “Light manufacturing” activities include, but are not limited to assembly, labor intensive manufacturing, fabrication or repair processes which do not involve large container truck traffic or transport of large scale bulky products. New products may be finished in that the product is ready for use or consumption or it may be semi-finished to become a component for further assembly and packaging. These types of businesses are usually directed to the wholesale market, inter-plant transfer rather than direct sale to the consumer. Uses may include, but not be limited to electronic microchip

assembly; printing, publishing and allied industries; candy and other confectionery products; bottle, canned soft drinks and carbonated water; apparel and other finished products; paper board containers and boxes; drugs; small, fabricated metal products such as hand tools, general hardware, architectural and ornamental metal works; amusement, toys, sports and athletic goods. These activities do not produce odors, noise, vibration, hazardous waste material or particulates which would adversely affect other uses in the structure or on the same site.

“Median” means the portion of a divided highway separating the traveled way for traffic in opposite directions.

“Mezzanine” means an intermediate floor between main floors of a building. The floor often projects from the walls and does not completely close the view of the ceiling from the floor immediately below. A mezzanine floor and the floor below it shares the same ceiling.

“Mined lands” means the surface, subsurface and groundwater of an area where surface mining operations will be, are being, or have been conducted. This includes private ways and roads appurtenant to any such land excavations, workings, mining waste, and areas where structures, facilities, equipment, machines, tools or other materials or property which result from, or are used in, surface mining operations are located.

“Minerals” means any naturally occurring chemical element or compound, or groups of elements and compounds, formed from inorganic processes and organic substances. These include, but are not limited to, sand, gravel, coal, peat and bituminous rock, but exclude geothermal resources, natural gas and petroleum.

“Mining waste” means the residual of soil, rock, mineral, liquid, vegetation, equipment, machines, tools, or other materials or property directly resulting from, or displaced by, surface mining operations.

Mini-Warehouse (Self-Storage Warehouse). A “mini-warehouse” means a facility containing separate storage spaces leased or rented to individual tenants who have access to such space for the purpose of storing and removing personal property. Mini-warehouses are also known as self-storage warehouses and self-service storage facilities. A mini-warehouse is not to be construed as a small, conventional warehouse.

“Minor arterial” means a highway intended to serve through traffic and where access rights are restricted. Minimum right-of-way width shall be eighty-eight (88) feet. Intersections with other streets and highways shall be as approved by the city engineer.

“Mixed-use horizontal development” means development that combines two or more types of land uses (e.g., residential, commercial, office, industrial, institutional, or recreation) on a single development site, but not necessarily in the same building, typically nonresidential uses are located adjacent to the street and residential uses are located away from major streets behind nonresidential uses.

“Mixed-use overlay district” means a land use designation (zoning district) that allows a combination of uses, which may include residential, commercial, office, industrial, institutional, or recreational uses.

“Mixed-use vertical development” means development that combines two or more types of land uses (e.g., residential, commercial, office, industrial, institutional, or recreation) in a single building in a vertical configuration, typically with residential uses located above nonresidential uses.

“Mobile home” means a structure that is transportable in one or more sections, built on a permanent chassis, and designed to be used with or without a permanent foundation when connected to the required utilities. It does not include recreational vehicles or travel trailers.

“Mobile home park” means a development where spaces are provided for rent or lease to accommodate mobile homes that are used for residential purposes.

“Mobile recycling unit” means an automobile, truck, trailer or van, licensed by the Department of Motor Vehicles, which is used for the collection of recyclable materials. A mobile recycling center also means the bins, boxes or containers transported by trucks, vans or trailers, and used for the collection of recyclable materials.

“Modified divided major arterial” means a six-lane divided highway primarily for through traffic where anticipated traffic volumes exceed four-lane capacity and where access rights are restricted. Access from other streets or highways shall be limited to approximately one-quarter mile intervals. Minimum right-of-way width shall be one hundred two (102) feet.

“Monument sign” means a sign supported permanently on the ground by columns, pilasters, or similar details to provide design interest and complement their surroundings. Monument signs shall incorporate landscaping to screen the base. Landscaping around monument signs should be designed to ensure the long-term readability of the sign.

**Figure 9.15.030-6  
Modified Monument Sign**

“Moving sign” means a sign, of which all or a portion, may move either on an intermittent or constant basis.

“Mulch” means any organic material such as leaves, bark, straw, compost, or inorganic mineral materials such as rocks, gravel, and decomposed granite left loose and applied to the soil surface for the beneficial purposes of reducing evaporation, suppressing weeds, moderating soil temperature, and preventing soil erosion. In mulched planting areas, the use of low volume irrigation is required to maximize water infiltration into the root zone.

“Multifamily ADU” is an ADU consistent with State law that is proposed on the same parcel with a multifamily structure in a residential, mixed use zone, or Specific Plan zone that allows for residential or mixed use.

“Multifamily dwelling structure” means, for the purposes of ADU law, a structure with two or more attached dwellings on a single lot.

“Multi-lane demand” means projected traffic volume which will exceed the nominal capacity of a two-lane street section when such projected traffic volume is determined by a rational method of traffic generation employing land use techniques and traffic engineering principles.

Attachment: Ordinance 984 [Revision 1] (5666 : SECOND READING AND ADOPTION OF ORDINANCE NO. 984)

Net Acre. See "Acreage (adjusted net)."

"Nightclubs" means a bar, tavern, restaurant or similar establishment that provides live entertainment (music, comedy, etc.) that may serve alcoholic beverage for sale, where the performance area exceeds seventy-five (75) square feet, or customer dancing occurs.

"Nonconforming lot" means a lot which when lawfully created or established, complied with the area requirements of the district where located, but which does not conform to the presently existing area regulations of the district where located, or which does not conform to the presently existing requirements of the subdivision regulations governing lot standards.

"Nonconforming outdoor advertising display" means an existing and lawfully constructed and maintained outdoor advertising display not in conformance with Ordinance No. 133 as of July 9, 1987, and any legally constructed and maintained outdoor advertising display established after July 9, 1987 which is not in conformance with Chapter 9 of the Moreno Valley Municipal Code as of the date said chapter became effective.

"Nonconforming sign" means all existing and lawfully constructed and maintained signs: (1) which did not comply with Interim Ordinance 348 (the zoning ordinance in effect prior to adoption of this title) immediately prior to the adoption of this title and which still do not comply with the provision of Chapter 9.12 of this title, or (2) which do not now comply with the provisions of this title.

"Nonconforming structure" means a structure which was lawfully erected, but which does not conform with the standards for the district in which the structure is located by reason of adoption or amendment of a prior zoning or land use ordinance or this title.

"Nonconforming use" means a lawfully established and maintained use which does not conform with the use standards for the district in which the use is located by reason of adoption or amendment of a prior zoning or land use ordinance or this title.

"Offices, business and professional" means offices of firms or organizations providing professional, executive management or administrative services such as architectural, engineering, real estate, insurance, investment, legal and medical/dental offices. This classification includes medical/dental laboratories incidental to an office use, but excludes banks and savings and loan associations.

"Off-site sign" means a sign that directs attention to a business, commodity, service, entertainment or attraction sold, offered or existing other than upon the same lot where the sign is displayed.

"Off-site subdivision sign" means a sign which directs traffic to an off-site subdivision within the city.

"Off-street loading facilities" means a site or portion of a site devoted to the loading or unloading of motor vehicles or trailers, including loading berths, aisles, access drives and landscaped areas.

"Off-street parking facilities" means a site or portion of a site devoted to the off-street parking of motor vehicles, including parking spaces, aisles, access drives and landscaped areas.

"On-site advertising structure or sign" means a structure or sign that is erected or maintained to advertise goods sold, business conducted, or services rendered on the site upon which the sign is located.

"On-site subdivision sign" means a sign which identifies the subdivision upon which the sign is located.

Open Space (Common). “Common open space” means usable open space within a residential development reserved for the exclusive use of residents of the development and their guests.

Open Space (Private). “Private open space” means a usable open space adjoining and directly accessible to a dwelling unit, reserved for the exclusive use of residents of the dwelling unit and their guests.

Open Space (Usable). “Usable open space” means outdoor space unobstructed from ground to sky, which serves a recreational function or provides visual relief from the building mass, the minimum dimension of which shall be six feet excluding required front yard.

“Outdoor recreational facility” means a facility designed and equipped for the conduct of outdoor sports, leisure time activities and other customary and usual recreational activities, and which includes public and private facilities.

“Outer separation” means the area between the traveled way of a highway for through traffic and a frontage road or service road.

“Overburden” means the soil, rock or other materials that lie above a natural mineral deposit or in between deposits, before or after their removal by surface mining operations.

“Owner” means any of the following:

1. A person with an aggregate ownership interest of twenty (20) percent or more in the person applying for a license or a licensee, unless the interest is solely a security, lien, or encumbrance.
2. The executive officer of a nonprofit or other entity.
3. A member of the board of directors of a nonprofit.
4. An individual who will be participating in the direction, control, or management of the person applying for a license or who has a financial interest in the business other than a fixed lease of real property.

Parcel Map Division. See “Land divisions.”

“Park,” as used herein, means a parcel or parcels of land, which is open and available for use by the general public, and which serves recreational needs of the public.

“Parkway” means the area adjoining the outer edge of the roadbed, extending to the right-of-way line in which sidewalks, plantings, utilities, bank slopes and related facilities may be located.

“Part-width street” means any street in which the improved width is less than the width necessary for a normal full-width street.

“Pedestrian traffic sign” means a sign other than the main business identification sign and which is oriented to pedestrian traffic. Such sign shall not include any business related advertising information.

“Pedestrian way or sidewalk” means a right-of-way designed for use by pedestrians and not intended for use by motor vehicles. A pedestrian way or sidewalk may be located within or outside a street right-of-way, at grade, or grade separated from vehicular traffic.

“Permeable paving/surfaces” means any paving or surfaces that allow stormwater to infiltrate the underlying soils. Permeable paving/surfaces are required to be contained so neither sediment nor the permeable surface discharges off the site. Materials allowed include, but are not limited to porous asphalt, porous concrete, single-sized aggregate, planting beds, open-jointed blocks, stone, pavers or brick that are loosely set without mortar.

“Podium parking” means parking spaces that are covered by the ground floor of a building and are completely enclosed by walls. Podium parking may occur at or below the grade of the adjacent sidewalk.

“Political sign” means a temporary sign relating to a candidate or ballot measure to be voted upon or signs which express a point of view on an issue of public debate or controversy which may or may not necessarily be the subject of an upcoming election.

“Pool hall” means a building or portion thereof having within its premises four or more pool tables or billiard tables, or combination thereof, regardless of size, and whether activated manually or by the insertion of a coin, token or other mechanical device.

“Portable sign” means any sign not permanently affixed either to land or a structure.

“Poultry” or “fowl” means and includes all commonly domesticated birds kept for eggs or meat, and shall not include roosters, guinea fowl or peafowl. Pigeons shall be classified as fowl.

“Pre-existing” means in existence prior to the effective date of the ordinance enacting this title.

“Premises” means the designated structure or structures and land specified in the application that is owned, leased, or otherwise held under the control of the applicant or licensee where the commercial cannabis activity will be or is conducted. The premises shall be a contiguous area and shall only be occupied by one licensee unless the operator is granted an M-license and an A-license for the same type of activity and such operation is lawful under state and local laws, rules and regulations.

“Prime agricultural land” means and includes any of the following:

1. Land which qualifies for rating as Class I or Class II in the soil conservation service land use capability classifications;
2. Land which qualifies for rating 80 through 100 in the Storie Index Rating;
3. Land which supports livestock used for production of food and fiber and which has an annual carrying capacity equivalent to at least one animal unit per acre as defined by the United States Department of Agriculture;
4. Land planted with fruit or nut-bearing trees, vines, bushes or crops which have a nonbearing period of less than five years and which will normally return during the commercial bearing period on an annual basis from the production of unprocessed agricultural plant production not less than two hundred dollars (\$200.00) per acre; or
5. Land which has returned from the production of unprocessed agricultural plant products and annual gross value of not less than two hundred dollars (\$200.00) per acre for three of the previous five years.

“Primary dwelling unit” means, for the purposes of ADU law, a structure with a single dwelling on a single lot.

Private Interior Street (Short, Local or Circulatory). “Private interior street” means a residential street limited by subdivision design to serve less than fifty (50) single-family dwellings or a circulatory private street in a planned residential development. Minimum right-of-way width shall be fifty (50) feet.

“Private realm” means any privately-owned property.

“Private street” means a street within a private development or a planned residential development, which is not a public street, and where the street requirements are regulated by this title.

“Production units” means single-family residential dwelling units which are constructed in accordance with approved model home plans.

“Projecting sign” means a sign that is wholly or partly dependent upon a building for support and which projects more than eight inches from such building.

“Promotional sales sign” means a sign erected on a temporary basis to promote the sale of new products, new management, new hours of operation, a new service, or to promote a special sale at that location or address.

“Prospecting” has the same meaning as “exploration.”

“Public access” means where public access rights between a parcel of property and an adjacent public street or highway have been legally established by dedication or conveyance and acceptance or otherwise expressly established and approved by the city engineer.

“Public improvements” means traffic controls, streets, roads, highways, freeways, bridges, overcrossings, street interchanges, flood control or storm drain facilities, sewer facilities, reclaimed water facilities, lighting facilities, parks and equestrian trails.

“Public realm” means any publicly owned streets, roadways, sidewalks, parks, plazas, and other open spaces that comprise the shared space of a city for its visitors, employees and residents. It is the space between buildings where civic interaction occurs and is defined in contrast to private property.

“Public use” means a use operated or maintained exclusively by a public body for the benefit of the public, such use having the purpose of serving the public health, safety or general welfare; this term includes uses by or for the benefit of the public such as (but not limited to) public schools, parks, streets and ways, playgrounds, hospitals, and administrative and service facilities.

“Pump island” means a raised concrete area upon which fuel dispensing pumps are situated to allow for the dispensing of fuel to a vehicle.

“Quasi-public use” means a use owned or operated by a nonprofit, religious or eleemosynary institution and providing educational, cultural, recreational, religious or similar types of public programs.

“Real estate sign” means a temporary sign advertising real property for sale, rent or lease.

“Reclamation” means the combined process of land treatment that minimizes water degradation, air pollution, damage to aquatic or wildlife habitat, flooding, erosion, and other adverse effects from surface mining operations, including adverse surface effects incidental to underground mines. Mined lands are reclaimed to a usable condition which is readily adaptable for alternate land uses, and creates no danger to public health or safety. The process may extend to affected lands surrounding mined lands, and may require backfilling, grading, resoiling, revegetation, soil compaction, stabilization or other measures.

“Recorder” means the recorder of Riverside County.

“Recyclable material” means reusable material, including, but not limited to metals, glass, plastic and paper, which are intended for reuse, remanufacture or recycling for the purpose of using the altered form. Recyclable material does not include refuse or hazardous materials.

“Recycling facility” means a center for the collection and/or processing of recyclable materials. A certified recycling facility or certified processor means a recycling facility certified by the California Department of Conservation as meeting the requirements of the

California Beverage Container Recycling and Litter Reduction Act of 1986. A recycling facility does not include storage containers or processing activity located on the premises of a residential, commercial or manufacturing use and used solely for the recycling of material generated by that residential property, business or manufacturer. Recycling facilities may include the following:

1. Reverse vending machine(s);
2. Small collection facilities which occupy an area of not more than five hundred (500) square feet, and may include:
  - a. A mobile recycling unit,
  - b. Bulk reverse vending machines or a grouping of reverse vending machines occupying more than fifty (50) square feet,
  - c. Kiosk type units, which may include permanent structures,
  - d. Unattended containers placed for the donation of recyclable materials;
3. Large collection facilities which may occupy an area of more than five hundred (500) square feet and may include permanent structures.

“Recycling processing facility” means a building or enclosed space used for the collection and processing of recycling materials. Processing means the preparation of material for efficient shipment, or to an end-user’s specifications, by such means as baling, briquetting, compacting, flattening, grinding, crushing, mechanical sorting, shredding, cleaning, and manufacturing. Recycling processing facilities include the following:

1. A light processing facility occupies an area of under forty-five thousand (45,000) square feet of gross collection, processing and storage area and has up to an average of two outbound truck shipments per day. Light processing facilities are limited to baling, briquetting, crushing, compacting, grinding, shredding and sorting of source-separated recyclable materials and repairing of reusable materials sufficient to qualify as a certified processing facility. A light processing facility shall not shred, compact or bale ferrous metals other than food and beverage containers.
2. A heavy processing facility is any processing facility other than a light processing facility.

“Residential building identification sign” means a sign which identifies the residential occupants, such as, “The Smiths.”

“Residential name plate” means a sign which identifies the name of a residential complex, such as, “Moreno Arms.”

“Restaurant” means a place of business which sells or serves food products and beverages for consumption on the premises within a building consisting of a permanent structure that is fully enclosed with a roof and walls, and where incidental dining may be permitted out-of-doors on a patio, deck or terrace that is integrated into the building design.

Restaurant (Drive-through). “Drive-through restaurant” means a place of business which sells food products or beverages, and which delivers such food products or beverages to customers outside of the building in which they are prepared by means of a service window, counter, or similar method or device.

Restaurant (Fast Food). “Fast food restaurant” means any establishment whose principal business is the sale of foods, frozen desserts or beverages in ready-to-consume individual servings, for consumption either within the restaurant building or for carry-out, and where either: (1) foods, frozen desserts or beverages are usually served in paper,

plastic, or other disposable containers, and where customers are not served their food, frozen desserts or beverages by a restaurant employee at the same table or counter where the items are consumed; or (2) the establishment includes a drive-up or drive-through service facility or offers curbside service.

“Restaurant with limited live entertainment” means a restaurant that provides incidental entertainment, such as musical performances, where the performance area does not exceed seventy-five (75) square feet, and customer dancing does not occur. The use shall be classified as a nightclub (commercial entertainment) if the performance area exceeds seventy-five (75) square feet or customer dancing is provided. Live entertainment does not include a sexually oriented business.

“Restricted parking” means a situation where no on-street parking is permitted along the street frontage, or where on-street parking is prohibited during specified hours on certain days or on all days.

“Retail sales” are classified as establishments primarily engaged in selling goods or merchandise to the general public for personal, business, or household consumption and rendering services incidental to the sale of such goods. Some characteristics of retail sales establishments include places of business that engage in activities to attract the general public to buy, receive, sell merchandise and may process, repair, or manufacture some of the products, such as but not limited to jewelry, baked goods, apparel, pottery, or consumer electronics, where such processing, repair, or manufacturing is incidental or subordinate to sale activities. Uses considered objectionable or a nuisance may be denied by the community development director. Uses requiring an adult business use permit are not included under “retail sales.”

Reverse Vending Machine—Bulk Reverse Vending Machine.

1. A “reverse vending machine” means an automated mechanical device which accepts at least one or more types of empty beverage containers including, but not limited to aluminum cans, glass and plastic bottles, and issues a cash refund or a redeemable credit slip with a value not less than the container’s redemption value as determined by the state. A reverse vending machine may sort and process containers mechanically, provided that the entire process is enclosed within the machine. In order to accept and temporarily store all three container types in a proportion commensurate with their relative redemption rates, and to meet the requirements of certification as a recycling facility, multiple grouping of reverse vending machines may be necessary.

2. A “bulk reverse vending machine” refers to a reverse vending machine that is larger than fifty (50) square feet; is designed to accept more than one container at a time; and will pay by weight instead of by container.

“Revised tentative map” means a modification of an approved tentative map wherein the design of the land division is changed from the approved tentative map, but there is no substantial change in concept from the original approved map.

“Right-of-way” means the entire width of property for the use of highways, flood and drainage works, overhead and underground utilities or any related or consistent improvements.

“Roadbed” means that portion of the roadway extending from curb-face to curb-face or from curb-face to the outside line of improved shoulder, or between the outside line of improved shoulders.

“Roadway” means that portion of the highway including roadbed, all slopes, side ditches, channels, waterways and all other related facilities which are located within a road right-of-way.

“Roof sign” means any sign or a portion thereof located on or extending over or above the roof of a building and either supported by the roof or by an independent structural frame.

“Sculpted can sign” means a can sign constructed in such a manner that the shape of the cabinet conforms to the outline of the letters or other characters to be displayed.

“Service bay” means an area inside a building designed for the maintenance, repair or servicing of a vehicle.

Service Road. See “Frontage road.”

“Shared parking” means where certain parking spaces can be utilized by two or more different uses.

Shopping Center, Integrated. “Integrated shopping center” means two or more parcels of land that are visually designed to operate as a single center containing cross easements, shared parking facilities and shared access.

“Sign” means a device, fixture, surface or structure of any kind or character, made of any material whatsoever, displaying letters, numbers, words, text, illustrations, symbols, forms, patterns, colors, textures, shadows or lights; or any other illustrative or graphic display designed, constructed or placed on the ground, on a building, canopy, wall, post or structure of any kind, in a window, or on any other object for the purpose of advertising, identifying or calling visual attention to any place, structure, firm, enterprise, profession, business, service, product, commodity, person, idea, activity or other message. “Sign” shall include any portable sign. The term does not include a religious symbol on a church or other place of worship.

Sign Area. The area of a sign shall be the entire area that encloses the outside limits of the sign, including the sign copy area and any frame, border, background area, structural trim, or other material forming an integral part of the sign.

Sign Copy Area. The “sign copy area” shall be the area that encloses the extreme limits of the area available for displaying the desired message. The sign copy area includes both the written message and the background against which the message can be displayed.

“Sign copy height” means the vertical dimension measured from the average finished grade level under the sign to the highest point of the sign copy area.

“Sign face” means that area of a sign which contains the advertising copy or conveys a message.

“Sign height” means the vertical dimension measured from the top of curb or curb design, at the property line nearest to the sign, to the highest point of the sign.

“Single ownership” means holding record title, possession under a contract to purchase or possession under a lease, by a person, firm, corporation or partnership, individually, jointly, in common or in any other manner where the property is or will be under unitary or unified control.

“Single family ADU” is an ADU consistent with State law that is proposed on the same parcel with a single family structure in a residential, mixed use zone, or a Specific Plan zone that allow for residential or mixed use.

“Single family dwelling structure” means, for the purposes of ADU law, a structure with a single dwelling on a single lot.

“Single room occupancy (SRO) facility” means a structure consisting of six or more units, each of which is designed for occupancy by no more than two persons, which also has bathing facilities, which may or may not have partial kitchen facilities, and which is occupied as a primary residence by its occupants. The definition of SRO does not include residential care homes, senior housing projects, rooming and boarding houses, hotels and motels, bed and breakfast lodging, extended care facilities or hospitals.

“Site” means a lot or group of contiguous lots not divided by an alley, street, other right-of-way or city boundary line that is proposed for development in accordance with the provisions of this title, and is in a single ownership or has multiple owners, all of whom join in an application for development.

“Smoke shop” shall mean a retail establishment, commonly known as a smoking shop, smoking lounge, vape shop, hookah bar, cigar bar, cigar shop, or headshop, which provides or sells products intended or designed for use in ingesting, inhaling, or otherwise introducing tobacco into the human body, including but not limited to tobacco products, electronic cigarettes which contain nicotine and emit smoke or vapor, smoking accessories, including but not limited to rolling papers, rolling machines, herb grinders, scales, glass pipes, hookah pipes, bongos, bubblers, or other paraphernalia.

Spa. See “Swimming pools, hot tubs and spas.”

“Spa facility” means an establishment in a fixed location where massage is performed for compensation pursuant to all applicable state and local laws, rules and regulations as well as meeting all the requirements of Chapter 11.96 (Spa Facilities). Spa facilities may include additional services such as full service hair salons, make-up consultation and application and manicure and pedicure services, and therapeutic treatments such as body packs and wraps, exfoliation, cellulite and heat treatments, electrolysis, body toning, waxing, aromatherapy, cleansing facials, medical facials, non-surgical face lifts, electrical toning and electrolysis. Hydrotherapy and steam and sauna facilities, nutrition and weight management, spa cuisine and exercise facilities and instruction may also be provided as additional services.

“Special event sign” means a temporary sign which advertises special events and activities such as charitable events, Christmas tree sales, and firework displays.

“Specific plan” means a plan adopted by the city council of the city of Moreno Valley that is based upon and implements the general plan of the city of Moreno Valley, as provided in Section 65450 et seq., of the California Government Code.

Stable (Commercial). “Commercial stable” means a stable for horses, mules or ponies which are rented, used or boarded on a commercial basis for compensation.

“Staff” means and includes the employees of the city of Moreno Valley public works and community development departments and fire prevention bureau.

Storm, One Hundred-Year Frequency. “One hundred-year frequency storm” means a storm that has a one percent chance of occurring in any given year. It does not follow, however, that such a storm will be equaled or exceeded once in every one hundred-year period, or that having occurred once, it will not occur again for one hundred (100) years. It may occur several times in a one hundred-year period, but over a sufficient length of time the average is expected to be once in one hundred (100) years.

“Story” means that portion of a building included between the upper surface of any floor and the upper surface of the floor next above, except that the topmost story shall be that portion of a building included between the upper surface of the topmost floor and the ceiling above. The basement or cellar shall not be considered a story unless the upper surface of the floor above is more than six feet above the average level of the highest and lowest points of the ground surface immediately adjacent to the exterior walls of the building.

Street. See “Highway or street.”

“Structural alteration” means any change in or alteration to a structure involving change in or alteration to a bearing wall, column, beam or girder, floor or ceiling joists, roof rafters, roof diaphragms, foundations, piles, retaining walls, or similar components.

“Structure” means anything constructed or erected that requires a location on the ground, including a building or a swimming pool, but not including a fence or a wall used as a fence if the height does not exceed six feet, or access drives or walks.

Structure (Accessory). “Accessory structure” means a structure that is accessory or incidental to a dwelling on the same lot.

Structure (Main). “Main structure” means a structure housing a principal use of a site or functioning as a principal use.

“Subdivider” means a person, firm, corporation, partnership or association who proposes to divide, divides or causes to be divided real property into a subdivision for himself or for others, except that employees, agents and consultants of such persons or entities, acting in such capacity, are not “subdividers.”

Subdivision. See “Land divisions.”

“Subdivision design” means and includes: street alignments, grades and widths; drainage and sanitary facilities and utilities, including alignments and grades thereof; location and size of all required easements and rights-of-way; fire roads and firebreaks; lot size and configuration; traffic access; grading; land to be dedicated for park or recreational purposes; and such other specific physical requirements in the plan and configuration of the entire subdivision as may be necessary to ensure consistency with, or implementation of, the general plan or any applicable specific plan.

Subdivision Improvement. See “Improvement.”

“Substantial improvement” or “substantial construction” means any repair, reconstruction or improvement of a structure, the cost of which equals or exceeds fifty (50) percent of the market value of the structure either:

1. Before the improvement or repair is started; or
2. If the structure has been damaged and is being restored, before the damage occurred.

For the purposes of this definition, “substantial improvement” is considered to occur when the first alteration of any wall, ceiling, floor, or other structural part of the building commences, whether or not that alteration affects the external dimensions of the structure.

“Support retail sales” are classified as establishments primarily engaged in retail services that support major business, corporate, and administrative office rather than general community retail needs. These uses include art galleries, art studios, art supply shops, assayer, and florist shops and similar uses. Uses requiring an adult business use permit are not included under “support retail sales.”

“Surface mining operations” mean all, or any part of, the process involved in the mining of minerals on mined lands by removing overburden and mining directly from the mineral deposits, open-pit mining of minerals naturally exposed, mining by the auger method, dredging and quarrying, or surface work incidental to an underground mine. Surface mining operations shall include, but are not limited to:

1. In-place distillation, retorting or leaching;
2. Production and disposal of mining waste; and
3. Prospecting and exploratory activities.

“Surface parking” means parking spaces that are not covered by a building and are not enclosed by walls. Surface parking is also known as a “parking lot.”

“Swimming pools” and “hot tubs” or “spas” mean water-filled enclosures having a depth of eighteen (18) inches or more used for swimming or recreation.

“Tandem parking” means parking space configuration where two or more parking spaces are lined up one behind the other.

“Temporary sign” means a sign erected for a temporary purpose attracting attention to an activity, product or other idea or message as provided for in this title.

“Tenant improvements” mean improvements to existing structures installed for the benefit of the proposed occupant and user of an office, commercial or industrial property. The occupant and user may be the property owner, a tenant or lessee. The improvements may involve the interior or exterior of the structure.

“Tentative map” means a map made for the purpose of showing the design and improvement of a proposed land division and the existing conditions in and around it and need not be based upon an accurate or detailed final survey of the property.

Tentative Map, Revised. “Revised tentative map” means a modification of an approved tentative map wherein the design of the subdivision is changed from the approved tentative map, but there is no substantial change in concept from the original approved map.

“Traveled way” means that portion of the roadway for the movement of vehicles, exclusive of shoulders and auxiliary lanes.

Truck (Large). “Large truck” means a truck weighing ten thousand (10,000) pounds or more unloaded.

“Tuck-under parking” means parking spaces that are covered by the upper floor of a building, but are otherwise open.

“Underground level” means that portion of a structure between the floor and ceiling which is wholly or partly below grade and having more than one half of its height below grade.

“Vehicle sign” means a sign which is placed, attached or mounted to a vehicle which is parked on or adjacent to any property, the principal purpose of which is to attract attention to a product or service sold or an activity or business located on such property or to an idea or other message.

“Vehicle storage yard” means any property used for the storage of vehicles. This classification does not include vehicle repair, dismantling, salvage or wrecking activities, nor the sale of vehicles or parts.

“Vesting tentative map” means a map which meets the requirements of a tentative map that has printed conspicuously on its face the words “Vesting Tentative Map” and is processed in accordance with Section 9.14.060 of this title.

“Visible” means likely to be noticed by a person of average height walking on an adjacent street or sidewalk or traveling in a vehicle on an adjacent street or highway two years after installation of any planting screening material intended to screen a view.

“Wall sign” means any sign affixed to a building facing in such a manner that the face of the sign is substantially parallel to the plane of the building facing.

**Figure 9.15.030-7  
Wall Sign**

“Wholesaling” means the selling of any type of goods for purpose of resale.

“Window sign” means any sign, exposed to public view, which is attached, painted, or pasted, or is located within three feet, either permanently or temporarily, on or of the interior or exterior of a window.

“Wrecking yard” means any facility used for the dismantling of vehicles. Activities normally include the buying and selling of inoperative vehicles, their parts or component materials and the storage thereof.

“Yard” or “court” means an open space on the same site as a structure, unoccupied and unobstructed from the ground upward, except as otherwise provided in this title, including a front yard, side yard, rear yard or court between structures.

Yard (Front). “Front yard” means a yard extending across the full width of a site, the depth of which is the minimum horizontal distance between the front property line and a line parallel thereto on the site.

Yard (Rear). “Rear yard” means a yard of the required width extending the full width across the site, from side yard to side yard measured parallel from the rear property line, the depth of which is the minimum horizontal distance between the rear property line and a line parallel thereto on the site.

Yard (Side). “Side yard” means a yard of the required width extending from the rear line of the required front yard measured parallel from the side property line of the lot extending to the rear property line.

**Figure 9.15.030-8  
Setbacks and Yard Areas”**

### 9.16.150 Commercial (retail, office, mixed use).

- A. Commercial design guidelines address the various types and intensities of commercial uses allowed for in the general plan. They include neighborhood commercial, community commercial, tourist recreational commercial, village commercial, office commercial and office.
1. Neighborhood Commercial: provides for the daily shopping needs of area residents with a wide range of common retail and personal service needs.
  2. Community Commercial: more intense than neighborhood commercial, provides for the general shopping needs of area residents and workers with a wide variety of retail and personal services.

3. Tourist Recreational Commercial: provides those commercial support activities that are necessary or incidental to recreation uses while meeting the personal service needs of both tourists and city residents alike.
4. Village Commercial: provides for office-related and commercial development within the Moreno townsite. It is the further intent of this designation to promote development which recognizes the historic significance of the site and projects a “turn-of-the-century” architectural atmosphere, yet provides limited retail commercial services that are compatible with the surrounding residential community.

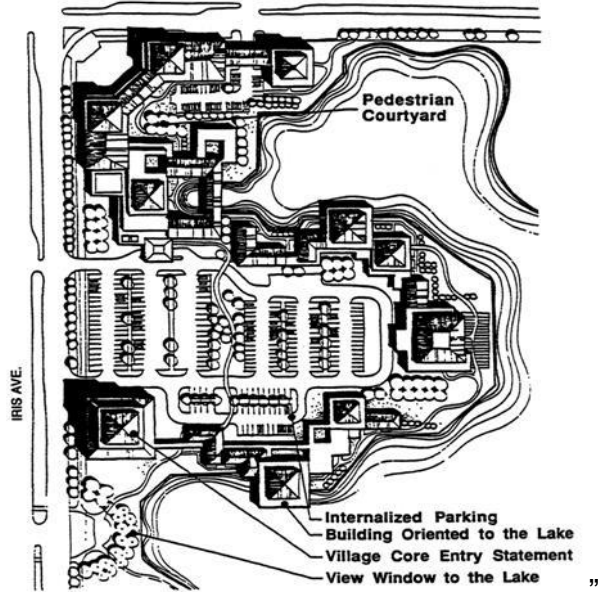

B. General Guidelines.

1. Commercial development shall be compatible with adjacent residential areas by incorporating landscape buffers planted with a mix of flowering, screening and spreading plants, by using low mass, low height building elements, by locating loading and trash collection areas away from residential property lines and by directing circulation away from residential neighborhoods.
2. Commercial development shall have a central place, main focal feature or point-of-emphasis, including pedestrian seating, shade structures, sculpture, water elements, centralized outdoor dining or any combination of these elements.
3. New development should respect pedestrian needs by incorporating pedestrian ways and plazas that provide visual interest at the street level, shelter from the elements and adequate street furniture. This guideline is intended to enhance pedestrian related features in concert with quality architecture that would not require variance approval if incorporated as a feature of design.
4. The development of new, small convenience centers on sites less than eight acres is discouraged.
5. Architectural elements shall be an integral part of the façade design, avoiding the “pasted-on” look.
6. Building façades should relate to overhangs, awnings, trellises and porticoes, incorporating these elements into building massing.
7. Pedestrian covered walks should have a clear walking width of seven feet along retail storefronts. Walkway width may be up to twelve (12) feet to accommodate columns, furniture or building articulation.
8. Large structures shall incorporate varied setbacks and variations in massing of building bulk.
9. Continuous, blank building elevations shall be avoided, particularly when visible from public rights-of-way.
10. Continuous building mass should be divided into smaller units, providing both variety and scale.
11. Loading areas shall be oriented away from street side elevations whenever possible and shall be screened from public view with a combination of walls and landscaping.
12. Building placement within office developments shall occur at or near the street setback line to bring the architectural image to the street and to remove parking lots to the extent possible from the streetscape.
13. Vehicular and pedestrian travel shall be separated to the best possible extent, providing for a safe pedestrian environment and smooth traffic flow.

14. Pedestrian walkways shall be provided in larger parking lots, encouraging foot travel out of vehicular drive lanes.
15. Freestanding or clustered retail, restaurant and office pads are encouraged, helping to add variety to the site plan and to introduce interesting architectural elements.
16. Interparcel access shall be provided between commercial centers, reducing the number of drive approaches from the street and encouraging commercial “crossover.”
17. Entry drive throats shall be at least sixty (60) feet long from property line for major commercial projects, providing adequate queuing for outbound traffic and smoothing inbound traffic flow.
18. Each commercial center of five acres or more shall have at least one major entry containing a median.
19. The “strip” commercial image is discouraged. New development should provide variety and articulation in storefront footprints, elevations and roofline.
20. There shall be landscaped strip equal to the building height where a commercial use is located adjacent to residentially zoned property.
21. Office developments shall provide courtyards for each building convenient to office users, incorporating seating, sculpture, accent landscaping and shelter. These shelters will allow for small lunch gatherings or relaxation.
22. Office developments shall have decentralized parking. Parking shall be oriented to the building it is intended to serve and shall be spread throughout the site, lessening the impact of an expansive parking lot.
23. Office developments shall offer interesting site plans by providing several detached or clustered buildings.
24. Access to service bays of automotive uses shall be from the interior of the site.
25. Service stations, mini markets and other automobile-related uses shall have architectural details consistent with the overall project design. Access to service bays will be from the interior of the service station site. Window placement should be sensitive to casual police surveillance.
26. Hotels over 4 stories shall include rooftop amenities (e.g., restaurant, bar, swimming pool or other amenities as accepted by the Community Development Director).
27. Freestanding buildings should incorporate distinctive massing, adding interest to the site and vicinity.
28. Intimate scale in building design and materials selection is encouraged, emphasizing comfort and warmth.
29. All rooftop equipment shall be part of the project design or be screened and located out of view from the pedestrian level, public rights-of-way, adjacent freeways and neighboring structures. Flat-roof drainage pipes shall be integrated into the project design and drain into a landscape area for water quality, retention and absorption to reduce water run-off.
30. Architectural design of new projects shall be mindful of the surrounding district’s urban fabric, providing a design statement to enhance the context and to upgrade the overall image.

**Continuous Mass Divided to Provide Scale**

**9.17.140 Freeway frontage.**

Development projects adjacent to the Moreno Valley Freeway (California State Highway 60) shall be landscaped within the freeway right-of-way and maintained by the property owner, as prescribed in the landscape guidelines established by the city of Moreno Valley. If the freeway right-of-way is not landscaped, the property owner shall maintain the right-of-way along their frontage in a manner that is free of weeds, vegetative debris, and refuse. An encroachment permit shall be reviewed and approved by the City, and Caltrans if applicable, prior to issuance of a grading permit.

**Section 4. CEQA COMPLIANCE:**

The proposed Municipal Code Amendments are exempt from the California Environmental Quality Act in that the proposed updates addressing accessory dwelling units qualify as a statutory exemption under Section 15282(h) of the California Environmental Quality Act Guidelines, and all of the other proposed amendments are exempt from the California Environmental Quality Act in accordance with Section

Attachment: Ordinance 984 [Revision 1] (5666 : SECOND READING AND ADOPTION OF ORDINANCE NO. 984)

15061(b)(3) of the CEQA Guidelines in that the amendments involve general policy and procedure making, and it can be seen with certainty that there is no possibility that the amendments will have a significant effect on the environment

**Section 5. SEVERABILITY**

That the City Council declares that, should any provision, section, paragraph, sentence or word of this Ordinance be rendered or declared invalid by any final court action in a court of competent jurisdiction or by reason of any preemptive legislation, the remaining provisions, sections, paragraphs, sentences or words of this ordinance as hereby adopted shall remain in full force and effect.

**Section 6. REPEAL OF CONFLICTING PROVISIONS**

That all the provisions of the Municipal Code as heretofore adopted by the City of Moreno Valley that are in conflict with the provisions of this Ordinance are hereby repealed.

**Section 7. EFFECTIVE DATE**

That this Ordinance shall take effect thirty (30) days after its second reading.

**Section 8. CERTIFICATION**

That the City Clerk shall certify to the passage of this Ordinance and shall cause the same to be published according to law.

INTRODUCED at a regular meeting of the City Council on January 4, 2022, and PASSED, APPROVED, and ADOPTED by the City Council on \_\_\_\_\_, 2022, by the following roll call vote, to wit:

\_\_\_\_\_  
Dr. Yxstian A. Gutierrez  
Mayor  
City of Moreno Valley

\*All density bonus calculations resulting in fractions are rounded up to the next whole number.

\*\*Affordable unit percentage is calculated excluding units added by a density bonus.

\*\*\*Moderate income density bonus applies to for sale units, not to rental units.

\*\*\*\* Applies when 100% of the total units (other than manager's units) are restricted to very low, lower and moderate income (maximum 20% moderate).

## Report to City Council

---

**TO:** Mayor and City Council

**FROM:** Brian Mohan, Assistant City Manager

**AGENDA DATE:** January 18, 2022

**TITLE:** PAYMENT REGISTER- NOVEMBER 2021

---

### **RECOMMENDED ACTION**

#### **Recommendation:**

1. Receive and file the Payment Register.

### **SUMMARY**

The Payment Register is an important report providing transparency of financial transactions and payments for City activity for review by the City Council and the residents and businesses in Moreno Valley. The report is posted to the City's website as soon as it is available. The report is included in the City Council agenda as an additional means of distributing the report.

The payment register lists in alphabetical order all checks and wires in the amount of \$25,000 or greater, followed by a listing in alphabetical order of all checks and wires less than \$25,000. The payment register also includes the fiscal year-to-date (FYTD) amount paid to each vendor.

### **PREPARATION OF STAFF REPORT**

Prepared By:  
Dena Heald  
Deputy Finance Director

Department Head Approval:  
Brian Mohan  
Assistant City Manager  
Chief Financial Officer/City Treasurer

### **CITY COUNCIL GOALS**

None

**CITY COUNCIL STRATEGIC PRIORITIES**

- 1. Economic Development
- 2. Public Safety
- 3. Library
- 4. Infrastructure
- 5. Beautification, Community Engagement, and Quality of Life
- 6. Youth Programs

## Report to City Council

---

**TO:** Mayor and City Council

**FROM:** Brian Mohan, Assistant City Manager

**AGENDA DATE:** January 18, 2022

**TITLE:** LIST OF PERSONNEL CHANGES

---

### **RECOMMENDED ACTION**

#### **Recommendation:**

1. Ratify the list of personnel changes as described.

### **DISCUSSION**

The attached list of personnel changes scheduled since the last City Council meeting is presented for City Council ratification.

Staffing of City positions ensures assignment of highly qualified and trained personnel to achieve Momentum MoVal priorities, objectives and initiatives.

### **FISCAL IMPACT**

All position changes are consistent with appropriations previously approved by the City Council.

### **PREPARATION OF STAFF REPORT**

Prepared By:  
Janelle Bizzle  
Management Aide

Department Head Approval:  
Brian Mohan  
Assistant City Manager  
Chief Financial Officer/City Treasurer

### **CITY COUNCIL GOALS**

None

**CITY COUNCIL STRATEGIC PRIORITIES**

- 1. Economic Development
- 2. Public Safety

## Report to City Council

---

**TO:** Mayor and City Council

**FROM:** John Salisbury, Chief of Police

**AGENDA DATE:** January 18, 2022

**TITLE:** ACCEPTANCE OF THE TOBACCO LAW ENFORCEMENT GRANT PROGRAM AWARD, MEMORANDUM OF UNDERSTANDING AND RESOLUTION NO. 2022-XX AUTHORIZING THE CITY MANAGER TO EXECUTE THE AGREEMENT WITH THE STATE OF CALIFORNIA DEPARTMENT OF JUSTICE

---

### **RECOMMENDED ACTION**

#### **Recommendations:**

1. Accept the Tobacco Law Enforcement Grant Program grant award in the amount of \$156,400 for overtime to conduct tobacco enforcement operations beginning in Fiscal Year 2022/23 and continuing over a three-year period.
2. Authorize the Chief Financial Officer to appropriate \$156,400 as revenue and expense per fiscal year in Fund (2300) beginning in Fiscal Year 2022/23 and carrying over any unused budget over the three-year grant period.
3. Approve the Memorandum of Understanding between the City of Moreno Valley and the Department of Justice regarding the Tobacco Law Enforcement Grant Program award.
4. Adopt Resolution No. 2022-XX a Resolution of the City Council of the City of Moreno Valley, California, authorizing the City Manager to execute the agreement with the State of California Department of Justice.

### **SUMMARY**

This report requests that the City Council accept the \$156,400 Tobacco Law Enforcement Grant Program award, appropriate funds for overtime to conduct tobacco enforcement operations beginning in Fiscal Year (FY) 2022/23 and continuing for the

three-year grant period, approve the Memorandum of Understanding between the City of Moreno Valley and the Department of Justice regarding the Tobacco Law Enforcement Grant Program award, and approve and adopt Resolution No. 2022-XX authorizing the City Manager to execute the agreement with the State of California Department of Justice.

## **DISCUSSION**

The California Healthcare, Research and Prevention Tax Act of 2016 (Proposition 56) provides local public agencies with funding to promote a healthier California by reducing illegal sales and marketing of cigarettes and tobacco products to minors. The Proposition specifically allocates \$26.8 million of annual revenue to the California Department of Justice. (Rev. & Tax Code, § 30130.57(e)(1).) These funds support local agencies to enforce tobacco-related statutes and ordinances, including to reduce the illegal sale of tobacco products to minors.

The City of Moreno Valley is committed to providing a safe environment for the citizens of Moreno Valley. The Moreno Valley Police Department has determined that a number of calls for service are being generated related to licensed tobacco retailers in the city. Some of these calls involve minors and adults under the age of 21 buying tobacco and/or electronic smoking devices and soliciting adults over the age of 21 to buy tobacco products from them. In an effort to address the sale of tobacco products to minors and underage adults, staff has identified a grant to assist law enforcement with their efforts to reduce problems and calls for service at licensed tobacco retailers.

There are approximately 94 licensed tobacco retailers within the City of Moreno Valley. Although most avoid the attention of law enforcement, there are a number that have generated calls for service relating to tobacco sales. The time spent by Moreno Valley Police Department deputies could be better spent assisting the community with other issues. In addition, the citizens of Moreno Valley suffer as a result of the problems that spill out into the community relating to long term health effects relating to adolescent's exposure to tobacco products.

The California Department of Public Health has confirmed that exposure to nicotine during adolescence can harm brain development and predispose youth to future tobacco use. These health effects can intensify anxiety and aggression and cause learning disabilities. In addition, long term exposure can cause lung/heart disease and many types of cancer.

The Moreno Valley Police Department will implement as many as nine (9) "Minor Decoy" operations per fiscal year for three-years. The "Minor Decoy" program allows law enforcement agencies to use persons under 20 years of age as decoys for the purpose of purchasing tobacco beverages from licensed premises. The use of underage decoys to check whether licensees are selling tobacco products to minors can show a dramatic drop in the illegal activity when the "Minor Decoy" program is repeatedly used.

The Moreno Valley Police Department also intend to use the grant funding to implement nine (9) “Shoulder Tap” operations per fiscal year for three-years. “Shoulder Tap” is a common method used by persons under the age of 21 to solicit persons to purchase and furnish them with tobacco products. The “Shoulder Tap” program is an enforcement program local law enforcement agencies use to detect and deter shoulder tap activity. During the program, a minor decoy, under the direct supervision of law enforcement officers, solicits adults outside a licensed store to buy the minor tobacco products. Any person seen furnishing these products to the minor decoy is arrested (either cited or booked) for furnishing tobacco products to a minor (a violation of Section 25658(a) Business and Professions Code).

The Problem Oriented Policing (POP) Team will provide a proactive approach through the use of “Minor Decoy” and “Shoulder Tap” operations. The operations will be conducted throughout the City in an attempt to licensed establishments from selling tobacco products to minors. In addition, several operations will focus on adults who purchase tobacco products for minors.

**ALTERNATIVES**

Council has the following alternatives:

1. Approve and authorize the recommended actions as presented in this staff report. *This alternative will allow for the Moreno Valley Police Department to conduct tobacco enforcement operations.*
  
2. Do not approve and authorize the recommended actions. *This alternative will not allow for the Moreno Valley Police Department to conduct tobacco enforcement operations.*

**FISCAL IMPACT**

The three-year grant period begins in FY 2022/2023 with reimbursement distribution totaling, \$156,400 cycling as follows:

- \$49,600 in expenditures for FY22/23
- \$52,100 in expenditures for FY23/24
- \$54,700 in expenditures for FY24/25

Carryover procedures will occur through FY 24/25 to ensure reimbursement funds are available in each respective Fiscal Year.

Re: Tobacco Grant Award Notification FY 21/22

Dear Felicia London:

Congratulations! On behalf of the California Department of Justice, I am excited to inform you that your agency's grant application for funds authorized under the California Healthcare, Research and Prevention Tobacco Tax Act of 2016 has been approved for Funding in the amount of \$156,400<sup>1</sup>.

The California Department of Justice was excited to receive applications totaling over \$71 million to support local law enforcement agencies in educating minors about the harms of tobacco products, enforcing state and local tobacco laws, and conducting retailer enforcement. Consequently, some awards were approved with modifications.

In order to accept the award, your agency must, within 15 calendar days of the date of this letter, respond with a signed Letter of Intent (template attached) affirming either 1) your agency will seek a resolution to accept the award, if your agency has a governing body; or 2) no governing body exists and no resolution is required. The letter can be sent via email to [TobaccoGrants@doj.ca.gov](mailto:TobaccoGrants@doj.ca.gov) with subject line "FY 21-22\_ Letter of Intent \_City of Moreno Valley" and/or hard copy to:

CA Department of Justice  
Division of Operations  
Tobacco Grant Program  
P.O. Box 160187  
Sacramento, CA 95816-0187

If the Letter of Intent is **only** being sent via hard copy, it must be postmarked within 15 days of the date of this letter. Upon receipt of the Letter of Intent, the Local Assistance Unit

<sup>1</sup>Award amounts are subject to change due to appeals or declinations of awards.

within the California Department of Justice will provide documents as part of your grant agreement (Memorandum of Understanding, Handbook, etc.).

Also provided with the electronic version of this letter are the Award Summary and approved Budget Detail which will reflect any necessary modifications. If you wish to realign the approved funds, please reference the attached instruction sheet and return your revised Budget Detail with your letter of intent.

If you have any questions about this process, please do not hesitate to contact me at (916) 210-7006 or at [TobaccoGrants@doj.ca.gov](mailto:TobaccoGrants@doj.ca.gov).

Sincerely,

STACY HEINSEN  
Manager, Tobacco Grant Program

For ROB BONTA  
Attorney General

RESOLUTION NO. 2022-\_\_\_\_\_

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA TO ACCEPT GRANT FUNDS IN THE AMOUNT OF \$156,400 FROM THE STATE OF CALIFORNIA DEPARTMENT OF JUSTICE, OFFICE OF ATTORNEY GENERAL, TOBACCO LAW ENFORCEMENT GRANT PROGRAM

WHEREAS, the City of Moreno Valley is interested in participating in the Tobacco Law Enforcement Grant Program, which is made available through the California Healthcare Research and Prevention Tobacco Tax Act of 2016 (Prop. 56) and administered by the State of California Department of Justice (DOJ) to support local efforts to reduce the illegal sale of tobacco products to minors in the City; and

WHEREAS, following the City’s submittal of proposal for the Program, the State of California DOJ offered to award \$156,400 for the three-year grant program beginning December 1, 2022 and ending June 30, 2025; and

WHEREAS, Grant funds will be used for Sheriff’s overtime costs related to tobacco enforcement operations; and

WHEREAS, in order to be considered eligible to receive grant funding, the City must submit a completed Grant Award Memorandum of Understanding to the State of California DOJ;

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:

1. The City Manager or designated representative is hereby authorized, on behalf of the City, to accept grant funding in the amount of \$156,400 from the State of California DOJ.
2. The City Manager or designated representative is hereby authorized and directed, on behalf of the City, to execute the grant documents and to submit all documents, including, without limitation, contracts, amendments, extensions, and payment requests as appropriate to accept the funds under and comply with the conditions of the grant.
3. The City Manager or designated representative is hereby authorized and directed to establish all required accounts and make any and all expenditures, appropriations, transfers, and/or distributions of funds on behalf of the City as are necessary and appropriate to carry out the purpose and intent of this resolution.
4. Grant funds received hereunder shall not be used to supplant ongoing law

enforcement expenditures.

APPROVED AND ADOPTED this 18th day of January, 2022.

## MEMORANDUM OF UNDERSTANDING

### PURPOSE

This Memorandum of Understanding (MOU) is entered into by the Department of Justice (hereinafter, "Department") and the M (hereinafter, "Grantee"), to provide grant funds to Grantee for expenditure in compliance with the Grantee Handbook. The Grantee will expend funds for the purposes identified in the approved Summary of Award document to be funded under the California Healthcare, Research and Prevention Tobacco Tax Act of 2016 (the "Act"), approved by the voters as Proposition 56.

The Request for Proposals, Grantee Handbook (dated March 2021), and Summary of Award document are hereby incorporated by reference into this MOU.

### COST REIMBURSEMENT

The Department agrees to reimburse Grantee in arrears, for Grantee's actual expenditures in performing the project or scope of work included in the approved Summary of Award document, upon receipt of invoices from Grantee and approval of the invoices by the Department, in accordance with the reimbursement procedures set forth in the Grantee Handbook.

### BUDGET CONTINGENCY CLAUSE

It is mutually agreed that if the Budget Act of the current year and/or any subsequent years covered under the agreement does not appropriate sufficient funds for this MOU, this MOU shall be of no further force and effect. In this event, the Department shall have no liability to pay any funds whatsoever to Grantee or to furnish any other considerations under this MOU and Grantee shall not be obligated to continue performing any provisions of this agreement for which it would have been reimbursed.

If funding for any fiscal year is reduced or deleted in the Budget Act for purposes of this MOU, the Department shall have the option to either cancel this MOU with no liability occurring to the Department, or offer an addendum to the Grantee to reflect the reduced amount.

### ADMINISTRATION

Should Grantee fail to comply with this MOU, including any expenditures for purposes not permitted under the MOU, the Department may take one or more of the actions described under Noncompliance in the Grantee Handbook.

### MISCELLANEOUS PROVISIONS

Addendum – No addendum or variation of the terms of this MOU is valid unless made in writing, and signed by the duly authorized representatives of the parties.

Assignment – This MOU is not assignable by Grantee in whole or in part.

Indemnification – Grantee agrees to indemnify and hold harmless the Department, its officers, agents and employees from all claims, liabilities, or losses in connection with the performance of this MOU.

Termination – The Department may terminate this MOU and be relieved of any obligation to provide grant funds to Grantee should Grantee fail to perform the scope of work at the time and in the manner provided in this MOU.

**TERMS**

Grant Duration: 12/1/2021 – 6/30/2025

Award Amount				
Category of Expenditure	Budget FY 2021-2022	Budget FY 2022-2023	Budget FY 2023-2024	Budget FY 2024-2025
Personal Services	\$0	\$0	\$0	\$0
Operating Expenses and Equipment	\$0	\$49,600	\$52,100	\$54,700
Administrative Costs (Not to Exceed 5%)	\$0	\$0	\$0	\$0
<b>TOTAL AWARD AMOUNT</b>	<b>\$156,400</b>			

The time limit for reimbursements against this award ends 6/30/2025. Requests received after 7/15/2025 cannot be reimbursed by the Department.

## Report to City Council

---

**TO:** Mayor and City Council

**FROM:** Manuel A. Mancha, Community Development Director

**AGENDA DATE:** January 18, 2022

**TITLE:** PROPOSED GENERAL PLAN AMENDMENT AND CHANGE OF ZONE AMENDING "MAP LCC-4: GENERAL PLAN LAND USE" OF THE MORENO VALLEY GENERAL PLAN AND THE CITY ZONING ATLAS, RESPECTIVELY, PROPOSED TENTATIVE PARCEL MAP 37944 FOR TWO (2) LOTS, A PLOT PLAN FOR AN APPROXIMATELY 290,726 SQUARE FOOT LIGHT INDUSTRIAL BUILDING, AND A PLOT PLAN FOR AN APPROXIMATELY 98,877 SQUARE FOOT LIGHT INDUSTRIAL BUILDING

---

### RECOMMENDED ACTION

#### Recommendations: That the City Council:

1. **ADOPT** Resolution 2022-XX: A Resolution of the City Council of the City of Moreno Valley **CERTIFYING** that the Initial Study/Mitigated Negative Declaration prepared for General Plan Amendment PEN20-0118, Change of Zone PEN20-0119, Tentative Parcel Map PEN20-0120, and Plot Plans PEN20-0121 and PEN20-0124 on file with the Community Development Department, and incorporated herein by this reference, was completed in compliance with the California Environmental Quality Act and the CEQA Guidelines, that the City Council reviewed and considered the information contained in the Initial Study/Mitigated Negative Declaration and that the document reflects the City's independent judgment and analysis, and **ADOPTING** the Mitigation Monitoring and Reporting Program prepared for the above-referenced Mitigated Negative Declaration; and
2. **ADOPT** Resolution 2022-XX: A Resolution of the City Council of the City of Moreno Valley approving a General Plan Amendment based on the Recitals and Evidence contained in the Administrative Record and Findings as set for in the Resolution No. 2022-XX to amend the General Plan Land Use Map as described

in the Resolution, based on the findings contained in the Resolution, and the revised Land Use Map; and

3. **INTRODUCE** and conduct the first reading by title only of Ordinance No. XXX, approving a Change of Zone PEN20-0119 to amend the City Zoning Atlas based on the Recitals, Evidence contained in the Administrative Records and Findings as set forth in Ordinance No. XXX; and
4. **ADOPT** Resolution No. 2022-XX, A Resolution of the City Council of the City of Moreno Valley approving Tentative Parcel Map 37944, PEN20-0120 based on the findings contained in this Resolution, and subject to the conditions of approval included as Exhibit A; and
5. **ADOPT** Resolution No. 2022-XX, A Resolution of the City of the City of Moreno Valley approving Plot Plans PEN20-0121 and PEN20-0124 based on the findings contained in this Resolution, and subject to the conditions of approval included as Exhibit A; and
6. **SCHEDULE** the second reading and adoption of Ordinance No. XXX for the next regular meeting.

### **SUMMARY**

This staff report recommends approval of development applications for the Compass Danbe Project for the development of two light industrial buildings located on the south side of Alessandro Boulevard west of Frederick Street and east of Graham Street.

The recommended actions for the project also include a General Plan Amendment, Change of Zone, Tentative Parcel Map and two Plot Plans for light industrial development.

### **BACKGROUND**

The project was continued to a date uncertain by the City Council on October 5, 2021. Required public noticing has been completed for this meeting.

As provided for in the California Government Code, a mandatory element of the General Plan may be amended no more than four times during one calendar year. The recommended action is for the City Council to approve the General Plan Amendment to change the Land Use Element covering the land use designation change. This change will be the third amendment to the Land Use Element of the General Plan for the 2021 calendar year.

### **Planning Commission Recommendation**

At its August 26, 2021 meeting, the Planning Commission held a public hearing and voted to recommend that the City Council certify the Mitigated Negative Declaration, adopt a Mitigation Monitoring and Reporting Program, and approve the General Plan

Amendment, Change of Zone, Tentative Parcel Map 37944, and two Plot Plans for the Compass Danbe project.

Prior to the Planning Commission meeting five (5) comment letters were received regarding the Project. Three did not raise any opposition to the Project. Two, one from South Coast Air Quality Management District (SCAQMD) and one from Golden State Environmental Justice Alliance (GSEJA) discussed concerns relating to several categories including air quality and truck traffic. A response to each comment submitted in the SCAQMD letter has been prepared and published. A response to comments for the GSEJA was not prepared, since the City received a withdrawal of the comment letter on September 2, 2021. The letters and response to comments are included in the attachments.

During the Planning Commission public hearing, there were seven commenters, six were in support and one was in opposition to the Project.

## **DISCUSSION**

### **Project**

The Applicant CDRE Holding 17, LLC (“Applicant”) is requesting approval of the following: a General Plan Amendment (PEN20-0118), to change the land use designation of the Project site from Commercial to Business Park/Light Industrial, a Change of Zone (PEN20-0119), to amend the Zoning Atlas from Community Commercial District (CC) to Light Industrial (LI), a Tentative Parcel Map 37944 (PEN20-0120) for two parcels, a Plot Plan (PEN20-0121) for a 290,726 square foot light industrial building and a Plot Plan (PEN20-0124), a Plot Plan for a 98,877 square foot light industrial building located on the south side of Alessandro Boulevard between Frederick Street and Graham Street, on parcels identified as Assessor Parcel Nos. 297-170-002 and 003.

### **General Plan Amendment**

The City’s General Plan is a comprehensive, long-term plan for the development of the City of Moreno Valley. The General Plan is at the top of the hierarchy of the City’s land use regulations, which means that the City’s zoning and other land use decisions must conform to the General Plan. A General Plan’s Land Use Element, which is referred to as the “Land Use & Community Character Element” in the City’s General Plan, must designate the proposed general distribution, location, and extent of land uses for housing; business; industry; open space, including agriculture, natural resources, recreation, and enjoyment of scenic beauty; education; public buildings and grounds; waste disposal facilities; and other categories of public and private uses.

Under the General Plan, the Project Site’s land use designation is Commercial. The primary purpose of the Commercial land use designation is to allow for the development of land for business purposes, including but not limited to, retail stores, restaurants, banks, hotels, professional offices, personal services and repair services.

The Applicant is requesting, via A General Plan Amendment, that the Commercial land use designation be changed to Business Park/Light Industrial. The primary purpose of the Business Park/Light Industrial land use designation is to allow for the development of land for manufacturing, research and development, warehousing and distribution, office uses and other uses that support commercial activities. If the proposed General Plan Amendment is approved, the land use designation of the Project Site will remain consistent with adjacent parcels to the south and east, which fall within the Business Park/Light Industrial land use designation. On balance, the General Plan Amendment will increase the amount of land in the City with a Business Park/Light Industrial land use designation by approximately 17.67-acres, with a corresponding decrease in the amount of land within the City with a Commercial land use designation.

### Change of Zone

In contrast to planning goals and objectives of the General Plan, which has a much broader connotation, zoning is a separation of the City into zoning districts, and includes the regulation of buildings and structures, according to their construction, and the nature and extent of their use.

Consistent with the Project Site's General Plan Commercial land use designation, the Project Site is currently zoned Community Commercial (CC). The Applicant, however, want to also change the Project Site's zoning to Light Industrial (LI). The primary purpose of the Light Industrial (LI) zone is to provide for the development of light manufacturing, light industrial, research and development, warehousing and distribution and multitenant industrial uses, as well as certain supporting administrative and professional offices and commercial on a limited basis. While the purpose of the two zoning districts are different, the proposed Change of Zone will be consistent with adjacent parcels to the south since those parcels are developed with light industrial buildings and zoned Light Industrial District (LI).

### Tentative Parcel Map

The Applicant is also requesting the approval of a Tentative Parcel Map 37944 to subdivide a single parcel into two separate parcels for Building #1 and Building #2.

The Subdivision Map Act distinguishes between a subdivision consisting of five or more parcels, which requires a tentative and final map, and a subdivision consisting of only four or fewer parcels, which merely requires a parcel map. However, local ordinances may require a tentative map for subdivisions of four or fewer parcels, which is what is required under the City's Municipal Code. When a tentative map is involved, no grading or construction work shall be performed until the tentative map and the improvement plans for such work have been approved by the appropriate approving authority of the City.

### Plot Plans

The Applicant is requesting approval of two separate Plot Plans. The purpose of a Plot Plan is to provide a mechanism by which new construction and design of industrial,

commercial or multiple-family residential projects can be reviewed.

The Applicant is proposing the construction of two light industrial buildings, one approximately 290,726 square feet in size and one approximately 98,877 square feet in size ("Project") with associated parking, landscape improvements and off-site public improvements.

The current proposal anticipates both buildings will be constructed in conjunction with each other. However, should one building be delayed, all on-site and off-site improvements shall be constructed with the first building.

In approving a plot plan, the approving authority shall impose conditions of approval for the project regarding on-site improvements, off-site improvements, the manner in which the site is used and any other conditions as may be deemed necessary to protect the public health, safety and welfare and ensure that the project will be developed in accordance with the purpose and intent of the City's regulations as set forth in Title 9 (Planning and Zoning).

#### Surrounding Vicinity

The Project Site is located in the center of the block on the southside of Alessandro Boulevard between Frederick Street and Graham Street.

The property across the street from the Project Site on the northside of Alessandro Boulevard is zoned Neighborhood Commercial (NC), Residential 20 (R20), and Residential 5 (R5), and is developed as such. The property west of the Project Site is vacant and unimproved and it is zoned Community Commercial (CC). The property south of the Project Site is developed with light industrial buildings and zoned Light Industrial District (LI). To the east of the Project Site, the land is vacant and unimproved and zoned Business Park-Mixed Use District (BPX) and Community Commercial (CC).

#### Access/Parking

Access to the Project Site will be from three new driveways along Alessandro Boulevard. All three driveways will be right-in and right-out, with only two driveways designed to accommodate truck traffic.

The Project's proposed truck and automobile parking exceed the Municipal Code's parking standards for such projects. Overall, a total of 217 parking spaces will be provided for both buildings which include standard automobile, ADA, EV, EVCS and Clean Air spaces, with 44-truck stalls in the truck court. Bicycle parking will also be provided as required by the City's applicable standards.

#### Design/Landscaping

The proposed light industrial type buildings incorporate a contemporary architectural design. Dark bronze metal tower elements at the building corners provide a focal point with textured concrete sections, glass, tile and various awning types, bringing an office aesthetic to the buildings. The elements are included on the side elevations for

continuity of the buildings. The colors of off-white, taupe and warm grey provide the background for the dark bronze metal tower and brown metal window treatments, which include flat awnings above the painted windows and elongated awnings at intervals, which break up the massing of the buildings.

Extensive landscaping is provided along the building frontage in addition to the required front set back and right-of-way landscaping which includes plant, ground covers, street trees and on-site trees.

### Environmental

An Initial Study was prepared by T&B Planning, Inc., in compliance with the California Environmental Quality Act (CEQA) and the CEQA Guidelines. The Initial Study examined the potential Project impacts on the environment. The Initial Study/Mitigation Negative Declaration (IS/MND) provides information in support of the finding that a Mitigated Negative Declaration serves as the appropriate CEQA documentation for the proposed Project in that the proposed Project, with the implementation of the proposed mitigation measures, will not have a significant effect on the environment.

Technical studies prepared in support of the IS/MND include the following: Air Quality Impact Analysis, Mobile Source Health Risk Assessment, MSHCP General Biological Resources Assessment & Compliance Analysis, Jurisdictional Delineation Report and Impact Analysis, MSHCP Determination of Biologically Equivalent or Superior Preservation, Burrowing Owl Focused Survey Report, Least Bell's Vireo Focused Survey Report, Phase I Cultural Resources Survey, Energy Analysis, Geotechnical Engineering Investigation, Greenhouse Gas Analysis, Phase I Environmental Site Assessment Report, Paleontological Assessment, Preliminary Water Quality Management Plan, Preliminary Drainage Study, Noise Impact Analysis, Traffic Analysis, and Vehicle Miles Traveled (VMT) Analysis. The electronic files for the IS/MND with appendices are attached to this staff report.

### Public Notices

The City provided the requisite notices related to the Project's Mitigated Negative Declaration as required under the California Environmental Quality Act ("CEQA") (Public Res. Code, § 21000 *et seq.*), the State CEQA Guidelines (14 CCR § 15000 *et seq.*, and the City of Moreno Valley's "Rules and Procedures for the Implementation of CEQA," as discussed below.

There was no notice requirement for an Initial Study until the City determined that it would prepare either a Negative Declaration or an Environmental Impact Report. If the City concluded that a Negative Declaration was required, it was required to immediately send out a Notice of Intent to Adopt a Negative Declaration or Mitigated Negative Declaration. (14 Cal Code Regs. § 15072.) The City was required provide the Notice by:

1. Mailing the Notice to the last known name and address of all organizations and individuals who have previously requested such notice in writing;  
and

2. Giving notice by at least one of the following:
  - a. Publication at least one time in a newspaper of general circulation in the area;
  - b. Posting of notice on and off site in the area where the project is to be located;
  - or
  - c. Direct mailing to the owners and occupants of property contiguous to the project, with the owners of such property being identified as shown on the latest equalized assessment roll.

The City was also required to send a copy of the Notice of Intent to each responsible agency. (14 Cal. Code Regs. 15073.) The review period must be at least 20 days, but the City provided 30 days. If any agency provided comments, the City was required to also give notice of any public hearing on the project to the commenting agency.

Moreno Valley Municipal Code Section 9.02.200 (Public Hearing and Notification Procedures) provides in part that the public review period for a proposed negative declaration or mitigated negative declaration shall be not less than twenty (20) days. However, when a proposed negative declaration or mitigated negative declaration is submitted to the State Clearinghouse for review by state agencies, the public review period shall not be less than thirty (30) days, unless a shorter period, not less than twenty (20) days, is approved by the State Clearinghouse.

The following records, which are available to review in the Planning Division and which are part of the Administrative Record for the Project, demonstrate that the City complied with all the aforementioned notice requirement under CEQA and the CEQA Guidelines: 1) Public Agency Mailing List; 2) Notice of Availability/Notice of Intent; 3) Notice of Availability/Notice of Intent filed with the County; 4) Notice of Availability/Notice of Intent filed with the Department of Fish & Game; 5) Notice of Availability/Notice of Intent submitted to Press Enterprise Newspaper; 6) State Clearinghouse confirmation of receipt; 7) San Manuel Band of Mission Indians Comment Letter, dated 08/25/2021; 8) South Coast Air Quality Management District Comment Letter dated 08/17/2021; 9) March Joint Powers Authority Comment Letter dated 08/05/2021; 10) Golden State Environmental Justice Alliance Comments Letters, dated 02/20/2021, 08/26/2021 and 09/02/2021, respectively; 11) Planning Commission Public Hearing Notice; 12) Property Owner List; 13) Planning Commission Staff Report; and 14) City Council Public Hearing Notice.

Because the City is a local agency, within five working days after the approval of the project for which the Mitigated Negative Declaration was prepared becomes final, a Notice of Determination must be filed with the County Clerk. (Pub Res C § 21152; 14 Cal Code Regs. § 15075.) Since this Project has not received final approval, there is currently no Notice of Determination.

Moreover, the Project Application, Planning Commission Meeting Agenda, Planning Commission Staff Report and this Staff Report indicate that Project includes

applications for the following entitlements: 1) General Plan Amendment; 2) Zone Change; 3) Tentative Tract Map; and 4) Plot Plans.

In addition to providing the notices required under CEQA and/or the CEQA Guidelines, the Moreno Valley Municipal Code requires that public notice be provided for the above entitlement applications as follows:

#### Section 9.02.040 – General Plan Amendments

For General Plan Amendments, the Planning Commission must conduct a public hearing which requires notice of the Public Hearing to be provided in accordance with Section 9.02.200 (Public Hearing and Notification Procedures).

#### Section 9.02.050 – Amendments to Zoning Districts or Other Provisions of Title 9

For Amendment to Zoning Districts (Zone Changes), the Planning Commission must conduct a public hearing which requires notice of the Public Hearing to be provided in accordance with Section 9.02.200 (Public Hearing and Notification Procedures).

#### Section 9.02.070 – Plot Plan

Except as otherwise provided, authority for approval of plot plans is vested with the Planning Commission. Plot plan applications shall be subject to major development review procedures pursuant to Section 9.02.200 (Public Hearing and Notification Procedures).

#### Section 9.14.050 – Processing of Tentative Maps

For tract maps, a public hearing shall be held before the Planning Commission with notice of the public hearing being provided pursuant to Section 9.02.200 (Public Hearing and Notification Procedures), as amended by Ordinance No. 959.

#### Section 9.02.20 - Public Hearing and Notification Procedures

Section 9.02.20, as amended by Ordinance No. 959, provides in relevant part that whenever a public hearing is required, notice of public hearings shall be given by: 1) Publication in a newspaper of general circulation within the city at least ten (10) calendar days prior to the public hearing; 2) Mailing, at least ten (10) calendar days prior to the public hearing, to all owners of property within a radius of six hundred (600) feet from the exterior boundaries of the property involved in the application. For this purpose, the last known name and address of each property owner, as contained in the records of the latest equalized Riverside County assessor rolls, shall be used. If the number of owners to whom notice would be mailed or delivered pursuant to this subsection is greater than one thousand (1,000), in lieu of mailed or delivered notice, notice may be provided by placing a display advertisement of at least one-eighth page in at least one newspaper of general circulation in the city at least ten (10) days prior to the hearing.

In addition, Section 9.02.200 provides notice of the public hearing must be mailed at least ten (10) calendar days prior to the public hearing, or delivering at least ten (10) calendar days prior to the public hearing, to each local agency expected to provide water, sewer, schools, or other essential services or facilities to the project whose ability to provide those facilities and services may be significantly affected.

The notice of the public hearing must also be mailed, at least ten (10) calendar days prior to the public hearing, to any person who has filed a written request with the community development director and has provided the community development director with a self-addressed stamped envelope for that purpose.

Notice of both the Planning Commission Public Hearing and City Council Public Hearing was provided pursuant to Section 9.02.200.

The following records, which are available to review in the Planning Division and which are part of the Administrative Record for the Project, demonstrate that the City complied with all the aforementioned notice requirements set forth in the Municipal Code: 1) Public Agency Mailing List; 2) Public Hearing Notices; 3) Property Owner List; and 4) Planning Commission Staff Report.

### **ALTERNATIVES**

1. Conduct a public hearing and take action to certify the Initial Study/Mitigated Negative Declaration and Mitigated Monitoring and Reporting Program, approve the General Plan Amendment, Change of Zone, Tentative Parcel Map 37944 and approve both Plot Plans consistent with the Staff recommendations to the Planning Commission. Staff recommends this alternative.
2. Conduct a public hearing on the Project and do not approve the applications. Staff does not recommend this alternative.

### **FISCAL IMPACT**

Not applicable

### **NOTIFICATION**

The public hearing notice was published on January 8, 2022 in the local Press Enterprise newspaper. Public notices were sent to all property owners within 600 feet of the project site on January 6, 2022, and posted on the site January 7, 2022.

### **PREPARATION OF STAFF REPORT**

Prepared By:  
Julia Descoteaux  
Associate Planner

Concurred By:  
Sean P. Kelleher  
Planning Official

Department Head Approval:  
Manuel A. Mancha  
Community Development Director

## **CITY COUNCIL GOALS**

**Community Image, Neighborhood Pride and Cleanliness.** Promote a sense of community pride and foster an excellent image about our City by developing and executing programs which will result in quality development, enhanced neighborhood preservation efforts, including home rehabilitation and neighborhood restoration.

## **CITY COUNCIL STRATEGIC PRIORITIES**

1. Economic Development
2. Public Safety
3. Library
4. Infrastructure
5. Beautification, Community Engagement, and Quality of Life
6. Youth Programs

Objective 1.1: Proactively attract high-quality businesses.

Objective 1.3: Promote local hiring through the expansion of local, quality, high paying jobs, and workforce development efforts.

Objective 1.5: Showcase Moreno Valley's unique assets.

Objective 2.5: Develop partnerships with local businesses and warehouse operators to reduce traffic related issues.

**HISTORY:**

10/05/21                      City Council                      CONTINUED  
 Next: 01/18/22

Mayor Gutierrez announced, at the Developer's request, Item No. F.1 be continued to the October 19<sup>th</sup> City Council meeting.

Mayor Gutierrez opened the Public Hearing at 6:04 p.m.

10/19/21                      City Council                      CONTINUED  
 Next: 01/04/22

Council Member Marquez read a letter from Compass Danbe in which they requested a continuance of item No. F.1. Council Member Cabrera agreed to continue the item.

Interim City Attorney Quintanilla noted with a City Council comprised of three members, a quorum that was required to conduct a meeting was two members. He announced that the following items needed to be pulled from the agenda as they required three affirmative votes per the local rules of procedure for City Council meetings 3.3.2; A.5, A.7, A.8, A.9, A.11, B.4, and G.3. He confirmed that the items remaining on the agenda included A.2, A.3, A.4, A.6, A.10, B.2, B.5, B.6, C.1, C.2, C.3, D.1, D.2, D.3, E.1, E.2, E.3, F.2, G.1, and G.2.

**RESOLUTION NUMBER 2022-**

**A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, ADOPTING A MITIGATED NEGATIVE DECLARATION AND MITIGATION MONITORING AND REPORTING PROGRAM FOR THE COMPASS DANBE CENTERPOINTE PROJECT LOCATED ON THE SOUTH SIDE OF ALESSANDRO BOULEVARD BETWEEN FREDERICK STREET AND GRAHAM STREET (APN'S 297-170-002 AND 003)**

**WHEREAS**, the City of Moreno Valley ("City") is a general law city and a municipal corporation of the State of California, and the lead agency for the preparation and consideration of environmental documents for local projects that are subject to requirements of the California Environmental Quality Act (CEQA) and CEQA Guidelines; and

**WHEREAS**, CDRE Holdings, LLC., ("Developer") is seeking approval for the development of the Compass Danbe Centerpointe project, a two building light industrial complex on a 17.67-acre site that includes: 1) a General Plan Amendment (GPA) (PEN20-0118) amending the "Land Use Map" (Map LCC-4) of the Moreno Valley General Plan to change the land use designation of the Project site from Commercial to Business Park; 2) a Change of Zone (PEN20-0119) to change the zoning designation of the site from Community Commercial District (CC) to Light Industrial District (LI); 3) a Tentative Parcel Map (PEN20-0120) for two lots; 4) a Plot Plan (PEN20-0121) for an approximately 290,726 square foot light industrial building; 5) a Plot Plan (PEN21-0124) for an approximately 98,877 square foot light industrial building with associated public improvements located on the south side of Alessandro Boulevard between Frederick Street and Graham Street (APN'S 297-170-002-003); and

**WHEREAS**, the proposed "Project" shall include not only the General Plan Amendment (GPA) (PEN20-0118), Change of Zone (PEN20-0119), Tentative Parcel Map (PEN20-0120), and two Plot Plans (PEN20-0121 and PEN20-0124), but also a corresponding amendment to the City's Zoning Atlas to reflect the proposed changes in the zoning classification and/or redistricting associated with the General Plan Amendment; and

**WHEREAS**, Planning Division Staff completed an environmental assessment for the proposed Project, and, based on the assessment, decided to prepare an Initial Study ("IS") and a Mitigated Negative Declaration ("MND") in accordance with Section 6 (ND Procedures) of the City's Rules and Procedures for the Implementation of the California Environmental Quality Act and the requirements of the CEQA Guidelines Sections 15070 – 15075; and

**WHEREAS**, a Notice of Intent to Adopt a Mitigated Negative Declaration was duly noticed and circulated for public review for a period of 30 days commencing on July 26, 2021, through August 25, 2021; and

**WHEREAS**, in conformance with CEQA and the CEQA Guidelines, a Mitigation Monitoring and Reporting Program (“MMRP”) that includes a program for reporting on and monitoring Project mitigation measures was prepared for the proposed Project and noticed with the Mitigated Negative Declaration; and

**WHEREAS**, on August 26, 2021 a hearing was conducted by the Planning Commission whereby the Planning Commission approved Planning Commission Resolution 2021-24, a recommendation that the City Council approve the Mitigated Negative Declaration and the Mitigation Monitoring Plan and approve the proposed Project; and

**WHEREAS**, on October 15, 2021, the City Council continued the item to a date uncertain.

**WHEREAS**, on January 18, 2022, a hearing was conducted by the City Council to approve the Mitigated Negative Declaration and the Mitigation Monitoring and Reporting Program and approve the proposed Project; and

**WHEREAS**, at the conclusion of the public hearing, in the exercise of its own independent judgment, the City Council has determined that the Mitigated Negative Declaration and the Mitigation Monitoring and Reporting Program will reduce the environmental impacts of the Project to levels of insignificance and that there is no substantial evidence supporting a fair argument that the Project will have a significant effect on the environment.

**NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:**

**Section 1. Recitals and Exhibits**

That the foregoing Recitals and attached exhibits are true and correct and are hereby incorporated by this reference.

**Section 2. Evidence**

That the City Council has considered all the evidence submitted into the Administrative Record for the Mitigated Negative Declaration and Mitigation Monitoring Plan, including, but not limited to, the following:

- (a) Mitigated Negative Declaration/Initial Study prepared for the proposed Project, attached hereto as Exhibit A;
- (b) Notice of Intent to Adopt a Mitigated Negative Declaration/Newspaper Notice, attached hereto as Exhibit B;
- (c) Mitigation Monitoring and Reporting Program, attached hereto as Exhibit C;
- (d) Staff Report prepared for the City Council’s consideration and all documents, records and references related thereto, and Staff’s presentation at the public hearing; and

Attachment: Resolution 2022- Initial Study [Revision 1] (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

- (e) Testimony, comments and correspondence from all persons that were provided at, or prior to, the public hearing.

### **Section 3. Findings**

That based on the content of the foregoing Recitals and the Evidence contained in the Administrative Record as set forth above, the City Council makes the following findings:

- (a) That the City has independently reviewed, analyzed, and considered the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program, and the whole record before it, including, the Initial Study and comments received;
- (b) That the proposed mitigation measures will reduce all environmental impacts of the proposed Project to levels of insignificance and there is no substantial evidence supporting a fair argument that the Project will have a significant effect on the environment;
- (c) That the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program have been completed in compliance with CEQA and the CEQA Guidelines consistent the City's Rules and Procedures for the Implementation of the California Environmental Quality Act.
- (d) That the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program reflect the independent judgment and analysis of the City as lead agency for the proposed Project; and
- (e) That the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program are adequate to serve as the required CEQA environmental documentation for the proposed Project.

### **Section 4. Adoption**

That based on the foregoing Recitals, Evidence contained in the Administrative Record and Findings, as set forth herein, the City Council hereby adopts the Mitigated Negative Declaration/Initial Study attached hereto as Exhibit A and the Mitigation Monitoring and Reporting Program attached hereto as Exhibit C.

### **Section 5. Repeal of Conflicting Provisions**

That all the provisions as heretofore adopted by the City Council that are in conflict with the provisions of this Resolution are hereby repealed.

### **Section 6. Severability**

That the City Council declares that, should any provision, section, paragraph, sentence or word of this Resolution be rendered or declared invalid by any final court action in a court of competent jurisdiction or by reason of any preemptive legislation, the remaining provisions, sections, paragraphs, sentences or words of this Resolution as hereby adopted shall remain in full force and effect.

**Section 7.                    Effective Date**

That this Resolution shall take effect immediately upon the date of adoption.

**Section 8.                    Certification**

That the City Clerk for the City Council shall certify to the passage of this Resolution.

# MITIGATED NEGATIVE DECLARATION FOR COMPASS DANBE CENTERPOINTE PROJECT

**Project Description:**

The Compass Danbe Centerpointe project comprises a proposal for a General Plan Amendment (PEN20-0118); Change of Zone (PEN20-0119); Tentative Parcel Map No. 37944 (PEN20-0120); and two Plot Plans (PEN20-0121 and PEN20-0124) that provide for the development of an approximately 17.7-acre property with two light industrial buildings with a total combined building floor area of 389,603 square feet. The Project also would include cargo loading areas at each building (within an enclosed truck court with loading docks on the south sides of the proposed buildings), parking areas, landscaping, signage, and lighting.

**Project Location:**

The Project site is located south of Alessandro Boulevard, between Frederick Street and Graham Street, in the City of Moreno Valley, Riverside County, California (APNs: 297-170-002 and -003).

**Project Proponent:**

Mark Bachli  
CDRE Holdings 17 LLC  
523 Main Street  
El Segundo, CA 90245

**Findings:**

It is hereby determined that, based on the information contained in the attached Initial Study, the Project would not have a significant adverse effect on the environment.

**Mitigation Measures:**

No.	Mitigation Measure
BR-1	<p>Within 30 days prior to grading, a qualified biologist shall conduct a survey of suitable habitat on site and make a determination regarding the presence or absence of the burrowing owl. The determination shall be documented in a report and shall be submitted, reviewed, and accepted by the City of Moreno Valley prior to the issuance of a grading permit and subject to the following provisions:</p> <ul style="list-style-type: none"> <li>a) In the event that the pre-construction survey identifies no burrowing owls on the property a grading permit may be issued without restriction.</li> <li>b) In the event that the pre-construction survey identifies the presence of at least one individual but less than three (3) mating pairs of burrowing owl, then prior to the issuance of a grading permit and prior to the commencement of ground-disturbing activities on the property, the qualified biologist shall passively or actively relocate any burrowing owls. Passive relocation, including the required use of one-way doors to exclude owls from the site and the collapsing of burrows, will occur if the biologist determines that the proximity and availability of alternate habitat is suitable for successful passive relocation. Passive relocation shall follow CDFW relocation protocol and shall only occur between September 15 and February 1. If proximate alternate habitat is not present as determined by the biologist, active relocation shall follow CDFW relocation protocol. The biologist shall confirm in writing that the species has fledged the site or been relocated prior to the issuance of a grading permit.</li> <li>c) In the event that the pre-construction survey identifies the presence of three (3) or more mating pairs of burrowing owl, the requirements of MSCHP Species-</li> </ul>

Attachment: Exhibit A to IS Resolution Initial Study - MND [Revision 1] (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass

No.	Mitigation Measure
	<p>Specific Conservation Objectives 5 for the burrowing owl shall be followed. Objective 5 states that if the site (including adjacent areas) supports three (3) or more pairs of burrowing owls and supports greater than 35 acres of suitable habitat, at least 90 percent of the area with long-term conservation value and burrowing owl pairs will be conserved onsite until it is demonstrated that Objectives 1-4 have been met. A grading permit shall be issued, either:</p> <ul style="list-style-type: none"> <li>i) Upon approval and implementation of a property-specific Determination of Biologically Superior Preservation (DBESP) report for the burrowing owl by the CDFW; or</li> <li>ii) A determination by the biologist that the site is part of an area supporting less than 35 acres of suitable Habitat, and upon passive or active relocation of the species following accepted CDFW protocols. Passive relocation, including the required use of one-way doors to exclude owls from the site and the collapsing of burrows, will occur if the biologist determines that the proximity and availability of alternate habitat is suitable for successful passive relocation. Passive relocation shall follow CDFW relocation protocol and shall only occur between September 15 and February 1. If proximate alternate habitat is not present as determined by the biologist, active relocation shall follow CDFW relocation protocol. The biologist shall confirm in writing that the species has fledged the site or been relocated prior to the issuance of a grading permit.</li> </ul>
BR-2	<p>All vegetation clearing and ground disturbance shall be prohibited during the bird nesting season (February 1 through September 15), unless a nesting bird survey is completed in accordance with the following requirements:</p> <ul style="list-style-type: none"> <li>a) A bird nesting survey of the Project Site, including suitable habitat within a 100-foot radius, shall be conducted by a qualified biologist within five (5) days prior to initiating vegetation clearing or ground disturbance at the respective property. A copy of the nesting bird survey results report shall be provided to the City of Moreno Valley.</li> <li>b) If the survey does not identify the presence of any active nests, then construction activities can proceed without restriction.</li> <li>c) If the survey identifies the presence of active nests, then the qualified biologist shall provide the City with a copy of maps showing the location of all nests and a species-appropriate buffer zone around each nest sufficient to protect the nest from substantial adverse direct and/or indirect impacts. The size and location of all buffer zones, if required, shall be subject to review and approval by the City but shall be no less than a 100-foot radius around the nest for non-raptor species and no more than a 500-foot radius around the nest for raptor species and any endangered, threatened, or candidate species. <ul style="list-style-type: none"> <li>i) The nests and buffer zones shall be field checked weekly by a qualified biological monitor. The approved buffer zone shall be marked in the field with construction fencing. No construction vehicles shall be permitted within restricted areas (i.e., bird protection zones), unless directly related to the management or protection of the legally protected species, until after the nest becomes inactive (or the nest has failed), the young have fledged, the young are no longer being fed by the parents, the young have left the area, or the young will no longer be impacted by the activities.</li> <li>ii) In the event that a nest is abandoned despite efforts to minimize disturbance and, if the nestlings are still alive, the Project Applicant/Developer shall contact the California Department of Fish and</li> </ul> </li> </ul>

No.	Mitigation Measure
	Wildlife (CDFW) and, subject to CDFW approval, fund the recovery and hacking (controlled release of captive reared young) of the nestling(s).
BR-3	Prior to the issuance of grading permits, the Project Applicant shall obtain all applicable permits for impacts to jurisdictional features, which may include a 1602 Streambed Alteration Agreement from CDFW and a 401 Certification issued by the RWQCB pursuant to the California Water Code Section 13260. In addition, the Project Applicant shall purchase a minimum of 0.81-acre of re-establishment credits (a 1:1 mitigation-to-impact ratio for impacts to wetland meadow habitat) and 0.82-acre of rehabilitation credits (a 2:1 mitigation-to-impact ratio for impacts to black willow riparian woodland and disturbed wetland-cattail habitats). Habitat mitigation credits can be purchased either at an approved Habitat Mitigation Bank (e.g., Riverpark Mitigation Bank) or via an In-Lieu Fee Program (e.g., Riverside-Corona Resource Conservation District and the Southwest Resource Management Association Santa Ana River Watershed In-Lieu Fee Program). Approval to purchase the mitigation credits must be granted in advance by the resource agencies. The Project Applicant shall provide evidence to the City of Moreno Valley that the applicable permits have been obtained and that the required habitat mitigation credits have been purchased prior to issuance of grading permits.
GEO-1	Prior to the issuance of a grading permit, the Project Applicant shall provide evidence to the City of Moreno Valley that a qualified paleontologist has been retained by the Project Applicant to conduct monitoring of excavation activities and has the authority to halt and redirect earthmoving activities in the event that suspected paleontological resources are unearthed.
GEO-2	The paleontological monitor shall conduct full-time monitoring during grading and excavation operations in undisturbed, very old alluvial fan sediments at depths exceeding five feet below the existing ground surface and shall be equipped to salvage fossils if they are unearthed to avoid construction delays and to remove samples of sediments that are likely to contain the remains of small fossil invertebrates and vertebrates. The paleontological monitor shall be empowered to temporarily halt or divert equipment to allow of removal of abundant and large specimens in a timely manner. Monitoring may be reduced if the potentially fossiliferous units are not present in the subsurface, or if present, are determined upon exposure and examination by qualified paleontological personnel to have a low potential to contain or yield fossil resources.
GEO-3	Recovered specimens shall be properly prepared to a point of identification and permanent preservation, including screen washing sediments to recover small invertebrates and vertebrates, if necessary. Identification and curation of specimens into a professional, accredited public museum repository with a commitment to archival conservation and permanent retrievable storage, such as the Western Science Museum in Hemet, California, is required for significant discoveries.
GEO-4	A final monitoring and mitigation report of findings and significance shall be prepared, including lists of all fossils recovered, if any, and necessary maps and graphics to accurately record the original location of the specimens. The report shall be submitted to the City of Moreno Valley prior to building final.
TCR-1	Prior to the issuance of a grading permit, the Developer shall retain a professional archaeologist to conduct monitoring of all mass grading and trenching activities. The Project Archaeologist shall have the authority to temporarily redirect earthmoving activities in the event that suspected archaeological resources are unearthed during Project construction. The Project Archaeologist, in consultation with the Consulting Tribe(s), the contractor, and the City, shall develop a Cultural Resources Management Plan (CRMP) in consultation pursuant to the definition in

No.	Mitigation Measure
	<p>AB52 to address the details, timing and responsibility of all archaeological and cultural activities that will occur on the project site. A consulting tribe is defined as a tribe that initiated the AB 52 tribal consultation process for the Project, has not opted out of the AB52 consultation process, and has completed AB 52 consultation with the City as provided for in Cal Pub Res Code Section 21080.3.2(b)(1) of AB52. Details in the Plan shall include:</p> <ul style="list-style-type: none"> <li>a) Project grading and development scheduling;</li> <li>b) The Project archeologist and the Consulting Tribes(s) as defined in MM TCR-1 shall attend the pre-grading meeting with the City, the construction manager and any contractors and will conduct a mandatory Cultural Resources Worker Sensitivity Training to those in attendance. The Training will include a brief review of the cultural sensitivity of the Project and the surrounding area; what resources could potentially be identified during earthmoving activities; the requirements of the monitoring program; the protocols that apply in the event inadvertent discoveries of cultural resources are identified, including who to contact and appropriate avoidance measures until the find(s) can be properly evaluated; and any other appropriate protocols. All new construction personnel that will conduct earthwork or grading activities that begin work on the Project following the initial Training must take the Cultural Sensitivity Training prior to beginning work and the Project archaeologist and Consulting Tribe(s) shall make themselves available to provide the training on an as-needed basis;</li> <li>c) The protocols and stipulations that the contractor, City, Consulting Tribe(s) and Project archaeologist will follow in the event of inadvertent cultural resources discoveries, including any newly discovered cultural resource deposits that shall be subject to a cultural resources evaluation.</li> </ul>
TCR-2	<p>Prior to the issuance of a grading permit, the Developer shall secure agreements with the Pechanga Band of Luiseño Indians and Soboba Band of Luiseño Indians for tribal monitoring. The Developer is also required to provide a minimum of 30 days advance notice to the tribes of all mass grading and trenching activities. The Native American Tribal Representatives shall have the authority to temporarily halt and redirect earth moving activities in the affected area in the event that suspected archaeological resources are unearthed. If the Native American Tribal Representatives suspect that an archaeological resource may have been unearthed, the Project Archaeologist or the Tribal Representatives shall immediately redirect grading operations in a 100-foot radius around the find to allow identification and evaluation of the suspected resource. In consultation with the Native American Tribal Representatives, the Project Archaeologist shall evaluate the suspected resource and make a determination of significance pursuant to California Public Resources Code Section 21083.2.</p>
TCR-3	<p>In the event that Native American cultural resources are discovered during the course of grading (inadvertent discoveries), the following procedures shall be carried out for final disposition of the discoveries:</p> <ul style="list-style-type: none"> <li>a) One or more of the following treatments, in order of preference, shall be employed with the tribes. Evidence of such shall be provided to the City of Moreno Valley Planning Division: <ul style="list-style-type: none"> <li>i. Preservation-In-Place of the cultural resources, if feasible. Preservation in place means avoiding the resources, leaving them in the place they were found with no development affecting the integrity of the resources.</li> </ul> </li> </ul>

No.	Mitigation Measure
	ii. Onsite reburial of the discovered items as detailed in the treatment plan required pursuant to MM TCR-1. This shall include measures and provisions to protect the future reburial area from any future impacts in perpetuity. Reburial shall not occur until all legally required cataloging and basic recordation have been completed. No recordation of sacred items is permitted without the written consent of all Consulting Native American Tribal Governments as defined in MM TCR-1.
TCR-4	The City shall verify that the following note is included on the Grading Plan:  "If any suspected archaeological resources are discovered during ground-disturbing activities and the Project Archaeologist or Native American Tribal Representatives are not present, the construction supervisor is obligated to halt work in a 100-foot radius around the find and call the Project Archaeologist and the Tribal Representatives to the site to assess the significance of the find."
TCR-5	If potential historic or cultural resources are uncovered during excavation or construction activities at the project site, work in the affected area must cease immediately and a qualified person meeting the Secretary of the Interior's standards (36 CFR 61), Tribal Representatives, and all site monitors per the Mitigation Measures, shall be consulted by the City to evaluate the find, and as appropriate recommend alternative measures to avoid, minimize or mitigate negative effects on the historic, or prehistoric resource. Determinations and recommendations by the consultant shall be immediately submitted to the Planning Division for consideration, and implemented as deemed appropriate by the Community Development Director, in consultation with the State Historic Preservation Officer (SHPO) and any and all Consulting Native American Tribes as defined in MM TCR-1 before any further work commences in the affected area.
TCR-6	If human remains are discovered, no further disturbance shall occur in the affected area until the County Coroner has made necessary findings as to origin. If the County Coroner determines that the remains are potentially Native American, the California Native American Heritage Commission shall be notified within 24 hours of the published finding to be given a reasonable opportunity to identify the "most likely descendant". The "most likely descendant" shall then make recommendations, and engage in consultations concerning the treatment of the remains (California Public Resources Code 5097.98).

--	--
8. **Project Location:** The Project site is located in the central-western portion of the City of Moreno Valley, Riverside County, California. The Project site is located south of Alessandro Boulevard, between Frederick Street and Graham Street (APNs: 297-170-002 and -003). Refer to Figure 1, *Regional Map*; Figure 2, *Vicinity Map*; and Figure 3, *USGS Topographic Map*.
9. **General Plan Designation:** Commercial. Refer to Figure 4, *Existing General Plan*.
10. **Specific Plan Name and Designation:** N/A

- 11. **Existing Zoning:** Community Commercial. Refer to Figure 5, *Existing Zoning*.
- 12. **Surrounding Land Uses and Setting** (Refer to Figure 6, *Aerial Photograph* and Figure 7, *Site Photographs*):

	Land Use	General Plan	Zoning
<b>Project Site</b>	<b>Undeveloped</b>	<b>Commercial</b>	<b>Community Commercial</b>
North	Residential	Residential: Max 5 du/ac; Residential: Max 20 du/ac	Residential 5; Residential 20
South	Industrial	Business Park/Light Industrial	Light Industrial
East	Commercial and Undeveloped	Business Park/Light Industrial; Commercial	Business Park-Mixed Use; Community Commercial
West	Undeveloped	Commercial	Community Commercial with Mixed-Use Institutional Anchor Overlay

- 13. **Project Description:** The Compass Danbe Centerpointe project (hereafter, “Project”) comprises a proposal for a General Plan Amendment (PEN20-0118); Change of Zone (PEN20-0119); Tentative Parcel Map No. 37944 (PEN20-0120); and Plot Plans (PEN20-0121 and PEN20-0124) that provides for the development of two light industrial buildings located south of Alessandro Boulevard, between Frederick Street and Graham Street. The components of the proposed Project are summarized on the following pages.

**General Plan Amendment (PEN20-0118)** would amend the City of Moreno Valley General Plan Land Use Map to change the land use designation for the entire Project site from “Commercial” to “Business Park/Light Industrial.” Refer to Figure 8, *General Plan Amendment (PEN20-0118)*.

**Change of Zone (PEN20-0119)** would amend the City of Moreno Valley Zoning Map to change the zoning designation for the entire Project site from “Community Commercial” to “Light Industrial.” Refer to Figure 9, *Change of Zone (PEN20-0119)*.

**Tentative Parcel Map No. 37944 (PEN20-0120)** would relocate the existing property line so that Building 1 and Building 2 would be placed upon separate parcels and, also, would grant various easements for public access (i.e., public sidewalks) and public utilities. Refer to Figure 10, *Tentative Parcel Map No. 37944 (PEN20-0120)*.

**Plot Plans (PEN20-0121 and PEN20-0124)** provide specific development plans for two industrial warehouse buildings (Buildings 1 and 2). Building 1, located on the western portion of the Project site, contains approximately 290,726 square feet (s.f.) of building floor area, including 280,726 s.f. of warehouse space, 5,000 s.f. of office space, and 5,000 s.f. of mezzanine. Building 2, located on the eastern portion of the Project site, contains approximately 98,877 s.f. of building floor area, including 93,77 s.f. of warehouse space, 2,500 s.f. of office space, and 2,500 s.f. of mezzanine. The total combined building floor area for Building 1 and Building 2 is approximately 389,603 s.f. Both buildings include outdoor employee break areas with tables and seating; provided along the eastern side of Building 1 and along the western side of Building 2. The site plan for the Project is illustrated on Figure 11, *Site Plan*.

Attachment: Exhibit A to IS Resolution Initial Study - MND [Revision 1] (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass

Vehicular access to the Project site is provided by three proposed driveways onto Alessandro Boulevard. The middle driveway would be accessible to only passenger vehicles and the westernmost driveway and easternmost driveway would be accessible to both passenger vehicles and trucks. All driveways would be restricted to right turn movements when entering/exiting the site. Sight distance at each Project driveway will be reviewed by the City of Moreno Valley at the time of preparation of final grading, landscape and street improvement plans to ensure that standard Caltrans and City of Moreno Valley sight distance standards are met.

### Parking and Loading

The Project provides a range of parking and loading options across the Project site. Buildings 1 and 2 both provide enclosed truck courts on the south sides of the respective buildings. The truck court for Building 1 includes 32 loading bays and 34 truck trailer parking stalls; the truck court for Building 2 includes 10 loading bays and 10 truck trailer parking stalls. Neither truck court would be visible from Alessandro Boulevard. Building 1 also provides 144 passenger vehicle parking spaces (distributed along the north and east side and southeast corner of the building) while Building 2 provides 73 passenger vehicle parking spaces along the north and west sides and southeast corner of the building). Bicycle parking spaces (“racks”) would be provided at the northeast corners of Building 1 (4 racks) and Building 2 (2 racks) in conformance with Moreno Valley Municipal Code Section 9.11.060(B)(1) which requires bicycle parking spaces be provided at a rate equal to five percent of the total required parking spaces.

### Architecture

Figure 12, *Architectural Elevations*, depicts the Project’s architectural design. Building 1 would have a maximum height of approximately 46 feet (measured from finished floor to the top of the parapets) and Building 2 would have a maximum height of approximately 46 feet (measured from finished grade to the top of the parapets). Both buildings are proposed to be constructed with painted concrete tilt-up panels and low reflective, blue-glazed glass. Articulated building elements, include parapets with a varied roofline, wall recesses, awnings, and mullions are proposed as decorative elements. The exterior color palette for Buildings 1 and 2 are comprised of various neutral, earth-toned colors, including shades of white, beige, gray, and dark brown.

Prior to the issuance of building permits to construct the Project, the Project Applicant would be required to submit construction architecture documents/plans to the City of Moreno Valley for review and approval. The construction documents/plans would be required to comply with the City of Moreno Valley Building Code, which is based on the California Building Code and is included in Chapter 8.20 of the City of Moreno Valley Municipal Code.

### Landscaping

Figure 13, *Conceptual Landscape Plan*, depicts the proposed landscape design for the Project. Proposed landscaping would be ornamental in nature and would feature trees, shrubs, and drought-tolerant accent plants in addition to a variety of groundcovers. Trees and groundcover would be concentrated along the Project site’s frontage with Alessandro Boulevard and along the Project site’s eastern and western boundaries. Landscaping also is massed at driveways, around the buildings, and in and around automobile parking areas.

Prior to the issuance of a building permit to construct the proposed building, the Project Applicant would be required to submit final planting and irrigation plans to the City of Moreno Valley for review and approval. The plans are required to comply with Chapter 9.17 of the Moreno Valley Municipal Code, which establishes requirements for landscape design, automatic irrigation system design, and water-use efficiency.

## ***Project Improvements***

### *Public Roadway Improvements*

The Project includes the following public roadway improvements in conjunction with development of the Project site:

1. The Project Applicant would improve the south side of Alessandro Boulevard to its ultimate half-section width as a Divided Major Arterial along the Project site's frontage. With proposed improvements, the south side of the street would feature: a 55-foot-wide travel way (including the existing raised median), new curb and gutter, a 6-foot-wide sidewalk abutting the curb, and a bioretention swale.
2. The Project Applicant would construct three driveways along the northern Project site boundary onto Alessandro Boulevard (which would require striping for lane transitions).
3. The Project Applicant would remove an existing bus stop along the south side of Alessandro Boulevard at the approximate midpoint of the northern Project site boundary. The bus stop would not be replaced as the Project site does not meet City's design requirements for a bus stop (the City's standard for bus stops/turnouts is at the far side of an intersection near a controlled crosswalk, not mid-block which is where the Project site is located).

### *Water Infrastructure*

Eastern Municipal Water District (EMWD) would provide water service to the Project site. As depicted on Figure 14, numerous connection points are proposed to the existing water line installed beneath Alessandro Boulevard for indoor, outdoor (i.e., landscape irrigation), and fire protection (i.e., fire hydrant) services. All proposed water facilities would be designed and constructed in accordance with EMWD standards.

### *Sanitary Sewer Service*

EMWD would provide wastewater conveyance services to the Project site. As shown on Figure 14, the Project would connect to the existing sewer line beneath the southern Project site boundary. All proposed wastewater facilities would be designed and constructed in accordance with EMWD's standards.

### *Stormwater Drainage Infrastructure*

As shown in Figure 14, *Conceptual Drainage Plan*, the Project's on-site stormwater drainage system would consist of catch basins, underground storm drain pipes, bioretention swales, two underground detention basins, two modular wetlands units, and two sump pumps. Runoff from the proposed Building 1 area would drain to a proposed underground detention system located in the southwest corner of the Project site, which would then be pumped to a proposed modular wetlands unit for water quality treatment purposes. Flows would then be conveyed westerly and then southerly via an existing 54-inch storm drain beneath the southwest corner of the Project site. Runoff from the proposed Building 2 area of the Project site would drain to a proposed underground detention system located in the southeast corner of the Project site, which would then be pumped to another proposed modular wetlands unit before being conveyed easterly to an existing 36-inch storm drain beneath the southeast corner of the Project site.

The Project also includes connections to the existing storm drain beneath Alessandro Boulevard to convey storm drain runoff from off-site tributary areas to the north through the Project site. Stormwater runoff from Alessandro Boulevard also would be conveyed through the Project site – after flowing through proposed bioretention swales abutting Alessandro

Boulevard. Off-site runoff flows conveyed through the Project site would discharge to existing storm drains at the southwest and southeast corners of the Project site.

### Dry Utilities

Implementation of the Project would result in the installation of conduit for communications cabling along the Project site's frontage with Alessandro Boulevard. Existing wooden power poles along the Project site would be removed as part of Project construction and the overhead electric transmission lines suspended on these poles would be undergrounded. The removal of the power poles and the undergrounding of the transmission lines would be performed in coordination with Moreno Valley Utility.

### **Earthwork and Grading**

Physical disturbances necessary to implement the Project include grading of the entire Project site. As shown on Figure 15, *Conceptual Grading Plan*, the proposed Project would result in approximately 30,500 cubic yards of cut and 26,000 cubic yards of fill. Based on the expected shrinkage and compaction of on-site soils, earthwork activities are expected to balance and no import or export of soil materials would be required. When grading is complete, the Project site would have a slight downward slope from north to southeast. No manufactured slopes and no retaining walls are needed to implement the Project.

### **Construction Characteristics**

Based on information provided by the Project Applicant, the Project is expected to be constructed over a period of approximately 190 work days (8 months). Site preparation would occur first, followed by mass-grading and installation of underground infrastructure. Next, fine grading would occur, surface materials would be poured, and the proposed building would be erected, connected to the underground utility system, and painted. Lastly, landscaping, fencing, screen walls, lighting, signage, and other site improvements would be installed. For purposes of analysis in this MND, construction is assumed to commence in October 2021 and finish in June 2022. The estimated Project construction schedule, organized by construction stage, is summarized in Table 1, *Estimated Construction Schedule*.

**Table 1: Estimated Construction Schedule**

Phase Name	Start Date	End Date	Days
Site Preparation	10/04/2021	10/15/2021	10
Grading	10/16/2021	11/26/2021	30
Building Construction	11/27/2021	06/24/2022	150
Paving	05/28/2022	06/24/2022	20
Architectural Coating	05/01/2022	06/24/2022	40

Source: (Urban Crossroads, 2020a, Table 3-2)

Construction workers would travel to the site by passenger vehicle and materials deliveries would occur by medium- and heavy-duty trucks. Construction equipment is expected to operate on the Project site up to eight hours per day, six days per week. Even though construction activities are permitted to occur between 7:00 a.m. to 8:00 p.m. on Mondays through Saturdays pursuant to Moreno Valley Municipal Code Section 11.80.030(D)(7), construction equipment is not in continual use and some pieces of equipment are used only periodically throughout a typical day of construction. Thus, eight hours of daily use per piece of equipment is a reasonable assumption. Should construction activities need to occur at night (such as concrete pouring activities which benefit from air temperatures that are lower than daytime temperatures), the Project Applicant would be required to obtain authorization

for nighttime work from the City of Moreno Valley as specified in Moreno Valley Municipal Code Section 11.80.030(D)(7).

The composition of the construction equipment fleet that the Project Applicant intends to use to construct the warehouse building, which also is used for purposes of analysis is in this IS/MND, is summarized in Table 2, *Estimated Construction Equipment Fleet*.

**Table 2: Estimated Construction Equipment Fleet**

Phase Name	Equipment	Amount	Hours Per Day
Site Preparation	Crawler Tractors	4	8
	Rubber Tired Dozers	3	8
	Water Trucks	1	4
Grading	Crawler Tractors	2	8
	Excavators	2	8
	Graders	1	8
	Rubber Tired Dozers	1	8
	Scrapers	2	8
	Water Trucks	1	4
Building Construction	Cranes	1	8
	Forklifts	3	8
	Generator Sets	1	8
	Tractors/Loaders/Backhoes	3	8
	Welders	1	8
	Water Trucks	1	4
Paving	Pavers	2	8
	Paving Equipment	2	8
	Rollers	2	8
	Water Trucks	1	4
Architectural Coating	Air Compressors	1	8

Source: (Urban Crossroads, 2020a, Table 3-3)

### ***Operational Characteristics***

At this time, the future occupant(s) of the Project is unknown. The Project Applicant expects that the building primarily would be occupied by warehouse distribution operators. The proposed buildings are designed with the potential to utilize up to 30 percent of their floor area for cold storage or refrigerated uses. The Project is expected to be operational 24 hours per day, seven days per week, with exterior loading and parking areas illuminated at night. Lighting would be subject to compliance with Moreno Valley Municipal Code Section 9.08.100, which states that all outdoor lighting associated with nonresidential uses shall be fully shielded and directed away from surrounding residential uses to reduce glare and light trespass, and shall not exceed one-quarter-foot-candle minimum maintained lighting measured from within five (5) feet of any property line.

The proposed warehouse buildings are designed such that business operations would be conducted within the enclosed building, with the exception of traffic movement, parking, and

the loading and unloading of tractor trailers at designated loading bays. As a practical matter, dock doors on industrial buildings are not occupied by a truck at all times of the day. There are typically more dock door positions on industrial buildings than are needed for receiving and shipping volumes. The dock doors that are in use at any given time are usually selected based on interior building operation efficiencies. In other words, trucks ideally dock in the position closest to where the goods to be carried by the truck are inside the building. As a result, many dock door positions are frequently inactive throughout the day. The City of Moreno Valley will condition the Project to use outdoor cargo handling equipment (e.g., yard trucks, hostlers, yard goats, pallet jacks, forklifts) that is only powered by non-diesel engines (e.g., gasoline, natural gas, electric).

During operation, employees, visitors, and vehicles hauling goods will travel to and from the Project site on a daily basis. Project operations are calculated by a trip generation calculation study to generate approximately 742 vehicle trips per day, including 518 passenger vehicle trips and 224 truck trips. Pursuant to State law, on-road diesel-fueled trucks that would service the Project are required to comply with various air quality and greenhouse gas emission standards, including but not limited to the type of fuel used, engine model year stipulations, aerodynamic features, and idling time restrictions. Compliance with State law is mandatory and inspections of on-road diesel trucks subject to applicable State laws are conducted by the California Air Resources Board (CARB).

Project operations are expected to demand approximately 9,735 gallons of water per day and 30,090 gallons of wastewater per day (EMWD's standard demand rates for industrial warehouse/distribution land uses are 550 gallons of water per acre per day and 1,700 gallons of wastewater per acre per day, respectively); 5,261,115 kilowatt hours (kWh) of electricity per year; and 6,438,204 kilo-British thermal units (kBTU) of natural gas per year.

14. **Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.3.1? If so, is there a plan for consultation that includes, for example, the determination of significance of impacts to tribal cultural resources, procedures regarding confidentiality, etc.?**

The City of Moreno Valley is required to consult with interested California Native American tribes regarding the Project pursuant to Assembly Bill 52 (AB 52). The City contacted California Native American Tribes with traditional use areas that encompass or are in the vicinity of the Project site. The Project received requests for consultation from Soboba Band of Luiseno Indians, Pechanga Band of Luiseno Indians, Rincon Band of Luiseno Indians, Agua Caliente Band of Cahuilla Indians, and San Manuel Band of Mission Indians. The City concluded consultation on June 16, 2021.

15. **Other public agencies whose approval is required (e.g., permits, financing approval, or participation agreement):**

Riverside County Airport Land Use Commission (Airport Land Use Plan Consistency Determination); Santa Ana Regional Water Quality Control Board (NPDES Permit), Riverside County Flood Control and Water Conservation District (drainage infrastructure design); and Eastern Municipal Water District (domestic water and sewer system design/connections).

**DETERMINATION (To be completed by the Lead Agency):**

On the basis of this initial evaluation:

- I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
- I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.
- I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
- I find that the proposed project MAY have a "potentially significant" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
- I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

**EVALUATION OF ENVIRONMENTAL IMPACTS:**

- 1) A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a Lead Agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g. the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g. the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).
- 2) All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
- 3) Once the Lead Agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect is significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.
- 4) "Less Than Significant with Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less than Significant Impact." The Lead Agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from Section XVII, "Earlier Analyses," may be cross-referenced).
- 5) Earlier analyses may be used where, pursuant to the tiering, program EIR, or another CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:
  - a) Earlier Analyses Used. Identify and state where they are available for review.
  - b) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
  - c) Mitigation Measures. For effects that are "Less than Significant with Mitigation Measures Incorporated," describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.
- 6) Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g. general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.
- 7) Supporting Information Sources. A source list should be attached, and other sources used, or individuals contacted should be cited in the discussion.
- 8) This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.
- 9) The explanation of each issue should identify:
  - a) the significance criteria or threshold, if any, used to evaluate each question; and
  - b) the mitigation measure identified, if any, to reduce the impact to less than significance.

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>I. AESTHETICS</b> – Except as provided in Public Resources Code § 21099 – Modernization of Transportation Analysis for Transit-Oriented Infill Projects – <b>Would the project:</b>				
a) Have a substantial adverse effect on a scenic vista?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> Scenic resources within the City of Moreno Valley are identified as Box Springs Mountains, the Foothills, the Badlands, and Mount Russell and its foothills. According to General Plan Figure 7-2, <i>Major Scenic Resources</i>, the Project site is not located within or adjacent to a designated scenic resource or within a view corridor for any of the designated scenic resources in the City (Moreno Valley, 2006a, Figure 7-2).</p> <p>Scenic resources visible (at least partially) from public viewpoints adjacent to the Project site include Mount Russell (approximately 4.0 miles to the southeast and partially visible from Alessandro Boulevard) (Google Earth Pro, 2020). Under existing conditions, views of Mount Russell are largely obscured from Alessandro Boulevard due to intervening development and landscaping, topography, and atmospheric haze that is common in the Inland Empire throughout the year. The Project would not substantially alter any existing views of Mount Russell from Alessandro Boulevard. As stated above, views of Mount Russell from Alessandro Boulevard are largely obscured from the Project site by the existing warehouse abutting the southern Project site boundary and on-site landscaping (and, for parts of the year, atmospheric haze). The Project would construct buildings up to 46-feet-tall and install new landscaping on the Project site. The proposed building and site improvements would partially obscure views of Mount Russell from Alessandro Boulevard – although not substantially more than views are obscured under existing conditions – and views of the Mountains would continue to be available above the building.</p> <p>Implementation of the Project would not result in any impacts to view corridors as identified in the City of Moreno Valley General Plan (Moreno Valley, 2006a, Figure 7-2). Additionally, implementation of the Project would not result in a substantial adverse impact to the general viewsheds of the scenic resources within the City. Therefore, the Project would result in a less-than-significant impact associated with an adverse effect on a scenic vista.</p>				
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p><b>Response:</b> The Project site is not located within or adjacent to a scenic highway corridor and there are no State-designated or eligible scenic highways within the vicinity of the Project site (Caltrans, 2019). Additionally, the City of Moreno General Plan does not identify any Scenic Route within proximity to the Project site (Moreno Valley, 2006a, Figure 7-2). The nearest State-designated scenic highway to the Project site is a segment of State Route (SR-) 74 located approximately 9.3 miles southeast of the Project site; the Project site would not be visible from this SR-74 segment due to distance and intervening development/topography (Caltrans, 2019; Google Earth Pro, 2020). It should be noted, also, that an area of Interstate (I-) 15 near the above-named segment of SR-74 is eligible for consideration as a State scenic highway; however, the Project site would not be visible from this portion of I-15 due to distance and intervening development/topography (Caltrans, 2019; Google Earth Pro, 2020). Accordingly, the Project site is not located within a State scenic highway corridor and implementation of the proposed Project would not have a substantial effect on scenic resources within a State scenic highway corridor. Thus, no impact to a State scenic highway would occur from implementation of the Project.</p>				
c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> The Project site is located within an urbanized area, as defined by U.S. Census Bureau, and determined as part of the 2010 Census (U.S. Census Bureau, 2012). Thus, pursuant to this threshold,</p>				

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
--	--------------------------------	--	------------------------------	-----------

a potentially significant impact to visual character only would occur if the Project were to conflict with applicable zoning and/or other City of Moreno Valley regulations governing scenic quality. Implementation of the proposed Project would result in the visual conversion of the site from vacant, undeveloped land to two industrial warehouse buildings with associated improvements including parking lots, drive aisles, utility infrastructure, landscaping, exterior lighting, and signage. The Project would be compatible with the size, scale, and aesthetic/decorative architectural and landscaping features of other existing light industrial/warehouse buildings constructed to the south and southwest of the Project site. Furthermore, the Project would be required to comply with the applicable development standards and design guidelines contained in the Moreno Valley Zoning Ordinance, which regulates the visual quality of new development and ensure that new development does not detract from any scenic attributes/qualities in the surrounding area. Because the Project site is located in an urbanized area and because the Project would not conflict with applicable regulations governing scenic quality, a less-than-significant impact would occur from implementation of the Project.

d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
---	--------------------------	--------------------------	-------------------------------------	--------------------------

**Response:** Under existing conditions, the Project site contains no sources of artificial lighting; however, street lights are present along the Project site's frontage with Alessandro Boulevard. The Project Applicant proposes to develop the site with two industrial warehouse buildings and would introduce new lighting elements on-site to illuminate the parking areas, truck docking areas, and building entrances.

The Project Applicant would be required to comply with lighting requirements as set forth in the City of Moreno Valley Municipal Code Sections 9.10.110 and 9.16.280. The Municipal Code lighting standards govern the placement and design of outdoor lighting fixtures to ensure adequate lighting for public safety while also minimizing light pollution and glare and precluding public nuisances (e.g., blinking/flashing lights, unusually high intensity, or needlessly bright lighting). The City would confirm compliance with applicable lighting requirements during future review of building permit applications/plans. Mandatory compliance with the Municipal Code would ensure that the Project would not introduce any permanent design features that would adversely affect day or nighttime views in the area. This impact would be less than significant.

With respect to glare, a majority of Project building materials would consist of concrete panels, which are non-reflective. While window glazing has a potential to result in minor glare effects, such effects would not adversely affect daytime views of surrounding properties, including motorists along adjacent roadways, because the glass proposed for the Project would be low-reflective, proposed buildings would be set back from adjacent roadways at a distance, and proposed landscaping would provide a buffer between all proposed glass surfaces and the public right of way. Thus, glare impacts from proposed building elements would be less than significant.

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p><b>II. AGRICULTURE AND FOREST RESOURCES</b> – In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state’s inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest protocols adopted by the California Air Resources Board. <b>Would the project:</b></p>				
<p>a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p><b>Response:</b> The Project site is not utilized for agricultural purposes under existing conditions. According to mapping information available from the California Department of Conservation’s (CDC) Farmland Mapping and Monitoring Program (FMMP), the Project site is classified as “Farmland of Local Importance” (CDC, 2016). Accordingly, the Project site does not contain any lands mapped by the FMMP as “Prime Farmland,” “Unique Farmland,” or “Farmland of Statewide Importance” and, thus, implementation of the Project would not convert such Farmland to a non-agricultural use. No impact would occur.</p>				
<p>b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p><b>Response:</b> The Project site is zoned for “Community Commercial” under existing conditions and would be re-zoned to “Light Industrial” as part of the Project; therefore, implementation of the Project would not conflict with zoning for agricultural use. Additionally, as disclosed in the City of Moreno Valley General Plan Final EIR, no land within the City – including the Project site – is under a Williamson Act Contract (Moreno Valley, 2006b, p. 5.8-6). Accordingly, implementation of the Project would not conflict with existing (or proposed) zoning for agricultural use or a Williamson Act contract. No impact would occur.</p>				
<p>c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p><b>Response:</b> The Project site is not zoned as forest land, timberland, or Timberland Production, nor is it surrounded by forest land, timberland, or Timberland Production land. According to the City of Moreno Valley Zoning Map, there are no lands located within the City of Moreno Valley that are zoned for forest land, timberland, or timberland zoned Timberland Production. Therefore, the Project has no potential to conflict with any areas currently zoned as forest, timberland, or Timberland Production and would not result in the rezoning of any such lands. As such, no impact would occur.</p>				
<p>d) Result in the loss of forest land or conversion of forest land to non-forest use?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p><b>Response:</b> The Project site does not contain a forest and is not designated as forest land; therefore, the Project would not result in the loss of forest land or the conversion of forest land to non-forest use. As such, no impact would occur.</p>				

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
e) Involve other changes in the existing environment which, due to their location or nature, could result in the conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p><b>Response:</b> “Farmland” is defined in Section II (a) of Appendix G of the State CEQA Guidelines as “Prime Farmland,” “Unique Farmland” or “Farmland of Statewide Importance” (“Farmland”). As disclosed above under Response II(a), the Project would not result in the conversion of Farmland to non-agricultural use.</p> <p>As discussed under Responses II(c) and II(d), the Project would not convert forest land to non-forest use. No impact would occur.</p>				
<p><b>Sources:</b></p> <ol style="list-style-type: none"> <li>Final Environmental Impact Report City of Moreno Valley General Plan, certified July 11, 2006                             <ul style="list-style-type: none"> <li>Section 5.8 – Agricultural Resources</li> </ul> </li> <li>Title 9 – Planning and Zoning of the Moreno Valley Municipal Code                             <ul style="list-style-type: none"> <li>Chapter 9.03 – Residential District</li> </ul> </li> <li>Moreno Valley Zoning Map, <a href="http://www.moreno-valley.ca.us/cdd/pdfs/ZoningMap.pdf">http://www.moreno-valley.ca.us/cdd/pdfs/ZoningMap.pdf</a></li> <li>California Department of Conservation – California Important Farmland Finder, <a href="https://maps.conservation.ca.gov/DLRP/CIFF/">https://maps.conservation.ca.gov/DLRP/CIFF/</a></li> </ol>				
<p><b>III. AIR QUALITY</b> – Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. <b>Would the project:</b></p>				
a) Conflict with or obstruct implementation of the applicable air quality plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> The Project site is located within the South Coast Air Basin (SCAB or “Basin”). The SCAB encompasses approximately 6,745 square miles and includes Orange County and the non-desert portions of Los Angeles, Riverside, and San Bernardino counties. The SCAB is bound by the Pacific Ocean to the west; the San Gabriel, San Bernardino, and San Jacinto Mountains to the north and east, respectively; and the San Diego County line to the south. In these areas, the South Coast Air Quality Management District (SCAQMD) is principally responsible for air pollution control, and works directly with the Southern California Association of Governments (SCAG), county transportation commissions, local governments, as well as state and federal agencies to reduce emissions from stationary, mobile, and indirect sources to meet state and federal ambient air quality standards.</p> <p>Historically and presently, State and federal air quality standards are exceeded in most parts of the SCAB. In response, the SCAQMD has adopted a series of Air Quality Management Plans (AQMPs) to meet the State and federal ambient air quality standards. AQMPs are updated regularly in order to more effectively reduce emissions, accommodate growth, and to minimize any negative fiscal impacts of air pollution control on the economy. The current AQMP, the 2016 AQMP, was adopted by SCAQMD in March 2017. Criteria for determining consistency with the AQMP are defined in Chapter 12 of the SCAQMD’s <i>CEQA Air Quality Handbook (1993)</i>. The Project’s consistency with these criteria is discussed below.</p> <p><i>Consistency Criterion No. 1: The Project will not result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations, or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP.</i></p> <p>Consistency Criterion No. 1 refers to violations of the California Ambient Air Quality Standards (CAAQS) and National Ambient Air Quality Standards (NAAQS). As evaluated under Response III(c), below, the Project would not exceed the SCAQMD localized emissions threshold for any criteria pollutant during any construction phase of the Project. Accordingly, localized criteria pollutant emissions from Project construction would not increase the frequency or severity of existing air quality violations, cause or contribute to new violations, and/or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP.</p>				

Attachment: Exhibit A to IS Resolution Initial Study - MND [Revision 1] (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p>The Project's operational emissions would not exceed SCAQMD localized emissions thresholds (refer to Response III(c), below); thus, long-term operation of the Project would not increase the frequency or severity of existing NAAQS and/or CAAQS violations, cause or contribute to new violations, and/or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP.</p> <p>Therefore, construction and operation of the Project is determined to be consistent with the first criterion and the impact would be less than significant.</p> <p><u>Consistency Criterion No. 2:</u> <i>The Project will not exceed the assumptions in the AQMP based on the years of Project build-out phase.</i></p> <p>The growth forecasts used in the AQMP to project future emissions levels are based in part on land use data provided by lead agency general plan documentation. Projects that propose to increase the intensity of use on a subject property may result in increased stationary area source emissions and/or vehicle source emissions when compared to the AQMP assumptions. If a project does not exceed the growth projections in the applicable local general plan, then the project is considered to be consistent with the growth assumptions in the AQMP. The prevailing planning documents for the Project site is the City of Moreno Valley General Plan. The City of Moreno Valley General Plan Land Use Map designates the Project site for Commercial land use. The Project includes a request to change the existing General Plan land use designation for the Project site from Commercial to Business Park/Light Industrial, which, if approved, would result in a land use and development intensity that was not anticipated by the General Plan, and, by extension, the growth models that were used in the AQMP. Although the Project would not be consistent with the land use assumptions used in the AQMP, Project construction and operation would not exceed applicable SCAQMD regional or localized air quality significance thresholds. As such, the Project's inconsistency with Consistency Criterion No. 2 would not result in a substantial adverse environmental impact.</p> <p>For the reasons stated above, the Project would not result in a substantial adverse environmental impact due to an increase in the frequency or severity of existing air quality violations, the creation creation of new violations, the delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP, or the exceedance of growth assumptions in the AQMP. As such, impacts would be less-than-significant.</p>				
<p>b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> The proposed Project has the potential to generate substantial pollutant concentrations during both construction activities and long-term operation. An <i>Air Quality Impact Analysis</i> (Urban Crossroads, 2020a) and a <i>Mobile Source Health Risk Assessment</i> (Urban Crossroads, 2020b) were prepared for the Project by Urban Crossroads, Inc. to evaluate potential criteria and hazardous air pollutant emissions that could result from the Project's construction and operation. These reports are included as <i>Technical Appendices A1 and A2</i> to this IS/MND and their findings are incorporated into the analysis presented herein.</p> <p>The following analysis is based on the applicable significance thresholds established by the SCAQMD for regional criteria pollutant emissions (as summarized in Table 3-1 of <i>Technical Appendix A1</i>). This analysis assumes that the Project would comply with applicable, mandatory regional air quality standards, including: SCAQMD Rule 403, "Fugitive Dust;" SCAQMD Rule 431.2, "Sulfur Content of Liquid Fuels;" SCAQMD Rule 1113, "Architectural Coatings;" SCAQMD Rule 1186, "PM<sub>10</sub> Emissions from Paved and Unpaved Roads, and Livestock Operations;" SCAQMD Rule 1186.1, "Less-Polluting Street Sweepers," and Title 13, Chapter 10, Section 2485, Division 3 of the California Code of Regulations "Airborne Toxic Control Measure."</p> <p>For a detailed description of the health effects of air pollutants refer to Section 2.4 of the Project's Air Quality Impact Analysis (<i>Technical Appendix A1</i>). In general, air pollutants have adverse effects to human health including, but not limited to, respiratory illness and carcinogenic effects; however, based</p>				

**ISSUES & SUPPORTING INFORMATION SOURCES:**

Potentially Significant Impact

Less Than Significant with Mitigation Incorporated

Less Than Significant Impact

No Impact

on available modeling it is not feasible to correlate regional criteria pollutant emissions from development projects of the scale of the proposed Project to adverse health effects on a SCAB-wide level (Urban Crossroads, 2020a, pp. 10-16, 56-58). The potential for the Project to result in substantial adverse health effects from toxic air contaminant emissions is addressed under Response III(c), below.

Impact Analysis for Construction Emissions

For purposes of the construction emissions analysis, construction was conservatively expected to occur between October 2021 and June 2022. The California Emissions Estimator Model (CalEEMod) accounts for the implementation and enforcement of California's progressively more restrictive regulatory requirements for construction equipment and the ongoing replacement of older construction fleet equipment with newer, less-polluting equipment. Thus, according to the CalEEMod, construction activities that occur in the near future are expected to generate more air pollutant emissions than the same activities that may occur farther into the future. Accordingly, in the event that the Project's construction occurs at a later date than assumed in this air quality analysis, Project-related construction emissions are not expected to exceed the values presented herein (Urban Crossroads, 2020a, p. 38).

The calculated maximum daily emissions associated with Project construction are presented in Table 3, *Summary of Construction-Related Emissions*. The Project's construction characteristics and construction equipment fleet assumptions used in the analysis were previously described above in the Project Description (see Tables 1 and 2).

**Table 3: Summary of Construction-Related Emissions**

Year	Emissions (lbs/day)					
	VOC	NO <sub>x</sub>	CO	SO <sub>x</sub>	PM <sub>10</sub>	PM <sub>2.5</sub>
Summer						
2021	5.43	61.02	32.00	0.10	14.04	6.81
2022	54.69	42.10	50.18	0.13	6.92	2.92
Winter						
2021	5.43	61.02	31.86	0.09	14.04	6.81
2022	54.68	42.02	47.88	0.13	6.39	2.92
<b>Maximum Daily Emissions</b>	<b>54.69</b>	<b>61.02</b>	<b>50.18</b>	<b>0.13</b>	<b>14.04</b>	<b>6.81</b>
SCAQMD Regional Threshold	75	100	550	150	150	55
<b>Threshold Exceeded?</b>	<b>NO</b>	<b>NO</b>	<b>NO</b>	<b>NO</b>	<b>NO</b>	<b>NO</b>

Source: (Urban Crossroads, 2020a, Table 3-4)

As shown in Table 3, the Project's daily construction emissions of volatile organic compounds (VOCs), nitrogen oxides (NO<sub>x</sub>), carbon monoxide (CO), sulfur oxides (SO<sub>x</sub>), and particulate matter (PM<sub>10</sub> and PM<sub>2.5</sub>) would not exceed SCAQMD regional criteria thresholds and, thus, would be less than significant. The SCAQMD considers any project-specific criteria pollutant emissions that exceed applicable SCAQMD significance thresholds also to be cumulatively-considerable. To put it another way, if a project does not exceed the SCAQMD regional thresholds, then SCAQMD considers that project's air pollutant emissions to not be cumulatively-considerable. Thus, because Project construction would not exceed the SCAQMD regional criteria significance thresholds, implementation of the Project would not result in a cumulatively-considerable net increase of any criteria pollutant, including any pollutants for which the SCAB does not attain applicable federal or State ambient air quality standards during construction.

Impact Analysis for Operational Emissions

Operational activities associated with the Project are expected to generate air pollutant emissions from the operation of motor vehicles (including trucks), landscape maintenance activities, application of architectural coatings, and the use of electricity and natural gas. Long term operational emissions associated with the Project are presented in Table 4, *Summary of Peak Operational Emissions*.

As summarized in Table 4, Project operational emissions of VOCs, NO<sub>x</sub>, CO, SO<sub>x</sub>, PM<sub>10</sub> and PM<sub>2.5</sub> would not exceed SCAQMD regional criteria thresholds. Accordingly, the Project would not emit substantial concentrations of these pollutants during long-term operation and would not contribute to an existing or projected air quality violation. The Project's long-term emissions of VOCs, NO<sub>x</sub>, CO, SO<sub>x</sub>, PM<sub>10</sub> and PM<sub>2.5</sub> would be less than significant.

c) Expose sensitive receptors to substantial pollutant concentrations?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
--	--------------------------	--------------------------	-------------------------------------	--------------------------

**Response:** The following analysis addresses the Project’s potential to expose sensitive receptors in the immediate vicinity of the Project site to substantial pollutant concentrations during Project construction and long-term operation. The following analysis is based on the applicable significance thresholds established by the SCAQMD (as summarized in Tables 3-9 and 3-11 of *Technical Appendix A1*).

Impact Analysis for Construction Localized Emissions

As summarized in Table 5, *Summary of Construction Localized Emissions*, localized emissions of NO<sub>x</sub>, CO, and particulate matter (PM<sub>10</sub> and PM<sub>2.5</sub>) would not exceed applicable SCAQMD thresholds during peak Project construction activities. Accordingly, Project construction would not expose any sensitive receptors to substantial concentrations of criteria pollutants. Impacts would be less than significant.

Impact Analysis for Operational Localized Emissions

The Project’s operational localized emissions are presented in Table 6, *Summary of Operational Localized Emissions*. As shown, the Project’s peak operational emissions would not exceed the localized thresholds established by the SCAQMD. Accordingly, long-term operation of the Project would not result in the exposure of any sensitive receptors to substantial pollutant concentrations. Impacts would be less than significant.

Impact Analysis for CO “Hot Spots”

Localized areas where ambient CO concentrations exceed the CAAQS and/or NAAQS are termed CO “hot spots.” Emissions of CO are produced in greatest quantities from motor vehicle combustion and are usually concentrated at or near ground level because they do not readily disperse into the atmosphere, particularly under cool, stable (i.e., low or no wind) atmospheric conditions. Consequently, the highest CO concentrations are generally found within close proximity to congested intersection locations.

For purposes of providing a conservative, worst-case impact analysis, the Project’s potential to cause or contribute to CO hotspots was evaluated by comparing study area intersections that would receive Project traffic (both intersection geometry and traffic volumes) with prior studies conducted by the SCAQMD in support of their AQMPs. In the 2003 AQMP, the SCAQMD evaluated CO concentrations at

four (4) busy intersections in the City of Los Angeles that were determined to be the most congested intersections in the SCAB. Each of the evaluated intersections were primary thoroughfares, some of which were located near major freeway on/off ramps, and experienced traffic volumes of approximately 100,000 vehicles per day. The SCAQMD’s analysis at these busy intersections did not identify any CO hotspots. Based on an analysis of the intersections in the Project’s study area, Urban Crossroads determined that none of the intersections in the Project’s study area would be subject to the extreme traffic volumes and vehicle congestion of the intersections modeled by the SCAQMD in the 2003 AQMP (Urban Crossroads, 2020a, pp. 52-53). Therefore, Project-related vehicular emissions would not create a CO hot spot and would not substantially contribute to an existing or projected CO hot spot. Impacts would be less than significant.

Impact Analysis for Diesel Particulate Emissions

Diesel-fueled trucks would travel to/from the Project site during operation of the Project. Diesel trucks produce diesel particulate matter (DPM), which is known to be associated with health hazards, including cancer. To evaluate the Project’s potential to expose sensitive receptors within ¼-mile of the Project site and the Project’s primary truck travel routes to substantial amounts of DPM during long-term operation, a *Mobile Source Health Risk Assessment* was prepared for the proposed Project (*Technical Appendix A2*). Project-related DPM health risks are summarized below. Detailed air dispersion model outputs and risk calculations are presented in Appendices 2.1 and 2.2, respectively, of *Technical Appendix A2*.

Attachment: Exhibit A to IS Resolution Initial Study - MND [Revision 1] (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p>At the maximally exposed individual receptor (MEIR) – the existing residential home located approximately 152 feet north of the Project site – the maximum cancer risk attributable to the Project’s DPM emissions is calculated to be 4.48 in one million. The cancer risk attributable to the Project at the MEIR would not exceed the SCAQMD cancer risk threshold of 10 in one million. At the MEIR, the non-cancer health risk index attributable to the Project would be 0.002, which would not exceed the SCAQMD non-cancer health risk index of 1.0 (Urban Crossroads, 2020b, p. 1). Accordingly, long-term operations at the Project site would not directly cause or contribute in a cumulatively-considerable manner to the exposure of residential receptors to substantial DPM emissions. Therefore, implementation of the Project would result in a less-than-significant impact.</p> <p>At the maximally exposed individual worker (MEIW) – the office building located approximately 744 feet west of the Project site – the maximum cancer risk attributable to the Project’s DPM emissions is calculated to be 0.18 in one million. The cancer risk attributable to the Project at the MEIW would not exceed the SCAQMD cancer risk threshold of 10 in one million. At the MEIW, the non-cancer health risk index attributable to the proposed Project would be 0.0006, which would not exceed the SCAQMD non-cancer health risk index of 1.0 (Urban Crossroads, 2020b, p. 1). Therefore, the Project would result in a less-than-significant impact.</p> <p>There are no schools located within a ¼ mile of the Project site, which is the distance from the Project site with the highest concentration of Project-related DPM emissions. Proximity to sources of toxics is critical to determining the impact. Based on California Air Resources Board and SCAQMD emissions and modeling analyses, particulate matter pollutant concentrations drop by 70 percent at approximately 500 feet from the emissions source and by 80 percent at approximately 1,000 feet from the emissions source (Urban Crossroads, 2020b, p. 2). Because there are no schools located within at least 1,320 feet of the Project site, implementation of the Project would not expose any school child receptors to substantial concentrations of diesel particulate matter emissions. Project-related truck traffic would travel off-site along public streets (traffic to/from I-215 is expected to travel along Alessandro Boulevard and Cactus Avenue). There are no schools located within ¼ mile of Alessandro Boulevard and Cactus Avenue between the Project site and I-215; therefore, the Project-related traffic traveling to/from I-215 would not expose school children receptors to substantial DPM concentrations. Based on the foregoing analysis, implementation of the Project would not expose school child receptors to substantial DPM concentrations. This impact is less than significant.</p>				
<p>d) Result in other emissions (such as those leading to odors adversely affecting a substantial number of people?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> The Project could produce odors during proposed construction activities resulting from construction equipment exhaust, application of asphalt, and/or the application of architectural coatings; however, standard construction practices would minimize the odor emissions and their associated impacts. Furthermore, any odors emitted during construction would be temporary, short-term, and intermittent in nature, and would cease upon the completion of the respective phase of construction. In addition, construction activities on the Project site would be required to comply with SCAQMD Rule 402, which prohibits the discharge of odorous emissions that would create a public nuisance (Urban Crossroads, 2020a, pp. 58-59). Accordingly, the proposed Project would not create objectionable odors affecting a substantial number of people during construction, and short-term impacts would be less than significant.</p> <p>During long-term operation, the Project would include a warehouse land use, which is not typically associated with objectionable odors. The temporary storage of refuse associated with the proposed Project’s long-term operational use could be a potential source of odor; however, Project-generated refuse is required to be stored in covered containers and removed at regular intervals in compliance with the City’s solid waste regulations, thereby precluding any significant odor impact. Furthermore, the proposed Project would be required to comply with SCAQMD Rule 402, which prohibits the discharge of odorous emissions that would create a public nuisance, during long-term operation (Urban Crossroads, 2020b, pp. 58-59) As such, long-term operation of the proposed Project would not create objectionable odors affecting a substantial number of people and impacts would be less than significant.</p>

**IV. BIOLOGICAL RESOURCES – Would the project:**

a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
--	--------------------------	-------------------------------------	--------------------------	--------------------------

**Response:** A *Multiple Species Habitat Conservation Plan (MSHCP) Compliance Analysis* was prepared for the Project by MIG. The MSHCP compliance analysis addresses potential impacts to candidate, sensitive, or special status species due to implementation of the Project and is included as *Technical Appendix B1* to this IS/MND (MIG, 2020a). Focused burrowing owl and least Bell’s vireo survey reports address the potential for the respective species to occur on the Project site and are included as *Technical Appendices B4* and *B5* (MIG, 2020b; MIG, 2020c). The analysis presented below is based on the findings of the abovementioned reports.

Special-Status Plant Species

All special-status plant species that have potential to occur within the Project survey area are adequately covered by the Western Riverside County MSHCP (MIG, 2020a, p. 15). Furthermore, the Project survey area is not located within a Narrow Endemic Plant Special Survey Area (NEPSSA) or Criteria Area Plant Special Survey Area (CAPSSA) and, thus, is not considered to be in an area with a high likelihood of supporting populations of sensitive native plant species (MIG, 2020a, p. 15). Implementation of the Project would not result in substantial adverse impacts to special-status plants and mitigation is not required.

Special-Status Wildlife Species

The Project site supports suitable habitat for the burrowing owl and least Bell’s vireo; however, neither species was observed on the Project site during focused species surveys (MIG, 2020a, pp. 15-16; MIG 2020b, p. 4; MIG 2020c, p. 5). All other special-status wildlife species that have the potential to occur within the Project survey area are adequately covered by the Western Riverside County MSHCP (MIG, 2020a, pp. 15-16). The Project’s consistency with the MSHCP is addressed under Response IV(f).

Notwithstanding the information presented above, the burrowing owl is a nomadic species and there is the potential that the species could migrate onto the Project site prior to construction. If burrowing owls are present on the Project site during grading activities, the Project’s impact to the species would be significant and mitigation would be required, as discussed below.

Additionally, implementation of Project would result in removal of vegetation across the Project site that has the potential to support nesting and/or migratory birds that are granted special status by federal and State regulations. The Project’s potential to impact nesting birds and migratory birds is a significant direct impact for which mitigation is required, as discussed below.

MM BR-1 and MM BR-2 would reduce potential impacts to the burrowing owl and nesting/migratory birds to less-than-significant levels by ensuring that pre-construction surveys are conducted to determine the presence or absence on the Project site of the burrowing owl and/or protected nesting bird species prior to the commencement of construction activities. If the burrowing owl or protected nesting bird species are present, the mitigation measures provide performance criteria that require avoidance and/or relocation of the species in accordance with accepted protocols.

Based on the foregoing analysis, the proposed Project would result in less-than-significant impacts to candidate, sensitive, or special status species with the implementation of mitigation.

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<b><u>Mitigation</u></b>				
MM BR-1	<p>Within 30 days prior to grading, a qualified biologist shall conduct a survey of suitable habitat on site and make a determination regarding the presence or absence of the burrowing owl. The determination shall be documented in a report and shall be submitted, reviewed, and accepted by the City of Moreno Valley prior to the issuance of a grading permit and subject to the following provisions:</p> <ol style="list-style-type: none"> <li>a) In the event that the pre-construction survey identifies no burrowing owls on the property a grading permit may be issued without restriction.</li> <li>b) In the event that the pre-construction survey identifies the presence of at least one individual but less than three (3) mating pairs of burrowing owl, then prior to the issuance of a grading permit and prior to the commencement of ground-disturbing activities on the property, the qualified biologist shall passively or actively relocate any burrowing owls. Passive relocation, including the required use of one-way doors to exclude owls from the site and the collapsing of burrows, will occur if the biologist determines that the proximity and availability of alternate habitat is suitable for successful passive relocation. Passive relocation shall follow CDFW relocation protocol and shall only occur between September 15 and February 1. If proximate alternate habitat is not present as determined by the biologist, active relocation shall follow CDFW relocation protocol. The biologist shall confirm in writing that the species has fledged the site or been relocated prior to the issuance of a grading permit.</li> <li>c) In the event that the pre-construction survey identifies the presence of three (3) or more mating pairs of burrowing owl, the requirements of MSCHP Species-Specific Conservation Objectives 5 for the burrowing owl shall be followed. Objective 5 states that if the site (including adjacent areas) supports three (3) or more pairs of burrowing owls and supports greater than 35 acres of suitable habitat, at least 90 percent of the area with long-term conservation value and burrowing owl pairs will be conserved onsite until it is demonstrated that Objectives 1-4 have been met. A grading permit shall be issued, either:               <ol style="list-style-type: none"> <li>i) Upon approval and implementation of a property-specific Determination of Biologically Superior Preservation (DBESP) report for the burrowing owl by the CDFW; or</li> <li>ii) A determination by the biologist that the site is part of an area supporting less than 35 acres of suitable Habitat, and upon passive or active relocation of the species following accepted CDFW protocols. Passive relocation, including the required use of one-way doors to exclude owls from the site and the collapsing of burrows, will occur if the biologist determines that the proximity and availability of alternate habitat is suitable for successful passive relocation. Passive relocation shall follow CDFW relocation protocol and shall only occur between September 15 and February 1. If proximate alternate habitat is not present as determined by the biologist, active relocation shall follow CDFW relocation protocol. The biologist shall confirm in writing that the species has fledged the site or been relocated prior to the issuance of a grading permit.</li> </ol> </li> </ol>			
MM BR-2	<p>All vegetation clearing and ground disturbance shall be prohibited during the bird nesting season (February 1 through September 15), unless a nesting bird survey is completed in accordance with the following requirements:</p> <ol style="list-style-type: none"> <li>a) A bird nesting survey of the Project Site, including suitable habitat within a 100-foot radius, shall be conducted by a qualified biologist within five (5) days prior to initiating</li> </ol>			

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p>vegetation clearing or ground disturbance at the respective property. A copy of the nesting bird survey results report shall be provided to the City of Moreno Valley.</p> <p>b) If the survey does not identify the presence of any active nests, then construction activities can proceed without restriction.</p> <p>c) If the survey identifies the presence of active nests, then the qualified biologist shall provide the City with a copy of maps showing the location of all nests and a species-appropriate buffer zone around each nest sufficient to protect the nest from substantial adverse direct and/or indirect impacts. The size and location of all buffer zones, if required, shall be subject to review and approval by the City but shall be no less than a 100-foot radius around the nest for non-raptor species and no more than a 500-foot radius around the nest for raptor species and any endangered, threatened, or candidate species.</p> <p>i) The nests and buffer zones shall be field checked weekly by a qualified biological monitor. The approved buffer zone shall be marked in the field with construction fencing. No construction vehicles shall be permitted within restricted areas (i.e., bird protection zones), unless directly related to the management or protection of the legally protected species, until after the nest becomes inactive (or the nest has failed), the young have fledged, the young are no longer being fed by the parents, the young have left the area, or the young will no longer be impacted by the activities.</p> <p>ii) In the event that a nest is abandoned despite efforts to minimize disturbance and, if the nestlings are still alive, the Project Applicant/Developer shall contact the California Department of Fish and Wildlife (CDFW) and, subject to CDFW approval, fund the recovery and hacking (controlled release of captive reared young) of the nestling(s).</p>				
<p>b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?</p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> A jurisdictional delineation report was prepared for the Project. The jurisdictional delineation identifies potential jurisdictional waters and wetlands located on and abutting the Project site and is included as <i>Technical Appendix B2</i> to this IS/MND (MIG, 2021a). Additionally, a DBESP report was prepared to address potential MSHCP riparian/riverine areas located on and abutting the Project site. The DBESP report is included as <i>Technical Appendix B3</i> (MIG, 2021b).</p> <p>The Project would permanently impact approximately 0.61-acre of riparian and riverine habitats subject to CDFW jurisdiction, which are located within the black willow riparian woodland habitat (0.39-acre), disturbed wetland-cattail (0.02-acre), and wetland meadow along two ephemeral drainage courses (Drainages A and B, totaling 0.81-acre) on the Project site (MIG, 2021a, pp. 25-26). Accordingly, the Project would have a direct significant impact on riparian/riverine habitat and sensitive natural community for which mitigation is required.</p> <p>MM BR-3 would reduce potential impacts to less-than-significant impacts by ensuring that the Project Applicant obtains all applicable permits for impacts to jurisdictional features and fully compensates for the permanent impacts to riparian/riverine habitat through the purchase of habitat mitigation credits at an approved mitigation bank. With implementation of MM BR-3, the proposed Project would result in less-than-significant impacts to riparian/riverine habitats and sensitive natural communities (MIG, 2021b, pp. 10-11).</p>				

Attachment: Exhibit A to IS Resolution Initial Study - MND [Revision 1] (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p>MM BR-3 Prior to the issuance of grading permits, the Project Applicant shall obtain all applicable permits for impacts to jurisdictional features, which may include a 1602 Streambed Alteration Agreement from CDFW and a 401 Certification issued by the RWQCB pursuant to the California Water Code Section 13260. In addition, the Project Applicant shall purchase a minimum of 0.81-acre of re-establishment credits (a 1:1 mitigation-to-impact ratio for impacts to wetland meadow habitat) and 0.82-acre of rehabilitation credits (a 2:1 mitigation-to-impact ratio for impacts to black willow riparian woodland and disturbed wetland-cattail habitats). Habitat mitigation credits can be purchased either at an approved Habitat Mitigation Bank (e.g., Riverpark Mitigation Bank) or via an In-Lieu Fee Program (e.g., Riverside-Corona Resource Conservation District and the Southwest Resource Management Association Santa Ana River Watershed In-Lieu Fee Program). Approval to purchase the mitigation credits must be granted in advance by the resource agencies. The Project Applicant shall provide evidence to the City of Moreno Valley that the applicable permits have been obtained and that the required habitat mitigation credits have been purchased prior to issuance of grading permits.</p>				
<p>c) Have a substantial adverse effect on State or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?</p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> Implementation of the Project would permanently impact 0.02-acre of Wetland Waters of the State, associated with the on-site disturbed wetland-cattail habitat (MIG, 2021a, pp. 25, 27). No other federal or State-protected wetland waters, including vernal pools, are present on the Project site (MIG, 2021a, p. 22). Accordingly, the Project would have a direct significant impact on State-protected wetlands for which mitigation is required.</p>				
<p>MM BR-3 would reduce Project impacts to State-protected wetlands to a less-than-significant level by ensuring that the Project Applicant obtains all applicable permits for impacts to jurisdictional features and fully compensates for the permanent impacts to State wetlands through the purchase of habitat mitigation credits at an approved mitigation bank. With implementation of MM BR-3, the proposed Project would result in less-than-significant impacts to State-protected wetlands (MIG, 2021b, pp. 10-11).</p>				
<p>d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with an established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?</p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> Wildlife movement corridors link together areas of suitable habitat that are otherwise separated by rugged terrain, changes in vegetation, or human disturbances. The Project site was evaluated for its function as a wildlife corridor that species would use to move between wildlife habitat zones as part of the MSHCP Compliance Analysis. Generally, mountain canyons and/or riparian corridors are used by wildlife as corridors; the Project site does not contain either of these features. Furthermore, the Project site is substantially surrounded by human activity in the form of industrial land uses and roadways. Lastly, the Project site is not identified for conservation or designated as a wildlife movement corridor as part of the MSHCP and the Project would be consistent with the MSHCP and, thus, would not interfere with or affect any MSHCP-designated wildlife movement corridor. (MIG, 2020a, p. 17) Therefore, no impact to a wildlife corridor would occur from implementation of the Project.</p>				
<p>Wildlife nurseries are sites where wildlife concentrate for hatching and/or raising young, such as rookeries, spawning areas, and bat colonies. Although no nesting birds or remnant nests were observed on the Project site by MIG, implementation of the Project could potentially result in significant impacts to biological resources (i.e., avian species and their nests) that are protected by the MBTA and CFGC if active nests are present within or adjacent to the site during construction. Implementation of MM BR-2 would reduce potential impacts to nesting birds to less-than-significant levels by ensuring that pre-construction surveys are conducted to determine the presence or absence of nesting birds on or adjacent to the Project site prior to the commencement of construction activities. If active nests are discovered,</p>				

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
this mitigation measure establishes performance criteria that requires avoidance of the nests until it can be determined the nest is no longer active or that the juveniles from the occupied nests are capable of surviving independently of the nest.				
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> Implementation of the Project would result in the removal of trees on the Project site. The removal of trees is regulated by City of Moreno Valley Municipal Code Chapter 9.17.030, which requires development projects to conduct a tree survey prior to construction and, if any mature significant trees are to be removed, to replace each removed tree at defined ratios (as specified in Municipal Code Chapter 9.17.030). Prior to removal of any mature significant trees from the Project survey area, the Project Applicant would be required to comply with the provisions of Chapter 9.17.030 of the City of Moreno Valley Municipal Code. Mandatory compliance with the requirements of the Municipal Code would ensure the Project would not conflict with the City of Moreno Valley's ordinance regulating tree removal.</p> <p>In addition, the City of Moreno Valley Municipal Code contains provisions for the protection of the Stephens' Kangaroo Rat (refer to Title 8, Chapter 8.60 of the Municipal Code). The Project site is not located within an identified reserve area for the Stephens' Kangaroo Rat and the species was not observed during biological surveys of the Project site (MIG, 2020a, p. 16). Accordingly, the Project is exempt from the focused survey requirements for the Stephens' Kangaroo Rat established by the City's Municipal Code. The Project Applicant is required by the Municipal Code to contribute a local development impact and mitigation fee, which requires a fee payment to assist the City in implementing the habitat conservation plan for the Stephens' Kangaroo Rat. With mandatory compliance with standard regulatory requirements (i.e., development impact and mitigation fee payment), the proposed Project would not conflict with any City policies or ordinances related to the protection of the Stephens' Kangaroo Rat. (The Project's consistency with applicable provisions of the Stephens' Kangaroo Rat HCP are addressed in Response IV(f).)</p> <p>The City of Moreno Valley Municipal Code also contains provisions for the collection of mitigation fees to further the implementation of the Western Riverside County MSHCP (refer to Title 3, Chapter 3.48 of the Municipal Code). The Project Applicant is required by the Municipal Code to contribute a local mitigation fee, which requires a fee payment to assist the City in implementing the Western Riverside County MSHCP reserve system (including the acquisition, management, and long-term maintenance of sensitive habitat areas). With mandatory compliance with standard regulatory requirements (i.e., mitigation fee payment), the proposed Project would not conflict with any City policies or ordinances related to the mitigation fee program associated with Western Riverside County MSHCP. (The Project's consistency with applicable provisions of the MSHCP are addressed in Response IV(f).)</p> <p>The City of Moreno Valley does not have any additional policies or ordinances in place to protect biological resources that are applicable to the Project. Mandatory compliance with the above referenced Moreno Valley Municipal Code Chapters would ensure that implementation of the Project would result in a less than significant impact associated with local policies and ordinances.</p>				
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or another approved local, regional, or state habitat conservation plan?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> The Project site is subject to the provisions of the Western Riverside County MSHCP; however, the Project site is not located in a criteria cell or area plan subunit. The following analysis evaluates the Project's compliance with the Western Riverside County MSHCP requirements pursuant to the following sections of the MSHCP that are applicable to the Project site: Section 6.1.2, <i>Protection of Species Associated with Riparian/Riverine areas and Vernal Pools</i>; Section 6.1.3, <i>Protection of Narrow Endemic Plant Species</i>; Section 6.1.4, <i>Guidelines Pertaining to the Urban/Wildland Interface</i>; and Section 6.3.2, <i>Additional Survey Needs and Procedures</i>.</p>				

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
--	--------------------------------	--	------------------------------	-----------

Section 6.1.2 Species Associated with Riparian/Riverine Habitat and Vernal Pools

The Project survey area does not contain any MSHCP vernal pools or seasonal pools. The Project site does contain 0.59-acre of MSHCP riparian/riverine habitat, all of which would be removed by the Project (MIG, 2021b, p. 1). As required by the MSHCP, a Determination of Biologically Equivalent or Superior Preservation (DBESP) report is required in all instances where MSHCP riparian/riverine areas would be impacted by a development project. The goal of the DBESP report is to demonstrate that the development project provides mitigation that is biologically equivalent or superior to the existing conditions on a development site if left undisturbed. The Project’s DBESP report is provided as *Technical Appendix B3*.

According to the Project’s DBESP report, the purchase of habitat re-establishment and rehabilitation mitigation credits would be considered superior mitigation as compared to the preservation of the 0.59-acre of on-site MSHCP riparian/riverine habitat because the mitigation bank where the habitat credits would be purchased provide high quality habitat areas with habitat functions that are superior to the existing conditions at the Project site (MIG, 2021b, pp. 10-11). As such, with implementation of MM BR-3, the Project’s significant impacts to MSHCP riverine and riparian areas would be reduced to less than significant and the Project would not conflict with Section 6.1.2 of the Western Riverside County MSHCP.

Section 6.1.3 Protection of Narrow Endemic Plants

The Project site is not located within the Western Riverside County MSHCP Narrow Endemic Plant Species Survey Area (NEPSSA); therefore, the NEPSSA requirements are not applicable to the Project and the Project is consistent with the Western Riverside County MSHCP narrow endemic plant species policies (MIG, 2020a, pp. 17-18).

Section 6.1.4 Urban/Wildlands Interface Guidelines

The Project site is not located within or adjacent to a Western Riverside County MSHCP Conservation Area; therefore, the Project site is not required to address Section 6.1.4 of the Western Riverside County MSHCP (MIG, 2020a, pp. 18-19).

Section 6.3.2 Additional Surveys and Procedures

The Project site is not located within the Western Riverside County MSHCP Criteria Area Plant Species Survey Area (CAPSSA); therefore, the CAPSSA requirements are not applicable to the Project. Additionally, the Project site is not located within the Western Riverside County MSHCP additional survey areas for amphibians, survey areas for mammals, or any special linkage areas; however, the Project site is located within the Western Riverside County MSHCP burrowing owl survey area (MIG, 2020a, pp. 17-18).

No evidence of use of the site by burrowing mammals was present and no burrows suitable for use by the owl was observed. The species is considered absent from the Project site and potential occurrence is low; however, a preconstruction burrowing owl survey in accordance with the Western Riverside County MSHCP Burrowing Owl Survey Requirements is required to ensure compliance with the Plan’s provisions for protecting the burrowing owl (see MM BR-1). With implementation of MM BR-1, implementation of the Project would result in a less-than-significant impact to the burrowing owl. (MIG, 2020a, p. 18)

Additionally, the Project site is located within the Stephens’ Kangaroo Rat Habitat Conservation Plan Fee Area, which is administered by the Riverside County Habitat Conservation Agency. The Project Applicant would be required to pay the Stephens’ Kangaroo Rat, which is established at \$500 per acre (MIG, 2020a, pp. 19-20; Riverside County, 1996, p. 53). Payment of the Stephens’ Kangaroo Rat HCP fee is required – as noted in the analysis under Response IV(e) – and would ensure the Project is consistent with the Stephens’ Kangaroo Rat HCP and the Western Riverside County MSHCP.

**V. CULTURAL RESOURCES – Would the project:**

a) Cause a substantial adverse change in the significance of a historical resource pursuant to § 15064.5?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
---	--------------------------	--------------------------	--------------------------	-------------------------------------

**Response:** A cultural resources survey conducted for the Project site by Brian F. Smith and Associates (BFSA), which included a comprehensive site survey and archival records search, identified no historic resources on the Project site (BFSA, 2020a, p. 1.0-1). Additionally, the Project site is not identified as containing a historic resource by the City of Moreno Valley General Plan FEIR, Exhibit 5.10-1, *Locations of Listed Historic Resource Inventory Structures* (Moreno Valley, 2006b). Accordingly, the Project has no potential to impact a historical resource as defined by California Code of Regulations Section 15064.5.

b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
--	--------------------------	--------------------------	-------------------------------------	--------------------------

**Response:** According to the cultural resources survey conducted by BFSA, no prehistoric archaeological resources were observed on the Project site during a comprehensive field survey and no prehistoric archaeological resources are known to exist within a one-mile radius of the Project site based on an archival records search conducted with the Eastern Information Center at the University of California, Riverside (BFSA, 2020a, pp. 5.0-1 to 5.0-5). Based on the findings of the field survey and archival research and due to historic disturbances on the Project site, BFSA concluded the Project site had a low likelihood for containing prehistoric archaeological resources (BFSA, 2020a, pp. 1.0-1 and 6.0-1). Based on the foregoing, the Project would result in less-than-significant impact to prehistoric archaeological resources defined by California Code of Regulations Section 15064.5.

c) Disturb any human remains, including those interred outside of formally dedicated cemeteries?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
--	--------------------------	--------------------------	-------------------------------------	--------------------------

**Response:** The Project site does not contain a cemetery, and no known formal cemeteries are located within the immediate site vicinity (Moreno Valley, 2006b, p. 1.0-1). Nevertheless, the remote potential exists that human remains may be unearthed during grading and excavation activities associated with Project construction. If human remains are unearthed during Project construction, the construction contractor would be required by law to comply with California Health and Safety Code, Section 7050.5 "Disturbance of Human Remains." According to Subsections 7050.5(b) and (c), if human remains are discovered, the County Coroner must be contacted and if the Coroner recognizes the human remains to be those of a Native American, or has reason to believe that they are those of a Native American, the Coroner is required to contact, by telephone within 24 hours, the Native American Heritage Commission

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
--	--------------------------------	--	------------------------------	-----------

(NAHC). Pursuant to California Public Resources Code Section 5097.98, whenever the NAHC receives notification of a discovery of Native American human remains from a county coroner, the NAHC is required to immediately notify those persons it believes to be most likely descended from the deceased Native American. The descendants may, with the permission of the owner of the land, or his or her authorized representative, inspect the site of the discovery of the Native American human remains and may recommend to the owner or the person responsible for the excavation work means for treatment or disposition, with appropriate dignity, of the human remains and any associated grave goods. The descendants shall complete their inspection and make recommendations or preferences for treatment within 48 hours of being granted access to the site. According to Public Resources Code Section 5097.94(k), the NAHC is authorized to mediate disputes arising between landowners and known descendants relating to the treatment and disposition of Native American human burials, skeletal remains, and items associated with Native American burials.

With mandatory compliance to California Health and Safety Code Section 7050.5 and Public Resources Code Section 5097.98, any potential impacts to human remains, including human remains of Native American descent, would be reduced to less than significant and mitigation is not required.

**VI. ENERGY – Would the project:**

a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
---	--------------------------	--------------------------	-------------------------------------	--------------------------

**Response:** The analysis below is based on the *Energy Analysis* (included as *Technical Appendix D* to this IS/MND) prepared for the proposed Project by Urban Crossroads and demonstrates that implementation of the Project would not result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation.

*Energy Use During Construction*

The Project’s construction process would consume electricity and fuel. Project-related construction activities would represent a “single-event” demand and would not require on-going or permanent commitment of energy resources. Project construction is estimated to consume approximately 85,609 kWh of electricity, approximately 36,736 gallons of diesel fuel from operation of construction equipment, 15,941 gallons of diesel fuel from construction vendor trips, and 26,278 gallons of fuel from construction worker trips (Urban Crossroads, 2020c, p. 36). The amount of energy and fuel use anticipated by the Project’s construction activities are typical for the type of scale of construction proposed by the Project and there are no aspects of the Project’s proposed construction process that are unusual or energy-intensive. Furthermore, construction equipment would be required to conform to the applicable CARB emissions standards, acting to promote equipment fuel efficiencies. For example, CCR Title 13, Motor Vehicles, Section 2449(d)(3) Idling, limits idling times of construction vehicles to no more than five minutes, thereby precluding unnecessary and wasteful consumption of fuel due to unproductive idling of construction equipment. As supported by the preceding discussion, the Project’s construction energy consumption would not be considered inefficient, wasteful, or otherwise unnecessary. (Urban Crossroads, 2020c, p. 31) Impacts during Project construction would be less than significant.

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p><u>Energy Use Project Operations</u></p> <p>Energy that would be consumed by Project-related traffic is a function of total vehicle miles traveled and the estimated vehicle fuel economies of vehicles accessing the Project site. The Project would result in 5,292,177 annual vehicle miles traveled and an estimated annual fuel consumption of 405,743 gallons of fuel (Urban Crossroads, 2020c, p. 34). The number of daily trips and miles traveled by Project traffic are consistent with other industrial uses of similar scale and configuration in the Inland Empire. That is, the Project does not propose uses or operations that would inherently result in excessive and wasteful vehicle trips and/or vehicle miles traveled, nor associated excess and wasteful vehicle energy consumption (Urban Crossroads, 2020c, p. 37). Enhanced fuel economies realized pursuant to federal and State regulatory actions, and related transition of passenger vehicles to alternative energy sources (e.g., electricity, natural gas, bio fuels, hydrogen cells) would likely decrease future gasoline fuel demands per mile traveled. The location of the Project site proximate to regional and local arterial roadways (e.g., I-215 and SR-60) is expected to minimize the Project vehicle miles traveled within the region. Based on the foregoing, Project transportation energy consumption would not be considered inefficient, wasteful, or otherwise unnecessary (Urban Crossroads, 2020c, p. 38).</p> <p>Building operations and site maintenance activities associated with the Project would result in the consumption of natural gas and electricity. Natural gas would be supplied to the Project by Southern California Gas Company; electricity would be supplied to the Project by Moreno Valley Utility (MVU). Energy demands resulting from Project operations are estimated at 6,438,204 kilo-British thermal units (kBTU) per year of natural gas and 5,261,115 Kilowatt-hour (kWh) per year of electricity (Urban Crossroads, 2020c, p. 35). The Project provides conventional industrial buildings uses reflecting contemporary energy efficient/energy conserving designs and operational programs. Uses proposed by the Project are not inherently energy intensive, and the Project energy demands in total would be comparable to, or less than, other industrial projects of similar scale and configuration (Urban Crossroads, 2020c, pp. 37-38). Additionally, the Project would be required to comply with Title 24 standards, which would ensure that the Project's energy demand would not be considered inefficient, wasteful, or otherwise unnecessary (ibid.).</p> <p>Based on the foregoing analysis, Project operations would result in a less-than-significant impact to energy resources.</p>				
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> The following section analyzes the Project's consistency with the applicable federal and State regulations. As supported by the proceeding analysis, the Project would not conflict with or obstruct a State or local plan for renewable energy or energy efficiency and a less-than-significant impact would occur.</p>				
<p><u>Consistency with Federal Energy Regulations</u></p> <p><i>Intermodal Surface Transportation Efficiency Act of 1991 (ISTEA)</i></p> <p>Transportation and access to the Project site is provided primarily by the local and regional roadway systems, which includes I-215, SR-60, and Alessandro Boulevard. Implementation of the Project would not interfere with, nor otherwise obstruct intermodal transportation plans or projects that may be realized pursuant to the ISTEA because SCAG is not planning for intermodal facilities on or through the Project site (Urban Crossroads, 2020c, p. 39).</p> <p><i>The Transportation Act for the 21st Century (TEA-21)</i></p> <p>The Project site is located along major transportation corridors with proximate access to the interstate freeway system (i.e., I-215). The site selected for the Project facilitates access, acts to reduce vehicle miles traveled (VMT), takes advantage of existing infrastructure systems, and promotes land use compatibilities through collocation of similar uses. The Project supports the strong planning processes emphasized under TEA-21. The Project is therefore consistent with, and would not otherwise interfere with, nor obstruct implementation of TEA-21 (Urban Crossroads, 2020c, p. 39).</p>				

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
--	--------------------------------	--	------------------------------	-----------

Consistency with State Energy Regulations

*Integrated Energy Policy Report (IEPR)*

Electricity would be provided to the Project by MVU and natural gas would be provided by SoCalGas. The MVU and SoCal Gas energy supplies comply with and build off existing State programs and policies. As such, the Project is consistent with, and would not otherwise interfere with, nor obstruct implementation the goals presented in the IEPR (Urban Crossroads, 2020c, p. 39).

*State of California Energy Plan*

The Project site is located along Alessandro Boulevard, east of Frederick Street, with proximate access to Interstate 215. The location of the Project site facilitates access, acts to reduce VMT, takes advantage of existing infrastructure systems, and promotes land use compatibilities through the introduction of industrial uses on a site surrounded by industrial and commercial uses. Therefore, the Project supports urban design and planning processes identified under the State of California Energy Plan, is consistent with, and would not otherwise interfere with, nor obstruct implementation of the State of California Energy Plan (Urban Crossroads, 2020c, p. 39).

*California Code Title 24, Part 6, Energy Efficiency Standards*

The Project would design building shells and building components, such as windows; roof systems: electrical and lighting systems: and heating, ventilating, and air conditioning systems to meet 2019 Title 24 Standards. The Project also is required by State law to be designed, constructed, and operated to meet or exceed Title 24 Energy Efficiency Standards. On this basis, the Project is determined to be consistent with, and would not interfere with, nor otherwise obstruct implementation of Title 24 Energy Efficiency Standards

*Pavley Fuel Efficiency Standards (AB 1493)*

AB 1493 is applicable to the Project because model year 2009-2016 passenger cars and light duty truck vehicles traveling to and from the Project site are required by law to comply with the legislation’s fuel efficiency requirements. On this basis, the Project is determined to be consistent, with, and would not interfere with, nor otherwise obstruct implementation of AB 1493.

*Advanced Clean Cars Program*

The Advanced Clean Cars Program is applicable to the Project because model year 2017-2025 passenger car vehicles traveling to and from the Project site are required by law to comply with the legislation’s fuel efficiency requirements. On this basis, the Project is determined to be consistent, with, and would not interfere with, nor otherwise obstruct implementation of California’s Advanced Clean Cars Program.

*California Renewable Portfolio Standards (SB 1078)*

Energy directly or indirectly supplied to the Project site by electric corporations is required by law to comply with SB 1078.

**Sources:**

1. Urban Crossroads, 2020c, Compass Danbe Centerpointe Energy Analysis, *Technical Appendix D*

**VII. GEOLOGY AND SOILS – Would the project:**

a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving:

i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to <a href="https://www.conservation.ca.gov/cgs/Documents/SP_042.pdf">https://www.conservation.ca.gov/cgs/Documents/SP_042.pdf</a>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
--	--------------------------	--------------------------	--------------------------	-------------------------------------

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p><b>Response:</b> There are no Alquist-Priolo Earthquake Fault Zones affecting the Project site (NorCal Engineering, 2020, p. 4). The nearest Earthquake Fault Zone is the San Jacinto Fault, which occurs approximately 3.7 miles southeast of the Project site (Google Earth Pro, 2020; Moreno Valley, 2006a, Figure 6-3). Because there are no known faults located on the Project site, there is no potential for the Project to expose people or structures to adverse effects related to ground rupture. No impact would occur.</p>				
<p>ii) Strong seismic ground shaking?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> The Project site is located in a seismically active area of southern California and is expected to experience moderate to severe ground shaking during the lifetime of the Project. This risk is not considered substantially different than that of other similar properties in the southern California area. As a mandatory condition of Project approval, the Project would be required to construct the proposed warehouse buildings in accordance with the California Building Standards Code (CBSC), also known as California Code of Regulations (CCR), Title 24 (Part 2), and the City of Moreno Valley Building Code, which is based on the CBSC with local amendments. The CBSC and City of Moreno Valley Building Code (Moreno Valley Municipal Code, Chapter 8.20) provide standards that must be met to safeguard life or limb, health, property, and public welfare by regulating and controlling the design, construction, quality of materials, use and occupancy, location, and maintenance of all buildings and structures, and have been specifically tailored for California earthquake conditions. In addition, the CBSC (Chapter 18) and the City of Moreno Valley Building Code (Chapter 8.21) require development projects to prepare geologic engineering reports to identify site-specific geologic and seismic conditions and implement the site-specific recommendations contained therein to preclude adverse effects involving unstable soils and strong seismic ground-shaking, including, but not limited to, recommendations related to ground stabilization, selection of appropriate foundation type and depths, selection of appropriate structural systems. The Project Applicant has commissioned such a report titled, <i>Geotechnical Investigation – Proposed Warehouse Building Development</i> (NorCal Engineering, 2020), which is included as <i>Technical Appendix E</i> to this IS/MND, and the City would condition the Project to comply with the site-specific ground preparation and construction recommendations contained in the report. With mandatory compliance with these standards and site-specific design and construction measures set forth in the Project's geotechnical report, potential impacts related to seismic ground shaking would be less than significant. As such, implementation of the Project would not expose people or structures to substantial adverse effects, including loss, injury, or death, involving seismic ground shaking. Impacts would be less-than-significant.</p>				
<p>iii) Seismic-related ground failure, including liquefaction?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> According to General Plan FEIR Figure 5.6-2, <i>Seismic Hazards</i>, the Project site is not located in an area with the potential for liquefaction. The geotechnical investigation prepared for the Project site concludes that based on observed subsurface conditions, the potential for liquefaction at the Project site is low due to the characteristics of on-site soils and the depth of the groundwater table beneath the site (greater than 50 feet below the surface) (NorCal Engineering, 2020, pp. 5-6). Regardless, the City of Moreno Valley will require that the property be developed in accordance with the latest applicable seismic safety guidelines, including the standard requirements of the CBSC and the City of Moreno Valley Municipal Code Building Code, to minimize potential liquefaction hazards. Therefore, implementation of the Project would not directly or indirectly expose people or structures to substantial hazards associated with seismic-related ground failure and/or liquefaction hazards. Impacts would be less than significant.</p>				
<p>iv) Landslides?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> The Project site is generally flat and contains no substantial natural or man-made slopes under existing conditions. There are no substantial natural or man-made slopes in the Project site vicinity, either. Accordingly, development on the subject property would not be exposed to landslide risks, and the Project would not pose a landslide risk to surrounding properties; a less-than-significant impact would occur.</p>				
<p>b) Result in substantial soil erosion or the loss of topsoil?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> The analysis below summarizes the likelihood of the Project to result in substantial soil erosion during temporary construction activities and/or long-term operation.</p>				

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
--	--------------------------------	--	------------------------------	-----------

Construction-Related Impacts

Construction of the Project would involve grading, paving, utility installation, building construction, and landscaping installation, which has the potential to temporarily expose on-site soils that would be subject to erosion during rainfall events or high winds. Pursuant to State Water Resources Control Board requirements, the Project Applicant is required to obtain a National Pollutant Discharge Elimination System (NPDES) permit for construction activities, including proposed grading. The NPDES permit is required for all projects that include construction activities, such as clearing, grading, and/or excavation that disturb at least one (1) acre of total land area. In addition, the Project would be required to comply with the Santa Ana RWQCB's *Santa Ana River Basin Water Quality Control Program*. Compliance with the NPDES permit and the Santa Ana River Basin Water Quality Control Program involves the preparation and implementation of a SWPPP for construction-related activities. The SWPPP will specify the Best Management Practices (BMPs) that would be required to be implemented during construction activities to ensure that waterborne pollution – including erosion/sedimentation – is prevented, minimized, and/or otherwise appropriately treated prior to surface runoff being discharged from the subject property. Examples of BMPs that may be utilized during construction include, but are not limited to, sandbag barriers, geotextiles, storm drain inlet protection, sediment traps, rip rap soil stabilizers, and hydro-seeding. In addition, the Project would be required to comply with SCAQMD Rule 403, which would reduce the amount of particulate matter in the air and minimize the potential for wind erosion (SCAQMD, 2005). With mandatory compliance to the requirements noted in the Project's SWPPP, as well as applicable regulatory requirements, the potential for water and/or wind erosion impacts during Project construction would be less than significant and mitigation is not required.

Long-Term Operational Activities

Following construction, wind and water erosion on the Project site would be minimized, because the areas disturbed during construction would be landscaped or covered with impervious surfaces and drainage would be controlled through a storm drain system. Implementation of the Project would result in less long-term erosion and loss of topsoil than occurs under the site's existing conditions.

The City's MS4 NPDES Permit requires the Project Applicant to prepare and submit to the City for approval a Water Quality Management Plan (WQMP) (refer to Moreno Valley Municipal Code Section 8.21.170). The WQMP is required to identify an effective combination of erosion control and sediment control measures (i.e., BMPs) to reduce or eliminate sediment discharge to surface water from storm water and non-storm water discharges. The WQMP also is required to establish a post-construction implementation and maintenance plan to ensure on-going, long-term erosion protection. Compliance with the WQMP will be required as a condition of approval for the Project, as would the long-term maintenance of erosion and sediment control features. The preliminary WQMP for the Project prepared by Thatcher Engineering and Associates, Inc. (Thatcher) (attached hereto as *Technical Appendix I1*) incorporates design features would be effective at removing silt and sediment from storm water runoff. Because the Project would be required to utilize erosion and sediment control measures to preclude substantial, long-term soil erosion and loss of topsoil, the Project would result in less-than-significant impacts related to soil erosion.

c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
--	--------------------------	--------------------------	-------------------------------------	--------------------------

**Response:** The Project's geotechnical report (*Technical Appendix E*) indicates that the settlement potential would be attenuated through the proposed removal of near surface soils down to competent materials and replacement with properly compacted fill, which is included as a recommendation in the Project's geotechnical report. Additionally, only minor ground subsidence (±0.2 feet) is expected to occur in the soils below the zone of removal, due to earthwork operations (NorCal Engineering, 2020, p. 9). Through standard conditions of approval in accordance with Moreno Valley Municipal Code Section 8.21.050, the proposed Project would be required by the City to incorporate the recommendations contained within the Project geotechnical report into the grading plan for the Project (Moreno Valley, n.d.). As such, implementation of the Project would result in less-than-significant impacts associated with soil shrinkage/subsidence and collapse.

Attachment: Exhibit A to IS Resolution Initial Study - MND [Revision 1] (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
As discussed in Responses VII (a), (iii) and (iv), development of the property as proposed by the Project would result in a less than significant impact involving ground failure, including liquefaction and landslide, and a less-than-significant impact involving landslides.				
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<b>Response:</b> According to USDA's Web Soil Survey, the Project site is underlain with Monserate sandy loam 0 to 5 percent slopes, and expansion potential is "very low" to "medium" (USDA, n.d.; NorCal Engineering, 2020, Table II). The expansive characteristics of on-site soils would be attenuated by implementation of the foundation and floor slab design recommendations included in the Project's geotechnical report, which the City will require as a condition of approval pursuant to Section 9.08.080 of the Moreno Valley Municipal Code (NorCal Engineering, 2020, pp. 7-14). According to the above, implementation of the Project would result in less-than-significant impacts associated with expansive soils and would not create substantial risks to life or property.				
e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<b>Response:</b> The Project does not propose the use of septic tanks or alternative waste water disposal systems. Accordingly, no impact would occur.				
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>Response:</b> The Project site does not contain any known unique geologic features (BFSA, 2020b, p. 6). However, the Project site is underlain by lower Pleistocene (approximately 1.8 million to 200,000 years old), very old, sandy alluvial fan deposits that have a high paleontological sensitivity for fossils of large, terrestrial Ice Age vertebrates (BFSA, 2020b, p. 6). In the event that Project grading and excavation activities encroach into previously undisturbed Pleistocene-age alluvial deposits, the Project could result in impacts to important paleontological resources that may exist below the ground surface if they are unearthed and not properly protected. Therefore, the Project's potential to directly or indirectly destroy a unique paleontological resource buried beneath the ground surface is determined to be a significant impact and mitigation is required.				
Implementation of MM GEO-1 through MM GEO-4 would ensure the proper identification and subsequent treatment of any paleontological resources that may be encountered during ground-disturbing activities associated with implementation of the proposed Project. Therefore, with implementation of MM GEO-1 through MM GEO-4, the Project's potential impacts related to paleontological resources would be reduced to a less-than-significant level.				
<b>Mitigation</b>				
MM GEO-1	Prior to the issuance of a grading permit, the Project Applicant shall provide evidence to the City of Moreno Valley that a qualified paleontologist has been retained by the Project Applicant to conduct monitoring of excavation activities and has the authority to halt and redirect earthmoving activities in the event that suspected paleontological resources are unearthed.			
MM GEO-2	The paleontological monitor shall conduct full-time monitoring during grading and excavation operations in undisturbed, very old alluvial fan sediments at depths exceeding five feet below the existing ground surface and shall be equipped to salvage fossils if they are unearthed to avoid construction delays and to remove samples of sediments that are likely to contain the remains of small fossil invertebrates and vertebrates. The paleontological monitor shall be empowered to temporarily halt or divert equipment to allow of removal of abundant and large specimens in a timely manner. Monitoring may be			

<b>ISSUES &amp; SUPPORTING INFORMATION SOURCES:</b>	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p>reduced if the potentially fossiliferous units are not present in the subsurface, or if present, are determined upon exposure and examination by qualified paleontological personnel to have a low potential to contain or yield fossil resources.</p> <p>MM GEO-3 Recovered specimens shall be properly prepared to a point of identification and permanent preservation, including screen washing sediments to recover small invertebrates and vertebrates, if necessary. Identification and curation of specimens into a professional, accredited public museum repository with a commitment to archival conservation and permanent retrievable storage, such as the Western Science Museum in Hemet, California, is required for significant discoveries.</p> <p>MM GEO-4 A final monitoring and mitigation report of findings and significance shall be prepared, including lists of all fossils recovered, if any, and necessary maps and graphics to accurately record the original location of the specimens. The report shall be submitted to the City of Moreno Valley prior to building final.</p>

**VIII. GREENHOUSE GAS EMISSIONS – Would the project:**

a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
---	--------------------------	--------------------------	-------------------------------------	--------------------------

**Response:** A *Greenhouse Gas Analysis* (Urban Crossroads, 2020d) was prepared for the Project by Urban Crossroads to quantify the greenhouse gas (GHG) emissions that would result from Project-related construction and operational activities. This report is included as *Technical Appendix F* to this IS/MND and its findings are incorporated into the analysis presented herein.

While estimated Project-related GHG emissions can be calculated, the direct impacts of such emissions on Global Climate Change (GCC) and global warming cannot be determined on the basis of available science because global climate change is a global phenomenon and not limited to a specific locale such as the Project site and its immediate vicinity. Furthermore, there is no evidence that would indicate that the emissions from a project the size of the proposed Project could directly or indirectly affect the global climate. Because global climate change is the result of GHG emissions, and GHGs are emitted by innumerable sources worldwide, the proposed Project would not result in a direct impact to global climate change; rather, Project-related impacts to global climate change only could be potentially significant on a cumulative basis. (Urban Crossroads, 2020d, p. 8) Therefore, the analysis below focuses on the Project’s potential to contribute to global climate change in a cumulatively-considerable way.

The City of Moreno Valley has not adopted a numerical threshold for determining the significance of GHG emissions; however, the City has discretion to select an appropriate significance criterion used by other agencies, based on substantial evidence (Urban Crossroads, 2020d, p. 39). Specifically, the City has selected to compare Project-related GHG emissions against the draft 10,000 metric tons of carbon dioxide equivalent (MTCO<sub>2e</sub>) per year threshold recommended by SCAQMD staff for industrial projects against where SCAQMD is the lead agency. The industrial threshold utilized by SCAQMD is a widely accepted threshold used by numerous lead agencies in the South Coast Air Basin (SCAB) and was established based on the recommendations from California Air Pollution Control Officers Association

**ISSUES & SUPPORTING INFORMATION SOURCES:**

Potentially Significant Impact

Less Than Significant with Mitigation Incorporated

Less Than Significant Impact

No Impact

(CAPCOA) contained in a report titled “CEQA and Climate Change” (dated January 2008), which serves as a resource for public agencies as they establish agency procedures for reviewing GHG emissions from projects under CEQA. The CAPCOA report provides three recommendations for evaluating a development project’s GHG emissions. When establishing their significance threshold, SCAQMD selected the CAPCOA non-zero approach which establishes a numerical threshold based on capture of approximately 90 percent of emissions from future development (Approach 2, Threshold 2.5). A 90 percent emission capture rate means that 90 percent of total emissions from all new or modified projects would be subject to evaluation under CEQA. Based on SCAQMD’s research of 1,297 major, industrial source point (i.e., stationary) emission sources in the SCAB, SCAQMD found that source point industrial facilities that generate at least 10,000 MTCO<sub>2e</sub> per year produce approximately 90 percent of the carbon dioxide equivalent emissions in the SCAB per year. As such, SCAQMD established their significance criterion at 10,000 MTCO<sub>2e</sub> as that threshold would capture 90 percent of total emissions from future industrial development in accordance with CAPCOA recommendations. (CAPCOA, 2008, pp. 46-47) If Project-related GHG emissions do not exceed the 10,000 MTCO<sub>2e</sub> per year threshold, then Project-related GHG emissions would clearly have a less-than-significant impact. On the other hand, if Project-related GHG emissions exceed 10,000 MTCO<sub>2e</sub> per year, the Project would be considered a substantial source of GHG emissions.

The Project’s annual GHG emissions are summarized in Table 7, *Total Annual Project Greenhouse Gas Emissions*. The methodology used to calculate the Project’s GHG emissions is described in detail in *Technical Appendix F*.

**Table 7: Total Annual Project Greenhouse Gas Emissions**

Emission Source	Emissions (MT/yr)			
	CO <sub>2</sub>	CH <sub>4</sub>	N <sub>2</sub> O	Total CO <sub>2e</sub>
Annual construction-related emissions amortized over 30 years	26.37	0.00	0.00	26.46
Area Source	0.02	5.00E-05	0.00	0.02
Energy Source	2,019.87	0.08	0.02	2,027.91
Mobile Source (Passenger Cars)	758.61	0.02	0.00	759.02
Mobile Source (Trucks)	3,038.11	0.05	0.00	3,039.35
On-Site Equipment Source	101.58	0.03	0.00	102.41
Waste	75.66	4.47	0.00	187.44
Water Usage	409.48	3.00	0.07	506.56
<b>Total CO<sub>2e</sub> (All Sources)</b>	<b>6,649.16</b>			

Source: (Urban Crossroads, 2020d, Table 3-6)

As shown in Table 7, the Project is estimated to generate approximately 6,649.16 MTCO<sub>2e</sub> annually, which is less than the significance threshold of 10,000 MTCO<sub>2e</sub> (Urban Crossroads, 2020d, p. 48). Because the Project’s total annual GHG emissions would not exceed 10,000 MTCO<sub>2e</sub>, the Project would not generate substantial GHG emissions – either directly or indirectly – that would have a significant impact on the environment. Impacts would be less than significant.

b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emission of greenhouse gases?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
---	--------------------------	--------------------------	-------------------------------------	--------------------------

**Response:** The Project would comply with a number of regulations, policies, plans, and policy goals that would reduce GHG emissions, including the Assembly Bill 32 (AB 32), and Senate Bill 32 (SB 32), which are regulations applicable to the Project. For more information on these regulations as well as other state-wide plans, policies, and regulations associated with GHG emissions that are not applicable to the Project, refer to *Technical Appendix F* of this IS/MND.

On October 9, 2012, the Moreno Valley City Council approved an Energy Efficiency and Climate Action Strategy and related GHG analysis. The Energy Efficiency and Climate Action Strategy document identifies potential programs and policies to reduce overall City energy consumption and increase the use of renewable energy. The majority of the policies are directed at municipal operations of the City,

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
--	--------------------------------	--	------------------------------	-----------

but the document also contains recommended policies for the community at large (including private development projects). These recommended policies include but are not limited to: energy efficiency, water use reduction, trip reduction, solid waste diversion, and educational policies. The overall goal of the Energy Efficiency and Climate Action Strategy is to ensure that the City is consistent with and would not otherwise conflict with the provisions of AB 32. As demonstrated by the analysis below, the Project would not conflict with the provisions of AB 32 and, therefore, would not obstruct implementation of the components of the City's Energy Efficiency and Climate Action Strategy that are applicable to the Project.

CARB identified measures in their 2017 Scoping Plan Update to identify the measures that would achieve the emissions reductions goals of SB 32. As explained in point-by-point detail in Section 3.8 of *Technical Appendix F* (refer to Table 3-7), the Project would not conflict with applicable measures of the 2017 Scoping Plan Update and would not preclude/obstruct implementation of the Scoping Plan Update (Urban Crossroads, 2020d, Table 3-8).

In April 2015, Governor Edmund Brown Jr. signed Executive Order B-30-15, which advocated for a statewide GHG-reduction target of 40 percent below year 1990 levels by 2030 and 80 percent below 1990 levels by 2050. In September 2016, Governor Brown signed the Senate Bill (SB) 32. SB 32 formally established a statewide goal to reduce GHG emissions to 40 percent below year 1990 levels by 2030. To date, no statutes or regulations have been adopted to translate the year 2050 GHG reduction goal into comparable, scientifically-based statewide emission reduction targets.

According to research conducted by the Lawrence Berkeley National Laboratory and supported by the CARB, California, under its existing and proposed GHG reduction policies (i.e., CARB Scoping Plan), is on track to meet the years 2020 and 2030 reduction targets established by AB 32 and SB 32, respectively (Urban Crossroads, 2020d, p. 27). As described above, the Project would not conflict with or obstruct implementation of the CARB Scoping Plan; therefore, the Project would not interfere with the State's ability to achieve the year 2030 GHG-reduction target established by SB 32.

Rendering a significance determination for year 2050 GHG emissions relative to EO B-30-15 would be speculative because EO B-30-15 establishes a goal more than three decades into the future; no agency with GHG subject matter expertise has adopted regulations to achieve these statewide goals at the project-level; and, available analytical models cannot presently quantify all project-related emissions in those future years. Further, due to the technological shifts anticipated and the unknown parameters of the regulatory framework in 2050, available GHG models and the corresponding technical analyses are subject to limitations for purposes of quantitatively estimating the Project's emissions in 2050.

As described above, the Project would not conflict with the State's ability to achieve the State-wide GHG reduction mandates and would be consistent with applicable policies and plans related to GHG emissions reductions. Impacts would be less than significant.

**IX. HAZARDS AND HAZARDOUS MATERIALS – Would the project:**

a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
---	--------------------------	--------------------------	-------------------------------------	--------------------------

**Response:** A Phase I Environmental Site Assessment (ESA) was prepared for the Project site by Partner Engineering and Science, Inc. (Partner) and is included as *Technical Appendix G* to this IS/MND. As part of the Phase I ESA efforts, Partner conducted a visual inspection of the Project site, researched regulatory hazardous materials databases, reviewed historical reference materials (including aerial photographs, topographic maps, and City of Moreno Valley directories), and interviewed people with historical links to the Project site; the findings of this research are incorporated into the analysis presented herein.

Attachment: Exhibit A to IS Resolution Initial Study - MND [Revision 1] (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
--	--------------------------------	--	------------------------------	-----------

Existing Site Conditions Impacts

There were no underground or aboveground storage tanks, drain lines, sumps, ponds, pits, lagoons, stressed vegetation, wells, transformers, or mold found on the Project site (Partner, 2019, pp. 17-18). Based on a review of historic regulatory agency hazardous materials databases, historic site aerial photographs, interviews with current property owners, and a reconnaissance of the Project site, Partner determined that the Project site does not contain any recognized environmental conditions (RECs), historic recognized environmental conditions, or other environmental issues (Partner, 2019, p. 21). A REC is defined as “the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment” (ibid.). A HREC is defined as “past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the application regulatory authority” (ibid).

Based on the foregoing analysis, the Project would not create significant hazard to the public or the environment through routine transport, use, or disposal of hazardous materials from the Project site under existing conditions. A less-than-significant impact would occur.

Construction-Related Impacts

Heavy equipment (e.g., dozers, excavators, tractors) would be operated on the subject property during construction of the Project. Heavy equipment is typically fueled and maintained by petroleum-based substances such as diesel fuel, gasoline, oil, and hydraulic fluid, which is considered hazardous if improperly stored or handled. In addition, materials such as paints, adhesives, solvents, and other substances typically used in building construction would be located on the Project site during construction. Improper use, storage, or transportation of hazardous materials can result in accidental releases or spills, potentially posing health risks to workers, the public, and the environment. This is a standard risk on all construction sites, and there would be no greater risk for improper handling, transportation, or spills associated with the proposed Project than would occur on any other similar construction site. Construction contractors would be required to comply with all applicable federal, state, and local laws and regulations regarding the transport, use, and storage of hazardous construction-related materials, including but not limited requirements imposed by the Environmental Protection Agency (EPA), California Department of Toxic Substances Control (DTSC), South Coast Air Quality Management District (SCAQMD), and Santa Ana RWQCB. With mandatory compliance with applicable hazardous materials regulations, the Project would not create a significant hazard to the public or the environment through routine transport, use, or disposal of hazardous materials during the construction phase. Impacts would be less than significant.

Long-Term Operational Impacts

The future building occupant(s) for the Project site are not yet identified; however, the Project is designed to house warehouse distribution occupants and it is possible that hazardous materials could be used during the course of a future building user’s daily operations. State and federal Community-Right-to-Know laws allow the public access to information about the amounts and types of chemicals in use at local businesses. Laws also are in place that requires businesses to plan and prepare for possible chemical emergencies. Any business that occupies a building on the Project site and that handles hazardous materials (as defined in Section 25500 of California Health and Safety Code, Division 20, Chapter 6.95) will require a permit from the Moreno Valley County Fire Department Hazardous Materials Division in order to register the business as a hazardous materials handler. Such businesses also are required to comply with California’s Hazardous Materials Release Response Plans and Inventory Law, which requires immediate reporting to the County of Riverside Fire Department and the State Office of Emergency Services regarding any release or threatened release of a hazardous material, regardless of the amount handled by the business. In addition, any business handling at any one time, greater than 500 pounds of solid, 55 gallons of liquid, or 200 cubic feet of gaseous hazardous material, is required, under Assembly Bill 2185 (AB 2185), to file a Hazardous Materials Business Emergency Plan (HMBEP). A HMBEP is a written set of procedures and information created to help minimize the effects and extent of a release or threatened release of a hazardous material. The intent of the HMBEP is to satisfy federal and State Community Right-To-Know laws and to provide detailed information for use by emergency responders.

Attachment: Exhibit A to IS Resolution Initial Study - MND [Revision 1] (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p>If businesses that use or store hazardous materials occupy the Project, the business owners and operators would be required to comply with all applicable federal, state, and local regulations to ensure proper use, storage, use, emission, and disposal of hazardous substances (as described above). With mandatory regulatory compliance, the Project is not expected to pose a significant hazard to the public or the environment through the routine transport, use, storage, emission, or disposal of hazardous materials, nor would the Project increase the potential for accident conditions which could result in the release of hazardous materials into the environment.</p> <p>With mandatory regulatory compliance, potential hazardous materials impacts associated with long-term operation of the Project are determined to be less than significant and mitigation is not required.</p>				
<p>b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> Accidents involving hazardous materials that could pose a significant hazard to the public or the environment would be highly unlikely during the construction and long-term operation of the Project and are not reasonably foreseeable. As discussed above under Response IX(a), the transport, use, and handling of hazardous materials on the Project site during construction is a standard risk on all construction sites, and there would be no greater risk for upset and accidents than would occur on any other similar construction site. Upon buildout, the Project site would operate as a warehouse distribution center. Based on the operational characteristics of warehouse distribution centers, it is possible that hazardous materials could be used during the course of a future occupant's daily operations; however, as discussed above under Response IX(a), the Project Applicant would be required to comply with all applicable local, State, and federal regulations related to the transport, handling, and usage of hazardous material. Accordingly, impacts associated with the accidental release of hazardous materials would be less than significant during both construction and long-term operation of the Project and mitigation would not be required.</p>				
<p>c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p><b>Response:</b> There are no schools located within 0.25-mile of the Project site (Google Earth Pro, 2020). Thus, the Project would not have a significant effect in emitting hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school. No impact would occur.</p>				
<p>d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> The Phase I ESA (<i>Technical Appendix G</i> to this IS/MND) prepared for the Project site included a search of regulatory databases, including the California EPA's Regulated Site Portal, the Santa Ana RWQCB's Geotracker database, and DTSC's EnviroStor database (EDR). The Project site is identified on the EDR database as situated within the former Department of Defense (DOD) boundary of March Air Force Base; however, the Project site is not mapped within a national priority list (NPL) or area of concern associated with the Base (Partner, 2019, p. 13). Accordingly, this listing is not expected to represent a significant environmental concern to the Project site and would not create a significant hazard to the public or the environment. The Project site is not included on any other list of hazardous materials sites compiled pursuant to Government Code Section 65962.5. Impacts would be less than significant.</p>				

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p>e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> The Project site is located approximately 1.1 miles southwest of the March Air Reserve Base/Inland Port Airport (MARB/IPA). Pursuant to the March Air Reserve Base Compatible Use Zone Study commissioned by the United States Air Force and as depicted on Figure 6-5, <i>Air Crash Hazards</i>, of the Moreno Valley General Plan, the Project site is not located within a zone subject to hazards related to air crashes (Moreno Valley, 2006a). According to the March Air Reserve Base/Inland Port Airport Land Use Compatibility Plan, the western portion of the Project site is located in Compatibility Zone E and the eastern portion of the Project site is located within Compatibility Zone D (RCALUC, 2014, Map MA-1). Properties located in Zone D and E are subject to safety risks associated with aircraft operations, but the potential hazards are sufficiently minimal that land use restrictions are generally unnecessary (RCALUC, 2014, Table MA-1). Thus, the light industrial land uses proposed by the Project are permitted in Zone D and E by the March Air Reserve Base/Inland Port Airport Land Use Compatibility Plan (ALUCP) and were determined by the ALUC to be consistent with the ALUCP during their January 14, 2021 public meeting. The industrial warehouse buildings proposed by the Project would be no greater than 50 feet tall and does not include an air travel component (e.g., runway, helipad); therefore, would not interfere with flight operations at the March Air Reserve Base. The Project would not result in safety hazards for people residing or working in the Project area. Impacts would be less than significant, and mitigation is not required.</p>				
<p>f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p><b>Response:</b> The Project site does not contain any emergency facilities under existing conditions nor does it serve as an emergency evacuation route, so there is no potential for the Project to adversely affect an existing emergency response or evacuation plan. During construction and at Project buildout, the proposed Project would be required to maintain adequate emergency access for emergency vehicles as required by the City. As part of the City's discretionary review process, the City of Moreno Valley reviewed the Project to ensure that appropriate emergency ingress and egress would be available to-and-from the proposed warehouse buildings for public safety, and determined that the Project would not substantially impede emergency response times in the local area. Accordingly, implementation of the proposed Project would not impair implementation of or physically interfere with an adopted emergency response plan or an emergency evacuation plan, and no impact would occur.</p>				
<p>g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> According to City of Moreno Valley General Plan FEIR Figure 5.5-2, <i>Floodplains and High Fire Hazard Areas</i>, the Project site is not located in an area of substantial or high fire risk (Moreno Valley, 2006b). Additionally, the California Department of Forestry and Fire Protection (CalFire) identifies the Project site location as within a Non-Very High Fire Hazard Severity Zone (CalFire, 2009). The Project site is located in an area that has been largely developed. No wildlands are located on or adjacent to the Project site and the Project site is largely disturbed or devoid of vegetation and surrounded on all sides by developed or maintained properties and a paved road. Thus, implementation of the proposed Project would not expose people or structures to a significant risk of loss, injury, or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands. Impacts would be less than significant.</p>

**X. HYDROLOGY AND WATER QUALITY – Would the project:**

a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
--	--------------------------	--------------------------	-------------------------------------	--------------------------

**Response:** The Project would be required to comply with Section 402 of the Clean Water Act, which authorizes the National Pollution Discharge Elimination System (NPDES) permit program that covers point sources of pollution discharging to a water body. The NPDES program also requires operators of construction sites one-acre or larger to prepare a Storm Water Pollution Prevention Plan (SWPPP) and obtain authorization to discharge stormwater under an NPDES construction stormwater permit. The Project Applicant also would be required to comply with the California Porter-Cologne Water Quality Control Act (Section 13000 et seq., of the California Water Code), which requires that comprehensive water quality control plans be developed for all waters within the State of California. The Project site is located within the jurisdiction of the Santa Ana Regional Water Quality Control Board (RWQCB).

Construction-Related Impacts

Construction of the proposed Project would involve clearing, grading, paving, utility installation, building construction, and landscaping activities. Construction activities would result in the generation of potential water quality pollutants such as silt, debris, chemicals, paints, and solvents, and other chemicals with the potential to adversely affect water quality. As such, short-term water quality impacts have the potential to occur during construction of the Project in the absence of any protective or avoidance measures.

Pursuant to the requirements of the Santa Ana RWQCB and the City Moreno Valley (Municipal Code Chapter 8.10 et seq. and Section 8.21.170), the Project would be required to obtain coverage under the State's General Construction Storm Water Permit (NPDES Permit). The NPDES permit is required for all projects that include construction activities, such as clearing, soil stockpiling, grading, and/or excavation that disturb at least one (1) acre of total land area. In addition, the Project would be required to comply with the Santa Ana RWQCB's *Santa Ana River Basin Water Quality Control Program*. Compliance with the NPDES permit and the *Santa Ana River Basin Water Quality Control Program* involves the preparation and implementation of a SWPPP for construction-related activities, including grading. The SWPPP will specify the Best Management Practices (BMPs) that the Project would be required to implement during construction activities to ensure that all potential pollutants of concern are prevented, minimized, and/or otherwise appropriately treated prior to being discharged from the subject property. Examples of BMPs that may be utilized during construction include, but are not limited to, sandbag barriers, geotextiles, storm drain inlet protection, sediment traps, rip rap soil stabilizers, and hydro-seeding. Mandatory compliance with the SWPPP would ensure that the Project's construction does not violate any water quality standards or waste discharge requirements. Therefore, water quality impacts associated with construction activities would be less than significant and no mitigation measures would be required.

Post-Development Water Quality Impacts

Stormwater pollutants commonly associated with the land uses proposed by the Project include bacterial indicators, metals, nutrients, pesticides, toxic organic compounds, sediments, trash and debris, and oil and grease. Based on current receiving water impairments (pursuant to the Clean Water Act's (CWA)

Attachment: Exhibit A to IS Resolution Initial Study - MND [Revision 1] (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
--	--------------------------------	--	------------------------------	-----------

Section 303(d) list), the Project’s pollutants of concern are bacterial indicators, nutrients, pesticides, and sediments (Thatcher, 2020, Table E.1).

Pursuant to the Moreno Valley Municipal Code (Chapter 8.10 *et seq.* and Section 8.21.170), the Project Applicant would be required to implement a Water Quality Management Plan (WQMP) to demonstrate compliance with the City’s NPDES municipal stormwater permit, and to minimize the release of potential waterborne pollutants, including pollutants of concern for downstream receiving waters. The WQMP is a site-specific post-construction water quality management program designed to address the pollutants of concern of a development project via BMPs, implementation of which ensures the on-going protection of the watershed basin. The Project’s Preliminary WQMP, prepared by Thatcher, is included as *Technical Appendix 11* appended to this IS/MND. As identified in the Project’s Preliminary WQMP, the proposed Project is designed to include structural source control BMPs (including bioretention swales, two underground detention systems and two modular wetlands units) as well as operational source controls (including but not limited to: drainage system maintenance, storm drain system stenciling and signage, and implementation of minimal pesticide use) to minimize, prevent, and/or otherwise appropriately treat stormwater runoff flows before they are discharged from the site. Compliance with the WQMP would be required as a condition of Project approval pursuant to Municipal Code Chapter 8.10 and Municipal Code Section 8.21.170, and long-term maintenance of on-site BMPs would be required to ensure their long-term effectiveness. Therefore, water quality impacts associated with long-term operational activities would be less than significant.

In addition to the WQMP, the NDPES program also requires certain land uses, including industrial land uses as proposed by the Project, to prepare a SWPPP for operational activities and to implement a long-term water quality sampling and monitoring program, unless an exemption has been granted. On April 1, 2014, the California State Water Resources Control Board adopted an updated new NPDES permit for stormwater discharge associated with industrial activities (referred to as the “Industrial General Permit”). The new Industrial General Permit, which is more stringent than the existing Industrial General Permit, became effective on July 1, 2015. Under the effective NPDES Industrial General Permit, the Project would be required to prepare a SWPPP for operational activities and implement a long-term water quality sampling and monitoring program or receive an exemption. Because the permit is dependent upon the operational activities of the buildings, and the Project’s future building occupants and their operations are not known at this time, details of the SWPPP (including BMPs) or potential exemption to the SWPPP operational activities requirement cannot be determined at this time. However, based on the requirements of the NPDES Industrial General Permit, it is anticipated that the Project’s mandatory compliance with all applicable regulations would further reduce potential water quality impacts during long-term operation.

Based on the foregoing analysis, the Project would not violate any water quality standards or waste discharge requirements during long-term operation. Impacts would be less than significant.

b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
---	--------------------------	--------------------------	-------------------------------------	--------------------------

**Response:** No potable groundwater wells are proposed by the Project. The proposed Project would be served with potable water by the Eastern Municipal Water District (EMWD). The EMWD relies on local potable groundwater as a source of its water supply (in addition to imported water from the Metropolitan Water District of Southern California, desalted ground water, and recycled water). The EMWD has indicated it has sufficient available water resources, including groundwater resources, to adequately serve the Project in addition to past, present, and future commitments to supply water (EMWD, 2016a, pp. XIV-XVI). Therefore, the proposed Project would not substantially deplete groundwater supplies and the Project’s impact to groundwater supplies would be less than significant.

Development of the Project would increase impervious surface coverage on the property, which would reduce the amount of water percolating down into the underground aquifer that underlies the Project site and a majority of the City. However, and as noted in the City’s General Plan EIR, “the impact of an incremental reduction in groundwater would not be significant as domestic water supplies are not reliant

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p>on groundwater as a primary source” (Moreno Valley, 2006b, p. 5.7-12). Additionally, water captured by the proposed Project’s underground detention systems and landscaped areas would have the opportunity to percolate into the ground. With buildout of the Project, the local groundwater levels would not be substantially adversely affected. Accordingly, buildout of the Project would not interfere substantially with groundwater recharge.</p> <p>For the reasons stated above, the Project would neither substantially deplete groundwater supplies nor interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level. Impacts would be less than significant.</p>				
<p>c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:</p>				
<p>i) Result in substantial erosion or siltation on- or off-site?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> Under existing conditions, the Project site primarily drains in southerly direction, ultimately discharging to two existing storm drains at the southwest and southeast corners of the Project site (Thatcher, 2021, p. 6).</p>				
<p>The Project would mass grade the entire property and construct two industrial warehouse buildings and associated improvements, which would change the site’s existing ground contours and alter the existing drainage patterns interior to the Project site. However, upon buildout of the Project, stormwater flow generated on the Project site would continue to be conveyed to the two existing storm drains adjacent south of the southern Project site boundary.</p>				
<p>Although the Project would alter the subject property’s internal drainage patterns, such changes would not result in substantial erosion or siltation on- or off-site. Under post-development conditions, a majority of the site would be covered with impervious surfaces and, therefore, the amount of exposed soils on the Project site would be minimal. Also, as discussed under Response X(a), the Project would construct an integrated storm drain system on-site with BMPs to minimize the amount of water-borne pollutants carried from the Project site. The BMPs proposed by the Project, including bioretention swales, two underground detention systems, and two modular wetlands units are highly effective at removing sediment from stormwater runoff flows. Therefore, stormwater runoff flows leaving the Project site would not carry substantial amounts of sediment. Once stormwater runoff leaves the Project site, it would be discharged into two existing storm drains located immediately southeast and southwest of the site. Because there are no exposed soils at the Project’s discharge points, there is no potential for the Project’s stormwater runoff to result in erosion as it leaves the Project site. Accordingly, the Project would not result in substantial erosion or siltation on- site or off-site, and a less-than-significant impact would occur.</p>				
<p>ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> As described above under Response X(c(i)), proposed grading and earthwork activities on the Project site would alter the site’s existing drainage patterns but would not substantially alter the drainage pattern of the local area. Under long-term development conditions, and with on-site detention, the peak storm water runoff flows discharged from the Project site would be equal to or less than under existing conditions (Thatcher, 2021, pp. 8-9). Accordingly, implementation of the Project would not substantially increase the rate or amount of surface water runoff discharged from the site in a manner that would result in flooding on- or off-site. Impacts would be less than significant.</p>				
<p>iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> As discussed above under Response X(c(ii)), the amount of runoff discharged to the two existing storm drains adjacent south of the southern Project site boundary would be either reduced or equal to existing conditions. Furthermore, the Project’s storm drain system would be sized and designed</p>				

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p>in accordance with the area’s master drainage plan to ensure that off-site flows that are conveyed through the Project site and flows originating off-site are discharged from the site at a volume and rate that can be accommodated by existing and planned downstream storm drain facilities (Thatcher, 2021, pp. 2-3, 8-9). Accordingly, the Project would not create or contribute runoff which would exceed the capacity of any existing or planned storm water drainage system, and impacts would be less than significant.</p> <p>As discussed under Response X(a), the proposed Project would be required to comply with a future SWPPP and the Project’s WQMP (<i>Technical Appendix I1</i>), which identify required BMPs to be incorporated into the Project to ensure that near-term construction activities and long-term post-development activities of the proposed Project would not result in substantial amounts of polluted runoff. Therefore, with mandatory compliance with the Project’s SWPPP and WQMP, the proposed Project would not create or contribute substantial additional sources of polluted runoff, and impacts would be less than significant.</p>				
iv) Impede or redirect flood flows?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p><b>Response:</b> According to FEMA Flood Insurance Rate Map (FIRM) No. 06065C0745G, the Project site is located within “Zone X (unshaded)”, which are areas determined to be an area with a 0.2% chance of annual flood (FEMA, 2008). The Zone X (unshaded) designation is considered to be an area of minimal flood hazard and is not considered a special flood hazard area. Accordingly, the Project site is not expected to be inundated by flood flows during the lifetime of the Project and the Project would not impede flood flows. No impact would occur.</p>				
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> The Pacific Ocean is located over 40 miles southwest of the Project site (Google Earth Pro, 2020); consequently, there is no potential for the Project site to be impacted by a tsunami as tsunamis typically only reach up to a few miles inland. The nearest large body of water to the Project site is Lake Perris, with the dam located approximately 5.3 miles southeast of the Project site. According to City of Moreno Valley General Plan FEIR Figure 5.5-2, <i>Floodplains, and High Fire Hazard Areas</i>, the Project site is not located in an identified inundation area (Moreno Valley, 2006b); therefore, risk of inundation by dam failure or seiche is low. Additionally, there are no levees in the vicinity of the Project site. Impacts would be less than significant.</p>				
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> As discussed under Response X(a) above, the Project site is located within the Santa Ana River Basin and Project-related construction and operational activities would be required to comply with the Santa Ana RWQCB’s <i>Santa Ana River Basin Water Quality Control Plan</i> by preparing and adhering to a SWPPP and WQMP. Implementation of the Project would not conflict with or obstruct the <i>Santa Ana River Basin Water Quality Control Plan</i> and impacts would be less than significant.</p> <p>Additionally, as discussed under Response X(a) above, the Project would not substantially decrease groundwater supplies nor interfere substantially with groundwater recharge and, therefore, is not expected to conflict with or obstruct a sustainable groundwater management plan. Further, EMWD produces potable groundwater from the San Jacinto Groundwater Basin, which is an adjudicated basin (DWR, n.d.). Adjudicated basins are exempt from the 2014 Sustainable Groundwater Management Act (SGMA) requirement to develop Groundwater Sustainability Plan because such basins already operate under a court-ordered water management plan to ensure their long-term sustainability. No component of the Project would obstruct with or prevent implementation of the management plan for the San Jacinto Groundwater Basin. As such, the Project’s construction and operation would not conflict with any sustainable groundwater management plan. Impacts would be less than significant.</p>

<b>XI. LAND USE AND PLANNING – Would the project:</b>				
a) Physically divide an established community?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p><b>Response:</b> Development of the Project would not physically disrupt or divide the arrangement of an established community. Under existing conditions, the Project site is bordered by Alessandro Boulevard to the north and bordered by vacant, undeveloped land to the east and west. The properties to the immediate south and southwest of the Project site are developed with warehouses; therefore, the Project would serve as an extension of the existing development patterns in the area. No impact would occur.</p>				
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> The Project includes an amendment to the City of Moreno Valley General Plan Land Use Map that would change the Project site’s land use designation from “Commercial” to “Business Park/Light Industrial.” Approval of the requested General Plan Amendment would eliminate any potential inconsistency between proposed land use and the site’s existing land use designation. Impacts to the environment associated with the Project’s proposed General Plan Amendment are evaluated throughout this IS/MND, and where significant impacts are identified, mitigation measures are imposed to reduce impacts to less than significant levels. There are no environmental impacts that would result as a specific consequence of the proposed changes to the site’s General Plan land use designation, beyond what is already evaluated and disclosed by this IS/MND.</p> <p>The Project would not conflict with any applicable goals, objectives, and policies of the SCAQMD’s AQMP, SCAG’s Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) (including the tentatively approved <i>Connect SoCal 2020-2045 RTP/SCS</i>), and SCAG’s <i>Regional Comprehensive Plan</i>. Impacts would be less than significant.</p>

Google Earth Pro</li> </ol>				
<b>XII. MINERAL RESOURCES – Would the project:</b>				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p><b>Response:</b> The Project site is not located within an area known to be underlain by regionally- or locally-important mineral resources (Moreno Valley, 2006b, p. 5.14-2). Implementation of the proposed Project would not result in the loss of availability of a known mineral resource that would be of value to the region or the residents of the State of California. In addition, the City’s General Plan EIR does not identify any locally-important mineral resource recovery sites on-site or within proximity to the Project site (Moreno Valley, 2006b, p. 5.14-2). Accordingly, no impact would occur.</p>

<b>XIII. NOISE – Would the project result in:</b>				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> A <i>Noise Impact Analysis</i> (Urban Crossroads, 2020e) was prepared for the Project by Urban Crossroads to evaluate Project-related long-term operational and short-term construction noise impacts. This report is included as <i>Technical Appendix J</i> to this IS/MND and its findings are incorporated into the analysis presented herein.</p> <p>The analysis presented below summarizes the Project’s potential construction noise levels and operational noise levels. The detailed noise calculations for the analysis presented here are provided in Appendices 7.1, 9.1, and 10.1 of <i>Technical Appendix J</i>.</p> <p><u>Construction Noise Impact Analysis</u> Construction activities on the Project site would create temporary periods of noise when heavy construction equipment is in operation and would cause a short-term increase in ambient noise levels. Maximum daytime construction noise levels at representative sensitive receptor locations near the Project site are summarized in Table 8, <i>Daytime Construction Equipment Noise Level Summary</i>.</p>				

**Table 8: Daytime Construction Equipment Noise Level Summary**

Receiver Location <sup>1</sup>	Construction Noise Levels (dBA L <sub>eq</sub> )					
	Site Preparation	Grading	Building Construction	Paving	Architectural Coating	Highest Levels <sup>2</sup>
R1	61.0	61.9	60.0	56.5	53.6	61.9
R2	55.4	56.3	54.4	50.9	48.0	56.3
R3	57.0	57.9	56.0	52.5	49.6	57.9
R4	56.4	57.3	55.4	52.3	49.0	57.3
R5	59.0	59.9	58.0	54.7	51.6	59.9
at 200'	62.8	63.7	61.8	57.6	55.4	63.7

<sup>1</sup>Noise receiver locations are shown on Exhibit 10-A of *Technical Appendix J*.  
<sup>2</sup>Construction noise level calculations based on distance from the project site boundaries (construction activity area) to the nearest receiver locations. CadnaA construction noise model inputs are included in Appendix 10.1 of *Technical Appendix J*.  
 Source: (Urban Crossroads, 2020e, Table 10-2)

As shown on Table 8, the Project’s daytime construction noise levels are expected to range from 48.0 to 61.9 A-weighted decibels (dBA) equivalent sound level (L<sub>eq</sub>) at the nearby receiver locations and range from 55.4 to 63.7 dBA L<sub>eq</sub> at 200 feet from the Project site. Project construction noise levels are considered exempt from the noise limits specified in the City of Moreno Valley’s Municipal Code if

**ISSUES & SUPPORTING INFORMATION SOURCES:**

Potentially Significant Impact

Less Than Significant with Mitigation Incorporated

Less Than Significant Impact

No Impact

activities occur within the hours of 7:00 a.m. to 8:00 p.m. (Municipal Code Section 11.80.030(D)(7)). Because Project-related construction activities are expected to occur during daylight hours, Project construction would not exceed the standards established by the City of Moreno Valley Municipal Code and impacts would be less than significant.

Notwithstanding, there is the potential that specific Project construction activities could occur outside of the construction hours permitted by right in the Municipal Code. Pursuant to Municipal Code Section 11.80.030(D)(7), the City of Moreno Valley would be required to approve any nighttime construction activities. If nighttime construction activities were to occur, noise levels above 60 dBA  $L_{eq}$  during the nighttime hours would exceed the standards established in the City’s Municipal Code Section 11.80.030(C). The only Project construction activities that have a reasonable potential to occur during nighttime hours are concrete pouring. As shown in Table 9, nighttime concrete pouring activities would not exceed 56.5 dBA  $L_{eq}$  at the nearby sensitive receiver locations or 57.6 dBA  $L_{eq}$  at a distance of 200 feet from the Project site; neither noise level would exceed the standard established by the City of Moreno Valley Municipal Code. Impacts during potential nighttime concrete pouring activities would be less than significant.

**Table 9: Nighttime Construction Equipment Noise Level Summary**

Receiver Location <sup>1</sup>	Construction Noise Levels (dBA $L_{eq}$ )		
	Paving Construction <sup>2</sup>	Nighttime Construction Standard <sup>3</sup>	Threshold Exceeded? <sup>4</sup>

<sup>4</sup>Is the applicable standard exceeded?

Source: (Urban Crossroads, 2020e, Table 10-4)

**Operational Noise Impact Analysis**

Stationary (on-site) noise sources associated with long-term Project operation are expected to include idling trucks, delivery truck and automobile parking, delivery truck backup alarms, roof-mounted equipment (e.g., heating/ventilation equipment), as well as noise associated with the loading and unloading of dry goods. The daytime and nighttime stationary maximum noise levels associated with Project operation at nearby sensitive receptor locations (the same receptor locations used for the construction analysis, above) and at a distance of 200 feet from the Project site are summarized in Table 10, *Operational Noise Level Compliance*.

As shown in Table 10, Project operations would not expose any nearby receptor to noise levels during daytime or nighttime hours in excess of City standards. The Project’s operational noise would contribute a maximum of 0.6 dBA  $L_{eq}$  and 0.8 dBA  $L_{eq}$  to the existing daytime and nighttime ambient noise environment, respectively in the Project area (Urban Crossroads, 2020e, pp. 48-49). Accordingly, implementation of the Project would not result in the exposure of receivers near the Project site to stationary noise levels that exceed the standards established in the City of Moreno Valley Municipal Code. Impacts would be less than significant.

Operational Noise Impact Analysis – Traffic Noise

To evaluate permanent, off-site noise increases that could result from Project-related traffic, noise levels were modeled for the following traffic scenarios:

- Existing: This scenario refers to the existing traffic noise conditions without and with the proposed Project.
- Existing plus Ambient Growth plus Project (EAP): This scenario refers to the existing traffic noise conditions plus ambient growth without and with the proposed Project.

Traffic noise contours and noise levels were established based on existing and projected future traffic conditions on off-site roadway segments within the Project’s study area, and do not take into account the effect of any existing noise barriers or topography that may affect ambient noise levels. Refer to *Technical Appendix J* for a detailed description of the methodology used to evaluate the Project’s traffic-related noise effects.

Table 11, *Existing plus Project Traffic Noise Impacts*, presents a comparison of the existing noise conditions along Project study area roadway segments and the noise levels that would result with addition of Project-related traffic. Under Existing plus Project conditions, noise levels along roadway segments within the Project study area would increase between 0.0 and 2.0 dBA CNEL, which would not exceed the applicable significance thresholds. Therefore, the Project’s contribution to off-site traffic noise would not result in a substantial permanent increase in ambient noise levels and Project-related impacts would be less than significant.

Table 12, *Existing plus Ambient Growth plus Project Traffic Noise Impacts*, presents a comparison of the existing noise conditions along Project study area roadway segments and the noise levels that would result with addition of ambient growth and Project-related traffic. Under Existing plus Ambient Growth plus Project, noise levels along roadway segments within the Project study area would increase between 0.0 and 1.9 dBA CNEL, which would not exceed the applicable significance thresholds. Therefore, the Project’s contribution to off-site traffic noise would not result in a substantial permanent increase in ambient noise levels and Project-related impacts would be less than significant.

b) Generation of excessive groundborne vibration or groundborne noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
---	--------------------------	--------------------------	-------------------------------------	--------------------------

**Response:** The analysis presented below demonstrates that implementation of the Project would not generate excessive groundborne vibration or groundborne noise levels.

Construction Analysis

Construction activities on the Project site would utilize construction equipment that has the potential to generate vibration. Table 13, *Construction Equipment Vibration Levels*, below, summarizes Project construction vibration levels at receiver locations near the Project site. As shown in Table 12, all receiver locations in the vicinity of the Project site would be exposed to vibration levels that fall below the City of Moreno Valley's significance threshold (i.e., 78 vibration decibels (VdB) for daytime residential uses, 84 VdB for daytime office use at all receiver locations and at 200 feet from the property line of the source). Accordingly, Project construction would not generate temporary, excessive groundborne vibration or noise levels and a less than significant impact would occur.

Operational Analysis

Under long-term conditions, the proposed Project would not include nor require equipment, facilities, or activities that would result in substantial or perceptible groundborne vibration. Trucks would travel to-and-from the Project site during long-term operation; however, vibration levels for heavy trucks operating

<sup>3</sup>FTA Transit Noise and Vibration Impact Assessment maximum acceptable vibration criteria as shown in Section 3.5 of *Technical Appendix J*.

<sup>4</sup>Does the vibration level exceed the maximum acceptable vibration threshold?

Source: (Urban Crossroads, 2020e, Table 10-6)

at low-to-normal speeds on smooth, paved surfaces – as is expected on the Project site and along surrounding roadways – typically do not exceed 65 VdB. Truck deliveries transiting on-site would travel at very low speeds, so it is expected long-term operations at the Project site would not exceed the City’s allowable levels. Accordingly, long-term operation of the Project would not expose persons to or generate excessive groundborne vibration or groundborne noise levels, and a less-than-significant impact would occur.

c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
---	--------------------------	--------------------------	-------------------------------------	--------------------------

**Response:** The Project site is located approximately 1.0-mile northeast of the March Air Reserve Base/Inland Port Airport (MARB/IPA). Based on the Airport Land Use Compatibility Plan (ALUCP) for the MARB/IPA, the Project is located outside of the Airport’s 60 dBA CNEL noise level contours (RCALUC, 2014, Map MA-4), and therefore, represents a moderate to low risk with regard to airport noise. Additionally, the proposed use for the site would not conflict with the allowable uses described in the ALUCP (RCALUC, 2014, Table MA-2). Accordingly, the proposed Project would not expose people residing or working the Project area to excessive noise levels from a public airport; therefore, impacts would be less than significant.

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
--	--------------------------------	--	------------------------------	-----------

**XIV. POPULATION AND HOUSING – Would the project:**

a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of road or other infrastructure)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
--	--------------------------	--------------------------	-------------------------------------	--------------------------

**Response:** The proposed Project would result in development of the subject property with industrial land uses that would add employment opportunities to the area. It is anticipated that the employment base for both the construction and operational phases of the Project would come from the existing population in the Inland Empire, which comprises western Riverside County and southwestern San Bernardino County. According to the Bureau of Labor Statistics, the Riverside-San Bernardino-Ontario region’s civilian labor force contains approximately 2,032,794 persons with approximately 1,809,690 people employed and an unemployment rate of approximately 11.0% (approximately 223,607 persons) (USBLS, 2020). Accordingly, the Project region already contains an ample supply of potential employees under existing conditions and the Project’s labor demand is not expected to draw substantial numbers of new residents to the area. Furthermore, approximately 86% of City of Moreno Valley residents commute outside of the City for work (SCAG, 2019, p. 21); therefore, the Project would provide job opportunities closer to home for existing and future Moreno Valley residents.

There are no components of the Project that would reasonably result in indirect or unplanned population growth because the surrounding area is mostly developed under existing conditions or approved for development. The Project would install new/expanded infrastructure; however, this infrastructure would either be master-planned facilities (meaning the facilities would be installed with or without the Project) or would be private facilities for the sole use of the Project (meaning they would not be available for general public use). Accordingly, no significant indirect impacts associated with population growth would result from any Project-related improvements because the Project and its required improvements would not induce substantial growth on surrounding properties.

Based on the foregoing analysis, neither the Project nor any Project-related component would result in substantial, direct, or indirect population growth that would cause a significant direct or indirect impact to the environment. This impact is less than significant.

b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
---	--------------------------	--------------------------	--------------------------	-------------------------------------

**Response:** The Project site does not contain any residential structures and no people live on the site under existing conditions. Accordingly, implementation of the Project would not displace substantial numbers of existing housing or people and would not necessitate the construction of replacement housing elsewhere. No impact would occur.

**XV. PUBLIC SERVICES – Would the project:**

a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
i) Fire protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

**Response:** Fire protection services to the Project site are provided by the Moreno Valley Fire Department (MVFD). The Project site is served by the Kennedy Park Fire Station (Station No. 65) located

Attachment: Exhibit A to IS Resolution Initial Study - MND [Revision 1] (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p>at 15111 Indian Avenue, approximately 2.0 roadway miles to the southeast of the Project site, and the Towngate Fire Station (Station No. 6) located at 22250 Eucalyptus Avenue, approximately 2.5 roadway miles to the northwest of the Project site. Based on the Project site's proximity to the two existing fire stations, the Project would be adequately served by fire protection services, and no new or expanded unplanned facilities would be required. The Project Applicant is required to comply with the provisions of the City of Moreno Valley's Development Impact Fee (DIF) Ordinance (Ordinance No. 695), which requires a fee payment that the City applies to the funding of public facilities, including fire protection facilities. Mandatory compliance with the DIF Ordinance would be required prior to the issuance of a building permit.</p> <p>The Project would feature a minimum of fire safety and fire suppression activities, including type of building construction, fire sprinklers, a fire hydrant system, and paved access. The proposed buildings would be of concrete tilt-up construction that contain a low fire hazard risk rating. In addition, a fire alarm system is proposed to be installed, as well as ceiling-mounted sprinklers that are designed to suppress a fire. To suppress a fire does not necessarily mean it will extinguish the fire but rather it is meant to "knock" the fire back down to its source, making it more manageable for the MVFD to extinguish.</p> <p>Based on the foregoing, the proposed Project would receive adequate fire protection service and would not result in the need for new or physically altered fire protection facilities. Impacts to fire protection facilities would be less than significant.</p>				
<p>ii) Police protection?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> The Project would introduce two new building structures and employees to the Project site, which would result in an incremental increase in demand for police protection services, but is not anticipated to require or result in the construction of new or physically altered police facilities. Furthermore, the Project Applicant would be required to comply with the provisions of Moreno Valley's Development Impact Fee (DIF) Ordinance (Ordinance No. 695), which requires a fee payment that the City applies to the funding of public facilities, including police protection facilities. Mandatory compliance with the DIF Ordinance would be required prior to the issuance of a building permit. Based on the foregoing, the proposed Project would receive adequate police protection service, and would not result in the need for new or physically altered fire protection facilities. Impacts to police protection facilities would therefore be less than significant.</p>				
<p>iii) Schools?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> Implementation of the Project would not create a direct demand for public school services, as the subject property would contain non-residential uses and would not generate any school-aged children requiring public education. The addition of employment-generating uses on the Project site would assist the City in achieving its goal to provide a better jobs/housing balance within the City and the larger western Riverside County region (Moreno Valley, 2006b, pp. 5.12-1). The proposed Project is not expected to draw a substantial number of new residents to the region and would therefore not indirectly generate school-aged students requiring public education. Because the proposed Project would not directly generate students and is not expected to indirectly draw students to the area, the proposed Project would not cause or contribute to a need to construct new or physically altered public school facilities. Although the Project would not create a demand for additional public school services, the Project Applicant would be required to contribute development impact fees to the Moreno Valley Unified School District in compliance with California Senate Bill 50 (Greene), which allows school districts to collect fees from new developments to offset the costs associated with increasing school capacity needs. Mandatory payment of school fees would be required prior to the issuance of building permits. Impacts to public schools would be less than significant.</p>				
<p>iv) Parks?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p><b>Response:</b> As discussed under Responses XVI(a) and XV(b) below, the Project would not create a demand for public park facilities and would not result in the need to modify existing or construct new park facilities. Accordingly, implementation of the Project would not adversely affect any park facility. Thus, no impact would occur.</p>				

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
v) Other public facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p><b>Response:</b> The Project is not expected to result in a demand for other public facilities/services, including libraries, community recreation centers, post offices, and/or animal shelters. As such, implementation of the Project would not adversely affect other public facilities or require the construction of new or modified public facilities and no impact would occur.</p>				
<p><b>Sources:</b></p> <ol style="list-style-type: none"> <li>1. Final Environmental Impact Report City of Moreno Valley General Plan               <ul style="list-style-type: none"> <li>• City of Moreno Valley Land Use Map                   <ul style="list-style-type: none"> <li>- Figure 5.4-1 – March Air Reserve Base Noise Impact Area</li> </ul> </li> </ul> </li> <li>2. <p><b>XVI. RECREATION – Would the project:</b></p>				
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p><b>Response:</b> The Project would develop the subject property with industrial land uses. The Project does not propose any type of residential use or other land use that may generate a population that would increase the use of existing neighborhood and regional parks or other recreational facilities. Accordingly, implementation of the proposed Project would not result in the increased use or substantial physical deterioration of an existing neighborhood or regional park, thus, no impact would occur.</p>				
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which have an adverse physical effect on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p><b>Response:</b> The Project does not propose to construct any new on- or off-site recreation facilities. Additionally, the Project would not expand any existing off-site recreational facilities. Therefore, environmental effects related to the construction or expansion of recreational facilities would not occur.</p>				
<p><b>Sources:</b></p> <ol style="list-style-type: none"> <li>1. Project Application Materials – Site Plan</li> </ol>				
<p><b>XVII. TRANSPORTATION – Would the project:</b></p>				
a) Conflict with program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> The Project would not conflict with applicable objectives from the Moreno Valley General Plan Circulation Element, including Objective 5.1, 5.2, 5.3 (discussed in more detail below), 5.4, 5.5, 5.8, 5.9, 5.10, and 5.11. In addition, Project would not conflict with the City’s Bicycle Master Plan nor with the vehicular and non-vehicular goals from SCAG’s 2016-2040 RTP/SCS, including goals to: 1) maximize mobility and accessibility for all people and goods in the region; 2) ensure travel safety and reliability for all people and goods in the region; 3) preserve and ensure a sustainable regional transportation system; 4) protect the environment and health of residents by improving air quality and encouraging active transportation; and 5) encouraging land use and growth patterns that facilitate transit and active transportation.</p>				

<b>ISSUES &amp; SUPPORTING INFORMATION SOURCES:</b>	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
---	--------------------------------	--	------------------------------	-----------

In accordance with Senate Bill (SB) 743, the California Natural Resources Agency (CNRA) adopted changes to the CEQA Guidelines in December 2018, which identify that starting on July 1, 2020, vehicle miles traveled (VMT) is the appropriate metric to evaluate a project’s transportation impacts. As of December 2018, when the revised CEQA Guidelines were adopted, automobile delay, as measured by “level of service” (LOS) and other similar metrics, no longer constitutes a significant environmental effect under CEQA. Lead agencies in California are required to use VMT to evaluate project-related transportation impacts. The VMT analysis for the Project is provided in Response XVII(b) below.

Notwithstanding, the City of Moreno Valley traffic study guidelines requires a traffic analysis based on LOS, which the City uses in part to demonstrate compliance with General Plan Circulation Element Objective 5.3, which states that the City shall maintain LOS C on roadway links wherever possible and LOS D in the vicinity of SR-60 and employment centers, and to determine transportation improvement obligations of development projects. For this reason, although LOS cannot be used to make a conclusion of a significant environmental effect, the Project’s impact to transportation facilities based on LOS is provided herein for informational purposes. The LOS analysis provided on the following pages is based on a traffic impact analysis report prepared by the consulting firm Urban Crossroads and included as *Technical Appendix K1* to this IS/MND (Urban Crossroads, 2021a). The traffic impact analysis was prepared in conformance with the City of Moreno Valley’s *Transportation Impact Analysis Preparation Guide for Vehicle Miles Traveled and Level of Service Assessment* (June 2020).

Project Study Area

The Project’s traffic study area (hereafter “Project study area” or “study area”) was devised based on the City of Moreno Valley traffic impact analysis guidelines and consultation with City of Moreno Valley staff via the City’s standard scoping process. The study area includes the intersections listed in Table 14, *Intersection Analysis Locations*.

**Table 14: Intersection Analysis Locations**

ID	Intersection Location	Jurisdiction	CMP?
1	Frederick St. & Alessandro Bl.	City of Moreno Valley	No
2	Driveway 1 & Alessandro Bl. – Future Intersection	City of Moreno Valley	No
3	Driveway 2 & Alessandro Bl. – Future Intersection	City of Moreno Valley	No
4	Driveway 3 & Alessandro Bl. – Future Intersection	City of Moreno Valley	No
5	Graham St. & Alessandro Bl.	City of Moreno Valley	No

Source: (Urban Crossroads, 2021a, Table 1-1)

Due to the ongoing COVID-19 pandemic, historic traffic counts from 2018 were used in conjunction with a 4.04 percent growth factor to reflect expected “normal” 2020 traffic conditions (Urban Crossroads, 2021a, p. 22). Based on the collected data, all existing intersections in the Project study area operate at a level of service (LOS) of “C” or better during the AM and PM peak hours (7:00-9:00am and 4:00-6:00pm, respectively) (Urban Crossroads, 2021a, p. 22). Refer to *Technical Appendix K1* for more information about existing traffic conditions in the Project study area.

Thresholds of Significance

The Project would result in a conflict with General Plan Circulation Element Objective 5.3 if, under Opening Year traffic conditions, Project traffic would:

- Cause a signalized intersection to degrade from either LOS C or better or LOS D or better to LOS D/E/F or LOS E/F, respectively; or increase the delay by 5.0 or more seconds at a signalized intersection that operates at an unacceptable level of service (i.e., LOS D or LOS E/F) without the Project (Urban Crossroads, 2021a, p. 14).
- Cause an unsignalized intersection to degrade from either LOS C or better or LOS D or better to LOS D/E/F or LOS E/F, respectively; or increase the delay by 5.0 or more seconds at an unsignalized intersection that operates at an unacceptable level of service (i.e., LOS D or LOS E/F) without the Project and the intersection meets the peak hour traffic signal warrant after the addition of Project traffic (Urban Crossroads, 2021a, p. 14).

<b>ISSUES &amp; SUPPORTING INFORMATION SOURCES:</b>	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
---	--------------------------------	--	------------------------------	-----------

Project Trip Generation and Distribution

Trip generation represents the amount of traffic that is attracted to and produced by a development project. Buildings 1 and 2 are evaluated as 70 percent warehouse use and 30 percent high-cube cold storage warehouse use each. The Institute of Transportation Engineers (ITE) Trip Generation Manual (2017) includes a trip generation rate for warehouse uses (ITE land use code 150) and high-cube cold storage warehouse uses (ITE land use code 157). The assumptions for the mix of trucks, by axle type, relies on recommendations from the SCAQMD Warehouse Truck Trip Study Data Results and Usage (2014). Based on the guidance from the SCAQMD, the following truck fleet mix under ITE land use code 150 was utilized for the purposes of estimating the truck trip generation for Buildings 1 and 2: 16.7% of the total trucks as 2-axle trucks, 20.7% of the total trucks as 3-axle trucks, and 62.6% of the total trucks as 4+-axle trucks (Urban Crossroads, 2021a, p. 29). The following truck fleet mix under ITE land use code 157 was utilized for the purposes of estimating the truck trip generation for Buildings 1 and 2: 34.7% of the total trucks as 2-axle trucks, 11.0% of the total trucks as 3-axle trucks, and 54.3% of the total trucks as 4+-axle trucks (Urban Crossroads, 2021a, p. 29).

Based on the assumptions described above, the Project is calculated to generate approximately 742 total vehicle trips per day, including 59 vehicle trips during the AM peak hour (7:00-9:00am) and 64 vehicle trips during the PM peak hour (4:00-6:00pm) (Urban Crossroads, 2021a, p. 31). Of the Project's 742 daily vehicle trips, 224 would be from trucks with two or more axles (ibid.). In conformance with standard traffic engineering practices in Southern California, the Project's daily vehicle trips were converted to a passenger car equivalent (PCE). PCE factors allow the typical "real-world" mix of vehicle types to be represented as a single, standardized unit (i.e., the passenger car). A PCE factor of 1.5 was applied to two-axle truck trips, a factor of 2.0 was applied to three-axle truck trips, and a factor of 3.0 was applied to four plus-axle truck trips (Urban Crossroads, 2021a, pp. 31, 33). The Project is anticipated to generate approximately 1,062 daily PCE trips, including 21 PCE trips during the AM peak hour and 81 PCE trips during the PM peak hour (ibid.). The Project's PCE vehicle trips were used for purposes of the LOS analysis. For more information about the Project's trip generation, refer to *Technical Appendix K1*.

Trip distribution is the process of identifying the probable destinations, directions, or traffic routes that would be utilized by Project traffic. The potential interaction between the planned land uses and surrounding regional access routes are considered to identify the routes where Project traffic would distribute. The trip distribution for the Project was developed based on anticipated passenger car and truck travel patterns to-and-from the Project site. The total volume on each roadway was divided by the Project's total traffic generation to indicate the percentage of Project traffic that would use each component of the roadway system in each relevant direction.

The assignment of traffic from the Project area to the adjoining roadway system is based on the Project trip generation, trip distribution, and the arterial highway and local street system improvements that would be in place by the time of initial occupancy of the Project. Based on the identified Project traffic generation and trip distribution patterns, PCE factored Project average daily traffic (ADT) volumes for the weekday are shown on Exhibit 4-3 in *Technical Appendix K1*.

Analysis Scenarios

The Project contribution of traffic to the local circulation network were assessed for each of the following conditions:

- Near-term Construction; and
- Opening Year (2022)

The Near-Term Construction conditions analysis determines the potential for the Project's construction-related traffic to result in an adverse effect to the local roadway system. Types of traffic anticipated during construction include construction workers traveling to/from the Project site as well as deliveries of construction materials to the Project site.

The Opening Year (2022) analysis includes an evaluation of traffic conditions at the Project's "opening year." The Opening Year (2022) analysis considers existing traffic + ambient growth + Project traffic.

No Impact

Near-term Construction Traffic Conditions

During the Project’s construction phase, traffic to-and-from the subject property would be generated by construction employee trips, delivery of construction materials, and delivery/use of heavy equipment.

Vehicular traffic from construction employees would be substantially less than daily and peak hour traffic volumes generated during Project operational activities because construction activities typically begin/end outside of the peak hour; therefore, a most – if not all – construction employees would not be driving to/from the Project site during hours of peak congestion. Because Project operations would not conflict with the LOS standards from Circulation Element Objective 5.3 under Opening Year (2022) traffic conditions (see “Opening Year (2022) Traffic Conditions,” below) and because construction worker peak hour trips would be substantially less than the peak hour trips generated by Project operations, traffic from construction workers is not expected to conflict with the LOS performance standards of Circulation Element Objective 5.3.

Deliveries of construction materials to the Project site also would make nominal traffic contributions to the local roadway network because most trips would occur during non-peak hours and the total volume of trips would be less than the Project’s operational trips, which are shown below to not conflict with Circulation Element Objective 5.3. Furthermore, construction materials would be delivered to the site throughout the construction phase based on need and would not occur on an everyday basis. Heavy equipment would be utilized on the Project site during the construction phase. As most heavy equipment is not authorized to be driven on public roadways, most equipment would be delivered and removed from the site via flatbed trucks. As with the delivery of construction materials, the delivery of heavy equipment to the Project site would not occur on a daily basis, but would occur periodically throughout the construction phase based on need.

Based on the foregoing analysis, traffic generated by the Project’s construction phase would not result in a conflict with the LOS performance standards contained in Circulation Element Objective 5.3.

Opening Year (2022) Traffic Conditions

As shown in Table 15, all Project study area intersections would operate at acceptable LOS under Opening Year (2022) traffic conditions. Therefore, the Project would not cause or contribute to an exceedance of the LOS performance standards contained in Circulation Element Objective 5.3.

**Table 15: Intersection Analysis for Opening Year (2022) Traffic Conditions**

#	Intersection	Traffic Control <sup>2</sup>	Existing (2020)				EAP (2022)			
			Delay <sup>1</sup> (secs.)		Level of Service		Delay <sup>1</sup> (secs.)		Level of Service	
			AM	PM	AM	PM	AM	PM	AM	PM
1	Frederick St. & Alessandro Bl.	TS	22.4	30.7	C	C	23.4	33.8	C	C
2	Driveway 1 & Alessandro Bl.	<b>CSS</b>	Future Intersection				11.8	21.0	B	C
3	Driveway 2 & Alessandro Bl.	<b>CSS</b>	Future Intersection				11.8	22.3	B	C
4	Driveway 3 & Alessandro Bl.	<b>CSS</b>	Future Intersection				11.7	21.8	B	C
5	Graham St. & Alessandro Bl.	TS	20.4	32.6	C	C	22.0	34.0	C	C

<sup>1</sup>Per the Highway Capacity Manual (6<sup>th</sup> Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>2</sup>CSS = Cross-street Stop; TS = Traffic Signal; **CSS** = Improvement  
Source: (Urban Crossroads, 2021a, Table 5-1)

b) Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
---	--------------------------	--------------------------	-------------------------------------	--------------------------

**Response:** As previously discussed, SB 743, which approved in 2013, was intended to change the way transportation impacts are determined according to CEQA. Updates to the CEQA Guidelines that were adopted in December 2018 included the addition of CEQA Guidelines Section 15064.3, of which

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p>Subdivision “b” establishes criteria for evaluating a project’s transportation impacts based on project type and using automobile VMT as the metric. As a component of OPR’s revisions to the CEQA Guidelines, lead agencies were required to adopt VMT thresholds of significance by July 1, 2020. The City of Moreno Valley adopted its <i>Transportation Impact Analysis Preparation Guide for Vehicle Miles Traveled and Level of Service Assessment</i> in June 2020, which is used in this analysis to determine the significance of Project-related VMT.</p>				
<p>According to the VMT analysis prepared by Urban Crossroads (<i>Technical Appendix K2</i>), the Project’s VMT per employee would exceed the City’s VMT per employee threshold by approximately 11.7% under baseline (Year 2020) traffic conditions when the Project’s location and Project design features are not considered (Urban Crossroads, 2021b, p. 5). With consideration of the Project’s location and Project design features, including: 1) the Project’s geographic location as an employment use in proximity to existing residential and commercial service land uses – which would reduce Project-related employee VMT from employee commutes, errands during break periods, etc.; and 2) sidewalks along the Project site frontage with Alessandro Boulevard which would facilitate pedestrian and bicycle travel to the site, the Project-related VMT would be reduced by approximately 15% and would fall below the City’s significance threshold (Urban Crossroads, 2021b, p. 8). Therefore, based on the City’s VMT significance guidelines, the Project would have a less-than-significant direct VMT impact and, therefore, would not conflict with or be inconsistent with CEQA Guidelines section 15064.3(b).</p>				
<p>c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> The types of traffic generated during operation of the Project (i.e., passenger cars and trucks) would be compatible with the type of traffic observed along Project study area roadways under existing conditions. In addition, all proposed improvements within the public right-of-way would be installed in conformance with City of Moreno Valley design standards. The City reviewed the Project’s application materials and determined that no hazardous transportation design features would be introduced through implementation of the Project. Accordingly, the Project’s construction and operation would not create or substantially increase safety hazards due to a design feature or incompatible use. Implementation of the Project would result in a less-than-significant impact.</p>				
<p>d) Result in inadequate emergency access?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> The Project would result in the construction of two warehouse buildings on the Project site, which would require the need for emergency access to-and-from the site. During the course of the City of Moreno Valley’s review of the proposed Project, the Project’s design was reviewed to ensure that adequate access to-and-from the site is provided for emergency vehicles. The City of Moreno Valley also will require the Project to provide adequate paved access to-and-from the site as a condition of Project approval. The Project’s proposed driveways would connect directly to Alessandro Boulevard, and the Project does not propose any changes to public roads other than frontage improvements along Alessandro Boulevard that would improve local circulation/access. Furthermore, the City of Moreno Valley will review all future Project construction drawings to ensure that adequate emergency access is maintained along abutting public streets during temporary construction activities. With required adherence to City requirements for emergency vehicle access, impacts would be less than significant.</p>

Final Environmental Impact Report City of Moreno Valley General Plan, certified July 11, 2006</li> </ol>				
<p><b>XVIII. TRIBAL CULTURAL RESOURCES – Would the project:</b></p>				
<p>a) Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:</p>				

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k), or ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

**Response:** A Phase I Cultural Resources Study (*Technical Appendix C*) was prepared for the Project site by BFSa. The Phase I Cultural Resources Study included a records search with the Eastern Information Center (EIC) at University of California Riverside in order to assess previous archaeological studies and identify any previously recorded tribal cultural resources within the Project site. Additionally, as part of preparation of the Phase I Cultural Resources Study, BFSa also requested a records search of the Native American Heritage Commission (NAHC) Sacred Lands Files (SLF). According to BFSa's search of EIC records and NAHC SLFs, no tribal cultural resources listed or eligible for listing in the California Register of Historical Resources or in a local register of historical resources are present on the Project site or previously recorded on the Project site. In addition, the Project site is highly disturbed and no tribal cultural resources were observed on the Project site or in the Project site's immediate vicinity. (BFSa, 2020a, p. 1.0-1)

As part of the SB 18/AB 52 consultation process required by State law, the City of Moreno Valley sent notification of the Project to Native American tribes with possible traditional or cultural affiliation to the Project area. In response to the AB 52 consultation invitation, five tribes contacted the City to request formal consultation. The City met with each tribe and concluded tribal consultation on June 16, 2021. During the course of the tribal consultation process, no Native American tribe provided the City with substantial evidence indicating that tribal cultural resources, as defined in Public Resources Code section 21074, are present on the Project site or have been found previously on the Project site. Notwithstanding, due to the Project site's location in an area where multiple Native American tribes are known to have a cultural affiliation, there is the possibility that prehistoric archaeological resources, including tribal cultural resources, could be encountered during ground-disturbing construction activities – although this is considered unlikely due to the pervasive, historic and on-going disturbances that have occurred on the Project site. Were a tribal cultural resource, as defined in Public Resources Code Section 21074, to be found on the Project site during construction – and not protected – a significant impact would occur.

Implementation of MMs TCR-1 through TCR-6, would ensure the proper identification and subsequent treatment of any significant tribal cultural resources that may be encountered during ground-disturbing activities associated with Project development. With implementation of the required mitigation, the Project's potential impact to significant tribal cultural resources would be reduced to less-than-significant.

**Mitigation**

**MM TCR-1** Prior to the issuance of a grading permit, the Developer shall retain a professional archaeologist to conduct monitoring of all mass grading and trenching activities. The Project Archaeologist shall have the authority to temporarily redirect earthmoving activities in the event that suspected archaeological resources are unearthed during Project construction. The Project Archaeologist, in consultation with the Consulting Tribe(s), the contractor, and the City, shall develop a Cultural Resources Management Plan (CRMP) in consultation pursuant to the definition in AB52 to address the details, timing and responsibility of all archaeological and cultural activities that will occur on the project site. A consulting tribe is defined as a tribe that initiated the AB 52 tribal consultation process

<b>ISSUES &amp; SUPPORTING INFORMATION SOURCES:</b>	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p>for the Project, has not opted out of the AB52 consultation process, and has completed AB 52 consultation with the City as provided for in Cal Pub Res Code Section 21080.3.2(b)(1) of AB52. Details in the Plan shall include:</p> <p>a) Project grading and development scheduling;</p> <p>b) The Project archeologist and the Consulting Tribes(s) as defined in MM TCR-1 shall attend the pre-grading meeting with the City, the construction manager and any contractors and will conduct a mandatory Cultural Resources Worker Sensitivity Training to those in attendance. The Training will include a brief review of the cultural sensitivity of the Project and the surrounding area; what resources could potentially be identified during earthmoving activities; the requirements of the monitoring program; the protocols that apply in the event inadvertent discoveries of cultural resources are identified, including who to contact and appropriate avoidance measures until the find(s) can be properly evaluated; and any other appropriate protocols. All new construction personnel that will conduct earthwork or grading activities that begin work on the Project following the initial Training must take the Cultural Sensitivity Training prior to beginning work and the Project archaeologist and Consulting Tribe(s) shall make themselves available to provide the training on an as-needed basis;</p> <p>c) The protocols and stipulations that the contractor, City, Consulting Tribe(s) and Project archaeologist will follow in the event of inadvertent cultural resources discoveries, including any newly discovered cultural resource deposits that shall be subject to a cultural resources evaluation.</p> <p><b>MM TCR-2</b> Prior to the issuance of a grading permit, the Developer shall secure agreements with the Pechanga Band of Luiseño Indians and Soboba Band of Luiseño Indians for tribal monitoring. The Developer is also required to provide a minimum of 30 days advance notice to the tribes of all mass grading and trenching activities. The Native American Tribal Representatives shall have the authority to temporarily halt and redirect earth moving activities in the affected area in the event that suspected archaeological resources are unearthed. If the Native American Tribal Representatives suspect that an archaeological resource may have been unearthed, the Project Archaeologist or the Tribal Representatives shall immediately redirect grading operations in a 100-foot radius around the find to allow identification and evaluation of the suspected resource. In consultation with the Native American Tribal Representatives, the Project Archaeologist shall evaluate the suspected resource and make a determination of significance pursuant to California Public Resources Code Section 21083.2.</p> <p><b>MM TCR-3</b> In the event that Native American cultural resources are discovered during the course of grading (inadvertent discoveries), the following procedures shall be carried out for final disposition of the discoveries:</p> <p>a) One or more of the following treatments, in order of preference, shall be employed with the tribes. Evidence of such shall be provided to the City of Moreno Valley Planning Division:</p> <p>i. Preservation-In-Place of the cultural resources, if feasible. Preservation in place means avoiding the resources, leaving them in the place they were found with no development affecting the integrity of the resources.</p> <p>ii. Onsite reburial of the discovered items as detailed in the treatment plan required pursuant to MM TCR-1. This shall include measures and provisions to protect the future reburial area from any future impacts in perpetuity. Reburial shall not occur until all legally required cataloging and basic recordation have been completed. No recordation of sacred items is permitted without the written consent of all Consulting Native American Tribal Governments as defined in MM TCR-1.</p>				

Attachment: Exhibit A to IS Resolution Initial Study - MND [Revision 1] (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p><b>MM TCR-4</b> The City shall verify that the following note is included on the Grading Plan:</p> <p>"If any suspected archaeological resources are discovered during ground-disturbing activities and the Project Archaeologist or Native American Tribal Representatives are not present, the construction supervisor is obligated to halt work in a 100-foot radius around the find and call the Project Archaeologist and the Tribal Representatives to the site to assess the significance of the find."</p>				
<p><b>MM TCR-5</b> If potential historic or cultural resources are uncovered during excavation or construction activities at the project site, work in the affected area must cease immediately and a qualified person meeting the Secretary of the Interior's standards (36 CFR 61), Tribal Representatives, and all site monitors per the Mitigation Measures, shall be consulted by the City to evaluate the find, and as appropriate recommend alternative measures to avoid, minimize or mitigate negative effects on the historic, or prehistoric resource. Determinations and recommendations by the consultant shall be immediately submitted to the Planning Division for consideration, and implemented as deemed appropriate by the Community Development Director, in consultation with the State Historic Preservation Officer (SHPO) and any and all Consulting Native American Tribes as defined in MM TCR-1 before any further work commences in the affected area.</p>				
<p><b>MM TCR-6</b> If human remains are discovered, no further disturbance shall occur in the affected area until the County Coroner has made necessary findings as to origin. If the County Coroner determines that the remains are potentially Native American, the California Native American Heritage Commission shall be notified within 24 hours of the published finding to be given a reasonable opportunity to identify the "most likely descendant". The "most likely descendant" shall then make recommendations, and engage in consultations concerning the treatment of the remains (California Public Resources Code 5097.98).</p>

**XIX. UTILITIES AND SERVICE SYSTEMS – Would the project:**

<p>a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
---	--------------------------	--------------------------	-------------------------------------	--------------------------

**Response:** The Project would construct an on-site network of water and sewer pipes and stormwater facilities that would connect to existing water, sewer, and storm drain lines beneath Alessandro Boulevard and along the southern Project site boundary. The Project also would remove existing wooden power poles and underground existing overhead power lines (less than 115kV) along the south side of Alessandro Boulevard abutting the Project site and install connections to existing electricity, natural gas, and communications infrastructure that already exist in the area, and all such connections would be accomplished in conformance with the rules and standards enforced by the applicable service provider. The installation of water and sewer line connections, stormwater drainage facilities, electricity, natural gas, and communications infrastructure as proposed by the Project would result in physical impacts to the environment; however, these impacts are considered to be part of the Project's construction phase and are evaluated throughout this IS/MND accordingly. In instances where significant environmental impacts have been identified for the Project's construction phase, mitigation measures are recommended in each applicable subsection of this IS/MND to reduce impacts to less-than-significant levels. The construction of utility infrastructure necessary to serve the proposed Project would not result in any significant physical effects on the environment that are not already identified and disclosed as part of this IS/MND. Accordingly, additional mitigation measures beyond those identified throughout this IS/MND would not be required.

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p>b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> EMWD is responsible for supplying potable water to the Project site and its region. As discussed in the <i>2015 EMWD Urban Water Management Plan</i>, herein incorporated by reference as the “UWMP,” which applies to and was adopted by the EMWD, adequate water supplies are projected to be available to meet EMWD’s estimated water demand through 2040 under normal, historic single-dry and historic multiple-dry year conditions (EMWD, 2016a, p. XV). EMWD forecasts for projected water demand are based on the population projections of SCAG, which rely on the adopted land use designations contained within the general plans that cover the geographic area within EMWD’s service. The water use projections utilized in the <i>2015 EMWD UWMP</i> were based on the site’s existing “Commercial” land use designation on the City of Moreno Valley Land Use Map. The Project would change the site’s land use designation to “Business Park/Light Industrial” and would operate the site as a light industrial land use (i.e., warehousing). According to EMWD’s Water System Planning &amp; Design manual, commercial and industrial development have the same average daily water demand rate (2,000 gpd per acre) (EMWD, 2007, p. 4). Because the Project’s water demand would be identical to the projection for the site’s existing land use designation (as mentioned above), the determination of the <i>2015 EMWD UWMP</i> remains valid and EMWD would have sufficient water supplies available to serve the Project from existing entitlements/resources and no new or expanded entitlements are needed. The Project’s impact would be less than significant.</p>				
<p>c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project’s projected demand in addition to the provider’s existing commitments?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> Wastewater generated by the Project would be treated by the EMWD, which operates the Moreno Valley Regional Water Reclamation Facility. Based upon EMWD’s wastewater generation rate of 1,700 gallons per day (gpd) per acre for industrial light land uses, the proposed Project would generate approximately 30,090 gallons of wastewater per day (1,700 gpd per acre × 17.7 Project acres = 30,090 gpd). Under existing conditions, the Moreno Valley Regional Water Reclamation Facility has an excess treatment capacity of approximately 5.4 million gallons per day (mgpd). Implementation of the Project would utilize approximately 0.6% of the Moreno Valley Regional Water Reclamation Facility daily excess treatment capacity (EMWD, 2016b). Accordingly, the Moreno Valley Regional Water Reclamation Facility has sufficient capacity to treat wastewater generated by the Project in addition to existing commitments. The Project would not create the need for any new or expanded wastewater facility (such as conveyance lines, treatment facilities, or lift stations). Because there is adequate capacity at existing treatment facilities to serve the Project’s projected sewer demand, impacts would be less than significant.</p>				
<p>d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> Implementation of the Project would generate an incremental increase in solid waste volumes requiring off-site disposal during short-term construction and long-term operational activities. Solid waste generated by the Project would be disposed at the El Sobrante Landfill and/or the Badlands Sanitary Landfill.</p> <p>The El Sobrante Landfill is permitted to receive 16,054 tons of refuse per day and has a total capacity of 209,910,000 cubic yards. According the CalRecycle, the El Sobrante Landfill has a total remaining capacity of 143,977,170 cubic yards. The El Sobrante Landfill is estimated to reach capacity, at the earliest time, in the year 2051 (CalRecycle, 2019a). In July 2020 (the most recent period for which disposal volumes are available), the average daily disposal at the El Sobrante Landfill was approximately 11,003 tons, which correlates to an excess daily disposal capacity of approximately 5,051 tons (CalRecycle, 2020a).</p>				

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p>The Badlands Sanitary landfill is permitted to accept a maximum of 4,800 tons of solid waste per day. In July 2020, the most recent time period for which disposal data was publicly available, the Badlands Sanitary Landfill was receiving an average of 2,709 tons of waste per day, which correlates to an excess daily disposal capacity of approximately 2,091 tons (CalRecycle, 2020b). The Badlands Sanitary Landfill has available capacity until at least the year 2021; however, future landfill expansion opportunities may exist at this site. (CalRecycle, 2019b)</p> <p>The analysis below summarizes the Project’s potential to generate solid waste during construction and/or operation that would exceed the disposal capacity of local landfill facilities. As demonstrated in the analysis below, the Project would generate less-than-significant volumes of solid waste.</p> <p><u>Construction Impact Analysis</u> Based on the United States Environmental Protection Agency’s (U.S. EPA) construction waste generation factor of 4.34 pounds of solid waste generated for the construction of every 1 s.f. for non-residential uses, Project construction is estimated to generate approximately 860.4 tons of solid waste. <math>([396,275 \text{ s.f.} \times 4.34 \text{ pounds per s.f.}] \div 2,000 \text{ pounds per ton} = 860 \text{ tons})</math> (EPA, 2009, Table A-2). CalGreen requires a minimum of 65% of all construction waste be diverted from landfills (by recycling, reusing, and other waste reduction strategies); therefore, the Project is estimated to generate approximately 301.1 tons of construction waste requiring landfill disposal <math>(860 \text{ tons} \times 0.35 = 301 \text{ tons})</math>. The Project’s construction phase is estimated to last for up to 190 working days; therefore, the Project is estimated to generate approximately 1.58 tons of solid waste per day <math>(301 \text{ tons} \div 190 \text{ days} = 1.58 \text{ tons per day})</math> requiring landfill during construction.</p> <p>Non-recyclable construction waste generated by the Project would be disposed at the El Sobrante Landfill or Badlands Sanitary Landfill. As described above, these landfills receive well below their maximum permitted daily disposal volume; thus, the relatively minimal construction waste generated by the Project is not anticipated to cause the landfills to exceed their maximum permitted daily disposal volume. (Project construction waste would represent approximately 0.03% of the excess disposal capacity at the El Sobrante Landfill and approximately 0.08% of the excess disposal capacity at the Badlands Sanitary Landfill.) Furthermore, the El Sobrante Landfill and Badlands Sanitary Landfill are not expected to reach its total maximum permitted disposal capacities during the Project’s construction period. The El Sobrante Landfill and Badlands Sanitary Landfill have sufficient daily capacity to accept solid waste generated by the Project’s construction phase; therefore, impacts to landfill capacity associated with the Project’s near-term construction activities would be less than significant.</p> <p><u>Operational Impact Analysis</u> Based on a daily waste generation factor of 1.42 pounds of waste per 100 square feet of industrial building area obtained from CalRecycle, long-term, on-going operation of the Project would generate approximately 2.81 tons of solid waste per day <math>([1.42 \text{ pounds} \div 100 \text{ s.f.}] \times 396,275 \text{ s.f.}] \div 2,000 \text{ pounds} = 2.81 \text{ tons per day})</math> (CalRecycle, 2019c). Pursuant to AB 939, at least 50 percent of the Project’s solid waste is required to be diverted from landfills; therefore, the Project would generate approximately 1.41 tons of solid waste per day requiring landfilling <math>(2.81 \text{ tons per day} \times 50\% = 1.41 \text{ tons per day})</math>.</p> <p>Non-recyclable solid waste generated during long-term operation of the Project would be disposed at the El Sobrante Landfill and the Badlands Sanitary Landfill. As described above, these landfills receive well below their maximum permitted daily disposal volume; thus, waste generated by the Project’s operation is not anticipated to cause the landfills to exceed their maximum permitted daily disposal volume. (Project operational rate would represent approximately 0.03% of the daily excess disposal capacity at the El Sobrante Landfill and approximately 0.07% of the daily excess disposal capacity at the Badlands Sanitary Landfill.) Because the Project would generate a relatively small amount of solid waste per day as compared to the permitted daily capacities at the receiving landfills, impacts to the El Sobrante Landfill and Badlands Sanitary Landfill facilities during the Project’s long-term operational activities would be less than significant.</p>				
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Attachment: Exhibit A to IS Resolution Initial Study - MND [Revision 1] (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
--	--------------------------------	--	------------------------------	-----------

**Response:** The California Integrated Waste Management Act (AB 939), signed into law in 1989, established an integrated waste management system that focused on source reduction, recycling, composting, and land disposal of waste. In addition, the bill established a 50 percent waste reduction requirement for cities and counties by the year 2000, along with a process to ensure environmentally safe disposal of waste that could not be diverted. Per the requirements of the Integrated Waste Management Act, the Riverside County Board of Supervisors adopted the County of Riverside Countywide Integrated Waste Management Plan (CIWMP), which outlines the goals, policies, and programs the County and its cities implement to create an integrated and cost-effective waste management system that complies with the provisions of AB 939 and its diversion mandates. (RCDWR, 2020)

In order to assist the City of Moreno Valley and the County of Riverside in achieving the mandated goals of the Integrated Waste Management Act, the Project’s building user(s) would be required to work with future refuse haulers to develop and implement feasible waste reduction programs, including source reduction, recycling, and composting. Additionally, in accordance with the California Solid Waste Reuse and Recycling Act of 1991 (Cal Pub Res. Code § 42911), the Project is required to provide adequate areas for collecting and loading recyclable materials where solid waste is collected. The collection areas are required to be shown on construction drawings and be in place before occupancy permits are issued. (CA Legislative Information, 2005) Additionally, in compliance with AB 341 (Mandatory Commercial Recycling Program), the future occupant(s) of the proposed Project would be required to arrange for recycling services, if the occupant generates four (4) or more cubic yards of solid waste per week (CA Legislative Information, 2011). The implementation of these mandatory requirements would reduce the amount of solid waste generated by the Project and diverted to landfills, which in turn will aid in the extension of the life of affected disposal sites. The Project Applicant would be required to comply with all applicable solid waste statutes and regulations; as such, impacts related to solid waste statutes and regulations would be less than significant.

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>XX. WILDFIRE</b> – If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, <b>would the project:</b>				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<b>Response:</b> The Project site is not located in or near state responsibility areas (SRA) or lands within a very high fire hazard severity zone (CalFire, 2007); therefore, the Project would not exacerbate wildfire hazard risks or expose people or the environment to adverse environmental effects related to wildfires. As such, no impact would occur.				
<b>Sources:</b>  1. California Department of Forestry and Fire Protection – Western Riverside County Fire Hazard Severity Zones in SRA, Adopted on November 7, 2007, <a href="https://osfm.fire.ca.gov/media/6752/fhszs_map60.pdf">https://osfm.fire.ca.gov/media/6752/fhszs_map60.pdf</a>				
<b>XXI. MANDATORY FINDINGS OF SIGNIFICANCE</b>				
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>Response:</b> All impacts to the environment, including impacts to habitat for fish and wildlife species, fish and wildlife populations, plant and animal communities, rare and endangered plants and animals, and historical and pre-historical resources were evaluated as part of this IS/MND. Throughout this IS/MND, where impacts were determined to be potentially significant, mitigation measures have been imposed to reduce those impacts to less-than-significant levels. Accordingly, with incorporation of the mitigation measures imposed throughout this IS/MND, the Project would not substantially degrade the quality of the environment and impacts would be less than significant.				
b) Does the project have impacts that are individually limited, but cumulatively considerable? (“Cumulatively considerable” means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current project, and the effects of probable future projects.)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p><b>Response:</b> As discussed throughout this IS/MND, implementation of the proposed Project has the potential to result in effects to the environment that are individually limited, but cumulatively considerable. In all instances where the Project has the potential to contribute to a cumulatively considerable impact to the environment, mitigation measures have been imposed to reduce potential effects to less-than-significant levels.</p>				
<p><u>Aesthetics</u></p>				
<p>New development on the Project site and in the surrounding area would change the existing character of the Project's viewshed; however, all development in the immediate vicinity of the Project would be required to comply with the development regulations and design standards contained in the City's Development Code, which would ensure that minimum standards related to visual character and quality are met to preclude adverse aesthetic effects (e.g., size, scale, building materials, lighting). Accordingly, the Project's aesthetic impacts would not be cumulatively considerable.</p>				
<p><u>Agriculture and Forestry Resources</u></p>				
<p>The Project would have no impact on agricultural resources. Therefore, there is no potential for the Project to contribute to a cumulatively considerable impact under this topic.</p>				
<p><u>Air Quality</u></p>				
<p>Based on SCAQMD guidance, any direct exceedance of a regional or localized threshold also is considered to be a cumulatively-considerable effect, while air pollutant emissions below applicable regional and/or localized thresholds are not considered cumulatively considerable. As discussed in the preceding analysis, the Project would not exceed SCAQMD's regional threshold for criteria pollutants during construction or operation of the Project. Therefore, Project-related construction and operation emissions are not considered cumulatively-considerable.</p>				
<p><u>Biological Resources</u></p>				
<p>The Project site does not support any sensitive plant or wildlife species; therefore, there is no potential for the Project to contribute to a cumulatively-considerable impact under these resources. Although the Project site is highly disturbed and fragmented from other open space areas under existing conditions, the site does contain quality habitat for nesting birds and contains habitat that could be used by the burrowing owl. Therefore, there is the potential that nesting birds and/or the burrowing owl could be present on the Project site prior to construction and there also is the potential that other development projects in the Riverside area could support bird nests and/or the burrowing owl. The Project's potential impacts to nesting birds and the burrowing owl would be cumulatively considerable. MMs BR-1 and BR-2 would reduce the Project's cumulative effects to less-than-significant levels by ensuring that no direct take of nesting birds occurs during construction.</p>				
<p>The Project would permanently impact habitat that is classified as: sensitive natural community, riparian/riverine habitat, and a State-protected wetland. Accordingly, the Project would contribute to a cumulatively-considerable impact under these resources. MM BR-3 would reduce the Project's cumulative effects to less-than-significant levels by ensuring that these impacts would be fully compensated through the purchasing of habitat mitigation credits.</p>				
<p><u>Cultural Resources</u></p>				
<p>The Project site does not contain historic or prehistoric archaeological resources and mandatory compliance with State law would preclude impacts to human remains; therefore, there is no potential for the Project to contribute to a cumulatively considerable impact to these resources.</p>				
<p><u>Energy</u></p>				
<p>The Project's construction and operation energy consumption would not be considered inefficient, wasteful, or otherwise unnecessary and would not obstruct a state or local plan for renewable energy or energy efficiency. In addition, all cumulative projects would also be required to comply with the California Building Standards Code, which establishes standards for energy efficiency and "green" construction. Therefore, implementation of the Project would result in a less-than-significant cumulative impact to energy.</p>				

<b>ISSUES &amp; SUPPORTING INFORMATION SOURCES:</b>	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p><u>Geology and Soils</u>                      Potential effects related to geology and soils are inherently site-specific; therefore, there is no potential for the Project to contribute to a cumulatively considerable impact under this topic. Furthermore, all development proposals would be required to comply with applicable federal, State, and local regulations that are in place to preclude adverse geology and soils effects, including effects related to strong seismic ground shaking, fault rupture, soil erosion, and hazardous soil conditions (e.g., liquefaction, expansive soils, landslides).</p> <p>Notwithstanding, there is remote potential that paleontological resources are buried beneath the surface of the Project site and could be impacted during construction. Other projects within region would similarly have the potential to impact unknown, subsurface paleontological resources during ground-disturbing activities. Therefore, the potential for development on the Project site to impact subsurface paleontological resource deposits is a cumulatively considerable impact. Application of MMs GEO-1 through GEO-4 would reduce the Project’s cumulative impacts to less-than-significant levels.</p> <p><u>Greenhouse Gas Emissions</u>                      As described in the preceding analysis, global climate change (GCC) occurs as the result of global emissions of GHGs. An individual development project does not have the potential to result in direct and significant GCC-related effects in the absence of cumulative sources of GHGs. The CEQA Guidelines also emphasize that the effects of GHG emissions are cumulative, and should be analyzed in the context of CEQA’s requirements for cumulative impacts analysis (See CEQA Guidelines § 15130[f]). Accordingly, the preceding analysis reflects a cumulative impact analysis of the GHG emissions related to the Project. As concluded under Response VIII(a) and (b), the Project would not result in a cumulatively considerable impact related to GHG emissions.</p> <p><u>Hazards and Hazardous Materials</u>                      Potential effects related to hazards and hazardous materials are inherently site-specific; therefore, there is no potential for the Project to contribute to a cumulatively considerable impact under this topic.</p> <p><u>Hydrology and Water Quality</u>                      Construction and operation of the Project and other projects in the Santa Ana River watershed would have the potential to result in a cumulative water quality impact, including erosion and sedimentation. However, in accordance with applicable federal, State, and local regulations, all development projects would be required to implement plans during construction and operation (e.g., SWPPP and WQMP) to minimize adverse effects to water quality, which would avoid a cumulatively considerable impact.</p> <p>The Project and other projects in the Santa Ana River Basin would be required to comply with federal, State, and local regulations in order to preclude flood hazards both on- and off-site. Compliance with federal, State, and local regulations would require on-site areas to be protected, at a minimum, from flooding during peak storm events (i.e., 100-year storm) and that proposed development would not expose downstream properties to increased flooding risks during peak storm events. Accordingly, a cumulatively considerable effect related to flooding would not occur.</p> <p><u>Land Use and Planning</u>                      The Project would not physically divide an established community, or conflict with applicable land use/planning documents; therefore, there is no potential for the Project to contribute to a cumulatively-considerable impact related to land use and planning.</p> <p><u>Mineral Resources</u>                      The Project would have no impact on mineral resources. Therefore, there is no potential for the Project to contribute to a cumulatively considerable impact under this topic.</p> <p><u>Noise</u>                      Noise levels diminish rapidly with distance; therefore, for a development project to contribute to a noise-related cumulative impact it must be located in close proximity to another development project or source of substantial noise. There are no construction projects in the immediate vicinity of the Project site that would overlap with Project-related construction activities. Accordingly, cumulatively-considerable impacts related to periodic noise and construction-related vibration would not occur. Under long-term</p>

<b>ISSUES &amp; SUPPORTING INFORMATION SOURCES:</b>	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p>operating conditions the Project would comply with the City of Moreno Valley noise ordinance and would not produce noticeable levels of vibration; therefore, cumulatively considerable impacts related to these issue areas would not occur. The analysis provided under Response XIII(a) demonstrates that the Project would not result in a cumulatively-considerable impact related to transportation noise under long-term conditions.</p> <p><u>Population and Housing</u> The Project would not implement land uses that generate new residents and would not require the construction of replacement housing. Accordingly, the City has anticipated – and planned for – the growth that would occur on the Project site and there is no potential for the Project to result in an adverse, cumulatively considerable environmental effect related to population and housing.</p> <p><u>Public Services</u> All development projects in the City of Moreno Valley, including the Project, would be required to pay development impact fees, a portion of which would be used by the City for the provision of public services, to offset the incremental increase in demand for fire protection and police protection services. Furthermore, future development would generate an on-going stream of property tax revenue and sales tax revenue, which would provide funds that could be used by the City of Moreno Valley for the provision of fire and police protection services. The Project would not directly result in the introduction of new residents to the City and, therefore, would have no potential to result in cumulatively considerable impacts to resident-serving public facilities such as schools, parks, libraries, and other public facilities or services.</p> <p><u>Recreation</u> The Project would have no impact to recreation facilities. Therefore, there is no potential for the Project to contribute to a cumulatively considerable impact under this topic.</p> <p><u>Transportation</u> The Project would not conflict with any City policies addressing the circulation network and would not generate substantial VMT. Therefore, the Project would not contribute to any cumulatively-considerable adverse transportation effects.</p> <p><u>Tribal Cultural Resource</u> Development activities on the Project site would not impact any known tribal cultural resources. However, there is the remote potential that such resources are buried beneath the surface of the Project site and could be impacted during construction. Other projects within region would similarly have the potential to impact unknown, subsurface tribal cultural resources during ground-disturbing activities. Therefore, the potential for development on the Project site to impact subsurface tribal cultural resource deposits is a cumulatively considerable impact. Application of MMs TCR-1 though TCR-6 would reduce the Project’s cumulative impacts to less-than-significant levels.</p> <p><u>Utilities and Service Systems</u> The Project would require water and wastewater infrastructure, as well as solid waste disposal for building operation. Development of public utility infrastructure is part of an extensive planning process involving utility providers and jurisdictions with discretionary review authority. The coordination process associated with the preparation of infrastructure plans is intended to ensure that adequate public utility services and resources are available to serve both individual development projects and cumulative growth in the region. Each individual development project is subject to review for utility capacity to avoid unanticipated interruptions in service or inadequate supplies. Coordination with the utility providers would allow for the provision of utility services to the Project and other developments. The Project and other planned projects are subject to connection and service fees to offset increased demand and assist in facility expansion and service improvements (at the time of need). Because of the utility planning and coordination activities described above, cumulatively considerable impacts to utilities and service systems would not occur.</p> <p><u>Wildfire</u> The Project site is not located in a SRA or very high fire hazard area. Therefore, implementation of the Project would result in no adverse impacts associated with wildfire.</p>				

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> The Project's potential to result in environmental effects that could adversely affect human beings, either directly or indirectly, has been discussed throughout this IS/MND. As demonstrated by this analysis, construction and operation of the Project would not involve any activities that would result in environmental effects which would cause substantial adverse effects on human beings, either directly or indirectly.</p>

## EXECUTIVE SUMMARY

### ES.1 SUMMARY OF FINDINGS

The results of this *Compass Danbe Centerpointe Air Quality Impact Analysis* are summarized below based on the significance criteria in Section 3 of this report consistent with Appendix G of the *2019 California Environmental Quality Act (CEQA) Guidelines (CEQA Guidelines)* (1). Table ES-1 shows the findings of significance for each potential air quality impact under CEQA before and after any required mitigation measures described below.

**TABLE ES-1: SUMMARY OF CEQA SIGNIFICANCE FINDINGS**

Analysis	Report Section	Significance Findings	
		Unmitigated	Mitigated
Regional Construction Emissions	3.4	<i>Less Than Significant</i>	<i>n/a</i>
Localized Construction Emissions	3.6	<i>Less Than Significant</i>	<i>n/a</i>
Regional Operational Emissions	3.5	<i>Less Than Significant</i>	<i>n/a</i>
Localized Operational Emissions	3.7	<i>Less Than Significant</i>	<i>n/a</i>
CO "Hot Spot" Analysis	3.8	<i>Less Than Significant</i>	<i>n/a</i>
Air Quality Management Plan	3.9	<i>Less Than Significant</i>	<i>n/a</i>
Sensitive Receptors	3.10	<i>Less Than Significant</i>	<i>n/a</i>
Odors	3.11	<i>Less Than Significant</i>	<i>n/a</i>
Cumulative Impacts	3.12	<i>Less Than Significant</i>	<i>n/a</i>

### ES.2 STANDARD REGULATORY REQUIREMENTS

There are numerous requirements that development projects must comply with by law, and that were put in place by federal, State, and local regulatory agencies for the improvement of air quality. The two most pertinent regulatory requirements that apply to the proposed Project and which are required by South Coast Air Quality Management District (SCAQMD) Rules that are currently applicable during construction activity for this Project are Rule 403 (Fugitive Dust) (2)

and Rule 1113 (Architectural Coatings) (3). Because they are required by law, credit for Rule 403 and Rule 1113 have been taken in the analysis.

#### **SCAQMD RULE 403**

This rule is intended to reduce the amount of particulate matter entrained in the ambient air as a result of anthropogenic (human-made) fugitive dust sources by requiring actions to prevent and reduce fugitive dust emissions. Rule 403 applies to any activity or human-made condition capable of generating fugitive dust and requires best available control measures to be applied to earth moving and grading activities.

#### **SCAQMD RULE 1113**

This rule serves to limit the Volatile Organic Compound (VOC) content of architectural coatings used on projects in the SCAQMD. Any person who supplies, sells, offers for sale, or manufactures any architectural coating for use on projects in the SCAQMD must comply with the current VOC standards set in this rule.

### **ES.3 CONSTRUCTION AND OPERATIONAL-SOURCE MITIGATION MEASURES**

The Project would not result in an exceedance of any regional or localized construction or operational-source emissions thresholds. As such, the Project would not result in any significant impacts and no MMs are required.

*This page intentionally left blank*

Attachment: Appendix A1-Air Quality Impact Analysis (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

# 1 INTRODUCTION

This report presents the results of the air quality impact analysis (AQIA) prepared by Urban Crossroads, Inc., for the proposed Compass Danbe Centerpointe (Project). The purpose of this AQIA is to evaluate the potential impacts to air quality associated with construction and operation of the proposed Project and recommend measures to mitigate impacts considered potentially significant in comparison to thresholds established by the SCAQMD.

## 1.1 SITE LOCATION

The proposed project is located south of Alessandro Boulevard on either side of Chagall Court in the City of Moreno Valley as shown on Exhibit 1-A. The March Air Reserve Base/Inland Port Airport (MARB/IPA) is located approximately 0.9 miles south of the Project site. The Project site is bordered to the west by vacant land, to the east by vacant land, to the north by commercial and residential uses, and to the south are existing industrial buildings.

This proposed Project includes a General Plan Amendment (GPA) and a Zone Change (ZC). The site is currently designated as Commercial in the City's General Plan, which would require a land use and zoning change to Light Industrial use. The proposed changes are consistent with the zones to the west, south and east of the subject site and adjacent properties. The amendment is in keeping with the uses surrounding the project site.

## 1.2 PROJECT DESCRIPTION

Exhibit 1-B illustrates a preliminary site plan for the Project. The Project is anticipated to be developed within a single phase with an anticipated opening year of 2022. The proposed Project consists of the following uses:

- Building 1: 206,665 square feet (sf) of warehousing (70% of total building sf) and 88,571 sf of high-cube cold storage warehouse use (30% of total building sf) for a total of 295,236 sf for Building 1
- Building 2: 70,876 sf of warehousing (70% of total building sf) and 30,376 sf of high-cube cold storage warehouse use (30% of total building sf) for a total of 101,252 sf for Building 2

This analysis includes a conservative assumption of on-site Project-related emission sources for potential future tenants, including architectural coatings, consumer products, landscape maintenance equipment, emissions associated with natural gas and electricity, and mobile source emissions. This analysis is intended to describe air impacts associated with the expected operational activities at the Project site. This report assumes the Project will operate 24-hours daily for seven days per week. At the time this air quality impact analysis was prepared, the future tenants of the proposed Project were unknown however any tenant would operate consistent with a high-cube warehouse.

## 2 AIR QUALITY SETTING

This section provides an overview of the existing air quality conditions in the Project area and region.

### 2.1 SOUTH COAST AIR BASIN

The Project site is located in the South Coast Air Basin (SCAB) within the jurisdiction of SCAQMD (4). The SCAQMD was created by the 1977 Lewis-Presley Air Quality Management Act, which merged four county air pollution control bodies into one regional district. Under the Act, the SCAQMD is responsible for bringing air quality in areas under its jurisdiction into conformity with federal and state air quality standards. As previously stated, the Project site is located within the SCAB, a 6,745-square mile subregion of the SCAQMD, which includes portions of Los Angeles, Riverside, and San Bernardino Counties, and all of Orange County.

The SCAB is bounded by the Pacific Ocean to the west and the San Gabriel, San Bernardino, and San Jacinto Mountains to the north and east. The Los Angeles County portion of the Mojave Desert Air Basin is bounded by the San Gabriel Mountains to the south and west, the Los Angeles/Kern County border to the north, and the Los Angeles/San Bernardino County border to the east. The Riverside County portion of the Salton Sea Air Basin is bounded by the San Jacinto Mountains in the west and spans eastward up to the Palo Verde Valley.

### 2.2 REGIONAL CLIMATE

The regional climate has a substantial influence on air quality in the SCAB. In addition, the temperature, wind, humidity, precipitation, and amount of sunshine influence the air quality.

The annual average temperatures throughout the SCAB vary from the low to middle 60s degrees Fahrenheit (°F). Due to a decreased marine influence, the eastern portion of the SCAB shows greater variability in average annual minimum and maximum temperatures. January is the coldest month throughout the SCAB, with average minimum temperatures of 47°F in downtown Los Angeles and 36°F in San Bernardino. All portions of the SCAB have recorded maximum temperatures above 100°F.

Although the climate of the SCAB can be characterized as semi-arid, the air near the land surface is quite moist on most days because of the presence of a marine layer. This shallow layer of sea air is an important modifier of SCAB climate. Humidity restricts visibility in the SCAB, and the conversion of sulfur dioxide (SO<sub>2</sub>) to sulfates (SO<sub>4</sub>) is heightened in air with high relative humidity. The marine layer provides an environment for that conversion process, especially during the spring and summer months. The annual average relative humidity within the SCAB is 71% along the coast and 59% inland. Since the ocean effect is dominant, periods of heavy early morning fog are frequent and low stratus clouds are a characteristic feature. These effects decrease with distance from the coast.

More than 90% of the SCAB's rainfall occurs from November through April. The annual average rainfall varies from approximately nine inches in Riverside to fourteen inches in downtown Los

Angeles. Monthly and yearly rainfall totals are extremely variable. Summer rainfall usually consists of widely scattered thunderstorms near the coast and slightly heavier shower activity in the eastern portion of the SCAB with frequency being higher near the coast.

Due to its generally clear weather, about three-quarters of available sunshine is received in the SCAB. The remaining one-quarter is absorbed by clouds. The ultraviolet portion of this abundant radiation is a key factor in photochemical reactions. On the shortest day of the year there are approximately 10 hours of possible sunshine, and on the longest day of the year there are approximately 14½ hours of possible sunshine.

The importance of wind to air pollution is considerable. The direction and speed of the wind determines the horizontal dispersion and transport of the air pollutants. During the late autumn to early spring rainy season, the SCAB is subjected to wind flows associated with the traveling storms moving through the region from the northwest. This period also brings five to ten periods of strong, dry offshore winds, locally termed “Santa Anas” each year. During the dry season, which coincides with the months of maximum photochemical smog concentrations, the wind flow is bimodal, typified by a daytime onshore sea breeze and a nighttime offshore drainage wind. Summer wind flows are created by the pressure differences between the relatively cold ocean and the unevenly heated and cooled land surfaces that modify the general northwesterly wind circulation over southern California. Nighttime drainage begins with the radiational cooling of the mountain slopes. Heavy, cool air descends the slopes and flows through the mountain passes and canyons as it follows the lowering terrain toward the ocean. Another characteristic wind regime in the SCAB is the “Catalina Eddy,” a low level cyclonic (counterclockwise) flow centered over Santa Catalina Island which results in an offshore flow to the southwest. On most spring and summer days, some indication of an eddy is apparent in coastal sections.

In the SCAB, there are two distinct temperature inversion structures that control vertical mixing of air pollution. During the summer, warm high-pressure descending (subsiding) air is undercut by a shallow layer of cool marine air. The boundary between these two layers of air is a persistent marine subsidence/inversion. This boundary prevents vertical mixing which effectively acts as an impervious lid to pollutants over the entire SCAB. The mixing height for the inversion structure is normally situated 1,000 to 1,500 feet above mean sea level.

A second inversion-type forms in conjunction with the drainage of cool air off the surrounding mountains at night followed by the seaward drift of this pool of cool air. The top of this layer forms a sharp boundary with the warmer air aloft and creates nocturnal radiation inversions. These inversions occur primarily in the winter when nights are longer and onshore flow is weakest. They are typically only a few hundred feet above mean sea level. These inversions effectively trap pollutants, such as Nitrogen Oxides (NO<sub>x</sub>) and carbon monoxide (CO) from vehicles, as the pool of cool air drifts seaward. Winter is therefore a period of high levels of primary pollutants along the coastline.

### 2.3 WIND PATTERNS AND PROJECT LOCATION

The distinctive climate of the Project area and the SCAB is determined by its terrain and geographical location. The SCAB is located in a coastal plain with connecting broad valleys and

low hills, bounded by the Pacific Ocean in the southwest quadrant with high mountains forming the remainder of the perimeter.

Wind patterns across the south coastal region are characterized by westerly and southwesterly onshore winds during the day and easterly or northeasterly breezes at night. Winds are characteristically light although the speed is somewhat greater during the dry summer months than during the rainy winter season.

## 2.4 CRITERIA POLLUTANTS

Criteria pollutants are pollutants that are regulated through the development of human health based and/or environmentally based criteria for setting permissible levels. Criteria pollutants, their typical sources, and health effects are identified below (5):

**TABLE 2-1: CRITERIA POLLUTANTS**

Criteria Pollutant	Description	Sources	Health Effects
CO	CO is a colorless, odorless gas produced by the incomplete combustion of carbon-containing fuels, such as gasoline or wood. CO concentrations tend to be the highest during the winter morning, when little to no wind and surface-based inversions trap the pollutant at ground levels. Because CO is emitted directly from internal combustion engines, unlike ozone (O <sub>3</sub> ), motor vehicles operating at slow speeds are the primary source of CO in the SCAB. The highest ambient CO concentrations are generally found near congested transportation corridors and intersections.	Any source that burns fuel such as automobiles, trucks, heavy construction equipment, farming equipment and residential heating.	Individuals with a deficient blood supply to the heart are the most susceptible to the adverse effects of CO exposure. The effects observed include earlier onset of chest pain with exercise, and electrocardiograph changes indicative of decreased oxygen (O <sub>2</sub> ) supply to the heart. Inhaled CO has no direct toxic effect on the lungs but exerts its effect on tissues by interfering with O <sub>2</sub> transport and competing with O <sub>2</sub> to combine with hemoglobin present in the blood to form carboxyhemoglobin (COHb). Hence, conditions with an increased demand for O <sub>2</sub> supply can be adversely affected by exposure to CO. Individuals most at risk include fetuses, patients with diseases involving heart and blood vessels, and patients with chronic hypoxemia (O <sub>2</sub> deficiency) as seen at high altitudes.

Criteria Pollutant	Description	Sources	Health Effects
SO <sub>2</sub>	SO <sub>2</sub> is a colorless, extremely irritating gas or liquid. It enters the atmosphere as a pollutant mainly as a result of burning high sulfur-content fuel oils and coal and from chemical processes occurring at chemical plants and refineries. When SO <sub>2</sub> oxidizes in the atmosphere, it forms SO <sub>4</sub> . Collectively, these pollutants are referred to as sulfur oxides (SO <sub>x</sub> ).	Coal or oil burning power plants and industries, refineries, diesel engines	<p>A few minutes of exposure to low levels of SO<sub>2</sub> can result in airway constriction in some asthmatics, all of whom are sensitive to its effects. In asthmatics, increase in resistance to air flow, as well as reduction in breathing capacity leading to severe breathing difficulties, are observed after acute exposure to SO<sub>2</sub>. In contrast, healthy individuals do not exhibit similar acute responses even after exposure to higher concentrations of SO<sub>2</sub>.</p> <p>Animal studies suggest that despite SO<sub>2</sub> being a respiratory irritant, it does not cause substantial lung injury at ambient concentrations. However, very high levels of exposure can cause lung edema (fluid accumulation), lung tissue damage, and sloughing off of cells lining the respiratory tract.</p> <p>Some population-based studies indicate that the mortality and morbidity effects associated with fine particles show a similar association with ambient SO<sub>2</sub> levels. In these studies, efforts to separate the effects of SO<sub>2</sub> from those of fine particles have not been successful. It is not clear whether the two pollutants act synergistically, or one pollutant alone is the predominant factor.</p>

Attachment: Appendix A1-Air Quality Impact Analysis (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

Criteria Pollutant	Description	Sources	Health Effects
NO <sub>x</sub>	NO <sub>x</sub> consist of nitric oxide (NO), nitrogen dioxide (NO <sub>2</sub> ) and nitrous oxide (N <sub>2</sub> O) and are formed when nitrogen (N <sub>2</sub> ) combines with O <sub>2</sub> . Their lifespan in the atmosphere ranges from one to seven days for nitric oxide and nitrogen dioxide, to 170 years for nitrous oxide. NO <sub>x</sub> is typically created during combustion processes and are major contributors to smog formation and acid deposition. NO <sub>2</sub> is a criteria air pollutant and may result in numerous adverse health effects; it absorbs blue light, resulting in a brownish-red cast to the atmosphere and reduced visibility. Of the seven types of nitrogen oxide compounds, NO <sub>2</sub> is the most abundant in the atmosphere. As ambient concentrations of NO <sub>2</sub> are related to traffic density, commuters in heavy traffic may be exposed to higher concentrations of NO <sub>2</sub> than those indicated by regional monitoring station.	Any source that burns fuel such as automobiles, trucks, heavy construction equipment, farming equipment and residential heating.	<p>Population-based studies suggest that an increase in acute respiratory illness, including infections and respiratory symptoms in children (not infants), is associated with long-term exposure to NO<sub>2</sub> at levels found in homes with gas stoves, which are higher than ambient levels found in Southern California. Increase in resistance to air flow and airway contraction is observed after short-term exposure to NO<sub>2</sub> in healthy subjects. Larger decreases in lung functions are observed in individuals with asthma or chronic obstructive pulmonary disease (e.g., chronic bronchitis, emphysema) than in healthy individuals, indicating a greater susceptibility of these sub-groups.</p> <p>In animals, exposure to levels of NO<sub>2</sub> considerably higher than ambient concentrations result in increased susceptibility to infections, possibly due to the observed changes in cells involved in maintaining immune functions. The severity of lung tissue damage associated with high levels of O<sub>3</sub> exposure increases when animals are exposed to a combination of O<sub>3</sub> and NO<sub>2</sub>.</p>
O <sub>3</sub>	O <sub>3</sub> is a highly reactive and unstable gas that is formed when VOCs and NO <sub>x</sub> , both byproducts of internal combustion engine exhaust, undergo slow photochemical reactions in the presence of sunlight. O <sub>3</sub> concentrations are generally highest during the summer	Formed when reactive organic gases (ROG) and NO <sub>x</sub> react in the presence of sunlight. ROG sources include any source	Individuals exercising outdoors, children, and people with preexisting lung disease, such as asthma and chronic pulmonary lung disease, are considered to be the most susceptible sub-groups for O <sub>3</sub> effects. Short-term exposure (lasting for a

Criteria Pollutant	Description	Sources	Health Effects
	<p>months when direct sunlight, light wind, and warm temperature conditions are favorable to the formation of this pollutant.</p>	<p>that burns fuels, (e.g., gasoline, natural gas, wood, oil) solvents, petroleum processing and storage and pesticides.</p>	<p>few hours) to O<sub>3</sub> at levels typically observed in Southern California can result in breathing pattern changes, reduction of breathing capacity, increased susceptibility to infections, inflammation of the lung tissue, and some immunological changes. Elevated O<sub>3</sub> levels are associated with increased school absences. In recent years, a correlation between elevated ambient O<sub>3</sub> levels and increases in daily hospital admission rates, as well as mortality, has also been reported. An increased risk for asthma has been found in children who participate in multiple outdoor sports and live in communities with high O<sub>3</sub> levels.</p> <p>O<sub>3</sub> exposure under exercising conditions is known to increase the severity of the responses described above. Animal studies suggest that exposure to a combination of pollutants that includes O<sub>3</sub> may be more toxic than exposure to O<sub>3</sub> alone. Although lung volume and resistance changes observed after a single exposure diminish with repeated exposures, biochemical and cellular changes appear to persist, which can lead to subsequent lung structural changes.</p>
<p>Particulate Matter</p>	<p>PM<sub>10</sub>: A major air pollutant consisting of tiny solid or liquid particles of soot, dust, smoke, fumes, and aerosols. Particulate matter pollution is a major cause of reduce visibility (haze) which is caused by the scattering of light</p>	<p>Sources of PM<sub>10</sub> include road dust, windblown dust and construction. Also formed from other pollutants (acid rain, NO<sub>x</sub>, SO<sub>x</sub>,</p>	<p>A consistent correlation between elevated ambient fine particulate matter (PM<sub>10</sub> and PM<sub>2.5</sub>) levels and an increase in mortality rates, respiratory infections, number and severity of</p>

Attachment: Appendix A1-Air Quality Impact Analysis (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

Criteria Pollutant	Description	Sources	Health Effects
	<p>and consequently the significant reduction air clarity. The size of the particles (10 microns or smaller, about 0.0004 inches or less) allows them to easily enter the lungs where they may be deposited, resulting in adverse health effects. Additionally, it should be noted that PM<sub>10</sub> is considered a criteria air pollutant.</p> <p>PM<sub>2.5</sub>: A similar air pollutant to PM<sub>10</sub> consisting of tiny solid or liquid particles which are 2.5 microns or smaller (which is often referred to as fine particles). These particles are formed in the atmosphere from primary gaseous emissions that include SO<sub>4</sub> formed from SO<sub>2</sub> release from power plants and industrial facilities and nitrates that are formed from NO<sub>x</sub> release from power plants, automobiles and other types of combustion sources. The chemical composition of fine particles highly depends on location, time of year, and weather conditions. PM<sub>2.5</sub> is a criteria air pollutant.</p>	<p>organics). Incomplete combustion of any fuel.</p> <p>PM<sub>2.5</sub> comes from fuel combustion in motor vehicles, equipment and industrial sources, residential and agricultural burning. Also formed from reaction of other pollutants (acid rain, NO<sub>x</sub>, SO<sub>x</sub>, organics).</p>	<p>asthma attacks and the number of hospital admissions has been observed in different parts of the United States and various areas around the world. In recent years, some studies have reported an association between long-term exposure to air pollution dominated by fine particles and increased mortality, reduction in lifespan, and an increased mortality from lung cancer.</p> <p>Daily fluctuations in PM<sub>2.5</sub> concentration levels have also been related to hospital admissions for acute respiratory conditions in children, to school and kindergarten absences, to a decrease in respiratory lung volumes in normal children, and to increased medication use in children and adults with asthma. Recent studies show lung function growth in children is reduced with long term exposure to particulate matter.</p> <p>The elderly, people with pre-existing respiratory or cardiovascular disease, and children appear to be more susceptible to the effects of high levels of PM<sub>10</sub> and PM<sub>2.5</sub>.</p>
VOC	<p>VOCs are hydrocarbon compounds (any compound containing various combinations of hydrogen and carbon atoms) that exist in the ambient air. VOCs contribute to the formation of smog through atmospheric photochemical reactions and/or may be toxic. Compounds of carbon (also known as organic compounds) have different levels of reactivity; that is, they do not react at the same speed or do not</p>	<p>Organic chemicals are widely used as ingredients in household products. Paints, varnishes and wax all contain organic solvents, as do many cleaning, disinfecting, cosmetic, degreasing and hobby products.</p>	<p>Breathing VOCs can irritate the eyes, nose and throat, can cause difficulty breathing and nausea, and can damage the central nervous system as well as other organs. Some VOCs can cause cancer. Not all VOCs have all these health effects, though many have several.</p>

Attachment: Appendix A1-Air Quality Impact Analysis (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

Criteria Pollutant	Description	Sources	Health Effects
	form O <sub>3</sub> to the same extent when exposed to photochemical processes. VOCs often have an odor, and some examples include gasoline, alcohol, and the solvents used in paints. Exceptions to the VOC designation include CO, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate. VOCs are a criteria pollutant since they are a precursor to O <sub>3</sub> , which is a criteria pollutant. The terms VOC and ROG (see below) interchangeably.	Fuels are made up of organic chemicals. All of these products can release organic compounds while you are using them, and, to some degree, when they are stored.	
ROG	Similar to VOC, ROGs are also precursors in forming O <sub>3</sub> and consist of compounds containing methane, ethane, propane, butane, and longer chain hydrocarbons, which are typically the result of some type of combustion/decomposition process. Smog is formed when ROG and NO <sub>x</sub> react in the presence of sunlight. ROGs are a criteria pollutant since they are a precursor to O <sub>3</sub> , which is a criteria pollutant. The terms ROG and VOC (see previous) interchangeably.	Sources similar to VOCs.	Health effects similar to VOCs.
Lead (Pb)	Pb is a heavy metal that is highly persistent in the environment and is considered a criteria pollutant. In the past, the primary source of Pb in the air was emissions from vehicles burning leaded gasoline. The major sources of Pb emissions are ore and metals processing, particularly Pb smelters, and piston-engine aircraft operating on leaded aviation gasoline. Other stationary sources include waste incinerators, utilities, and lead-acid battery manufacturers. It should be noted that the Project does not include	Metal smelters, resource recovery, leaded gasoline, deterioration of Pb paint.	Fetuses, infants, and children are more sensitive than others to the adverse effects of Pb exposure. Exposure to low levels of Pb can adversely affect the development and function of the central nervous system, leading to learning disorders, distractibility, inability to follow simple commands, and lower intelligence quotient. In adults, increased Pb levels are associated with increased blood pressure.

Criteria Pollutant	Description	Sources	Health Effects
	operational activities such as metal processing or Pb acid battery manufacturing. As such, the Project is not anticipated to generate a quantifiable amount of Pb emissions.		Pb poisoning can cause anemia, lethargy, seizures, and death; although it appears that there are no direct effects of Pb on the respiratory system. Pb can be stored in the bone from early age environmental exposure, and elevated blood Pb levels can occur due to breakdown of bone tissue during pregnancy, hyperthyroidism (increased secretion of hormones from the thyroid gland) and osteoporosis (breakdown of bony tissue). Fetuses and breast-fed babies can be exposed to higher levels of Pb because of previous environmental Pb exposure of their mothers.
Odor	Odor means the perception experienced by a person when one or more chemical substances in the air come into contact with the human olfactory nerves (6).	Odors can come from many sources including animals, human activities, industry, natures, and vehicles.	Offensive odors can potentially affect human health in several ways. First, odorant compounds can irritate the eye, nose, and throat, which can reduce respiratory volume. Second, studies have shown that the VOCs that cause odors can stimulate sensory nerves to cause neurochemical changes that might influence health, for instance, by compromising the immune system. Finally, unpleasant odors can trigger memories or attitudes linked to unpleasant odors, causing cognitive and emotional effects such as stress.

Attachment: Appendix A1-Air Quality Impact Analysis (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

## 2.5 EXISTING AIR QUALITY

Existing air quality is measured at established SCAQMD air quality monitoring stations. Monitored air quality is evaluated in the context of ambient air quality standards. These standards are the levels of air quality that are considered safe, with an adequate margin of safety, to protect the public health and welfare. National Ambient Air Quality Standards (NAAQS) and California Ambient Air Quality Standards (CAAQS) currently in effect are shown in Table 2-2 (7).

The determination of whether a region's air quality is healthful or unhealthful is determined by comparing contaminant levels in ambient air samples to the state and federal standards. At the time of this AQIA, the most recent state and federal standards were updated by CARB on May 4, 2016 and are presented in Table 2-2. The air quality in a region is considered to be in attainment by the state if the measured ambient air pollutant levels for O<sub>3</sub>, CO, SO<sub>2</sub> (1 and 24 hour), NO<sub>2</sub>, PM<sub>10</sub>, and PM<sub>2.5</sub> do not exceed standards. All others are not to be equaled or exceeded. It should be noted that the three-year period is presented for informational purposes and is not the basis for how the State assigns attainment status. Attainment status for a pollutant means that the SCAQMD meets the standards set by the Environmental Protection Agency (EPA) or the California EPA (CalEPA). Conversely, nonattainment means that an area has monitored air quality that does not meet the NAAQS or CAAQS standards. In order to improve air quality in nonattainment areas, CARB has implemented a State Implementation Plan (SIP). The SIP outlines the measures that the state will take to improve air quality. Once nonattainment areas meet the standards and additional redesignation requirements, the EPA will designate the area as a maintenance area (8).

TABLE 2-2: AMBIENT AIR QUALITY STANDARDS (1 OF 2)

Ambient Air Quality Standards						
Pollutant	Averaging Time	California Standards <sup>1</sup>		National Standards <sup>2</sup>		
		Concentration <sup>3</sup>	Method <sup>4</sup>	Primary <sup>3,5</sup>	Secondary <sup>3,8</sup>	Method <sup>7</sup>
Ozone (O <sub>3</sub> ) <sup>8</sup>	1 Hour	0.09 ppm (180 µg/m <sup>3</sup> )	Ultraviolet Photometry	—	Same as Primary Standard	Ultraviolet Photometry
	8 Hour	0.070 ppm (137 µg/m <sup>3</sup> )		0.070 ppm (137 µg/m <sup>3</sup> )		
Respirable Particulate Matter (PM10) <sup>9</sup>	24 Hour	50 µg/m <sup>3</sup>	Gravimetric or Beta Attenuation	150 µg/m <sup>3</sup>	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	20 µg/m <sup>3</sup>		—		
Fine Particulate Matter (PM2.5) <sup>9</sup>	24 Hour	—	—	35 µg/m <sup>3</sup>	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	12 µg/m <sup>3</sup>	Gravimetric or Beta Attenuation	12.0 µg/m <sup>3</sup>		
Carbon Monoxide (CO)	1 Hour	20 ppm (23 mg/m <sup>3</sup> )	Non-Dispersive Infrared Photometry (NDIR)	35 ppm (40 mg/m <sup>3</sup> )	—	Non-Dispersive Infrared Photometry (NDIR)
	8 Hour	9.0 ppm (10 mg/m <sup>3</sup> )		9 ppm (10 mg/m <sup>3</sup> )	—	
	8 Hour (Lake Tahoe)	6 ppm (7 mg/m <sup>3</sup> )		—	—	
Nitrogen Dioxide (NO <sub>2</sub> ) <sup>10</sup>	1 Hour	0.18 ppm (339 µg/m <sup>3</sup> )	Gas Phase Chemiluminescence	100 ppb (188 µg/m <sup>3</sup> )	—	Gas Phase Chemiluminescence
	Annual Arithmetic Mean	0.030 ppm (57 µg/m <sup>3</sup> )		0.053 ppm (100 µg/m <sup>3</sup> )	Same as Primary Standard	
Sulfur Dioxide (SO <sub>2</sub> ) <sup>11</sup>	1 Hour	0.25 ppm (655 µg/m <sup>3</sup> )	Ultraviolet Fluorescence	75 ppb (196 µg/m <sup>3</sup> )	—	Ultraviolet Fluorescence; Spectrophotometry (Pararosaniline Method)
	3 Hour	—		—	0.5 ppm (1300 µg/m <sup>3</sup> )	
	24 Hour	0.04 ppm (105 µg/m <sup>3</sup> )		0.14 ppm (for certain areas) <sup>11</sup>	—	
	Annual Arithmetic Mean	—		0.030 ppm (for certain areas) <sup>11</sup>	—	
Lead <sup>12,13</sup>	30 Day Average	1.5 µg/m <sup>3</sup>	Atomic Absorption	—	—	High Volume Sampler and Atomic Absorption
	Calendar Quarter	—		1.5 µg/m <sup>3</sup> (for certain areas) <sup>12</sup>	Same as Primary Standard	
	Rolling 3-Month Average	—		0.15 µg/m <sup>3</sup>		
Visibility Reducing Particles <sup>14</sup>	8 Hour	See footnote 14	Beta Attenuation and Transmittance through Filter Tape	<b>No National Standards</b>		
Sulfates	24 Hour	25 µg/m <sup>3</sup>	Ion Chromatography			
Hydrogen Sulfide	1 Hour	0.03 ppm (42 µg/m <sup>3</sup> )	Ultraviolet Fluorescence			
Vinyl Chloride <sup>12</sup>	24 Hour	0.01 ppm (26 µg/m <sup>3</sup> )	Gas Chromatography

California Air Resources Board (5/4/16)

Attachment: Appendix A1-Air Quality Impact Analysis (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

**TABLE 2-2: AMBIENT AIR QUALITY STANDARDS (2 OF 2)**

1. California standards for ozone, carbon monoxide (except 8-hour Lake Tahoe), sulfur dioxide (1 and 24 hour), nitrogen dioxide, and particulate matter (PM10, PM2.5, and visibility reducing particles), are values that are not to be exceeded. All others are not to be equaled or exceeded. California ambient air quality standards are listed in the Table of Standards in Section 70200 of Title 17 of the California Code of Regulations.
2. National standards (other than ozone, particulate matter, and those based on annual arithmetic mean) are not to be exceeded more than once a year. The ozone standard is attained when the fourth highest 8-hour concentration measured at each site in a year, averaged over three years, is equal to or less than the standard. For PM10, the 24 hour standard is attained when the expected number of days per calendar year with a 24-hour average concentration above  $150 \mu\text{g}/\text{m}^3$  is equal to or less than one. For PM2.5, the 24 hour standard is attained when 98 percent of the daily concentrations, averaged over three years, are equal to or less than the standard. Contact the U.S. EPA for further clarification and current national policies.
3. Concentration expressed first in units in which it was promulgated. Equivalent units given in parentheses are based upon a reference temperature of  $25^\circ\text{C}$  and a reference pressure of 760 torr. Most measurements of air quality are to be corrected to a reference temperature of  $25^\circ\text{C}$  and a reference pressure of 760 torr; ppm in this table refers to ppm by volume, or micromoles of pollutant per mole of gas.
4. Any equivalent measurement method which can be shown to the satisfaction of the ARB to give equivalent results at or near the level of the air quality standard may be used.
5. National Primary Standards: The levels of air quality necessary, with an adequate margin of safety to protect the public health.
6. National Secondary Standards: The levels of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.
7. Reference method as described by the U.S. EPA. An "equivalent method" of measurement may be used but must have a "consistent relationship to the reference method" and must be approved by the U.S. EPA.
8. On October 1, 2015, the national 8-hour ozone primary and secondary standards were lowered from 0.075 to 0.070 ppm.
9. On December 14, 2012, the national annual PM2.5 primary standard was lowered from  $15 \mu\text{g}/\text{m}^3$  to  $12.0 \mu\text{g}/\text{m}^3$ . The existing national 24-hour PM2.5 standards (primary and secondary) were retained at  $35 \mu\text{g}/\text{m}^3$ , as was the annual secondary standard of  $15 \mu\text{g}/\text{m}^3$ . The existing 24-hour PM10 standards (primary and secondary) of  $150 \mu\text{g}/\text{m}^3$  also were retained. The form of the annual primary and secondary standards is the annual mean, averaged over 3 years.
10. To attain the 1-hour national standard, the 3-year average of the annual 98th percentile of the 1-hour daily maximum concentrations at each site must not exceed 100 ppb. Note that the national 1-hour standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the national 1-hour standard to the California standards the units can be converted from ppb to ppm. In this case, the national standard of 100 ppb is identical to 0.100 ppm.
11. On June 2, 2010, a new 1-hour  $\text{SO}_2$  standard was established and the existing 24-hour and annual primary standards were revoked. To attain the 1-hour national standard, the 3-year average of the annual 99th percentile of the 1-hour daily maximum concentrations at each site must not exceed 75 ppb. The 1971  $\text{SO}_2$  national standards (24-hour and annual) remain in effect until one year after an area is designated for the 2010 standard, except that in areas designated nonattainment for the 1971 standards, the 1971 standards remain in effect until implementation plans to attain or maintain the 2010 standards are approved.  
Note that the 1-hour national standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the 1-hour national standard to the California standard the units can be converted to ppm. In this case, the national standard of 75 ppb is identical to 0.075 ppm.
12. The ARB has identified lead and vinyl chloride as 'toxic air contaminants' with no threshold level of exposure for adverse health effects determined. These actions allow for the implementation of control measures at levels below the ambient concentrations specified for these pollutants.
13. The national standard for lead was revised on October 15, 2008 to a rolling 3-month average. The 1978 lead standard ( $1.5 \mu\text{g}/\text{m}^3$  as a quarterly average) remains in effect until one year after an area is designated for the 2008 standard, except that in areas designated nonattainment for the 1978 standard, the 1978 standard remains in effect until implementation plans to attain or maintain the 2008 standard are approved.
14. In 1989, the ARB converted both the general statewide 10-mile visibility standard and the Lake Tahoe 30-mile visibility standard to instrumental equivalents, which are "extinction of 0.23 per kilometer" and "extinction of 0.07 per kilometer" for the statewide and Lake Tahoe Air Basin standards, respectively.

California Air Resources Board (5/4/16)

## 2.6 REGIONAL AIR QUALITY

Air pollution contributes to a wide variety of adverse health effects. The EPA has established NAAQS for six of the most common air pollutants: CO, Pb, O<sub>3</sub>, particulate matter (PM<sub>10</sub> and PM<sub>2.5</sub>), NO<sub>2</sub>, and SO<sub>2</sub> which are known as criteria pollutants. The SCAQMD monitors levels of various criteria pollutants at 37 permanent monitoring stations and 5 single-pollutant source Pb air monitoring sites throughout the air district (9). On February 21, 2019, CARB posted the 2018 amendments to the state and national area designations. See Table 2-3 for attainment designations for the SCAB (10). Appendix 2.1 provides geographic representation of the state and federal attainment status for applicable criteria pollutants within the SCAB.

**TABLE 2-3: ATTAINMENT STATUS OF CRITERIA POLLUTANTS IN THE SCAB**

Criteria Pollutant	State Designation	Federal Designation
O <sub>3</sub> – 1-hour standard	Nonattainment	--
O <sub>3</sub> – 8-hour standard	Nonattainment	Nonattainment
PM <sub>10</sub>	Nonattainment	Attainment
PM <sub>2.5</sub>	Nonattainment	Nonattainment
CO	Attainment	Unclassifiable/Attainment
NO <sub>2</sub>	Attainment	Unclassifiable/Attainment
SO <sub>2</sub>	Unclassifiable/Attainment	Unclassifiable/Attainment
Pb <sup>1</sup>	Attainment	Unclassifiable/Attainment

Note: See Appendix 2.1 for a detailed map of State/National Area Designations within the SCAB  
 "--" = The national 1-hour O<sub>3</sub> standard was revoked effective June 15, 2005.

## 2.7 LOCAL AIR QUALITY

The SCAQMD has designated general forecast areas and air monitoring areas (referred to as Source Receptor Areas [SRA]) throughout the district in order to provide Southern California residents about the air quality conditions. The Project site is located within the Perris Valley area (SRA 24). The Perris Valley monitoring station is located approximately 8.5 miles southeast of the Project site and reports air quality statistics for O<sub>3</sub> and PM<sub>10</sub>. As the Perris Valley monitoring station does not include statistics for CO, NO<sub>2</sub>, and PM<sub>2.5</sub>, the next nearest station will be used. The Metropolitan Riverside County (SRA 23) monitoring station, located approximately 10.7 miles northwest of the Project, is the next nearest monitoring stations that reports air quality statistics for CO, NO<sub>2</sub>, and PM<sub>2.5</sub>. It should be noted that the Metropolitan Riverside County monitoring station was utilized in lieu of the Perris Valley monitoring station only in instances where data was not available.

The most recent three (3) years of data available is shown on Table 2-4 and identifies the number of days ambient air quality standards were exceeded for the study area, which is considered to be representative of the local air quality at the Project site. Data for O<sub>3</sub>, CO, NO<sub>2</sub>, PM<sub>10</sub>, and PM<sub>2.5</sub>

<sup>1</sup> The Federal nonattainment designation for lead is only applicable towards the Los Angeles County portion of the SCAB.

for 2017 through 2019 was obtained from the SCAQMD Air Quality Data Tables (11). Additionally, data for SO<sub>2</sub> has been omitted as attainment is regularly met in the SCAB and few monitoring stations measure SO<sub>2</sub> concentrations.

**TABLE 2-4: PROJECT AREA AIR QUALITY MONITORING SUMMARY 2017-2019**

Pollutant	Standard	Year		
		2017	2018	2019
O <sub>3</sub>				
Maximum Federal 1-Hour Concentration (ppm)		0.120	0.117	0.118
Maximum Federal 8-Hour Concentration (ppm)		0.105	0.103	0.095
Number of Days Exceeding State 1-Hour Standard	> 0.09 ppm	33	31	26
Number of Days Exceeding State/Federal 8-Hour Standard	> 0.070 ppm	80	67	64
CO				
Maximum Federal 1-Hour Concentration	> 35 ppm	1.9	2.2	1.5
Maximum Federal 8-Hour Concentration	> 20 ppm	1.7	2.0	1.2
NO <sub>2</sub>				
Maximum Federal 1-Hour Concentration	> 0.100 ppm	0.063	0.055	0.056
Annual Federal Standard Design Value		0.015	0.014	0.014
PM <sub>10</sub>				
Maximum Federal 24-Hour Concentration (µg/m <sup>3</sup> )	> 150 µg/m <sup>3</sup>	75	64	97
Annual Federal Arithmetic Mean (µg/m <sup>3</sup> )		32.2	29.7	25.3
Number of Days Exceeding Federal 24-Hour Standard	> 150 µg/m <sup>3</sup>	0	0	0
Number of Days Exceeding State 24-Hour Standard	> 50 µg/m <sup>3</sup>	11	3	4
PM <sub>2.5</sub>				
Maximum Federal 24-Hour Concentration (µg/m <sup>3</sup> )	> 35 µg/m <sup>3</sup>	50.30	50.70	46.70
Annual Federal Arithmetic Mean (µg/m <sup>3</sup> )	> 12 µg/m <sup>3</sup>	12.18	12.41	11.13
Number of Days Exceeding Federal 24-Hour Standard	> 35 µg/m <sup>3</sup>	6	2	4

ppm= Parts Per Million

Source: Data for O<sub>3</sub>, CO, NO<sub>2</sub>, PM<sub>10</sub>, and PM<sub>2.5</sub> was obtained from SCAQMD Air Quality Data Tables.

## 2.8 REGULATORY BACKGROUND

### 2.8.1 FEDERAL REGULATIONS

The EPA is responsible for setting and enforcing the NAAQS for O<sub>3</sub>, CO, NO<sub>x</sub>, SO<sub>2</sub>, PM<sub>10</sub>, and Pb (12). The EPA has jurisdiction over emissions sources that are under the authority of the federal government including aircraft, locomotives, and emissions sources outside state waters (Outer Continental Shelf). The EPA also establishes emission standards for vehicles sold in states other than California. Automobiles sold in California must meet the stricter emission requirements of CARB.

The Federal Clean Air Act (CAA) was first enacted in 1955 and has been amended numerous times in subsequent years (1963, 1965, 1967, 1970, 1977, and 1990). The CAA establishes the federal air quality standards, the NAAQS, and specifies future dates for achieving compliance (13). The CAA also mandates that states submit and implement SIPs for local areas not meeting these standards. These plans must include pollution control measures that demonstrate how the standards will be met.

The 1990 amendments to the CAA that identify specific emission reduction goals for areas not meeting the NAAQS require a demonstration of reasonable further progress toward attainment and incorporate additional sanctions for failure to attain or to meet interim milestones. The sections of the CAA most directly applicable to the development of the Project site include Title I (Non-Attainment Provisions) and Title II (Mobile Source Provisions) (14) (15). Title I provisions were established with the goal of attaining the NAAQS for the following criteria pollutants O<sub>3</sub>, NO<sub>2</sub>, SO<sub>2</sub>, PM<sub>10</sub>, CO, PM<sub>2.5</sub>, and Pb. The NAAQS were amended in July 1997 to include an additional standard for O<sub>3</sub> and to adopt a NAAQS for PM<sub>2.5</sub>. Table 2-3 (previously presented) provides the NAAQS within the SCAB.

Mobile source emissions are regulated in accordance with Title II provisions. These provisions require the use of cleaner burning gasoline and other cleaner burning fuels such as methanol and natural gas. Automobile manufacturers are also required to reduce tailpipe emissions of hydrocarbons and NO<sub>x</sub>. NO<sub>x</sub> is a collective term that includes all forms of NO<sub>x</sub> which are emitted as byproducts of the combustion process.

## 2.8.2 CALIFORNIA REGULATIONS

### CARB

CARB, which became part of the CalEPA in 1991, is responsible for ensuring implementation of the California Clean Air Act (AB 2595), responding to the federal CAA, and for regulating emissions from consumer products and motor vehicles. AB 2595 mandates achievement of the maximum degree of emissions reductions possible from vehicular and other mobile sources in order to attain the state ambient air quality standards by the earliest practical date. CARB established the CAAQS for all pollutants for which the federal government has NAAQS and, in addition, establishes standards for SO<sub>4</sub>, visibility, hydrogen sulfide (H<sub>2</sub>S), and vinyl chloride (C<sub>2</sub>H<sub>3</sub>Cl). However, at this time, H<sub>2</sub>S and C<sub>2</sub>H<sub>3</sub>Cl are not measured at any monitoring stations in the SCAB because they are not considered to be a regional air quality problem. Generally, the CAAQS are more stringent than the NAAQS (16) (12).

Local air quality management districts, such as the SCAQMD, regulate air emissions from stationary sources such as commercial and industrial facilities. All air pollution control districts have been formally designated as attainment or non-attainment for each CAAQS.

Serious non-attainment areas are required to prepare Air Quality Management Plans (AQMP) that include specified emission reduction strategies in an effort to meet clean air goals. These plans are required to include:

- Application of Best Available Retrofit Control Technology to existing sources;

- Developing control programs for area sources (e.g., architectural coatings and solvents) and indirect sources (e.g. motor vehicle use generated by residential and commercial development);
- A District permitting system designed to allow no net increase in emissions from any new or modified permitted sources of emissions;
- Implementing reasonably available transportation control measures and assuring a substantial reduction in growth rate of vehicle trips and miles traveled;
- Significant use of low emissions vehicles by fleet operators;
- Sufficient control strategies to achieve a 5% or more annual reduction in emissions or 15% or more in a period of three years for ROG<sub>s</sub>, NO<sub>x</sub>, CO and PM<sub>10</sub>. However, air basins may use alternative emission reduction strategy that achieves a reduction of less than 5% per year under certain circumstances.

#### **TITLE 24 ENERGY EFFICIENCY STANDARDS AND CALIFORNIA GREEN BUILDING STANDARDS**

California Code of Regulations (CCR) Title 24 Part 6: The California Energy Code was first adopted in 1978 in response to a legislative mandate to reduce California's energy consumption.

The standards are updated periodically to allow consideration and possible incorporation of new energy efficient technologies and methods. CCR, Title 24, Part 11: California Green Building Standards Code (CALGreen) is a comprehensive and uniform regulatory code for all residential, commercial, and school buildings that went in effect on January 1, 2009, and is administered by the California Building Standards Commission.

CALGreen is updated on a regular basis, with the most recent approved update consisting of the 2019 California Green Building Code Standards that became effective January 1, 2020.

Local jurisdictions are permitted to adopt more stringent requirements, as state law provides methods for local enhancements. CALGreen recognizes that many jurisdictions have developed existing construction waste and demolition ordinances and defers to them as the ruling guidance provided they establish a minimum 65% diversion requirement.

The code also provides exemptions for areas not served by construction waste and demolition recycling infrastructure. The State Building Code provides the minimum standard that buildings must meet in order to be certified for occupancy, which is generally enforced by the local building official.

Energy efficient buildings require less electricity; therefore, increased energy efficiency reduces fossil fuel consumption and decreases greenhouse gas (GHG) emissions. The 2019 version of Title 24 was adopted by the California Energy Commission (CEC) and became effective on January 1, 2020.

The 2019 Title 24 standards will result in less energy use, thereby reducing air pollutant emissions associated with energy consumption in the SCAB and across the State of California. For example, the 2019 Title 24 standards require solar photovoltaic systems for new homes, establish requirements for newly constructed healthcare facilities, encourage demand responsive technologies for residential buildings, and update indoor and outdoor lighting requirements for nonresidential buildings.

The CEC anticipates that single-family homes built with the 2019 standards will use approximately 7% less energy compared to the residential homes built under the 2016 standards. Additionally, after implementation of solar photovoltaic systems, homes built under the 2019 standards will use about 53% less energy than homes built under the 2016 standards. Nonresidential buildings (such as the Project) will use approximately 30% less energy due to lighting upgrade requirements (18).

Because the Project will be constructed after January 1, 2020, the 2019 CALGreen standards are applicable to the Project and require, among other items (19):

- Short-term bicycle parking. If the new project or an additional alteration is anticipated to generate visitor traffic, provide permanently anchored bicycle racks within 200 feet of the visitors' entrance, readily visible to passers-by, for 5% of new visitor motorized vehicle parking spaces being added, with a minimum of one two-bike capacity rack (5.106.4.1.1).
- Long-term bicycle parking. For new buildings with tenant spaces that have 10 or more tenant-occupants, provide secure bicycle parking for 5% of the tenant-occupant vehicular parking spaces with a minimum of one bicycle parking facility (5.106.4.1.2).
- Designated parking for clean air vehicles. In new projects or additions to alterations that add 10 or more vehicular parking spaces, provide designated parking for any combination of low-emitting, fuel-efficient and carpool/van pool vehicles as shown in Table 5.106.5.2 (5.106.5.2).
- Electric vehicle (EV) charging stations. New construction shall facilitate the future installation of EV supply equipment. The compliance requires empty raceways for future conduit and documentation that the electrical system has adequate capacity for the future load. The number of spaces to be provided for is contained in Table 5.106. 5.3.3 (5.106.5.3).
- Outdoor light pollution reduction. Outdoor lighting systems shall be designed to meet the backlight, upright and glare ratings per Table 5.106.8 (5.106.8)
- Construction waste management. Recycle and/or salvage for reuse a minimum of 65% of the nonhazardous construction and demolition waste in accordance with Section
- 5.408.1.1. 5.405.1.2, or 5.408.1.3; or meet a local construction and demolition waste management ordinance, whichever is more stringent (5.408.1).
- Excavated soil and land clearing debris. 100% of trees, stumps, rocks and associated vegetation and soils resulting primarily from land clearing shall be reused or recycled. For a phased project, such material may be stockpiled on site until the storage site is developed (5.408.3).
- Recycling by Occupants. Provide readily accessible areas that serve the entire building and are identified for the depositing, storage and collection of non-hazardous materials for recycling, including (at a minimum) paper, corrugated cardboard, glass, plastics, organic waste, and metals or meet a lawfully enacted local recycling ordinance, if more restrictive (5.410.1).
- Water conserving plumbing fixtures and fittings. Plumbing fixtures (water closets and urinals) and fittings (faucets and showerheads) shall comply with the following:
  - Water Closets. The effective flush volume of all water closets shall not exceed 1.28 gallons per flush (5.303.3.1)
  - Urinals. The effective flush volume of wall-mounted urinals shall not exceed 0.125 gallons per flush (5.303.3.2.1). The effective flush volume of floor-mounted or other urinals shall not exceed 0.5 gallons per flush (5.303.3.2.2).

- Showerheads. Single showerheads shall have a minimum flow rate of not more than 1.8 gallons per minute and 80 psi (5.303.3.3.1). When a shower is served by more than one showerhead, the combine flow rate of all showerheads and/or other shower outlets controlled by a single valve shall not exceed 1.8 gallons per minute at 80 psi (5.303.3.3.2).
- Faucets and fountains. Nonresidential lavatory faucets shall have a maximum flow rate of not more than 0.5 gallons per minute at 60 psi (5.303.3.4.1). Kitchen faucets shall have a maximum flow rate of not more than 1.8 gallons per minute of 60 psi (5.303.3.4.2). Wash fountains shall have a maximum flow rate of not more than 1.8 gallons per minute (5.303.3.4.3). Metering faucets shall not deliver more than 0.20 gallons per cycle (5.303.3.4.4). Metering faucets for wash fountains shall have a maximum flow rate not more than 0.20 gallons per cycle (5.303.3.4.5).
- Outdoor portable water use in landscaped areas. Nonresidential developments shall comply with a local water efficient landscape ordinance or the current California Department of Water Resources' Model Water Efficient (MWELO), whichever is more stringent (5.304.1).
- Water meters. Separate submeters or metering devices shall be installed for new buildings or additions in excess of 50,000 sf or for excess consumption where any tenant within a new building or within an addition that is project to consume more than 1,000 gallons per day (5.303.1.1 and 5.303.1.2).
- Outdoor water use in rehabilitated landscape projects equal or greater than 2,500 sf. Rehabilitated landscape projects with an aggregate landscape area equal to or greater than 2,500 sf requiring a building or landscape permit (5.304.3).
- Commissioning. For new buildings 10,000 sf and over, building commissioning shall be included in the design and construction processes of the building project to verify that the building systems and components meet the owner's or owner representative's project requirements (5.410.2).

### 2.8.3 AQMP

Currently, the NAAQS and CAAQS are exceeded in most parts of the SCAB. In response, the SCAQMD has adopted a series of AQMP to meet the state and federal ambient air quality standards (17). AQMPs are updated regularly in order to more effectively reduce emissions, accommodate growth, and to minimize any negative fiscal impacts of air pollution control on the economy. A detailed discussion on the AQMP and Project consistency with the AQMP is provided in Section 3.10.

## 2.9 REGIONAL AIR QUALITY IMPROVEMENT

The Project is within the jurisdiction of the SCAQMD. In 1976, California adopted the Lewis Air Quality Management Act which created SCAQMD from a voluntary association of air pollution control districts in Los Angeles, Orange, Riverside, and San Bernardino counties. The geographic area of which SCAQMD consists is known as the SCAB. SCAQMD develops comprehensive plans and regulatory programs for the region to attain federal standards by dates specified in federal law. The agency is also responsible for meeting state standards by the earliest date achievable, using reasonably available control measures.

SCAQMD rule development through the 1970s and 1980s resulted in dramatic improvement in SCAB air quality. Nearly all control programs developed through the early 1990s relied on (i) the

development and application of cleaner technology; (ii) add-on emission controls, and (iii) uniform CEQA review throughout the SCAB. Industrial emission sources have been significantly reduced by this approach and vehicular emissions have been reduced by technologies implemented at the state level by CARB.

As discussed above, the SCAQMD is the lead agency charged with regulating air quality emission reductions for the entire SCAB. SCAQMD created AQMPs which represent a regional blueprint for achieving healthful air on behalf of the 16 million residents of the SCAB. The 2012 AQMP states, “the remarkable historical improvement in air quality since the 1970’s is the direct result of Southern California’s comprehensive, multiyear strategy of reducing air pollution from all sources as outlined in its AQMPs,” (18).

Emissions of O<sub>3</sub>, NO<sub>x</sub>, VOC, and CO have been decreasing in the SCAB since 1975 and are projected to continue to decrease through 2020 (19). These decreases result primarily from motor vehicle controls and reductions in evaporative emissions. Although vehicle miles traveled (VMT) in the SCAB continue to increase, NO<sub>x</sub> and VOC levels are decreasing because of the mandated controls on motor vehicles and the replacement of older polluting vehicles with lower-emitting vehicles. NO<sub>x</sub> emissions from electric utilities have also decreased due to use of cleaner fuels and renewable energy. O<sub>3</sub> contour maps show that the number of days exceeding the 8-hour NAAQS has generally decreased between 1980 and 2019. For 2019, there was an overall decrease in exceedance days compared with the 1980 period. However, as shown on Table 2-5, O<sub>3</sub> levels have increased in the past three years due to higher temperatures and stagnant weather conditions. Notwithstanding, O<sub>3</sub> levels in the SCAB have decreased substantially over the last 30 years with the current maximum measured concentrations being approximately one-third of concentrations within the late 70’s (20).

TABLE 2-5: SCAB O<sub>3</sub> TREND

Source: 2020 SCAQMD, Historical O<sub>3</sub> Air Quality Trends (1976-2018)

The overall trends of PM<sub>10</sub> and PM<sub>2.5</sub> levels in the air (not emissions) show an overall improvement since 1975. Direct emissions of PM<sub>10</sub> have remained somewhat constant in the SCAB and direct emissions of PM<sub>2.5</sub> have decreased slightly since 1975. Area wide sources (fugitive dust from roads, dust from construction and demolition, and other sources) contribute the greatest amount of direct particulate matter emissions.

As with other pollutants, the most recent PM<sub>10</sub> statistics show an overall improvement as illustrated in Tables 2-6 and 2-7. During the period for which data are available, the 24-hour national annual average concentration for PM<sub>10</sub> decreased by approximately 48%, from 103.7 microgram per cubic meter (µg/m<sup>3</sup>) in 1988 to 53.5 µg/m<sup>3</sup> in 2018 (21). Although the values are below the federal standard, it should be noted that there are days within the year where the concentrations will exceed the threshold. The 24-hour state annual average for emissions for PM<sub>10</sub>, have decreased by approximately 53% since 1988 (21). Although data in the late 1990's show some variability, this is probably due to the advances in meteorological science rather than a change in emissions. Similar to the ambient concentrations, the calculated number of days above the 24-hour PM<sub>10</sub> standards has also shown an overall drop.

**TABLE 2-6: SCAB AVERAGE 24-HOUR CONCENTRATION PM<sub>10</sub> TREND (BASED ON FEDERAL STANDARD)<sup>1</sup>**

Source: 2020 CARB, iADAM: Top Four Summary: PM<sub>10</sub> 24-Hour Averages (1988-2018)

<sup>1</sup> Some year have been omitted from the table as insufficient data (or no) data has been reported. Years with reported value of "0" have also been omitted.

Attachment: Appendix A1-Air Quality Impact Analysis (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

**TABLE 2-7: SCAB ANNUAL AVERAGE CONCENTRATION PM<sub>10</sub> TREND (BASED ON STATE STANDARD)<sup>1</sup>**

Source: 2020 CARB, iADAM: Top Four Summary: PM<sub>10</sub> 24-Hour Averages (1988-2018)

<sup>1</sup> Some year have been omitted from the table as insufficient data (or no) data has been reported. Years with reported value of "0" have also been omitted.

Tables 2-8 and 2-9 shows the most recent 24-hour average PM<sub>2.5</sub> concentrations in the SCAB from 1999 through 2018. Overall, the national and state annual average concentrations have decreased by almost 52% and 33% respectively (21). It should be noted that the SCAB is currently designated as nonattainment for the state and federal PM<sub>2.5</sub> standards.

**TABLE 2-8: SCAB 24-HOUR AVERAGE CONCENTRATION PM<sub>2.5</sub> TREND (BASED ON FEDERAL STANDARD)<sup>1</sup>**

**TABLE 2-9: SCAB ANNUAL AVERAGE CONCENTRATION PM<sub>2.5</sub> TREND (BASED ON STATE STANDARD)<sup>1</sup>**

Source: 2020 CARB, iADAM: Top Four Summary: PM<sub>2.5</sub> 24-Hour Averages (1999-2018)

<sup>1</sup> Some year have been omitted from the table as insufficient data (or no) data has been reported. Years with reported value of "0" have also been omitted.

While the 2012 AQMP PM<sub>10</sub> attainment demonstration and the 2015 associated supplemental SIP submission indicated that attainment of the 24-hour standard was predicted to occur by the end of 2015, it could not anticipate the effect of the ongoing drought on the measured PM<sub>2.5</sub>.

The 2006 to 2010 base period used for the 2012 attainment demonstration had near-normal rainfall. While the trend of PM<sub>2.5</sub>-equivalent emission reductions continued through 2015, the severe drought conditions contributed to the PM<sub>2.5</sub> increases observed after 2012. As a result of the disrupted progress toward attainment of the federal 24-hour PM<sub>2.5</sub> standard, SCAQMD submitted a request and the EPA approved, in January 2016, a "bump up" to the nonattainment classification from "moderate" to "serious," with a new attainment deadline as soon as practicable, but not beyond December 31, 2019. As of March 14, 2019, the EPA approved portions of a SIP revision submitted by California to address CAA requirements for the 2006 24-hour PM<sub>2.5</sub> NAAQS in the Los Angeles-SCAB Serious PM<sub>2.5</sub> nonattainment area. The EPA also approved 2017 and 2019 motor vehicle emissions budgets for transportation conformity purposes and inter-pollutant trading ratios for use in transportation conformity analyses (22).

In March 2017, the SCAQMD released the Final 2016 AQMP. The 2016 AQMP continues to evaluate current integrated strategies and control measures to meet the NAAQS, as well as, explore new and innovative methods to reach its goals. Some of these approaches include utilizing incentive programs, recognizing existing co-benefit programs from other sectors, and developing a strategy with fair-share reductions at the federal, state, and local levels (23). Similar to the 2012 AQMP, the 2016 AQMP incorporates scientific and technological information and planning assumptions, including the 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy (2016-2040 RTP/SCS) and updated emission inventory methodologies for various source categories (17).

The 2022 AQMP is currently being developed by SCAQMD to address the EPA’s strengthened ozone standard. Development of the 2022 AQMP is in its early stages and no formal timeline for completion and adoption is currently known.

The most recent CO concentrations in the SCAB are shown in Table 2-10 (21). CO concentrations in the SCAB have decreased markedly — a total decrease of more about 80% in the peak 8-hour concentration from 1986 to 2012. It should be noted 2012 is the most recent year where 8-hour CO averages and related statistics are available in the SCAB. The number of exceedance days has also declined. The entire SCAB is now designated as attainment for both the state and national CO standards. Ongoing reductions from motor vehicle control programs should continue the downward trend in ambient CO concentrations.

**TABLE 2-10: SCAB 8-HOUR AVERAGE CONCENTRATION CO TREND<sup>1</sup>**

Source: 2020 CARB, iADAM: Top Four Summary: CO 8-Hour Averages (1999-2018)

<sup>1</sup> The most recent year where 8-hour concentration data is available is 2012.

Part of the control process of the SCAQMD’s duty to greatly improve the air quality in the SCAB is the uniform CEQA review procedures required by SCAQMD’s *CEQA Air Quality Handbook (1993) (1993 CEQA Handbook)* (24). The single threshold of significance used to assess Project direct and cumulative impacts has in fact “worked” as evidenced by the track record of the air quality in the SCAB dramatically improving over the course of the past decades. As stated by the SCAQMD, the District’s thresholds of significance are based on factual and scientific data and are therefore appropriate thresholds of significance to use for this Project.

The most recent NO<sub>2</sub> data for the SCAB is shown in Tables 2-11 and 2-12 (21). Over the last 50 years, NO<sub>2</sub> values have decreased significantly; the peak 1-hour national and state averages for 2018 is approximately 82% lower than what it was during 1963. The SCAB attained the State 1-hour NO<sub>2</sub> standard in 1994, bringing the entire state into attainment. A new state annual average standard of 0.030 ppm was adopted by the ARB in February 2007 (25). The new standard is just barely exceeded in the SCAQMD. NO<sub>2</sub> is formed from NO<sub>x</sub> emissions, which also contribute to O<sub>3</sub>.

As a result, the majority of the future emission control measures will be implemented as part of the overall O<sub>3</sub> control strategy. Many of these control measures will target mobile sources, which account for more than three-quarters of California’s NO<sub>x</sub> emissions. These measures are expected to bring the SCAQMD into attainment of the state annual average standard.

### 2.9.1 TOXIC AIR CONTAMINANTS (TAC) TRENDS

In 1984, as a result of public concern for exposure to airborne carcinogens, CARB adopted regulations to reduce the amount of TAC emissions resulting from mobile and area sources, such as cars, trucks, stationary products, and consumer products. According to the *Ambient and Emission Trends of Toxic Air Contaminants in California* journal article (26) which was prepared for CARB, results show that between 1990-2012, ambient concentration and emission trends for the seven TACs responsible for most of the known cancer risk associated with airborne exposure in California have declined significantly (between 1990 and 2012). The seven TACs studied include those that are derived from mobile sources: diesel particulate matter (DPM), benzene (C<sub>6</sub>H<sub>6</sub>), and 1,3-butadiene (C<sub>4</sub>H<sub>6</sub>); those that are derived from stationary sources: perchloroethylene (C<sub>2</sub>Cl<sub>4</sub>) and hexavalent chromium (Cr(VI)); and those derived from photochemical reactions of emitted VOCs: formaldehyde (CH<sub>2</sub>O) and acetaldehyde (C<sub>2</sub>H<sub>4</sub>O)<sup>2</sup>. The decline in ambient concentration and emission trends of these TACs are a result of various regulations CARB has implemented to address cancer risk.

#### MOBILE SOURCE TACS

CARB introduced two programs that aimed at reducing mobile emissions for light and medium duty vehicles through vehicle emissions controls and cleaner fuel. In California, light-duty vehicles sold after 1996 are equipped with California's second-generation On-Board Diagnostic (OBD-II) system. The OBD-II system monitors virtually every component that can affect the emission performance of the vehicle to ensure that the vehicle remains as clean as possible over its entire life and assists repair technicians in diagnosing and fixing problems with the computerized engine controls. If a problem is detected, the OBD-II system illuminates a warning lamp on the vehicle instrument panel to alert the driver. This warning lamp typically contains the phrase "Check Engine" or "Service Engine Soon". The system will also store important information about the detected malfunction so that a repair technician can accurately find and fix the problem. CARB has recently developed similar OBD requirements for heavy-duty vehicles over 14,000 pounds (lbs). CARB's phase II Reformulated Gasoline Regulation (RFG-2), adopted in 1996, also led to a reduction of mobile source emissions. Through such regulations, benzene levels declined 88% from 1990-2012. 1,3-Butadiene concentrations also declined 85% from 1990-2012 as a result of the use of reformulated gasoline and motor vehicle regulations (26).

In 2000, CARB's Diesel Risk Reduction Plan (DRRP) recommended the replacement and retrofit of diesel-fueled engines and the use of ultra-low-sulfur (<15 ppm) diesel fuel. As a result of these measures, DPM concentrations have declined 68% since 2000, even though the state's population increased 31% and the amount of diesel vehicles miles traveled increased 81%, as shown on Exhibit 2-B. With the implementation of these diesel-related control regulations, CARB expects a DPM decline of 71% for 2000-2020.

<sup>2</sup> It should be noted that ambient DPM concentrations are not measured directly. Rather, a surrogate method using the coefficient of haze (COH) and elemental carbon (EC) is used to estimate DPM concentrations.

**EXHIBIT 2-A: DPM AND DIESEL VEHICLE MILES TREND****California Population, Gross State Product (GSP),  
Diesel Cancer Risk, Diesel Vehicle-Miles-Traveled (VMT)**

Source: 2020 CARB

**DIESEL REGULATIONS**

CARB and the Ports of Los Angeles and Long Beach (POLA and POLB) have adopted several iterations of regulations for diesel trucks that are aimed at reducing DPM. More specifically, CARB Drayage Truck Regulation (27), CARB statewide On-road Truck and Bus Regulation (28), and the Ports of Los Angeles and Long Beach Clean Truck Program (CTP) require accelerated implementation of “clean trucks” into the statewide truck fleet (29). In other words, older more polluting trucks will be replaced with newer, cleaner trucks as a function of these regulatory requirements.

Moreover, the average statewide DPM emissions for Heavy Duty Trucks (HDT), in terms of grams of DPM generated per mile traveled, will dramatically be reduced due to the aforementioned regulatory requirements.

Diesel emissions identified in this analysis would therefore overstate future DPM emissions since not all the regulatory requirements are reflected in the modeling.

**CANCER RISK TRENDS**

Based on information available from CARB, overall cancer risk throughout the SCAB has had a declining trend since 1990. In 1998, following an exhaustive 10-year scientific assessment process, CARB identified particulate matter from diesel-fueled engines as a toxic air contaminant. The SCAQMD initiated a comprehensive urban toxic air pollution study called the Multiple Air Toxics Exposure Study (MATES). DPM accounts for more than 70% of the cancer risk.

In 2008 the SCAQMD prepared an update to the MATES-II study, referred to as MATES-III. MATES-III estimates the average excess cancer risk level from exposure to TACs is an approximately 17% decrease in comparison to the MATES-II study.

In 2015, the SCAQMD published an in-depth analysis of the toxic air contaminants and the resulting health risks for all of Southern California. The *Multiple Air Toxics Exposure Study in the SCAB, MATES IV* shows that cancer risk decreased less than 50% between 2005 and 2015 (30).

MATES-IV study represents the baseline health risk for a cumulative analysis. MATES-IV calculated cancer risks based on monitoring data collected at ten fixed sites within the SCAB. None of the fixed monitoring sites are within the local area of the Project site. However, MATES-IV has extrapolated the excess cancer risk levels throughout the SCAB by modeling the specific grids. MATES-IV modeling predicted an excess cancer risk of 587.29 in one million for the geographic grid containing the Project site. DPM is included in this cancer risk along with all other TAC sources. DPM accounts for 68% of the total risk shown in MATES-IV. Cumulative Project generated TACs are limited to DPM.

In January 2018, as part of the overall effort to reduce air toxics exposure in the SCAB, SCAQMD began conducting the MATES V Program. MATES V field measurements were conducted at ten fixed sites (the same sites selected for MATES III and IV) to assess trends in air toxics levels. MATES V also included measurements of ultrafine particles (UFP) and black carbon (BC) concentrations, which can be compared to the UFP levels measured in MATES IV (31). The final report for the MATES V study was expected to be available in Fall 2019, however it is not yet available and no definitive date for its release has been provided by SCAQMD.

### 3 PROJECT AIR QUALITY IMPACT

#### 3.1 INTRODUCTION

This study quantifies air quality emissions generated by construction and operation of the Project and addresses whether the Project conflicts with implementation of the SCAQMD's AQMP. The analysis of Project-generated air emissions determines whether the Project would result in a cumulatively considerable net increase of any criteria pollutant for which the SCAB is in non-attainment under an applicable NAAQS and CAAQS. Additionally, the Project has been evaluated to determine whether the Project would expose sensitive receptors to substantial pollutant concentrations and the impacts of odors. The significance of these potential impacts is described in the following section.

#### 3.2 STANDARDS OF SIGNIFICANCE

The criteria used to determine the significance of potential Project-related air quality impacts are taken from the *CEQA Guidelines* (14 CCR §§15000, et seq.). Based on these thresholds, a project would result in a significant impact related to air quality if it would (1):

- Conflict with or obstruct implementation of the applicable air quality plan.
- Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or state ambient air quality standard.
- Expose sensitive receptors to substantial pollutant concentrations.
- Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

The SCAQMD has also developed regional significance thresholds for other regulated pollutants, as summarized at Table 3-1 (32). The SCAQMD's *CEQA Air Quality Significance Thresholds* (April 2019) indicate that any projects in the SCAB with daily emissions that exceed any of the indicated thresholds should be considered as having an individually and cumulatively significant air quality impact.

**TABLE 3-1: MAXIMUM DAILY REGIONAL EMISSIONS THRESHOLDS**

Pollutant	Regional Construction Threshold	Regional Operational Thresholds
NO <sub>x</sub>	100 lbs/day	55 lbs/day
VOC	75 lbs/day	55 lbs/day
PM <sub>10</sub>	150 lbs/day	150 lbs/day
PM <sub>2.5</sub>	55 lbs/day	55 lbs/day
SO <sub>x</sub>	150 lbs/day	150 lbs/day
CO	550 lbs/day	550 lbs/day
Pb	3 lbs/day	3 lbs/day

lbs/day = Pounds Per Day

### 3.3 MODELS EMPLOYED TO ANALYZE AIR QUALITY

#### 3.3.1 CALIFORNIA EMISSIONS ESTIMATOR MODEL (CALEEMOD)

Land uses such as the Project affect air quality through construction-source and operational-source emissions.

On October 17, 2017, the SCAQMD in conjunction with the California Air Pollution Control Officers Association (CAPCOA) and other California air districts, released the latest version of the CalEEMod Version 2016.3.2. The purpose of this model is to calculate construction-source and operational-source criteria pollutant (VOCs, NO<sub>x</sub>, SO<sub>x</sub>, CO, PM<sub>10</sub>, and PM<sub>2.5</sub>) and GHG emissions from direct and indirect sources; and quantify applicable air quality and GHG reductions achieved from MMs (33). Accordingly, the latest version of CalEEMod has been used for this Project to determine construction and operational air quality emissions. Output from the model runs for both construction and operational activity are provided in Appendices 3.1 through 3.3.

#### 3.3.2 EMISSION FACTORS MODEL

On August 19, 2019, the EPA approved the 2017 version of the EMISSIONS FACTOR model (EMFAC) web database for use in SIP and transportation conformity analyses. EMFAC2017 is a mathematical model that was developed to calculate emission rates, fuel consumption, VMT from motor vehicles that operate on highways, freeways, and local roads in California and is commonly used by the CARB to project changes in future emissions from on-road mobile sources (34). This AQIA utilizes summer, winter, and annual EMFAC2017 emission factors in order to derive vehicle emissions associated with Project operational activities, which vary by season.

Because the EMFAC2017 emission rates are associated with vehicle fuel types while CalEEMod vehicle emission factors are aggregated to include all fuel types for each individual vehicle class, the EMFAC2017 emission rates for different fuel types of a vehicle class are averaged by activity or by population and activity to derive CalEEMod emission factors. The equations applied to obtain CalEEMod vehicle emission factors for each emission type are detailed in CalEEMod User's Guide *Appendix A: Calculation Details for CalEEMod* (35).

### 3.4 CONSTRUCTION EMISSIONS

#### 3.4.1 CONSTRUCTION ACTIVITIES

Construction activities associated with the Project will result in emissions of VOCs, NO<sub>x</sub>, SO<sub>x</sub>, CO, PM<sub>10</sub>, and PM<sub>2.5</sub>. Construction related emissions are expected from the following construction activities:

- Site Preparation
- Grading
- Building Construction
- Paving
- Architectural Coating

## GRADING ACTIVITIES

Dust is typically a major concern during grading activities. Because such emissions are not amenable to collection and discharge through a controlled source, they are called “fugitive emissions”. Fugitive dust emissions rates vary as a function of many parameters (soil silt, soil moisture, wind speed, area disturbed, number of vehicles, depth of disturbance or excavation, etc.). CalEEMod was utilized to calculate fugitive dust emissions resulting from this phase of activity. This analysis assumes that earthwork activities are expected to balance on site and no import or export of soils would be required.

## CONSTRUCTION WORKER VEHICLE TRIPS

Construction emissions for construction worker vehicles traveling to and from the Project site, as well as vendor trips (construction materials delivered to the Project site) were estimated based on information from CalEEMod model defaults.

### 3.4.2 CONSTRUCTION DURATION

Construction is expected to commence in October 2021 and will last through June 2022. The construction schedule utilized in the analysis, shown in Table 3-2, represents a “worst-case” analysis scenario should construction occur any time after the respective dates since emission factors for construction decrease as time passes and the analysis year increases due to emission regulations becoming more stringent.<sup>3</sup> The duration of construction activity and associated equipment represents a reasonable approximation of the expected construction fleet as required per *CEQA Guidelines* (1). The duration of construction activity was based on the 2022 opening year.

**TABLE 3-2: CONSTRUCTION DURATION**

Phase Name	Start Date	End Date	Days
Site Preparation	10/04/2021	10/15/2021	10
Grading	10/16/2021	11/26/2021	30
Building Construction	11/27/2021	06/24/2022	150
Paving	05/28/2022	06/24/2022	20
Architectural Coating	05/01/2022	06/24/2022	40

Source: Construction activity based the 2022 opening year.

### 3.4.3 CONSTRUCTION EQUIPMENT

Consistent with industry standards and typical construction practices, each piece of equipment listed in Table 3-3 will operate up to a total of eight (8) hours per day, or more than two-thirds of the period during which construction activities are allowed pursuant to the code. It should be

<sup>3</sup> As shown in the CalEEMod User’s Guide Version 2016.3.2, Section 4.3 “OFFROAD Equipment” as the analysis year increases, emission factors for the same equipment pieces decrease due to the natural turnover of older equipment being replaced by newer less polluting equipment and new regulatory requirements.

noted that most pieces of equipment would likely operate for fewer hours per day. A summary of construction equipment assumptions by phase is provided at Table 3-3.

**TABLE 3-3: CONSTRUCTION EQUIPMENT ASSUMPTIONS**

Phase Name	Equipment <sup>A,B</sup>	Amount	Hours Per Day
Site Preparation	Crawler Tractors	4	8
	Rubber Tired Dozers	3	8
	Water Trucks	1	4
Grading	Crawler Tractors	2	8
	Excavators	2	8
	Graders	1	8
	Rubber Tired Dozers	1	8
	Scrapers	2	8
	Water Trucks	1	4
Building Construction	Cranes	1	8
	Forklifts	3	8
	Generator Sets	1	8
	Tractors/Loaders/Backhoes	3	8
	Welders	1	8
	Water Trucks	1	4
Paving	Pavers	2	8
	Paving Equipment	2	8
	Rollers	2	8
	Water Trucks	1	4
Architectural Coating	Air Compressors	1	8

<sup>A</sup> In order to account for fugitive dust emissions associated with Site Preparation and Grading activities, Crawler Tractors were used in lieu of Tractors/Loaders/Backhoes.

<sup>B</sup> As Water Trucks are driven on-road, emissions associated with the operations of Water Trucks have been modeled as additional trips (two 2-way trips per Water Truck).

### 3.4.4 CONSTRUCTION EMISSIONS SUMMARY

#### IMPACTS WITHOUT MITIGATION

CalEEMod calculates maximum daily emissions for summer and winter periods. As such, the estimated maximum daily construction emissions without mitigation for both summer and winter periods are summarized on Table 3-4. Detailed construction model outputs are presented in Appendix 3.1. Under the assumed scenarios, emissions resulting from the Project construction would not exceed criteria pollutant thresholds established by the SCAQMD for emissions of any criteria pollutant.

**TABLE 3-4: PROJECT CONSTRUCTION EMISSIONS SUMMARY – WITHOUT MITIGATION**

Year	Emissions (lbs/day)					
	VOC	NO <sub>x</sub>	CO	SO <sub>x</sub>	PM <sub>10</sub>	PM <sub>2.5</sub>
Summer						
2021	5.43	61.02	32.00	0.10	14.04	6.81
2022	54.69	42.10	50.18	0.13	6.92	2.92
Winter						
2021	5.43	61.02	31.86	0.09	14.04	6.81
2022	54.68	42.02	47.88	0.13	6.39	2.92
<b>Maximum Daily Emissions</b>	<b>54.69</b>	<b>61.02</b>	<b>50.18</b>	<b>0.13</b>	<b>14.04</b>	<b>6.81</b>
SCAQMD Regional Threshold	75	100	550	150	150	55
<b>Threshold Exceeded?</b>	<b>NO</b>	<b>NO</b>	<b>NO</b>	<b>NO</b>	<b>NO</b>	<b>NO</b>

Source: CalEEMod unmitigated regional construction-source emissions are presented in Appendix 3.1.

### 3.5 OPERATIONAL EMISSIONS

Operational activities associated with the Project will result in emissions of VOCs, NO<sub>x</sub>, SO<sub>x</sub>, CO, PM<sub>10</sub>, and PM<sub>2.5</sub>. Operational emissions would be expected from the following primary sources:

- Area Source Emissions
- Energy Source Emissions
- Mobile Source Emissions
- On-Site Cargo Handling Equipment Emissions

#### 3.5.1 AREA SOURCE EMISSIONS

##### ARCHITECTURAL COATINGS

Over a period of time the buildings that are part of this Project will require maintenance and will therefore produce emissions resulting from the evaporation of solvents contained in paints, varnishes, primers, and other surface coatings. The emissions associated with architectural coatings were calculated using CalEEMod.

##### CONSUMER PRODUCTS

Consumer products include, but are not limited to detergents, cleaning compounds, polishes, personal care products, and lawn and garden products. Many of these products contain organic compounds which when released in the atmosphere can react to form ozone and other photochemically reactive pollutants. The emissions associated with use of consumer products were calculated based on defaults provided within CalEEMod.

## LANDSCAPE MAINTENANCE EQUIPMENT

Landscape maintenance equipment would generate emissions from fuel combustion and evaporation of unburned fuel. Equipment in this category would include lawnmowers, shredders/grinders, blowers, trimmers, chain saws, and hedge trimmers used to maintain the landscaping of the Project. The emissions associated with landscape maintenance equipment were calculated based on assumptions provided in CalEEMod.

### 3.5.2 ENERGY SOURCE EMISSIONS

#### COMBUSTION EMISSIONS ASSOCIATED WITH NATURAL GAS AND ELECTRICITY

Criteria pollutant emissions are emitted through the generation of electricity and consumption of natural gas.

When combustion of natural gas occurs within a building, the building is considered a direct emission source and CalEEMod will calculate emissions of all criteria pollutants (35). For purposes of analysis, the emissions associated with natural gas use were calculated using CalEEMod.

CalEEMod also calculates criteria pollutants from generation of electricity associated with a building. It should be noted that when electricity is used in buildings, the electricity generation typically takes place offsite (i.e. power plants). Because power plants are existing stationary sources, criteria pollutant emissions are generally associated with the power plants and not the individual buildings or electricity users (35). Since electricity will be provided to the Project by Southern California Edison, Project-related electricity generation is considered to take place offsite and therefore criteria pollutant emissions are not accounted for.

#### TITLE 24 ENERGY EFFICIENCY STANDARDS

California's Energy Efficiency Standards for Residential and Nonresidential Buildings was first adopted in 1978 in response to a legislative mandate to reduce California's energy consumption. The standards are updated periodically to allow consideration and possible incorporation of new energy efficient technologies and methods. Energy efficient buildings require less electricity. The 2019 version of Title 24 was adopted by the CEC and became effective on January 1, 2020. The CEC anticipates that nonresidential buildings will use approximately 30% less energy compared to the prior code (36). The CalEEMod defaults for Title 24 – Electricity and Lighting Energy were reduced by 30% in order to reflect consistency with the 2019 Title 24 standard.

### 3.5.3 MOBILE SOURCE EMISSIONS

The Project related operational air quality emissions derive primarily from vehicle trips generated by the Project, including employee and driver trips to and from the site and truck trips associated with the proposed uses. Trip characteristics available from the *Alessandro Warehouse Traffic Analysis* (TA) report were utilized in this analysis. Per the TA, the Project would generate a total of approximately 742 two-way vehicular trips per day (371 inbound and 371 outbound), including 224 two-way truck trips per day (112 inbound and 112 outbound) (37).

**3.5.3.1 APPROACH FOR ESTIMATE OF MOBILE SOURCE EMISSIONS**

Two separate model runs were utilized to accurately analyze emissions resulting from passenger car and truck operations.

**PASSENGER CAR**

For purposes of analysis, the CalEEMod default trip length of 16.6 miles was utilized along with an assumption of 100% primary trips. It is important to note that although the TA does not breakdown passenger cars by type, this analysis assumes that passenger cars include Light-Duty-Auto vehicles (LDA), Light-Duty-Trucks (LDT1<sup>4</sup> & LDT2<sup>5</sup>), and Medium-Duty-Vehicles (MDV) vehicle types. In order to account for emissions generated by employees, the fleet mix presented in Table 3-5 was utilized in this analysis. Additional details on the use of the applicable fleet mix can be found in the footnote to Table 3-5.

**TABLE 3-5: PASSENGER CAR FLEET MIX<sup>6</sup>**

Land Use	Vehicle Type	%
Building 1		
Warehouse/ High-Cube Cold Storage Warehouse	LDA	61.73
	LDT1	4.17
	LDT2	21.05
	MDV	13.05
Building 2		
Warehouse/ High-Cube Cold Storage Warehouse	LDA	61.73
	LDT1	4.17
	LDT2	21.05
	MDV	13.05

**TRUCKS**

The second run analyzed truck emissions, incorporated the SCAQMD recommended truck trip length of 40 miles<sup>7</sup> and an assumption of 100% primary trips. In order to be consistent with the TA, trucks are broken down by truck type. The trucks are comprised of 2-axle/Light-Heavy-Duty Trucks (LHDT), 3-axle/Medium-Heavy-Duty Trucks (MHDT), and 4+-axle/Heavy-Heavy-Duty Trucks (HHDT). In order to account for emissions generated by trucks, the fleet mix presented in

<sup>4</sup> Vehicles under the LDT1 category have a gross vehicle weight rating (GVWR) of less than 6,000 lbs. and equivalent test weight (ETW) of less than or equal to 3,750 lbs.

<sup>5</sup> Vehicles under the LDT2 category have a GVWR of less than 6,000 lbs. and ETW between 3,751 lbs. and 5,750 lbs.

<sup>6</sup> The Project-specific employee and driver fleet mix used in this analysis is based on a proportional split utilizing the CalEEMod default percentage assigned to LDA, LDT1, LDT2, and MDV vehicle types.

<sup>7</sup> The average trip length for heavy trucks were based on the SCAQMD documents for the implementation of the Facility Based Mobile Source Measures (FBMSMs) adopted in the 2016 AQMP. SCAQMD's "Preliminary Warehouse Emission Calculations" cites 39.9-mile trip length for heavy-heavy trucks (41). As a conservative measure, a trip length of 40 miles has been utilized for all trucks for the purpose of this analysis.

Table 3-6 was utilized in this analysis. Additional details on the use of the applicable fleet mix can be found in the footnote to Table 3-6.

**TABLE 3-6: TRUCK FLEET MIX<sup>8</sup>**

Land Use	Vehicle Type	%
Building 1		
Warehouse	LHDT	16.32
	MHDT	20.41
	HHDT	63.27
High-Cube Cold Storage Warehouse	LHDT	35.30
	MHDT	11.76
	HHDT	52.94
Building 2		
Warehouse	LHDT	16.67
	MHDT	22.22
	HHDT	61.11
High-Cube Cold Storage Warehouse	LHDT	36.36
	MHDT	9.09
	HHDT	54.55

#### FUGITIVE DUST RELATED TO VEHICULAR TRAVEL

Vehicles traveling on paved roads would be a source of fugitive emissions due to the generation of road dust inclusive of break and tire wear particulates. The emissions estimates for travel on paved roads were calculated using CalEEMod.

#### 3.5.4 ON-SITE CARGO HANDLING EQUIPMENT EMISSIONS

It is common for industrial warehouse buildings to require cargo handling equipment to move empty containers and empty chassis to and from the various pieces of cargo handling equipment that receive and distribute containers. The most common type of cargo handling equipment is the yard truck which is designed for moving cargo containers. Yard trucks are also known as yard goats, utility tractors (UTRs), hustlers, yard hostlers, and yard tractors. The cargo handling equipment is assumed to have a horsepower (hp) range of approximately 175 hp to 200 hp. Based on the latest available information from SCAQMD (38); for example, high-cube warehouse projects typically have 3.6 yard trucks per million sf of building space. For this particular Project, based on the maximum square footage of each building space, on-site modeled operational equipment includes up to two (2) 200 hp, compressed natural gas or gasoline-powered yard tractors operating at 4 hours a day for 365 days of the year.

<sup>8</sup> Project-specific truck fleet mix is based on the number of trips generated by each truck type (LHDT, MHDT, HHDT) relative to the total number of truck trips generated by the Project.

### 3.5.5 OPERATIONAL EMISSIONS SUMMARY

#### IMPACTS WITHOUT MITIGATION

As previously stated, CalEEMod utilizes summer and winter EMFAC2017 emission factors in order to derive vehicle emissions associated with Project operational activities, which vary by season. The estimated operational-source emissions are summarized on Tables 3-7. Detailed operation model outputs for the Project are presented in Appendices 3.2 through 3.3. As shown on Table 3-7, the Project's daily regional emissions from on-going operations will not exceed any of the thresholds of significance.

**TABLE 3-7: SUMMARY OF PEAK OPERATIONAL EMISSIONS-- WITHOUT MITIGATION**

Source	Emissions (lbs/day)					
	VOC	NO <sub>x</sub>	CO	SO <sub>x</sub>	PM <sub>10</sub>	PM <sub>2.5</sub>

### 3.6 LOCALIZED SIGNIFICANCE

#### BACKGROUND ON LOCALIZED SIGNIFICANCE THRESHOLD (LST) DEVELOPMENT

The analysis makes use of methodology included in the SCAQMD *Final Localized Significance Threshold Methodology* (LST Methodology) (39). The SCAQMD has established that impacts to air quality are significant if there is a potential to contribute or cause localized exceedances of the federal and/or state ambient air quality standards (NAAQS/CAAQS). Collectively, these are referred to as Localized Significance Thresholds (LSTs).

The SCAQMD established LSTs in response to the SCAQMD Governing Board's Environmental Justice Initiative I-4<sup>9</sup>. LSTs represent the maximum emissions from a project that will not cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standard at the nearest residence or sensitive receptor. The SCAQMD states that lead agencies can use the LSTs as another indicator of significance in its air quality impact analyses.

LSTs were developed in response to environmental justice and health concerns raised by the public regarding exposure of individuals to criteria pollutants in local communities. To address the issue of localized significance, the SCAQMD adopted LSTs that show whether a project would cause or contribute to localized air quality impacts and thereby cause or contribute to potential localized adverse health effects. The analysis makes use of methodology included in the LST Methodology (40).

#### APPLICABILITY OF LSTs FOR THE PROJECT

For this Project, the appropriate SRA for the LST analysis is the SCAQMD Perris Valley (SRA 24). LSTs apply to CO, NO<sub>2</sub>, PM<sub>10</sub>, and PM<sub>2.5</sub>. The SCAQMD produced look-up tables for projects less than or equal to 5 acres in size.

In order to determine the appropriate methodology for determining localized impacts that could occur as a result of Project-related construction, the following process is undertaken:

- Identify the maximum daily on-site emissions that will occur during construction activity:
  - The maximum daily on-site emissions could be based on information provided by the Project Applicant; or
  - The SCAQMD's *Fact Sheet for Applying CalEEMod to Localized Significance Thresholds* and *CalEEMod User's Guide Appendix A: Calculation Details for CalEEMod* can be used to determine the maximum site acreage that is actively disturbed based on the construction equipment fleet and equipment hours as estimated in CalEEMod (41) (35).
- If the total acreage disturbed is less than or equal to 5 acres per day, then the SCAQMD's screening look-up tables are utilized to determine if a Project has the potential to result in a significant impact. The look-up tables establish a maximum daily emissions threshold in lbs/day that can be compared to CalEEMod outputs.

<sup>9</sup> The purpose of SCAQMD's Environmental Justice program is to ensure that everyone has the right to equal protection from air pollution and fair access to the decision-making process that works to improve the quality of air within their communities. Further, the SCAQMD defines Environmental Justice as "...equitable environmental policymaking and enforcement to protect the health of all residents, regardless of age, culture, ethnicity, gender, race, socioeconomic status, or geographic location, from the health effects of air pollution."

- If the total acreage disturbed is greater than 5 acres per day, then LST impacts may still be conservatively evaluated using the LST look-up tables for a 5-acre disturbance area. Use of the 5-acre disturbance area thresholds can be used to show that even if the daily emissions from all construction activity were emitted within a 5-acre area, and therefore concentrated over a smaller area which would result in greater site adjacent concentrations, the impacts would still be less than significant if the applicable 5-acre thresholds are utilized.
- The LST Methodology presents mass emission rates for each SRA, project sizes of 1, 2, and 5 acres, and nearest receptor distances of 25, 50, 100, 200, and 500 meters. For project sizes between the values given, or with receptors at distances between the given receptors, the methodology uses linear interpolation to determine the thresholds.

#### EMISSIONS CONSIDERED

SCAQMD's LST Methodology clearly states that "off-site mobile emissions from the Project should not be included in the emissions compared to LSTs (39)." Therefore, for purposes of the construction LST analysis, only emissions included in the CalEEMod "on-site" emissions outputs were considered.

#### MAXIMUM DAILY DISTURBED-ACREAGE

As a conservative measure, it is assumed that a maximum of 10 acres per day can be actively disturbed. As such, the "Total Acres Graded" field in CalEEMod has been revised to 100 acres for site preparation (10 acres disturbed per day x 10 working days) and 300 acres for grading activities (10 acres disturbed per day x 30 working days)<sup>10</sup>.

#### SENSITIVE RECEPTORS

As previously stated, LSTs represent the maximum emissions from a project that will not cause or contribute to an exceedance of the most stringent applicable NAAQS and CAAQS at the nearest residence or sensitive receptor. Receptor locations are off-site locations where individuals may be exposed to emissions from Project activities.

#### RESIDENTIAL RECEPTORS

Some people are especially sensitive to air pollution and are given special consideration when evaluating air quality impacts from projects. These groups of people include children, the elderly, individuals with pre-existing respiratory or cardiovascular illness, and athletes and others who engage in frequent exercise. Structures that house these persons or places where they gather to exercise are defined as "sensitive receptors". These structures typically include residences, hotels, hospitals, etc. as they are also known to be locations where an individual can remain for 24 hours. Consistent with the LST Methodology, the nearest land use where an individual could remain for 24 hours to the Project site (in this case the nearest residential land use) has been used to determine construction and operational air quality impacts for emissions of PM<sub>10</sub> and PM<sub>2.5</sub>, since PM<sub>10</sub> and PM<sub>2.5</sub> thresholds are based on a 24 hour averaging time.

<sup>10</sup> CalEEMod does not provide a "Total Acres Graded" field for Building Construction, Paving, or Architectural Coating activities.

## NON-RESIDENTIAL RECEPTORS

As per the LST Methodology, commercial and industrial facilities are not included in the definition of sensitive receptor because employees and patrons do not typically remain onsite for a full 24 hours but are typically onsite for 8 hours or less. The LST Methodology explicitly states that “LSTs based on shorter averaging periods, such as the NO<sub>2</sub> and CO LSTs, could also be applied to receptors such as industrial or commercial facilities since it is reasonable to assume that a worker at these sites could be present for periods of one to eight hours (39).” For purposes of analysis, if an industrial/commercial use is located at a closer distance to the Project site than the nearest residential use, the nearest industrial/commercial use will be utilized to determine construction and operational LST air impacts for emissions of NO<sub>2</sub> and CO an individual could be present at these sites for periods of 1 to 8 hours.

## PROJECT-RELATED SENSITIVE RECEPTORS

Receptors in the Project study area are described below and shown on Exhibit 3-A. Localized air quality impacts were evaluated at sensitive receptor land uses nearest the Project site. Consistent with the *Compass Danbe Centerpointe Noise Impact Analysis*, prepared by Urban Crossroads, Inc., all distances are measured from the Project site boundary to the outdoor living areas (e.g., backyards) or at the building façade, whichever is closer to the Project site.

- R1: Location R1 represents the existing residence at 13994 Chagall Court, approximately 152 feet north of the Project site. Since there are no private outdoor living areas (backyards) facing the Project site, receptor R1 is placed at the residential building façade.
- R2: Location R2 represents the Motel 6 at 23581 Alessandro Blvd, approximately 1,023 feet east of the Project site. Receptor R2 is placed at the building façade.
- R3: Location R3 represents the Moreno Valley City Hall at 14177 Frederick Street, approximately 744 feet west of the Project site. Receptor R3 is placed at the building façade.
- R4: Location R4 represents the existing residence at 13979 Frederick Street, approximately 784 feet northwest of the Project site. Since there are no private outdoor living areas (backyards) facing the Project site, receptor R4 is placed at the residential building façade.
- R5: Location R5 represents the existing residences at 13933 Chagall Court, approximately 217 feet north of the Project site. Since there are no private outdoor living areas (backyards) facing the Project site, receptor R5 is placed at the residential building façade.

The SCAQMD recommends that the nearest sensitive receptor be considered when determining the Project’s potential to cause an individual a cumulatively significant impact. The nearest land use where an individual could remain for 24 hours to the Project site has been used to determine localized construction and operational air quality impacts for emissions of PM<sub>10</sub> and PM<sub>2.5</sub> (since PM<sub>10</sub> and PM<sub>2.5</sub> thresholds are based on a 24 hour averaging time). The nearest receptor used for evaluation of localized impacts of PM<sub>10</sub> and PM<sub>2.5</sub> is represented by location R1 which represents the existing residence at 13994 Chagall Court, approximately 152 feet/ 46 meters north of the Project site.

EXHIBIT 3-A: SENSITIVE RECEPTOR LOCATIONS

**LEGEND:**

- Receptor Locations
- Distance from receptor to Project site boundary (in feet)
- Existing Barrier Height (in feet)
- Existing Barrier

Attachment: Appendix A1-Air Quality Impact Analysis (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

As previously stated, and consistent with *LST Methodology*, the nearest industrial/commercial use to the Project site is used to determine construction and operational LST air impacts for emissions of NO<sub>x</sub> and CO as the averaging periods for these pollutants are shorter (8 hours or less) and it is reasonable to assumed that an individual could be present at these sites for periods of one to 8 hours. It should be noted that the existing residence (R1) is located at a closer distance than the nearest industrial/commercial use. As such, same receptor will be used for evaluation of localized NO<sub>x</sub> and CO.

### 3.7 CONSTRUCTION-SOURCE EMISSIONS LST ANALYSIS

#### 3.7.1 LOCALIZED THRESHOLDS FOR CONSTRUCTION ACTIVITY

As previously stated, approximately 10 acres can be disturbed per day. For the purposes of this analysis, and as a conservative measure, the SCAQMD look-up tables of 5 acres are used to determine localized significance thresholds. The LST lookup tables can be used as a conservative measure to show that even if the daily emissions from all project construction were emitted on a 5-acre site (and therefore concentrated over a smaller area which would result in greater site adjacent concentrations), if the impacts are less than significant, then a more detailed evaluation is not necessary. The thresholds presented in Table 3-8 were calculated by interpolating the threshold values for a 5-acre site and a 46-meter distance for localized PM<sub>10</sub>, PM<sub>2.5</sub>, NO<sub>x</sub>, and CO evaluation.

**TABLE 3-8: MAXIMUM DAILY LOCALIZED EMISSIONS THRESHOLDS**

Pollutant	Construction Localized Thresholds
NO <sub>x</sub>	297 lbs/day
CO	2,082 lbs/day
PM <sub>10</sub>	36 lbs/day
PM <sub>2.5</sub>	10 lbs/day

Source: Localized Thresholds presented in this table are based on the SCAQMD Final LST Methodology, July 2008

#### 3.7.2 LOCALIZED CONSTRUCTION-SOURCE EMISSIONS

##### IMPACTS WITHOUT MITIGATION

In order to estimate on-site emissions from each building area, the total on-site construction emissions were weighed based on the ratio of each building area relative to the entire Project site. Table 3-9 identifies the localized impacts at the nearest receptor location in the vicinity of the Project. Without mitigation, localized construction emissions would not exceed the applicable SCAQMD LSTs for emissions of any criteria pollutant.

**TABLE 3-9: PROJECT LOCALIZED CONSTRUCTION EMISSIONS – WITHOUT MITIGATION**

On-Site Emissions	Emissions (lbs/day)			
	NO <sub>x</sub>	CO	PM <sub>10</sub>	PM <sub>2.5</sub>
Site Preparation				
Maximum Daily Emissions	60.79	21.85	13.83	6.75
SCAQMD Localized Threshold	297	2,082	36	10
Threshold Exceeded?	NO	NO	NO	NO

SCAQMD Localized Threshold	297	2,082	36	10
Threshold Exceeded?	NO	NO	NO	NO

Source: CalEEMod unmitigated localized construction-source emissions are presented in Appendix 3.1.

### 3.8 LOCALIZED SIGNIFICANCE – LONG-TERM OPERATIONAL ACTIVITY

The Project is located on an approximately 17.65-net acre parcel. As noted previously, the LST Methodology provides look-up tables for sites with an area with daily disturbance of 5 acres or less. For projects that exceed 5 acres, the 5-acre LST look-up tables can be used as a screening tool to determine whether pollutants require additional detailed analysis. This approach is conservative as it assumes that all on-site emissions associated with the project would occur within a concentrated 5-acre area. This screening method would therefore over-predict potential localized impacts, because by assuming that on-site operational activities are occurring over a smaller area, the resulting concentrations of air pollutants are more highly concentrated once they reach the smaller site boundary than they would be for activities if they were spread out

over a larger surface area. On a larger site, the same amount of air pollutants generated would disperse over a larger surface area and would result in a lower concentration once emissions reach the project-site boundary. As such, LSTs for a 5-acre site during operations are used as a screening tool to determine if further detailed analysis is required.

The LST analysis generally includes on-site sources (area, energy, mobile, and on-site cargo handling equipment are previously discussed in Section 3.5 of this report). However, it should be noted that the CalEEMod outputs do not separate on-site and off-site emissions from mobile sources. In an effort to establish a maximum potential impact scenario for analytic purposes, the emissions shown on Table 3-11 represent all on-site Project-related stationary (area) sources and 5% of the Project-related mobile sources. Considering that the trip length used in CalEEMod for the Project is approximately 16.60 miles for passenger cars and 40.00 miles for all trucks, 5% of this total would represent an on-site travel distance of approximately 0.83 miles/4,382.40 feet for passenger cars and 2.00 miles/10,560.00 feet for trucks.

It should be noted that the longest on-site distance, is less than 0.5 mile for both trucks and passenger cars (entry into Driveway 1 and exit out of Driveway 3). As such, the 5% assumption is conservative and would tend to overstate the actual impact because it is not likely that a passenger car would drive 0.83 miles on the site or that a truck would drive 2.00 miles on the site. Modeling based on these assumptions demonstrates that even within broad encompassing parameters, Project operational-source emissions would not exceed applicable LSTs.

### 3.8.1 LOCALIZED THRESHOLDS FOR OPERATIONAL ACTIVITY

As previously stated, LSTs for a 5-acre site during operations are used as a screening tool to determine if further detailed analysis is required. As such, the threshold values presented in Table 3-10, were calculated by interpolating the threshold values for a 5-acre site and a 46-meter distance for localized PM<sub>10</sub>, PM<sub>2.5</sub>, NO<sub>x</sub>, and CO evaluation.

**TABLE 3-10: MAXIMUM DAILY LOCALIZED OPERATIONAL EMISSIONS THRESHOLDS**

Pollutant	Operational Localized Thresholds
NO <sub>x</sub>	297 lbs/day
CO	2,082 lbs/day
PM <sub>10</sub>	9 lbs/day
PM <sub>2.5</sub>	3 lbs/day

Source: Localized Thresholds presented in this table are based on the SCAQMD Final LST Methodology, July 2008

### 3.8.2 OPERATIONAL-SOURCE LOCALIZED EMISSIONS

#### IMPACTS WITHOUT MITIGATION

As shown on Table 3-11 operational emissions will not exceed the LST thresholds for the nearest sensitive receptor. Therefore, the Project will have a less than significant localized impact during operational activity.

**TABLE 3-11: LOCALIZED SIGNIFICANCE SUMMARY OF OPERATIONS – WITHOUT MITIGATION**

Operational Activity	Emissions (lbs/day)			
	NO <sub>x</sub>	CO	PM <sub>10</sub>	PM <sub>2.5</sub>
Maximum Daily Emissions	6.69	4.48	0.97	0.44
SCAQMD Localized Threshold	297	2,082	9	3
Threshold Exceeded?	NO	NO	NO	NO

Source: CalEEMod localized operational-source emissions are presented in Appendices 3.2 through 3.3.

### 3.9 CO “HOT SPOT” ANALYSIS

As discussed below, the Project would not result in potentially adverse CO concentrations or “hot spots.” Further, detailed modeling of Project-specific carbon monoxide (CO) “hot spots” is not needed to reach this conclusion.

An adverse CO concentration, known as a “hot spot”, would occur if an exceedance of the state one-hour standard of 20 ppm or the eight-hour standard of 9 ppm were to occur. At the time of the 1993 Handbook, the SCAB was designated nonattainment under the California AAQS and National AAQS for CO (42).

It has long been recognized that CO hotspots are caused by vehicular emissions, primarily when idling at congested intersections. In response, vehicle emissions standards have become increasingly stringent in the last twenty years. Currently, the allowable CO emissions standard in California is a maximum of 3.4 grams/mile for passenger cars (there are requirements for certain vehicles that are more stringent). With the turnover of older vehicles, introduction of cleaner fuels, and implementation of increasingly sophisticated and efficient emissions control technologies, CO concentration in the SCAB is now designated as attainment, as previously noted in Table 2-3.

To establish a more accurate record of baseline CO concentrations affecting the SCAB, a CO “hot spot” analysis was conducted in 2003 for four busy intersections in Los Angeles at the peak morning and afternoon time periods. This “hot spot” analysis did not predict any violation of CO standards, as shown on Table 3-12.

**TABLE 3-12: CO MODEL RESULTS**

Intersection Location	CO Concentrations (ppm)		
	Morning 1-hour	Afternoon 1-hour	8-hour
Wilshire Boulevard/Veteran Avenue	4.6	3.5	4.2
Sunset Boulevard/Highland Avenue	4	4.5	3.9
La Cienega Boulevard/Century Boulevard	3.7	3.1	5.8
Long Beach Boulevard/Imperial Highway	3	3.1	9.3

Source: 2003 AQMP, Appendix V: Modeling and Attainment Demonstrations

Notes: Federal 1-hour standard is 35 ppm and the deferral 8-hour standard is 9.0 ppm.

Based on the SCAQMD's 2003 AQMP and the 1992 Federal Attainment Plan for Carbon Monoxide (1992 CO Plan), peak CO concentrations in the SCAB were a result of unusual meteorological and topographical conditions and not a result of traffic volumes and congestion at a particular intersection. As evidence of this, for example, 9.3 ppm 8-hour CO concentration measured at the Long Beach Boulevard and Imperial Highway intersection (highest CO generating intersection within the “hot spot” analysis), only 0.7 ppm was attributable to the traffic volumes and congestion at this intersection; the remaining 8.6 ppm were due to the ambient air measurements at the time the 2003 AQMP was prepared (43). In contrast, the ambient 8-hour CO concentration within the Project study area is estimated at 1.4 ppm—1.6 ppm. Therefore, even if the traffic volumes for the Project were double or even triple of the traffic volumes generated at the Long Beach Boulevard and Imperial Highway intersection, coupled with the on-going improvements in ambient air quality, the Project would not be capable of resulting in a CO “hot spot” at any study area intersections. Similar considerations are also employed by other Air Districts when evaluating potential CO concentration impacts. More specifically, the Bay Area Air Quality Management District (BAAQMD) concludes that under existing and future vehicle emission rates, a given project would have to increase traffic volumes at a single intersection by more than 44,000 vehicles per hour (vph) —or 24,000 vph where vertical and/or horizontal air does not mix—in order to generate a significant CO impact (44).

The 2003 AQMP, and as previously shown in Table 3-12, estimated that the 1-hour concentration for this intersection was 4.6 ppm; this indicates that, should the daily traffic volume increase four times to 400,000 vehicles per day, CO concentrations ( $4.6 \text{ ppm} \times 4 = 18.4 \text{ ppm}$ ) would still not likely exceed the most stringent 1-hour CO standard ( $20.0 \text{ ppm}$ )<sup>11</sup>. As shown in TA on Exhibit 5-1, EAP<sup>12</sup> (2022) Traffic Volumes (In PCE<sup>13</sup>), the highest trips on a segment of is 43,500 vph on east Graham Street and Alessandro Boulevard (37).

Traffic volumes generating the CO concentrations for the “hot spot” analysis is shown on Table 3-13. The busiest intersection evaluated for traffic volumes was at La Cienega Boulevard and Century Boulevard, which has an traffic volume of approximately 8,674 vph (45). As shown on Table 3-14, the highest trips on a segment of road for the proposed Project is 4,070 vph on Frederick Street and Alessandro Boulevard. As such, Project-related traffic volumes are less than the traffic volumes identified in the 2003 AQMP. The Project considered herein would not produce the volume of traffic required to generate a CO “hot spot” either in the context of the 2003 Los Angeles hot spot study or based on representative BAAQMD CO threshold considerations. Therefore, CO “hot spots” are not an environmental impact of concern for the Project. Localized air quality impacts related to mobile-source emissions would therefore be less than significant.

<sup>11</sup> Based on the ratio of the CO standard (20.0 ppm) and the modeled value (4.6 ppm).

<sup>12</sup> EAP = Existing Plus Ambient Growth Plus Project

<sup>13</sup> PCE = Passenger Car Equivalent

**TABLE 3-13: TRAFFIC VOLUMES**

### 3.10 AIR QUALITY MANAGEMENT PLANNING

The Project site is located within the SCAB, which is characterized by relatively poor air quality. The SCAQMD has jurisdiction over an approximately 10,743 square-mile area consisting of the four-county Basin and the Los Angeles County and Riverside County portions of what use to be referred to as the Southeast Desert Air Basin. In these areas, the SCAQMD is principally responsible for air pollution control, and works directly with the Southern California Association of Governments (SCAG), county transportation commissions, local governments, as well as state and federal agencies to reduce emissions from stationary, mobile, and indirect sources to meet state and federal ambient air quality standards.

Currently, these state and federal air quality standards are exceeded in most parts of the SCAB. In response, the SCAQMD has adopted a series of AQMPs to meet the state and federal ambient air quality standards. AQMPs are updated regularly in order to more effectively reduce emissions, accommodate growth, and to minimize any negative fiscal impacts of air pollution control on the economy.

In March 2017, the AQMD released the Final 2016 AQMP. The 2016 AQMP continues to evaluate current integrated strategies and control measures to meet the NAAQS and explores new and innovative methods to reach its goals. Some of these approaches include utilizing incentive programs, recognizing existing co-benefit programs from other sectors, and developing a strategy with fair-share reductions at the federal, state, and local levels (46). Similar to the 2012 AQMP,

the 2016 AQMP incorporates scientific and technological information and planning assumptions, including the 2016-2040 RTP/SCS, a planning document that supports the integration of land use and transportation to help the region meet the federal Clean Air Act requirements (17). The Project's consistency with the AQMP will be determined using the 2016 AQMP as discussed below.

Criteria for determining consistency with the AQMP are defined in Chapter 12, Section 12.2 and Section 12.3 of the SCAQMD's CEQA Air Quality Handbook (1993) (47). These indicators are discussed below:

### 3.10.1 CONSISTENCY CRITERION No. 1

***The proposed Project will not result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP.***

The violations that Consistency Criterion No. 1 refers to are the CAAQS and NAAQS. CAAQS and NAAQS violations would occur if regional or localized significance thresholds were exceeded.

#### ***Construction Impacts – Consistency Criterion 1***

Consistency Criterion No. 1 refers to violations of the CAAQS and NAAQS. CAAQS and NAAQS violations would occur if LSTs or regional significance thresholds were exceeded. As evaluated, the Project's regional and localized construction-source emissions would not exceed applicable regional significance threshold and LST thresholds. As such, a less than significant impact is expected.

#### ***Operational Impacts – Consistency Criterion 1***

As evaluated, and when taking into consideration existing emissions, the Project's operational emissions would not exceed the applicable regional significance thresholds and LST thresholds for operational activity. Therefore, the Project would not conflict with the AQMP according to this criterion.

On the basis of the preceding discussion, the Project is determined to be consistent with the first criterion.

### 3.10.2 CONSISTENCY CRITERION No. 2

***The Project will not exceed the assumptions in the AQMP based on the years of Project build-out phase.***

The 2016 AQMP demonstrates that the applicable ambient air quality standards can be achieved within the timeframes required under federal law. Growth projections from local general plans adopted by cities in the district are provided to the SCAG, which develops regional growth forecasts, which are then used to develop future air quality forecasts for the AQMP. Development consistent with the growth projections in City of Moreno Valley General Plan is considered to be consistent with the AQMP.

### **Construction Impacts – Consistency Criterion 2**

Peak day emissions generated by construction activities are largely independent of land use assignments, but rather are a function of development scope and maximum area of disturbance. Irrespective of the site's land use designation, development of the site to its maximum potential would likely occur, with disturbance of the entire site occurring during construction activities.

### **Operational Impacts – Consistency Criterion 2**

Per the City's General Plan, the Project site is designated for Commercial uses. The primary purpose of areas designated Commercial is to provide property for business purposes, including, but not limited to, retail stores, restaurants, banks, hotels, professional offices, personal services and repair services. The zoning regulations shall identify the particular uses permitted on each parcel of land, which could include compatible noncommercial uses (48).

The proposed Project will consist of 206,665 sf of warehousing (70% of total building sf) and 88,571 sf of high-cube cold storage warehouse use (30% of total building sf) for a total of 295,236 sf for Building 1 and 70,876 sf of warehousing (70% of total building sf) and 30,376 sf of high-cube cold storage warehouse use (30% of total building sf) for a total of 101,252 sf for Building 2. As such, even though the Project involves a GPA and ZC to change the land use designation to Light Industrial use. The proposed changes are consistent with the zones to the west, south and east of the subject site and adjacent properties. The amendment is in keeping with the uses surrounding the Project site. Furthermore, the Project, as evaluated herein would not exceed the regional or localized air quality significance thresholds.

On the basis of the preceding discussion, the Project is determined to be consistent with the second criterion

### **AQMP CONSISTENCY CONCLUSION**

The Project would not have the potential to result in or cause NAAQS or CAAQS violations. Additionally, Project construction and operational-source emissions would not exceed the regional or localized significance thresholds. The Project is therefore considered to be consistent with the AQMP.

### **3.11 POTENTIAL IMPACTS TO SENSITIVE RECEPTORS**

The potential impact of Project-generated air pollutant emissions at sensitive receptors has also been considered. Sensitive receptors can include uses such as long-term health care facilities, rehabilitation centers, and retirement homes. Residences, schools, playgrounds, childcare centers, and athletic facilities can also be considered as sensitive receptors.

Results of the LST analysis indicate that the Project will not exceed the SCAQMD localized significance thresholds during construction. Therefore, sensitive receptors would not be exposed to substantial pollutant concentrations during Project construction.

Additionally, the Project will not exceed the SCAQMD localized significance thresholds during operational activity. Further Project traffic would not create or result in a CO "hotspot."

Therefore, sensitive receptors would not be exposed to substantial pollutant concentrations as the result of Project operations.

### 3.11.1 FRIANT RANCH CASE

In December 2018, in the case of *Sierra Club v. County of Fresno* (2018) 6 Cal.5<sup>th</sup> 502, the California Supreme Court held that an Environmental Impact Report's (EIR) air quality analysis must meaningfully connect the identified air quality impacts to the human health consequences of those impacts, or meaningfully explain why that analysis cannot be provided.

As discussed in briefs filed in the Friant Ranch case, correlating a project's criteria air pollutant emissions to specific health impacts is challenging. Health effects caused by criteria pollutant emissions are dependent on a variety of interrelated variables. In particular, ozone precursors (VOCs and NO<sub>x</sub>) affect air quality on a regional scale. The SCAQMD, which has among the most sophisticated air quality modeling and health impact evaluation capability of any of the air districts in the State, and thus it is uniquely situated to express an opinion on how lead agencies should correlate air quality impacts with specific health outcomes noted that it may be "difficult to quantify health impacts for criteria pollutants." (49).

As noted in the *Brief*, the San Joaquin Valley Unified Air Pollution Control District (SJVUAPCD) ties the difficulty of correlating the emission of criteria pollutants to health impacts to how ozone and particulate matter are formed, stating that "[b]ecause of the complexity of ozone formation, a specific tonnage amount of NO<sub>x</sub> or VOCs emitted in a particular area does not equate to a particular concentration of ozone in that area." (50). Similarly, the tonnage of PM "emitted does not always equate to the local PM concentration because it can be transported long distances by wind," and "[s]econdary PM, like ozone, is formed via complex chemical reactions in the atmosphere between precursor chemicals such as sulfur dioxides (SO<sub>x</sub>) and NO<sub>x</sub>," meaning that "the tonnage of PM-forming precursor emissions in an area does not necessarily result in an equivalent concentration of secondary PM in that area." (50). The disconnect between the amount of precursor pollutants and the concentration of ozone or PM formed makes it difficult to determine potential health impacts, which are related to the concentration of ozone and PM experienced by the receptor rather than levels of NO<sub>x</sub>, SO<sub>x</sub>, and VOCs produced by a source.

Health effects related to ozone are therefore the product of emissions generated by numerous sources throughout a region. SCAQMD's *Brief of Amicus Curiae (Brief)* goes on to state that "it takes a large amount of additional precursor emissions (NO<sub>x</sub> and VOCs) to cause a modeled increase in ambient ozone levels over an entire region,". The SCAQMD states that based on their own modeling in the SCAQMD's 2012 AQMP, a reduction of "NO<sub>x</sub> by 432 tons per day (157,680 tons/year) and reducing VOC by 187 tons per day (68,255 tons/year) would reduce ozone levels at the SCAQMD's monitor site with the highest levels by only 9 parts per billion." As such, the SCAQMD concludes that it is not currently possible "to accurately quantify ozone-related health impacts caused by NO<sub>x</sub> or VOC emissions from relatively small projects." (51).

Most local agencies, including the City of Moreno Valley, lack the data to do their own assessment of potential health impacts from criteria air pollutant emissions, as would be required to establish customized, locally-specific thresholds of significance based on potential health impacts from an

individual development project. The use of national or “generic” data to fill the gap of missing local data would not yield accurate results because such data does not capture local air patterns, local background conditions, or local population characteristics, all of which play a role in how a population experiences air pollution. Because it is impracticable to accurately isolate the exact cause of a human disease (for example, the role a particular air pollutant plays compared to the role of other allergens and genetics in cause asthma), the City has determined that existing scientific tools cannot accurately estimate health impacts of the Project’s air emissions without undue speculation. Instead, readers are directed to the Project’s air quality impact analysis above, which provides extensive information concerning the quantifiable and non-quantifiable health risks related to the Project’s construction and long-term operation.

Notwithstanding, this AQIA does evaluate the proposed Project’s localized impact to air quality for emissions of CO, NO<sub>x</sub>, PM<sub>10</sub>, and PM<sub>2.5</sub> by comparing the proposed project’s on-site emissions to the SCAQMD’s applicable LST thresholds. The LST analysis above determined that the project would not result in emissions exceeding SCAQMD’s LSTs. Therefore, the proposed Project would not be expected to exceed the most stringent applicable federal or state ambient air quality standards for emissions of CO, NO<sub>x</sub>, PM<sub>10</sub>, and PM<sub>2.5</sub>.

As the Project’s emissions will comply with federal, state, and local air quality standards, the proposed Project’s emissions are not sufficiently high enough to use a regional modeling program to correlate health effects on a basin-wide level, and would not provide a reliable indicator of health effects if modeled.

### 3.11.2 HEALTH RISK ASSESSMENT

A Health Risk Assessment (HRA) has been prepared by Urban Crossroads, Inc. under a separate cover. The results of the *Compass Danbe Centerpointe Mobile Source Health Risk Assessment* (Urban Crossroads, Inc. 2020) indicate that the proposed Project would not result in any significant health risk impacts from exposure to TACs resulting from the proposed Project.

### 3.12 ODORS

The potential for the proposed Project to generate objectionable odors has also been considered. Land uses generally associated with odor complaints include:

- Agricultural uses (livestock and farming)
- Wastewater treatment plants
- Food processing plants
- Chemical plants
- Composting operations
- Refineries
- Landfills
- Dairies
- Fiberglass molding facilities

The proposed Project does not contain land uses typically associated with emitting objectionable odors. Potential odor sources associated with the proposed Project may result from construction equipment exhaust and the application of asphalt and architectural coatings during construction activities and the temporary storage of typical solid waste (refuse) associated with the proposed Project's (long-term operational) uses. Standard construction requirements would minimize odor impacts from construction. The construction odor emissions would be temporary, short-term, and intermittent in nature and would cease upon completion of the respective phase of construction and is thus considered less than significant. It is expected that Project-generated refuse would be stored in covered containers and removed at regular intervals in compliance with the City's solid waste regulations. The proposed Project would also be required to comply with SCAQMD Rule 402 to prevent occurrences of public nuisances. Therefore, odors associated with the proposed Project construction and operations would be less than significant and no mitigation is required (52).

### 3.13 CUMULATIVE IMPACTS

The proposed Project site area is designated as an extreme non-attainment area for ozone, and a non-attainment area for PM<sub>10</sub>, PM<sub>2.5</sub>, and lead.

The AQMD has published a report on how to address cumulative impacts from air pollution: *White Paper on Potential Control Strategies to Address Cumulative Impacts from Air Pollution* (53). In this report the AQMD clearly states (Page D-3):

*"...the AQMD uses the same significance thresholds for project specific and cumulative impacts for all environmental topics analyzed in an Environmental Assessment or EIR. The only case where the significance thresholds for project specific and cumulative impacts differ is the Hazard Index (HI) significance threshold for toxic air contaminant (TAC) emissions. The project specific (project increment) significance threshold is HI > 1.0 while the cumulative (facility-wide) is HI > 3.0. It should be noted that the HI is only one of three TAC emission significance thresholds considered (when applicable) in a CEQA analysis. The other two are the maximum individual cancer risk (MICR) and the cancer burden, both of which use the same significance thresholds (MICR of 10 in 1 million and cancer burden of 0.5) for project specific and cumulative impacts.*

*Projects that exceed the project-specific significance thresholds are considered by the SCAQMD to be cumulatively considerable. This is the reason project-specific and cumulative significance thresholds are the same. Conversely, projects that do not exceed the project-specific thresholds are generally not considered to be cumulatively significant."*

Therefore, this analysis assumes that individual projects that do not generate operational or construction emissions that exceed the SCAQMD's recommended daily thresholds for project-specific impacts would also not cause a cumulatively considerable increase in emissions for those pollutants for which the Basin is in nonattainment, and, therefore, would not be considered to have a significant, adverse air quality impact. Alternatively, individual project-related

construction and operational emissions that exceed SCAQMD thresholds for project-specific impacts would be considered cumulatively considerable.

#### **CONSTRUCTION IMPACTS**

The Project-specific evaluation of emissions presented in the preceding analysis demonstrates that proposed Project construction-source air pollutant emissions would not result in exceedances of regional thresholds. Therefore, proposed Project construction-source emissions would be considered less than significant on a project-specific and cumulative basis.

#### **OPERATIONAL IMPACTS**

The Project-specific evaluation of emissions presented in the preceding analysis demonstrates that proposed Project operational-source air pollutant emissions would not result in exceedances of regional thresholds. Therefore, proposed Project operational-source emissions would be considered less than significant on a project-specific and cumulative basis.

STATE AND NATIONAL AMBIENT AIR QUALITY STANDARDS***

*[This page intentionally left blank]*

## APPENDIX C

### MAPS AND TABLES OF AREA DESIGNATIONS FOR STATE AND NATIONAL AMBIENT AIR QUALITY STANDARDS

This attachment fulfills the requirement of Health and Safety Code section 40718 for CARB to publish maps that identify areas where one or more violations of any State ambient air quality standard (State standard) or national ambient air quality standard (national standard) have been measured. The national standards are those promulgated under section 109 of the federal Clean Air Act (42 U.S.C. 7409).

This attachment is divided into three parts. The first part comprises a table showing the levels, averaging times, and measurement methods for each of the State and national standards. This is followed by a section containing maps and tables showing the area designations for each pollutant for which there is a State standard in the California Code of Regulations, title 17, section 70200. The last section contains maps and tables showing the most current area designations for the national standards.

Ambient Air Quality Standards (Updated 5/4/16)						
Pollutant	Averaging Time	California Standards <sup>1</sup>		National Standards <sup>2</sup>		
		Concentration <sup>3</sup>	Method <sup>4</sup>	Primary <sup>3,5</sup>	Secondary <sup>3,6</sup>	Method <sup>7</sup>
Ozone (O <sub>3</sub> ) <sup>8</sup>	1 Hour	0.09 ppm (180 µg/m <sup>3</sup> )	Ultraviolet Photometry	—	Same as Primary Standard	Ultraviolet Photometry
	8 Hour	0.070 ppm (137 µg/m <sup>3</sup> )		0.070 ppm (137 µg/m <sup>3</sup> )		
Respirable Particulate Matter (PM <sub>10</sub> ) <sup>9</sup>	24 Hour	50 µg/m <sup>3</sup>	Gravimetric or Beta Attenuation	150 µg/m <sup>3</sup>	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	20 µg/m <sup>3</sup>		—		
Fine Particulate Matter (PM <sub>2.5</sub> ) <sup>9</sup>	24 Hour	—	—	35 µg/m <sup>3</sup>	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	12 µg/m <sup>3</sup>	Gravimetric or Beta Attenuation	12.0 µg/m <sup>3</sup>	15 µg/m <sup>3</sup>	
Carbon Monoxide (CO)	1 Hour	20 ppm (23 mg/m <sup>3</sup> )	Non-Dispersive Infrared Photometry (NDIR)	35 ppm (40 mg/m <sup>3</sup> )	—	Non-Dispersive Infrared Photometry (NDIR)
	8 Hour	9.0 ppm (10 mg/m <sup>3</sup> )		9 ppm (10 mg/m <sup>3</sup> )	—	
	8 Hour (Lake Tahoe)	6 ppm (7 mg/m <sup>3</sup> )		—	—	
Nitrogen Dioxide (NO <sub>2</sub> ) <sup>10</sup>	1 Hour	0.18 ppm (339 µg/m <sup>3</sup> )	Gas Phase Chemiluminescence	100 ppb (188 µg/m <sup>3</sup> )	—	Gas Phase Chemiluminescence
	Annual Arithmetic Mean	0.030 ppm (57 µg/m <sup>3</sup> )		0.053 ppm (100 µg/m <sup>3</sup> )	Same as Primary Standard	
Sulfur Dioxide (SO <sub>2</sub> ) <sup>11</sup>	1 Hour	0.25 ppm (655 µg/m <sup>3</sup> )	Ultraviolet Fluorescence	75 ppb (196 µg/m <sup>3</sup> )	—	Ultraviolet Fluorescence; Spectrophotometry (Pararosaniline Method)
	3 Hour	—		—	0.5 ppm (1300 µg/m <sup>3</sup> )	
	24 Hour	0.04 ppm (105 µg/m <sup>3</sup> )		0.14 ppm (for certain areas) <sup>11</sup>	—	
	Annual Arithmetic Mean	—		0.030 ppm (for certain areas) <sup>11</sup>	—	
Lead <sup>12,13</sup>	30 Day Average	1.5 µg/m <sup>3</sup>	Atomic Absorption	—	—	High Volume Sampler and Atomic Absorption
	Calendar Quarter	—		1.5 µg/m <sup>3</sup> (for certain areas) <sup>12</sup>	Same as Primary Standard	
	Rolling 3-Month Average	—		0.15 µg/m <sup>3</sup>		
Visibility Reducing Particles <sup>14</sup>	8 Hour	See footnote 14	Beta Attenuation and Transmittance through Filter Tape	<b>No National Standards</b>		
Sulfates	24 Hour	25 µg/m <sup>3</sup>	Ion Chromatography			
Hydrogen Sulfide	1 Hour	0.03 ppm (42 µg/m <sup>3</sup> )	Ultraviolet Fluorescence			
Vinyl Chloride <sup>12</sup>	24 Hour	0.01 ppm (26 µg/m <sup>3</sup> )	Gas Chromatography			

See footnotes on next page ...

Attachment: Appendix A1-Air Quality Impact Analysis (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

1. California standards for ozone, carbon monoxide (except 8-hour Lake Tahoe), sulfur dioxide (1- and 24-hour), nitrogen dioxide, and particulate matter (PM10, PM2.5, and visibility reducing particles), are values that are not to be exceeded. All others are not to be equaled or exceeded. California ambient air quality standards are listed in the Table of Standards in Section 70200 of Title 17 of the California Code of Regulations.
2. National standards (other than ozone, particulate matter, and those based on annual arithmetic mean) are not to be exceeded more than once a year. The ozone standard is attained when the fourth highest 8-hour concentration measured at each site in a year, averaged over three years, is equal to or less than the standard. For PM10, the 24-hour standard is attained when the expected number of days per calendar year with a 24-hour average concentration above  $150 \mu\text{g}/\text{m}^3$  is equal to or less than one. For PM2.5, the 24-hour standard is attained when 98 percent of the daily concentrations, averaged over three years, are equal to or less than the standard. Contact the U.S. EPA for further clarification and current national policies.
3. Concentration expressed first in units in which it was promulgated. Equivalent units given in parentheses are based upon a reference temperature of  $25^\circ\text{C}$  and a reference pressure of 760 torr. Most measurements of air quality are to be corrected to a reference temperature of  $25^\circ\text{C}$  and a reference pressure of 760 torr; ppm in this table refers to ppm by volume, or micromoles of pollutant per mole of gas.
4. Any equivalent measurement method which can be shown to the satisfaction of the CARB to give equivalent results at or near the level of the air quality standard may be used.
5. National Primary Standards: The levels of air quality necessary, with an adequate margin of safety to protect the public health.
6. National Secondary Standards: The levels of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.
7. Reference method as described by the U.S. EPA. An "equivalent method" of measurement may be used but must have a "consistent relationship to the reference method" and must be approved by the U.S. EPA.
8. On October 1, 2015, the national 8-hour ozone primary and secondary standards were lowered from 0.075 to 0.070 ppm.
9. On December 14, 2012, the national annual PM2.5 primary standard was lowered from  $15 \mu\text{g}/\text{m}^3$  to  $12.0 \mu\text{g}/\text{m}^3$ . The existing national 24-hour PM2.5 standards (primary and secondary) were retained at  $35 \mu\text{g}/\text{m}^3$ , as was the annual secondary standard of  $15 \mu\text{g}/\text{m}^3$ . The existing 24-hour PM10 standards (primary and secondary) of  $150 \mu\text{g}/\text{m}^3$  also were retained. The form of the annual primary and secondary standards is the annual mean, averaged over 3 years.
10. To attain the 1-hour national standard, the 3-year average of the annual 98th percentile of the 1-hour daily maximum concentrations at each site must not exceed 100 ppb. Note that the national 1-hour standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the national 1-hour standard to the California standards the units can be converted from ppb to ppm. In this case, the national standard of 100 ppb is identical to 0.100 ppm.
11. On June 2, 2010, a new 1-hour SO<sub>2</sub> standard was established and the existing 24-hour and annual primary standards were revoked. To attain the 1-hour national standard, the 3-year average of the annual 99th percentile of the 1-hour daily maximum concentrations at each site must not exceed 75 ppb. The 1971 SO<sub>2</sub> national standards (24-hour and annual) remain in effect until one year after an area is designated for the 2010 standard, except that in areas designated nonattainment for the 1971 standards, the 1971 standards remain in effect until implementation plans to attain or maintain the 2010 standards are approved.  
  
Note that the 1-hour national standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the 1-hour national standard to the California standard the units can be converted to ppm. In this case, the national standard of 75 ppb is identical to 0.075 ppm.
12. The CARB has identified lead and vinyl chloride as 'toxic air contaminants' with no threshold level of exposure for adverse health effects determined. These actions allow for the implementation of control measures at levels below the ambient concentrations specified for these pollutants.
13. The national standard for lead was revised on October 15, 2008 to a rolling 3-month average. The 1978 lead standard ( $1.5 \mu\text{g}/\text{m}^3$  as a quarterly average) remains in effect until one year after an area is designated for the 2008 standard, except that in areas designated nonattainment for the 1978 standard, the 1978 standard remains in effect until implementation plans to attain or maintain the 2008 standard are approved.
14. In 1989, the CARB converted both the general statewide 10-mile visibility standard and the Lake Tahoe 30-mile visibility standard to instrumental equivalents, which are "extinction of 0.23 per kilometer" and "extinction of 0.07 per kilometer" for the statewide and Lake Tahoe Air Basin standards, respectively.

*[This page intentionally left blank]*

### ***Area Designations for the State Ambient Air Quality Standards***

The following maps and tables show the area designations for each pollutant with a State standard set forth in the California Code of Regulations, title 17, section 60200. Each area is identified as attainment, nonattainment, nonattainment-transitional, or unclassified for each pollutant, as shown below:

Attainment	A
Nonattainment	N
Nonattainment-Transitional	NA-T
Unclassified	U

In general, CARB designates areas by air basin for pollutants with a regional impact and by county for pollutants with a more local impact. However, when there are areas within an air basin or county with distinctly different air quality deriving from sources and conditions not affecting the entire air basin or county, CARB may designate a smaller area. Generally, when boundaries of the designated area differ from the air basin or county boundaries, the description of the specific area is referenced at the bottom of the summary table.

(1) AB 3048 (Olberg) and AB 2525 (Miller) signed into law in 1996, made changes to Health and Safety Code, section 40925.5. One of the changes allows nonattainment districts to become nonattainment-transitional for ozone by operation of law.

## **Area Designations for the National Ambient Air Quality Standards**

The following maps and tables show the area designations for each pollutant with a national ambient air quality standard. Additional information about the federal area designations is available on the U.S. EPA website:

<https://www.epa.gov/green-book>

Over the last several years, U.S. EPA has been reviewing the levels of the various national standards. The agency has already promulgated new standard levels for some pollutants and is considering revising the levels for others. Information about the status of these reviews is available on the U.S. EPA website:

<https://www.epa.gov/criteria-air-pollutants>

### Designation Categories

*Suspended Particulate Matter (PM<sub>10</sub>)*. The U.S. EPA uses three categories to designate areas with respect to PM<sub>10</sub>:

- Attainment
- Nonattainment
- Unclassifiable

*Ozone, Fine Suspended Particulate Matter (PM<sub>2.5</sub>), Carbon Monoxide (CO), and Nitrogen Dioxide (NO<sub>2</sub>)*. The U.S. EPA uses two categories to designate areas with respect to these standards:

- Nonattainment
- Unclassifiable/Attainment

The national 1-hour ozone standard was revoked effective June 15, 2005, and the area designations map reflects the 2015 national 8-hour ozone standard of 0.070 ppm. Original designations were finalized on August 3, 2018.

On December 14, 2012, the U.S. EPA established a new national annual primary PM<sub>2.5</sub> standard of 12.0 µg/m<sup>3</sup>. New area designations reflecting this revised standard became final in December 2014. The current designation map reflects the most recently revised (2012) annual average standard of 12.0 µg/m<sup>3</sup> as well as the 24-hour standard of 35 µg/m<sup>3</sup>, revised in 2006.

On January 22, 2010, the U.S. EPA established a new national 1-hour NO<sub>2</sub> standard of 100 parts per billion (ppb) and retained the annual average standard of 53 ppb. Designations for the primary NO<sub>2</sub> standard became effective on February 29, 2012. All areas of California meet this standard.

*Sulfur Dioxide (SO<sub>2</sub>)*. The U.S. EPA uses three categories to designate areas with respect to the 24-hour and annual average sulfur dioxide standards. These designation categories are:

- Nonattainment,
- Unclassifiable, and
- Attainment/Unclassifiable.

On June 2, 2010, the U.S. EPA established a new primary 1-hour SO<sub>2</sub> standard of 75 parts per billion (ppb). At the same time, U.S. EPA revoked the 24-hour and annual

average standards. Area designations for the 1-hour SO<sub>2</sub> standard were finalized on December 21, 2017 and are reflected in the area designations map.

*Lead (particulate).* The U.S. EPA promulgated a new rolling 3-month average lead standard in October 2008 of 0.15 µg/m<sup>3</sup>. Designations were made for this standard in November 2010.

### Designation Areas

From time to time, the boundaries of the California air basins have been changed to facilitate the planning process. CARB generally initiates these changes, and they are not always reflected in the U.S. EPA's area designations. For purposes of consistency, the maps in this attachment reflect area designation boundaries and nomenclature as promulgated by the U.S. EPA. In some cases, these may not be the same as those adopted by CARB. For example, the national area designations reflect the former Southeast Desert Air Basin. In accordance with Health and Safety Code section 39606.1, CARB redefined this area in 1996 to be the Mojave Desert Air Basin and Salton Sea Air Basin. The definitions and boundaries for all areas designated for the national standards can be found in Title 40, Code of Federal Regulations (CFR), Chapter I, Subchapter C, Part 81.305. They are available on the web at:

[https://ecfr.io/Title-40/se40.20.81\\_1305](https://ecfr.io/Title-40/se40.20.81_1305)

(1) Air quality in Sacramento County meets the national PM10 standards. The request for redesignation to attainment was approved by U.S. EPA in September 2013.

(2) U.S. EPA designation puts the Sacramento Valley Air Basin portion of Placer County in the Mountain Counties Air Basin.

(3) Air quality in Coachella Valley meets the national PM10 standards. A request for redesignation to attainment has been submitted to U.S. EPA.

\* Definitions and references for all areas can be found in 40 CFR, Chapter I, Part 81.305. This map reflects the 2006 24-hour PM2.5 standard as well as the 1997 and 2012 PM2.5 annual standards.

(1) For this purpose, Sacramento Metro Area comprises all of Sacramento and portions of El Dorado, Placer, Solano, and Yolo Counties. Air quality in this area meets the national PM2.5 standards. A Determination of Attainment for the 2006 24-hour PM2.5 standard was made by U.S. EPA in June 2017.

(2) Air quality in this area meets the national PM2.5 standards. A Determination of Attainment for the 2006 24-hour PM2.5 standard was made by U.S. EPA in June 2017.

(3) Those lands of the Santa Rosa Band of Cahulla Mission Indians in Riverside County are designated Unclassifiable/Attainment.

(4) That portion of Imperial County encompassing the urban and surrounding areas of Brawley, Calexico, El Centro, Heber, Holtville, Imperial, Seeley, and Westmorland. Air quality in this area meets the national PM2.5 standards. A Determination of Attainment for the 2006 24-hour PM2.5 standard was made by U.S. EPA in June 2017.

Compass Danbe Centerpointe (Construction - Unmitigated) - Riverside-South Coast County, Winter

Project Characteristics -

Land Use -

Construction Phase - Construction is anticipated to occur over an 8-month timeframe.

Off-road Equipment - Hours are based on an 8-hour workday.

Off-road Equipment - Hours are based on an 8-hour workday.

Off-road Equipment - Crawler Tractors used in lieu of Tractors/Loaders/Backhoes.

Off-road Equipment -

Off-road Equipment - Crawler Tractors used in lieu of Tractors/Loaders/Backhoes.

Trips and VMT - Vendor Trips have been adjusted to account for Water Trucks.

Grading - This analysis conservatively assumes that up to 10 acres will be disturbed per day.

Architectural Coating - Rule 1113

Vehicle Trips - Construction Run Only.

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Energy Use - Construction Run Only.

Water And Wastewater - Construction Run Only.

Solid Waste - Construction Run Only.

Construction Off-road Equipment Mitigation - Rule 403

Attachment: Appendix A1-Air Quality Impact Analysis (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-

Compass Danbe Center (Building 1 Operations - Passenger Cars) - Riverside-South Coast County, Summer

Project Characteristics -

Land Use - Total Building 1 Area is 12.47 acres.

Construction Phase - Operations Run Only.

Off-road Equipment - Operations Run Only.

Trips and VMT - Operations Run Only.

Vehicle Trips - Trip Characteristics based on information provided in the Traffic Analysis report prepared by Urban Crossroads, Inc.

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Energy Use - The Project will design building shells and building components to meet 2019 Title 24 Standards which expects 30% less energy for nonresidential uses.

Operational Off-Road Equipment - Based on SCAQMD High Cube Warehouse Truck Trip Study White Paper Summary of Business Survey Results (2014)

Fleet Mix - Passenger Car Fleet Mix estimated based on the CalEEMod default fleet mix and the ratio of the vehicle classes (LDA, LDT1, LDT2, and MDV).

Compass Danbe Center (Building 1 Operations - Passenger Cars) - Riverside-South Coast County, Winter

Project Characteristics -

Land Use - Total Building 1 Area is 12.47 acres.

Construction Phase - Operations Run Only.

Off-road Equipment - Operations Run Only.

Trips and VMT - Operations Run Only.

Vehicle Trips - Trip Characteristics based on information provided in the Traffic Analysis report prepared by Urban Crossroads, Inc.

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Energy Use - The Project will design building shells and building components to meet 2019 Title 24 Standards which expects 30% less energy for nonresidential uses.

Operational Off-Road Equipment - Based on SCAQMD High Cube Warehouse Truck Trip Study White Paper Summary of Business Survey Results (2014)

Fleet Mix - Passenger Car Fleet Mix estimated based on the CalEEMod default fleet mix and the ratio of the vehicle classes (LDA, LDT1, LDT2, and MDV).

Compass Danbe Centerpointe (Building 2 Operations - Passenger Cars) - Riverside-South Coast County, Summer

Project Characteristics -

Land Use - Total Building 2 Area is 5.18 acres.

Construction Phase - Operations Run Only.

Off-road Equipment - Operations Run Only.

Trips and VMT - Operations Run Only.

Vehicle Trips - Trip Characteristics based on information provided in the Traffic Analysis report prepared by Urban Crossroads, Inc.

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Energy Use - The Project will design building shells and building components to meet 2019 Title 24 Standards which expects 30% less energy for nonresidential uses.

Operational Off-Road Equipment - Based on SCAQMD High Cube Warehouse Truck Trip Study White Paper Summary of Business Survey Results (2014)

Fleet Mix - Passenger Car Fleet Mix estimated based on the CalEEMod default fleet mix and the ratio of the vehicle classes (LDA, LDT1, LDT2, and MDV).

Compass Danbe Centerpointe (Building 2 Operations - Passenger Cars) - Riverside-South Coast County, Winter

Project Characteristics -

Land Use - Total Building 2 Area is 5.18 acres.

Construction Phase - Operations Run Only.

Off-road Equipment - Operations Run Only.

Trips and VMT - Operations Run Only.

Vehicle Trips - Trip Characteristics based on information provided in the Traffic Analysis report prepared by Urban Crossroads, Inc.

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Energy Use - The Project will design building shells and building components to meet 2019 Title 24 Standards which expects 30% less energy for nonresidential uses.

Operational Off-Road Equipment - Based on SCAQMD High Cube Warehouse Truck Trip Study White Paper Summary of Business Survey Results (2014)

Fleet Mix - Passenger Car Fleet Mix estimated based on the CalEEMod default fleet mix and the ratio of the vehicle classes (LDA, LDT1, LDT2, and MDV).

Attachment: Appendix A1-Air Quality Impact Analysis (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-

Compass Danbe Center (Building 1 Operations - Trucks) - Riverside-South Coast County, Summer

Project Characteristics -

Land Use - Total Building 1 Area is 12.47 acres.

Construction Phase - Operations Run Only.

Off-road Equipment - Operations Run Only.

Trips and VMT - Operations Run Only.

Vehicle Trips - Trip Characteristics based on information provided in the Traffic Analysis report prepared by Urban Crossroads, Inc.

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Energy Use - The Project will design building shells and building components to meet 2019 Title 24 Standards which expects 30% less energy for nonresidential uses.

Operational Off-Road Equipment - Based on SCAQMD High Cube Warehouse Truck Trip Study White Paper Summary of Business Survey Results (2014)

Fleet Mix - Truck Fleet Mix estimated by rationing the Trip Rates for each truck type based on information provided in the Traffic Analysis.

Compass Danbe Center (Building 1 Operations - Trucks) - Riverside-South Coast County, Winter

Project Characteristics -

Land Use - Total Building 1 Area is 12.47 acres.

Construction Phase - Operations Run Only.

Off-road Equipment - Operations Run Only.

Trips and VMT - Operations Run Only.

Vehicle Trips - Trip Characteristics based on information provided in the Traffic Analysis report prepared by Urban Crossroads, Inc.

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Energy Use - The Project will design building shells and building components to meet 2019 Title 24 Standards which expects 30% less energy for nonresidential uses.

Operational Off-Road Equipment - Based on SCAQMD High Cube Warehouse Truck Trip Study White Paper Summary of Business Survey Results (2014)

Fleet Mix - Truck Fleet Mix estimated by rationing the Trip Rates for each truck type based on information provided in the Traffic Analysis.

Compass Danbe Centerpointe (Building 2 Operations - Trucks) - Riverside-South Coast County, Summer

Project Characteristics -

Land Use - Total Building 2 Area is 5.18 acres.

Construction Phase - Operations Run Only.

Off-road Equipment - Operations Run Only.

Trips and VMT - Operations Run Only.

Vehicle Trips - Trip Characteristics based on information provided in the Traffic Analysis report prepared by Urban Crossroads, Inc.

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Energy Use - The Project will design building shells and building components to meet 2019 Title 24 Standards which expects 30% less energy for nonresidential uses.

Operational Off-Road Equipment - Based on SCAQMD High Cube Warehouse Truck Trip Study White Paper Summary of Business Survey Results (2014)

Fleet Mix - Truck Fleet Mix estimated by rationing the Trip Rates for each truck type based on information provided in the Traffic Analysis.

Compass Danbe Centerpointe (Building 2 Operations - Trucks) - Riverside-South Coast County, Winter

Project Characteristics -

Land Use - Total Building 2 Area is 5.18 acres.

Construction Phase - Operations Run Only.

Off-road Equipment - Operations Run Only.

Trips and VMT - Operations Run Only.

Vehicle Trips - Trip Characteristics based on information provided in the Traffic Analysis report prepared by Urban Crossroads, Inc.

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Energy Use - The Project will design building shells and building components to meet 2019 Title 24 Standards which expects 30% less energy for nonresidential uses.

Operational Off-Road Equipment - Based on SCAQMD High Cube Warehouse Truck Trip Study White Paper Summary of Business Survey Results (2014)

Fleet Mix - Truck Fleet Mix estimated by rationing the Trip Rates for each truck type based on information provided in the Traffic Analysis.

**TO THE HONORABLE CHIEF JUSTICE AND JUSTICES OF THE  
SUPREME COURT:**

**APPLICATION FOR LEAVE TO FILE *AMICUS CURIAE* BRIEF**

Pursuant to Rule 8.520(f) of the California Rules of Court, the South Coast Air Quality Management District (SCAQMD) respectfully requests leave to file the attached *amicus curiae* brief. Because SCAQMD's position differs from that of either party, we request leave to submit this *amicus* brief in support of neither party.

**HOW THIS BRIEF WILL ASSIST THE COURT**

SCAQMD's proposed *amicus* brief takes a position on two of the issues in this case. In both instances, its position differs from that of either party. The issues are:

- 1) Does the California Environmental Quality Act (CEQA) require an environmental impact report (EIR) to correlate a project's air pollution emissions with specific levels of health impacts?
- 2) What is the proper standard of review for determining whether an EIR provides sufficient information on the health impacts caused by a project's emission of air pollutants?

This brief will assist the Court by discussing the practical realities of correlating identified air quality impacts with specific health outcomes. In short, CEQA requires agencies to provide detailed information about a project's air quality impacts that is sufficient for the public and decisionmakers to adequately evaluate the project and meaningfully understand its impacts. However, the level of analysis is governed by a rule of reason; CEQA only requires agencies to conduct analysis if it is reasonably feasible to do so.

With regard to health-related air quality impacts, an analysis that correlates a project's air pollution emissions with specific levels of health impacts will be feasible in some cases but not others. Whether it is feasible depends on a variety of factors, including the nature of the project and the nature of the analysis under consideration. The feasibility of analysis may also change over time as air districts and others develop new tools for measuring projects' air quality related health impacts. Because SCAQMD has among the most sophisticated air quality modeling and health impact evaluation capability of any of the air districts in the State, it is uniquely situated to express an opinion on the extent to which the Court should hold that CEQA requires lead agencies to correlate air quality impacts with specific health outcomes.

SCAQMD can also offer a unique perspective on the question of the appropriate standard of review. SCAQMD submits that the proper standard of review for determining whether an EIR is sufficient as an informational document is more nuanced than argued by either party. In our view, this is a mixed question of fact and law. It includes determining whether additional analysis is feasible, which is primarily a factual question that should be reviewed under the substantial evidence standard. However, it also involves determining whether the omission of a particular analysis renders an EIR insufficient to serve CEQA's purpose as a meaningful, informational document. If a lead agency has not determined that a requested analysis is infeasible, it is the court's role to determine whether the EIR nevertheless meets CEQA's purposes, and courts should not defer to the lead agency's conclusions regarding the legal sufficiency of an EIR's analysis. The ultimate question of whether an EIR's analysis is "sufficient" to serve CEQA's informational purposes is predominately a question of law that courts should review de novo.

This brief will explain the rationale for these arguments and may assist the Court in reaching a conclusion that accords proper respect to a lead agency's factual conclusions while maintaining judicial authority over the ultimate question of what level of analysis CEQA requires.

### **STATEMENT OF INTEREST OF *AMICUS CURIAE***

The SCAQMD is the regional agency primarily responsible for air pollution control in the South Coast Air Basin, which consists of all of Orange County and the non-desert portions of the Los Angeles, Riverside, and San Bernardino Counties. (Health & Saf. Code § 40410; Cal. Code Regs., tit. 17, § 60104.) The SCAQMD participates in the CEQA process in several ways. Sometimes it acts as a lead agency that prepares CEQA documents for projects. Other times it acts as a responsible agency when it has permit authority over some part of a project that is undergoing CEQA review by a different lead agency. Finally, SCAQMD also acts as a commenting agency for CEQA documents that it receives because it is a public agency with jurisdiction by law over natural resources affected by the project.

In all of these capacities, SCAQMD will be affected by the decision in this case. SCAQMD sometimes submits comments requesting that a lead agency perform an additional type of air quality or health impacts analysis. On the other hand, SCAQMD sometimes determines that a particular type of health impact analysis is not feasible or would not produce reliable and informative results. Thus, SCAQMD will be affected by the Court's resolution of the extent to which CEQA requires EIRs to correlate emissions and health impacts, and its resolution of the proper standard of review.

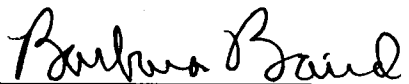

**CERTIFICATION REGARDING AUTHORSHIP AND FUNDING**

No party or counsel in the pending case authored the proposed amicus curiae brief in whole or in part, or made any monetary contribution intended to fund the preparation or submission of the brief. No person or entity other than the proposed *Amicus Curiae* made any monetary contribution intended to fund the preparation or submission of the brief.

Respectfully submitted,

DATED: April 3, 2015

SOUTH COAST AIR QUALITY  
MANAGEMENT DISTRICT  
KURT R. WIESE, GENERAL COUNSEL  
BARBARA BAIRD, CHIEF DEPUTY COUNSEL

*Attorneys for [proposed] Amicus Curiae*  
*SOUTH COAST AIR QUALITY*  
*MANAGEMENT DISTRICT*

## BRIEF OF AMICUS CURIAE

### SUMMARY OF ARGUMENT

The South Coast Air Quality Management District (SCAQMD) submits that this Court should not try to establish a hard-and-fast rule concerning whether lead agencies are required to correlate emissions of air pollutants with specific health consequences in their environmental impact reports (EIR). The level of detail required in EIRs is governed by a few, core CEQA (California Environmental Quality Act) principles. As this Court has stated, “[a]n EIR must include detail sufficient to enable those who did not participate in its preparation to understand and to consider meaningfully the issues raised by the proposed project.” (*Laurel Heights Improvement Assn. v. Regents of the Univ of Cal.* (1988) 47 Cal.3d 376, 405 [*“Laurel Heights I”*]) Accordingly, “an agency must use its best efforts to find out and disclose all that it reasonably can.” (*Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 428 (quoting CEQA Guidelines § 15144)<sup>1</sup>). However, “[a]nalysis of environmental effects need not be exhaustive, but will be judged in light of what is reasonably feasible.” (*Association of Irrigated Residents v. County of Madera* (2003) 107 Cal.App.4th 1383, 1390; CEQA Guidelines §§ 15151, 15204(a).)

With regard to analysis of air quality related health impacts, EIRs must generally quantify a project’s pollutant emissions, but in some cases it is not feasible to correlate these emissions to specific, quantifiable health impacts (e.g., premature mortality; hospital admissions). In such cases, a general description of the adverse health impacts resulting from the pollutants at issue may be sufficient. In other cases, due to the magnitude

---

<sup>1</sup> The CEQA Guidelines are found at Cal. Code Regs., tit. 14 §§ 15000, *et seq.*

or nature of the pollution emissions, as well as the specificity of the project involved, it may be feasible to quantify health impacts. Or there may be a less exacting, but still meaningful analysis of health impacts that can feasibly be performed. In these instances, agencies should disclose those impacts.

SCAQMD also submits that whether or not an EIR complies with CEQA's informational mandates by providing sufficient, feasible analysis is a mixed question of fact and law. Pertinent here, the question of whether an EIR's discussion of health impacts from air pollution is sufficient to allow the public to understand and consider meaningfully the issues involves two inquiries: (1) Is it feasible to provide the information or analysis that a commenter is requesting or a petitioner is arguing should be required?; and (2) Even if it is feasible, is the agency relying on other policy or legal considerations to justify not preparing the requested analysis? The first question of whether an analysis is feasible is primarily a question of fact that should be judged by the substantial evidence standard. The second inquiry involves evaluating CEQA's information disclosure purposes against the asserted reasons to not perform the requested analysis. For example, an agency might believe that its EIR meets CEQA's informational disclosure standards even without a particular analysis, and therefore choose not to conduct that analysis. SCAQMD submits that this is more of a legal question, which should be reviewed de novo as a question of law.

## **ARGUMENT**

### **I. RELEVANT FACTUAL AND LEGAL FRAMEWORK.**

#### **A. Air Quality Regulatory Background**

The South Coast Air Quality Management District (SCAQMD) is one of the local and regional air pollution control districts and air quality

management districts in California. The SCAQMD is the regional air pollution agency for the South Coast Air Basin, which consists of all of Orange County and the non-desert portions of Los Angeles, Riverside, and San Bernardino Counties. (Health & Saf. Code § 40410, 17 Cal. Code Reg. § 60104.) The SCAQMD also includes the Coachella Valley in Riverside County (Palm Springs area to the Salton Sea). (SCAQMD, *Final 2012 AQMP (Feb. 2013)*, <http://www.aqmd.gov/home/library/clean-air-plans/air-quality-mgt-plan/final-2012-air-quality-management-plan>; then follow “chapter 7” hyperlink; pp 7-1, 7-3 (last visited Apr. 1, 2015).) The SCAQMD's jurisdiction includes over 16 million residents and has the worst or nearly the worst air pollution levels in the country for ozone and fine particulate matter. (SCAQMD, *Final 2012 AQMP (Feb. 2013)*, <http://www.aqmd.gov/home/library/clean-air-plans/air-quality-mgt-plan/final-2012-air-quality-management-plan>; then follow “Executive Summary” hyperlink p. ES-1 (last visited Apr. 1, 2015).)

Under California law, the local and regional districts are primarily responsible for controlling air pollution from all sources except motor vehicles. (Health & Saf. Code § 40000.) The California Air Resources Board (CARB), part of the California Environmental Protection Agency, is primarily responsible for controlling pollution from motor vehicles. (*Id.*) The air districts must adopt rules to achieve and maintain the state and federal ambient air quality standards within their jurisdictions. (Health & Saf. Code § 40001.)

The federal Clean Air Act (CAA) requires the United States Environmental Protection Agency (EPA) to identify pollutants that are widely distributed and pose a threat to human health, developing a so-called “criteria” document. (42 U.S.C. § 7408; CAA § 108.) These pollutants are frequently called “criteria pollutants.” EPA must then establish “national ambient air quality standards” at levels “requisite to protect public health”,

allowing “an adequate margin of safety.” (42 U.S.C. § 7409; CAA § 109.) EPA has set standards for six identified pollutants: ozone, nitrogen dioxide, sulfur dioxide, carbon monoxide, particulate matter (PM), and lead. (U.S. EPA, National Ambient Air Quality Standards (NAAQS), <http://www.epa.gov/air/criteria.html> (last updated Oct. 21, 2014).)<sup>2</sup>

Under the Clean Air Act, EPA sets emission standards for motor vehicles and “nonroad engines” (mobile farm and construction equipment, marine vessels, locomotives, aircraft, etc.). (42 U.S.C. §§ 7521, 7547; CAA §§ 202, 213.) California is the only state allowed to establish emission standards for motor vehicles and most nonroad sources; however, it may only do so with EPA's approval. (42 U.S.C. §§ 7543(b), 7543(e); CAA §§ 209(b), 209(c).) Sources such as manufacturing facilities, power plants and refineries that are not mobile are often referred to as “stationary sources.” The Clean Air Act charges state and local agencies with the primary responsibility to attain the national ambient air quality standards. (42 U.S.C. § 7401(a)(3); CAA § 101(a)(3).) Each state must adopt and implement a plan including enforceable measures to achieve and maintain the national ambient air quality standards. (42 U.S.C. § 7410; CAA § 110.) The SCAQMD and CARB jointly prepare portion of the plan for the South Coast Air Basin and submit it for approval by EPA. (Health & Saf. Code §§ 40460, et seq.)

The Clean Air Act also requires state and local agencies to adopt a permit program requiring, among other things, that new or modified “major” stationary sources use technology to achieve the “lowest achievable emission rate,” and to control minor stationary sources as

---

<sup>2</sup> Particulate matter (PM) is further divided into two categories: fine particulate or PM<sub>2.5</sub> (particles with a diameter of less than or equal to 2.5 microns) and coarse particulate (PM<sub>10</sub>) (particles with a diameter of 10 microns or less). (U.S. EPA, Particulate Matter (PM), <http://www.epa.gov/airquality/particulatepollution/> (last visited Apr. 1, 2015).)

needed to help attain the standards. (42 U.S.C. §§ 7502(c)(5), 7503(a)(2), 7410(a)(2)(C); CAA §§ 172(c)(5), 173(a)(2), 110(a)(2)(C).) The air districts implement these permit programs in California. (Health & Saf. Code §§ 42300, et seq.)

The Clean Air Act also sets out a regulatory structure for over 100 so-called “hazardous air pollutants” calling for EPA to establish “maximum achievable control technology” (MACT) for sources of these pollutants. (42 U.S.C. § 7412(d)(2); CAA § 112(d)(2).) California refers to these pollutants as “toxic air contaminants” (TACs) which are subject to two state-required programs. The first program requires “air toxics control measures” for specific categories of sources. (Health & Saf. Code § 39666.) The other program requires larger stationary sources and sources identified by air districts to prepare “health risk assessments” for impacts of toxic air contaminants. (Health & Saf. Code §§ 44320(b), 44322, 44360.) If the health risk exceeds levels identified by the district as “significant,” the facility must implement a “risk reduction plan” to bring its risk levels below “significant” levels. Air districts may adopt additional more stringent requirements than those required by state law, including requirements for toxic air contaminants. (Health & Saf. Code § 41508; *Western Oil & Gas Assn. v. Monterey Bay Unified APCD* (1989) 49 Cal.3d 408, 414.) For example, SCAQMD has adopted a rule requiring new or modified sources to keep their risks below specified levels and use best available control technology (BACT) for toxics. (SCAQMD, *Rule 1401-New Source Review of Toxic Air Contaminants*, <http://www.aqmd.gov/home/regulations/rules/scaqmd-rule-book/regulation-xiv>; then follow “Rule 1401” hyperlink (last visited Apr. 1, 2015).)

## B. The SCAQMD's Role Under CEQA

The California Environmental Quality Act (CEQA) requires public agencies to perform an environmental review and appropriate analysis for projects that they implement or approve. (Pub. Resources Code § 21080(a).) The agency with primary approval authority for a particular project is generally the “lead agency” that prepares the appropriate CEQA document. (CEQA Guidelines §§ 15050, 15051.) Other agencies having a subsequent approval authority over all or part of a project are called “responsible” agencies that must determine whether the CEQA document is adequate for their use. (CEQA Guidelines §§ 15096(c), 15381.) Lead agencies must also consult with and circulate their environmental impact reports to “trustee agencies” and agencies “with jurisdiction by law” including “authority over resources which may be affected by the project.” (Pub. Resources Code §§ 21104(a), 21153; CEQA Guidelines §§ 15086(a)(3), 15073(c).) The SCAQMD has a role in all these aspects of CEQA.

Fulfilling its responsibilities to implement its air quality plan and adopt rules to attain the national ambient air quality standards, SCAQMD adopts a dozen or more rules each year to require pollution reductions from a wide variety of sources. The SCAQMD staff evaluates each rule for any adverse environmental impact and prepares the appropriate CEQA document. Although most rules reduce air emissions, they may have secondary environmental impacts such as use of water or energy or disposal of waste—e.g., spent catalyst from control equipment.<sup>3</sup>

---

<sup>3</sup> The SCAQMD's CEQA program for its rules is a “Certified Regulatory Program” under which it prepares a “functionally equivalent” document in lieu of a negative declaration or EIR. (Pub. Resources Code § 21080.5, CEQA Guidelines § 15251(l).)

The SCAQMD also approves a large number of permits every year to construct new, modified, or replacement facilities that emit regulated air pollutants. The majority of these air pollutant sources have already been included in an earlier CEQA evaluation for a larger project, are currently being evaluated by a local government as lead agency, or qualify for an exemption. However, the SCAQMD sometimes acts as lead agency for major projects where the local government does not have a discretionary approval. In such cases, SCAQMD prepares and certifies a negative declaration or environmental impact report (EIR) as appropriate.<sup>4</sup> SCAQMD evaluates perhaps a dozen such permit projects under CEQA each year. SCAQMD is often also a “responsible agency” for many projects since it must issue a permit for part of the projects (e.g., a boiler used to provide heat in a commercial building). For permit projects evaluated by another lead agency under CEQA, SCAQMD has the right to determine that the CEQA document is inadequate for its purposes as a responsible agency, but it may not do so because its permit program already requires all permitted sources to use the best available air pollution control technology. (SCAQMD, *Rule 1303(a)(1) – Requirements*, <http://www.aqmd.gov/home/regulations/rules/scaqmd-rule-book/regulation-xiii>; then follow “Rule 1303” hyperlink (last visited Apr. 1, 2015).)

Finally, SCAQMD receives as many as 60 or more CEQA documents each month (around 500 per year) in its role as commenting agency or an agency with “jurisdiction by law” over air quality—a natural resource affected by the project. (Pub. Resources Code §§ 21104(a), 21153; CEQA Guidelines § 15366(a)(3).) The SCAQMD staff provides comments on as many as 25 or 30 such documents each month.

---

<sup>4</sup> The SCAQMD's permit projects are not included in its Certified Regulatory Program, and are evaluated under the traditional local government CEQA analysis. (Pub. Resources Code §§ 21150-21154.)

(SCAQMD Governing Board Agenda, Apr. 3, 2015, Agenda Item 16, Attachment A, <http://www.aqmd.gov/home/library/meeting-agendas-minutes/agenda?title=governing-board-meeting-agenda-april-3-2015>; then follow “16. Lead Agency Projects and Environmental Documents Received by SCAQMD” hyperlink (last visited Apr. 1, 2015).) Of course, SCAQMD focuses its commenting efforts on the more significant projects.

Typically, SCAQMD comments on the adequacy of air quality analysis, appropriateness of assumptions and methodology, and completeness of the recommended air quality mitigation measures. Staff may comment on the need to prepare a health risk assessment detailing the projected cancer and noncancer risks from toxic air contaminants resulting from the project, particularly the impacts of diesel particulate matter, which CARB has identified as a toxic air contaminant based on its carcinogenic effects. (California Air Resources Board, Resolution 98-35, Aug. 27, 1998, <http://www.arb.ca.gov/regact/diesltac/diesltac.htm>; then follow Resolution 98-35 hyperlink (last visited Apr. 1, 2015).) Because SCAQMD already requires new or modified stationary sources of toxic air contaminants to use the best available control technology for toxics and to keep their risks below specified levels, (SCAQMD Rule 1401, *supra*, note 15), the greatest opportunity to further mitigate toxic impacts through the CEQA process is by reducing emissions—particularly diesel emissions—from vehicles.

**II. THIS COURT SHOULD NOT SET A HARD-AND-FAST RULE CONCERNING THE EXTENT TO WHICH AN EIR MUST CORRELATE A PROJECT’S EMISSION OF POLLUTANTS WITH RESULTING HEALTH IMPACTS.**

Numerous cases hold that courts do not review the correctness of an EIR’s conclusions but rather its sufficiency as an informative document. (*Laurel Heights 1*, *supra*, 47 Cal.3d at p. 392; *Citizens of Goleta Valley v.*

*Bd. of Supervisors* (1990) 52 Cal.3d 553, 569; *Bakersfield Citizens for Local Control v. City of Bakersfield* (2004) 124 Cal.App.4th 1184, 1197.)

As stated by the Court of Appeal in this case, where an EIR has addressed a topic, but the petitioner claims that the information provided about that topic is insufficient, courts must “draw[] a line that divides *sufficient* discussions from those that are *insufficient*.” (*Sierra Club v. County of Fresno* (2014) 226 Cal.App.4th 704 (superseded by grant of review) 172 Cal.Rptr.3d 271, 290.) The Court of Appeal readily admitted that “[t]he terms themselves – sufficient and insufficient – provide little, if any, guidance as to where the line should be drawn. They are simply labels applied once the court has completed its analysis.” (*Id.*)

The CEQA Guidelines, however, provide guidance regarding what constitutes a sufficient discussion of impacts. Section 15151 states that “the sufficiency of an EIR is to be reviewed in light of what is reasonably feasible.” Case law reflects this: “Analysis of environmental effects need not be exhaustive, but will be judged in light of what was reasonably feasible.” (*Association of Irrigated Residents v. County of Madera, supra*, 107 Cal.App.4th at p. 1390; see also CEQA Guidelines § 15204(a).)

Applying this test, this Court cannot realistically establish a hard-and-fast rule that an analysis correlating air pollution impacts of a project to quantified resulting health impacts is always required, or indeed that it is never required. Simply put, in some cases such an analysis will be “feasible”; in some cases it will not.

For example, air pollution control districts often require a proposed new source of toxic air contaminants to prepare a “health risk assessment” before issuing a permit to construct. District rules often limit the allowable cancer risk the new source may cause to the “maximally exposed individual” (worker and residence exposures). (*See, e.g.*, SCAQMD Rule 1401(c)(8); 1401(d)(1), *supra* note 15.) In order to perform this analysis, it

is necessary to have data regarding the sources and types of air toxic contaminants, location of emission points, velocity of emissions, the meteorology and topography of the area, and the location of receptors (worker and residence). (SCAQMD, *Supplemental Guidelines for Preparing Risk Assessments for the Air Toxics "Hot Spots" Information and Assessment Act (AB2588)*, pp. 11-16; (last visited Apr. 1, 2015) <http://www.aqmd.gov/home/library/documents-support-material>; "Guidelines" hyperlink; AB2588; then follow AB2588 Risk Assessment Guidelines hyperlink.)

Thus, it is feasible to determine the health risk posed by a new gas station locating at an intersection in a mixed use area, where receptor locations are known. On the other hand, it may not be feasible to perform a health risk assessment for airborne toxics that will be emitted by a generic industrial building that was built on "speculation" (i.e., without knowing the future tenant(s)). Even where a health risk assessment can be prepared, however, the resulting maximum health risk value is only a calculation of risk—it does not necessarily mean anyone will contract cancer as a result of the project.

In order to find the "cancer burden" or expected additional cases of cancer resulting from the project, it is also necessary to know the numbers and location of individuals living within the "zone of impact" of the project: i.e., those living in areas where the projected cancer risk from the project exceeds one in a million. (SCAQMD, Health Risk Assessment Summary form, <http://www.aqmd.gov/home/forms>; filter by "AB2588" category; then "Health Risk Assessment" hyperlink (last visited Apr. 1, 2015).) The affected population is divided into bands of those exposed to at least 1 in a million risk, those exposed to at least 10 in a million risk, etc. up to those exposed at the highest levels. (*Id.*) This data allows agencies to calculate an approximate number of additional cancer cases expected from

the project. However, it is not possible to predict which particular individuals will be affected.

For the so-called criteria pollutants<sup>5</sup>, such as ozone, it may be more difficult to quantify health impacts. Ozone is formed in the atmosphere from the chemical reaction of the nitrogen oxides (NO<sub>x</sub>) and volatile organic compounds (VOC) in the presence of sunlight. (U.S. EPA, Ground Level Ozone, <http://www.epa.gov/airquality/ozonepollution/> (last updated Mar. 25, 2015).) It takes time and the influence of meteorological conditions for these reactions to occur, so ozone may be formed at a distance downwind from the sources. (U.S. EPA, *Guideline on Ozone Monitoring Site Selection* (Aug. 1998) EPA-454/R-98-002 § 5.1.2, <http://www.epa.gov/ttnamti1/archive/cpreldoc.html> (last visited Apr. 1, 2015).) NO<sub>x</sub> and VOC are known as “precursors” of ozone.

Scientifically, health effects from ozone are correlated with increases in the ambient level of ozone in the air a person breathes. (U.S. EPA, *Health Effects of Ozone in the General Population*, Figure 9, <http://www.epa.gov/apti/ozonehealth/population.html#levels> (last visited Apr. 1, 2015).) However, it takes a large amount of additional precursor emissions to cause a modeled increase in ambient ozone levels over an entire region. For example, the SCAQMD's 2012 AQMP showed that reducing NO<sub>x</sub> by 432 tons per day (157,680 tons/year) and reducing VOC by 187 tons per day (68,255 tons/year) would reduce ozone levels at the SCAQMD's monitor site with the highest levels by only 9 parts per billion. (South Coast Air Quality Management District, *Final 2012 AQMP (February 2013)*, <http://www.aqmd.gov/home/library/clean-air-plans/air-quality-mgt-plan/final-2012-air-quality-management-plan>; then follow “Appendix V: Modeling & Attainment Demonstrations” hyperlink,

---

<sup>5</sup> See discussion of types of pollutants, supra, Part I.A.

pp. v-4-2, v-7-4, v-7-24.) SCAQMD staff does not currently know of a way to accurately quantify ozone-related health impacts caused by NO<sub>x</sub> or VOC emissions from relatively small projects.

On the other hand, this type of analysis may be feasible for projects on a regional scale with very high emissions of NO<sub>x</sub> and VOCs, where impacts are regional. For example, in 2011 the SCAQMD performed a health impact analysis in its CEQA document for proposed Rule 1315, which authorized various newly-permitted sources to use offsets from the districts “internal bank” of emission reductions. This CEQA analysis accounted for essentially *all* the increases in emissions due to new or modified sources in the District between 2010 and 2030.<sup>6</sup> The SCAQMD was able to correlate this very large emissions increase (e.g., 6,620 pounds per day NO<sub>x</sub> (1,208 tons per year), 89,180 pounds per day VOC (16,275 tons per year)) to expected health outcomes from ozone and particulate matter (e.g., 20 premature deaths per year and 89,947 school absences in the year 2030 due to ozone).<sup>7</sup> (SCAQMD Governing Board Agenda, February 4, 2011, Agenda Item 26, *Assessment for: Re-adoption of Proposed Rule 1315 – Federal New Source Review Tracking System* (see hyperlink in fn 6) at p. 4.1-35, Table 4.1-29.)

---

<sup>6</sup> (SCAQMD Governing Board Agenda, February 4, 2011, Agenda Item 26, Attachment G, *Assessment for: Re-adoption of Proposed Rule 1315 – Federal New Source Review Tracking System, Vol. 1, p.4.0-6*, <http://www.aqmd.gov/home/library/meeting-agendas-minutes/agenda?title=governing-board-meeting-agenda-february-4-2011>; the follow “26. Adopt Proposed Rule 1315 – Federal New Source Review Tracking System” (last visited April 1, 2015).)

<sup>7</sup> The SCAQMD was able to establish the location of future NO<sub>x</sub> and VOC emissions by assuming that new projects would be built in the same locations and proportions as existing stationary sources. This CEQA document was upheld by the Los Angeles County Superior Court in *Natural Res. Def. Council v SCAQMD*, Los Angeles Superior Court No. BS110792).

However, a project emitting only 10 tons per year of NO<sub>x</sub> or VOC is small enough that its regional impact on ambient ozone levels may not be detected in the regional air quality models that are currently used to determine ozone levels. Thus, in this case it would not be feasible to directly correlate project emissions of VOC or NO<sub>x</sub> with specific health impacts from ozone. This is in part because ozone formation is not linearly related to emissions. Ozone impacts vary depending on the location of the emissions, the location of other precursor emissions, meteorology and seasonal impacts, and because ozone is formed some time later and downwind from the actual emission. (EPA Guideline on Ozone Monitoring Site Selection (Aug. 1998) EPA-454/R-98-002, § 5.1.2; <https://www.epa.gov/ttnamti1/archive/cpreldoc.html>; then search “Guideline on Ozone Monitoring Site Selection” click on pdf) (last viewed Apr. 1, 2015).)

SCAQMD has set its CEQA “significance” threshold for NO<sub>x</sub> and VOC at 10 tons per year (expressed as 55 lb/day). (SCAQMD, *Air Quality Analysis Handbook*, <http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook>; then follow “SCAQMD Air Quality Significance Thresholds” hyperlink (last visited Apr. 1, 2015).) This is because the federal Clean Air Act defines a “major” stationary source for “extreme” ozone nonattainment areas such as SCAQMD as one emitting 10 tons/year. (42 U.S.C. §§ 7511a(e), 7511a(f); CAA §§ 182(e), 182(f).) Under the Clean Air Act, such sources are subject to enhanced control requirements (42 U.S.C. §§ 7502(c)(5), 7503; CAA §§ 172(c)(5), 173), so SCAQMD decided this was an appropriate threshold for making a CEQA “significance” finding and requiring feasible mitigation. Essentially, SCAQMD takes the position that a source that emits 10 tons/year of NO<sub>x</sub> or VOC would contribute cumulatively to ozone formation. Therefore, lead agencies that use SCAQMD’s thresholds of significance may determine

that many projects have “significant” air quality impacts and must apply all feasible mitigation measures, yet will not be able to precisely correlate the project to quantifiable health impacts, unless the emissions are sufficiently high to use a regional modeling program.

In the case of particulate matter (PM<sub>2.5</sub>)<sup>8</sup>, another “criteria” pollutant, SCAQMD staff is aware of two possible methods of analysis. SCAQMD used regional modeling to predict expected health impacts from its proposed Rule 1315, as mentioned above. Also, the California Air Resources Board (CARB) has developed a methodology that can predict expected mortality (premature deaths) from large amounts of PM<sub>2.5</sub>. (California Air Resources Board, *Health Impacts Analysis: PM Premature Death Relationship*, [http://www.arb.ca.gov/research/health/pm-mort/pm-mort\\_arch.htm](http://www.arb.ca.gov/research/health/pm-mort/pm-mort_arch.htm) (last reviewed Jan. 19, 2012).) SCAQMD used the CARB methodology to predict impacts from three very large power plants (e.g., 731-1837 lbs/day). (Final Environmental Assessment for Rule 1315, *supra*, pp 4.0-12, 4.1-13, 4.1-37 (e.g., 125 premature deaths in the entire SCAQMD in 2030), 4.1-39 (0.05 to 1.77 annual premature deaths from power plants.) Again, this project involved large amounts of additional PM<sub>2.5</sub> in the District, up to 2.82 tons/day (5,650 lbs/day of PM<sub>2.5</sub>, or, or 1029 tons/year. (*Id.* at table 4.1-4, p. 4.1-10.)

However, the primary author of the CARB methodology has reported that this PM<sub>2.5</sub> health impact methodology is not suited for small projects and may yield unreliable results due to various uncertainties.<sup>9</sup> (SCAQMD, *Final Subsequent Mitigated Negative Declaration for: Warren*

<sup>8</sup> SCAQMD has not attained the latest annual or 24-hour national ambient air quality standards for “PM<sub>2.5</sub>” or particulate matter less than 2.5 microns in diameter.

<sup>9</sup> Among these uncertainties are the representativeness of the population used in the methodology, and the specific source of PM and the corresponding health impacts. (*Id.* at p. 2-24.)

*E&P, Inc. WTU Central Facility, New Equipment Project* (certified July 19, 2011), <http://www.aqmd.gov/home/library/documents-support-material/lead-agency-permit-projects/permit-project-documents---year-2011>; then follow “Final Subsequent Mitigated Negative Declaration for Warren E&P Inc. WTU Central Facility, New Equipment Project” hyperlink, pp. 2-22, 2-23 (last visited Apr. 1, 2015).) Therefore, when SCAQMD prepared a CEQA document for the expansion of an existing oil production facility, with very small PM<sub>2.5</sub> increases (3.8 lb/day) and a very small affected population, staff elected not to use the CARB methodology for using estimated PM<sub>2.5</sub> emissions to derive a projected premature mortality number and explained why it would be inappropriate to do so. (*Id.* at pp 2-22 to 2-24.) SCAQMD staff concluded that use of this methodology for such a small source could result in unreliable findings and would not provide meaningful information. (*Id.* at pp. 2-23, 2-25.) This CEQA document was not challenged in court.

In the above case, while it may have been technically possible to plug the data into the methodology, the results would not have been reliable or meaningful. SCAQMD believes that an agency should not be required to perform analyses that do not produce reliable or meaningful results. This Court has already held that an agency may decline to use even the “normal” “existing conditions” CEQA baseline where to do so would be misleading or without informational value. (*Neighbors for Smart Rail v. Exposition Metro Line* (2013) 57 Cal.4th 439, 448, 457.) The same should be true for a decision that a particular study or analysis would not provide reliable or meaningful results.<sup>10</sup>

<sup>10</sup> Whether a particular study would result in “informational value” is a part of deciding whether it is “feasible.” CEQA defines “feasible” as “capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social, and

Therefore, it is not possible to set a hard-and-fast rule on whether a correlation of air quality impacts with specific quantifiable health impacts is required in all cases. Instead, the result turns on whether such an analysis is reasonably feasible in the particular case.<sup>11</sup> Moreover, what is reasonably feasible may change over time as scientists and regulatory agencies continually seek to improve their ability to predict health impacts. For example, CARB staff has been directed by its Governing Board to reassess and improve the methodology for estimating premature deaths. (California Air Resources Board, *Health Impacts Analysis: PM Mortality Relationship*, <http://www.arb.ca.gov/research/health/pm-mort/pm-mort.htm> (last reviewed Dec. 29, 2010).) This factor also counsels against setting any hard-and-fast rule in this case.

### **III. THE QUESTION OF WHETHER AN EIR CONTAINS SUFFICIENT ANALYSIS TO MEET CEQA'S REQUIREMENTS IS A MIXED QUESTION OF FACT AND LAW GOVERNED BY TWO DIFFERENT STANDARDS OF REVIEW.**

#### **A. Standard of Review for Feasibility Determination and Sufficiency as an Informative Document**

A second issue in this case is whether courts should review an EIR's informational sufficiency under the “substantial evidence” test as argued by Friant Ranch or the “independent judgment” test as argued by Sierra Club.

---

technological factors.” (Pub. Resources Code § 21061.1.) A study cannot be “accomplished in a *successful* manner” if it produces unreliable or misleading results.

<sup>11</sup> In this case, the lead agency did not have an opportunity to determine whether the requested analysis was feasible because the comment was non-specific. Therefore, SCAQMD suggests that this Court, after resolving the legal issues in the case, direct the Court of Appeal to remand the case to the lead agency for a determination of whether the requested analysis is feasible. Because Fresno County, the lead agency, did not seek review in this Court, it seems likely that the County has concluded that at least some level of correlation of air pollution with health impacts is feasible.

SCAQMD submits that the issue is more nuanced than either party contends. We submit that, whether a CEQA document includes sufficient analysis to satisfy CEQA's informational mandates is a mixed question of fact and law,<sup>13</sup> containing two levels of inquiry that should be judged by different standards.<sup>14</sup>

The state CEQA Guidelines set forth standards for the adequacy of environmental analysis. Guidelines Section 15151 states:

An EIR should be prepared with a sufficient degree of analysis to provide decision makers with information which enables them to make a decision which intelligently takes account of environmental consequences. An evaluation of the environmental effects of a proposed project need not be exhaustive, but the sufficiency of an EIR is to be reviewed in light of what is reasonably feasible. Disagreement among experts does not make an EIR inadequate, but the EIR should summarize the main points of disagreement among the experts. The courts have looked not for perfection, but for adequacy, completeness, and a good-faith effort at full disclosure.

In this case, the basic question is whether the underlying analysis of air quality impacts made the EIR "sufficient" as an informative document. However, whether the EIR's analysis was sufficient is judged in light of what was reasonably feasible. This represents a mixed question of fact and law that is governed by two different standards of review.

---

<sup>13</sup> Friant Ranch actually states that the claim that an EIR lacks sufficient relevant information is, "most properly thought of as raising mixed questions of fact and law." (Opening Brief, p. 27.) However, the remainder of its argument claims that the court should apply the substantial evidence standard of review to all aspects of the issue.

<sup>14</sup> Mixed questions of fact and law issues may implicate predominantly factual subordinate questions that are reviewed under the substantial evidence test even though the ultimate question may be reviewed by the independent judgment test. *Crocker National Bank v. City and County of San Francisco* (1989) 49 Cal.3d 881, 888-889.

SCAQMD submits that an EIR’s sufficiency as an informational document is ultimately a legal question that courts should determine using their independent judgment. This Court’s language in *Laurel Heights I* supports this position. As this Court explained: “The court does not pass upon the correctness of the EIR’s environmental conclusions, but only upon its *sufficiency as an informative document*.” (*Laurel Heights I, supra*, 47 Cal.3d at 392-393) (emphasis added.) As described above, the Court in *Vineyard Area Citizens v. City of Rancho Cordova, supra*, 40 Cal.4th at 431, also used its independent judgment to determine what level of analysis CEQA requires for water supply impacts. The Court did not defer to the lead agency’s opinion regarding the law’s requirements; rather, it determined for itself what level of analysis was necessary to meet “[t]he law’s informational demands.” (*Id.* at p. 432.) Further, existing case law also holds that where an agency fails to comply with CEQA’s information disclosure requirements, the agency has “failed to proceed in the manner required by law.” (*Save Our Peninsula Comm. v. Monterey County Bd. of Supervisors* (2001) 87 Cal.App.4th 99, 118.)

However, whether an EIR satisfies CEQA’s requirements depends in part on whether it was reasonably feasible for an agency to conduct additional or more thorough analysis. EIRs must contain “a detailed statement” of a project’s impacts (Pub. Res. Code § 21061), and an agency must “use its best efforts to find out and disclose all that it reasonably can.” (CEQA Guidelines § 15144.) Nevertheless, “the sufficiency of an EIR is to be reviewed in light of what is reasonably feasible.” (CEQA Guidelines § 15151.)

SCAQMD submits that the question of whether additional analysis or a particular study suggested by a commenter is “feasible” is generally a question of fact. Courts have already held that whether a particular alternative is “feasible” is reviewed by the substantial evidence test.

(*Uphold Our Heritage v. Town of Woodside* (2007) 147 Cal.App.4th 587, 598-99; *Center for Biological Diversity v. County of San Bernardino* (2010) 185 Cal.App.4th 866, 883.) Thus, if a lead agency determines that a particular study or analysis is infeasible, that decision should generally be judged by the substantial evidence standard. However, SCAQMD urges this Court to hold that lead agencies must explain the basis of any determination that a particular analysis is infeasible in the EIR itself. An EIR must discuss information, including issues related to the feasibility of particular analyses “in sufficient detail to enable meaningful participation and criticism by the public. ‘[W]hatever is required to be considered in an EIR must be in that formal report; what any official might have known from other writings or oral presentations cannot supply what is lacking in the report.’” (*Laurel Heights I, supra*, 47 Cal.3d at p. 405 (quoting *Santiago County Water District v. County of Orange* (1981) 118 Cal.App.3d 818, 831) (discussing analysis of alternatives).) The evidence on which the determination is based should also be summarized in the EIR itself, with appropriate citations to reference materials if necessary. Otherwise commenting agencies such as SCAQMD would be forced to guess where the lead agency's evidence might be located, thus thwarting effective public participation.

Moreover, if a lead agency determines that a particular study or analysis would not result in reliable or useful information and for that reason is not feasible, that determination should be judged by the substantial evidence test. (See *Neighbors for Smart Rail v. Exposition Metro Line Construction Authority, supra*, 57 Cal.4th 439, 448, 457:

whether “existing conditions” baseline would be misleading or uninformative judged by substantial evidence standard.<sup>15</sup>)

If the lead agency’s determination that a particular analysis or study is not feasible is supported by substantial evidence, then the agency has not violated CEQA’s information disclosure provisions, since it would be infeasible to provide additional information. This Court’s decisions provide precedent for such a result. For example, this Court determined that the issue of whether the EIR should have included a more detailed discussion of future herbicide use was resolved because substantial evidence supported the agency’s finding that “the precise parameters of future herbicide use could not be predicted.” *Ebbetts Pass Forest Watch v. California Dept. of Forestry & Fire Protection* (2008) 43 Cal.4th 936, 955.

Of course, SCAQMD expects that courts will continue to hold lead agencies to their obligations to consult with, and not to ignore or misrepresent, the views of sister agencies having special expertise in the area of air quality. (*Berkeley Keep Jets Over the Bay v. Board of Port Commissioners* (2007) 91 Cal.App.4<sup>th</sup> 1344, 1364 n.11.) In some cases, information provided by such expert agencies may establish that the purported evidence relied on by the lead agency is not in fact “substantial”. (*Id.* at pp. 1369-1371.)

In sum, courts retain ultimate responsibility to determine what CEQA requires. However, the law does not require exhaustive analysis, but only what is reasonably feasible. Agencies deserve deference for their factual determinations regarding what type of analysis is reasonably feasible. On the other hand, if a commenter requests more information, and the lead agency declines to provide it but does *not* determine that the

---

<sup>15</sup> The substantial evidence standard recognizes that the courts "have neither the resources nor the scientific expertise" to weigh conflicting evidence on technical issues. (*Laurel Heights I, supra*, 47 Cal.3d 376, 393.)

requested study or analysis would be infeasible, misleading or uninformative, the question becomes whether the omission of that analysis renders the EIR inadequate to satisfy CEQA’s informational purposes. (*Id.* at pp. 1370-71.) Again, this is predominantly a question of law and should be judged by the de novo or independent judgment standard of review. Of course, this Court has recognized that a “project opponent or reviewing court can always imagine some additional study or analysis that might provide helpful information. It is not for them to design the EIR. That further study...might be helpful does not make it necessary.” (*Laurel Heights I, supra*, 47 Cal.3d 376, 415 – see also CEQA Guidelines § 15204(a) [CEQA “does not require a lead agency to conduct every test. . . recommended or demanded by commenters.”].) Courts, then, must adjudicate whether an omission of particular information renders an EIR inadequate to serve CEQA’s informational purposes.<sup>16</sup>

---

<sup>16</sup> We recognize that there is case law stating that the substantial evidence standard applies to “challenges to the scope of an EIR’s analysis of a topic” as well as the methodology used and the accuracy of the data relied on in the document “because these types of challenges involve factual questions.” (*Bakersfield Citizens for Local Control v. City of Bakersfield, supra*, 124 Cal.App.4<sup>th</sup> 1184, 1198, and cases relied on therein.) However, we interpret this language to refer to situations where the question of the scope of the analysis really is factual—that is, where it involves whether further analysis is feasible, as discussed above. This interpretation is supported by the fact that the *Bakersfield* court expressly rejected an argument that a claimed “omission of information from the EIR should be treated as inquiries whether there is substantial evidence supporting the decision approving the project.” *Bakersfield, supra*, 124 Cal.App.4<sup>th</sup> at p. 1208. And the *Bakersfield* court ultimately decided that the lead agency must analyze the connection between the identified air pollution impacts and resulting health impacts, even though the EIR already included some discussion of air-pollution-related respiratory illnesses. *Bakersfield, supra*, 124 Cal.App.4<sup>th</sup> at p. 1220. Therefore, the court must not have interpreted this question as one of the “scope of the analysis” to be judged by the substantial evidence standard.

**B. Friant Ranch's Rationale for Rejecting the Independent Judgment Standard of Review is Unsupported by Case Law.**

In its brief, Friant Ranch makes a distinction between cases where a required CEQA topic is not discussed at all (to be reviewed by independent judgment as a failure to proceed in the manner required by law) and cases where a topic is discussed, but the commenter claims the information provided is insufficient (to be judged by the substantial evidence test). (Opening Brief, pp. 13-17.) The Court of Appeal recognized these two types of cases, but concluded that both raised questions of law. (*Sierra Club v. County of Fresno* (2014) 226 Cal.App.4th 704 (superseded by grant of review) 172 Cal.Rptr.3d 271, 290.) We believe the distinction drawn by Friant Ranch is unduly narrow, and inconsistent with cases which have concluded that CEQA documents are insufficient. In many instances, CEQA's requirements are stated broadly, and the courts must interpret the law to determine what level of analysis satisfies CEQA's mandate for providing meaningful information, even though the EIR discusses the issue to some extent.

For example, the CEQA Guidelines require discussion of the existing environmental baseline. In *County of Amador v. El Dorado County Water Agency* (1999) 76 Cal.App.4th 931, 954-955, the lead agency had discussed the environmental baseline by describing historic month-end water levels in the affected lakes. However, the court held that this was not an adequate baseline discussion because it failed to discuss the timing and amounts of past actual water releases, to allow comparison with the proposed project. The court evidently applied the independent judgment test to its decision, even though the agency discussed the issue to some extent.

Likewise, in *Vineyard Area Citizens* (2007) 40 Cal.4th 412, this Court addressed the question of whether an EIR’s analysis of water supply impacts complied with CEQA. The parties agreed that the EIR was required to analyze the effects of providing water to the development project, “and that in order to do so the EIR had, in some manner, to identify the planned sources of that water.” (*Vineyard Area Citizens, supra*, at p. 428.) However, the parties disagreed as to the level of detail required for this analysis and “what level of uncertainty regarding the availability of water supplies can be tolerated in an EIR . . . .” (*Id.*) In other words, the EIR had analyzed water supply impacts for the project, but the petitioner claimed that the analysis was insufficient.

This Court noted that neither CEQA’s statutory language or the CEQA Guidelines specifically addressed the question of how precisely an EIR must discuss water supply impacts. (*Id.*) However, it explained that CEQA “states that ‘[w]hile foreseeing the unforeseeable is not possible, an agency must use its best efforts to find out and disclose all that it reasonably can.’” (*Id.*, [Guidelines § 15144].) The Court used this general principle, along with prior precedent, to elucidate four “principles for analytical adequacy” that are necessary in order to satisfy “CEQA’s informational purposes.” (*Vineyard Area Citizens, supra*, at p. 430.) The Court did not defer to the agency’s determination that the EIR’s analysis of water supply impacts was sufficient. Rather, this Court used its independent judgment to determine for itself the level of analysis required to satisfy CEQA’s fundamental purposes. (*Vineyard Area Citizens, supra*, at p. 441: an EIR does not serve its purposes where it neglects to explain likely sources of water and “... leaves long term water supply considerations to later stages of the project.”)

Similarly, the CEQA Guidelines require an analysis of noise impacts of the project. (Appendix G, “Environmental Checklist Form.”<sup>17</sup>) In *Gray v. County of Madera* (2008) 167 Cal.App.4th 1099, 1123, the court held that the lead agency’s noise impact analysis was inadequate even though it had addressed the issue and concluded that the increase would not be noticeable. If the court had been using the substantial evidence standard, it likely would have upheld this discussion.

Therefore, we do not agree that the issue can be resolved on the basis suggested by Friant Ranch, which would apply the substantial evidence standard to *every* challenge to an analysis that addresses a required CEQA topic. This interpretation would subvert the courts’ proper role in interpreting CEQA and determining what the law requires.

Nor do we agree that the Court of Appeal in this case violated CEQA’s prohibition on courts interpreting its provisions “in a manner which imposes procedural or substantive requirements beyond those explicitly stated in this division or in the state guidelines.” (Pub. Resources Code § 21083.1.) CEQA requires an EIR to describe *all* significant impacts of the project on the environment. (Pub. Resources Code § 21100(b)(2); *Vineyard Area Citizens, supra*, at p. 428.) Human beings are part of the environment, so CEQA requires EIRs to discuss a project’s significant impacts on human health. However, except in certain particular circumstances,<sup>18</sup> neither the CEQA statute nor Guidelines specify the precise level of analysis that agencies must undertake to satisfy the law’s requirements. (see, e.g., CEQA Guidelines § 15126.2(a) [EIRs must describe “health and safety problems caused by {a project’s} physical changes”].) Accordingly, courts must interpret CEQA as a whole to

<sup>17</sup> Association of Environmental Professionals, 2015 CEQA Statute and Guidelines (2015) p.287.

<sup>18</sup> E.g., Pub. Resources Code § 21151.8(C)(3)(B)(iii) (requiring specific type of health risk analysis for siting schools).

determine whether a particular EIR is sufficient as an informational document. A court determining whether an EIR's discussion of human health impacts is legally sufficient does not constitute imposing a new substantive requirement.<sup>19</sup> Under Friant Ranch's theory, the above-referenced cases holding a CEQA analysis inadequate would have violated the law. This is not a reasonable interpretation.

#### **IV. COURTS MUST SCRUPULOUSLY ENFORCE THE REQUIREMENTS THAT LEAD AGENCIES CONSULT WITH AND OBTAIN COMMENTS FROM AIR DISTRICTS**

Courts must "scrupulously enforce" CEQA's legislatively mandated requirements. (*Vineyard Area Citizens, supra*, 40 Cal.4<sup>th</sup> 412, 435.) Case law has firmly established that lead agencies must consult with the relevant air pollution control district before conducting an initial study, and must provide the districts with notice of the intention to adopt a negative declaration (or EIR). (*Schenck v. County of Sonoma* (2011) 198 Cal.App.4th 949, 958.) As *Schenck* held, neither publishing the notice nor providing it to the State Clearinghouse was a sufficient substitute for sending notice directly to the air district. (*Id.*) Rather, courts "must be satisfied that [administrative] agencies have fully complied with the procedural requirements of CEQA, since only in this way can the important public purposes of CEQA be protected from subversion." *Schenck*, 198 Cal.App.4th at p. 959 (citations omitted).<sup>20</sup>

<sup>19</sup> We submit that Public Resources Code Section 21083.1 was intended to prevent courts from, for example, holding that an agency must analyze economic impacts of a project where there are no resulting environmental impacts (see CEQA Guidelines § 15131), or imposing new procedural requirements, such as imposing additional public notice requirements not set forth in CEQA or the Guidelines.

<sup>20</sup> Lead agencies must consult air districts, as public agencies with jurisdiction by law over resources affected by the project, *before* releasing an EIR. (Pub. Resources Code §§ 21104(a); 21153.) Moreover, air

Lead agencies should be aware, therefore, that failure to properly seek and consider input from the relevant air district constitutes legal error which may jeopardize their project approvals. For example, the court in *Fall River Wild Trout Foundation v. County of Shasta*, (1999) 70 Cal.App.4th 482, 492 held that the failure to give notice to a trustee agency (Department of Fish and Game) was prejudicial error requiring reversal. The court explained that the lack of notice prevented the Department from providing any response to the CEQA document. (*Id.* at p. 492.) It therefore prevented relevant information from being presented to the lead agency, which was prejudicial error because it precluded informed decision-making. (*Id.*)<sup>21</sup>

---

districts should be considered “state agencies” for purposes of the requirement to consult with “trustee agencies” as set forth in Public Resources Code § 20180.3(a). This Court has long ago held that the districts are not mere “local agencies” whose regulations are superseded by those of a state agency regarding matters of statewide concern, but rather have concurrent jurisdiction over such issues. (*Orange County Air Pollution Control District v. Public Util. Com.* (1971) 4 Cal.3d 945, 951, 954.) Since air pollution is a matter of statewide concern, *Id.* at 952, air districts should be entitled to trustee agency status in order to ensure that this vital concern is adequately protected during the CEQA process.

<sup>21</sup> In *Schenck*, the court concluded that failure to give notice to the air district was not prejudicial, but this was partly because the trial court had already corrected the error before the case arrived at the Court of Appeal. The trial court issued a writ of mandate requiring the lead agency to give notice to the air district. The air district responded by concurring with the lead agency that air impacts were not significant. (*Schenck*, 198 Cal.App.4th 949, 960.) We disagree with the *Schenck* court that the failure to give notice to the air district would not have been prejudicial (even in the absence of the trial court writ) merely because the lead agency purported to follow the air district’s published CEQA guidelines for significance. (*Id.*, 198 Cal.App.4th at p. 960.) In the first place, absent notice to the air district, it is uncertain whether the lead agency properly followed those guidelines. Moreover, it is not realistic to expect that an air district’s published guidelines would necessarily fully address all possible air-quality related issues that can arise with a CEQA project, or that those

Similarly, lead agencies must obtain additional information requested by expert agencies, including those with jurisdiction by law, if that information is necessary to determine a project's impacts. (*Sierra Club v. State Bd. Of Forestry* (1994) 7 Cal.4th 1215, 1236-37.) Approving a project without obtaining that information constitutes a failure to proceed in the manner prescribed by CEQA. (*Id.* at p. 1236.)

Moreover, a lead agency can save significant time and money by consulting with the air district early in the process. For example, the lead agency can learn what the air district recommends as an appropriate analysis on the facts of its case, including what kinds of health impacts analysis may be available, and what models are appropriate for use. This saves the lead agency from the need to do its analysis all over again and possibly needing to recirculate the document after errors are corrected, if new significant impacts are identified. (CEQA Guidelines § 15088.5(a).) At the same time, the air district's expert input can help the lead agency properly determine whether another commenter's request for additional analysis or studies is reasonable or feasible. Finally, the air district can provide input on what mitigation measures would be feasible and effective.

Therefore, we suggest that this Court provide guidance to lead agencies reminding them of the importance of consulting with the relevant air districts regarding these issues. Otherwise, their feasibility decisions may be vulnerable to air district evidence that establishes that there is no substantial evidence to support the lead agency decision not to provide specific analysis. (*See Berkeley Keep Jets Over the Bay, supra*, 91 Cal.App.4th 1344, 1369-1371.)

---

guidelines would necessarily be continually modified to reflect new developments. Therefore we believe that, had the trial court not already ordered the lead agency to obtain the air district's views, the failure to give notice would have been prejudicial, as in *Fall River, supra*, 70 Cal.App.4th 482, 492.

## CONCLUSION

The SCAQMD respectfully requests this Court *not* to establish a hard-and-fast rule concerning whether CEQA requires a lead agency to correlate identified air quality impacts of a project with resulting health outcomes. Moreover, the question of whether an EIR is “sufficient as an informational document” is a mixed question of fact and law containing two levels of inquiry. Whether a particular proposed analysis is feasible is predominantly a question of fact to be judged by the substantial evidence standard of review. Where the requested analysis is feasible, but the lead agency relies on legal or policy reasons not to provide it, the question of whether the EIR is nevertheless sufficient as an informational document is predominantly a question of law to be judged by the independent judgment standard of review.

Respectfully submitted,

## CERTIFICATE OF WORD COUNT

Pursuant to Rule 8.520(c)(1) of the California Rules of Court, I hereby certify that this brief contains 8,476 words, including footnotes, but excluding the Application, Table of Contents, Table of Authorities, Certificate of Service, this Certificate of Word Count, and signature blocks. I have relied on the word count of the Microsoft Word Vista program used to prepare this Certificate.

DATED: April 3, 2015

Respectfully submitted,

  
Barbara Baird

**PROOF OF SERVICE**

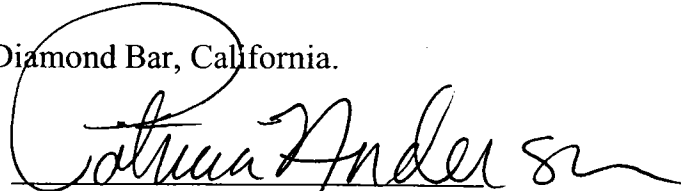

I am employed in the County of Los Angeles, California. I am over the age of 18 years and not a party to the within action. My business address is 21865 Copley Drive, Diamond Bar, California 91765.

On April 3, 2015 I served true copies of the following document(s) described as **APPLICATION OF THE SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT FOR LEAVE TO FILE BRIEF OF *AMICUS CURIAE* IN SUPPORT OF NEITHER PARTY AND [PROPOSED] BRIEF OF *AMICUS CURIAE*** by placing a true copy of the foregoing document(s) in a sealed envelope addressed as set forth on the attached service list as follows:

**BY MAIL:** I enclosed the document(s) in a sealed envelope or package addressed to the persons at the addresses listed in the Service List and placed the envelope for collection and mailing following our ordinary business practices. I am readily familiar with this District's practice for collection and processing of correspondence for mailing. Under that practice, the correspondence would be deposited with the United States Postal Service, with postage thereon fully prepaid at Diamond Bar, California, in the ordinary course of business. I am aware that on motion of the party served, service is presumed invalid if postal cancellation date or postage meter date is more than one day after date of deposit for mailing in affidavit.

I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct.

Executed on April 3, 2015 at Diamond Bar, California.

  
 Patricia Anderson

## EXECUTIVE SUMMARY

This report evaluates the potential mobile source health risk impacts to the nearest sensitive receptors (which are residents) and nearest workers to the proposed Project, more specifically, health risk impacts as a result of exposure to diesel particulate matter (DPM) emitted from heavy-duty diesel trucks accessing the site. This section summarizes the significance criteria and Project mobile source health risks.

The results of the health risk assessment of lifetime cancer risk from Project-generated DPM emissions are provided in Table ES-1 below for the Project.

### Individual Exposure Scenario:

The residential land use with the greatest potential exposure to Project DPM source emissions is Location R1, which represents the existing residence at 13994 Chagall Court, approximately 152 feet north of the Project site. Since there is no private outdoor living area (back yard) facing the Project site at this location, R1 is placed at the building façade. At the maximally exposed individual receptor (MEIR), the maximum incremental cancer risk attributable to Project DPM source emissions is estimated at 4.48 in one million, which is less than the South Coast Air Quality Management District's (SCAQMD's) significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be 0.002, which would not exceed the applicable significance threshold of 1.0. Because all other modeled residential receptors are exposed to lesser concentrations and are located at a greater distance than the MEIR analyzed herein, and DPM generally dissipates with distance from the source, all other residential receptors in the vicinity of the Project site would be exposed to less emissions and therefore less risk than the MEIR identified herein. As such, the Project will not cause a significant human health or cancer risk to nearby residences.

### Worker Exposure Scenario:

The worker receptor land use with the greatest potential exposure to Project DPM source emissions is Location R3, which represents the Moreno Valley City Hall at 14177 Frederick Street, approximately 744 feet west of the Project site. R3 is placed at the building façade where a worker could remain for a typical workday. At the maximally exposed individual worker (MEIW), the maximum incremental cancer risk impact is 0.18 in one million which is less than the SCAQMD's threshold of 10 in one million. Maximum non-cancer risks at this same location were estimated to be 0.0006, which would not exceed the applicable significance threshold of 1.0. Because all other modeled worker receptors are located at a greater distance than the MEIW analyzed herein, and DPM dissipates with distance from the source, all other worker receptors in the vicinity of the Project would be exposed to less emissions and therefore less risk than the MEIW identified herein. As such, the Project will not cause a significant human health or cancer risk to adjacent workers.

School Child Exposure Scenario:

There are no schools located within a ¼ mile of the Project site. As such, there would be no significant impacts that would occur to any schools in the vicinity of the Project. Proximity to sources of toxics is critical to determining the impact. In traffic-related studies, the additional non-cancer health risk attributable to proximity was seen within 1,000 feet and was strongest within 300 feet. California freeway studies show about a 70-percent drop-off in particulate pollution levels at 500 feet. Based on CARB and SCAQMD emissions and modeling analyses, an 80-percent drop-off in pollutant concentrations is expected at approximately 1,000 feet from a distribution center (1). As such, the Project will not cause a significant human health or cancer risk to nearby school children.

TABLE ES-1: SUMMARY OF CANCER AND NON-CANCER RISKS

Time Period	Location	Maximum Lifetime Cancer Risk (Risk per Million)	Significance Threshold (Risk per Million)	Exceeds Significance Threshold
30 Year Exposure	Maximum Exposed Individual Receptor	4.48	10	NO
25 Year Exposure	Maximum Exposed Worker Receptor	0.18	10	NO
Time Period	Location	Maximum Hazard Index	Significance Threshold	Exceeds Significance Threshold
Annual Average	Maximum Exposed Sensitive Receptor	0.002	1.0	NO
Annual Average	Maximum Exposed Worker Receptor	0.0006	1.0	NO

Attachment: Appendix A2-HRA Report (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

## 1 INTRODUCTION

The purpose of this Health Risk Assessment (HRA) is to evaluate Project-related impacts to the nearest sensitive receptors (residents) and workers as a result of heavy-duty diesel trucks accessing the site.

The SCAQMD identifies that if a proposed Project is expected to generate/attract heavy-duty diesel trucks, which emit DPM, preparation of a mobile source HRA is recommended. This document serves to meet the SCAQMD's recommendation for preparation of a HRA. The mobile source HRA has been prepared in accordance with the document Health Risk Assessment Guidance for Analyzing Cancer Risk from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis (2) and is comprised of all relevant and appropriate procedures presented by the United States Environmental Protection Agency (U.S. EPA), California EPA and SCAQMD. Cancer risk is expressed in terms of expected incremental incidence per million population. The SCAQMD has established an incidence rate of ten (10) persons per million as the maximum acceptable incremental cancer risk due to DPM exposure from a project such as the proposed Project. This threshold serves to determine whether or not a given project has a potentially significant development-specific and cumulatively considerable impact.

The AQMD has published a report on how to address cumulative impacts from air pollution: *White Paper on Potential Control Strategies to Address Cumulative Impacts from Air Pollution* (3). In this report the AQMD states (Page D-3):

*"...the AQMD uses the same significance thresholds for project specific and cumulative impacts for all environmental topics analyzed in an Environmental Assessment or EIR. The only case where the significance thresholds for project specific and cumulative impacts differ is the Hazard Index (HI) significance threshold for toxic air contaminant (TAC) emissions. The project specific (project increment) significance threshold is  $HI > 1.0$  while the cumulative (facility-wide) is  $HI > 3.0$ . It should be noted that the HI is only one of three TAC emission significance thresholds considered (when applicable) in a CEQA analysis. The other two are the maximum individual cancer risk (MICR) and the cancer burden, both of which use the same significance thresholds (MICR of 10 in 1 million and cancer burden of 0.5) for project specific and cumulative impacts.*

*Projects that exceed the project-specific significance thresholds are considered by the SCAQMD to be cumulatively considerable. This is the reason project-specific and cumulative significance thresholds are the same. Conversely, projects that do not exceed the project-specific thresholds are generally not considered to be cumulatively significant."*

The SCAQMD has also established non-carcinogenic risk parameters for use in HRAs. Non-carcinogenic risks are quantified by calculating a "hazard index," expressed as the ratio between the ambient pollutant concentration and its toxicity or Reference Exposure Level (REL). An REL is a concentration at or below which health effects are not likely to occur. A hazard index less of than one (1.0) means that adverse health effects are not expected. In this HRA, non-carcinogenic exposures of less than 1.0 are considered less-than-significant. Both the cancer risk and non-carcinogenic risk thresholds are applied to the nearest sensitive receptors below.

## 1.1 SITE LOCATION

The proposed project is located south of Alessandro Boulevard on either side of Chagall Court in the City of Moreno Valley as shown on Exhibit 1-A. The March Air Reserve Base/Inland Port Airport (MARB/IPA) is located approximately 0.9 miles south of the Project site. The Project site is bordered to the west by vacant land, to the east by vacant land, to the north by commercial and residential uses, and to the south are existing industrial buildings.

This proposed Project includes a General Plan Amendment (GPA) and a Zone Change (ZC). The site is currently designated as Commercial in the City's General Plan, which would require a land use and zoning change to Light Industrial use. The proposed changes are consistent with the zones to the west, south and east of the subject site and adjacent properties. The amendment is in keeping with the uses surrounding the project site.

## 1.2 PROJECT DESCRIPTION

Exhibit 1-B illustrates a preliminary site plan for the Project. The Project is anticipated to be developed within a single phase with an anticipated opening year of 2022. The proposed Project consists of the following uses:

- Building 1: 206,665 square feet (sf) of warehousing (70% of total building sf) and 88,571 sf of high-cube cold storage warehouse use (30% of total building sf) for a total of 295,236 sf for Building 1
- Building 2: 70,876 sf of warehousing (70% of total building sf) and 30,376 sf of high-cube cold storage warehouse use (30% of total building sf) for a total of 101,252 sf for Building 2

At the time this HRA was prepared, the future tenants of the proposed Project were unknown. Because the operating hours of perspective building tenants is not known at this time, this HRA is intended to describe potential toxic emission impacts associated with the expected typical 24-hour, seven day per week operational activities at the Project site, which provides a conservative analysis of impacts.

Per the *Alessandro Warehouse Traffic Analysis* (TA) prepared by Urban Crossroads, Inc., the Project is expected to generate a total of approximately 742 two-way vehicular trips per day (371 inbound and 371 outbound) which includes 224 two-way truck trips per day (112 inbound and 112 outbound) (4). This HRA evaluates the potential impacts resulting from diesel exhaust from the 224 two-way truck trips generated by the Project.

## 2 BACKGROUND

### 2.1 BACKGROUND ON RECOMMENDED METHODOLOGY

This HRA is based on SCAQMD guidelines to produce conservative estimates of human health risk posed by exposure to DPM. The conservative nature of this analysis is due primarily to the following factors:

- The ARB-adopted diesel exhaust Unit Risk Factor (URF) of 300 in one million per  $\mu\text{g}/\text{m}^3$  is based upon the upper 95 percentile of estimated risk for each of the epidemiological studies utilized to develop the URF. Using the 95<sup>th</sup> percentile URF represents a very conservative (health-protective) risk posed by DPM because it represents breathing rates that are high for the human body (95% higher than the average population).
- The emissions derived assume that every truck accessing the Project site will idle for 15 minutes under the unmitigated scenario, and this is an overestimation of actual idling times and thus conservative.<sup>1</sup> The California Air Resources Board (CARB's) anti-idling requirements impose a 5-minute maximum idling time and therefore the analysis conservatively overestimates DPM emissions from idling by a factor of 3.

### 2.2 EMISSIONS ESTIMATION

#### 2.2.1 ON-SITE AND OFF-SITE TRUCK ACTIVITY

Vehicle DPM emissions were calculated using emission factors for particulate matter less than  $10\mu\text{m}$  in diameter ( $\text{PM}_{10}$ ) generated with the 2017 version of the Emission FACTor model (EMFAC) developed by the CARB. EMFAC 2017 is a mathematical model that CARB developed to calculate emission rates from motor vehicles that operate on highways, freeways, and local roads in California and is commonly used by the ARB to project changes in future emissions from on-road mobile sources (5). The most recent version of this model, EMFAC 2017, incorporates regional motor vehicle data, information and estimates regarding the distribution of vehicle miles traveled (VMT) by speed, and number of starts per day.

Several distinct emission processes are included in EMFAC 2017. Emission factors calculated using EMFAC 2017 are expressed in units of grams per vehicle miles traveled (g/VMT) or grams per idle-hour (g/idle-hr), depending on the emission process. The emission processes and corresponding emission factor units associated with diesel particulate exhaust for this Project are presented below.

For this Project, annual average  $\text{PM}_{10}$  emission factors were generated by running EMFAC 2017 in EMFAC Mode for vehicles in the Riverside County jurisdiction. The EMFAC Mode generates emission factors in terms of grams of pollutant emitted per vehicle activity and can calculate a matrix of emission factors at specific values of temperature, relative humidity, and vehicle speed.

<sup>1</sup> Although the Project is required to comply with ARB's idling limit of 5 minutes, staff at SCAQMD recommends that the on-site idling emissions should be estimated for 15 minutes of truck idling (personal communication, in person, with Jillian Wong, December 22, 2016), which would take into account on-site idling which occurs while the trucks are waiting to pull up to the truck bays, idling at the bays, idling at check-in and check-out, etc.

The model was run for speeds traveled in the vicinity of the Project. The vehicle travel speeds for each segment modeled are summarized below.

- Idling – on-site loading/unloading and truck gate
- 5 miles per hour – on-site vehicle movement including driving and maneuvering
- 25 miles per hour – off-site vehicle movement including driving and maneuvering.

Calculated emission factors are shown at Table 2-1. As a conservative measure, a 2022 EMFAC 2017 run was conducted and a static 2022 emissions factor data set was used for the entire duration of analysis herein (e.g., 30 years). Use of 2022 emission factors would overstate potential impacts since this approach assumes that emission factors remain “static” and do not change over time due to fleet turnover or cleaner technology with lower emissions that would be incorporated into vehicles after 2022. Additionally, based on EMFAC 2017, Light-Heavy-Duty Trucks are comprised of 49.43% diesel, Medium-Heavy-Duty Trucks are comprised of 88.51% diesel, and Heavy-Heavy-Duty Trucks are comprised of 98.94% diesel. Trucks fueled by diesel are accounted for by these percentages accordingly in the emissions factor generation.

The vehicle DPM exhaust emissions were calculated for running exhaust emissions. The running exhaust emissions were calculated by applying the running exhaust PM<sub>10</sub> emission factor (g/VMT) from EMFAC over the total distance traveled. The following equation was used to estimate off-site emissions for each of the different vehicle classes comprising the mobile sources (6):

$$\text{Emissions}_{\text{SpeedA}} \text{ (g/s)} = \text{EF}_{\text{RunExhaust}} \text{ (g/VMT)} * \text{Distance (VMT/trip)} * \text{Number of Trips (trips/day)} / \text{seconds per day}$$

Where:

$\text{Emissions}_{\text{SpeedA}}$  (g/s): Vehicle emissions at a given speed A;

$\text{EF}_{\text{RunExhaust}}$  (g/VMT): EMFAC running exhaust PM<sub>10</sub> emission factor at speed A;

Distance (VMT/trip): Total distance traveled per trip.

Similar to off-site traffic, on-site vehicle running emissions were calculated by applying the running exhaust PM<sub>10</sub> emission factor (g/VMT) from EMFAC and the total vehicle trip number over the length of the driving path using the same formula presented above for on-site emissions. In addition, on-site vehicle idling exhaust emissions were calculated by applying the idle exhaust PM<sub>10</sub> emission factor (g/idle-hr) from EMFAC and the total truck trip over the total assumed idle time (15 minutes). The following equation was used to estimate the on-site vehicle idling emissions for each of the different vehicle classes (6):

$$\text{Emissions}_{\text{Idle}} \text{ (g/s)} = \text{EF}_{\text{Idle}} \text{ (g/hr)} * \text{Number of Trips (trips/day)} * \text{Idling Time (min/trip)} * \frac{60 \text{ minutes}}{\text{per hour}} / \text{seconds per day}$$

Where:

$\text{Emissions}_{\text{Idle}}$  (g/s): Vehicle emissions during idling;

$EF_{idle}$  (g/s): EMFAC idle exhaust  $PM_{10}$  emission factor.

**TABLE 2-1: 2022 WEIGHTED AVERAGE DPM EMISSIONS FACTORS**

Speed	Weighted Average
0 (idling)	0.12462 (g/idle-hr)
5	0.04500 (g/s)
25	0.01931 (g/s)

Each roadway was modeled as a line source (made up of multiple adjacent volume sources). Due to the large number of volume sources modeled for this analysis, the corresponding coordinates of each volume source have not been included in this report but are included in Appendix “2.1”. The DPM emission rate for each volume source was calculated by multiplying the emission factor (based on the average travel speed along the roadway) by the number of trips and the distance traveled along each roadway segment and dividing the result by the number of volume sources along that roadway, as illustrated on Table 2-2. The modeled emission sources are illustrated on Exhibit 2-A. The modeling domain is limited to the Project’s primary truck route and includes off-site sources in the study area for approximately 1 mile. This modeling domain is more inclusive and conservative than using only a ¼ mile modeling domain which is the distance supported by several reputable studies which conclude that the greatest potential risks occur within a ¼ mile of the primary source of emissions (1) (in the case of the Project, the primary source of emissions is the on-site idling and on-site travel).

On-site truck idling was estimated to occur as trucks enter and travel through the Project site. Although the Project’s diesel-fueled truck and equipment operators will be required by State law to comply with CARB’s idling limit of 5 minutes, staff at SCAQMD recommends that the on-site idling emissions be calculated assuming 15 minutes of truck idling (7), which would take into account on-site idling which occurs while the trucks are waiting to pull up to the truck bays, idling at the bays, idling at check-in and check-out, etc. As such, this analysis calculates truck idling at 15 minutes, consistent with SCAQMD’s recommendation.

Per the TA, the Project is expected to generate a total of approximately 742 two-way vehicular trips per day (371 inbound and 371 outbound) which includes 224 two-way truck trips per day (112 inbound and 112 outbound) (4). This HRA evaluates the potential impacts resulting from diesel exhaust from the 224 two-way truck trips generated by the Project.

<sup>a</sup> Vehicle miles traveled are for modeled truck route only.

<sup>b</sup> Emission rates determined using EMFAC 2017. Idle emission rates are expressed in grams per idle hour rather than grams per mile.  
This column includes the total truck travel and truck idle emissions. For idle emissions this column includes emissions based on the assumption that each truck idles for 15 minutes. Additionally, this column includes idling from

<sup>c</sup> TRUs accessing the Project, it is assumed that TRUs would idle for up to 30 minutes.

Attachment: Appendix A2-HRA Report (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass

## 2.2.2 TRANSPORT REFRIGERATION UNITS (TRUs)

In order to account for the possibility of refrigerated uses (cold storage) that would be accommodated by the Project, all trucks accessing the refrigerated portion of the Project site are presumed to also have transport refrigeration units (TRUs). Therefore, for modeling purposes 45 total daily trucks (one-way) are presumed to be trucks with TRUs. In addition to on-site truck idling, the analysis assumes that each TRU accessing the site will also idle for 30 minutes, even though the CARB's anti-idling rules mandate a 5-minute idling time. Based on CARB's *Draft Update to Inventory for Transportation Refrigeration Units* (8) 60% of TRUs are anticipated to be 25+ horsepower and 40% of TRUs are anticipated to be 23 horsepower, as such 60% of TRUs are assumed to be 34 horsepower with a load factor of 0.53 (0.01 grams of PM<sub>10</sub> per brake-horsepower-hour) and 40% of TRUs are assumed to be 23 horsepower with a load factor of 0.46 (0.12 grams of PM<sub>10</sub> per brake-horsepower-hour). TRUs are also accounted for during on-site and off-site travel. TRU emission rates were calculated based on CARB's 2017 Off-Road Diesel Emission Factors for analysis year 2022.

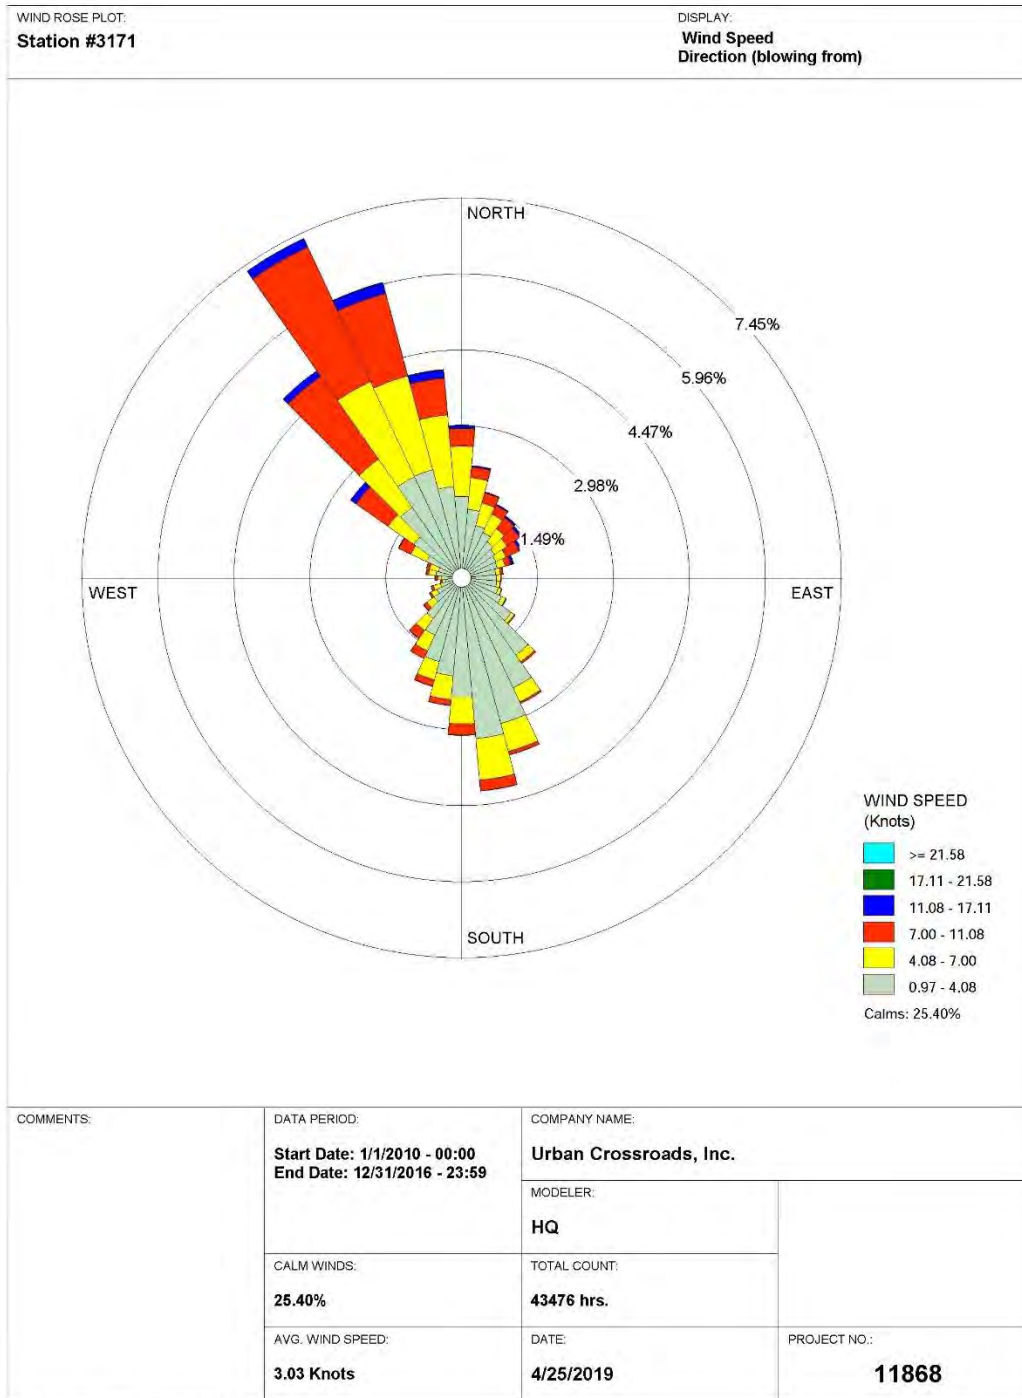

## 2.3 EXPOSURE QUANTIFICATION

The analysis herein has been conducted in accordance with the guidelines in the Health Risk Assessment Guidance for Analyzing Cancer Risks from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis (2). SCAQMD recommends using the Environmental Protection Agency's (U.S. EPA's) AERMOD model. For purposes of this analysis, the Lakes AERMOD View (Version 9.9.0) was used to calculate annual average particulate concentrations associated with site operations. Lakes AERMOD View was utilized to incorporate the U.S. EPA's latest AERMOD Version 19191 (9).

The model offers additional flexibility by allowing the user to assign an initial release height and vertical dispersion parameters for mobile sources representative of a roadway. For this HRA, the roadways were modeled as adjacent volume sources. Roadways were modeled using the U.S. EPA's haul route methodology for modeling of on-site and off-site truck movement. More specifically, the Haul Road Volume Source Calculator in Lakes AERMOD View has been utilized to determine the release height parameters. Based on the US EPA methodology, the Project's modeled sources would result in a release height of 3.49 meters, and an initial lateral dimension of 4.0 meters, and an initial vertical dimension of 3.25 meters.

SCAQMD-recommended model parameters are presented in Table 2-3 (10). The model requires additional input parameters including emission data and local meteorology. Meteorological data from the SCAQMD's Perris monitoring station (SRA 24) was used to represent local weather conditions and prevailing winds (11). A wind rose exhibit of the FONT monitoring station is provided at Exhibit 2-B.

**EXHIBIT 2-B: WIND ROSE (SRA 24)**

Attachment: Appendix A2-HRA Report (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

**TABLE 2-3: AERMOD MODEL PARAMETERS**

Dispersion Coefficient (Urban/Rural)	Urban (Population 2,035,210)
Terrain (Flat/Elevated)	Elevated (Regulatory Default)
Averaging Time	1 year (5-year Meteorological Data Set)
Receptor Height	0 meters (Regulatory Default)

Universal Transverse Mercator (UTM) coordinates for World Geodetic System (WGS) 84 were used to locate the Project site boundaries, each volume source location, and receptor locations in the Project site's vicinity. The AERMOD dispersion model summary output files for the proposed Project are presented in Appendix "2.1". Modeled sensitive receptors were placed at residential and non-residential locations.

Receptors may be placed at applicable structure locations for residential and worker property and not necessarily the boundaries of the properties containing these uses because the human receptors (residents and workers) spend a majority of their time at the residence or in the workplace's building, and not on the property line. It should be noted that the primary purpose of receptor placement is focused on long-term exposure. For example, the HRA evaluates the potential health risks to residents and workers over a period of 30 or 25 years of exposure, respectively. Notwithstanding, as a conservative measure, receptors were placed at either the outdoor living area or the building façade, whichever is closer to the Project site.

For purposes of this HRA, receptors include both residential and non-residential (worker) land uses in the vicinity of the Project. These receptors are included in the HRA since residents, and workers may be exposed at these locations over a long-term duration of 30 and 25 years, respectively. This methodology is consistent with SCAQMD and OEHHA recommended guidance.

Any impacts to residents or workers located further away from the Project site than the modeled residential and workers would have a lesser impact than what has already been disclosed in the HRA at the MEIR, and MEIW because concentrations dissipate with distance.

Consistent with SCAQMD modeling guidance, all receptors were set to existing elevation height so that only ground-level concentrations are analyzed (12). United States Geological Survey (USGS) Digital Elevation Model (DEM) terrain data based on a 7.5-minute topographic quadrangle map series using AERMAP was utilized in the HRA modeling to set elevations.

Discrete variants for daily breathing rates, exposure frequency, and exposure duration were obtained from relevant distribution profiles presented in the 2015 OEHHA Guidelines. Tables 2-4 and 2-5 summarize the Exposure Parameters for Residents and Workers based on 2015 OEHHA Guidelines. Appendix 2.2 includes the detailed risk calculation.

**TABLE 2-4: EXPOSURE ASSUMPTIONS FOR INDIVIDUAL CANCER RISK (30 YEAR RESIDENTIAL)**

Age	Daily Breathing Rate (L/kg-day)	Age Specific Factor	Exposure Duration (years)	Fraction of Time at Home	Exposure Frequency (days/year)	Exposure Time (hours/day)
-0.25 to 0	361	10	0.25	0.85	350	24
0 to 2	1090	10	2	0.85	350	24
2 to 16	572	3	14	0.72	350	24
16 to 30	261	1	14	0.73	350	24

**TABLE 2-5: EXPOSURE ASSUMPTIONS FOR INDIVIDUAL CANCER RISK (25 YEAR WORKER)**

Age	Daily Breathing Rate (L/kg-day)	Age Specific Factor	Exposure Duration (years)	Exposure Frequency (days/year)	Exposure Time (hours/day)
16 to 41	230	1	25	250	12

## 2.4 CARCINOGENIC CHEMICAL RISK

The SCAQMD CEQA Air Quality Handbook (1993) states that emissions of toxic air contaminants (TACs) are considered significant if a HRA shows an increased risk of greater than 10 in one million. Based on guidance from the SCAQMD in the document Health Risk Assessment Guidance for Analyzing Cancer Risks from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis (2), for purposes of this analysis, 10 in one million is used as the cancer risk threshold for the proposed Project.

Excess cancer risks are estimated as the upper-bound incremental probability that an individual will develop cancer over a lifetime as a direct result of exposure to potential carcinogens over a specified exposure duration. The estimated risk is expressed as a unitless probability. The cancer risk attributed to a chemical is calculated by multiplying the chemical intake or dose at the human exchange boundaries (e.g., lungs) by the chemical-specific cancer potency factor (CPF). A risk level of 10 in one million implies a likelihood that up to 10 people, out of one million equally exposed people would contract cancer if exposed continuously (24 hours per day) to the levels of toxic air contaminants over a specified duration of time.

Guidance from CARB and the California Environmental Protection Agency, Office of Environmental Health Hazard Assessment (OEHHA) recommends a refinement to the standard point estimate approach when alternate human body weights and breathing rates are utilized to assess risk for susceptible subpopulations such as children. For the inhalation pathway, the procedure requires the incorporation of several discrete variates to effectively quantify dose. Once determined, contaminant dose is multiplied by the cancer potency factor (CPF) in units of inverse dose expressed in milligrams per kilogram per day (mg/kg/day)<sup>-1</sup> to derive the cancer risk estimate. Therefore, to assess exposures, the following dose algorithm was utilized.

$$\text{DOSE}_{\text{air}} = (\text{C}_{\text{air}} \times [\text{BR}/\text{BW}] \times A \times \text{EF}) \times (1 \times 10^{-6})$$

Where:

DOSE <sub>air</sub>	=	chronic daily intake (mg/kg/day)
C <sub>air</sub>	=	concentration of contaminant in air (ug/m <sup>3</sup> )
[BR/BW] BW-day)	=	daily breathing rate normalized to body weight (L/kg BW-day)
A	=	inhalation absorption factor
EF	=	exposure frequency (days/365 days)
BW	=	body weight (kg)
1 x 10 <sup>-6</sup>	=	conversion factors (ug to mg, L to m <sup>3</sup> )
RISK <sub>air</sub> = DOSE <sub>air</sub> x CPF x ED/AT		

Where:

DOSE <sub>air</sub>	=	chronic daily intake (mg/kg/day)
CPF	=	cancer potency factor
ED	=	number of years within particular age group
AT	=	averaging time

## 2.5 NON-CARCINOGENIC EXPOSURES

An evaluation of the potential noncarcinogenic effects of chronic exposures was also conducted. Adverse health effects are evaluated by comparing a compound's annual concentration with its toxicity factor or Reference Exposure Level (REL). The REL for diesel particulates was obtained from OEHHA for this analysis. The chronic reference exposure level (REL) for DPM was established by OEHHA as 5 µg/m<sup>3</sup> (OEHHA Toxicity Criteria Database, <http://www.oehha.org/risk/chemicaldb/index.asp>).

The non-cancer hazard index was calculated (consistent with SCAQMD methodology) as follows:

The relationship for the non-cancer health effects of DPM is given by the following equation:

$$\text{HI}_{\text{DPM}} = \text{C}_{\text{DPM}}/\text{REL}_{\text{DPM}}$$

Where:

HI <sub>DPM</sub>	=	Hazard Index; an expression of the potential for non-cancer health effects.
C <sub>DPM</sub>	=	Annual average DPM concentration (µg/m <sup>3</sup> ).

REL<sub>DPM</sub> = Reference exposure level (REL) for DPM; the DPM concentration at which no adverse health effects are anticipated.

For purposes of this analysis the hazard index for the respiratory endpoint totaled less than one for all receptors in the project vicinity, and thus is less than significant.

## 2.6 POTENTIAL PROJECT-RELATED DPM SOURCE CANCER AND NON-CANCER RISKS

### Individual Exposure Scenario:

The residential land use with the greatest potential exposure to Project DPM source emissions is Location R1, which represents the existing residence at 13994 Chagall Court, approximately 152 feet north of the Project site. Since there is no private outdoor living area (back yard) facing the Project site at this location, R1 is placed at the building façade. At the MEIR, the maximum incremental cancer risk attributable to Project DPM source emissions is estimated at 4.48 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be 0.002, which would not exceed the applicable significance threshold of 1.0. Because all other modeled residential receptors are exposed to lesser concentrations and are located at a greater distance than the MEIR analyzed herein, and DPM generally dissipates with distance from the source, all other residential receptors in the vicinity of the Project site would be exposed to less emissions and therefore less risk than the MEIR identified herein. As such, the Project will not cause a significant human health or cancer risk to nearby residences. The nearest modeled receptors are illustrated on Exhibit 2-C.

### Worker Exposure Scenario<sup>2</sup>:

The worker receptor land use with the greatest potential exposure to Project DPM source emissions is Location R3, which represents the Moreno Valley City Hall at 14177 Frederick Street, approximately 744 feet west of the Project site. R3 is placed at the building façade where a worker could remain for a typical workday. At the MEIW, the maximum incremental cancer risk impact is 0.18 in one million which is less than the SCAQMD's threshold of 10 in one million. Maximum non-cancer risks at this same location were estimated to be 0.0006, which would not exceed the applicable significance threshold of 1.0. Because all other modeled worker receptors are located at a greater distance than the MEIW analyze herein, and DPM dissipates with distance from the source, all other worker receptors in the vicinity of the Project would be exposed to less emissions and therefore less risk than the MEIW identified herein. As such, the Project will not cause a significant human health or cancer risk to adjacent workers. The nearest modeled receptors are illustrated on Exhibit 2-C.

### School Child Exposure Scenario:

2 SCAQMD guidance does not require assessment of the potential health risk to on-site workers. Excerpts from the document OEHHA Air Toxics Hot Spots Program Risk Assessment Guidelines—The Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments (OEHHA 2003), also indicate that it is not necessary to examine the health effects to on-site workers unless required by RCRA (Resource Conservation and Recovery Act) / CERCLA (Comprehensive Environmental Response, Compensation, and Liability Act) or the worker resides on-site.

There are no schools located within a ¼ mile of the Project site. As such, there would be no significant impacts that would occur to any schools in the vicinity of the Project. Proximity to sources of toxics is critical to determining the impact. In traffic-related studies, the additional non-cancer health risk attributable to proximity was seen within 1,000 feet and was strongest within 300 feet. California freeway studies show about a 70-percent drop-off in particulate pollution levels at 500 feet. Based on CARB and SCAQMD emissions and modeling analyses, an 80-percent drop-off in pollutant concentrations is expected at approximately 1,000 feet from a distribution center (1). As such, the Project will not cause a significant human health or cancer risk to nearby school children.

\*\*\* MODELOPTs: RegDEFAULT CONC ELEV URBAN ADJ\_U\*

\*\*\* MODEL SETUP OPTIONS SUMMARY

\*\*\*

-----  
\*\*Model Is Setup For Calculation of Average CONCentration Values.

-- DEPOSITION LOGIC --

\*\*NO GAS DEPOSITION Data Provided.  
\*\*NO PARTICLE DEPOSITION Data Provided.  
\*\*Model Uses NO DRY DEPLETION. DRYDPLT = F  
\*\*Model Uses NO WET DEPLETION. WETDPLT = F

\*\*Model Uses URBAN Dispersion Algorithm for the SBL for 577 Source(s),  
for Total of 1 Urban Area(s):  
Urban Population = 2189641.0 ; Urban Roughness Length = 1.000 m

\*\*Model Uses Regulatory DEFAULT Options:  
1. Stack-tip Downwash.  
2. Model Accounts for ELEVated Terrain Effects.  
3. Use Calms Processing Routine.

Attachment: Appendix A2-HRA Report (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

4. Use Missing Data Processing Routine.
5. No Exponential Decay.
6. Urban Roughness Length of 1.0 Meter Assumed.

**\*\*Other Options Specified:**

ADJ\_U\* - Use ADJ\_U\* option for SBL in AERMET  
 CCVR\_Sub - Meteorological data includes CCVR substitutions  
 TEMP\_Sub - Meteorological data includes TEMP substitutions

**\*\*Model Assumes No FLAGPOLE Receptor Heights.**

**\*\*The User Specified a Pollutant Type of: OTHER**

**\*\*Model Calculates ANNUAL Averages Only**

**\*\*This Run Includes: 577 Source(s); 1 Source Group(s); and 5 Receptor(s)**

with: 0 POINT(s), including  
       0 POINTCAP(s) and 0 POINTHOR(s)  
 and: 577 VOLUME source(s)  
 and: 0 AREA type source(s)  
 and: 0 LINE source(s)  
 and: 0 RLINE/RLINEXT source(s)  
 and: 0 OPENPIT source(s)  
 and: 0 BUOYANT LINE source(s) with 0 line(s)

**\*\*Model Set To Continue RUNNING After the Setup Testing.**

**\*\*The AERMET Input Meteorological Data Version Date: 16216**

**\*\*Output Options Selected:**

Model Outputs Tables of ANNUAL Averages by Receptor  
 Model Outputs External File(s) of High Values for Plotting (PLOTFILE  
 Keyword)  
 Model Outputs Separate Summary File of High Ranked Values (SUMMFILE  
 Keyword)

**\*\*NOTE: The Following Flags May Appear Following CONC Values:** c for Calm Hours  
 m for Missing  
 Hours  
 b for Both Calm  
 and Missing Hours

**\*\*Misc. Inputs:** Base Elev. for Pot. Temp. Profile (m MSL) = 442.00 ; Decay  
 Coef. = 0.000 ; Rot. Angle = 0.0  
 Emission Units = GRAMS/SEC ;  
 Emission Rate Unit Factor = 0.10000E+07  
 Output Units = MICROGRAMS/M\*\*3

\*\*Approximate Storage Requirements of Model = 3.7 MB of RAM.

\*\*Input Runstream File: aermod.inp

\*\*Output Print File: aermod.out

\*\*Detailed Error/Message File: 13661 HRA.err

\*\*File for Summary of Results: 13661 HRA.sum
