 Classification: Large Quantity Generator

Date form received by agency: 1992-03-30 00:00:00.0  
 Site name: MARCH AIR FORCE BASE  
 Classification: Large Quantity Generator

Hazardous Waste Summary:

- . Waste code: 141
- . Waste name: Off-specification, aged, or surplus inorganics
  
- . Waste code: 151
- . Waste name: Asbestos-containing waste

Attachment: Appendix G-Phase I ESA (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

- . Waste code: P098
- . Waste name: POTASSIUM CYANIDE (OR) POTASSIUM CYANIDE K(CN)
  
- . Waste code: U188
- . Waste name: PHENOL
  
- . Waste code: U227
- . Waste name: 1,1,2-TRICHLOROETHANE (OR) ETHANE, 1,1,2-TRICHLORO-

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

- Waste code: D001
- Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 15899.4

- Waste code: D002
- Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Amount (Lbs): 186

- Waste code: D003
- Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Amount (Lbs): 1

- Waste code: D005
- Waste name: BARIUM
- Amount (Lbs): 8

- Waste code: D006
- Waste name: CADMIUM
- Amount (Lbs): 843

Attachment: Appendix G-Phase I ESA (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

of the dry cleaning solvent, tetrachloroethene (also known as perchloroethylene or PCE), in soil and groundwater under the M&M Cleaners, the alley located north of the Property, and under the parking lot located to the south. However, these initial investigations have not been able to determine how far the PCE may have migrated since it was released. Soil gas investigations that were conducted in 2013 and early 2014 detected the presence of elevated concentrations of PCE in the soil vapor beneath the dry cleaners, adjacent units of the shopping center, the alley behind the shopping center, and the parking area of the Sienna Pointe apartments. Mitigation of the soil vapor intrusion risk is a driving factor in the selection of remediation technologies and is the current focus of work at the Site.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site ID: 400775  
 Site Name: Riverside County Department of Waste Resources (Headquarters)  
 Violation Date: 05-16-2019  
 Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)

Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,?2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October?1,?2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

## Handler Activities Summary:

U.S. importer of hazardous waste: No  
Mixed waste (haz. and radioactive): No  
Recycler of hazardous waste: No  
Transporter of hazardous waste: No  
Treater, storer or disposer of HW: No  
Underground injection activity: No  
On-site burner exemption: No  
Furnace exemption: No  
Used oil fuel burner: No  
Used oil processor: No  
User oil refiner: No  
Used oil fuel marketer to burner: No  
Used oil Specification marketer: No  
Used oil transfer facility: No  
Used oil transporter: No

## Hazardous Waste Summary:

. Waste code: D000  
. Waste name: Not Defined  
  
. Waste code: D001  
. Waste name: IGNITABLE WASTE  
  
. Waste code: D018  
. Waste name: BENZENE

Violation Status: No violations found

## FINDS:

Registry ID: 110012215753

## Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Citation: 23 CCR 16 2632(c)(2)(A)&(B) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2632(c)(2)(A)&(B)  
 Violation Description: Failure to continuously monitor the interstitial space of a double-walled tank with an audible and visual alarm system.  
 Violation Notes: Returned to compliance on 04/16/2019. OBSERVATION: Observed the L1 87 Main Annular 407 sensor fail to activate an audible and visual alarm when tested. After todays inspection and reviewing work order from 9/4/2018 it appears that there may be potential liquid/fuel in the annular space. CORRECTIVE ACTION: Owner/operator shall repair/replace inoperable L1 87 Main Annular 407 sensor and certify that sensor will activate an audible visual alarm when a leak is detected. Due to potential liquid/fuel in the annular space owner/operator will need to conduct a tank integrity test to verify if there is a leak in the primary and submit results to this department.

prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Notes:

Returned to compliance on 06/27/2019. OBSERVATION: An overfill equipment inspection was not completed by the October 13, 2018 deadline. CORRECTIVE ACTION: Owner/operator shall immediately schedule and complete an overfill equipment inspection providing the required 48 hour notification prior to conducting the inspection. Inspection results and all supporting documentation (inspection procedures used, tank charts, printouts, etc.) must be submitted to this Department within 30 days upon completion of the inspection. Testing is being conducted today.

 NPL Status: Not Listed  
 Description: March Field is located in Riverside County, CA approximately 10 miles south of the City fo Riverside and immediately south of the City of Moreno Valley.  
 History: The U.S. Army acquired use of 640 acres in 1918 and established March Field. Initially, the airfield was used for primary flight training. During WWII, the airfield was used for bomber training. The Army Air Corps leased a total of 654.61 acres immediately north of the base. Skeet and shotgun ranges were established on the center portion of this parcel. No ordnance debris is known to have been discovered in this area, but remains of clay pigeons are abundant. Based on available documentation, the eastern and western ends of this parcel were inactive during the entire lease period. None of the military improvements remain and portions of the parcel, especially the western half, have undergone commercial development. Two parcels on the south side of the base, one 4.28ac. and the other 4.90ac., were aquired

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal NPL site list***

#### NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 10/25/2019	Source: EPA
Date Data Arrived at EDR: 11/07/2019	Telephone: N/A
Date Made Active in Reports: 11/20/2019	Last EDR Contact: 11/07/2019
Number of Days to Update: 13	Next Scheduled EDR Contact: 01/13/2020
	Data Release Frequency: Quarterly

EPA Region 10  
Telephone 206-553-8665

#### Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/25/2019	Source: EPA
Date Data Arrived at EDR: 11/07/2019	Telephone: N/A
Date Made Active in Reports: 11/20/2019	Last EDR Contact: 11/07/2019
Number of Days to Update: 13	Next Scheduled EDR Contact: 01/13/2020
	Data Release Frequency: Quarterly

#### NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

 Data Release Frequency: No Update Planned

## ***Federal Delisted NPL site list***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/25/2019

 Telephone: 703-603-8704  
 Last EDR Contact: 10/04/2019  
 Next Scheduled EDR Contact: 01/13/2020  
 Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2019  
 Date Data Arrived at EDR: 11/07/2019  
 Date Made Active in Reports: 11/21/2019

 Next Scheduled EDR Contact: 01/27/2020  
 Data Release Frequency: Quarterly

## ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 10/25/2019	Source: EPA
Date Data Arrived at EDR: 11/07/2019	Telephone: 800-424-9346
Date Made Active in Reports: 11/21/2019	Last EDR Contact: 11/07/2019
Number of Days to Update: 14	Next Scheduled EDR Contact: 01/27/2020
	Data Release Frequency: Quarterly

### ***Federal RCRA CORRACTS facilities list***

CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 06/24/2019	Source: EPA
Date Data Arrived at EDR: 06/26/2019	Telephone: 800-424-9346
Date Made Active in Reports: 10/17/2019	Last EDR Contact: 10/28/2019
Number of Days to Update: 113	Next Scheduled EDR Contact: 01/06/2020
	Data Release Frequency: Quarterly

### ***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/24/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/26/2019	Telephone: (415) 495-8895
Date Made Active in Reports: 10/17/2019	Last EDR Contact: 10/28/2019
Number of Days to Update: 113	Next Scheduled EDR Contact: 01/06/2020
	Data Release Frequency: Quarterly

### ***Federal RCRA generators list***

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/24/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/26/2019	Telephone: (415) 495-8895
Date Made Active in Reports: 10/17/2019	Last EDR Contact: 10/28/2019
Number of Days to Update: 113	Next Scheduled EDR Contact: 01/06/2020
	Data Release Frequency: Quarterly

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 06/24/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/26/2019	Telephone: (415) 495-8895
Date Made Active in Reports: 10/17/2019	Last EDR Contact: 10/28/2019
Number of Days to Update: 113	Next Scheduled EDR Contact: 01/06/2020
	Data Release Frequency: Quarterly

## RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/24/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/26/2019	Telephone: (415) 495-8895
Date Made Active in Reports: 10/17/2019	Last EDR Contact: 10/28/2019
Number of Days to Update: 113	Next Scheduled EDR Contact: 01/06/2020
	Data Release Frequency: Quarterly

## ***Federal institutional controls / engineering controls registries***

### LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 08/13/2019	Source: Department of the Navy
Date Data Arrived at EDR: 08/20/2019	Telephone: 843-820-7326
Date Made Active in Reports: 08/26/2019	Last EDR Contact: 11/07/2019
Number of Days to Update: 6	Next Scheduled EDR Contact: 02/24/2020
	Data Release Frequency: Varies

### US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 08/19/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/20/2019	Telephone: 703-603-0695
Date Made Active in Reports: 08/26/2019	Last EDR Contact: 11/22/2019
Number of Days to Update: 6	Next Scheduled EDR Contact: 03/09/2020
	Data Release Frequency: Varies

### US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 08/19/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/20/2019	Telephone: 703-603-0695

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## **Federal ERNS list**

### ERNS: Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 09/09/2019  
Date Data Arrived at EDR: 09/09/2019  
Date Made Active in Reports: 09/23/2019  
Number of Days to Update: 14

Source: National Response Center, United States Coast Guard  
Telephone: 202-267-2180  
Last EDR Contact: 09/09/2019  
Next Scheduled EDR Contact: 01/06/2020  
Data Release Frequency: Quarterly

## **State- and tribal - equivalent NPL**

### RESPONSE: State Response Sites

Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

Date of Government Version: 07/29/2019  
Date Data Arrived at EDR: 07/31/2019  
Date Made Active in Reports: 10/08/2019  
Number of Days to Update: 69

Source: Department of Toxic Substances Control  
Telephone: 916-323-3400  
Last EDR Contact: 10/29/2019  
Next Scheduled EDR Contact: 02/10/2020  
Data Release Frequency: Quarterly

## **State- and tribal - equivalent CERCLIS**

### ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Date of Government Version: 07/29/2019  
Date Data Arrived at EDR: 07/31/2019  
Date Made Active in Reports: 10/08/2019  
Number of Days to Update: 69

Source: Department of Toxic Substances Control  
Telephone: 916-323-3400  
Last EDR Contact: 10/29/2019  
Next Scheduled EDR Contact: 02/10/2020  
Data Release Frequency: Quarterly

## **State and tribal landfill and/or solid waste disposal site lists**

### SWF/LF (SWIS): Solid Waste Information System

Active, Closed and Inactive Landfills. SWF/LF records typically contain an inventory of solid waste disposal facilities or landfills. These may be active or inactive facilities or open dumps that failed to meet RCRA Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 08/12/2019  
Date Data Arrived at EDR: 08/13/2019  
Date Made Active in Reports: 10/09/2019  
Number of Days to Update: 57

Source: Department of Resources Recycling and Recovery  
Telephone: 916-341-6320  
Last EDR Contact: 11/12/2019  
Next Scheduled EDR Contact: 02/24/2020

Number of Days to Update: 28	Next Scheduled EDR Contact: 01/09/2012
	Data Release Frequency: No Update Planned

## LUST REG 8: Leaking Underground Storage Tanks

California Regional Water Quality Control Board Santa Ana Region (8). For more current information, please refer to the State Water Resources Control Board's LUST database.

Date of Government Version: 02/14/2005	Source: California Regional Water Quality Control Board Santa Ana Region (8)
Date Data Arrived at EDR: 02/15/2005	Telephone: 909-782-4496
Date Made Active in Reports: 03/28/2005	Last EDR Contact: 08/15/2011
Number of Days to Update: 41	Next Scheduled EDR Contact: 11/28/2011
	Data Release Frequency: No Update Planned

## LUST REG 7: Leaking Underground Storage Tank Case Listing

Leaking Underground Storage Tank locations. Imperial, Riverside, San Diego, Santa Barbara counties.

Date of Government Version: 02/26/2004	Source: California Regional Water Quality Control Board Colorado River Basin Region (7)
Date Data Arrived at EDR: 02/26/2004	Telephone: 760-776-8943
Date Made Active in Reports: 03/24/2004	Last EDR Contact: 08/01/2011
Number of Days to Update: 27	Next Scheduled EDR Contact: 11/14/2011
	Data Release Frequency: No Update Planned

## LUST REG 5: Leaking Underground Storage Tank Database

Leaking Underground Storage Tank locations. Alameda, Alpine, Amador, Butte, Colusa, Contra Costa, Calveras, El Dorado, Fresno, Glenn, Kern, Kings, Lake, Lassen, Madera, Mariposa, Merced, Modoc, Napa, Nevada, Placer, Plumas, Sacramento, San Joaquin, Shasta, Solano, Stanislaus, Sutter, Tehama, Tulare, Tuolumne, Yolo, Yuba counties.

Date of Government Version: 07/01/2008	Source: California Regional Water Quality Control Board Central Valley Region (5)
Date Data Arrived at EDR: 07/22/2008	Telephone: 916-464-4834
Date Made Active in Reports: 07/31/2008	Last EDR Contact: 07/01/2011
Number of Days to Update: 9	Next Scheduled EDR Contact: 10/17/2011
	Data Release Frequency: No Update Planned

## LUST REG 4: Underground Storage Tank Leak List

Los Angeles, Ventura counties. For more current information, please refer to the State Water Resources Control Board's LUST database.

Date of Government Version: 09/07/2004	Source: California Regional Water Quality Control Board Los Angeles Region (4)
Date Data Arrived at EDR: 09/07/2004	Telephone: 213-576-6710
Date Made Active in Reports: 10/12/2004	Last EDR Contact: 09/06/2011
Number of Days to Update: 35	Next Scheduled EDR Contact: 12/19/2011
	Data Release Frequency: No Update Planned

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## LUST REG 3: Leaking Underground Storage Tank Database

Leaking Underground Storage Tank locations. Monterey, San Benito, San Luis Obispo, Santa Barbara, Santa Cruz counties.

Date of Government Version: 05/19/2003	Source: California Regional Water Quality Control Board Central Coast Region (3)
Date Data Arrived at EDR: 05/19/2003	Telephone: 805-542-4786

## ADDITIONAL ENVIRONMENTAL RECORDS

### Local Brownfield lists

#### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 06/03/2019

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## Local Lists of Hazardous waste / Contaminated Sites

### US HIST CDL: National Clandestine Laboratory Register

A listing of clandestine drug lab locations that have been removed from the DEAs National Clandestine Laboratory Register.

Date of Government Version: 06/11/2019	Source: Drug Enforcement Administration
Date Data Arrived at EDR: 06/13/2019	Telephone: 202-307-1000
Date Made Active in Reports: 09/03/2019	Last EDR Contact: 11/20/2019
Number of Days to Update: 82	Next Scheduled EDR Contact: 03/09/2020
	Data Release Frequency: No Update Planned

### HIST CAL-SITES: Calsites Database

The Calsites database contains potential or confirmed hazardous substance release properties. In 1996, California EPA reevaluated and significantly reduced the number of sites in the Calsites database. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

Date of Government Version: 08/08/2005	Source: Department of Toxic Substance Control
Date Data Arrived at EDR: 08/03/2006	Telephone: 916-323-3400
Date Made Active in Reports: 08/24/2006	Last EDR Contact: 02/23/2009
Number of Days to Update: 21	Next Scheduled EDR Contact: 05/25/2009
	Data Release Frequency: No Update Planned

### SCH: School Property Evaluation Program

This category contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. In some cases, these properties may be listed in the CalSites category depending on the level of threat to public health and safety or the environment they pose.

Date of Government Version: 07/29/2019	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 07/31/2019	Telephone: 916-323-3400
Date Made Active in Reports: 10/08/2019	Last EDR Contact: 10/29/2019
Number of Days to Update: 69	Next Scheduled EDR Contact: 02/10/2020
	Data Release Frequency: Quarterly

### CDL: Clandestine Drug Labs

A listing of drug lab locations. Listing of a location in this database does not indicate that any illegal drug lab materials were or were not present there, and does not constitute a determination that the location either requires or does not require additional cleanup work.

Date of Government Version: 06/30/2018	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 07/16/2019	Telephone: 916-255-6504
Date Made Active in Reports: 09/24/2019	Last EDR Contact: 09/24/2019

## US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 06/11/2019

### DEED: Deed Restriction Listing

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Date of Government Version: 09/03/2019	Source: DTSC and SWRCB
Date Data Arrived at EDR: 09/04/2019	Telephone: 916-323-3400

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## SPILLS 90: SPILLS90 data from FirstSearch

Spills 90 includes those spill and release records available exclusively from FirstSearch databases. Typically, they may include chemical, oil and/or hazardous substance spills recorded after 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 90.

Date of Government Version: 06/06/2012	Source: FirstSearch
Date Data Arrived at EDR: 01/03/2013	Telephone: N/A
Date Made Active in Reports: 02/22/2013	Last EDR Contact: 01/03/2013

	Data Release Frequency: No Update Planned

## Other Ascertainable Records

### RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

Date Data Arrived at EDR: 04/11/2018	Telephone: 888-275-8747
Date Made Active in Reports: 11/06/2019	Last EDR Contact: 10/07/2019
Number of Days to Update: 574	Next Scheduled EDR Contact: 01/20/2020
	Data Release Frequency: N/A

### SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Date of Government Version: 08/30/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/21/2014	Telephone: 617-520-3000

Number of Days to Update: 88	Next Scheduled EDR Contact: 02/17/2020
	Data Release Frequency: Quarterly

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

Date of Government Version: 09/30/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 05/08/2018	Telephone: 703-308-4044

## SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 09/30/2018

## RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995

## HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 12/17/2007
Number of Days to Update: 40	Next Scheduled EDR Contact: 03/17/2008
	Data Release Frequency: No Update Planned

## HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing

A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

## UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

## US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

## US MINES 3: Active Mines & Mineral Plants Database Listing

Active Mines and Mineral Processing Plant operations for commodities monitored by the Minerals Information Team of the USGS.

Date of Government Version: 04/14/2011	Source: USGS
Date Data Arrived at EDR: 06/08/2011	Telephone: 703-648-7709
Date Made Active in Reports: 09/13/2011	Last EDR Contact: 11/22/2019
Number of Days to Update: 97	Next Scheduled EDR Contact: 03/09/2020
	Data Release Frequency: Varies

## ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

Date of Government Version: 09/10/2019	Source: Department of Interior

	Data Release Frequency: Varies

## HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

Date of Government Version: 12/31/2017	Source: California Environmental Protection Agency
Date Data Arrived at EDR: 05/29/2019	Telephone: 916-255-1136
Date Made Active in Reports: 07/22/2019	Last EDR Contact: 10/11/2019
Number of Days to Update: 54	Next Scheduled EDR Contact: 01/20/2020
	Data Release Frequency: Annually

## ICE: ICE

Contains data pertaining to the Permitted Facilities with Inspections / Enforcements sites tracked in Envirostor.

Date of Government Version: 08/19/2019	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 08/20/2019	Telephone: 877-786-9427
Date Made Active in Reports: 10/18/2019	Last EDR Contact: 11/19/2019

## WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

## WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

## EDR HIGH RISK HISTORICAL RECORDS

### *EDR Exclusive Records*

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Data Release Frequency: No Update Planned

#### EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

## EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

### CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

### AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

### Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

### Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

### Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

### Private Schools

UTM X (Meters):	476161.7
UTM Y (Meters):	3752705.8
Elevation:	1570 ft. above sea level

### USGS TOPOGRAPHIC MAP

Target Property Map:	5641312 RIVERSIDE EAST, CA
Version Date:	2012
East Map:	5641326 SUNNYMEAD, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**GROUNDWATER FLOW DIRECTION INFORMATION**

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

**TOPOGRAPHIC INFORMATION**

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

**TARGET PROPERTY TOPOGRAPHY**

General Topographic Gradient: General South

**SURROUNDING TOPOGRAPHY: ELEVATION PROFILES**

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

Attachment: Appendix G-Phase I ESA (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

### FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
06065C0745G	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
06065C0761G	FEMA FIRM Flood data
06065C0765G	FEMA FIRM Flood data

### NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
NOT AVAILABLE	YES - refer to the Overview Map and Detail Map

### HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

**Site-Specific Hydrogeological Data\*:**

Search Radius: 1.25 miles  
 Status: Not found

### AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
1	1/8 - 1/4 Mile WNW	Not Reported
1G	1/8 - 1/4 Mile WNW	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

\* ©1996 Site-specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

#### Soil Map ID: 1

Soil Component Name: MONSERATE

Soil Surface Texture: sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	9 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 8.4 Min: 6.6
2	9 inches	27 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 8.4 Min: 6.6
3	27 inches	44 inches	indurated	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 8.4 Min: 6.6
4	44 inches	57 inches	cemented	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 8.4 Min: 6.6

Attachment: Appendix G-Phase I ESA (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
5	57 inches	70 inches	loamy coarse sand	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 8.4 Min: 6.6

### LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

### Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

## HYDROLOGIC INFORMATION

**Flood Zone Data:** This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

### STATE RECORDS

#### Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

#### California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

## Highlights

7 years of experience in the environmental consulting industry

Phase I Environmental Site Assessments

Records Search Risk Assessment Reports

## Experience Summary

Mr. Vejar has over 7 years of experience in the environmental consulting industry conducting Database Reviews (DR), Records Search Risk Assessment Reports (RSRA), Historical Records Review (HRR), Historical Records and Database Review (HRDR), Extended Database Search (EDS), Environmental Transaction Screen (ETS), Phase I Environmental Site Assessments (ESA), Asbestos Sampling and Radon Screenings and other related environmental assessments. He is knowledgeable with various property types, including apartment buildings/complexes, commercial office buildings, shopping centers, multi-tenant commercial complexes, industrial warehouses, manufacturing facilities, gasoline service stations, and dry cleaning operations.

## Project Experience

*Phase I ESA, Santa Fe Springs Marketplace, Santa Fe Springs, California.* A 100,133 SF retail center on 13.07 acres including restaurants, retail, and an active drycleaner release site with ongoing remediation.

*Phase I ESA, Harbor Auto Care Center, Santa Ana, California.* An eleven tenant automotive repair and service center with storage of hazardous materials and generated hazardous waste.

*Phase I ESA, Mass Kansas, Riverside, California.* A 102,742 SF fiberglass and composite manufacturing of below ground enclosures on a 14.42 acre facility. Impacted with volatile organic compounds (VOCs) from historic manufacturing an industrial operations that operated from the facility since the 1940s.

*Phase I ESA, Park @ VNY, Van Nuys, California.* A 37.34 acre historic Former Used Defense Site during World War II occupied by the United States Army between 1942 and 1946 and by the California Air National Guard between 1954 and 1989.

*Phase I ESA, Montclair, California.* A 1.24 acre property with a gasoline service station and car wash building. The site was identified with an open release case and ongoing Santa Ana Regional Water Quality Control Board (RWQCB) oversight.

Ramiro Vejar

---

*Phase I ESA, Bellflower, California.* A six parcel commercial property with three multistory buildings which was historically occupied by two gasoline stations in the 1920s and 1930s prior to the redevelopment of the retail structures in 1946 and 1957. Phase II subsurface investigation was recommended which included advancing borings for soil analysis and geophysical surveys to identify potential Underground Storage Tanks (USTs) or backfill anomalies.

*Phase I ESA, Moon Valley Nursery, Hemet, California.* An 80 acre nursery property with barns, residential living, pesticide and herbicide storage, and related horticultural activities.

*Phase I ESA, Gasser Olds Bronze, Vernon, California.* A 24,375SF bronze foundry and metal plaque manufacturing facility operating since 1982 from a building which has been historically occupied for industrial use since it was constructed in 1941.

Sarah Vosovic  
Project Manager

### *Education*

B.S., Environmental Science, California State University, Chico

### *Registrations*

OSHA 40-Hour HAZWOPER

AHERA Building Inspector training

California Department of Health Services/USEPA Lead Inspector/Assessor training

### *Summary of Professional Experience*

Ms. Vosovic has more than 14 years of experience in the environmental consulting field and has worked in various disciplines, including environmental due diligence, NEPA compliance, lead-based paint and asbestos assessment, and LUST monitoring and reporting. Ms. Vosovic has performed hundreds of Phase I ESAs. She has also served as senior reviewer for NEPA compliance documents, with thousands of reports reviewed. She has tracked and managed the regulatory compliance for hundreds of microwave sites for a major telecommunications carrier.

Ms. Vosovic is well versed in EPA's All Appropriate Inquiry and ASTM E1527-13. She is knowledgeable in due diligence reporting standards, including Fannie Mae DUS, Freddie Mac, and HUD. Ms. Vosovic has conducted Phase I ESAs on a wide range of properties. Site assessment experience includes agricultural properties, semiconductor manufacturing facilities, fueling and automobile repair facilities, chemical distribution facilities, landfills, oil well fields, telecommunications sites, and shopping centers with dry cleaning facilities. She has scoped projects, mentored field personnel, identified environmental risks, and regularly provides detailed reports within demanding deadlines.

Ms. Vosovic is responsible for conducting all aspects of Phase I Environmental Site Assessments including proposal writing, staffing projects, client liaison, site reconnaissance and record reviews. Ms. Vosovic also provides management and QA/QC review of Phase I ESAs and Transaction Screens, and is focused on providing exemplary client service. Ms. Vosovic is responsible for ensuring consistency and quality of due diligence services and ensuring that client-specific requirements are met, as well as the requirements of ASTM and AAI standards. Ms. Vosovic displays excellent technical writing and editing skills, attention to detail, and excels at providing concise, logical conclusions and recommendations.

Project experience for Ms. Vosovic includes the following:

- Provided senior review for thousands of NEPA Screening Reports, Environmental Assessments, Section 106 Reports, SHPO consultation packets, NEPA Audit Reports, and

---

Sarah Vosovic

other related documents for various telecommunications industry clients. NEPA Technical Manager for multiple telecommunications industry clients in the western United States. Served as the primary point of contact with multiple state and federal agencies.

- Assisted in subsurface investigations at heavily industrialized and commercially developed properties. Subsurface investigations included the installation of soil borings, characterization of soils, and subsequent sampling of soil and groundwater. Oversaw geophysical surveys.
- Evaluated proposed microwave installations, LTE installations and underlying support structures for compliance with environmental, FAA, and FCC regulations. Tracked and managed over 700 microwave sites in two markets. Worked closely with the client, construction managers, turf vendors, engineers, and RF safety engineers to obtain and track regulatory compliance documentation.
- Managed a database and scheduled quarterly reporting for 45 leaking underground storage tank (LUST) cases under regulatory direction. Prepared Groundwater Monitoring Reports, NPDES Quarterly Reports, Subsurface Investigation Reports, Remediation Work Plans, Sensitive Receptor Surveys, and UST Cleanup Fund submittals. Collected soil and groundwater samples for laboratory analysis.
- Performed regulatory compliance audits for a major telecommunications carrier. Provided solutions and established protocols for ensuring compliance.
- Laboratory Instructor for Introductory Geology and Environmental Science courses at California State University, Chico.

## Education

Bachelor of Arts, Public Administration & Economics, San Diego State University  
Executive MBA Program, 2000-2003

## Highlights

Over 20 years of experience in the environmental and engineering consulting industry  
Property Condition Assessments (PCAs)  
Fannie Mae, Freddie Mac, and HUD due diligence

## Experience Summary

Mr. Lambson is a true veteran of the commercial real estate services industry. He has over 20 years of experience managing and performing environmental and engineering consulting projects on a national level. Mr. Lambson serves as a Principal for Partner and is located in Partner's San Diego County office. Mr. Lambson currently provides client management and consulting to a nationwide client base and specializes in advising "equity" clients during the acquisition phase of commercial property transactions in the U.S., Mexico, and Canada.

Mr. Lambson has assisted clients on over 10,000 commercial real estate transactions throughout his career. His due diligence resume includes experience at all levels, and includes advising REITs, developers, property managers, retail companies, commercial real estate brokers, mortgage brokers, attorneys, lenders, universities, and real estate investment groups with the following nationwide services:

- Property Condition Assessments (PCAs)
- Individual Building System Inspections for Roof, Mechanical Electrical Plumbing (MEP), Elevator, Structure, Façade, and ADA/Accessibility
- Phase I Environmental Site Assessments (ESAs)
- Phase II Subsurface Investigations (Soil and groundwater sampling and analysis)
- Phase III Environmental Remediation Services
- Asbestos, Lead, Radon, Mold Sampling
- Seismic and Structural Assessments (PMLs)
- Energy Audits, Benchmarking, AB1103 Energy Disclosure, and LEED-related services
- Hydrology, Water Conservation and Efficiency
- Fannie Mae / Freddie Mac / HUD Due Diligence
- Geotechnical and Soils Reports
- Zoning Reports
- ALTA Surveys

## Building Sciences

Property Condition Assessment, MEP Report, Roof Report, Elevator Report, Structural and Seismic Assessment for a high-profile Class A office campus acquisition in the San Francisco Bay Area

ADA Compliance and Accessibility Reviews for a national bank branch portfolio

Fannie Mae Property Condition / Physical Needs Assessment services for a 5400-unit multifamily portfolio in Nevada

## Mark Lambson

## I. INTRODUCTION AND LOCATION

This paleontological assessment report has been completed for the Compass Danbe Centerpointe Project, identified as Assessor's Parcel Numbers 297-170-002 and -003, is located along the south side of Alessandro Boulevard between Frederick and Graham streets in the city of Moreno Valley, Riverside County, California (Figures 1 and 2). On the U.S. Geological Survey, 7.5-minute, 1:24,000-scale *Riverside East, California* topographic quadrangle map, the project is located in the northeast quarter of Section 13, Township 3 South, Range 4 West, San Bernardino Base and Meridian, at an elevation of approximately 1,570 feet. Proposed improvements, which will cover approximately 17.7 acres of the project, include the construction of two industrial warehouse buildings with associated parking and infrastructure.

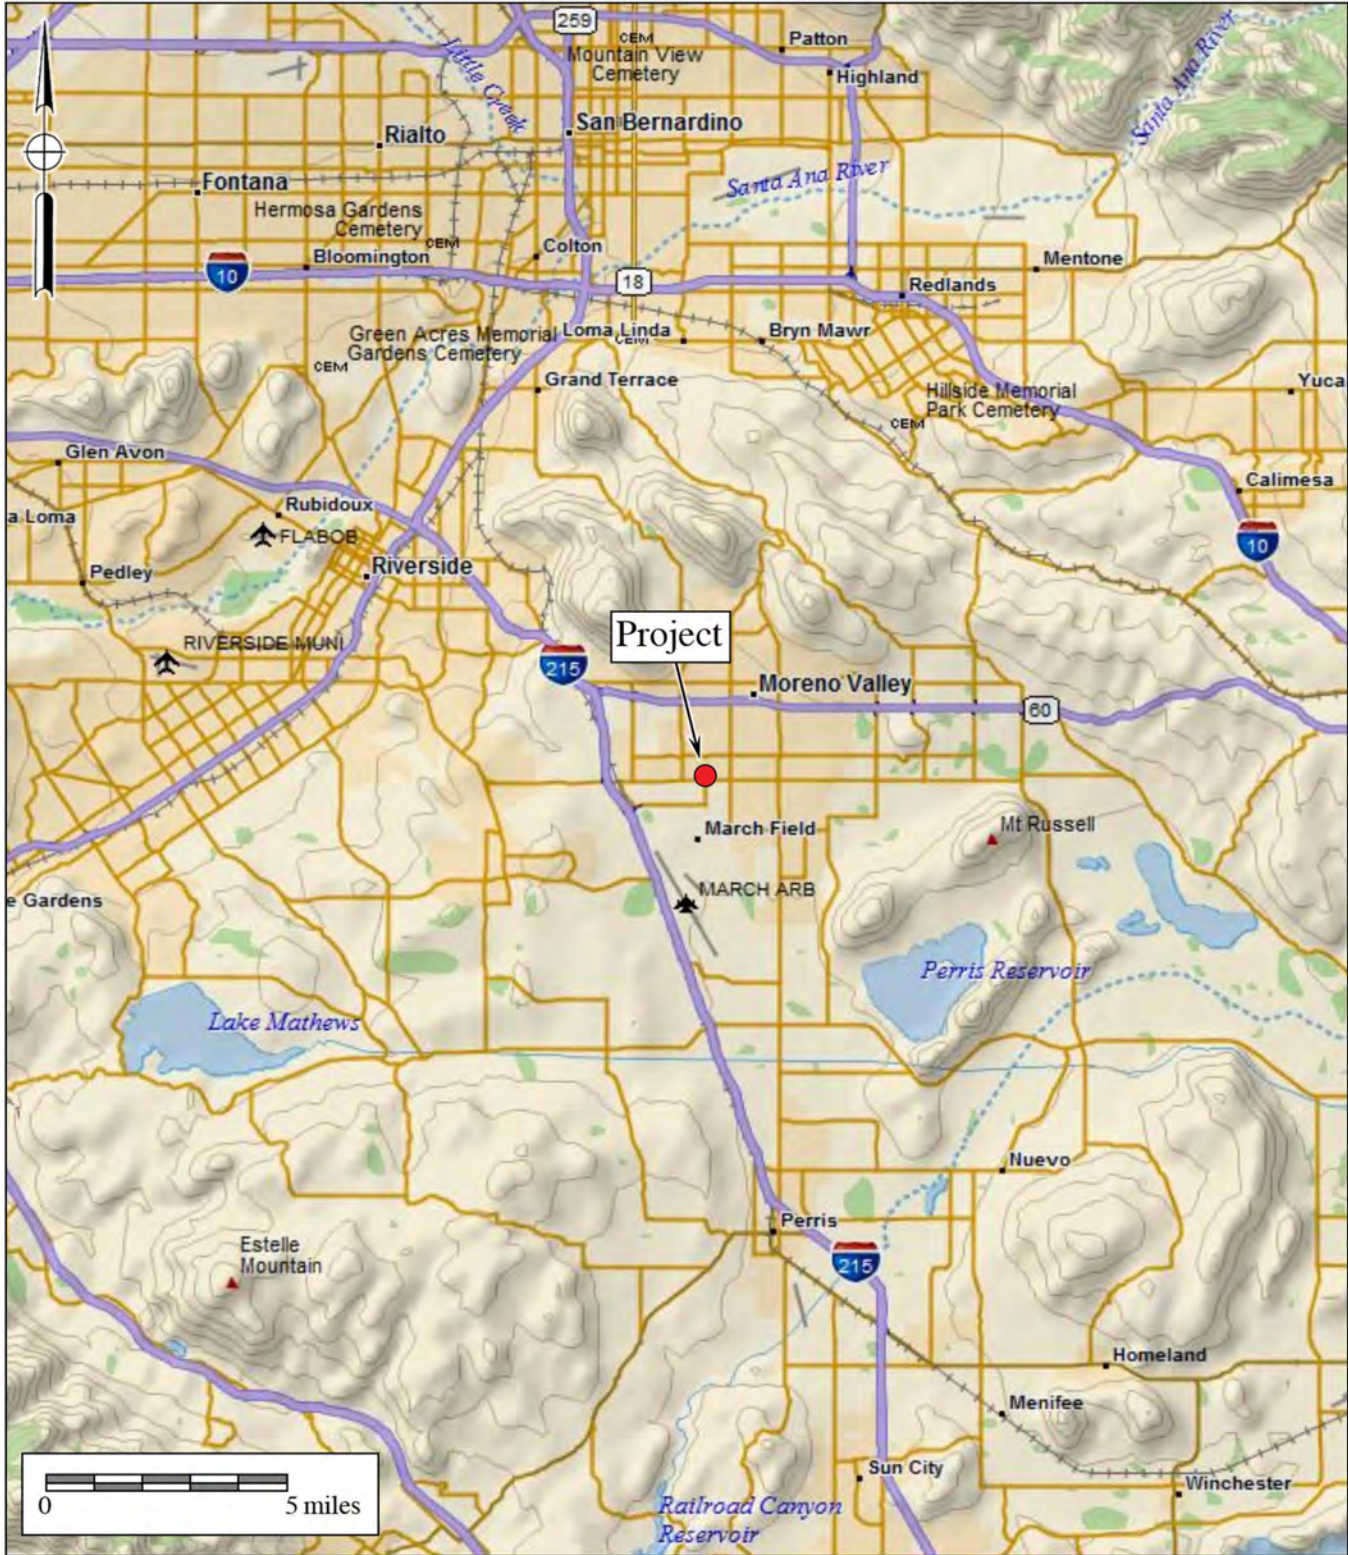

## II. REGULATORY SETTING

The California Environmental Quality Act (CEQA), which is patterned after the National Environmental Policy Act, is the overriding environmental document that sets the requirement for protecting California's cultural and paleontological resources. The document does not establish specific rules that must be followed but mandates that governing permitting agencies (lead agencies) set their own guidelines for the protection of nonrenewable paleontological resources under their jurisdiction.

### State of California

Under the Guidelines for the Implementation of CEQA, as amended March 29, 1999 (Title 1, Chapter 3, California Code of Regulations: 15000 et seq.), procedures define the type of activities, persons, and public agencies required to comply with CEQA. In the Environmental Checklist, one of the questions to answer is, "Will the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?" (Section 15023, Appendix G, Section XIV, Part a). California Public Resources Code Section 5097.5 states:

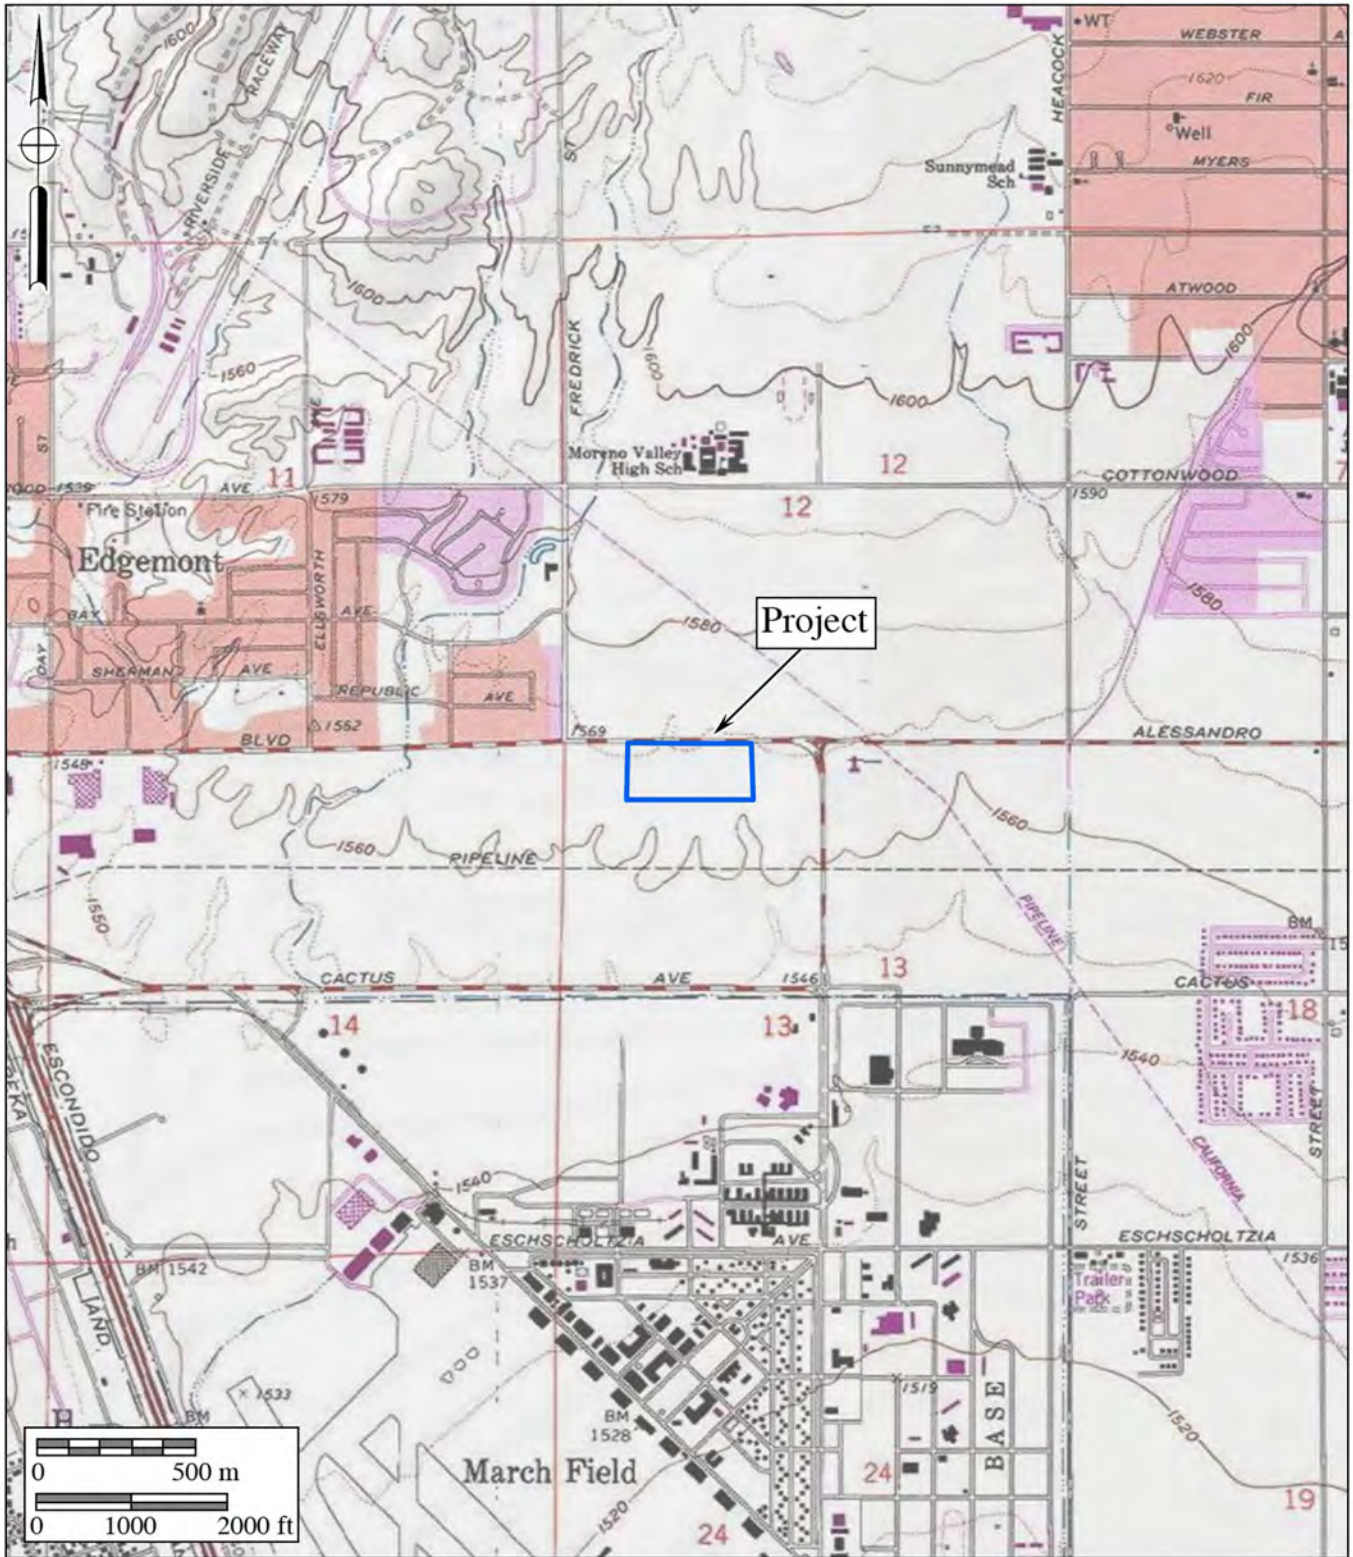

- a) No person shall knowingly and willfully excavate upon, or remove, destroy, injure or deface any historic or prehistoric ruins, burial grounds, archaeological or vertebrate paleontological site, including fossilized footprints, inscriptions made by human agency, rock art, or any other archaeological, paleontological or historical feature, situated on public lands, except with the express permission of the public agency having jurisdiction over such lands. Violation of this section is a misdemeanor.
- b) As used in this section, "public lands" means lands owned by, or under the jurisdiction of, the state, or any city, county, district, authority, or public corporation, or any agency thereof.

### **City of Moreno Valley**

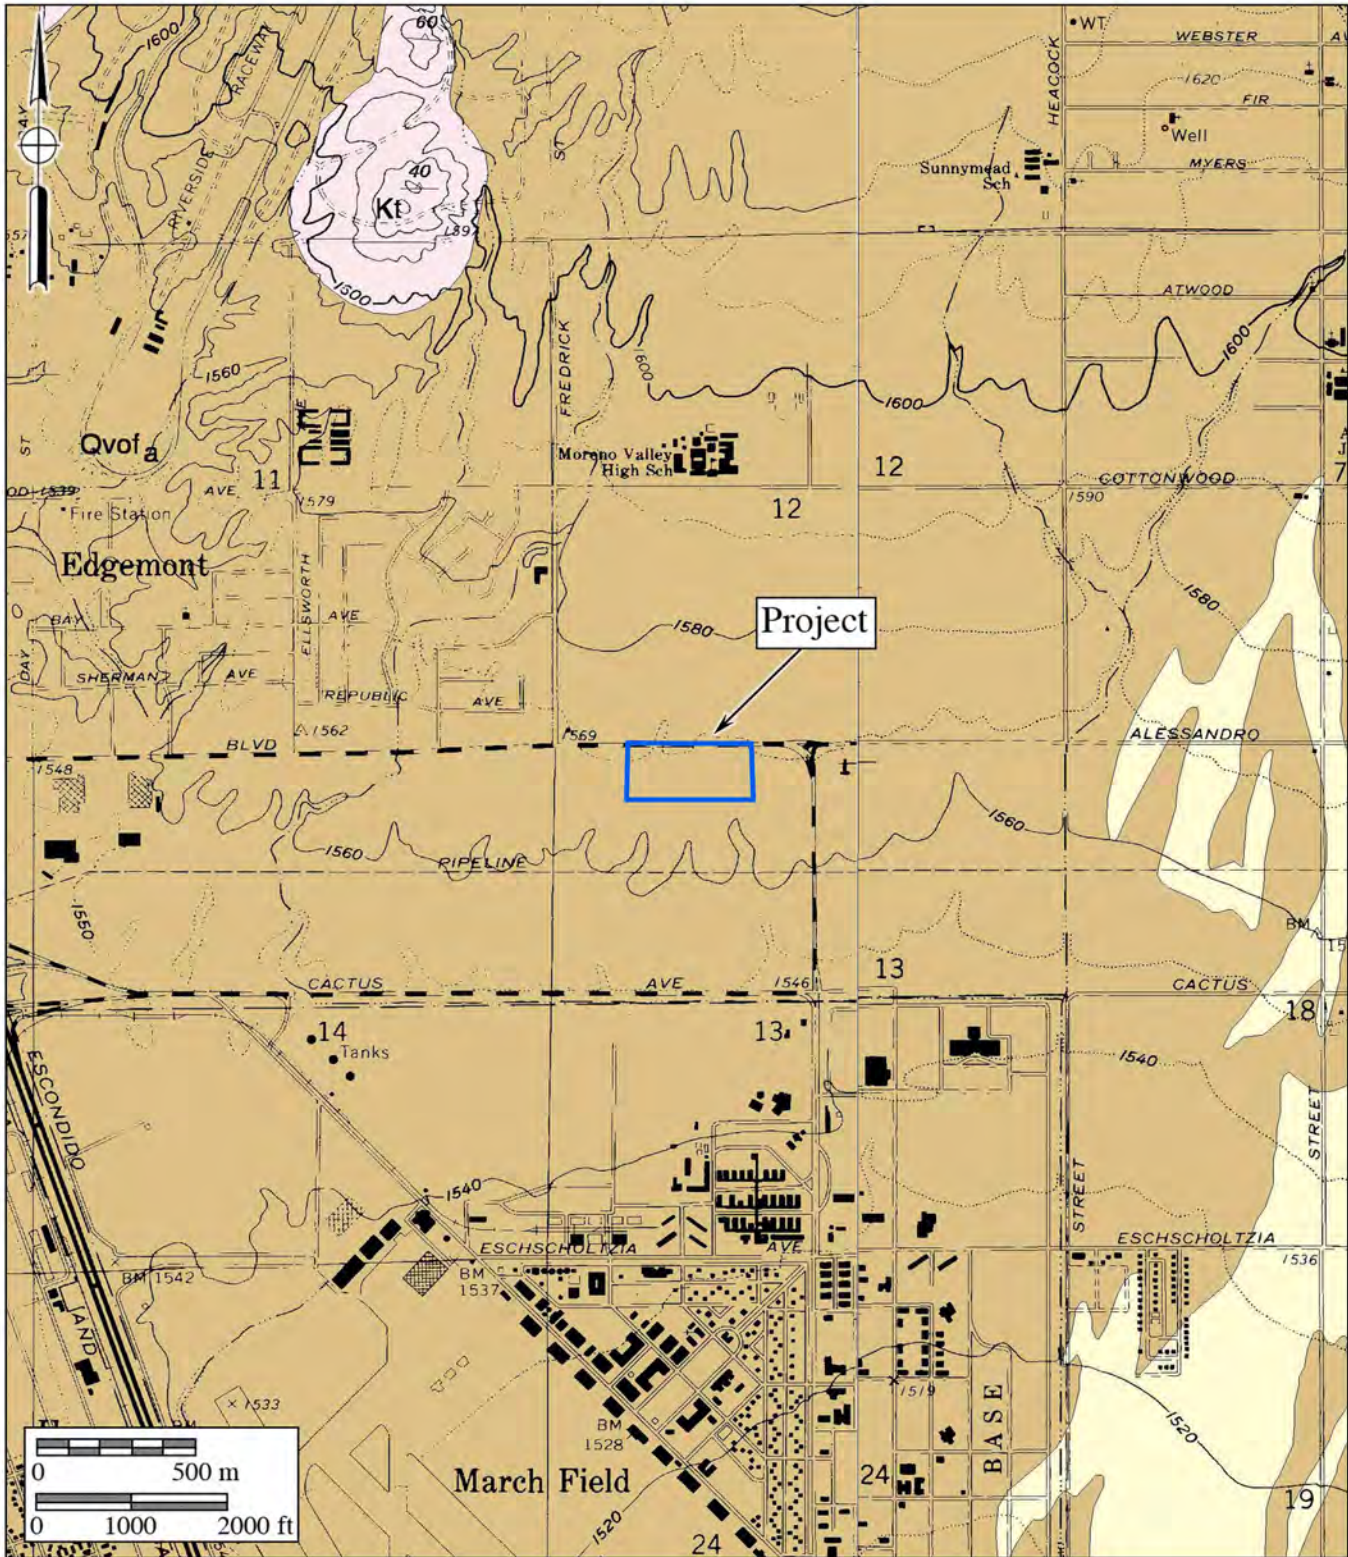

The treatment of paleontological resources and applicable mitigation measures are outlined in Section 5.10 of the City of Moreno Valley’s Final Environmental Impact Report (FEIR) (City of Moreno Valley 2006). In the FEIR, “Paleontological Resource Sensitive Areas” are presented as Figure 5.10-3. In Figure 5.10-3, all areas west of Gilman Springs Road, and therefore most of the city limits including the project property, are shown as having a “low potential” for fossil resources; however, what constitutes an area of “low potential” is not provided. The areas with a “high potential” are limited to the outcrops of the fossiliferous Mt. Eden Formation and San Timoteo Formation, which occur in the San Timoteo Badlands (*i.e.*, east of Gilman Springs Road). Since significant impacts to paleontological resources could potentially occur if the City of Moreno Valley’s General Plan is implemented, the FEIR presents a mitigation measure that would reduce impacts to a level below that of significant. This measure is presented in Section VI of this report.

### **III. GEOLOGY**

The geology mapped underlying the project and immediate area indicates that the property is underlain by lower Pleistocene (approximately 1.8 million- to perhaps 200,000- to 300,000-year-old), very old, sandy alluvial fan deposits (areas labeled “Qvof<sub>a</sub>” and shown in brown on Figure 3 [after Morton and Cox 2001; Morton and Matti 2001]). These sedimentary deposits are described as:

... mostly well dissected, well-indurated, reddish-brown sand deposits. Commonly contains duripans and locally silcretes. Forms widespread deposits north and south of Moreno Valley, flanking bedrock areas. Deposits on older erosion surfaces lack diagnostic features, and may or may not be alluvial fan deposits. (Morton and Matti 2001)

**Figure 3**  
**Geologic Map**

The Compass Danbe Centerpointe Project  
Geology after Morton and Cox (2001) and Morton and Matti (2001)

Attachment: Appendix H-Paleontological Assessment (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

## IV. PALEONTOLOGICAL RESOURCES

### Definition

Paleontological resources are the remains of prehistoric life that have been preserved in geologic strata. These remains are called fossils and include bones, shells, teeth, and plant remains (including their impressions, casts, and molds) in the sedimentary matrix, as well as trace fossils such as footprints and burrows. Fossils are considered older than 5,000 years of age (Society of Vertebrate Paleontology 2010), but may include younger remains (subfossils), for example, when viewed in the context of local extinction of the organism or habitat. Fossils are considered a nonrenewable resource under state, county, and city guidelines (see Section II of this report).

### Fossil Records Search

Based upon a paleontological literature review and a collections and records search conducted by the Geological Sciences Division of the San Bernardino County Museum in Redlands, California for the nearby Moreno Valley Logistics Center Project, older Pleistocene alluvial fan deposits (“Qvof<sub>a</sub>” on Figure 3) have a high potential to contain significant nonrenewable paleontological resources (*i.e.*, fossils) and were assigned a “high paleontological resource sensitivity” (see Scott 2015 in Appendix B). Similar older Pleistocene sediments throughout the lowland (valley) areas of western Riverside County and the Inland Empire have been reported to yield significant fossils of extinct terrestrial mammals from the last Ice Age (see references in Scott 2015), such as mammoths, mastodons, giant ground sloths, dire wolves, short-faced bears, saber-toothed cats, large and small horses, camels, and bison.

A fossil records search for the Canyon Steele Industrial Building Project, which is about 4.5 miles south of the subject property in the city of Perris, was performed by the Western Science Center (WSC) in Hemet, California, as part of a paleontological assessment conducted by CRM Tech (Radford 2018). Radford (2018) indicates that the closest WSC fossil localities to the Canyon Steele Industrial Building Project are from the Aldi Distribution Center, which is located southwest of Highway 60 and Redlands Boulevard in Moreno Valley, approximately five and a half miles east-northeast of the Compass Danbe Centerpointe Project. These localities include WSC locs. 192, 193, and 194, all of late Pleistocene age, which consist of the remains of a horse (*Equus* sp.), a giant ground sloth (*Megalonyx jeffersonii*), and a llama (*Hemiauchenia* sp.), animals that became extinct in North America at or soon after the end of the Pleistocene epoch, about 11,700 years ago (Darla Radford, personal communication 2020). The depths of the fossils ranged from approximately 11 to 13 feet below the surface. On the geologic map of Morton and Matti (2001), these fossil localities are situated in an area mapped as Quaternary (Holocene and late Pleistocene), sandy, gravely, young alluvial fan deposits (“Qyf”) at the surface, which suggests deposits of late Pleistocene age and older (greater than 11,700 years) are present beginning at a depth of less than 11 feet below the surface.

## V. PALEONTOLOGICAL SENSITIVITY

### Overview

The degree of paleontological sensitivity of any particular area is based on a number of factors, including the documented presence of fossiliferous resources on a site or in nearby areas, the presence of documented fossils within a particular geologic formation or lithostratigraphic unit, and whether or not the original depositional environment of the sediments is one that might have been conducive to the accumulation of organic remains that might have become fossilized over time. Late Quaternary (Holocene, or “modern”) alluvium is generally considered to be geologically too young to contain significant, nonrenewable paleontological resources (*i.e.*, fossils), and is thus typically assigned a Low paleontological sensitivity. Older Pleistocene (greater than 11,700 years old) alluvial and alluvial fan deposits in the Inland Empire, however, often yield important Ice Age terrestrial vertebrate fossils, such as extinct mammoths, mastodons, giant ground sloths, extinct species of horse, bison, and camel, saber-toothed cats, and others (Scott 2015). These Pleistocene sediments are thus accorded a High paleontological resource sensitivity.

### Professional Standard

The Society of Vertebrate Paleontology (2010) drafted guidelines outlining procedures that include:

[E]valuating the potential for impacts of a proposed action on paleontological resources and for mitigating those impacts. Impact mitigation includes pre-project survey and salvage, monitoring and screen washing during excavation to salvage fossils, conservation and inventory, and final reports and specimen curation. The objective of these procedures is to offer standard methods for assessing potential impacts to fossils and mitigating these impacts.

The guidelines include four categories of paleontological sensitivity for geologic units (formations) that might be impacted by a proposed project, as listed below:

- High Potential: Rock units from which vertebrate or significant invertebrate, plant, or trace fossils have been recovered.
- Undetermined Potential: Rock units for which little information is available concerning their paleontological content, geologic age, and depositional environment, and that further study is needed to determine the potential of the rock unit.
- Low Potential: Rock units that are poorly represented by fossil specimens in institutional collections or based upon a general scientific consensus that only preserve fossils in rare circumstances.
- No Potential: Rock units that have no potential to contain significant paleontological

resources, such as high-grade metamorphic rocks and plutonic igneous rocks.

### **Riverside County Assessment**

A “paleontological sensitivity map” generated by the Riverside County Transportation and Land Management Agency in September 2020 (see Figure 4) ranks the entire project as having a High Paleontological Potential/Sensitivity (High B), which is:

[E]quivalent to High A, but is based on the occurrence of fossils at a specified depth below the surface. The category High B indicates that fossils are likely to be encountered at or below four feet of depth, and may be impacted during excavation by construction activities. (County of Riverside 2020)

The category “High B” indicates that fossils are likely to be encountered at or below four feet of depth and may be impacted during excavation by construction activities. Alluvial valley sediments and very old alluvial fan sediments with a High Potential/Sensitivity (High B) to yield nonrenewable paleontological resources (*i.e.*, fossils) are shown in amber tint on Figure 4.

### **City of Moreno Valley Assessment**

The City of Moreno Valley General Plan acknowledges that significant impacts to paleontological resources could potentially occur as a result of development within the city limits (City of Moreno Valley 2006). As a result, Mitigation Measure C1 (City of Moreno Valley 2006:5.10-15; see Section VI, below) is provided to reduce potential impacts to fossil resources (as well as historic and prehistoric archeological sites) to a level below significant during earth disturbance activities. However, the FEIR’s statement addressing potential impacts to paleontological resources is not entirely clear as to whether the mitigation measures are stipulated exclusively for the fossiliferous, geologic formations that occur in the Badlands areas at the far eastern extent of the city limits (specifically, the Mt. Eden Formation and San Timoteo Formation), or for the greater Moreno Valley area. In addition, the FEIR seems to state that the Mt. Eden Formation and San Timoteo Formation underlie the alluvium found across much of the city, when it is most likely granitic rocks, such as the outcrop of tonalite about a mile north of the project, that comprise the bedrock formation. Furthermore, the FEIR assumes the age of the surficial alluvial deposits is “recent,” which is incorrect (see Section III, above).

**Figure 4**

**Paleontological Sensitivity Map**

The Compass Danbe Centerpointe Project  
After Riverside County Land Information System

## VI. RECOMMENDATIONS

The existence of potentially fossiliferous Quaternary very old alluvial fan deposits mapped across the project (Qvof<sub>a</sub> on Figure 3 in Appendix B); the known occurrence of terrestrial vertebrate fossils at relatively shallow depths from Quaternary older alluvial fan sediments across the Inland Empire of western Riverside County; and the High Paleontological Potential/Sensitivity (High B) typically assigned to Quaternary older alluvial fan sediments all support the recommendation that paleontological monitoring be required during mass grading, trenching, and excavation activities in undisturbed, Quaternary, older alluvial fan sediments in order to mitigate any adverse impacts (loss or destruction) to potential nonrenewable paleontological resources. Monitoring is recommended on a full-time basis for excavations exceeding five feet in depth in undisturbed deposits at the Compass Danbe Centerpointe Project. Mitigation Measure C1 listed in the City of Moreno Valley's FEIR is presented below:

- C1.** Prior to the approval of a project, the City will assess potential impacts to significant historic, prehistoric archaeological, and paleontological [*sic*] resources, including impacts to human remains, pursuant to Section 15064.5 of the California Environmental Quality Act Guidelines. If significant impacts are identified, the City will require the project to be modified to avoid the impacts, or require measures to mitigate the impacts. Mitigation may involve monitoring, resource recovery, documentation or other measures. (City of Moreno Valley 2006:5.10-16)

Should the City of Moreno Valley Planning Division identify a potential for impacts to paleontological resources at a level above significant at the project, a proposed Mitigation Monitoring and Reporting Program (MMRP) is proposed below. When implemented with the provisions of CEQA, Scott (2015), the City of Moreno Valley (2006), and the Society of Vertebrate Paleontology (2010), this proposed MMRP would mitigate any adverse impacts (loss or destruction) to potential nonrenewable paleontological resources (fossils), if present, to a level below significant. The proposed MMRP is as follows:

- 1) Monitoring of mass grading and excavation activities in areas identified as likely to contain paleontological resources by a qualified paleontologist or paleontological monitor. Full-time monitoring will be conducted in areas of grading or excavation in undisturbed, very old alluvial fan sediments (Qvof<sub>a</sub> on Figure 3), starting at a depth of five feet below the surface. Paleontological monitors will be equipped to salvage fossils as they are unearthed to avoid construction delays and to remove samples of sediments that are likely to contain the remains of small fossil invertebrates and vertebrates. The monitor must be empowered to temporarily halt or divert equipment

- to allow for the removal of abundant or large specimens in a timely manner. Monitoring may be reduced if the potentially fossiliferous units are not present in the subsurface, or if present, are determined upon exposure and examination by qualified paleontological personnel to have a low potential to contain or yield fossil resources.
- 2) Paleontological salvage during trenching and boring activities is typically from the generated spoils and does not delay the trenching or drilling activities. Fossils are collected and placed in cardboard flats or plastic buckets and identified by field number, collector, and date collected. Notes are taken on the map location and stratigraphy of the site, and the site is photographed before it is vacated and the fossils are removed to a safe place. On mass grading projects, any discovered fossil site is protected by red flagging to prevent it from being overrun by earthmovers (scrapers) before salvage begins. Fossils are collected in a similar manner, with notes and photographs being taken before removing the fossils. Precise location of the site is determined with the use of handheld Global Positioning System units. If the site involves a large terrestrial vertebrate, such as large bone(s) or a mammoth tusk, that is/are too large to be easily removed by a single monitor, Brian F. Smith and Associates, Inc. (BFSA) will send a fossil recovery crew in to excavate around the find, encase the find within a plaster jacket, and remove it after the plaster is set. For large fossils, use of the contractor's construction equipment is solicited to help remove the jacket to a safe location before it is returned to the BFSA laboratory facility for preparation.
  - 3) Particularly small invertebrate fossils typically represent multiple specimens of a limited number of organisms, and a scientifically suitable sample can be obtained from one to several five-gallon buckets of fossiliferous sediment. If it is possible to dry-screen the sediment in the field, a concentrated sample may consist of one or two buckets of material. For vertebrate fossils, the test is usually the observed presence of small pieces of bones within the sediments. If present, as many as 20 to 40 five-gallon buckets of sediment can be collected and returned to a separate facility to wet-screen the sediment. In the laboratory, individual fossils are cleaned of extraneous matrix, any breaks are repaired, and the specimen, if needed, is stabilized by soaking in an archivally approved acrylic hardener (*e.g.*, a solution of acetone and Paraloid B-72).
  - 4) Preparation of recovered specimens to a point of identification and permanent preservation, including screen washing sediments to recover small invertebrates and vertebrates, if necessary. Preparation of individual vertebrate fossils is often more time-consuming than for accumulations of invertebrate fossils.
  - 5) Identification and curation of specimens into a professional, accredited public museum repository with a commitment to archival conservation and permanent retrievable storage (*e.g.*, the WSC, 2345 Searl Parkway, Hemet, California 92543). The paleontological program should include a written repository agreement prior to the initiation of mitigation activities.

- 6) Preparation of a final monitoring and mitigation report of findings and significance, including lists of all fossils recovered and necessary maps and graphics to accurately record their original location. The report, when submitted to the appropriate lead agency (City of Moreno Valley), will signify satisfactory completion of the project program to mitigate impacts to any paleontological resources.
- 7) Decisions regarding the intensity of the MMRP will be made by the project paleontologist based upon the significance of the paleontological resources and their biostratigraphic, biochronologic, paleoecologic, taphonomic, and taxonomic attributes, not upon the ability of a project proponent to fund the MMRP.

## VII. CERTIFICATION

I hereby certify that the statements furnished above and in the attached exhibits present the data and information required for this paleontological report, and that the facts, statements, and information presented are true and correct to the best of my knowledge and belief, and have been compiled in accordance with CEQA criteria.

Todd A. Wirths  
Senior Paleontologist

re: **PALEONTOLOGY LITERATURE AND RECORDS REVIEW, MORENO VALLEY LOGISTICS CENTER, CITY OF MORENO VALLEY, RIVERSIDE COUNTY, CALIFORNIA**

---

Dear Dr. Kennedy,

The Division of Geological Sciences of the San Bernardino County Museum (SBCM) has completed a literature review and records search for the above-named project in the City of Moreno Valley, Riverside County, California. Specifically, the proposed study area is located in the southwestern quadrant of section 30, Township 3 South, Range 3 West, San Bernardino Base and Meridian, as seen on the Perris, California and the Sunnymead, California 7.5' United States Geological Survey topographic quadrangle maps (1967 editions, photorevised 1973 and 1980, respectively).

Previous mapping of the proposed property (Rogers, 1965; Morton and Matti, 2001; Morton, 2003) indicates that the study area is situated entirely upon surface exposures of early Pleistocene alluvial fan deposits (= unit **Qvof<sub>a</sub>**). These Pleistocene fan deposits may have high paleontologic sensitivity, depending upon their lithology. Pleistocene alluvium elsewhere throughout Riverside County and the Inland Empire has repeatedly been reported to yield significant fossils of extinct animals from the Ice Age (Jefferson, 1991; Reynolds, 1991; Anderson and others, 2002; Scott and Cox, 2008; Springer and others, 2009, 2010; Scott, 2010). Fossils recovered from these Pleistocene sediments represent extinct taxa including mammoths, mastodons, ground sloths, dire wolves, sabre-toothed cats, large and small horses, large and small camels, and bison (Jefferson, 1991; Reynolds, 1991; Scott and Cox, 2008; Springer and others, 2009, 2010; Scott, 2010), as well as plant macro- and microfossils (Anderson and others, 2002). If not previously disturbed by development, and depending upon the lithology exhibited, these sediments have high potential to contain significant nonrenewable paleontologic resources.

For this review, I conducted a search of the Regional Paleontologic Locality Inventory (RPLI) at the SBCM. The results of this search indicate that no previously-recorded fossil resource

Packet Pg. 2894

localities from Pleistocene older alluvium are present within the boundaries of the proposed development property, nor from at least within one mile in any direction.

## Recommendations

The results of the literature review and the search of the RPLI at the SBCM demonstrate that the proposed study area is situated upon Pleistocene older alluvial deposits that, if not previously disturbed by development and depending upon their lithology, have high potential to contain paleontologic resources. Excavation in this older alluvium therefore has high potential to impact paleontologic resources. A qualified vertebrate paleontologist must develop a program to mitigate impacts to nonrenewable paleontologic resources. This mitigation program must be consistent with the provisions of the California Environmental Quality Act (Scott and Springer, 2003), as well as with regulations currently implemented by the County of Riverside. This program should include, but not be limited to:

1. Monitoring of excavation in areas identified as likely to contain paleontologic resources by a qualified paleontologic monitor. Areas requiring monitoring include all previously-undisturbed Pleistocene older alluvial sediments present, at the surface or at depth, within the boundaries of the property. Paleontologic monitors should be equipped to salvage fossils as they are unearthed, to avoid construction delays, and to remove samples of sediments that are likely to contain the remains of small fossil invertebrates and vertebrates. Monitors must be empowered to temporarily halt or divert equipment to allow removal of abundant or large specimens. Monitoring may be reduced or eliminated if the potentially-fossiliferous units described herein are determined upon exposure and examination by qualified paleontologic personnel to have low potential to contain fossil resources.
2. Preparation of recovered specimens to a point of identification and permanent preservation, including washing of sediments to recover small invertebrates and vertebrates. Preparation and stabilization of all recovered fossils are essential in order to fully mitigate adverse impacts to the resources (Scott and others, 2004).
3. Identification and curation of specimens into an established, accredited museum repository with permanent retrievable paleontologic storage. These procedures are also essential steps in effective paleontologic mitigation (Scott and others, 2004) and CEQA compliance (Scott and Springer, 2003). The paleontologist must have a written repository agreement in hand prior to the initiation of mitigation activities. Mitigation of adverse impacts to significant paleontologic resources is not complete until such curation into an established, accredited museum repository has been fully completed and documented.
4. Preparation of a report of findings with an appended itemized inventory of specimens. The report and inventory, when submitted to the appropriate Lead Agency along with confirmation of the curation of recovered specimens into an established, accredited museum

repository, would signify completion of the program to mitigate impacts to paleontologic resources.

### A Brief Introduction

This Project-Specific WQMP Template for the **Santa Ana Region** has been prepared to help guide you in documenting compliance for your project. Because this document has been designed to specifically document compliance, you will need to utilize the WQMP Guidance Document as your “how-to” manual to help guide you through this process. Both the Template and Guidance Document go hand-in-hand, and will help facilitate a well prepared Project-Specific WQMP. Below is a flowchart for the layout of this Template that will provide the steps required to document compliance.

Attachment: Appendix I1-PWQMP (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

**OWNER’S CERTIFICATION**

This Project-Specific Water Quality Management Plan (WQMP) has been prepared for CDRE HOLDINGS 17 LLC by Thatcher Engineering and Associates, Inc. for Compass Danbe Centerpointe.

This WQMP is intended to comply with the requirements of City of Moreno Valley for Water Quality Ordinance (Municipal code Section 9.10.080) which includes the requirement for the preparation and implementation of a Project-Specific WQMP.

The undersigned, while owning the property/project described in the preceding paragraph, shall be responsible for the implementation and funding of this WQMP and will ensure that this WQMP is amended as appropriate to reflect up-to-date conditions on the site. In addition, the property owner accepts responsibility for interim operation and maintenance of Stormwater BMPs until such time as this responsibility is formally transferred to a subsequent owner. This WQMP will be reviewed with the facility operator, facility supervisors, employees, tenants, maintenance and service contractors, or any other party (or parties) having responsibility for implementing portions of this WQMP. At least one copy of this WQMP will be maintained at the project site or project office in perpetuity. The undersigned is authorized to certify and to approve implementation of this WQMP. The undersigned is aware that implementation of this WQMP is enforceable under City of Moreno Valley Water Quality Ordinance (Municipal Code Section 9.10.080).

"I, the undersigned, certify under penalty of law that the provisions of this WQMP have been reviewed and accepted and that the WQMP will be transferred to future successors in interest."

EXISTING SITE CHARACTERISTICS	
Total area of <u>existing</u> Impervious Surfaces within the project limits (SF)	47,725      (Alessandro Blvd)
Is the project located within any MSHCP Criteria Cell?	<input type="checkbox"/> Y <input checked="" type="checkbox"/> N
If so, identify the Cell number:	
Are there any natural hydrologic features on the project site?	<input checked="" type="checkbox"/> Y <input type="checkbox"/> N
Is a Geotechnical Report attached?	<input checked="" type="checkbox"/> Y <input type="checkbox"/> N
If no Geotech. Report, list the NRCS soils type(s) present on the site (A, B, C and/or D)	
What is the Water Quality Design Storm Depth for the project?	0.67

The project site is currently vacant, and consists of two parcels. The site is located on the south side of Alessandro Blvd. between Frederick Street and Graham Street in the City of Moreno Valley. The site generally drains from north to south.

The project proposes to develop the site as an industrial warehouse facility with related access from Alessandro Blvd. and landscape improvements. The development will also include street improvements along Alessandro Boulevard.

The total existing net area of the site is approximately 17.67 acres. After dedication for public right of way, the proposed net area of the site is approximately 17.65 acres. The project area, including proposed offsite improvements and vacant area runoff, and existing offsite improvements tributary to the project's BMPs is 995,188 SF.

Drainage Area 1 includes Parcel 1 onsite areas and offsite tributary runoff totaling 558,536 SF. Flows generated onsite from Parcel 1 and offsite tributary runoff will be directed to an underground detention tank. From here the required treatment volume will be pumped to Biotreatment Device 1 (a Modular Wetland). Treated flows will discharge (gravity flow) to the City of Moreno Valley's storm drain system. Flows from larger storms in excess of water quality treatment volume will be pumped out at rates less than pre-development rates from the detention tank to the storm drain. From here, flows continue via City of Moreno Valley Storm Drain to Perris Valley Channel and Canyon Lake as they do historically.

Drainage Area 2 includes Parcel 2 onsite areas and offsite tributary runoff totaling 346,029 SF. Flows generated onsite from Parcel 2 and offsite tributary runoff will be directed to an underground detention tank. From here the required treatment volume will be pumped to Biotreatment Device 2 (a Modular Wetland). Treated flows will discharge (gravity flow) to the City of Moreno Valley's storm drain system. Flows from larger storms in excess of water quality treatment volume will be pumped out at rates less than pre-development rates from the detention tank to the storm drain. From here, flows continue via City of Moreno Valley Storm Drain to Perris Valley Channel and Canyon Lake as they do historically.

Drainage Area 3 includes the westerly portion of the Alessandro frontage, adjacent and adjacent parkway totaling 27,680 SF. Bioretention Swale 3 is proposed to provide treatment of the area. Runoff from Alessandro Boulevard will be directed to the swale via curb openings. Once treated in the soil media, runoff will enter an underdrain, ultimately directing flows to a proposed catch basin and into a City of Moreno Valley storm drain which is proposed to be routed through the site. From here, flows continue via City of Moreno Valley Storm Drain to Perris Valley Channel and Canyon Lake as they do historically.

Drainage Area 4 includes the center portion of the Alessandro frontage, adjacent and adjacent parkway totaling 27,994 SF. Bioretention Swale 4 is proposed to provide treatment of the area. Runoff from Alessandro Boulevard will be directed to the swale via curb openings. Once treated in the soil media, runoff will enter an underdrain, ultimately directing flows to a proposed catch basin and into a City of Moreno Valley storm drain which is proposed to be routed through the site. From here, flows continue via City of Moreno Valley Storm Drain to Perris Valley Channel and Canyon Lake as they do historically.

Drainage Area 5 includes the easterly portion of the Alessandro frontage, adjacent and adjacent parkway totaling 34,949 SF. Bioretention Swale 5 is proposed to provide treatment of the area. Runoff from Alessandro Boulevard will be directed to the swale via curb openings. Once treated in the soil media, runoff will enter an underdrain, ultimately directing flows to a proposed catch basin and into a City of Moreno Valley storm drain which is proposed to be routed through the site. From here, flows continue via City of Moreno Valley Storm Drain to Perris Valley Channel and Canyon Lake as they do historically.

The Owner will maintain all BMPs including onsite biotreatment devices and offsite bioretention swales.

### A.1 Maps and Site Plans

When completing your Project-Specific WQMP, include a map of the local vicinity and existing site. In addition, include all grading, drainage, landscape/plant palette and other pertinent construction plans in Appendix 2. At a minimum, your WQMP Site Plan should include the following:

- Drainage Management Areas
- Proposed Structural BMPs
- Drainage Path
- Drainage Infrastructure, Inlets, Overflows
- Source Control BMPs
- Buildings, Roof Lines, Downspouts
- Impervious Surfaces
- Standard Labeling

Attachment: Appendix I1-PWQMP (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

Use your discretion on whether or not you may need to create multiple sheets or can appropriately accommodate these features on one or two sheets. Keep in mind that the Co-Permittee plan reviewer must be able to easily analyze your project utilizing this template and its associated site plans and maps.

## A.2 Identify Receiving Waters

Using Table A.1 below, list in order of upstream to downstream, the receiving waters that the project site is tributary to. Continue to fill each row with the Receiving Water's 303(d) listed impairments (if any), designated beneficial uses, and proximity, if any, to a RARE beneficial use. Include a map of the receiving waters in Appendix 1.

**Table A.1** Identification of Receiving Waters

Receiving Waters	EPA Approved 303(d) List Impairments	Designated Beneficial Uses	Proximity to RARE Beneficial Use
Perris Valley Channel	None	None	N/A
San Jacinto River (Reach 3)	None	MUN-AGR-GWR-REC1-REC2-WARM-WILD-RARE	11.6 Miles
Canyon Lake (aka San Jacinto River Reach 2)	Nutrients	MUN-AGR-GWR-REC1-REC2-WARM-WILD	N/A
San Jacinto River (Reach 1)	None	MUN-AGR-GWR-REC1-REC2-WARM-WILD-RARE	18.8 Miles
Lake Elsinore	Nutrients, DDT, PCBs, Organic Enrichment/Low Dissolved Oxygen	REC1-REC2-WARM-WILD	N/A
Temescal Creek (Reach 5)	None	AGR-GWR-REC1-REC2-WARM-WILD-RARE	24.4 Miles
Temescal Creek (Reach 4)	None	AGR-GWR-REC1-REC2-WARM-WILD-RARE	37.3 Miles
Temescal Creek (Reach 3)	None	AGR-IND-GWR-REC1-REC2-WARM-WILD	N/A
Temescal Creek (Reach 2)	None	AGR-IND-GWR-REC1-REC2-WARM-LWRM	N/A
Temescal Creek (Reach 1)	pH	REC1-REC2-WARM-WILD	N/A
Santa Ana River (Reach 3)	Copper, Lead, Pathogens	AGR-GWR-REC1-REC2-WARM-WILD-RARE-SPWN	60.7 Miles
Prado Basin Management Zone	pH	REC1-REC2-WARM-WILD-RARE	46.3 Miles
Santa Ana River (Reach 2)	None	AGR-GWR-REC1-REC2-WARM-WILD-RARE	65.7 Miles
Santa Ana River (Reach 1)	None	REC1-REC2-WARM-WILD	N/A
Tidal Prism of Santa Ana River (to within 1000' of Victoria Street) and Newport Slough	None	None	N/A

### A.3 Additional Permits/Approvals required for the Project:

Table A.2 Other Applicable Permits

Agency	Permit Required	
State Department of Fish and Game, 1602 Streambed Alteration Agreement	<input checked="" type="checkbox"/> Y	<input type="checkbox"/> N
State Water Resources Control Board, Clean Water Act (CWA) Section 401 Water Quality Cert.	<input checked="" type="checkbox"/> Y	<input type="checkbox"/> N
US Army Corps of Engineers, CWA Section 404 Permit	<input type="checkbox"/> Y	<input checked="" type="checkbox"/> N
US Fish and Wildlife, Endangered Species Act Section 7 Biological Opinion	<input type="checkbox"/> Y	<input checked="" type="checkbox"/> N
Statewide Construction General Permit Coverage	<input checked="" type="checkbox"/> Y	<input type="checkbox"/> N
Statewide Industrial General Permit Coverage	<input checked="" type="checkbox"/> Y	<input type="checkbox"/> N
Western Riverside MSHCP Consistency Approval (e.g., JPR, DBESP)	<input checked="" type="checkbox"/> Y	<input type="checkbox"/> N
Other <i>(please list in the space below as required)</i> City of Moreno Valley Permits	<input checked="" type="checkbox"/> Y	<input type="checkbox"/> N

If yes is answered to any of the questions above, the Co-Permittee may require proof of approval/coverage from those agencies as applicable including documentation of any associated requirements that may affect this Project-Specific WQMP.

Attachment: Appendix I1-PWQMP (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

## Section B: Optimize Site Utilization (LID Principles)

Review of the information collected in Section 'A' will aid in identifying the principal constraints on site design and selection of LID BMPs as well as opportunities to reduce imperviousness and incorporate LID Principles into the site and landscape design. For example, **constraints** might include impermeable soils, high groundwater, groundwater pollution or contaminated soils, steep slopes, geotechnical instability, high-intensity land use, heavy pedestrian or vehicular traffic, utility locations or safety concerns. **Opportunities** might include existing natural areas, low areas, oddly configured or otherwise unbuildable parcels, easements and landscape amenities including open space and buffers (which can double as locations for bioretention BMPs), and differences in elevation (which can provide hydraulic head). Prepare a brief narrative for each of the site optimization strategies described below. This narrative will help you as you proceed with your LID design and explain your design decisions to others.

The 2010 Santa Ana MS4 Permit further requires that LID Retention BMPs (Infiltration Only or Harvest and Use) be used unless it can be shown that those BMPs are infeasible. Therefore, it is important that your narrative identify and justify if there are any constraints that would prevent the use of those categories of LID BMPs. Similarly, you should also note opportunities that exist which will be utilized during project design. Upon completion of identifying Constraints and Opportunities, include these on your WQMP Site plan in Appendix 1.

### Site Optimization

The following questions are based upon Section 3.2 of the WQMP Guidance Document. Review of the WQMP Guidance Document will help you determine how best to optimize your site and subsequently identify opportunities and/or constraints, and document compliance.

Did you identify and preserve existing drainage patterns? If so, how? If not, why?

*No. The entire site will be mass graded. Runoff from onsite areas is directed to one of the biotreatment devices for treatment, prior to exiting the site to the City storm drain as it does historically.*

Did you identify and protect existing vegetation? If so, how? If not, why?

*No. The entire site will be mass graded to accommodate the development, so it is not feasible to protect existing vegetation.*

Did you identify and preserve natural infiltration capacity? If so, how? If not, why?

*No. The measured infiltration rates were too low to allow for the use of an infiltration BMP. Instead, biotreatment BMPs are proposed.*

Did you identify and minimize impervious area? If so, how? If not, why?

*Yes. Impervious areas are limited to required streets, sidewalks and buildings. No decorative hardscape is proposed.*

Did you identify and disperse runoff to adjacent pervious areas? If so, how? If not, why?

*Yes. Alessandro Boulevard runoff will be directed to bioretention swales for treatment.*

## Section C: Delineate Drainage Management Areas (DMAs)

Utilizing the procedure in Section 3.3 of the WQMP Guidance Document which discusses the methods of delineating and mapping your project site into individual DMAs, complete Table C.1 below to appropriately categorize the types of classification (e.g., Type A, Type B, etc.) per DMA for your project site. Upon completion of this table, this information will then be used to populate and tabulate the corresponding tables for their respective DMA classifications.

**Table C.1 DMA Classifications**

DMA Name or ID	Surface Type(s) <sup>1</sup>	Area (Sq. Ft.)	DMA Type
1A	Concrete /Asphalt/ Roof	502,471	Type D
1B	Ornamental Landscaping	40,593	Type D
1C	Natural	15,472	Type D
2A	Concrete /Asphalt/ Roof	221,281	Type D
2B	Ornamental Landscaping	24,599	Type D
2C	Natural	100,149	Type D
3A	Concrete /Asphalt	21,819	Type D
3B	Ornamental Landscaping	5,861	Type D
4A	Concrete /Asphalt	21,407	Type D
4B	Ornamental Landscaping	6,587	Type D
5A	Concrete /Asphalt	26,789	Type D
5B	Ornamental Landscaping	8,160	Type D

<sup>1</sup>Reference Table 2-1 in the WQMP Guidance Document to populate this column

**Table C.2 Type 'A', Self-Treating Areas**

DMA Name or ID	Area (Sq. Ft.)	Stabilization Type	Irrigation Type (if any)
N/A	N/A	N/A	N/A

Table C.3 Type 'B', Self-Retaining Areas

Self-Retaining Area				Type 'C' DMAs that are draining to the Self-Retaining Area		
DMA Name/ ID	Post-project surface type	Area (square feet) [A]	Storm Depth (inches) [B]	DMA Name / ID	[C] from Table C.4 [C]	Required Retention Depth (inches) [D]
N/A	N/A	N/A	N/A	N/A	N/A	N/A

$$[D] = [B] + \frac{[B] \cdot [C]}{[A]}$$

Table C.4 Type 'C', Areas that Drain to Self-Retaining Areas

DMA					Receiving Self-Retaining DMA		
DMA Name/ ID	Area (square feet) [A]	Post-project surface type	Runoff factor [B]	Product [C] = [A] x [B]	DMA name /ID	Area (square feet) [D]	Ratio [C]/[D]
N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A

Table C.5 Type 'D', Areas Draining to BMPs

DMA Name or ID	BMP Name or ID
1A and 1B	Underground Detention and Biotreatment Device 1
2A and 2B	Underground Detention and Biotreatment Device 2
3A and 3B	Bioretention Swale 3
4A and 4B	Bioretention Swale 4
5A and 5B	Bioretention Swale 5

*Note: More than one drainage management area can drain to a single LID BMP, however, one drainage management area may not drain to more than one BMP.*

Attachment: Appendix I1-PWQMP (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

## Section D: Implement LID BMPs

### D.1 Infiltration Applicability

Is there an approved downstream ‘Highest and Best Use’ for stormwater runoff (see discussion in Chapter 2.4.4 of the WQMP Guidance Document for further details)?  Y  N

If yes has been checked, Infiltration BMPs shall not be used for the site. If no, continue working through this section to implement your LID BMPs. It is recommended that you contact your Co-Permittee to verify whether or not your project discharges to an approved downstream ‘Highest and Best Use’ feature.

#### Geotechnical Report

A Geotechnical Report or Phase I Environmental Site Assessment may be required by the Copermitee to confirm present and past site characteristics that may affect the use of Infiltration BMPs. In addition, the Co-Permittee, at their discretion, may not require a geotechnical report for small projects as described in Chapter 2 of the WQMP Guidance Document. If a geotechnical report has been prepared, include it in Appendix 3. In addition, if a Phase I Environmental Site Assessment has been prepared, include it in Appendix 4.

Is this project classified as a small project consistent with the requirements of Chapter 2 of the WQMP Guidance Document?  Y  N

#### Infiltration Feasibility

Table D.1 below is meant to provide a simple means of assessing which DMAs on your site support Infiltration BMPs and is discussed in the WQMP Guidance Document in Chapter 2.4.5. Check the appropriate box for each question and then list affected DMAs as applicable. If additional space is needed, add a row below the corresponding answer.

Table D.1 Infiltration Feasibility

Does the project site...	YES	NO
...have any DMAs with a seasonal high groundwater mark shallower than 10 feet? If Yes, list affected DMAs:		X
...have any DMAs located within 100 feet of a water supply well? If Yes, list affected DMAs:		X
...have any areas identified by the geotechnical report as posing a public safety risk where infiltration of stormwater could have a negative impact? If Yes, list affected DMAs:		X
...have measured in-situ infiltration rates of less than 1.6 inches / hour? If Yes, list affected DMAs: ALL	X	
...have significant cut and/or fill conditions that would preclude in-situ testing of infiltration rates at the final infiltration surface? If Yes, list affected DMAs:		X
...geotechnical report identify other site-specific factors that would preclude effective and safe infiltration? Describe here:		X

If you answered “Yes” to any of the questions above for any DMA, Infiltration BMPs should not be used for those DMAs and you should proceed to the assessment for Harvest and Use below.

## D.2 Harvest and Use Assessment

Please check what applies: None of the below apply. Therefore, Harvest and Use has been assessed.

- Reclaimed water will be used for the non-potable water demands for the project.
- Downstream water rights may be impacted by Harvest and Use as approved by the Regional Board (verify with the Copermittee).
- The Design Capture Volume will be addressed using Infiltration Only BMPs. In such a case, Harvest and Use BMPs are still encouraged, but it would not be required if the Design Capture Volume will be infiltrated or evapotranspired.

If any of the above boxes have been checked, Harvest and Use BMPs need not be assessed for the site. If neither of the above criteria applies, follow the steps below to assess the feasibility of irrigation use, toilet use and other non-potable uses (e.g., industrial use).

### Irrigation Use Feasibility

Complete the following steps to determine the feasibility of harvesting stormwater runoff for Irrigation Use BMPs on your site:

- Step 1: Identify the total area of irrigated landscape on the site, and the type of landscaping used.  
*Total Area of Irrigated Landscape: 2.01 acres*  
*Type of Landscaping (Conservation Design or Active Turf): Conservation Design*
- Step 2: Identify the planned total of all impervious areas on the proposed project from which runoff might be feasibly captured and stored for irrigation use. Depending on the configuration of buildings and other impervious areas on the site, you may consider the site as a whole, or parts of the site, to evaluate reasonable scenarios for capturing and storing runoff and directing the stored runoff to the potential use(s) identified in Step 1 above.  
*Total Area of Impervious Surfaces: 18.22 acres*
- Step 3: Cross reference the Design Storm depth for the project site (see Exhibit A of the WQMP Guidance Document) with the left column of Table 2-3 in Chapter 2 to determine the minimum area of Effective Irrigated Area per Tributary Impervious Area (EIATIA).  
*Enter your EIATIA factor: 1.158*
- Step 4: Multiply the unit value obtained from Step 3 by the total of impervious areas from Step 2 to develop the minimum irrigated area that would be required.  
*Minimum required irrigated area: 21.10*
- Step 5: Determine if harvesting stormwater runoff for irrigation use is feasible for the project by comparing the total area of irrigated landscape (Step 1) to the minimum required irrigated area (Step 4).

Minimum required irrigated area (Step 4)	Available Irrigated Landscape (Step 1)
21.10	2.01

### Toilet Use Feasibility

Complete the following steps to determine the feasibility of harvesting stormwater runoff for toilet flushing uses on your site:

Step 1: Identify the projected total number of daily toilet users during the wet season, and account for any periodic shut downs or other lapses in occupancy:

*Projected Number of Daily Toilet Users:*

*Project Type: Industrial*

Step 2: Identify the planned total of all impervious areas on the proposed project from which runoff might be feasibly captured and stored for toilet use. Depending on the configuration of buildings and other impervious areas on the site, you may consider the site as a whole, or parts of the site, to evaluate reasonable scenarios for capturing and storing runoff and directing the stored runoff to the potential use(s) identified in Step 1 above.

*Total Area of Impervious Surfaces: 18.22 acres*

Step 3: Enter the Design Storm depth for the project site (see Exhibit A) into the left column of Table 2-1 in Chapter 2 to determine the minimum number of toilet users per tributary impervious acre (TUTIA).

*Enter your TUTIA factor: 190*

Step 4: Multiply the unit value obtained from Step 3 by the total of impervious areas from Step 2 to develop the minimum number of toilet users that would be required.

*Minimum number of toilet users: 3,462*

Step 5: Determine if harvesting stormwater runoff for toilet flushing use is feasible for the project by comparing the Number of Daily Toilet Users (Step 1) to the minimum required number of toilet users (Step 4).

<u>Minimum required Toilet Users (Step 4)</u>	<u>Projected number of toilet users (Step 1)</u>
3,462	914

### Other Non-Potable Use Feasibility

Are there other non-potable uses for stormwater runoff on the site (e.g. industrial use)? See Chapter 2 of the Guidance for further information. If yes, describe below. If no, write N/A.

N/A

Step 1: Identify the projected average daily non-potable demand, in gallons per day, during the wet season and accounting for any periodic shut downs or other lapses in occupancy or operation.

*Average Daily Demand:*

Step 2: Identify the planned total of all impervious areas on the proposed project from which runoff might be feasibly captured and stored for the identified non-potable use. Depending on the configuration of buildings and other impervious areas on the site, you may consider the site as a whole, or parts of the site, to evaluate reasonable scenarios for capturing and storing runoff and directing the stored runoff to the potential use(s) identified in Step 1 above.

*Total Area of Impervious Surfaces:*

Step 3: Enter the Design Storm depth for the project site (see Exhibit A) into the left column of Table 2-3 in Chapter 2 to determine the minimum demand for non-potable uses per tributary impervious acre.

*Enter the factor from Table 2-3:*

Step 4: Multiply the unit value obtained from Step 4 by the total of impervious areas from Step 3 to develop the minimum number of gallons per day of non-potable use that would be required.

*Minimum required use:*

Step 5: Determine if harvesting stormwater runoff for other non-potable use is feasible for the project by comparing the Number of Daily Toilet Users (Step 1) to the minimum required number of toilet users (Step 4).

<u>Minimum required non-potable use (Step 4)</u>	<u>Projected average daily use (Step 1)</u>
--	---

If Irrigation, Toilet and Other Use feasibility anticipated demands are less than the applicable minimum values, Harvest and Use BMPs are not required and you should proceed to utilize LID Bioretention and Biotreatment, unless a site-specific analysis has been completed that demonstrates technical infeasibility as noted in D.3 below.

### D.3 Bioretention and Biotreatment Assessment

Other LID Bioretention and Biotreatment BMPs as described in Chapter 2.4.7 of the WQMP Guidance Document are feasible on nearly all development sites with sufficient advance planning.

Select one of the following:

- LID Bioretention/Biotreatment BMPs will be used for some or all DMAs of the project as noted below in Section D.4 (note the requirements of Section 3.4.2 in the WQMP Guidance Document).
- A site-specific analysis demonstrating the technical infeasibility of all LID BMPs has been performed and is included in Appendix 5. If you plan to submit an analysis demonstrating the technical infeasibility of LID BMPs, request a pre-submittal meeting with the Copermittee to discuss this option. Proceed to Section E to document your alternative compliance measures.

Attachment: Appendix I1-PWQMP (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

### D.4 Feasibility Assessment Summaries

From the Infiltration, Harvest and Use, Bioretention and Biotreatment Sections above, complete Table D.2 below to summarize which LID BMPs are technically feasible, and which are not, based upon the established hierarchy.

Table D.2 LID Prioritization Summary Matrix

DMA Name/ID	LID BMP Hierarchy				No LID (Alternative Compliance)
	1. Infiltration	2. Harvest and use	3. Bioretention	4. Biotreatment	
1A	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
1B	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
2A	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
2B	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
3A	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3B	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4A	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4B	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5A	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5B	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

For those DMAs where LID BMPs are not feasible, provide a brief narrative below summarizing why they are not feasible, include your technical infeasibility criteria in Appendix 5, and proceed to Section E below to document Alternative Compliance measures for those DMAs. Recall that each proposed DMA must pass through the LID BMP hierarchy before alternative compliance measures may be considered.

All DMAs are treated using a LID BMP. No alternative compliance is required or proposed.

Attachment: Appendix I1-PWQMP (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

### D.5 LID BMP Sizing

Each LID BMP must be designed to ensure that the Design Capture Volume will be addressed by the selected BMPs. First, calculate the Design Capture Volume for each LID BMP using the  $V_{BMP}$  worksheet in Appendix F of the LID BMP Design Handbook. Second, design the LID BMP to meet the required  $V_{BMP}$  using a method approved by the Copermittee. Utilize the worksheets found in the LID BMP Design Handbook or consult with your Copermittee to assist you in correctly sizing your LID BMPs. Complete Table D.3 below to document the Design Capture Volume and the Proposed Volume for each LID BMP. Provide the completed design procedure sheets for each LID BMP in Appendix 6. You may add additional rows to the table below as needed.

Table D.3 DCV Calculations for LID BMPs

DMA Type/ID	DMA Area (square feet) [A]	Post-Project Surface Type	Effective Impervious Fraction, $I_f$ [B]	DMA Runoff Factor [C]	DMA Areas x Runoff Factor [A] x [C]	<i>Bioretention Device 1</i>

[B], [C] is obtained as described in Section 2.3.1 of the WQMP Guidance Document

[E] is obtained from Exhibit A in the WQMP Guidance Document

[G] is obtained from a design procedure sheet, such as in LID BMP Design Handbook and placed in Appendix 6

## Section E: Alternative Compliance (LID Waiver Program)

LID BMPs are expected to be feasible on virtually all projects. Where LID BMPs have been demonstrated to be infeasible as documented in Section D, other Treatment Control BMPs must be used (subject to LID waiver approval by the Copermittee). Check one of the following Boxes:

LID Principles and LID BMPs have been incorporated into the site design to fully address all Drainage Management Areas. No alternative compliance measures are required for this project and thus this Section is not required to be completed.

- Or -

The following Drainage Management Areas are unable to be addressed using LID BMPs. A site-specific analysis demonstrating technical infeasibility of LID BMPs has been approved by the Co-Permittee and included in Appendix 5. Additionally, no downstream regional and/or sub-regional LID BMPs exist or are available for use by the project. The following alternative compliance measures on the following pages are being implemented to ensure that any pollutant loads expected to be discharged by not incorporating LID BMPs, are fully mitigated.

## E.1 Identify Pollutants of Concern

Utilizing Table A.1 from Section A above which noted your project's receiving waters and their associated EPA approved 303(d) listed impairments, cross reference this information with that of your selected Priority Development Project Category in Table E.1 below. If the identified General Pollutant Categories are the same as those listed for your receiving waters, then these will be your Pollutants of Concern and the appropriate box or boxes will be checked on the last row. The purpose of this is to document compliance and to help you appropriately plan for mitigating your Pollutants of Concern in lieu of implementing LID BMPs.

Table E.1 Potential Pollutants by Land Use Type

Priority Development Project Categories and/or Project Features (check those that apply)	General Pollutant Categories							
	Bacterial Indicators	Metals	Nutrients	Pesticides	Toxic Organic Compounds	Sediments	Trash & Debris	Oil & Grease
<input type="checkbox"/> Detached Residential Development	P	N	P	P	N	P	P	P
<input type="checkbox"/> Attached Residential Development	P	N	P	P	N	P	P	P <sup>(2)</sup>
<input checked="" type="checkbox"/> Commercial/Industrial Development	P <sup>(3)</sup>	P	P <sup>(1)</sup>	P <sup>(1)</sup>	P <sup>(5)</sup>	P <sup>(1)</sup>	P	P
<input type="checkbox"/> Automotive Repair Shops	N	P	N	N	P <sup>(4, 5)</sup>	N	P	P
<input type="checkbox"/> Restaurants (>5,000 ft <sup>2</sup> )	P	N	N	N	N	N	P	P
<input type="checkbox"/> Hillside Development (>5,000 ft <sup>2</sup> )	P	N	P	P	N	P	P	P
<input type="checkbox"/> Parking Lots (>5,000 ft <sup>2</sup> )	P <sup>(6)</sup>	P	P <sup>(1)</sup>	P <sup>(1)</sup>	P <sup>(4)</sup>	P <sup>(1)</sup>	P	P
<input type="checkbox"/> Retail Gasoline Outlets	N	P	N	N	P	N	P	P
<b>Project Priority Pollutant(s) of Concern</b>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

P = Potential

N = Not Potential

<sup>(1)</sup> A potential Pollutant if non-native landscaping exists or is proposed onsite; otherwise not expected

<sup>(2)</sup> A potential Pollutant if the project includes uncovered parking areas; otherwise not expected

<sup>(3)</sup> A potential Pollutant is land use involving animal waste

<sup>(4)</sup> Specifically petroleum hydrocarbons

<sup>(5)</sup> Specifically solvents

<sup>(6)</sup> Bacterial indicators are routinely detected in pavement runoff

## E.2 Stormwater Credits

Projects that cannot implement LID BMPs but nevertheless implement smart growth principles are potentially eligible for Stormwater Credits. Utilize Table 3-8 within the WQMP Guidance Document to identify your Project Category and its associated Water Quality Credit. If not applicable, write N/A.

N/A

Table E.2 Water Quality Credits

Qualifying Project Categories	Credit Percentage <sup>2</sup>
<i>Total Credit Percentage<sup>1</sup></i>	

<sup>1</sup>Cannot Exceed 50%

<sup>2</sup>Obtain corresponding data from Table 3-8 in the WQMP Guidance Document

## E.3 Sizing Criteria

After you appropriately considered Stormwater Credits for your project, utilize Table E.3 below to appropriately size them to the DCV, or Design Flow Rate, as applicable. Please reference Chapter 3.5.2 of the WQMP Guidance Document for further information.

N/A

Table E.3 Treatment Control BMP Sizing

DMA Type/ID	DMA Area (square feet) [A]	Post-Project Surface Type	Effective Impervious Fraction, I <sub>f</sub> [B]	DMA Runoff Factor [C]	DMA Area x Runoff Factor [A] x [C]	Enter BMP Name / Identifier Here
$A_T = \sum[A]$						$\Sigma = [D] \quad [E] \quad [F] = \frac{[D] \times [E]}{[G]} \quad [F] \times (1-[H]) \quad [I]$

[B], [C] is obtained as described in Section 2.3.1 from the WQMP Guidance Document

[E] is obtained from Exhibit A in the WQMP Guidance Document

[G] is for Flow-Based Treatment Control BMPs [G] = 43,560, for Volume-Based Control Treatment BMPs, [G] = 12

[H] is from the Total Credit Percentage as Calculated from Table E.2 above

[I] as obtained from a design procedure sheet from the BMP manufacturer and should be included in Appendix 6

Attachment: Appendix I1-PWQMP (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

### E.4 Treatment Control BMP Selection

Treatment Control BMPs typically provide proprietary treatment mechanisms to treat potential pollutants in runoff, but do not sustain significant biological processes. Treatment Control BMPs must have a removal efficiency of a medium or high effectiveness as quantified below:

- **High:** equal to or greater than 80% removal efficiency
- **Medium:** between 40% and 80% removal efficiency

Such removal efficiency documentation (e.g., studies, reports, etc.) as further discussed in Chapter 3.5.2 of the WQMP Guidance Document, must be included in Appendix 6. In addition, ensure that proposed Treatment Control BMPs are properly identified on the WQMP Site Plan in Appendix 1.

N/A

Table E.4 Treatment Control BMP Selection

Selected Treatment Control BMP Name or ID <sup>1</sup>	Priority Concern to Mitigate <sup>2</sup>	Pollutant(s) of	Removal Percentage <sup>3</sup>	Efficiency

<sup>1</sup> Treatment Control BMPs must not be constructed within Receiving Waters. In addition, a proposed Treatment Control BMP may be listed more than once if they possess more than one qualifying pollutant removal efficiency.

<sup>2</sup> Cross Reference Table E.1 above to populate this column.

<sup>3</sup> As documented in a Co-Permittee Approved Study and provided in Appendix 6.

Attachment: Appendix I1-PWQMP (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

## Section F: Hydromodification

### F.1 Hydrologic Conditions of Concern (HCOC) Analysis

Once you have determined that the LID design is adequate to address water quality requirements, you will need to assess if the proposed LID Design may still create a HCOC. Review Chapters 2 and 3 (including Figure 3-7) of the WQMP Guidance Document to determine if your project must mitigate for Hydromodification impacts. If your project meets one of the following criteria which will be indicated by the check boxes below, you do not need to address Hydromodification at this time. However, if the project does not qualify for Exemptions 1, 2 or 3, then additional measures must be added to the design to comply with HCOC criteria. This is discussed in further detail below in Section F.2.

**HCOC EXEMPTION 1:** The Priority Development Project disturbs less than one acre. The Copermittee has the discretion to require a Project-Specific WQMP to address HCOCs on projects less than one acre on a case by case basis. The disturbed area calculation should include all disturbances associated with larger common plans of development.

Does the project qualify for this HCOC Exemption?  Y  N

If Yes, HCOC criteria do not apply.

**HCOC EXEMPTION 2:** The volume and time of concentration<sup>1</sup> of storm water runoff for the post-development condition is not significantly different from the pre-development condition for a 2-year return frequency storm (a difference of 5% or less is considered insignificant) using one of the following methods to calculate:

- Riverside County Hydrology Manual
- Technical Release 55 (TR-55): Urban Hydrology for Small Watersheds (NRCS 1986), or derivatives thereof, such as the Santa Barbara Urban Hydrograph Method
- Other methods acceptable to the Co-Permittee

Does the project qualify for this HCOC Exemption?  Y  N

If Yes, report results in Table F.1 below and provide your substantiated hydrologic analysis in Appendix 7.

Table F.1 Hydrologic Conditions of Concern Summary (DA 1)

	2 year – 24 hour		
	Pre-condition	Post-condition	% Difference
Time of Concentration			
Volume (Cubic Feet)			

Table F.2 Hydrologic Conditions of Concern Summary (DA 2)

	2 year – 24 hour		
	Pre-condition	Post-condition	% Difference
Time of Concentration			
Volume (Cubic Feet)			

Table F.3 Hydrologic Conditions of Concern Summary (DA 3)

	2 year – 24 hour		
	Pre-condition	Post-condition	% Difference
Time of Concentration			
Volume (Cubic Feet)			

Table F.4 Hydrologic Conditions of Concern Summary (DA 4)

	2 year – 24 hour		
	Pre-condition	Post-condition	% Difference
Time of Concentration			
Volume (Cubic Feet)			

Table F.5 Hydrologic Conditions of Concern Summary (DA 5)

	2 year – 24 hour		
	Pre-condition	Post-condition	% Difference
Time of Concentration			
Volume (Cubic Feet)			

<sup>1</sup> Time of concentration is defined as the time after the beginning of the rainfall when all portions of the drainage basin are contributing to flow at the outlet.

**HCOC EXEMPTION 3:** All downstream conveyance channels to an adequate sump (for example, Prado Dam, Lake Elsinore, Canyon Lake, Santa Ana River, or other lake, reservoir or naturally erosion resistant feature) that will receive runoff from the project are engineered and regularly maintained to ensure design flow capacity; no sensitive stream habitat areas will be adversely affected; or are not identified on the Co-Permittees Hydromodification Sensitivity Maps.

Does the project qualify for this HCOC Exemption?  Y  N

If Yes, HCOC criteria do not apply and note below which adequate sump applies to this HCOC qualifier:

**F.2 HCOC Mitigation**

If none of the above HCOC Exemption Criteria are applicable, HCOC criteria is considered mitigated if they meet one of the following conditions:

- a. Additional LID BMPS are implemented onsite or offsite to mitigate potential erosion or habitat impacts as a result of HCOCs. This can be conducted by an evaluation of site-specific conditions utilizing accepted professional methodologies published by entities such as the California Stormwater Quality Association (CASQA), the Southern California Coastal Water Research Project (SCCRWP), or other Co-Permittee approved methodologies for site-specific HCOC analysis.
- b. The project is developed consistent with an approved Watershed Action Plan that addresses HCOC in Receiving Waters.
- C.** Mimicking the pre-development hydrograph with the post-development hydrograph, for a 2-year return frequency storm. Generally, the hydrologic conditions of concern are not significant, if the post-development hydrograph is no more than 10% greater than pre-development hydrograph. In cases where excess volume cannot be infiltrated or captured and reused, discharge from the site must be limited to a flow rate no greater than 110% of the pre-development 2-year peak flow.

Be sure to include all pertinent documentation used in your analysis of the items a, b or c in Appendix 7.

Attachment: Appendix I1-PWQMP (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

## Section G: Source Control BMPs

Source control BMPs include permanent, structural features that may be required in your project plans — such as roofs over and berms around trash and recycling areas — and Operational BMPs, such as regular sweeping and “housekeeping”, that must be implemented by the site’s occupant or user. The MEP standard typically requires both types of BMPs. In general, Operational BMPs cannot be substituted for a feasible and effective permanent BMP. Using the Pollutant Sources/Source Control Checklist in Appendix 8, review the following procedure to specify Source Control BMPs for your site:

1. **Identify Pollutant Sources:** Review Column 1 in the Pollutant Sources/Source Control Checklist. Check off the potential sources of Pollutants that apply to your site.
2. **Note Locations on Project-Specific WQMP Exhibit:** Note the corresponding requirements listed in Column 2 of the Pollutant Sources/Source Control Checklist. Show the location of each Pollutant source and each permanent Source Control BMP in your Project-Specific WQMP Exhibit located in Appendix 1.
3. **Prepare a Table and Narrative:** Check off the corresponding requirements listed in Column 3 in the Pollutant Sources/Source Control Checklist. In the left column of Table G.1 below, list each potential source of runoff Pollutants on your site (from those that you checked in the Pollutant Sources/Source Control Checklist). In the middle column, list the corresponding permanent, Structural Source Control BMPs (from Columns 2 and 3 of the Pollutant Sources/Source Control Checklist) used to prevent Pollutants from entering runoff. **Add additional narrative** in this column that explains any special features, materials or methods of construction that will be used to implement these permanent, Structural Source Control BMPs.
4. **Identify Operational Source Control BMPs:** To complete your table, refer once again to the Pollutant Sources/Source Control Checklist. List in the right column of your table the Operational BMPs that should be implemented as long as the anticipated activities continue at the site. Copermittee stormwater ordinances require that applicable Source Control BMPs be implemented; the same BMPs may also be required as a condition of a use permit or other revocable Discretionary Approval for use of the site.

**Table G.1** Permanent and Operational Source Control Measures

Potential Sources of Runoff pollutants	Permanent Structural Source Control BMPs	Operational Source Control BMPs
Landscape/Outdoor Pesticide Use	Project plan designs maximize natural water storage and infiltration opportunities, and protect slopes and channels. Plants are grouped with similar water requirements in order to reduce excess irrigation runoff and promote surface infiltration. Landscaping correlates to the climate,	Landscape maintenance will begin upon construction completion and will occur on a monthly basis (or more frequently if desired) for all common areas. The Owners will be responsible for servicing all site landscaping and irrigation in common areas. Site trees

	<p>soil, related natural resources and existing vegetation of the site, as well as the type of development proposed. Irrigation methods will be utilized to minimize runoff of excess irrigation water across impervious surfaces. Such measures will include employing rain-triggered shutoff devices to eliminate or reduce irrigation during and immediately after precipitation, using mulches (such as wood chips) to minimize sediment in runoff and to maintain soil infiltration capacity, and coordinating design of the irrigation system and landscape to minimize overspray and runoff. Irrigation systems will use flow reducers or shutoff valves triggered by pressure drop to control water loss in the event of broken sprinkler heads or water supply lines. Water conservation devices such as programmable irrigation timers will be used.</p>	<p>and shrubs are to be trimmed as necessary and all wastes disposed of offsite. Wood mulch that has been disturbed is to be replaced. Ongoing maintenance shall be consistent with local guidelines, and fertilizer and pesticide usage shall be consistent with the instructions contained on product labels and with the regulations administered by the State Department of Pesticide Regulation. Clippings and yard waste shall be composted. Any adjustments to ensure that sprinklers are not overspraying should be made in a timely manner. Any breaks or leaks in piping must be repaired within 5 business days of report to the landscaper. Scrap pipe and extra materials shall be recycled if possible. All non-recyclable wastes shall be landfilled. Hazardous wastes shall be disposed of per County hazardous material disposal regulations.</p>
Refuse Area	<p>Drainage is not directed to the trash enclosures but away from it. The enclosures will be roofed.</p>	<p>This BMP will begin upon construction completion and will occur on a monthly basis or more frequently as dictated by volume of trash. The Owners will be responsible for having staff or contracting with a landscape maintenance service that will be responsible for litter control. They are to ensure that the entire site is trash free. Trash is to be removed and placed in bins. "No hazardous materials" signs will be posted in the trash enclosure areas.</p>
Loading Docks	<p>Loading docks drain to the biotreatment devices for treatment which will include pre-treatment.</p>	<p>Items shall be unloaded and loaded from docks as quickly as possible.</p>

<p>Sweeping of Sidewalks and Parking Lots</p>		<p>This BMP will begin upon construction completion and will occur on a bi-annual basis. The Owners will contract with a sweeping service to sweep the lot every every six months.</p>
<p>Roofing, Gutters, Trim</p>	<p>Roofing, gutters and trim made of copper or other unprotected metals will not be used.</p>	
<p>On-site Storm Drain Inlets</p>	<p>Stenciling adjacent to drop inlets will be provided.</p>	<p>This BMP will begin upon construction completion. Inspections will be done by Owner’s staff after the first storm of the rainy season and bi-monthly thereafter for the duration of the rainy season. The inspector is also required to clean the facility as needed or when filled to 25% capacity. Cleaning can be by pump or chopvac or by hand. Debris and trash shall be placed inside bins. Stenciling shall be refreshed as needed . The Owners shall provide stormwater pollution prevention information to new site owners, lessees and operators, and shall include the following language on the lease agreement: “Tenant shall not allow anyone to discharge anything to storm drains or to store or deposit materials so as to create a potential discharge to storm drains.”</p>

Attachment: Appendix I1-PWQMP (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

## Section H: Construction Plan Checklist

Populate Table H.1 below to assist the plan checker in an expeditious review of your project. The first two columns will contain information that was prepared in previous steps, while the last column will be populated with the corresponding plan sheets. This table is to be completed with the submittal of your final Project-Specific WQMP.

Table H.1 Construction Plan Cross-reference

BMP No. or ID	BMP Identifier and Description	Corresponding Plan Sheet(s)
1	Bioretention Device 1	Conceptual Grading Plan
2	Bioretention Device 2	Conceptual Grading Plan
3	Bioretention Swale 3	Conceptual Grading Plan
4	Bioretention Swale 4	Conceptual Grading Plan
5	Bioretention Swale 5	Conceptual Grading Plan

Note that the updated table — or Construction Plan WQMP Checklist — is **only a reference tool** to facilitate an easy comparison of the construction plans to your Project-Specific WQMP. Co-Permittee staff can advise you regarding the process required to propose changes to the approved Project-Specific WQMP.

Attachment: Appendix I1-PWQMP (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

## Section I: Operation, Maintenance and Funding

The Copermittee will periodically verify that Stormwater BMPs on your site are maintained and continue to operate as designed. To make this possible, your Copermittee will require that you include in Appendix 9 of this Project-Specific WQMP:

1. A means to finance and implement facility maintenance in perpetuity, including replacement cost.
2. Acceptance of responsibility for maintenance from the time the BMPs are constructed until responsibility for operation and maintenance is legally transferred. A warranty covering a period following construction may also be required.
3. An outline of general maintenance requirements for the Stormwater BMPs you have selected.
4. Figures delineating and designating pervious and impervious areas, location, and type of Stormwater BMP, and tables of pervious and impervious areas served by each facility. Geolocating the BMPs using a coordinate system of latitude and longitude is recommended to help facilitate a future statewide database system.
5. A separate list and location of self-retaining areas or areas addressed by LID Principles that do not require specialized O&M or inspections but will require typical landscape maintenance as noted in Chapter 5, pages 85-86, in the WQMP Guidance. Include a brief description of typical landscape maintenance for these areas.

Your local Co-Permittee will also require that you prepare and submit a detailed Stormwater BMP Operation and Maintenance Plan that sets forth a maintenance schedule for each of the Stormwater BMPs built on your site. An agreement assigning responsibility for maintenance and providing for inspections and certification may also be required.

Details of these requirements and instructions for preparing a Stormwater BMP Operation and Maintenance Plan are in Chapter 5 of the WQMP Guidance Document.

**Maintenance Mechanism:** The Owners will maintain all BMPs including the offsite bioretention swales and onsite biotreatment devices.

Will the proposed BMPs be maintained by a Home Owners' Association (HOA) or Property Owners Association (POA)?

Y       N

Include your Operation and Maintenance Plan and Maintenance Mechanism in Appendix 9. Additionally, include all pertinent forms of educational materials for those personnel that will be maintaining the proposed BMPs within this Project-Specific WQMP in Appendix 10.

Operation and Maintenance Plan and Maintenance Mechanism will be provided in the Final WQMP.

Attn: Mr. Mark Bachli

RE: **Evaluation of Soils Infiltration Study** - Proposed Industrial Warehouse Development - Located at the Southeast and Southwest Corners of Alessandro Boulevard and Chagall Court, in the City of Moreno Valley, California

Dear Mr. Bachli:

Pursuant to your request, this firm has performed an evaluation of our soil infiltration study at the above referenced project. Based upon the results of our field testing as described in our Updated Soils Infiltration Study dated April 27, 2020, the soils have infiltration rates less than 0.8 in/hr in 7 of 8 pits, as listed below.

Test No.	Depth	Minimum Field Percolation Rate (in/hr)	Design Infiltration Rate (in/hr)
1	5'	4.72	1.57
2	2'	0.16	0.05
3	5'	0.16	0.05
4	3'	0.63	0.21
5	6'	0.79	0.26
6	7'	0.16	0.05
7	7'	0.16	0.05
8	4'	0.32	0.11

The actual water drop verses time was plotted by this firm for eight (8) percolation tests with the results shown in Appendix A. The minimum field percolation rate was computed based on the lowest water drop over a 3 hour testing period. For field percolation tests up to 6 hours long, lower percolation rates would typically occur. Since 7 out of 8 tests yield very low percolation rates, our final design recommendations are these fine-grained soils should not be used for percolation pits.

Attachment: Appendix I1-PWQMP (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

Based on a safety factor of 3.0, the subsurface soils encountered in the proposed on-site drainage disposal system have a design infiltration rate of less than 0.3 in/hr in 7 of 8 pits. Thus, these fine grained soils are not acceptable for percolation pits at the site.

Our Test No. 1 encountered an isolated area of sandy soil which did provide a favorable infiltration rate. It is our professional opinion, that the proposed on-site drainage disposal system shall not be utilized based on the predominately very stiff clayey conditions.

We appreciate this opportunity to be of service to you. If you have any further questions, please do not hesitate to contact the undersigned.

Respectfully submitted,

**RE: Geotechnical Engineering Investigation - Proposed Industrial Warehouse Development - Located at the Southeast and Southwest Corners of Alessandro Boulevard and Chagall Court, in the City of Moreno Valley, California**

Dear Mr. Bachli:

Pursuant to your request, this firm has performed a Geotechnical Engineering Investigation for the above referenced project in accordance with your approval of our proposal dated January 13, 2020. The purpose of this investigation is to evaluate the geotechnical conditions of the subject site and to provide recommendations for the proposed industrial warehouse development.

The scope of work included the following: 1) site reconnaissance; 2) subsurface geotechnical exploration and sampling; 3) laboratory testing; 4) soil infiltration testing; 5) engineering analysis of field and laboratory data; 5) preparation of a geotechnical engineering report. It is the opinion of this firm that the proposed development is feasible from a geotechnical standpoint provided that the recommendations presented in this report are followed in the design and construction of the project.

Attachment: Appendix I1-PWQMP (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

## 1.0 Project Description

It is proposed to construct an industrial warehouse development consisting of a 102,669 and 295,470 square feet buildings as shown on the attached Site Plan by Herdman Architecture + Design dated December 18, 2019. The proposed concrete tilt-up buildings will be supported by a conventional slab-on-grade foundation system with perimeter-spread footings and isolated interior footings. Other improvements will include asphalt and concrete pavement areas, hardscape and landscaping.

It is assumed that the proposed grading for the development will include cut and fill procedures on the order of a few feet to achieve finished grade elevations. Final building plans shall be reviewed by this firm prior to submittal for city approval to determine the need for any additional study and revised recommendations pertinent to the proposed development, if necessary.

## 2.0 Site Description

The 18.05-acre subject property is located at the southeast and southwest corners of Alessandro Boulevard and Chagall Court, in the City of Moreno Valley. The generally rectangular-shaped parcel is elongated in an east to west direction with topography of the relatively level descending slightly from a north to south direction on the order of a few feet. The site is undeveloped parcel covered with a low vegetation growth of natural grasses and weeds.

## 3.0 Site Exploration

The investigation consisted of the placement of ten (10) subsurface exploratory trenches by a backhoe to depths ranging between 5 and 15 feet and two (2) exploratory borings by a truck mounted drill rig both to a depth of 50 feet below current ground elevations. The explorations were visually classified and logged by a field engineer with locations of the subsurface explorations shown on the attached plan. The exploratory trenches/borings revealed the existing earth materials to consist of fill and natural soil. Detailed descriptions of the subsurface conditions are listed on the trench and boring logs in Appendix A.

It should be noted that the transition from one soil type to another as shown on the trench logs is approximate and may in fact be a gradual transition. The soils encountered are described as follows:

**Fill:** A fill soil classifying as a brown, fine to medium grained, silty to clayey SAND was encountered across the site to depths ranging from 1 to 1½ feet below ground surface. These soils were noted to be loose and moist.

**Natural:** A natural undisturbed soil classifying as a brown, fine to medium grained, clayey to silty SAND to sandy CLAY was encountered beneath the upper fill soils. The native soils as encountered were observed to be dense/stiff to very dense/stiff and moist.

The overall engineering characteristics of the earth material were relatively uniform with each excavation. Groundwater was encountered to the depth of 33 and 39 feet ground surface in Borings B-1 and B-2 respectively, and no caving occurred.

#### 4.0 Laboratory Tests

Relatively undisturbed samples of the subsurface soils were obtained to perform laboratory testing and analysis for direct shear, consolidation tests, and to determine in-place moisture/densities. These relatively undisturbed ring samples were obtained by driving a thin-walled steel sampler lined with one-inch long brass rings with an inside diameter of 2.42 inches into the undisturbed soils. Bulk bag samples were obtained in the upper soils for expansion index tests and maximum density tests. All test results are included in Appendix B, unless otherwise noted.

- 4.1 **Field Moisture Content** (ASTM: D 2216) and the dry density of the ring samples were determined in the laboratory. This data is listed on the logs of explorations.
- 4.2 **Maximum Density tests** (ASTM: D 1557) were performed on typical samples of the upper soils. Results of these tests are shown on Table I.

- 4.3 **Expansion Index tests** (ASTM: D 4829) were performed on remolded samples of the upper soils to determine expansive characteristics. Results of these tests are provided on Table II.
- 4.4 **Atterberg Limits** (ASTM: D 4318) consisting of liquid limit, plastic limit and plasticity index were performed on representative soil samples. Results are shown on Table III.
- 4.5 **Corrosion tests** consisting of sulfate, pH, resistivity and chloride analysis to determine potential corrosive effects of soils on concrete and underground utilities. Test results are provided on Table IV.
- 4.6 **R-Value test** per California Test Method 301 was performed on a representative sample, which may be anticipated to be near subgrade to determine pavement design. Results are provided within the pavement design section of the report.
- 4.7 **Direct Shear tests** (ASTM: D 3080) were performed on undisturbed and/or remolded samples of the subsurface soils. The test is performed under saturated conditions at loads of 1,000 lbs./sq.ft., 2,000 lbs./sq.ft., and 3,000 lbs./sq.ft. with results shown on Plates A and B.
- 4.8 **Consolidation tests** (ASTM: D 2435) were performed on undisturbed samples to determine the differential and total settlement which may be anticipated based upon the proposed loads. Water was added to the samples at a surcharge of one KSF and the settlement curves are plotted on Plates C to E.

## 5.0 Seismicity Evaluation

The proposed development lies outside of any Alquist Priolo Special Studies Zone and the potential for damage due to direct fault rupture is considered unlikely. The site is situated in an area of high regional seismicity and the San Jacinto (San Jacinto Valley) fault is located about 6 kilometers from the site. Ground shaking originating from earthquakes along other active faults in the region is expected to induce lower horizontal accelerations due to smaller anticipated earthquakes and/or greater distances to other faults.

**NorCal Engineering**

The seismic design parameters are provided below and are based on the 2019 California Building Code (CBC) Standard ASCE/SEI 7-16. The data was obtained from the American Society of Civil Engineers (ASCE) website, <https://asce7hazardtool.online/>. The ASCE 7 Hazards Report is attached in Appendix C.

### Seismic Design Acceleration Parameters

Latitude	33.916
Longitude	-117.257
Site Class	D
Risk Category	I/II/III
Mapped Spectral Response Acceleration	$S_s = 1.500$ $S_1 = 0.600$
Adjusted Maximum Acceleration	$S_{MS} = 1.500$
Design Spectral Response Acceleration Parameters	$S_{DS} = 1.000$
Peak Ground Acceleration	$PGA_M = 0.674$

#### 6.0 Liquefaction Evaluation

The site is expected to experience ground shaking and earthquake activity that is typical of Southern California area. It is during severe ground shaking that loose, granular soils below the groundwater table can liquefy. A review of the exploratory boring log and the laboratory test results on selected soil samples obtained indicate the following soil classifications, field blowcounts and amounts of fines passing through the No. 200 sieve.

#### Field Blowcount and Gradation Data

Boring No.	Classification	Blowcounts (blows/ft)	Relative Density	% Passing No. 200 Sieve
B-1 @ 5'	SC	>50	Very Dense	47
B-1 @ 10'	ML/CL	>50	Very Stiff	62
B-1 @ 15'	SC	82	Very Dense	45
B-1 @ 20'	SC	76	Very Dense	44
B-1 @ 25'	SC	>50	Very Dense	42
B-1 @ 30'	SC	34	Dense	42
B-1 @ 35'	SM	32	Dense	37
B-1 @ 40'	CL	65	Very Stiff	60
B-1 @ 45'	CL	42	Dense	61
B-1 @ 50'	CL	36	Stiff	56

B-2 @ 45'	SC	46	Very Dense	47
B-2 @ 50'	SM	37	Dense	29

The analysis indicates the potential for liquefaction at this site to be low based on the density of the subsurface soils. The associated seismic-induced settlements would be on the order of less than 3/4 inch and would occur rather uniformly across the site. Differential settlements would be on the order of 1/2 inch over a 50-foot (horizontal) distance. Thus, the design of the proposed construction in conformance with the latest Building Code provisions for earthquake design is expected to provide mitigation of ground shaking hazards that are typical to Southern California.

## 7.0 Infiltration Characteristics

Infiltration tests within the site were performed to provide preliminary infiltration rates for the purpose of planning and design of an on-site water disposal system. The infiltration tests consisted of the double ring infiltration test per ASTM Method D 3385. The field infiltration rate was computed using a reduction factor – R<sub>f</sub> based on the field measurements with our calculations given in Appendix D. Based upon the results of our testing, the soils encountered in the planned on-site drainage disposal system area exhibit the following infiltration rates.

Test No.	Depth	Soil Classification	Infiltration Rate
T-1	5'	Silty SAND	26.8 in/hr
T-2	7.5'	Sandy CLAY	0.1 in/hr
T-3	10'	Sandy CLAY	0.7 in/hr

**NorCal Engineering**

The correction factors  $CF_t$ ,  $CF_v$  and  $CF_s$  are given below based on soils at 5 to 10 feet from our field tests.

- a)  $CF_t = R_f = 1.0$  for our double ring infiltration test holes.
- b)  $CF_v = 1.0$  based on uniform soils encountered in three (3) trenches for infiltration tests.
- c)  $CF_s = 3.0$  for long-term siltation, plugging and maintenance. The subsurface soils are likely to have some plugging and regular maintenance of storm water discharge devices is required.

Based on the results of our field testing, the subsurface soils encountered in the proposed on-site drainage disposal system at 5 feet below ground surface and into sandy soils shall utilize a design infiltration rate of 8 in/hr. The infiltration rate at a depth below 5 feet to 10 feet indicates the very stiff fine-grained clayey soils which are not suitable for seepage pits at the site. All systems must meet the latest county specifications and the California Regional Water Quality Control Board (CRWQCB) requirements.

It is recommended that foundations shall be setback a minimum distance of 10 feet from the drainage disposal system and the bottom of footing shall be a minimum of 10 feet from the expected zone of saturation. The boundary of the zone of saturation may be assumed to project downward from the top of the permeable portion of the disposal system at an inclination of 1 to 1 or flatter, as determined by the geotechnical engineer.

## **8.0 Conclusions and Recommendations**

Based upon our evaluations, the proposed development is acceptable from a geotechnical engineering standpoint. By following the recommendations and guidelines set forth in our report, the structures will be safe from excessive settlements under the anticipated design loadings and conditions. The proposed development shall meet all requirements of the City Building Ordinance and will not impose any adverse effect on existing adjacent structures.

**NorCal Engineering**

The following recommendations are based upon soil conditions encountered in our field investigation; these near-surface soil conditions could vary across the site. Variations in the soil conditions may not become evident until the commencement of grading operations for the proposed development and revised recommendations from the soils engineer may be necessary based upon the conditions encountered.

It is recommended that site inspections be performed by a representative of this firm during all grading and construction of the development to verify the findings and recommendations documented in this report. Any unusual conditions which may be encountered in the course of the project development may require the need for additional study and revised recommendations.

#### 8.1 **Site Grading Recommendations**

Any vegetation and/or demolition debris shall be removed and hauled from proposed grading areas prior to the start of grading operations. Existing vegetation shall not be mixed or disced into the soils. Any removed soils may be reutilized as compacted fill once any deleterious material or oversized materials (in excess of eight inches) is removed. Grading operations shall be performed in accordance with the attached *Specifications for Placement of Compacted Fill*.

##### 8.1.1 **Removal and Recomaction Recommendations**

All disturbed soils and/or fill (about 1 to 1½ feet below ground surface) shall be removed to competent native material, the exposed surface scarified to a depth of 12 inches, brought to within 2% of optimum moisture content and compacted to a minimum of 90% of the laboratory standard (ASTM: D 1557) prior to placement of any additional compacted fill soils, foundations, slabs-on-grade and pavement. Grading shall extend a minimum of five horizontal feet outside the edges of foundations or equidistant to the depth of fill placed, whichever is greater.

It is possible that isolated areas of undiscovered fill not described in this report are present on site; if found, these areas should be treated as discussed earlier. A diligent search shall also be conducted during grading operations in an effort to uncover any underground structures, irrigation or utility lines. If encountered, these structures and lines shall be either removed or properly abandoned prior to the proposed construction.

**NorCal Engineering**

Any imported fill material should be preferably soil similar to the upper soils encountered at the subject site. All soils shall be approved by this firm prior to importing at the site and will be subjected to additional laboratory testing to assure concurrence with the recommendations stated in this report.

If placement of slabs-on-grade and pavement is not completed immediately upon completion of grading operations, additional testing and grading of the areas may be necessary prior to continuation of construction operations. Likewise, if adverse weather conditions occur which may damage the subgrade soils, additional assessment by the soils engineer as to the suitability of the supporting soils may be needed.

Care should be taken to provide or maintain adequate lateral support for all adjacent improvements and structures at all times during the grading operations and construction phase. Adequate drainage away from the structures, pavement and slopes should be provided at all times.

#### 8.1.2 **Fill Blanket Recommendations**

Due to the potential for differential settlement of foundations placed on compacted fill and native materials, it is recommended that all foundations including floor slab areas be underlain by a uniform compacted fill blanket at least two feet in thickness. This fill blanket shall extend a minimum of five horizontal feet outside the edges of foundations or equidistant to the depth of fill placed, whichever is greater.

#### 8.2 **Shrinkage and Subsidence**

Results of our in-place density tests reveal that the soil shrinkage will be less than 5% due to excavation and recompaction, based upon the assumption that the fill is compacted to 92% of the maximum dry density per ASTM standards. Subsidence should be 0.2 feet due to earthwork operations. The volume change does not include any allowance for vegetation or organic stripping, removal of subsurface improvements, or topographic approximations.

**NorCal Engineering**

Although these values are only approximate, they represent our best estimate of lost yardage, which will likely occur during grading. If more accurate shrinkage and subsidence factors are needed, it is recommended that field testing the actual equipment and grading techniques should be conducted.

### 8.3 Temporary Excavations

Temporary unsurcharged excavations in the existing site materials may be made at vertical inclinations up to 4 feet in height unless cohesionless soils are encountered. In areas where soils with little or no binder are encountered, where adverse geological conditions are exposed, or where excavations are adjacent to existing structures, shoring or flatter excavations may be required. The temporary cut slope gradients given above do not preclude local raveling and sloughing. All excavations shall be made in accordance with the requirements of the soils engineer, CAL-OSHA and other public agencies having jurisdiction. Care should be taken to provide or maintain adequate lateral support for all adjacent improvements and structures at all times during the grading operations and construction phase.

### 8.4 Foundation Design

All foundations may be designed utilizing the following allowable bearing capacities for an embedded depth of 24 inches into approved engineered fill with the corresponding widths:

Allowable Bearing Capacity (psf)		
Width (feet)	Continuous Foundation	Isolated Foundation
1.5	2000	2500
2.0	2075	2575
4.0	2375	2875
6.0	2500	3000

The bearing value may be increased by 500 psf for each additional foot of depth in excess of the 18-inch minimum depth, up to a maximum of 4,000 psf. A one-third increase may be used when considering short-term loading and seismic forces. Any foundations located along property line may utilize an allowable bearing capacity of 1,500 psf and embedded into competent native soils. All foundations shall be reinforced a minimum of one, No. 4 bar, top and bottom. A representative of this firm shall inspect all foundation excavations prior to pouring concrete.

**NorCal Engineering**

**8.5 Settlement Analysis**

Resultant pressure curves for the consolidation tests are shown on Plates C and D. Computations utilizing these curves and the recommended allowable soil bearing capacities reveal that the foundations will experience settlements on the order of  $\frac{3}{4}$  inch and differential settlements of less than  $\frac{1}{4}$  inch.

**8.6 Lateral Resistance**

The following values may be utilized in resisting lateral loads imposed on the structure. Requirements of the California Building Code should be adhered to when the coefficient of friction and passive pressures are combined.

Coefficient of Friction - 0.35

Equivalent Passive Fluid Pressure = 200 lbs./cu.ft.

Maximum Passive Pressure = 2,000 lbs./cu.ft.

The passive pressure recommendations are valid only for approved compacted fill soils or competent native materials.

**8.7 Retaining Wall Design Parameters**

Active earth pressures against retaining walls will be equal to the pressures developed by the following fluid densities. These values are for **approved granular backfill material** placed behind the walls at various ground slopes above the walls.

Surface Slope of Retained Materials (Horizontal to Vertical)	Equivalent Fluid Density (lb./cu.ft.)
Level	30
5 to 1	35
4 to 1	38
3 to 1	40
2 to 1	45

Any applicable short-term construction surcharges and seismic forces should be added to the above lateral pressure values. An equivalent fluid pressure of 45 pcf may be utilized for the restrained wall condition with a level grade behind the wall.

The seismic-induced lateral soil pressure for walls greater than 6 feet may be computed using a triangular pressure distribution with the maximum value at the top of the wall. The maximum lateral pressure of  $(20 \text{ pcf}) H$  where  $H$  is the height of the retained soils above the wall footing should be used in final design of retaining walls. Sliding resistance values and passive fluid pressure values may be increased by  $1/3$  during short-term wind and seismic loading conditions.

All walls shall be waterproofed as needed and protected from hydrostatic pressure by a reliable permanent subdrain system. The granular backfill to be utilized immediately adjacent to retaining walls shall consist of an approved select granular soil with a sand equivalency greater than 30. This backfill zone of free draining material shall consist of a wedge beginning a minimum of one horizontal foot from the base of the wall extending upward at an inclination of no less than  $3/4$  to 1 (horizontal to vertical).

#### 8.8 Slab Design

All concrete slabs shall be a minimum of six inches in thickness in the proposed warehouse areas and four inches in office and hardscape both reinforced a minimum of No. 3 bars, sixteen inches in each direction and positioned in the center of slab and placed on approved subgrade soils. Additional reinforcement requirements and an increase in thickness of the slabs-on-grade may be necessary based upon soils expansion potential and proposed loading conditions in the structures and should be evaluated further by the project engineers and/or architect. All subgrade soils shall be moisture conditioned to 3% over optimum moisture content to a depth eighteen inches.

A vapor retarder (10-mil minimum thickness) should be utilized in areas which would be sensitive to the infiltration of moisture. This retarder shall meet requirements of ASTM E 96, *Water Vapor Transmission of Materials* and ASTM E 1745, *Standard Specification for Water Vapor Retarders used in Contact with Soil or Granular Fill Under Concrete Slabs*. The vapor retarder shall be installed in accordance with procedures stated in ASTM E 1643, *Standard practice for Installation of Water Vapor Retarders used in Contact with Earth or Granular Fill Under Concrete Slabs*.

The moisture retarder may be placed directly upon compacted subgrade soils conditioned to near optimum moisture levels, although one to two inches of sand beneath the membrane is desirable. The subgrade upon which the retarder is placed shall be smooth and free of rocks, gravel or other protrusions which may damage the retarder. Use of sand above the retarder is under the purview of the structural engineer; if sand is used over the retarder, it should be placed in a dry condition.

#### 8.9 Pavement Section Design

The table on the following page provides a preliminary pavement design based upon an R-Value of 16 for the subgrade soils for the proposed pavement areas. Final pavement design may need to be based on R-Value testing of the subgrade soils near the conclusion of site grading to assure that these soils are consistent with those assumed in this preliminary design.

*The recommendations are based upon estimated traffic loads. Client should submit any other anticipated traffic loadings to the geotechnical engineer, if necessary, so that pavement sections may be reviewed to determine adequacy to support the proposed loadings.*

Type of Traffic	Traffic Index	Asphalt (in.)	Base Material (in.)
Automobile Parking Stalls	4.0	3.0	6.0
Light Vehicle Circulation Areas	5.5	3.5	9.5
Heavy Truck Access Areas	7.0	4.0	14.0

Any concrete slab-on-grade in pavement areas shall be a minimum of seven inches in thickness and may be placed on approved subgrade soils. All pavement areas shall have positive drainage toward an approved outlet from the site. Drain lines behind curbs and/or adjacent to landscape areas should be considered by client and the appropriate design engineers to prevent water from infiltrating beneath pavement. If such infiltration occurs, damage to pavement, curbs and flow lines, especially on sites with expansive soils, may occur during the life of the project.

Any approved base material shall consist of a Class II aggregate or equivalent and should be compacted to a minimum of 95% relative compaction. All pavement materials shall conform to the requirements set forth by the City of Moreno Valley. The base material; and asphaltic concrete should be tested prior to delivery to the site and during placement to determine conformance with the project specifications. A pavement engineer shall designate the specific asphalt mix design to meet the required project specifications.

#### 8.10 Utility Trench and Excavation Backfill

Trenches from installation of utility lines and other excavations may be backfilled with on-site soils or approved imported soils compacted to a minimum of 90% relative compaction. All utility lines shall be properly bedded with clean sand having a sand equivalency rating of 30 or more. This bedding material shall be thoroughly water jetted around the pipe structure prior to placement of compacted backfill soils.

#### 8.11 Corrosion Design Criteria

Representative samples of the surficial soils, typical of the subgrade soils expected to be encountered within foundation excavations and underground utilities were tested for corrosion potential. The minimum resistivity value obtained for the samples tested is representative of an environment that may be severely corrosive to metals. The soil pH value was considered mildly alkaline and may not have a significant effect on soil corrosivity. Consideration should be given to corrosion protection systems for buried metal such as protective coatings, wrappings or the use of PVC where permitted by local building codes.

**NorCal Engineering**

According to Table 4.3.1 of ACI 318 Building Code and Commentary, these contents revealed negligible sulfate concentrations. Therefore, a Type II cement according to latest CBC specifications may be utilized for building foundations at this time. It is recommended that additional sulfate tests be performed at the completion of site grading to assure that the as graded conditions are consistent with the recommendations stated in this design. Corrosion test results may be found on the attached Table IV.

### 8.12 Expansive Soil

Since expansive soils were encountered, special attention should be given to the project design and maintenance. The attached *Expansive Soil Guidelines* should be reviewed by the engineers, architects, owner, maintenance personnel and other interested parties and considered during the design of the project and future property maintenance.

### 9.0 Closure

The recommendations and conclusions contained in this report are based upon the soil conditions uncovered in our test excavations. No warranty of the soil condition between our excavations is implied. NorCal Engineering should be notified for possible further recommendations if unexpected to unfavorable conditions are encountered during construction phase. It is the responsibility of the owner to ensure that all information within this report is submitted to the Architect and appropriate Engineers for the project.

A preconstruction conference should be held between the developer, general contractor, grading contractor, city inspector, architect, and geotechnical engineer to clarify any questions relating to the grading operations and subsequent construction. Our representative should be present during the grading operations and construction phase to certify that such recommendations are complied within the field.

**NorCal Engineering**

This geotechnical investigation has been conducted in a manner consistent with the level of care and skill exercised by members of our profession currently practicing under similar conditions in the Southern California area. No other warranty, expressed or implied is made.

We appreciate this opportunity to be of service to you. If you have any further questions, please do not hesitate to contact the undersigned.

Respectfully submitted,  
NORCAL ENGINEERING

Keith D. Tucker  
Project Engineer  
R.G.E. 841

Scott D. Spensiero

**NorCal Engineering**

## SPECIFICATIONS FOR PLACEMENT OF COMPACTED FILL

### **Excavation**

Any existing low-density soils and/or saturated soils shall be removed to competent natural soil under the inspection of the Geotechnical Engineering Firm. After the exposed surface has been cleansed of debris and/or vegetation, it shall be scarified until it is uniform in consistency, brought to the proper moisture content and compacted to a minimum of 90% relative compaction (in accordance with ASTM: D 1557).

In any area where a transition between fill and native soil or between bedrock and soil are encountered, additional excavation beneath foundations and slabs will be necessary in order to provide uniform support and avoid differential settlement of the structure.

### **Material for Fill**

The on-site soils or approved import soils may be utilized for the compacted fill provided they are free of any deleterious materials and shall not contain any rocks, brick, asphaltic concrete, concrete or other hard materials greater than eight inches in maximum dimensions. Any import soil must be approved by the Geotechnical Engineering firm a minimum of 72 hours prior to importation of site.

### **Placement of Compacted Fill Soils**

The approved fill soils shall be placed in layers not excess of six inches in thickness. Each lift shall be uniform in thickness and thoroughly blended. The fill soils shall be brought to within 2% of the optimum moisture content, unless otherwise specified by the Soils Engineering firm. Each lift shall be compacted to a minimum of 90% relative compaction (in accordance with ASTM: D 1557) and approved prior to the placement of the next layer of soil. Compaction tests shall be obtained at the discretion of the Geotechnical Engineering firm but to a minimum of one test for every 500 cubic yards placed and/or for every 2 feet of compacted fill placed.

The minimum relative compaction shall be obtained in accordance with accepted methods in the construction industry. The final grade of the structural areas shall be in a dense and smooth condition prior to placement of slabs-on-grade or pavement areas. No fill soils shall be placed, spread or compacted during unfavorable weather conditions. When the grading is interrupted by heavy rains, compaction operations shall not be resumed until approved by the Geotechnical Engineering firm.

### **Grading Observations**

The controlling governmental agencies should be notified prior to commencement of any grading operations. This firm recommends that the grading operations be conducted under the observation of a Soils Engineering firm as deemed necessary. A 24-hour notice must be provided to this firm prior to the time of our initial inspection.

Observation shall include the clearing and grubbing operations to assure that all unsuitable materials have been properly removed; approve the exposed subgrade in areas to receive fill and in areas where excavation has resulted in the desired finished grade and designate areas of overexcavation; and perform field compaction tests to determine relative compaction achieved during fill placement. In addition, all foundation excavations shall be observed by the Geotechnical Engineering firm to confirm that appropriate bearing materials are present at the design grades and recommend any modifications to construct footings.

**EXPANSIVE SOIL GUIDELINES**

The following expansive soil guidelines are provided for your project. The intent of these guidelines is to inform you, the client, of the importance of proper design and maintenance of projects supported on expansive soils. ***You, as the owner or other interested party, should be warned that you have a duty to provide the information contained in the soil report including these guidelines to your design engineers, architects, landscapers and other design parties in order to enable them to provide a design that takes into consideration expansive soils.***

*In addition, you should provide the soil report with these guidelines to any property manager, lessee, property purchaser or other interested party that will have or assume the responsibility of maintaining the development in the future.*

Expansive soils are fine-grained silts and clays which are subject to swelling and contracting. The amount of this swelling and contracting is subject to the amount of fine-grained clay materials present in the soils and the amount of moisture either introduced or extracted from the soils. Expansive soils are divided into five categories ranging from "very low" to "very high". Expansion indices are assigned to each classification and are included in the laboratory testing section of this report. *If the expansion index of the soils on your site, as stated in this report, is 21 or higher, you have expansive soils.* The classifications of expansive soils are as follows:

**Classification of Expansive Soil\***

Expansion Index	Potential Expansion
0-20	Very Low
21-50	Low
51-90	Medium
91-130	High
Above 130	Very High

\*From Table 18A-I-B of California Building Code (1988)

**NorCal Engineering**

When expansive soils are compacted during site grading operations, care is taken to place the materials at or slightly above optimum moisture levels and perform proper compaction operations. Any subsequent excessive wetting and/or drying of expansive soils will cause the soil materials to expand and/or contract. These actions are likely to cause distress of foundations, structures, slabs-on-grade, sidewalks and pavement over the life of the structure. ***It is therefore imperative that even after construction of improvements, the moisture contents are maintained at relatively constant levels, allowing neither excessive wetting or drying of soils.***

Evidence of excessive wetting of expansive soils may be seen in concrete slabs, both interior and exterior. Slabs may lift at construction joints producing a trip hazard or may crack from the pressure of soil expansion. Wet clays in foundation areas may result in lifting of the structure causing difficulty in the opening and closing of doors and windows, as well as cracking in exterior and interior wall surfaces. In extreme wetting of soils to depth, settlement of the structure may eventually result. Excessive wetting of soils in landscape areas adjacent to concrete or asphaltic pavement areas may also result in expansion of soils beneath pavement and resultant distress to the pavement surface.

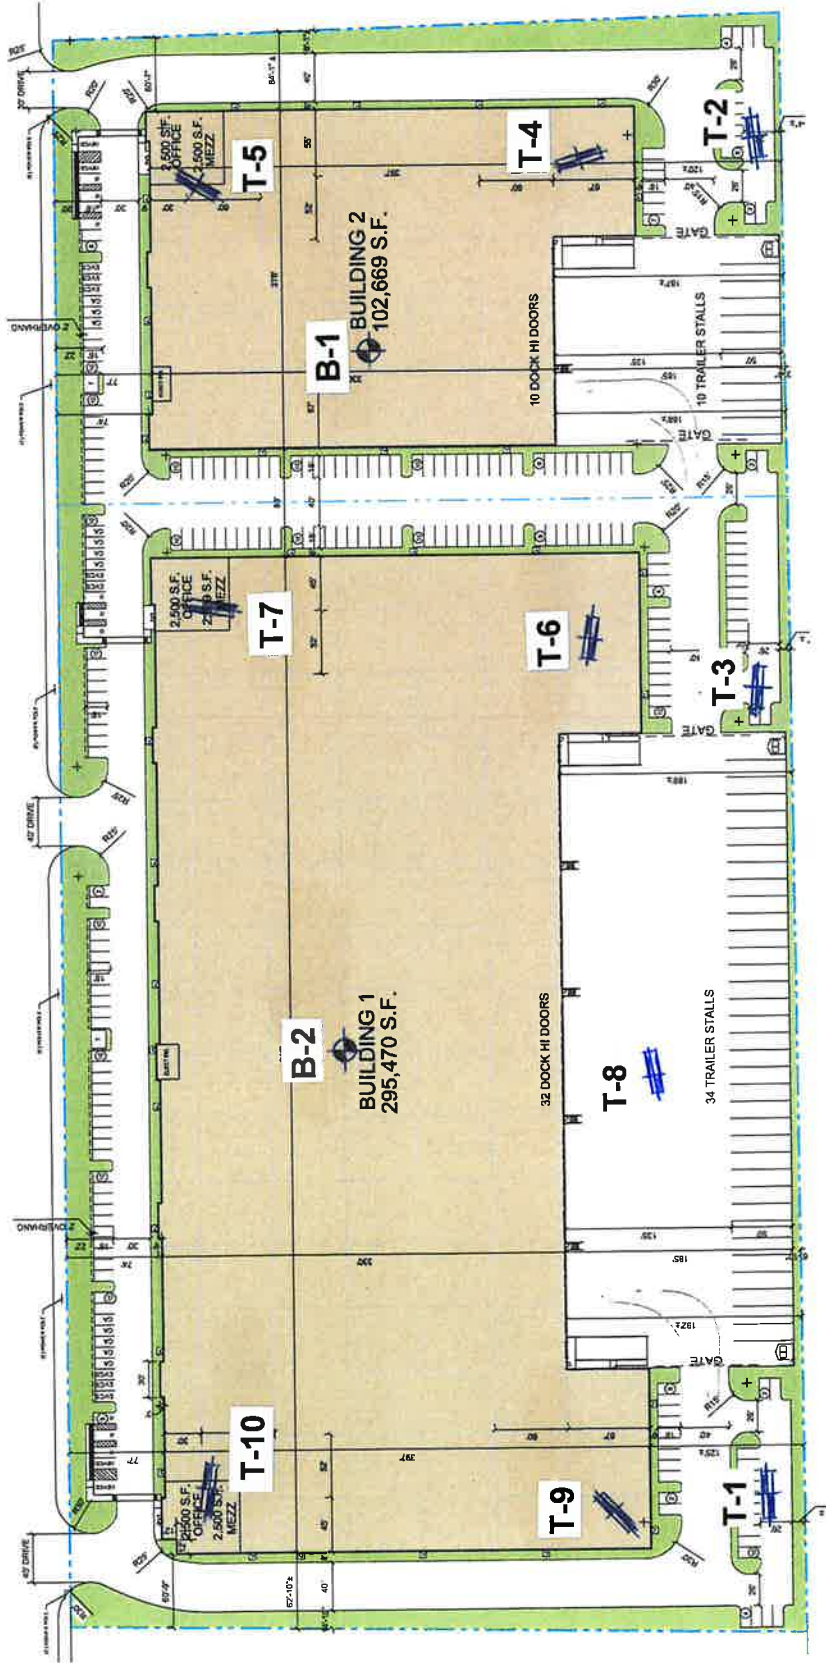

Excessive drying of expansive soils is initially evidenced by cracking in the surface of the soils due to contraction. Settlement of structures and on-grade slabs may also eventually result along with problems in the operation of doors and windows.

*Projects located in areas of expansive clay soils will be subject to more movement and "hairline" cracking of walls and slabs than similar projects situated on non-expansive sandy soils.* There are, however, measures that developers and property owners may take to reduce the amount of movement over the life the development. The following guidelines are provided to assist you in both design and maintenance of projects on expansive soils:

- Drainage away from structures and pavement is essential to prevent excessive wetting of expansive soils. Grades should be designed to the latest building code and maintained to allow flow of irrigation and rain water to approved drainage devices or to the street. Any “ponding” of water adjacent to buildings, slabs and pavement after rains is evidence of poor drainage; the installation of drainage devices or regrading of the area may be required to assure proper drainage. Installation of rain gutters is also recommended to control the introduction of moisture next to buildings. Gutters should discharge into a drainage device or onto pavement which drains to roadways.
- Irrigation should be strictly controlled around building foundations, slabs and pavement and may need to be adjusted depending upon season. This control is essential to maintain a relatively uniform moisture content in the expansive soils and to prevent swelling and contracting. Over-watering adjacent to improvements may result in damage to those improvements. NorCal Engineering makes no specific recommendations regarding landscape irrigation schedules.
- Planting schemes for landscaping around structures and pavement should be analyzed carefully. Plants (including sod) requiring high amounts of water may result in excessive wetting of soils. Trees and large shrubs may actually extract moisture from the expansive soils, thus causing contraction of the fine-grained soils.
- Thickened edges on exterior slabs will assist in keeping excessive moisture from entering directly beneath the concrete. A six-inch thick or greater deepened edge on slabs may be considered. Underlying interior and exterior slabs with 6 to 12 inches or more of non-expansive soils and providing presaturation of the underlying clayey soils as recommended in the soil report will improve the overall performance of on-grade slabs.

- Increase the amount of steel reinforcing in concrete slabs, foundations and other structures to resist the forces of expansive soils. The precise amount of reinforcing should be determined by the appropriate design engineers and/or architects.
- Recommendations of the soil report should always be followed in the development of the project. Any recommendations regarding presaturation of the upper subgrade soils in slab areas should be performed in the field and verified by the Soil Engineer.

Attn: Mr. Mark Bachli

**RE: Updated Soils Infiltration Study** - Proposed Industrial Warehouse Development - Located at the Southeast and Southwest Corners of Alessandro Boulevard and Chagall Court, in the City of Moreno Valley, California

Dear Mr. Bachli:

Pursuant to your request, this firm has performed an Updated Soils Infiltration Study in accordance with our proposal dated April 10, 2020 for the above referenced project. The purpose of this study is to provide additional testing to evaluate the feasibility of an on-site water disposal system for the proposed industrial development. The scope of work included the following: 1) site reconnaissance; 2) subsurface geotechnical exploration; 3) soil infiltration testing; 4) engineering analysis of field and laboratory data; and 5) preparation of a report.

The 18.05-acre subject property is located at the southeast and southwest corners of Alessandro Boulevard and Chagall Court, in the City of Moreno Valley. The generally rectangular-shaped parcel is elongated in an east to west direction with topography of the relatively level descending slightly from a north to south direction on the order of a few feet. The site is undeveloped parcel covered with a low vegetation growth of natural grasses and weeds.

It is proposed to construct an industrial warehouse development consisting of a 102,669 and 295,470 square feet building as shown on the plan by Herdman Architecture + Design dated December 18, 2019. The proposed concrete tilt-up building will be supported by a conventional slab-on-grade foundation system with perimeter-spread footings and isolated interior footings. Other improvements will include asphalt and concrete pavement areas, hardscape and landscaping.

It is assumed that the proposed grading for the development will include cut and fill procedures on the order of a few feet to achieve finished grade elevations. Final building plans shall be reviewed by this firm prior to submittal for city approval to determine the need for any additional study and revised recommendations pertinent to the proposed development, if necessary.

#### **Field Exploration and Testing**

The field exploration consisted of eight (8) additional exploratory trenches by a backhoe to depths ranging between 2 and 7 feet below ground surface (bgs) to determine the subsurface soil conditions. The explorations were visually classified and logged by a field engineer with locations of the subsurface explorations shown on the attached Site Plan. The exploratory trenches revealed the existing earth materials to consist of fill and natural soil. Detailed descriptions of the subsurface conditions are listed on the trench logs in Appendix A. It should be noted that the transition from one soil type to another as shown on the trench logs is approximate and may in fact be a gradual transition. The soils encountered are described as follows:

**Fill:** A fill soil classifying as a brown, fine to medium grained, silty to clayey SAND was encountered across the site to depths ranging from 1 to 2 feet below ground surface. These soils were noted to be loose and moist.

**Natural:** A natural undisturbed soil classifying as a brown, fine to medium grained, clayey to silty SAND to sandy CLAY was encountered beneath the upper fill soils. The native soils as encountered were observed to be dense/stiff to very dense/very stiff and moist.

The overall engineering characteristics of the earth material were relatively uniform with each trench and no caving occurred. Groundwater was encountered at a depth of 33 and 39 feet ground surface as encountered from our deep borings in our “Geotechnical Engineering Investigation” report dated January 31, 2020.

### **Results of Field Infiltration Tests**

Infiltration tests within the site were performed to provide preliminary infiltration rates for the purpose of planning and design of an on-site water disposal system. The infiltration tests consisted of the double ring infiltration test per ASTM Method D 3385. The field infiltration rate was computed using a reduction factor –  $R_f$  based on the field measurements with our calculations given in Appendix D. Based upon the results of our testing, the soils encountered in the planned on-site drainage disposal system area exhibit the following infiltration rates.

Test No.	Depth	Soil Classification	Field Infiltration Rate	Design Rate
T-1	5'	Silty Sand	5.12 in/hr	1.707
T-2	2'	Sandy Clay	0.05 in/hr	0.017
T-3	5'	Sandy Clay	0.26 in/hr	0.087
T-4	3'	Clayey Sand	0.83 in/hr	0.277
T-5	6'	Clayey Sand	0.87 in/hr	0.290
T-6	7'	Sandy Clay	0.08 in/hr	0.027
T-7	7'	Sandy Clay	0.08 in/hr	0.027
T-8	4'	Sandy Clay	0.35 in/hr	0.117

The correction factors  $CF_t$ ,  $CF_v$  and  $CF_s$  are given below based on soils from 2 to 7 feet from our field tests.

- a)  $CF_t = R_f = 1.0$  for our double ring infiltration test holes.
- b)  $CF_v = 1.0$  based on uniform soils encountered in eight trenches.
- c)  $CF_s = 3.0$  for long-term siltation, plugging and maintenance. The subsurface soils are likely to have some plugging and regular maintenance of storm water discharge devices is required.

Based on the results of our field testing, the subsurface soils encountered in the proposed on-site drainage disposal system shall utilize the design infiltration rates based on the County of Riverside safety factor. These infiltration rates were found to be low representing very stiff fine-grained clayey soils which may not be suitable for seepage at the site. Our referenced preliminary geotechnical report stated that deeper soils were clayey soils with increasing density with depth, indicating unfavorable conditions for infiltration. All systems must meet the latest county specifications and the California Regional Water Quality Control Board (CRWQCB) requirements.

It is recommended that foundations shall be setback a minimum distance of 10 feet from the drainage disposal system and the bottom of footing shall be a minimum of 10 feet from the expected zone of saturation. The boundary of the zone of saturation may be assumed to project downward from the top of the permeable portion of the disposal system at an inclination of 1 to 1 or flatter, as determined by the geotechnical engineer.

### **Closure**

The recommendations and conclusions contained in this report are based upon the soil conditions uncovered in our test excavation. No warranty of the soil condition between our excavations is implied. NorCal Engineering should be notified for possible further recommendations if unexpected unfavorable conditions are encountered during construction phase.

This firm should have the opportunity to review the final plans to verify that all our recommendations are incorporated. This report and all conclusions are subject to the review of the controlling authorities for the project. Our representative should be present during the grading operations and construction phase to certify that such recommendations are complied within the field.

This geotechnical investigation has been conducted in a manner consistent with the level of care and skill exercised by members of our profession currently practicing under similar conditions in the Southern California area. No other warranty, expressed or implied is made.

**NorCal Engineering**

We appreciate this opportunity to be of service to you. If you have any further questions, please do not hesitate to contact the undersigned.

Respectfully submitted,  
NORCAL ENGINEERING

		MORE THAN 50% OF COARSE FRACTION PASSING ON NO. 4 SIEVE	SANDS WITH FINE (APPRECIABLE AMOUNT OF FINES)		SM	SILTY SANDS, SAND-SILT MIXTURES			
					SC	CLAYEY SANDS, SAND-CLAY MIXTURES			
				FINE GRAINED SOILS	SILTS AND CLAYS	LIQUID LIMIT LESS THAN 50		ML	INORGANIC SILTS AND VERY FINE SANDS, ROCK FLOUR, SILTY OR CLAYEY FINE SANDS OR CLAYEY SILTS WITH SLIGHT PLASTICITY
								CL	INORGANIC CLAYS OF LOW TO MEDIUM PLASTICITY, GRAVELLY CLAYS, SANDY CLAYS, SILTY CLAYS, LEAN CLAYS
	OL	ORGANIC SILTS AND ORGANIC SILTY CLAYS OF LOW PLASTICITY							
MORE THAN 50% OF MATERIAL IS SMALLER THAN NO. 200 SIEVE SIZE	SILTS AND CLAYS	LIQUID LIMIT GREATER THAN 50		MH	INORGANIC SILTS, MICACEOUS OR DIATOMACEOUS FINE SAND OR SILTY SOILS				
				CH	INORGANIC CLAYS OF HIGH PLASTICITY, FAT CLAYS				
				OH	ORGANIC CLAYS OF MEDIUM TO HIGH PLASTICITY, ORGANIC SILTS				
HIGHLY ORGANIC SOILS				PT	PEAT, HUMUS, SWAMP SOILS WITH HIGH ORGANIC CONTENTS				

NOTE: DUAL SYMBOLS ARE USED TO INDICATE BORDERLINE SOIL CLASSIFICATIONS

## UNIFIED SOIL CLASSIFICATION SYSTEM

**KEY:**

- Indicates 2.5-inch Inside Diameter. Ring Sample.
- ☒ Indicates 2-inch OD Split Spoon Sample (SPT).
- ☐ Indicates Shelby Tube Sample.
- Indicates No Recovery.
- ▣ Indicates SPT with 140# Hammer 30 in. Drop.
- ☑ Indicates Bulk Sample.
- ▤ Indicates Small Bag Sample.
- ▢ Indicates Non-Standard
- ☒ Indicates Core Run.

**COMPONENT DEFINITIONS**

COMPONENT	SIZE RANGE
Boulders	Larger than 12 in
Cobbles	3 in to 12 in
Gravel	3 in to No 4 (4.5mm)
Coarse gravel	3 in to 3/4 in
Fine gravel	3/4 in to No 4 ( 4.5mm )
Sand	No. 4 ( 4.5mm ) to No. 200 ( 0.074mm )
Coarse sand	No. 4 ( 4.5 mm ) to No. 10 ( 2.0 mm )
Medium sand	No. 10 ( 2.0 mm ) to No. 40 ( 0.42 mm )
Fine sand	No. 40 ( 0.42 mm ) to No. 200 ( 0.074 mm )
Silt and Clay	Smaller than No. 200 ( 0.074 mm )

**COMPONENT PROPORTIONS**

DESCRIPTIVE TERMS	RANGE OF PROPORTION
Trace	1 - 5%
Few	5 - 10%
Little	10 - 20%
Some	20 - 35%
And	35 - 50%

**MOISTURE CONTENT**

DRY	Absence of moisture, dusty, dry to the touch.
DAMP	Some perceptible moisture; below optimum
MOIST	No visible water; near optimum moisture content
WET	Visible free water, usually soil is below water table.

**RELATIVE DENSITY OR CONSISTENCY VERSUS SPT N -VALUE**

COHESIONLESS SOILS		COHESIVE SOILS		
Density	N ( blows/ft )	Consistency	N (blows/ft )	Approximate Undrained Shear Strength (psf)
Very Loose	0 to 4	Very Soft	0 to 2	< 250
Loose	4 to 10	Soft	2 to 4	250 - 500
Medium Dense	10 to 30	Medium Stiff	4 to 8	500 - 1000
Dense	30 to 50	Stiff	8 to 15	1000 - 2000
Very Dense	over 50	Very Stiff	15 to 30	2000 - 4000
		Hard	over 30	> 4000

**HCOG Narrative**  
**Compass Danbe Centerpointe**  
**Proposed Industrial Warehouse Facility**  
**APN 297-170-002 & 003**  
**South Side of Alessandro Boulevard**  
**City of Moreno Valley**  
**October 6, 2020**  
**PEN20-0120 & PEN20-0121**

Alessandro Boulevard is currently a partially improved roadway with a paved roadway, curb, gutter, and sidewalk along the north side. The street is divided by an existing raised center median. The south side of the street, adjacent to the project site, is currently unimproved. Flows from the south side of Alessandro Boulevard currently drain south onto the subject site, and these tributary flows are included in this study. The development proposes to improve Alessandro Boulevard across the project frontage with curb, gutter, and sidewalk. The improvements will nearly mirror the improvements on the north side of the street, which contains two separate catch basins. The improvements will include modified under sidewalk drains, which will allow street flows to enter a proposed bioretention swale sized for water quality treatment purposes. The proposed bioretention swales will discharge treated flows to two proposed catch basins connected to the city's storm drain system, which will be extended as part of this development. The two proposed catch basins will also act as an overflow for the bioretention swale.

The proposed development of the site includes the construction of two industrial warehouse buildings with related parking, paved access, and landscaping. Post-development flows from the property will be directed via sheet flow, ribbon gutter, curb and gutter, and an underground storm drain system to one of two proposed underground detention tanks onsite. A proposed sump and pump will pump flows from the detention tank to a proposed Modular Wetland biotreatment unit for water quality treatment. The Modular Wetland biotreatment units will discharge treated flows into the city's storm drain system that is being installed as part of this development. Each of the two parcels will have its own Modular Wetlands unit and detention tank, and both are located on the south side of the proposed buildings. A separate proposed sump and pump will discharge flows in excess of water quality volumes from the detention tank to the city's storm drain system. There will be no increase in flows or intensity from historic storm events.

 FLOW PROCESS FROM NODE 10.00 TO NODE 10.00 IS CODE = 1  
 -----

>>>>DESIGNATE INDEPENDENT STREAM FOR CONFLUENCE<<<<<<  
 >>>>AND COMPUTE VARIOUS CONFLUENCED STREAM VALUES<<<<<<

=====

TOTAL NUMBER OF STREAMS = 3  
 CONFLUENCE VALUES USED FOR INDEPENDENT STREAM 3 ARE:  
 TIME OF CONCENTRATION(MIN.) = 22.57  
 RAINFALL INTENSITY(INCH/HR) = 0.62  
 TOTAL STREAM AREA(ACRES) = 2.84  
 PEAK FLOW RATE(CFS) AT CONFLUENCE = 0.81

\*\* CONFLUENCE DATA \*\*

STREAM NUMBER	RUNOFF (CFS)	Tc (MIN.)	INTENSITY (INCH/HOUR)	AREA (ACRE)
1	2.28	10.12	0.897	2.94
2	2.01	6.61	1.088	2.13
3	0.81	22.57	0.624	2.84

\*\*\*\*\*WARNING\*\*\*\*\*  
 IN THIS COMPUTER PROGRAM, THE CONFLUENCE VALUE USED IS BASED ON THE RCFC&WCD FORMULA OF PLATE D-1 AS DEFAULT VALUE. THIS FORMULA WILL NOT NECESSARILY RESULT IN THE MAXIMUM VALUE OF PEAK FLOW.  
 \*\*\*\*\*

RAINFALL INTENSITY AND TIME OF CONCENTRATION RATIO  
 CONFLUENCE FORMULA USED FOR 3 STREAMS.

\*\* PEAK FLOW RATE TABLE \*\*

STREAM NUMBER	RUNOFF (CFS)	Tc (MIN.)	INTENSITY (INCH/HOUR)
1	3.74	6.61	1.088
2	4.30	10.12	0.897
3	3.55	22.57	0.624

COMPUTED CONFLUENCE ESTIMATES ARE AS FOLLOWS:

PEAK FLOW RATE(CFS) = 4.30 Tc(MIN.) = 10.12  
 TOTAL AREA(ACRES) = 7.9  
 LONGEST FLOWPATH FROM NODE 11.00 TO NODE 10.00 = 705.00 FEET.

=====

END OF STUDY SUMMARY:

TOTAL AREA(ACRES) = 7.9 TC(MIN.) = 10.12  
 PEAK FLOW RATE(CFS) = 4.30

Attachment: Appendix I1-PWQMP (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

\*\*\*\*\*

-----

Problem Descriptions:  
APN 297-170-002 & 003  
PRE-DEVELOPMENT DA3  
2-YEAR STORM EVENT

-----

RATIONAL METHOD CALIBRATION COEFFICIENT = 0.90  
TOTAL CATCHMENT AREA (ACRES) = 0.64  
SOIL-LOSS RATE, Fm, (INCH/HR) = 0.173  
LOW LOSS FRACTION = 0.415  
TIME OF CONCENTRATION (MIN.) = 5.00  
SMALL AREA PEAK Q COMPUTED USING PEAK FLOW RATE FORMULA  
USER SPECIFIED RAINFALL VALUES ARE USED  
RETURN FREQUENCY (YEARS) = 2  
5-MINUTE POINT RAINFALL VALUE (INCHES) = 0.12  
30-MINUTE POINT RAINFALL VALUE (INCHES) = 0.32  
1-HOUR POINT RAINFALL VALUE (INCHES) = 0.45  
3-HOUR POINT RAINFALL VALUE (INCHES) = 0.78  
6-HOUR POINT RAINFALL VALUE (INCHES) = 1.07  
24-HOUR POINT RAINFALL VALUE (INCHES) = 1.83

-----

TOTAL CATCHMENT RUNOFF VOLUME (ACRE-FEET) = 0.05  
TOTAL CATCHMENT SOIL-LOSS VOLUME (ACRE-FEET) = 0.04

\*\*\*\*\*

\*\*\*\*\*

-----

Problem Descriptions:  
APN 297-170-002 & 003  
PRE-DEVELOPMENT DA4  
2-YEAR STORM EVENT

-----

RATIONAL METHOD CALIBRATION COEFFICIENT = 0.90  
TOTAL CATCHMENT AREA (ACRES) = 0.64  
SOIL-LOSS RATE, Fm, (INCH/HR) = 0.179  
LOW LOSS FRACTION = 0.425  
TIME OF CONCENTRATION (MIN.) = 5.36  
SMALL AREA PEAK Q COMPUTED USING PEAK FLOW RATE FORMULA  
USER SPECIFIED RAINFALL VALUES ARE USED  
RETURN FREQUENCY (YEARS) = 2  
5-MINUTE POINT RAINFALL VALUE (INCHES) = 0.12  
30-MINUTE POINT RAINFALL VALUE (INCHES) = 0.32  
1-HOUR POINT RAINFALL VALUE (INCHES) = 0.45  
3-HOUR POINT RAINFALL VALUE (INCHES) = 0.78  
6-HOUR POINT RAINFALL VALUE (INCHES) = 1.07  
24-HOUR POINT RAINFALL VALUE (INCHES) = 1.83

-----

TOTAL CATCHMENT RUNOFF VOLUME (ACRE-FEET) = 0.05  
TOTAL CATCHMENT SOIL-LOSS VOLUME (ACRE-FEET) = 0.05

-----

Problem Descriptions:  
APN 297-170-002 & 003  
PRE-DEVELOPMENT DA5  
2-YEAR STORM EVENT

-----

RATIONAL METHOD CALIBRATION COEFFICIENT = 0.90  
TOTAL CATCHMENT AREA (ACRES) = 0.80  
SOIL-LOSS RATE, Fm, (INCH/HR) = 0.167  
LOW LOSS FRACTION = 0.404  
TIME OF CONCENTRATION (MIN.) = 5.00  
SMALL AREA PEAK Q COMPUTED USING PEAK FLOW RATE FORMULA  
USER SPECIFIED RAINFALL VALUES ARE USED  
RETURN FREQUENCY (YEARS) = 2  
5-MINUTE POINT RAINFALL VALUE (INCHES) = 0.12  
30-MINUTE POINT RAINFALL VALUE (INCHES) = 0.32  
1-HOUR POINT RAINFALL VALUE (INCHES) = 0.45  
3-HOUR POINT RAINFALL VALUE (INCHES) = 0.78  
6-HOUR POINT RAINFALL VALUE (INCHES) = 1.07  
24-HOUR POINT RAINFALL VALUE (INCHES) = 1.83

-----

TOTAL CATCHMENT RUNOFF VOLUME (ACRE-FEET) = 0.07  
TOTAL CATCHMENT SOIL-LOSS VOLUME (ACRE-FEET) = 0.05

\*\*\*\*\*

-----

Problem Descriptions:  
APN 297-107-002 & 003  
POST-DEVELOPMENT DA2  
2-YEAR STORM EVENT

-----

RATIONAL METHOD CALIBRATION COEFFICIENT = 0.90  
TOTAL CATCHMENT AREA (ACRES) = 7.94  
SOIL-LOSS RATE, Fm, (INCH/HR) = 0.246  
LOW LOSS FRACTION = 0.437  
TIME OF CONCENTRATION (MIN.) = 10.12  
SMALL AREA PEAK Q COMPUTED USING PEAK FLOW RATE FORMULA  
USER SPECIFIED RAINFALL VALUES ARE USED  
RETURN FREQUENCY (YEARS) = 2  
5-MINUTE POINT RAINFALL VALUE (INCHES) = 0.12  
30-MINUTE POINT RAINFALL VALUE (INCHES) = 0.32  
1-HOUR POINT RAINFALL VALUE (INCHES) = 0.45  
3-HOUR POINT RAINFALL VALUE (INCHES) = 0.78  
6-HOUR POINT RAINFALL VALUE (INCHES) = 1.07  
24-HOUR POINT RAINFALL VALUE (INCHES) = 1.83

-----

TOTAL CATCHMENT RUNOFF VOLUME (ACRE-FEET) = 0.63  
TOTAL CATCHMENT SOIL-LOSS VOLUME (ACRE-FEET) = 0.58

\*\*\*\*\*

<sup>1</sup> Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS). Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values. Please refer to NOAA Atlas 14 document for more information.

# Appendix 8: Source Control

*Pollutant Sources/Source Control Checklist*

Attachment: Appendix I1-PWQMP (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

**STORMWATER POLLUTANT SOURCES/SOURCE CONTROL CHECKLIST**

**How to use this worksheet (also see instructions in Section G of the WQMP Template):**

1. Review Column 1 and identify which of these potential sources of stormwater pollutants apply to your site. Check each box that applies.
2. Review Column 2 and incorporate all of the corresponding applicable BMPs in your WQMP Exhibit.
3. Review Columns 3 and 4 and incorporate all of the corresponding applicable permanent controls and operational BMPs in your WQMP. Use the format shown in Table G.1 on page 23 of this WQMP Template. Describe your specific BMPs in an accompanying narrative, and explain any special conditions or situations that required omitting BMPs or substituting alternative BMPs for those shown here.

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
<input checked="" type="checkbox"/> <b>A. On-site storm drain inlets</b>	<input checked="" type="checkbox"/> Locations of inlets.	<input checked="" type="checkbox"/> Mark all inlets with the words “Only Rain Down the Storm Drain” or similar. Catch Basin Markers may be available from the Riverside County Flood Control and Water Conservation District, call 951.955.1200 to verify.	<input checked="" type="checkbox"/> Maintain and periodically repaint or replace inlet markings. <input checked="" type="checkbox"/> Provide stormwater pollution prevention information to new site owners, lessees, or operators. <input checked="" type="checkbox"/> See applicable operational BMPs in Fact Sheet SC-44, “Drainage System Maintenance,” in the CASQA Stormwater Quality Handbooks at <a href="http://www.cabmphandbooks.com">www.cabmphandbooks.com</a> <input checked="" type="checkbox"/> Include the following in lease agreements: “Tenant shall not allow anyone to discharge anything to storm drains or to store or deposit materials so as to create a potential discharge to storm drains.”
<input type="checkbox"/> <b>B. Interior floor drains and elevator shaft sump pumps</b>		<input type="checkbox"/> State that interior floor drains and elevator shaft sump pumps will be plumbed to sanitary sewer.	<input type="checkbox"/> Inspect and maintain drains to prevent blockages and overflow.
<input type="checkbox"/> <b>C. Interior parking garages</b>		<input type="checkbox"/> State that parking garage floor drains will be plumbed to the sanitary sewer.	<input type="checkbox"/> Inspect and maintain drains to prevent blockages and overflow.

1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
<input type="checkbox"/> <b>E. Pools, spas, ponds, decorative fountains, and other water features.</b>	<input type="checkbox"/> Show location of water feature and a sanitary sewer cleanout in an accessible area within 10 feet. (Exception: Public pools must be plumbed according to County Department of Environmental Health Guidelines.)	If the Co-Permittee requires pools to be plumbed to the sanitary sewer, place a note on the plans and state in the narrative that this connection will be made according to local requirements.	<input checked="" type="checkbox"/> See applicable operational BMPs in "Guidelines for Maintaining Your Swimming Pool, Jacuzzi and Garden Fountain" at <a href="http://rcflood.org/stormwater/">http://rcflood.org/stormwater/</a>
<input type="checkbox"/> <b>F. Food service</b>	<input type="checkbox"/> For restaurants, grocery stores, and other food service operations, show location (indoors or in a covered area outdoors) of a floor sink or other area for cleaning floor mats, containers, and equipment.  <input type="checkbox"/> On the drawing, show a note that this drain will be connected to a grease interceptor before discharging to the sanitary sewer.	<input type="checkbox"/> Describe the location and features of the designated cleaning area.  <input type="checkbox"/> Describe the items to be cleaned in this facility and how it has been sized to insure that the largest items can be accommodated.	<input type="checkbox"/> See the brochure, "The Food Service Industry Best Management Practices for: Restaurants, Grocery Stores, Delicatessens and Bakeries" at <a href="http://rcflood.org/stormwater/">http://rcflood.org/stormwater/</a>  Provide this brochure to new site owners, lessees, and operators.
<input checked="" type="checkbox"/> <b>G. Refuse areas</b>	<input checked="" type="checkbox"/> Show where site refuse and recycled materials will be handled and stored for pickup. See local municipal requirements for sizes and other details of refuse areas.  <input checked="" type="checkbox"/> If dumpsters or other receptacles are outdoors, show how the designated area will be covered, graded, and paved to prevent run-on and show locations of berms to prevent runoff from the area.  <input type="checkbox"/> Any drains from dumpsters, compactors, and tallow bin areas shall be connected to a grease removal device before discharge to sanitary sewer.	<input checked="" type="checkbox"/> State how site refuse will be handled and provide supporting detail to what is shown on plans.  <input checked="" type="checkbox"/> State that signs will be posted on or near dumpsters with the words "Do not dump hazardous materials here" or similar.	<input checked="" type="checkbox"/> State how the following will be implemented:  Provide adequate number of receptacles. Inspect receptacles regularly; repair or replace leaky receptacles. Keep receptacles covered. Prohibit/prevent dumping of liquid or hazardous wastes. Post "no hazardous materials" signs. Inspect and pick up litter daily and clean up spills immediately. Keep spill control materials available on-site. See Fact Sheet SC-34, "Waste Handling and Disposal" in the CASQA Stormwater Quality Handbooks at <a href="http://www.cabmphandbooks.com">www.cabmphandbooks.com</a>

# Site Design & Landscape Planning SD-10

## Design Objectives

- Maximize Infiltration
- Provide Retention
- Slow Runoff
- Minimize Impervious Land Coverage
- Prohibit Dumping of Improper Materials
- Contain Pollutants
- Collect and Convey

## Description

Each project site possesses unique topographic, hydrologic, and vegetative features, some of which are more suitable for development than others. Integrating and incorporating appropriate landscape planning methodologies into the project design is the most effective action that can be done to minimize surface and groundwater contamination from stormwater.

## Approach

Landscape planning should couple consideration of land suitability for urban uses with consideration of community goals and projected growth. Project plan designs should conserve natural areas to the extent possible, maximize natural water storage and infiltration opportunities, and protect slopes and channels.

## Suitable Applications

Appropriate applications include residential, commercial and industrial areas planned for development or redevelopment.

## Design Considerations

Design requirements for site design and landscapes planning should conform to applicable standards and specifications of agencies with jurisdiction and be consistent with applicable General Plan and Local Area Plan policies.

# SD-10 Site Design & Landscape Planning

## *Designing New Installations*

Begin the development of a plan for the landscape unit with attention to the following general principles:

- Formulate the plan on the basis of clearly articulated community goals. Carefully identify conflicts and choices between retaining and protecting desired resources and community growth.
- Map and assess land suitability for urban uses. Include the following landscape features in the assessment: wooded land, open unwooded land, steep slopes, erosion-prone soils, foundation suitability, soil suitability for waste disposal, aquifers, aquifer recharge areas, wetlands, floodplains, surface waters, agricultural lands, and various categories of urban land use. When appropriate, the assessment can highlight outstanding local or regional resources that the community determines should be protected (e.g., a scenic area, recreational area, threatened species habitat, farmland, fish run). Mapping and assessment should recognize not only these resources but also additional areas needed for their sustenance.

Project plan designs should conserve natural areas to the extent possible, maximize natural water storage and infiltration opportunities, and protect slopes and channels.

## *Conserve Natural Areas during Landscape Planning*

If applicable, the following items are required and must be implemented in the site layout during the subdivision design and approval process, consistent with applicable General Plan and Local Area Plan policies:

- Cluster development on least-sensitive portions of a site while leaving the remaining land in a natural undisturbed condition.
- Limit clearing and grading of native vegetation at a site to the minimum amount needed to build lots, allow access, and provide fire protection.
- Maximize trees and other vegetation at each site by planting additional vegetation, clustering tree areas, and promoting the use of native and/or drought tolerant plants.
- Promote natural vegetation by using parking lot islands and other landscaped areas.
- Preserve riparian areas and wetlands.

## *Maximize Natural Water Storage and Infiltration Opportunities Within the Landscape Unit*

- Promote the conservation of forest cover. Building on land that is already deforested affects basin hydrology to a lesser extent than converting forested land. Loss of forest cover reduces interception storage, detention in the organic forest floor layer, and water losses by evapotranspiration, resulting in large peak runoff increases and either their negative effects or the expense of countering them with structural solutions.
- Maintain natural storage reservoirs and drainage corridors, including depressions, areas of permeable soils, swales, and intermittent streams. Develop and implement policies and

# Site Design & Landscape Planning SD-10

regulations to discourage the clearing, filling, and channelization of these features. Utilize them in drainage networks in preference to pipes, culverts, and engineered ditches.

- Evaluating infiltration opportunities by referring to the stormwater management manual for the jurisdiction and pay particular attention to the selection criteria for avoiding groundwater contamination, poor soils, and hydrogeological conditions that cause these facilities to fail. If necessary, locate developments with large amounts of impervious surfaces or a potential to produce relatively contaminated runoff away from groundwater recharge areas.

## *Protection of Slopes and Channels during Landscape Design*

- Convey runoff safely from the tops of slopes.
- Avoid disturbing steep or unstable slopes.
- Avoid disturbing natural channels.
- Stabilize disturbed slopes as quickly as possible.
- Vegetate slopes with native or drought tolerant vegetation.
- Control and treat flows in landscaping and/or other controls prior to reaching existing natural drainage systems.
- Stabilize temporary and permanent channel crossings as quickly as possible, and ensure that increases in run-off velocity and frequency caused by the project do not erode the channel.
- Install energy dissipaters, such as riprap, at the outlets of new storm drains, culverts, conduits, or channels that enter unlined channels in accordance with applicable specifications to minimize erosion. Energy dissipaters shall be installed in such a way as to minimize impacts to receiving waters.
- Line on-site conveyance channels where appropriate, to reduce erosion caused by increased flow velocity due to increases in tributary impervious area. The first choice for linings should be grass or some other vegetative surface; since these materials not only reduce runoff velocities, but also provide water quality benefits from filtration and infiltration. If velocities in the channel are high enough to erode grass or other vegetative linings, riprap, concrete, soil cement, or geo-grid stabilization are other alternatives.
- Consider other design principles that are comparable and equally effective.

## *Redeveloping Existing Installations*

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define “redevelopment” in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of “redevelopment” must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under “designing new installations” above should be followed.

## **SD-10 Site Design & Landscape Planning**

Redevelopment may present significant opportunity to add features which had not previously been implemented. Examples include incorporation of depressions, areas of permeable soils, and swales in newly redeveloped areas. While some site constraints may exist due to the status of already existing infrastructure, opportunities should not be missed to maximize infiltration, slow runoff, reduce impervious areas, disconnect directly connected impervious areas.

# Efficient Irrigation

## SD-12

### Design Objectives

- Maximize Infiltration
- Provide Retention
- Slow Runoff
- Minimize Impervious Land Coverage
- Prohibit Dumping of Improper Materials
- Contain Pollutants
- Collect and Convey

### Description

Irrigation water provided to landscaped areas may result in excess irrigation water being conveyed into stormwater drainage systems.

### Approach

Project plan designs for development and redevelopment should include application methods of irrigation water that minimize runoff of excess irrigation water into the stormwater conveyance system.

### Suitable Applications

Appropriate applications include residential, commercial and industrial areas planned for development or redevelopment. (Detached residential single-family homes are typically excluded from this requirement.)

### Design Considerations

#### *Designing New Installations*

The following methods to reduce excessive irrigation runoff should be considered, and incorporated and implemented where determined applicable and feasible by the Permittee:

- Employ rain-triggered shutoff devices to prevent irrigation after precipitation.
- Design irrigation systems to each landscape area's specific water requirements.
- Include design featuring flow reducers or shutoff valves triggered by a pressure drop to control water loss in the event of broken sprinkler heads or lines.
- Implement landscape plans consistent with County or City water conservation resolutions, which may include provision of water sensors, programmable irrigation times (for short cycles), etc.

## SD-12

## Efficient Irrigation

- Design timing and application methods of irrigation water to minimize the runoff of excess irrigation water into the storm water drainage system.
- Group plants with similar water requirements in order to reduce excess irrigation runoff and promote surface filtration. Choose plants with low irrigation requirements (for example, native or drought tolerant species). Consider design features such as:
  - Using mulches (such as wood chips or bark) in planter areas without ground cover to minimize sediment in runoff
  - Installing appropriate plant materials for the location, in accordance with amount of sunlight and climate, and use native plant materials where possible and/or as recommended by the landscape architect
  - Leaving a vegetative barrier along the property boundary and interior watercourses, to act as a pollutant filter, where appropriate and feasible
  - Choosing plants that minimize or eliminate the use of fertilizer or pesticides to sustain growth
- Employ other comparable, equally effective methods to reduce irrigation water runoff.

### ***Redeveloping Existing Installations***

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define “redevelopment” in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of “redevelopment” must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under “designing new installations” above should be followed.

# Alternative Building Materials

# SD-21

## Design Objectives

- Maximize Infiltration
- Provide Retention
- Source Control
- Minimize Impervious Land Coverage
- Prohibit Dumping of Improper Materials
- Contain Pollutant
- Collect and Convey

## Description

Alternative building materials are selected instead of conventional materials for new construction and renovation. These materials reduce potential sources of pollutants in stormwater runoff by eliminating compounds that can leach into runoff, reducing the need for pesticide application, reducing the need for painting and other maintenance, or by reducing the volume of runoff.

## Approach

Alternative building materials are available for use as lumber for decking, roofing materials, home siding, and paving for driveways, decks, and sidewalks.

## Suitable Applications

Appropriate applications include residential, commercial and industrial areas planned for development or redevelopment.

## Design Considerations

### *Designing New Installations*

#### *Decking*

One of the most common materials for construction of decks and other outdoor construction has traditionally been pressure treated wood, which is now being phased out. The standard treatment is called CCA, for chromated copper arsenate. The key ingredients are arsenic (which kills termites, carpenter ants and other insects), copper (which kills the fungi that cause wood to rot) and chromium (which reacts with the other ingredients to bind them to the wood). The amount of arsenic is far from trivial. A deck just 8 feet x 10 feet contains more than 1 1/3 pounds of this highly potent poison. Replacement materials include a new type of pressure treated wood, plastic and composite lumber.

## SD-21 **Alternative Building Materials**

There are currently over 20 products in the market consisting of plastic or plastic-wood composites. Plastic lumber is made from 100% recycled plastic, # 2 HDPE and polyethylene plastic milk jugs and soap bottles. Plastic-wood composites are a combination of plastic and wood fibers or sawdust. These materials are a long lasting exterior weather, insect, and chemical resistant wood lumber replacement for non structural applications. Use it for decks, docks, raised garden beds and planter boxes, pallets, hand railings, outdoor furniture, animal pens, boat decks, etc.

New pressure treated wood uses a much safer recipe, ACQ, which stands for ammoniacal copper quaternary. It contains no arsenic and no chromium. Yet the American Wood Preservers Association has found it to be just as effective as the standard formula. ACQ is common in Japan and Europe.

### *Roofing*

Several studies have indicated that metal used as roofing material, flashing, or gutters can leach metals into the environment. The leaching occurs because rainfall is slightly acidic and slowly dissolved the exposed metals. Common traditional applications include copper sheathing and galvanized (zinc) gutters.

Coated metal products are available for both roofing and gutter applications. These products eliminate contact of bare metal with rainfall, eliminating one source of metals in runoff. There are also roofing materials made of recycled rubber and plastic that resemble traditional materials.

A less traditional approach is the use of green roofs. These roofs are not just green, they're alive. Planted with grasses and succulents, low- profile green roofs reduce the urban heat island effect, stormwater runoff, and cooling costs, while providing wildlife habitat and a connection to nature for building occupants. These roofs are widely used on industrial facilities in Europe and have been established as experimental installations in several locations in the US, including Portland, Oregon. Their feasibility is questionable in areas of California with prolonged, dry, hot weather.

### *Paved Areas*

Traditionally, concrete is used for construction of patios, sidewalks, and driveways. Although it is non-toxic, these paved areas reduce stormwater infiltration and increase the volume and rate of runoff. This increase in the amount of runoff is the leading cause of stream channel degradation in urban areas.

There are a number of alternative materials that can be used in these applications, including porous concrete and asphalt, modular blocks, and crushed granite. These materials, especially modular paving blocks, are widely available and a well established method to reduce stormwater runoff.

### *Building Siding*

Wood siding is commonly used on the exterior of residential construction. This material weathers fairly rapidly and requires repeated painting to prevent rotting. Alternative "new" products for this application include cement-fiber and vinyl. Cement-fiber siding is a masonry product made from Portland cement, sand, and cellulose and will not burn, cup, swell, or shrink.

# Alternative Building Materials

# SD-21

## Pesticide Reduction

A common use of powerful pesticides is for the control of termites. Chlordane was used for many years for this purpose and is now found in urban streams and lakes nationwide. There are a number of physical barriers that can be installed during construction to help reduce the use of pesticides.

Sand barriers for subterranean termites are a physical deterrent because the termites cannot tunnel through it. Sand barriers can be applied in crawl spaces under pier and beam foundations, under slab foundations, and between the foundation and concrete porches, terraces, patios and steps. Other possible locations include under fence posts, underground electrical cables, water and gas lines, telephone and electrical poles, inside hollow tile cells and against retaining walls.

Metal termite shields are physical barriers to termites which prevent them from building invisible tunnels. In reality, metal shields function as a helpful termite detection device, forcing them to build tunnels on the outside of the shields which are easily seen. Metal termite shields also help prevent dampness from wicking to adjoining wood members which can result in rot, thus making the material more attractive to termites and other pests. Metal flashing and metal plates can also be used as a barrier between piers and beams of structures such as decks, which are particularly vulnerable to termite attack.

## ***Redeveloping Existing Installations***

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define “redevelopment” in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of “redevelopment” must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under “designing new installations” above should be followed.

## **Other Resources**

There are no good, independent, comprehensive sources of information on alternative building materials for use in minimizing the impacts of stormwater runoff. Most websites or other references to “green” or “alternative” building materials focus on indoor applications, such as formaldehyde free plywood and low VOC paints, carpets, and pads. Some supplemental information on alternative materials is available from the manufacturers.

Fires are a source of concern in many areas of California. Information on the flammability of alternative decking materials is available from the University of California Forest Product Laboratory (UCFPL) website at: <http://www.ucfpl.ucop.edu/WDeckIntro.htm>

# Bioretention

# TC-32

## Description

The bioretention best management practice (BMP) functions as a soil and plant-based filtration device that removes pollutants through a variety of physical, biological, and chemical treatment processes. These facilities normally consist of a grass buffer strip, sand bed, ponding area, organic layer or mulch layer, planting soil, and plants. The runoff's velocity is reduced by passing over or through buffer strip and subsequently distributed evenly along a ponding area. Exfiltration of the stored water in the bioretention area planting soil into the underlying soils occurs over a period of days.

## California Experience

None documented. Bioretention has been used as a stormwater BMP since 1992. In addition to Prince George's County, MD and Alexandria, VA, bioretention has been used successfully at urban and suburban areas in Montgomery County, MD; Baltimore County, MD; Chesterfield County, VA; Prince William County, VA; Smith Mountain Lake State Park, VA; and Cary, NC.

## Advantages

- Bioretention provides stormwater treatment that enhances the quality of downstream water bodies by temporarily storing runoff in the BMP and releasing it over a period of four days to the receiving water (EPA, 1999).
- The vegetation provides shade and wind breaks, absorbs noise, and improves an area's landscape.

## Limitations

- The bioretention BMP is not recommended for areas with slopes greater than 20% or where mature tree removal would

## Design Considerations

- Soil for Infiltration
- Tributary Area
- Slope
- Aesthetics
- Environmental Side-effects

- ▲ Medium

## TC-32

## Bioretention

be required since clogging may result, particularly if the BMP receives runoff with high sediment loads (EPA, 1999).

- Bioretention is not a suitable BMP at locations where the water table is within 6 feet of the ground surface and where the surrounding soil stratum is unstable.
- By design, bioretention BMPs have the potential to create very attractive habitats for mosquitoes and other vectors because of highly organic, often heavily vegetated areas mixed with shallow water.
- In cold climates the soil may freeze, preventing runoff from infiltrating into the planting soil.

### Design and Sizing Guidelines

- The bioretention area should be sized to capture the design storm runoff.
- In areas where the native soil permeability is less than 0.5 in/hr an underdrain should be provided.
- Recommended minimum dimensions are 15 feet by 40 feet, although the preferred width is 25 feet. Excavated depth should be 4 feet.
- Area should drain completely within 72 hours.
- Approximately 1 tree or shrub per 50 ft<sup>2</sup> of bioretention area should be included.
- Cover area with about 3 inches of mulch.

### Construction/Inspection Considerations

Bioretention area should not be established until contributing watershed is stabilized.

### Performance

Bioretention removes stormwater pollutants through physical and biological processes, including adsorption, filtration, plant uptake, microbial activity, decomposition, sedimentation and volatilization (EPA, 1999). Adsorption is the process whereby particulate pollutants attach to soil (e.g., clay) or vegetation surfaces. Adequate contact time between the surface and pollutant must be provided for in the design of the system for this removal process to occur. Thus, the infiltration rate of the soils must not exceed those specified in the design criteria or pollutant removal may decrease. Pollutants removed by adsorption include metals, phosphorus, and hydrocarbons. Filtration occurs as runoff passes through the bioretention area media, such as the sand bed, ground cover, and planting soil.

Common particulates removed from stormwater include particulate organic matter, phosphorus, and suspended solids. Biological processes that occur in wetlands result in pollutant uptake by plants and microorganisms in the soil. Plant growth is sustained by the uptake of nutrients from the soils, with woody plants locking up these nutrients through the seasons. Microbial activity within the soil also contributes to the removal of nitrogen and organic matter. Nitrogen is removed by nitrifying and denitrifying bacteria, while aerobic bacteria are responsible for the decomposition of the organic matter. Microbial processes require oxygen and can result in depleted oxygen levels if the bioretention area is not adequately

# Bioretention

# TC-32

aerated. Sedimentation occurs in the swale or ponding area as the velocity slows and solids fall out of suspension.

The removal effectiveness of bioretention has been studied during field and laboratory studies conducted by the University of Maryland (Davis et al, 1998). During these experiments, synthetic stormwater runoff was pumped through several laboratory and field bioretention areas to simulate typical storm events in Prince George's County, MD. Removal rates for heavy metals and nutrients are shown in Table 1.

Pollutant	Removal Rate
Total Phosphorus	70-83%
Metals (Cu, Zn, Pb)	93-98%
TKN	68-80%
Total Suspended Solids	90%
Organics	90%
Bacteria	90%

Results for both the laboratory and field experiments were similar for each of the pollutants analyzed. Doubling or halving the influent pollutant levels had little effect on the effluent pollutants concentrations (Davis et al, 1998).

The microbial activity and plant uptake occurring in the bioretention area will likely result in higher removal rates than those determined for infiltration BMPs.

## Siting Criteria

Bioretention BMPs are generally used to treat stormwater from impervious surfaces at commercial, residential, and industrial areas (EPA, 1999). Implementation of bioretention for stormwater management is ideal for median strips, parking lot islands, and swales. Moreover, the runoff in these areas can be designed to either divert directly into the bioretention area or convey into the bioretention area by a curb and gutter collection system.

The best location for bioretention areas is upland from inlets that receive sheet flow from graded areas and at areas that will be excavated (EPA, 1999). In order to maximize treatment effectiveness, the site must be graded in such a way that minimizes erosive conditions as sheet flow is conveyed to the treatment area. Locations where a bioretention area can be readily incorporated into the site plan without further environmental damage are preferred. Furthermore, to effectively minimize sediment loading in the treatment area, bioretention only should be used in stabilized drainage areas.

## TC-32

## Bioretention

### Additional Design Guidelines

The layout of the bioretention area is determined after site constraints such as location of utilities, underlying soils, existing vegetation, and drainage are considered (EPA, 1999). Sites with loamy sand soils are especially appropriate for bioretention because the excavated soil can be backfilled and used as the planting soil, thus eliminating the cost of importing planting soil.

The use of bioretention may not be feasible given an unstable surrounding soil stratum, soils with clay content greater than 25 percent, a site with slopes greater than 20 percent, and/or a site with mature trees that would be removed during construction of the BMP.

Bioretention can be designed to be off-line or on-line of the existing drainage system (EPA, 1999). The drainage area for a bioretention area should be between 0.1 and 0.4 hectares (0.25 and 1.0 acres). Larger drainage areas may require multiple bioretention areas. Furthermore, the maximum drainage area for a bioretention area is determined by the expected rainfall intensity and runoff rate. Stabilized areas may erode when velocities are greater than 5 feet per second (1.5 meter per second). The designer should determine the potential for erosive conditions at the site.

The size of the bioretention area, which is a function of the drainage area and the runoff generated from the area is sized to capture the water quality volume.

The recommended minimum dimensions of the bioretention area are 15 feet (4.6 meters) wide by 40 feet (12.2 meters) long, where the minimum width allows enough space for a dense, randomly-distributed area of trees and shrubs to become established. Thus replicating a natural forest and creating a microclimate, thereby enabling the bioretention area to tolerate the effects of heat stress, acid rain, runoff pollutants, and insect and disease infestations which landscaped areas in urban settings typically are unable to tolerate. The preferred width is 25 feet (7.6 meters), with a length of twice the width. Essentially, any facilities wider than 20 feet (6.1 meters) should be twice as long as they are wide, which promotes the distribution of flow and decreases the chances of concentrated flow.

In order to provide adequate storage and prevent water from standing for excessive periods of time the ponding depth of the bioretention area should not exceed 6 inches (15 centimeters). Water should not be left to stand for more than 72 hours. A restriction on the type of plants that can be used may be necessary due to some plants' water intolerance. Furthermore, if water is left standing for longer than 72 hours mosquitoes and other insects may start to breed.

The appropriate planting soil should be backfilled into the excavated bioretention area. Planting soils should be sandy loam, loamy sand, or loam texture with a clay content ranging from 10 to 25 percent.

Generally the soil should have infiltration rates greater than 0.5 inches (1.25 centimeters) per hour, which is typical of sandy loams, loamy sands, or loams. The pH of the soil should range between 5.5 and 6.5, where pollutants such as organic nitrogen and phosphorus can be adsorbed by the soil and microbial activity can flourish. Additional requirements for the planting soil include a 1.5 to 3 percent organic content and a maximum 500 ppm concentration of soluble salts.

# Bioretention

# TC-32

Soil tests should be performed for every 500 cubic yards (382 cubic meters) of planting soil, with the exception of pH and organic content tests, which are required only once per bioretention area (EPA, 1999). Planting soil should be 4 inches (10.1 centimeters) deeper than the bottom of the largest root ball and 4 feet (1.2 meters) altogether. This depth will provide adequate soil for the plants' root systems to become established, prevent plant damage due to severe wind, and provide adequate moisture capacity. Most sites will require excavation in order to obtain the recommended depth.

Planting soil depths of greater than 4 feet (1.2 meters) may require additional construction practices such as shoring measures (EPA, 1999). Planting soil should be placed in 18 inches or greater lifts and lightly compacted until the desired depth is reached. Since high canopy trees may be destroyed during maintenance the bioretention area should be vegetated to resemble a terrestrial forest community ecosystem that is dominated by understory trees. Three species each of both trees and shrubs are recommended to be planted at a rate of 2500 trees and shrubs per hectare (1000 per acre). For instance, a 15 foot (4.6 meter) by 40 foot (12.2 meter) bioretention area (600 square feet or 55.75 square meters) would require 14 trees and shrubs. The shrub-to-tree ratio should be 2:1 to 3:1.

Trees and shrubs should be planted when conditions are favorable. Vegetation should be watered at the end of each day for fourteen days following its planting. Plant species tolerant of pollutant loads and varying wet and dry conditions should be used in the bioretention area.

The designer should assess aesthetics, site layout, and maintenance requirements when selecting plant species. Adjacent non-native invasive species should be identified and the designer should take measures, such as providing a soil breach to eliminate the threat of these species invading the bioretention area. Regional landscaping manuals should be consulted to ensure that the planting of the bioretention area meets the landscaping requirements established by the local authorities. The designers should evaluate the best placement of vegetation within the bioretention area. Plants should be placed at irregular intervals to replicate a natural forest. Trees should be placed on the perimeter of the area to provide shade and shelter from the wind. Trees and shrubs can be sheltered from damaging flows if they are placed away from the path of the incoming runoff. In cold climates, species that are more tolerant to cold winds, such as evergreens, should be placed in windier areas of the site.

Following placement of the trees and shrubs, the ground cover and/or mulch should be established. Ground cover such as grasses or legumes can be planted at the beginning of the growing season. Mulch should be placed immediately after trees and shrubs are planted. Two to 3 inches (5 to 7.6 cm) of commercially-available fine shredded hardwood mulch or shredded hardwood chips should be applied to the bioretention area to protect from erosion.

## Maintenance

The primary maintenance requirement for bioretention areas is that of inspection and repair or replacement of the treatment area's components. Generally, this involves nothing more than the routine periodic maintenance that is required of any landscaped area. Plants that are appropriate for the site, climatic, and watering conditions should be selected for use in the bioretention cell. Appropriately selected plants will aide in reducing fertilizer, pesticide, water, and overall maintenance requirements. Bioretention system components should blend over time through plant and root growth, organic decomposition, and the development of a natural

soil horizon. These biologic and physical processes over time will lengthen the facility's life span and reduce the need for extensive maintenance.

Routine maintenance should include a biannual health evaluation of the trees and shrubs and subsequent removal of any dead or diseased vegetation (EPA, 1999). Diseased vegetation should be treated as needed using preventative and low-toxic measures to the extent possible. BMPs have the potential to create very attractive habitats for mosquitoes and other vectors because of highly organic, often heavily vegetated areas mixed with shallow water. Routine inspections for areas of standing water within the BMP and corrective measures to restore proper infiltration rates are necessary to prevent creating mosquito and other vector habitat. In addition, bioretention BMPs are susceptible to invasion by aggressive plant species such as cattails, which increase the chances of water standing and subsequent vector production if not routinely maintained.

In order to maintain the treatment area's appearance it may be necessary to prune and weed. Furthermore, mulch replacement is suggested when erosion is evident or when the site begins to look unattractive. Specifically, the entire area may require mulch replacement every two to three years, although spot mulching may be sufficient when there are random void areas. Mulch replacement should be done prior to the start of the wet season.

New Jersey's Department of Environmental Protection states in their bioretention systems standards that accumulated sediment and debris removal (especially at the inflow point) will normally be the primary maintenance function. Other potential tasks include replacement of dead vegetation, soil pH regulation, erosion repair at inflow points, mulch replenishment, unclogging the underdrain, and repairing overflow structures. There is also the possibility that the cation exchange capacity of the soils in the cell will be significantly reduced over time. Depending on pollutant loads, soils may need to be replaced within 5-10 years of construction (LID, 2000).

## Cost

### **Construction Cost**

Construction cost estimates for a bioretention area are slightly greater than those for the required landscaping for a new development (EPA, 1999). A general rule of thumb (Coffman, 1999) is that residential bioretention areas average about \$3 to \$4 per square foot, depending on soil conditions and the density and types of plants used. Commercial, industrial and institutional site costs can range between \$10 to \$40 per square foot, based on the need for control structures, curbing, storm drains and underdrains.

Retrofitting a site typically costs more, averaging \$6,500 per bioretention area. The higher costs are attributed to the demolition of existing concrete, asphalt, and existing structures and the replacement of fill material with planting soil. The costs of retrofitting a commercial site in Maryland, Kettering Development, with 15 bioretention areas were estimated at \$111,600.

In any bioretention area design, the cost of plants varies substantially and can account for a significant portion of the expenditures. While these cost estimates are slightly greater than those of typical landscaping treatment (due to the increased number of plantings, additional soil excavation, backfill material, use of underdrains etc.), those landscaping expenses that would be required regardless of the bioretention installation should be subtracted when determining the net cost.

# Bioretention

# TC-32

Perhaps of most importance, however, the cost savings compared to the use of traditional structural stormwater conveyance systems makes bioretention areas quite attractive financially. For example, the use of bioretention can decrease the cost required for constructing stormwater conveyance systems at a site. A medical office building in Maryland was able to reduce the amount of storm drain pipe that was needed from 800 to 230 feet - a cost savings of \$24,000 (PGDER, 1993). And a new residential development spent a total of approximately \$100,000 using bioretention cells on each lot instead of nearly \$400,000 for the traditional stormwater ponds that were originally planned (Rappahanock, ). Also, in residential areas, stormwater management controls become a part of each property owner's landscape, reducing the public burden to maintain large centralized facilities.

## **Maintenance Cost**

The operation and maintenance costs for a bioretention facility will be comparable to those of typical landscaping required for a site. Costs beyond the normal landscaping fees will include the cost for testing the soils and may include costs for a sand bed and planting soil.

# Outdoor Loading/Unloading

# SC-30

## Description

The loading/unloading of materials usually takes place outside on docks or terminals; therefore, materials spilled, leaked, or lost during loading/unloading may collect in the soil or on other surfaces and have the potential to be carried away by stormwater runoff or when the area is cleaned. Additionally, rainfall may wash pollutants from machinery used to unload or move materials. Implementation of the following protocols will prevent or reduce the discharge of pollutants to stormwater from outdoor loading/unloading of materials.

## Approach

Reduce potential for pollutant discharge through source control pollution prevention and BMP implementation. Successful implementation depends on effective training of employees on applicable BMPs and general pollution prevention strategies and objectives.

## Pollution Prevention

- Keep accurate maintenance logs to evaluate materials removed and improvements made.
- Park tank trucks or delivery vehicles in designated areas so that spills or leaks can be contained.
- Limit exposure of material to rainfall whenever possible.
- Prevent stormwater run-on.
- Check equipment regularly for leaks.

## Objectives

- Cover
- Contain
- Educate
- Reduce/Minimize
- Product Substitution

## Targeted Constituents

Sediment	✓
Nutrients	✓
Trash	
Metals	✓
Bacteria	
Oil and Grease	✓
Organics	✓

**SC-30****Outdoor Loading/Unloading*****Suggested Protocols******Loading and Unloading – General Guidelines***

- Develop an operations plan that describes procedures for loading and/or unloading.
- Conduct loading and unloading in dry weather if possible.
- Cover designated loading/unloading areas to reduce exposure of materials to rain.
- Consider placing a seal or door skirt between delivery vehicles and building to prevent exposure to rain.
- Design loading/unloading area to prevent stormwater run-on, which would include grading or berming the area, and position roof downspouts so they direct stormwater away from the loading/unloading areas.
- Have employees load and unload all materials and equipment in covered areas such as building overhangs at loading docks if feasible.
- Load/unload only at designated loading areas.
- Use drip pans underneath hose and pipe connections and other leak-prone spots during liquid transfer operations, and when making and breaking connections. Several drip pans should be stored in a covered location near the liquid transfer area so that they are always available, yet protected from precipitation when not in use. Drip pans can be made specifically for railroad tracks. Drip pans must be cleaned periodically, and drip collected materials must be disposed of properly.
- Pave loading areas with concrete instead of asphalt.
- Avoid placing storm drains in the area.
- Grade and/or berm the loading/unloading area to a drain that is connected to a deadend.

***Inspection***

- Check loading and unloading equipment regularly for leaks, including valves, pumps, flanges and connections.
- Look for dust or fumes during loading or unloading operations.

***Training***

- Train employees (e.g., fork lift operators) and contractors on proper spill containment and cleanup.
- Have employees trained in spill containment and cleanup present during loading/unloading.
- Train employees in proper handling techniques during liquid transfers to avoid spills.
- Make sure forklift operators are properly trained on loading and unloading procedures.

# Outdoor Loading/Unloading

# SC-30

## ***Spill Response and Prevention***

- Keep your Spill Prevention Control and Countermeasure (SPCC) Plan up-to-date.
- Contain leaks during transfer.
- Store and maintain appropriate spill cleanup materials in a location that is readily accessible and known to all and ensure that employees are familiar with the site's spill control plan and proper spill cleanup procedures.
- Have an emergency spill cleanup plan readily available.
- Use drip pans or comparable devices when transferring oils, solvents, and paints.

## ***Other Considerations (Limitations and Regulations)***

- Space and time limitations may preclude all transfers from being performed indoors or under cover.
- It may not be possible to conduct transfers only during dry weather.

## **Requirements**

### ***Costs***

Costs should be low except when covering a large loading/unloading area.

### ***Maintenance***

- Conduct regular inspections and make repairs as necessary. The frequency of repairs will depend on the age of the facility.
- Check loading and unloading equipment regularly for leaks.
- Conduct regular broom dry-sweeping of area.

## **Supplemental Information**

### ***Further Detail of the BMP***

#### ***Special Circumstances for Indoor Loading/Unloading of Materials***

Loading or unloading of liquids should occur in the manufacturing building so that any spills that are not completely retained can be discharged to the sanitary sewer, treatment plant, or treated in a manner consistent with local sewer authorities and permit requirements.

- For loading and unloading tank trucks to above and below ground storage tanks, the following procedures should be used:
  - The area where the transfer takes place should be paved. If the liquid is reactive with the asphalt, Portland cement should be used to pave the area.
  - The transfer area should be designed to prevent run-on of stormwater from adjacent areas. Sloping the pad and using a curb, like a speed bump, around the uphill side of the transfer area should reduce run-on.

## SC-30 Outdoor Loading/Unloading

- The transfer area should be designed to prevent runoff of spilled liquids from the area. Sloping the area to a drain should prevent runoff. The drain should be connected to a dead-end sump or to the sanitary sewer. A positive control valve should be installed on the drain.
- For transfer from rail cars to storage tanks that must occur outside, use the following procedures:
  - Drip pans should be placed at locations where spillage may occur, such as hose connections, hose reels, and filler nozzles. Use drip pans when making and breaking connections.
  - Drip pan systems should be installed between the rails to collect spillage from tank cars.

# Parking/Storage Area Maintenance SC-43

## Description

Parking lots and storage areas can contribute a number of substances, such as trash, suspended solids, hydrocarbons, oil and grease, and heavy metals that can enter receiving waters through stormwater runoff or non-stormwater discharges. The protocols in this fact sheet are intended to prevent or reduce the discharge of pollutants from parking/storage areas and include using good housekeeping practices, following appropriate cleaning BMPs, and training employees.

## Approach

The goal of this program is to ensure stormwater pollution prevention practices are considered when conducting activities on or around parking areas and storage areas to reduce potential for pollutant discharge to receiving waters. Successful implementation depends on effective training of employees on applicable BMPs and general pollution prevention strategies and objectives.

## Pollution Prevention

- Encourage alternative designs and maintenance strategies for impervious parking lots. (See New Development and Redevelopment BMP Handbook)
- Keep accurate maintenance logs to evaluate BMP implementation.

## Objectives

- Cover
- Contain
- Educate
- Reduce/Minimize
- Product Substitution

## Targeted Constituents

Sediment	✓
Nutrients	
Trash	✓
Metals	✓
Bacteria	
Oil and Grease	✓
Organics	✓

# **SC-43 Parking/Storage Area Maintenance**

## ***Suggested Protocols***

### ***General***

- Keep the parking and storage areas clean and orderly. Remove debris in a timely fashion.
- Allow sheet runoff to flow into biofilters (vegetated strip and swale) and/or infiltration devices.
- Utilize sand filters or oleophilic collectors for oily waste in low quantities.
- Arrange rooftop drains to prevent drainage directly onto paved surfaces.
- Design lot to include semi-permeable hardscape.
- Discharge soapy water remaining in mop or wash buckets to the sanitary sewer through a sink, toilet, clean-out, or wash area with drain.

### ***Controlling Litter***

- Post "No Littering" signs and enforce anti-litter laws.
- Provide an adequate number of litter receptacles.
- Clean out and cover litter receptacles frequently to prevent spillage.
- Provide trash receptacles in parking lots to discourage litter.
- Routinely sweep, shovel, and dispose of litter in the trash.

### ***Surface Cleaning***

- Use dry cleaning methods (e.g., sweeping, vacuuming) to prevent the discharge of pollutants into the stormwater conveyance system if possible.
- Establish frequency of public parking lot sweeping based on usage and field observations of waste accumulation.
- Sweep all parking lots at least once before the onset of the wet season.
- Follow the procedures below if water is used to clean surfaces:
  - Block the storm drain or contain runoff.
  - Collect and pump wash water to the sanitary sewer or discharge to a pervious surface. Do not allow wash water to enter storm drains.
  - Dispose of parking lot sweeping debris and dirt at a landfill.
- Follow the procedures below when cleaning heavy oily deposits:
  - Clean oily spots with absorbent materials.
  - Use a screen or filter fabric over inlet, then wash surfaces.

## **Parking/Storage Area Maintenance SC-43**

- Do not allow discharges to the storm drain.
- Vacuum/pump discharges to a tank or discharge to sanitary sewer.
- Appropriately dispose of spilled materials and absorbents.

### ***Surface Repair***

- Preheat, transfer or load hot bituminous material away from storm drain inlets.
- Apply concrete, asphalt, and seal coat during dry weather to prevent contamination from contacting stormwater runoff.
- Cover and seal nearby storm drain inlets where applicable (with waterproof material or mesh) and manholes before applying seal coat, slurry seal, etc. Leave covers in place until job is complete and all water from emulsified oil sealants has drained or evaporated. Clean any debris from these covered manholes and drains for proper disposal.
- Use only as much water as necessary for dust control, to avoid runoff.
- Catch drips from paving equipment that is not in use with pans or absorbent material placed under the machines. Dispose of collected material and absorbents properly.

### ***Inspection***

- Have designated personnel conduct inspections of parking facilities and stormwater conveyance systems associated with parking facilities on a regular basis.
- Inspect cleaning equipment/sweepers for leaks on a regular basis.

### ***Training***

- Provide regular training to field employees and/or contractors regarding cleaning of paved areas and proper operation of equipment.
- Train employees and contractors in proper techniques for spill containment and cleanup.

### ***Spill Response and Prevention***

- Keep your Spill Prevention Control and Countermeasure (SPCC) Plan up-to-date.
- Place a stockpile of spill cleanup materials where it will be readily accessible or at a central location.
- Clean up fluid spills immediately with absorbent rags or material.
- Dispose of spilled material and absorbents properly.

### ***Other Considerations***

Limitations related to sweeping activities at large parking facilities may include high equipment costs, the need for sweeper operator training, and the inability of current sweeper technology to remove oil and grease.

# **SC-43 Parking/Storage Area Maintenance**

## **Requirements**

### **Costs**

Cleaning/sweeping costs can be quite large. Construction and maintenance of stormwater structural controls can be quite expensive as well.

### **Maintenance**

- Sweep parking lot regularly to minimize cleaning with water.
- Clean out oil/water/sand separators regularly, especially after heavy storms.
- Clean parking facilities regularly to prevent accumulated wastes and pollutants from being discharged into conveyance systems during rainy conditions.

## **Supplemental Information**

### **Further Detail of the BMP**

#### **Surface Repair**

Apply concrete, asphalt, and seal coat during dry weather to prevent contamination from contacting stormwater runoff. Where applicable, cover and seal nearby storm drain inlets (with waterproof material or mesh) and manholes before applying seal coat, slurry seal, etc. Leave covers in place until job is complete and all water from emulsified oil sealants has drained or evaporated. Clean any debris from these covered manholes and drains for proper disposal. Only use only as much water as is necessary for dust control to avoid runoff.

# Drainage System Maintenance

## SC-44

### Objectives

- Cover
- Contain
- Educate
- Reduce/Minimize

### Description

As a consequence of its function, the stormwater conveyance system collects and transports urban runoff and stormwater that may contain certain pollutants. The protocols in this fact sheet are intended to reduce pollutants reaching receiving waters through proper conveyance system operation and maintenance.

### Approach

#### *Pollution Prevention*

Maintain catch basins, stormwater inlets, and other stormwater conveyance structures on a regular basis to remove pollutants, reduce high pollutant concentrations during the first flush of storms, prevent clogging of the downstream conveyance system, restore catch basins' sediment trapping capacity, and ensure the system functions properly hydraulically to avoid flooding.

#### *Suggested Protocols*

##### *Catch Basins/Inlet Structures*

- Staff should regularly inspect facilities to ensure compliance with the following:
  - Immediate repair of any deterioration threatening structural integrity.
  - Cleaning before the sump is 40% full. Catch basins should be cleaned as frequently as needed to meet this standard.
  - Stenciling of catch basins and inlets (see SC34 Waste Handling and Disposal).

### Targeted Constituents

Sediment	✓
Nutrients	
Trash	✓
Metals	
Bacteria	✓
Oil and Grease	
Organics	

# SC-44      Drainage System Maintenance

- Clean catch basins, storm drain inlets, and other conveyance structures before the wet season to remove sediments and debris accumulated during the summer.
- Conduct inspections more frequently during the wet season for problem areas where sediment or trash accumulates more often. Clean and repair as needed.
- Keep accurate logs of the number of catch basins cleaned.
- Store wastes collected from cleaning activities of the drainage system in appropriate containers or temporary storage sites in a manner that prevents discharge to the storm drain.
- Dewater the wastes if necessary with outflow into the sanitary sewer if permitted. Water should be treated with an appropriate filtering device prior to discharge to the sanitary sewer. If discharge to the sanitary sewer is not allowed, water should be pumped or vacuumed to a tank and properly disposed. Do not dewater near a storm drain or stream.

## *Storm Drain Conveyance System*

- Locate reaches of storm drain with deposit problems and develop a flushing schedule that keeps the pipe clear of excessive buildup.
- Collect and pump flushed effluent to the sanitary sewer for treatment whenever possible.

## *Pump Stations*

- Clean all storm drain pump stations prior to the wet season to remove silt and trash.
- Do not allow discharge to reach the storm drain system when cleaning a storm drain pump station or other facility.
- Conduct routine maintenance at each pump station.
- Inspect, clean, and repair as necessary all outlet structures prior to the wet season.

## *Open Channel*

- Modify storm channel characteristics to improve channel hydraulics, increase pollutant removals, and enhance channel/creek aesthetic and habitat value.
- Conduct channel modification/improvement in accordance with existing laws. Any person, government agency, or public utility proposing an activity that will change the natural (emphasis added) state of any river, stream, or lake in California, must enter into a Stream or Lake Alteration Agreement with the Department of Fish and Game. The developer-applicant should also contact local governments (city, county, special districts), other state agencies (SWRCB, RWQCB, Department of Forestry, Department of Water Resources), and Federal Corps of Engineers and USFWS.

## *Illicit Connections and Discharges*

- Look for evidence of illegal discharges or illicit connections during routine maintenance of conveyance system and drainage structures:
  - Is there evidence of spills such as paints, discoloring, etc?

# Drainage System Maintenance

## SC-44

- Are there any odors associated with the drainage system?
- Record locations of apparent illegal discharges/illicit connections?
- Track flows back to potential dischargers and conduct aboveground inspections. This can be done through visual inspection of upgradient manholes or alternate techniques including zinc chloride smoke testing, fluorometric dye testing, physical inspection testing, or television camera inspection.
- Eliminate the discharge once the origin of flow is established.
- Stencil or demarcate storm drains, where applicable, to prevent illegal disposal of pollutants. Storm drain inlets should have messages such as “Dump No Waste Drains to Stream” stenciled next to them to warn against ignorant or intentional dumping of pollutants into the storm drainage system.
- Refer to fact sheet SC-10 Non-Stormwater Discharges.

### *Illegal Dumping*

- Inspect and clean up hot spots and other storm drainage areas regularly where illegal dumping and disposal occurs.
- Establish a system for tracking incidents. The system should be designed to identify the following:
  - Illegal dumping hot spots
  - Types and quantities (in some cases) of wastes
  - Patterns in time of occurrence (time of day/night, month, or year)
  - Mode of dumping (abandoned containers, “midnight dumping” from moving vehicles, direct dumping of materials, accidents/spills)
  - Responsible parties
- Post “No Dumping” signs in problem areas with a phone number for reporting dumping and disposal. Signs should also indicate fines and penalties for illegal dumping.
- Refer to fact sheet SC-10 Non-Stormwater Discharges.

### *Training*

- Train crews in proper maintenance activities, including record keeping and disposal.
- Allow only properly trained individuals to handle hazardous materials/wastes.
- Have staff involved in detection and removal of illicit connections trained in the following:
  - OSHA-required Health and Safety Training (29 CFR 1910.120) plus annual refresher training (as needed).

# SC-44      Drainage System Maintenance

- OSHA Confined Space Entry training (Cal-OSHA Confined Space, Title 8 and Federal OSHA 29 CFR 1910.146).
- Procedural training (field screening, sampling, smoke/dye testing, TV inspection).

## ***Spill Response and Prevention***

- Investigate all reports of spills, leaks, and/or illegal dumping promptly.
- Clean up all spills and leaks using “dry” methods (with absorbent materials and/or rags) or dig up, remove, and properly dispose of contaminated soil.
- Refer to fact sheet SC-11 Spill Prevention, Control, and Cleanup.

## ***Other Considerations (Limitations and Regulations)***

- Clean-up activities may create a slight disturbance for local aquatic species. Access to items and material on private property may be limited. Trade-offs may exist between channel hydraulics and water quality/riparian habitat. If storm channels or basins are recognized as wetlands, many activities, including maintenance, may be subject to regulation and permitting.
- Storm drain flushing is most effective in small diameter pipes (36-inch diameter pipe or less, depending on water supply and sediment collection capacity). Other considerations associated with storm drain flushing may include the availability of a water source, finding a downstream area to collect sediments, liquid/sediment disposal, and prohibition against disposal of flushed effluent to sanitary sewer in some areas.
- Regulations may include adoption of substantial penalties for illegal dumping and disposal.
- Local municipal codes may include sections prohibiting discharge of soil, debris, refuse, hazardous wastes, and other pollutants into the storm drain system.

## **Requirements**

### ***Costs***

- An aggressive catch basin cleaning program could require a significant capital and O&M budget.
- The elimination of illegal dumping is dependent on the availability, convenience, and cost of alternative means of disposal. The primary cost is for staff time. Cost depends on how aggressively a program is implemented. Other cost considerations for an illegal dumping program include:
  - Purchase and installation of signs.
  - Rental of vehicle(s) to haul illegally-disposed items and material to landfills.
  - Rental of heavy equipment to remove larger items (e.g., car bodies) from channels.
  - Purchase of landfill space to dispose of illegally-dumped items and material.

# Drainage System Maintenance

# SC-44

- Methods used for illicit connection detection (smoke testing, dye testing, visual inspection, and flow monitoring) can be costly and time-consuming. Site-specific factors, such as the level of impervious area, the density and ages of buildings, and type of land use will determine the level of investigation necessary.

## ***Maintenance***

- Two-person teams may be required to clean catch basins with vector trucks.
- Teams of at least two people plus administrative personnel are required to identify illicit discharges, depending on the complexity of the storm sewer system.
- Arrangements must be made for proper disposal of collected wastes.
- Technical staff are required to detect and investigate illegal dumping violations.

## **Supplemental Information**

### ***Further Detail of the BMP***

#### ***Storm Drain Flushing***

Flushing is a common maintenance activity used to improve pipe hydraulics and to remove pollutants in storm drainage systems. Flushing may be designed to hydraulically convey accumulated material to strategic locations, such as an open channel, another point where flushing will be initiated, or the sanitary sewer and the treatment facilities, thus preventing resuspension and overflow of a portion of the solids during storm events. Flushing prevents “plug flow” discharges of concentrated pollutant loadings and sediments. Deposits can hinder the designed conveyance capacity of the storm drain system and potentially cause backwater conditions in severe cases of clogging.

Storm drain flushing usually takes place along segments of pipe with grades that are too flat to maintain adequate velocity to keep particles in suspension. An upstream manhole is selected to place an inflatable device that temporarily plugs the pipe. Further upstream, water is pumped into the line to create a flushing wave. When the upstream reach of pipe is sufficiently full to cause a flushing wave, the inflated device is rapidly deflated with the assistance of a vacuum pump, thereby releasing the backed up water and resulting in the cleaning of the storm drain segment.

To further reduce impacts of stormwater pollution, a second inflatable device placed well downstream may be used to recollect the water after the force of the flushing wave has dissipated. A pump may then be used to transfer the water and accumulated material to the sanitary sewer for treatment. In some cases, an interceptor structure may be more practical or required to recollect the flushed waters.

It has been found that cleansing efficiency of periodic flush waves is dependent upon flush volume, flush discharge rate, sewer slope, sewer length, sewer flow rate, sewer diameter, and population density. As a rule of thumb, the length of line to be flushed should not exceed 700 feet. At this maximum recommended length, the percent removal efficiency ranges between 65-75% for organics and 55-65% for dry weather grit/inorganic material. The percent removal efficiency drops rapidly beyond that. Water is commonly supplied by a water truck, but fire hydrants can also supply water. To make the best use of water, it is recommended that reclaimed water be used or that fire hydrant line flushing coincide with storm sewer flushing.

## EXECUTIVE SUMMARY

Urban Crossroads, Inc. has prepared this noise study to determine the potential noise impacts and the necessary noise mitigation measures, if any, for the proposed Compass Danbe Centerpointe development (“Project”). The Project site is located south of Alessandro Boulevard on either side of Chagall Court in the City of Moreno Valley. The Project is proposed to consist of up to 396,488 square feet (sf) of warehouse use. The site is currently designated as Commercial in the City’s General Plan, which would require a land use and zoning change to Light Industrial use.

The results of this Compass Danbe Centerpointe Noise Impact Analysis are summarized below based on the significance criteria in Section 4 of this report consistent with Appendix G of the California Environmental Quality Act (CEQA) Guidelines (1). Table ES-1 shows the findings of significance for each potential noise and/or vibration impact under CEQA. All impacts are considered less than significant without mitigation.

**TABLE ES-1: SUMMARY OF CEQA SIGNIFICANCE FINDINGS**

Analysis	Report Section	Significance Findings	
		Unmitigated	Mitigated
Off-Site Traffic Noise	7	<i>Less Than Significant</i>	-
Operational Noise	9	<i>Less Than Significant</i>	-
Construction Noise	10	<i>Less Than Significant</i>	-
Construction Vibration		<i>Less Than Significant</i>	-
Nighttime Concrete Pour		<i>Less Than Significant</i>	-

# 1 INTRODUCTION

This noise analysis has been completed to determine the noise impacts associated with the development of the proposed Compass Danbe Centerpointe (“Project”). This noise study briefly describes the proposed Project, provides information regarding noise fundamentals, sets out the local regulatory setting, presents the study methods and procedures for transportation related CNEL traffic noise analysis, and evaluates the future exterior noise environment. In addition, this study includes an analysis of the potential Project-related long-term stationary-source operational noise and short-term construction noise and vibration impacts.

## 1.1 SITE LOCATION

The proposed project is located south of Alessandro Boulevard on either side of Chagall Court in the City of Moreno Valley as shown on Exhibit 1-A. The March Air Reserve Base/Inland Port Airport (MARB/IPA) is located approximately 0.9 miles south of the Project site. The Project site is bordered to the west by vacant land, to the east by vacant land, to the north by commercial and residential uses, and to the south are existing industrial buildings.

This proposed Project includes a General Plan Amendment (GPA) and a Zone Change (ZC). The site is currently designated as Commercial in the City’s General Plan, which would require a land use and zoning change to Light Industrial use. The proposed changes are consistent with the zones to the west, south and east of the subject site and adjacent properties. The amendment is in keeping with the uses surrounding the project site.

## 1.2 PROJECT DESCRIPTION

Exhibit 1-B illustrates a preliminary site plan for the Project. The Project is anticipated to be developed within a single phase with an anticipated opening year of 2022. The proposed Project consists of the following uses:

- Building 1: 206,665 square feet (sf) of warehousing (70% of total building sf) and 88,571 sf of high-cube cold storage warehouse use (30% of total building sf) for a total of 295,236 sf for Building 1
- Building 2: 70,876 sf of warehousing (70% of total building sf) and 30,376 sf of high-cube cold storage warehouse use (30% of total building sf) for a total of 101,252 sf for Building 2

The on-site Project-related noise sources are expected to include: loading dock activity, entry gate & truck movements, roof-top air conditioning units, and trash enclosure activity. This noise analysis is intended to describe noise level impacts associated with the expected typical operational activities at the Project site. This report assumes the Project will operate 24-hours daily for seven days per week. At the time this noise analysis was prepared, the future tenants of the proposed Project were unknown however any tenant would operate consistent with a high-cube warehouse.

## 2 FUNDAMENTALS

Noise is simply defined as "unwanted sound." Sound becomes unwanted when it interferes with normal activities, when it causes actual physical harm or when it has adverse effects on health. Noise is measured on a logarithmic scale of sound pressure level known as a decibel (dB). A-weighted decibels (dBA) approximate the subjective response of the human ear to broad frequency noise source by discriminating against very low and very high frequencies of the audible spectrum. They are adjusted to reflect only those frequencies which are audible to the human ear. Exhibit 2-A presents a summary of the typical noise levels and their subjective loudness and effects that are described in more detail below.

**EXHIBIT 2-A: TYPICAL NOISE LEVELS**

COMMON OUTDOOR ACTIVITIES	COMMON INDOOR ACTIVITIES	A - WEIGHTED SOUND LEVEL dBA	SUBJECTIVE LOUDNESS	EFFECTS OF NOISE
THRESHOLD OF PAIN		140	INTOLERABLE OR DEAFENING	HEARING LOSS
NEAR JET ENGINE		130		
		120		
JET FLY-OVER AT 300m (1000 ft)	ROCK BAND	110		
LOUD AUTO HORN		100	VERY NOISY	SPEECH INTERFERENCE
GAS LAWN MOWER AT 1m (3 ft)		90		
DIESEL TRUCK AT 15m (50 ft), at 80 km/hr (50 mph)	FOOD BLENDER AT 1m (3 ft)	80	LOUD	
NOISY URBAN AREA, DAYTIME	VACUUM CLEANER AT 3m (10 ft)	70		
HEAVY TRAFFIC AT 90m (300 ft)	NORMAL SPEECH AT 1m (3 ft)	60	MODERATE	SLEEP DISTURBANCE
QUIET URBAN DAYTIME	LARGE BUSINESS OFFICE	50		
QUIET URBAN NIGHTTIME	THEATER, LARGE CONFERENCE ROOM (BACKGROUND)	40		
QUIET SUBURBAN NIGHTTIME	LIBRARY	30	FAINT	NO EFFECT
QUIET RURAL NIGHTTIME	BEDROOM AT NIGHT, CONCERT HALL (BACKGROUND)	20		
	BROADCAST/RECORDING STUDIO	10	VERY FAINT	
LOWEST THRESHOLD OF HUMAN HEARING	LOWEST THRESHOLD OF HUMAN HEARING	0		

Source: Environmental Protection Agency Office of Noise Abatement and Control, Information on Levels of Environmental Noise Requisite to Protect Public Health and Welfare with an Adequate Margin of Safety (EPA/ONAC 550/9-74-004) March 1974.

### 2.1 RANGE OF NOISE

Since the range of intensities that the human ear can detect is so large, the scale frequently used to measure intensity is a scale based on multiples of 10, the logarithmic scale. The scale for measuring intensity is the decibel scale. Each interval of 10 decibels indicates a sound energy ten times greater than before, which is perceived by the human ear as being roughly twice as loud (2). The most common sounds vary between 40 dBA (very quiet) to 100 dBA (very loud). Normal conversation at three feet is roughly at 60 dBA, while loud jet engine noises equate to 110 dBA

at approximately 100 feet, which can cause serious discomfort (3). Another important aspect of noise is the duration of the sound and the way it is described and distributed in time.

## 2.2 NOISE DESCRIPTORS

Environmental noise descriptors are generally based on averages, rather than instantaneous, noise levels. The most used figure is the equivalent level ( $L_{eq}$ ). Equivalent sound levels are not measured directly but are calculated from sound pressure levels typically measured in A-weighted decibels (dBA). The equivalent sound level ( $L_{eq}$ ) represents a steady state sound level containing the same total energy as a time varying signal over a given sample period (typically one hour) and is commonly used to describe the “average” noise levels within the environment.

To describe the time-varying character of environmental noise, the City of Moreno Valley relies on the  $L_{25}$ ,  $L_{17}$ ,  $L_8$  and  $L_{max}$ , percentile noise levels to describe the stationary source noise level limits. The percentile noise descriptors are the noise levels equaled or exceeded during 25 percent, 17 percent, and 8 percent of a stated time. Sound levels associated with the  $L_8$  typically describe transient or short-term events, while levels associated with the  $L_{25}$  describe the base or typical noise conditions. The City of Moreno Valley relies on the percentile noise levels to describe the stationary source noise level limits. While the  $L_{25}$  describes the noise levels occurring 25 percent of the time, the  $L_{eq}$  accounts for the total energy (average) observed for the entire hour.

Peak hour or average noise levels, while useful, do not completely describe a given noise environment, however. Noise levels lower than peak hour may be disturbing if they occur during times when quiet is most desirable, namely evening and nighttime (sleeping) hours. To account for this, the Community Noise Equivalent Level (CNEL), representing a composite 24-hour noise level is utilized. The CNEL is the weighted average of the intensity of a sound, with corrections for time of day, and averaged over 24 hours. The time of day corrections require the addition of 5 decibels to dBA  $L_{eq}$  sound levels in the evening from 7:00 p.m. to 10:00 p.m., and the addition of 10 decibels to dBA  $L_{eq}$  sound levels at night between 10:00 p.m. and 7:00 a.m. These additions are made to account for the noise sensitive time periods during the evening and night hours when sound appears louder. CNEL does not represent the actual sound level heard at any time, but rather represents the total sound exposure. The City of Moreno Valley relies on the 24-hour CNEL level to assess land use compatibility with transportation related noise sources.

## 2.3 SOUND PROPAGATION

When sound propagates over a distance, it changes in level and frequency content. Based on guidance from the U.S. Department of Transportation, Federal Highway Administration (FHWA), Office of Environment and Planning, Noise and Air Quality Branch, the way noise reduces with distance depends on the following factors.

### 2.3.1 GEOMETRIC SPREADING

Sound from a localized source (i.e., a stationary point source) propagates uniformly outward in a spherical pattern. The sound level attenuates (or decreases) at a rate of 6 dB for each doubling

of distance from a point source. Highways consist of several localized noise sources on a defined path and hence can be treated as a line source, which approximates the effect of several point sources. Noise from a line source propagates outward in a cylindrical pattern, often referred to as cylindrical spreading. Sound levels attenuate at a rate of 3 dB for each doubling of distance from a line source (2).

### 2.3.2 GROUND ABSORPTION

The propagation path of noise from a highway to a receiver is usually very close to the ground. Noise attenuation from ground absorption and reflective wave canceling adds to the attenuation associated with geometric spreading. Traditionally, the excess attenuation has also been expressed in terms of attenuation per doubling of distance. This approximation is usually sufficiently accurate for distances of less than 200 feet. For acoustically hard sites (i.e., sites with a reflective surface between the source and the receiver, such as a parking lot or body of water), no excess ground attenuation is assumed. For acoustically absorptive or soft sites (i.e., those sites with an absorptive ground surface between the source and the receiver such as soft dirt, grass, or scattered bushes and trees), an excess ground attenuation value of 1.5 dB per doubling of distance is normally assumed. When added to the cylindrical spreading, the excess ground attenuation results in an overall drop-off rate of 4.5 dB per doubling of distance from a line source (4).

### 2.3.3 ATMOSPHERIC EFFECTS

Receivers located downwind from a source can be exposed to increased noise levels relative to calm conditions, whereas locations upwind can have lowered noise levels. Sound levels can be increased at large distances (e.g., more than 500 feet) due to atmospheric temperature inversion (i.e., increasing temperature with elevation). Other factors such as air temperature, humidity, and turbulence can also have significant effects (2).

### 2.3.4 SHIELDING

A large object or barrier in the path between a noise source and a receiver can substantially attenuate noise levels at the receiver. The amount of attenuation provided by shielding depends on the size of the object and the frequency content of the noise source. Shielding by trees and other such vegetation typically only has an “out of sight, out of mind” effect. That is, the perception of noise impact tends to decrease when vegetation blocks the line-of-sight to nearest residents. However, for vegetation to provide a substantial, or even noticeable, noise reduction, the vegetation area must be at least 15 feet in height, 100 feet wide and dense enough to completely obstruct the line-of-sight between the source and the receiver. This size of vegetation may provide up to 5 dBA of noise reduction. The Federal Highway Administration (FHWA) does not consider the planting of vegetation to be a noise abatement measure (4).

### 2.3.5 REFLECTION

Field studies conducted by the FHWA have shown that the reflection from barriers and buildings does not substantially increase noise levels (4). If all the noise striking a structure was reflected back to a given receiving point, the increase would be theoretically limited to 3 dBA. Further, not

all the acoustical energy is reflected back to same point. Some of the energy would go over the structure, some is reflected to points other than the given receiving point, some is scattered by ground coverings (e.g., grass and other plants), and some is blocked by intervening structures and/or obstacles (e.g., the noise source itself). Additionally, some of the reflected energy is lost due to the longer path that the noise must travel. FHWA measurements made to quantify reflective increases in traffic noise have not shown an increase of greater than 1-2 dBA; an increase that is not perceptible to the average human ear.

## 2.4 NOISE CONTROL

Noise control is the process of obtaining an acceptable noise environment for an observation point or receiver by controlling the noise source, transmission path, receiver, or all three. This concept is known as the source-path-receiver concept. In general, noise control measures can be applied to these three elements.

## 2.5 NOISE BARRIER ATTENUATION

Effective noise barriers can reduce noise levels by up to 10 to 15 dBA, cutting the loudness of traffic noise in half. A noise barrier is most effective when placed close to the noise source or receiver. Noise barriers, however, do have limitations. For a noise barrier to work, it must be high enough and long enough to block the path of the noise source (4).

## 2.6 LAND USE COMPATIBILITY WITH NOISE

Some land uses are more tolerant of noise than others. For example, schools, hospitals, churches, and residences are more sensitive to noise intrusion than are commercial or industrial developments and related activities. Sensitive receivers are generally defined as locations where people reside or where the presence of unwanted sound could otherwise adversely affect the use of the land. Noise-sensitive land uses are generally considered to include schools, hospitals, single-family dwellings, mobile home parks, churches, libraries, recreation areas or buildings where people normally sleep. Although the West Valley Detention Center is a temporary holding facility, there are beds at this facility for temporary stays. Therefore as a conservative measure, the individuals held at the West Valley Detention Center are considered sensitive receptors for the purposes of this analysis.

As ambient noise levels affect the perceived amenity or livability of a development, so too can the mismanagement of noise impacts impair the economic health and growth potential of a community by reducing the area's desirability as a place to live, shop and work. For this reason, land use compatibility with the noise environment is an important consideration in the planning and design process. The FHWA encourages State and Local government to regulate land development in such a way that noise-sensitive land uses are either prohibited from being located adjacent to a highway, or that the developments are planned, designed, and constructed in such a way that noise impacts are minimized (5).

## 2.7 COMMUNITY RESPONSE TO NOISE

Community responses to noise varies depending upon everyone's susceptibility to noise and personal attitudes about noise. Several factors are related to the level of community annoyance including:

- Fear associated with noise producing activities;
- Socio-economic status and educational level;
- Perception that those affected are being unfairly treated;
- Attitudes regarding the usefulness of the noise-producing activity;
- Belief that the noise source can be controlled.

Approximately ten percent of the population has a very low tolerance for noise and will object to any noise not of their making. Consequently, even in the quietest environment, some complaints will occur. Twenty-five percent of the population will not complain even in very severe noise environments. Thus, a variety of reactions can be expected from people exposed to any given noise environment (6). Surveys have shown that about ten percent of the people exposed to traffic noise of 60 dBA will report being highly annoyed with the noise, and each increase of one dBA is associated with approximately two percent more people being highly annoyed. When traffic noise exceeds 60 dBA or aircraft noise exceeds 55 dBA, people may begin to complain (6). Despite this variability in behavior on an individual level, the population can be expected to exhibit the following responses to changes in noise levels as shown on Exhibit 2-B. A change of 3 dBA are considered *barely perceptible*, and changes of 5 dBA are considered *readily perceptible*. (4)

**EXHIBIT 2-B: NOISE LEVEL INCREASE PERCEPTION**

## 2.8 VIBRATION

Per the Federal Transit Administration (FTA) *Transit Noise and Vibration Impact Assessment Manual* (7), vibration is the periodic oscillation of a medium or object. The rumbling sound caused by the vibration of room surfaces is called structure-borne noise. Sources of ground-borne vibrations include natural phenomena (e.g., earthquakes, volcanic eruptions, sea waves, landslides) or human-made causes (e.g., explosions, machinery, traffic, trains, construction equipment). Vibration sources may be continuous, such as factory machinery, or transient, such as explosions. As is the case with airborne sound, ground-borne vibrations may be described by amplitude and frequency.

There are several different methods that are used to quantify vibration. The peak particle velocity (PPV) is defined as the maximum instantaneous peak of the vibration signal. The PPV is most frequently used to describe vibration impacts to buildings but is not always suitable for evaluating human response (annoyance) because it takes some time for the human body to respond to vibration signals. Instead, the human body responds to average vibration amplitude often described as the root mean square (RMS). The RMS amplitude is defined as the average of the squared amplitude of the signal and is most frequently used to describe the effect of vibration on the human body. Decibel notation (VdB) is commonly used to measure RMS. Decibel notation (VdB) serves to reduce the range of numbers used to describe human response to vibration. Typically, ground-borne vibration generated by man-made activities attenuates rapidly with distance from the source of the vibration. Sensitive receivers for vibration include structures (especially older masonry structures), people (especially residents, the elderly, and sick), and vibration-sensitive equipment and/or activities

The background vibration-velocity level in residential areas is generally 50 VdB. Ground-borne vibration is normally perceptible to humans at approximately 65 VdB. For most people, a vibration-velocity level of 75 VdB is the approximate dividing line between barely perceptible and distinctly perceptible levels. Typical outdoor sources of perceptible ground-borne vibration are construction equipment, steel-wheeled trains, and traffic on rough roads. If a roadway is smooth, the ground-borne vibration is rarely perceptible. The range of interest is from approximately 50 VdB, which is the typical background vibration-velocity level, to 100 VdB, which is the general threshold where minor damage can occur in fragile buildings. Exhibit 2-C illustrates common vibration sources and the human and structural response to ground-borne vibration.

**EXHIBIT 2-C: TYPICAL LEVELS OF GROUND-BORNE VIBRATION**

### 3 REGULATORY SETTING

To limit population exposure to physically and/or psychologically damaging as well as intrusive noise levels, the federal government, the State of California, various county governments, and most municipalities in the state have established standards and ordinances to control noise. In most areas, automobile and truck traffic is the major source of environmental noise. Traffic activity generally produces an average sound level that remains constant with time. Air and rail traffic, and commercial and industrial activities are also major sources of noise in some areas. Federal, state, and local agencies regulate different aspects of environmental noise. Federal and state agencies generally set noise standards for mobile sources such as aircraft and motor vehicles, while regulation of stationary sources is left to local agencies.

#### 3.1 STATE OF CALIFORNIA NOISE REQUIREMENTS

The State of California regulates freeway noise, sets standards for sound transmission, provides occupational noise control criteria, identifies noise standards, and provides guidance for local land use compatibility. State law requires that each county and city adopt a General Plan that includes a Noise Element which is to be prepared per guidelines adopted by the Governor's Office of Planning and Research (OPR). (8) The purpose of the Noise Element is to *limit the exposure of the community to excessive noise levels*. In addition, the California Environmental Quality Act (CEQA) requires that all known environmental effects of a project be analyzed, including environmental noise impacts.

#### 3.2 STATE OF CALIFORNIA GREEN BUILDING STANDARDS CODE

The State of California's Green Building Standards Code contains mandatory measures for non-residential building construction in Section 5.507 on Environmental Comfort. (9) These noise standards are applied to new construction in California for controlling interior noise levels resulting from exterior noise sources. The regulations specify that acoustical studies must be prepared when non-residential structures are developed in areas where the exterior noise levels exceed 65 dBA CNEL, such as within a noise contour of an airport, freeway, railroad, and other areas where noise contours are not readily available. If the development falls within an airport or freeway 65 dBA CNEL noise contour, the combined sound transmission class (STC) rating of the wall and roof-ceiling assemblies must be at least 50. For those developments in areas where noise contours are not readily available and the noise level exceeds 65 dBA  $L_{eq}$  for any hour of operation, a wall and roof-ceiling combined STC rating of 45, and exterior windows with a minimum STC rating of 40 are required (Section 5.507.4.1).

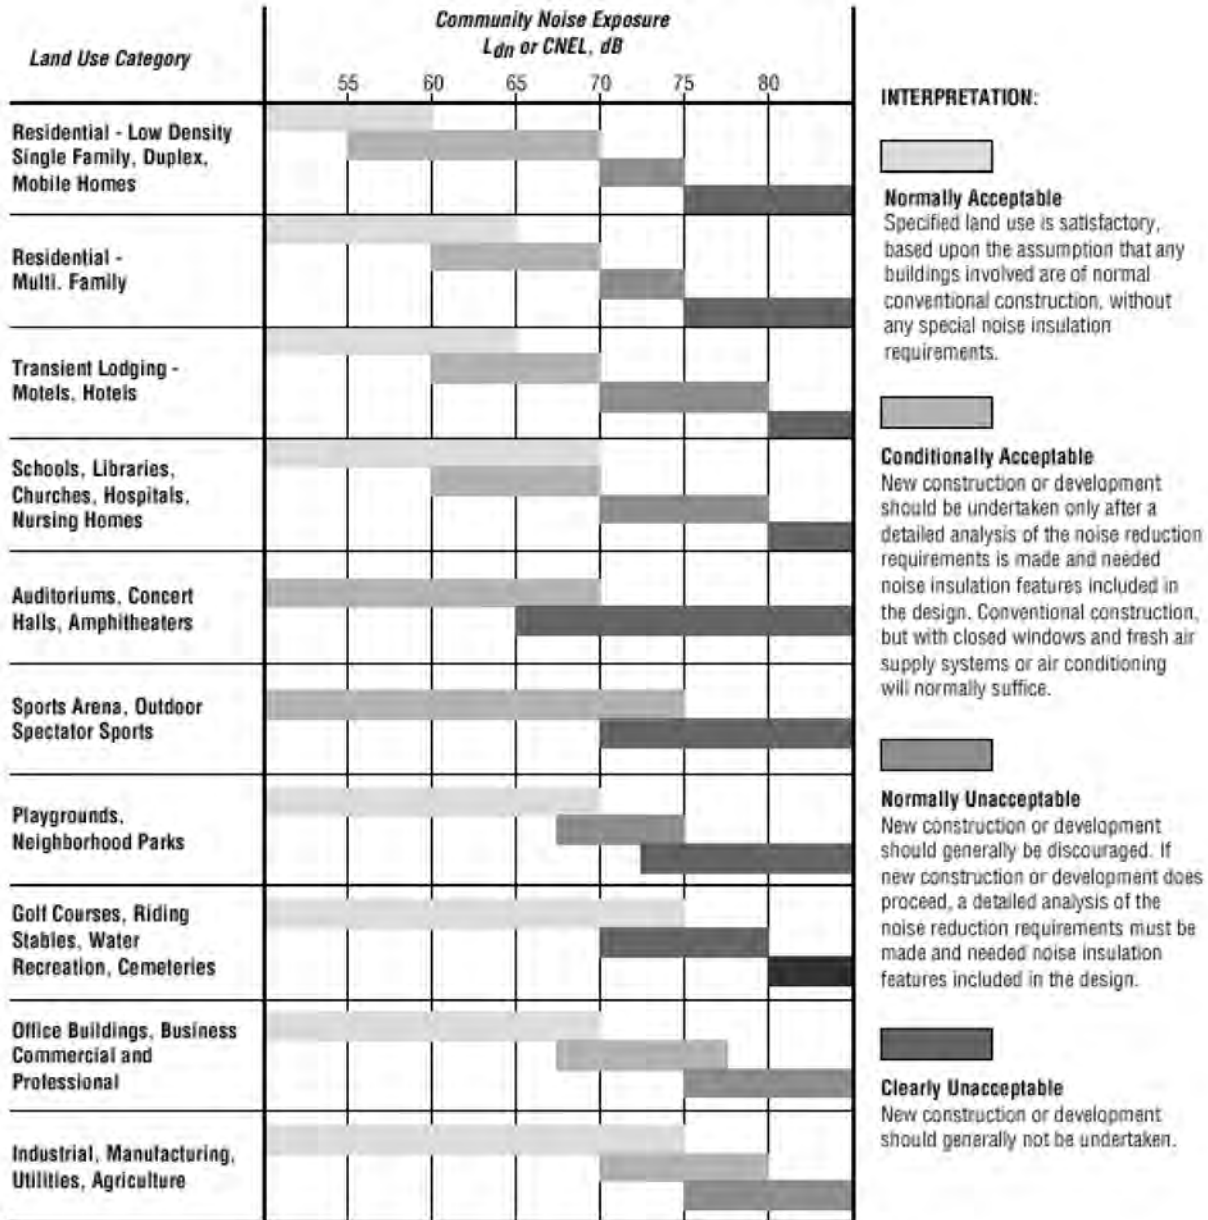

### 3.3 CITY OF MORENO VALLEY GENERAL PLAN NOISE ELEMENT

The City of Moreno Valley Noise Element typically provides the standards for land use compatibility for community noise exposure. However, the City of Moreno Valley General Plan does not include a noise element or specific transportation-related noise standards. Rather, noise is considered in the Environmental Safety section of the General Plan Safety Element. (10) While the General Plan provides background and noise fundamentals, it does not identify criteria to assess the impacts associated with off-site transportation-related noise impacts. Therefore, for this analysis, the transportation noise criteria are derived from standards contained in the California Office of Planning and Research (OPR) *General Plan Guidelines*. (8)

The OPR land use/noise compatibility standards are used by many California cities and counties and specify the maximum noise levels allowable for new developments impacted by transportation noise sources. The OPR land use/noise compatibility criteria, found in Figure 2 of the *General Plan Guidelines, Appendix D: Noise Element Guidelines*, identify the criteria for industrial land uses such as the Project, as shown on Exhibit 3-A. When the unmitigated exterior noise levels approach 70 dBA CNEL industrial land use is considered *normally acceptable*. With exterior noise levels ranging from 70 to 80 dBA CNEL, industrial land uses are considered *conditionally acceptable*, and with exterior noise levels greater than 80 dBA CNEL, they are considered *normally unacceptable*. For *normally unacceptable* land use, *new construction or development should generally be discouraged. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design.* (8) For the purposes of this analysis, industrial land use such as the Project does not contain outdoor living areas requiring exterior noise mitigation as outlined in the OPR *General Plan Guidelines*, and therefore, only the interior noise levels experienced by employees at the Project site are evaluated against the appropriate noise level standards.

The purpose of the transportation noise criteria is to protect, create, and maintain an environment free from noise and vibration that may jeopardize the health or welfare of sensitive receptors, or degrade quality of life. City General Policies (City of Moreno Valley General Plan, pp.9-31, 9-32) act to ensure that when exterior noise levels exceed 65 dBA CNEL at sensitive receivers, mitigation is provided to ensure that interior noise levels of 45 dBA CNEL are maintained. General Plan Policies in this regard are consistent with, and support, the California Building Code interior noise standards.

**EXHIBIT 3-A: LAND USE NOISE COMPATIBILITY CRITERIA**

Source: OPR General Plan Guidelines, Appendix D: Noise Element Guidelines, Figure 2.

Attachment: Appendix J-Noise Study (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

### 3.4 OPERATIONAL NOISE STANDARDS

To analyze noise impacts originating from a designated fixed location or private property such as the Compass Danbe Centerpointe Project, stationary-source (operational) noise such as the expected loading dock activity, entry gate & truck movements, roof-top air conditioning units, and trash enclosure activity are typically evaluated against standards established under a City's Municipal Code.

The City of Moreno Valley Municipal Code, Chapter 11.80 *Noise Regulation*, provides performance standards and noise control guidelines for determining and mitigating non-transportation or stationary-source noise impacts from operations at private properties. The City of Moreno Valley Municipal Code defines *Maximum Sound Levels (in dB(A)) for Source Land Uses* in Table 11.80.030-2 for *Residential* and *Commercial* land uses. As defined by the Municipal Code, Section 11.80.020 *Definitions*, *Commercial* land use means all uses of land not otherwise classified as residential, and *Residential* land use means all uses of land primarily for dwelling units, as well as hospitals, schools, colleges and universities, and places of religious assembly. (11) For the purpose of this analysis, the Compass Danbe Centerpointe Project is considered *Commercial* land use since it is not classified as residential. Based on this standard, the operational noise level limits for commercial land use, from Table 11.80.030-2, of 65 dBA  $L_{eq}$  during the daytime (8:00 a.m. to 10:00 p.m.) hours and 60 dBA  $L_{eq}$  during the nighttime (10:01 p.m. to 7:59 a.m.) hours shall apply to the operational noise source activities from the Project.

Further, Section 11.80.030 (C) *Prohibited Acts, Nonimpulsive Sound Decibel Limits*, states: *No person shall maintain, create, operate or cause to be operated on private property any source of sound in such a manner as to create any nonimpulsive sound which exceeds the limits set forth for the source land use category (as defined in Section 11.80.020) in Table 11.80.030-2 when measured at a distance of two hundred (200) feet or more from the real property line of the source of the sound, if the sound occurs on a privately owned property...* (11) Therefore, at a distance of 200 feet from the property line, the Project's operational noise levels shall not exceed the 65 dBA  $L_{eq}$  daytime and 60 dBA  $L_{eq}$  nighttime noise level standards for commercial land uses, as shown on Table 3-1.

The City of Moreno Valley Municipal Code also identifies continuous sound level limits in Table 11.80.030-1 based on the Center for Disease Control and Prevention and the National Institute for Occupational Safety and Health (NIOSH) noise exposure guidelines. A division of the U.S. Department of Health and Human Services, NIOSH identifies a noise level threshold based on the duration of exposure to the source. The City of Moreno Valley noise level threshold starts at 90 dBA for more than eight hours per day, and for every increase, the exposure time is reduced. The City of Moreno Valley identifies noise level thresholds of 92 dBA for more than 6 hours per day, 95 dBA for more than 4 hour per day, 97 dBA for more than 3 hours per day, and up to 100 dBA for more than 2 hours per day. However, this noise study uses the more restrictive City of Moreno Valley commercial noise level limits identified on Table 11.80.030-2 for source land uses in the Municipal Code, shown on Table 3-1 of this report, to evaluate the potential operational noise levels due to the operation of the Project.

**TABLE 3-1: OPERATIONAL NOISE STANDARDS AT 200 FEET FROM THE SOURCE**

City	Source Land use	Noise Level Standards (dBA Leq) <sup>1</sup>	
		Daytime	Nighttime
Moreno Valley	Commercial	65	60

<sup>1</sup> City of Moreno Valley Municipal Code, Chapter 11.80 Noise Regulation, Table 11.80.030-2 Maximum Sound Levels (in dB(A)) for Source Land Uses when measured at a distance of 200 feet from the property line of the source land use (Appendix 3.1). Leq represents a steady state sound level containing the same total energy as a time varying signal over a given period. "Daytime" = 8:00 a.m. to 10:00 p.m.; "Nighttime" = 10:01 p.m. to 7:59 a.m.

### 3.5 CONSTRUCTION NOISE STANDARDS

To analyze noise impacts originating from the construction of the Compass Danbe Centerpointe site, noise from construction activities are typically evaluated against standards established under a City's Municipal Code. The Municipal Code noise standards for construction are described below for the City of Moreno Valley to determine the potential noise impacts at the nearest receiver locations. The construction-related noise standards are shown on Table 3-2.

The Municipal Code noise standards for construction are described below for the City of Moreno Valley to determine the potential noise impacts at the nearest sensitive receiver locations. As a subset of its stationary-source noise regulations, the City Municipal Code establishes permitted hours of construction activity. More specifically, Municipal Code Section 11.80.030 (D)(7), *Construction and Demolition*, provides the following:

*No person shall operate, or cause operation of any tools or equipment used in construction, drilling, repair, alteration, or demolition work between the hours of eight p.m. and seven a.m. the following day such that the sound there from creates a noise disturbance, except for emergency work by public service utilities or for other work approved by the city manager or designee.*

Therefore, based on the Section 11.80.030 (D)(7) construction regulations, a construction-related *noise disturbance* occurs if Project construction activity occurs outside of the permitted hours. However, for this analysis, the stationary-source noise level limits of 65 dBA Leq during the daytime hours and 60 dBA Leq during the nighttime hours are used as appropriate thresholds for the nearest sensitive land uses (e.g. residential homes) in the Project study area. In addition, grading operations shall be limited to the hours identified in Section 8.21.050 (O) of 7:00 a.m. to 6:00 p.m., Monday through Friday, and 8:00 a.m. to 4:00 p.m. on weekends and holidays or as approved by the City Engineer. The City of Moreno Valley construction noise standards are shown on Table 3-2 and included in Appendix 3.1. As previously discussed in Section 3.4, the construction noise level threshold used in this noise study represents a conservative approach, since it is more restrictive than the continuous sound level limits of Table 11.80.030-1 of the City of Moreno Valley Municipal Code.

TABLE 3-2: CONSTRUCTION NOISE STANDARDS FROM THE SOURCE LAND USE

City	Permitted Hours of Construction Activity	Construction Noise Level Standard (dBA Leq) <sup>2</sup>	
		Daytime	Nighttime
Moreno Valley <sup>1</sup>	General Activity: 7:00 a.m. to 8:00 p.m. on any day. Grading is limited to 7:00 a.m. to 6:00 p.m. Monday to Friday; 8:00 a.m. to 4:00 p.m. on weekends and holidays.	65	60 <sup>3</sup>

<sup>1</sup> City of Moreno Valley Municipal Code, Section 11.80.030 (D)(7) and Section 8.21.050 (O) (Appendix 3.1).

<sup>2</sup> Acceptable threshold for determining the relative significance of short-term Project construction noise levels, based on the City of Moreno Valley stationary noise standards shown on Table 3-1.

<sup>3</sup> Any nighttime construction activity requires an exemption from the City of Moreno Valley Municipal Code as indicated in Section 11.80.030 (E)(8) for a special event permit (Section 11.80.040). The special event permit application shall be submitted to the City of Moreno Valley Planning Department for approval and meet the requirements of Municipal Code Section 11.80.040.

"Daytime" = 8:00 a.m. to 10:00 p.m.; "Nighttime" = 10:01 p.m. to 7:59 a.m.

### 3.5 VIBRATION STANDARDS

Construction activity can result in varying degrees of ground-borne vibration, depending on the equipment and methods used, distance to the affected structures and soil type. Construction vibration is generally associated with pile driving and rock blasting. Other construction equipment such as air compressors, light trucks, hydraulic loaders, etc., generates little or no ground vibration. (7) To analyze vibration impacts originating from the operation and construction of the Compass Danbe Centerpointe, vibration-generating activities are appropriately evaluated against standards established under a City's Municipal Code, if such standards exist. However, the City of Moreno Valley does not identify specific vibration level limits and instead relies on the Federal Transit Administration (FTA) methodology. The FTA *Transit Noise and Vibration Impact Assessment* methodology provides guidelines for the maximum-acceptable vibration criteria for different types of land uses. These guidelines allow 90 VdB for industrial (workshop) use, 84 VdB for office use and 78 VdB for daytime residential uses and 72 VdB for nighttime uses in buildings where people normally sleep. (7)

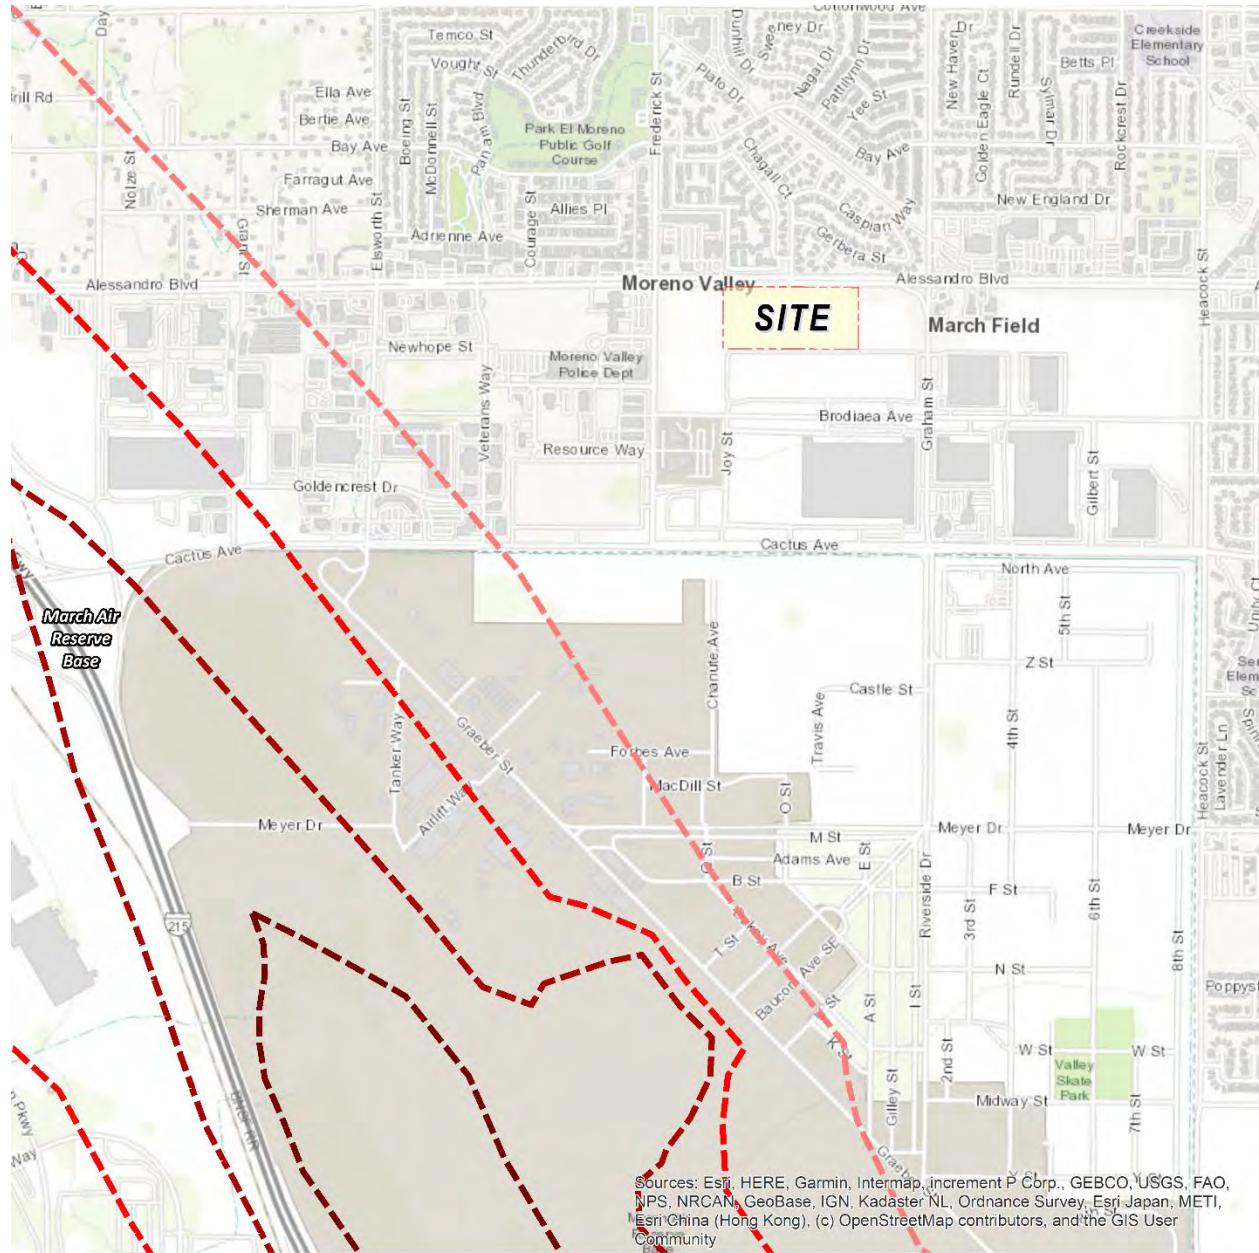

### 3.6 MARCH AIR RESERVE BASE/INLAND PORT AIRPORT LAND USE COMPATIBILITY

The March Air Reserve Base/Inland Port Airport (MARB/IPA) is located approximately 0.9-miles south of the Project site. The *March Air Reserve Base/Inland Port Airport Land Use Compatibility Plan* (MARB/IPA LUCP) includes the policies for determining the land use compatibility of the Project. The MARB/IPA, Map MA-1, indicates that the Project site is located within Compatibility Zone D and Zone E, which Table MA-1 Compatibility Zone Factors indicates is considered to have a *moderate to low* noise impact. Further, the Project site is located outside of the 60 dBA CNEL noise level contour boundary. Moreover, the Basic Compatibility Criteria, listed in Table MA-2 of the MARB/IPA LUCP identifies no prohibited uses for either zones. (12) The MARB/IPA LUCP does not identify industrial-use specific noise compatibility standards, and therefore, the City of Moreno Valley *Land Use Compatibility for Community Noise Exposure* matrix, previously discussed in Section 3.3, is used to assess potential aircraft-related noise levels at the Project site. The City of Moreno Valley guidelines indicate that industrial uses, such as the Project, are considered *normally acceptable* with exterior noise levels of up to 70 dBA CNEL. (13) The noise

contour boundaries of MARB/IPA are presented on Exhibit 3-B of this report and show that the Project is considered *normally acceptable* land use since it is located outside of the 60 dBA CNEL contour boundary. Further, Table MA-2 indicates that no uses are prohibited in this area.

## 4 SIGNIFICANCE CRITERIA

The following significance criteria are based on currently adopted guidance provided by Appendix G of the California Environmental Quality Act (CEQA) Guidelines. (14) For the purposes of this report, impacts would be potentially significant if the Project results in or causes:

- A. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?
- B. Generation of excessive ground-borne vibration or ground-borne noise levels?
- C. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

While the City of Moreno Valley General Plan Guidelines provide direction on noise compatibility and establish noise standards by land use type that are sufficient to assess the significance of noise impacts, they do not define the levels at which increases are considered substantial for use under Guideline A. CEQA Appendix G Guideline C applies to nearby public and private airports, if any, and the Project's land use compatibility.

### 4.1 CEQA GUIDELINES NOT FURTHER ANALYZED

In Section 3.6, the noise contour boundaries of MARB/IPA are presented on Exhibit 3-B of this report and show that the Project is considered *normally acceptable* land use since it is located outside of the 60 dBA CNEL contour. Moreover, Table MA-2 of the MARB/IPA LUCP indicates that no uses are prohibited in this area, and therefore, impacts are considered *less than significant*, and no further noise analysis is provided under Guideline C.

### 4.2 NOISE-SENSITIVE RECEIVERS

Noise level increases resulting from the Project are evaluated based on the Appendix G CEQA Guidelines described above at the closest sensitive receiver locations. Under CEQA, consideration must be given to the magnitude of the increase, the existing ambient noise levels, and the location of noise-sensitive receivers to determine if a noise increase represents a significant adverse environmental impact. This approach recognizes *that there is no single noise increase that renders the noise impact significant*. (15)

Unfortunately, there is no completely satisfactory way to measure the subjective effects of noise or of the corresponding human reactions of annoyance and dissatisfaction. This is primarily because of the wide variation in individual thresholds of annoyance and differing individual experiences with noise. Thus, an important way of determining a person's subjective reaction to a new noise is the comparison of it to the existing environment to which one has adapted—the so-called *ambient* environment. In general, the more a new noise exceeds the previously existing ambient noise level, the less acceptable the new noise will typically be judged. The Federal Interagency Committee on Noise (FICON) (16) developed guidance to be used for the assessment

of project-generated increases in noise levels that consider the ambient noise level. The FICON recommendations are based on studies that relate aircraft noise levels to the percentage of persons highly annoyed by aircraft noise. Although the FICON recommendations were specifically developed to assess aircraft noise impacts, these recommendations are often used in environmental noise impact assessments involving the use of cumulative noise exposure metrics, such as the average-daily noise level (CNEL) and equivalent continuous noise level ( $L_{eq}$ ).

As previously stated, the approach used in this noise study recognizes *that there is no single noise increase that renders the noise impact significant*, based on a 2008 California Court of Appeal ruling on Gray v. County of Madera. (15) For example, if the ambient noise environment is quiet (<60 dBA) and the new noise source greatly increases the noise levels, an impact may occur if the noise criteria may be exceeded. Therefore, for this analysis, FICON identifies a *readily perceptible* 5 dBA or greater project-related noise level increase is considered a significant impact when the noise criteria for a given land use is exceeded. Per the FICON, in areas where the without project noise levels range from 60 to 65 dBA, a 3 dBA *barely perceptible* noise level increase appears to be appropriate for most people. When the without project noise levels already exceed 65 dBA, any increase in community noise louder than 1.5 dBA or greater is considered a significant impact if the noise criteria for a given land use is exceeded, since it likely contributes to an existing noise exposure exceedance.

The FICON guidance provides an established source of criteria to assess the impacts of substantial temporary or permanent increase in ambient noise levels. Based on the FICON criteria, the amount to which a given noise level increase is considered acceptable is reduced when the without Project noise levels are already shown to exceed certain land-use specific exterior noise level criteria. The specific levels are based on typical responses to noise level increases of 5 dBA or *readily perceptible*, 3 dBA or *barely perceptible*, and 1.5 dBA depending on the underlying without Project noise levels for noise-sensitive uses. These levels of increases and their perceived acceptance are consistent with guidance provided by both the Federal Highway Administration (4 p. 9) and Caltrans (17 p. 2\_48).

### 4.3 NON-NOISE-SENSITIVE RECEIVERS

Since the City of Moreno Valley General Plan Safety Element does not identify criteria to assess the impacts associated with off-site transportation-related noise impacts, the OPR land use/noise compatibility criteria, found in Figure 2 of the *General Plan Guidelines, Appendix D: Noise Element Guidelines* is used to determine potential impacts at adjacent land uses. As previously shown on Exhibit 3-A, the *normally acceptable* exterior noise level for non-noise-sensitive land use, such as industrial use, is 70 dBA CNEL. Noise levels greater than 70 dBA CNEL are considered *conditionally acceptable* according to the *Land Use Compatibility Criteria*. (8)

To determine if Project-related traffic noise level increases are significant at off-site non-noise-sensitive land uses, a *barely perceptible* 3 dBA criteria is used. When the without Project noise levels are greater than the *normally acceptable* 70 dBA CNEL land use compatibility criteria, a *barely perceptible* 3 dBA or greater noise level increase is considered a significant impact since the noise level criteria is already exceeded. The noise level increases used to determine significant impacts for non-noise-sensitive land uses is generally consistent with the FICON noise

level increase thresholds for noise-sensitive land uses but instead rely on the OPR land use/noise compatibility criteria, found in Figure 2 of the *General Plan Guidelines, Appendix D: Noise Element Guidelines normally acceptable 70 dBA CNEL exterior noise level criteria.*

#### 4.4 SIGNIFICANCE CRITERIA SUMMARY

Noise impacts shall be considered significant if any of the following occur as a direct result of the proposed development. Table 4-1 shows the significance criteria summary matrix.

**TABLE 4-1: SIGNIFICANCE CRITERIA SUMMARY**

Analysis	Receiving Land Use	Condition(s)	Significance Criteria	
			Daytime	Nighttime
Off-Site	Noise-Sensitive <sup>1</sup>	if ambient is < 60 dBA CNEL	≥ 5 dBA CNEL Project increase	
		if ambient is 60 - 65 dBA CNEL	≥ 3 dBA CNEL Project increase	
		if ambient is > 65 dBA CNEL	≥ 1.5 dBA CNEL Project increase	
	Non-Noise-Sensitive <sup>2</sup>	if ambient is > 70 dBA CNEL	≥ 3 dBA CNEL Project increase	
Operational	Noise-Sensitive <sup>1</sup>	At 200' from the property line of the source <sup>3</sup>	65 dBA Leq	60 dBA Leq
		if ambient is < 60 dBA Leq <sup>1</sup>	≥ 5 dBA Leq Project increase	
		if ambient is 60 - 65 dBA Leq <sup>1</sup>	≥ 3 dBA Leq Project increase	
		if ambient is > 65 dBA Leq <sup>1</sup>	≥ 1.5 dBA Leq Project increase	
		Vibration Level Threshold <sup>4</sup>	78 VdB	72 VdB
Construction	Noise-Sensitive	At 200' from the property line of the source <sup>3</sup>	65 dBA Leq	60 dBA Leq
		Vibration Level Threshold <sup>4</sup>	78 VdB	n/a

## 5 EXISTING NOISE LEVEL MEASUREMENTS

To assess the existing noise level environment, 24-hour noise level measurements were taken at five locations in the Project study area. The receiver locations were selected to describe and document the existing noise environment within the Project study area. Exhibit 5-A provides the boundaries of the Project study area and the noise level measurement locations. To fully describe the existing noise conditions, noise level measurements were collected by Urban Crossroads, Inc. on Wednesday, September 16<sup>th</sup>, 2020. Appendix 5.1 includes study area photos.

### 5.1 MEASUREMENT PROCEDURE AND CRITERIA

To describe the existing noise environment, the hourly noise levels were measured during typical weekday conditions over a 24-hour period. By collecting individual hourly noise level measurements, it is possible to describe the daytime and nighttime hourly noise levels and calculate the 24-hour CNEL. The long-term noise readings were recorded using Piccolo Type 2 integrating sound level meter and dataloggers. The Piccolo sound level meters were calibrated using a Larson-Davis calibrator, Model CAL 150. All noise meters were programmed in "slow" mode to record noise levels in "A" weighted form. The sound level meters and microphones were equipped with a windscreen during all measurements. All noise level measurement equipment satisfies the American National Standards Institute (ANSI) standard specifications for sound level meters ANSI S1.4-2014/IEC 61672-1:2013. (18)

### 5.2 NOISE MEASUREMENT LOCATIONS

The long-term noise level measurements were positioned as close to the nearest sensitive receiver locations as possible to assess the existing ambient hourly noise levels surrounding the Project site. Both Caltrans and the FTA recognize that it is not reasonable to collect noise level measurements that can fully represent every part of a private yard, patio, deck, or balcony normally used for human activity when estimating impacts for new development projects. This is demonstrated in the Caltrans general site location guidelines which indicate that, *sites must be free of noise contamination by sources other than sources of interest. Avoid sites located near sources such as barking dogs, lawnmowers, pool pumps, and air conditioners unless it is the express intent of the analyst to measure these sources.* (2) Further, FTA guidance states, *that it is not necessary nor recommended that existing noise exposure be determined by measuring at every noise-sensitive location in the project area. Rather, the recommended approach is to characterize the noise environment for clusters of sites based on measurements or estimates at representative locations in the community.* (7)

Based on recommendations of Caltrans and the FTA, it is not necessary to collect measurements at each individual building or residence, because each receiver measurement represents a group of buildings that share acoustical equivalence. (7) In other words, the area represented by the receiver shares similar shielding, terrain, and geometric relationship to the reference noise source. Receivers represent a location of noise sensitive areas and are used to estimate the future noise level impacts. Collecting reference ambient noise level measurements at the nearest sensitive receiver locations allows for a comparison of the before and after Project noise levels

and is necessary to assess potential noise impacts due to the Project's contribution to the ambient noise levels.

### 5.3 NOISE MEASUREMENT RESULTS

The noise measurements presented below focus on the average or equivalent sound levels ( $L_{eq}$ ). The equivalent sound level ( $L_{eq}$ ) represents a steady state sound level containing the same total energy as a time varying signal over a given sample period. Table 5-1 identifies the hourly daytime (8:00 a.m. to 10:00 p.m.) and nighttime (10:00 p.m. to 8:00 a.m.) noise levels at each noise level measurement location.

Table 5-1 provides the (energy average) noise levels used to describe the daytime and nighttime ambient conditions. These daytime and nighttime energy average noise levels represent the average of all hourly noise levels observed during these time periods expressed as a single number. Appendix 5.2 provides summary worksheets of the noise levels for each hour as well as the minimum, maximum,  $L_1$ ,  $L_2$ ,  $L_5$ ,  $L_8$ ,  $L_{25}$ ,  $L_{50}$ ,  $L_{90}$ ,  $L_{95}$ , and  $L_{99}$  percentile noise levels observed during the daytime and nighttime periods.

The background ambient noise levels in the Project study area are dominated by the transportation-related noise associated with surface streets. This includes the auto and heavy truck activities on study area roadway segments near the noise level measurement locations.

**TABLE 5-1: 24-HOUR AMBIENT NOISE LEVEL MEASUREMENTS**

Location <sup>1</sup>	Description	Energy Average Noise Level (dBA $L_{eq}$ ) <sup>2</sup>		CNEL
		Daytime	Nighttime	
L1	Located north of the Project site on Alessandro Boulevard near existing single-family residential home at 13994 Chagall Court.	68.7	67.3	73.8
L2	Located east of the Project site by existing Motel 6 at 23581 Alessandro Boulevard.	61.1	56.3	64.1
L3	Located southwest of the Project site by the Moreno Valley City Hall at 14177 Frederick Street.	57.3	55.9	62.4
L4	Located northwest of the Project site on Fredrick Street near existing single-family residential home at 13979 Frederick Street.	66.0	63.5	70.6
L5	Located north of the Project site on Alessandro Boulevard near existing multi-family residential homes at 13933 Chagall Court.	71.0	67.9	74.8

<sup>1</sup> See Exhibit 5-A for the noise level measurement locations.

<sup>2</sup> Energy (logarithmic) average levels. The long-term 24-hour measurement worksheets are included in Appendix 5.2.

"Daytime" = 8:00 a.m. to 10:00 p.m.; "Nighttime" = 10:00 p.m. to 8:00 a.m.

## 6 METHODS AND PROCEDURES

The following section outlines the methods and procedures used to model and analyze the future traffic noise environment. Consistent with the *Land Use Compatibility Criteria*, all transportation related noise levels are presented in terms of the 24-hour CNEL's.

### 6.1 FHWA TRAFFIC NOISE PREDICTION MODEL

The expected roadway noise level increases from vehicular traffic were calculated by Urban Crossroads, Inc. using a computer program that replicates the Federal Highway Administration (FHWA) Traffic Noise Prediction Model- FHWA-RD-77-108. (19) The FHWA Model arrives at a predicted noise level through a series of adjustments to the Reference Energy Mean Emission Level (REMEL). In California the national REMELs are substituted with the California Vehicle Noise (Calveno) Emission Levels. (20) Adjustments are then made to the REMEL to account for: the roadway classification (e.g., collector, secondary, major or arterial), the roadway active width (i.e., the distance between the center of the outermost travel lanes on each side of the roadway), the total average daily traffic (ADT), the travel speed, the percentages of automobiles, medium trucks, and heavy trucks in the traffic volume, the roadway grade, the angle of view (e.g., whether the roadway view is blocked), the site conditions ("hard" or "soft" relates to the absorption of the ground, pavement, or landscaping), and the percentage of total ADT which flows each hour throughout a 24-hour period. Research conducted by Caltrans has shown that the use of soft site conditions is appropriate for the application of the FHWA traffic noise prediction model used in this analysis. (21)

### 6.2 OFF-SITE TRAFFIC NOISE PREDICTION MODEL INPUTS

Table 6-1 presents the roadway parameters used to assess the Project's off-site dBA CNEL transportation noise impacts. Table 6-1 identifies the 4 study area roadway segments, the distance from the centerline to adjacent land use based on the functional roadway classifications per the City of Moreno Valley General Plan Circulation Element, and the posted vehicle speeds. The ADT volumes used in this study area presented on Table 6-2 are based on the *Alessandro Warehouse Traffic Analysis*, prepared by Urban Crossroads, Inc. for the following traffic scenarios under both Without and With Project alternatives: Existing (2020), and Existing plus Ambient Growth plus Project (EAP). (22)

The ADT volumes vary for each roadway segment based on the existing traffic volumes and the combination of project traffic distributions. This analysis relies on a comparative evaluation of the off-site traffic noise impacts, without and with project ADT traffic volumes from the Project traffic study.

**TABLE 6-1: OFF-SITE ROADWAY PARAMETERS**

ID	Roadway	Segment	Receiving Existing Land Use <sup>1</sup>	Distance from Centerline to Receiving Land Use (Feet) <sup>2</sup>	Vehicle Speed (mph) <sup>3</sup>
1	Graham St.	s/o Alessandro Bl.	Non-Sensitive	44'	40
2	Alessandro Bl.	w/o Frederick St.	Sensitive	55'	45
3	Alessandro Bl.	w/o Graham St.	Sensitive	55'	45
4	Alessandro Bl.	e/o Graham St.	Non-Sensitive	55'	45

<sup>1</sup> Based on a review of existing aerial imagery. Noise sensitive uses limited to existing residential land uses.

<sup>2</sup> Distance to receiving land use is based upon the right-of-way distances.

<sup>3</sup> Alessandro Warehouse Traffic Analysis, Urban Crossroads, Inc.

**TABLE 6-2: AVERAGE DAILY TRAFFIC VOLUMES**

4	Alessandro Bl.	e/o Graham St.	41,770	41,799	43,458	43,484

<sup>1</sup> Alessandro Warehouse Traffic Analysis, Urban Crossroads, Inc.

To quantify the off-site noise levels, the Project related truck trips were added to the heavy truck category in the FHWA noise prediction model. The addition of the Project related truck trips increases the percentage of heavy trucks in the vehicle mix. This approach recognizes that the FHWA noise prediction model is significantly influenced by the number of heavy trucks in the vehicle mix.

Table 6-3 provides the time of day (daytime, evening, and nighttime) vehicle splits. The daily Project truck trip-ends were assigned to the individual off-site study area roadway segments based on the Project truck trip distribution percentages documented in the *Traffic Impact Analysis*. Using the Project truck trips in combination with the Project trip distribution, Urban Crossroads, Inc. calculated the number of additional Project truck trips and vehicle mix percentages for each of the study area roadway segments. Table 6-4 shows the traffic flow by vehicle type (vehicle mix) used for all without Project traffic scenarios, and Tables 6-5 and 6-6 show the vehicle mixes used for the with Project traffic scenarios.

**TABLE 6-3: TIME OF DAY VEHICLE SPLITS**

Vehicle Type	Time of Day Splits <sup>1</sup>			Total of Time of Day Splits
	Daytime	Evening	Nighttime	
Autos	77.50%	12.90%	9.60%	100.00%
Medium Trucks	84.80%	4.90%	10.30%	100.00%
Heavy Trucks	86.50%	2.70%	10.80%	100.00%

<sup>1</sup> County of Riverside Office of Industrial Hygiene. Values rounded to the nearest one-hundredth.

"Daytime" = 7:00 a.m. to 7:00 p.m.; "Evening" = 7:00 p.m. to 10:00 p.m.; "Nighttime" = 10:00 p.m. to 7:00 a.m.

**TABLE 6-4: WITHOUT PROJECT VEHICLE MIX**

Classification	Total % Traffic Flow			Total
	Autos	Medium Trucks	Heavy Trucks	
All Segments	98.89%	0.70%	0.42%	100.00%

Based on an existing vehicle count taken at Frederick Street and Alessandro Boulevard (Alessandro Warehouse Traffic Analysis, Urban Crossroads, Inc.). Vehicle mix percentage values rounded to the nearest one-hundredth.

Due to the added Project truck trips, the increase in Project traffic volumes and the distributions of trucks on the study area road segments, the percentage of autos, medium trucks and heavy trucks will vary for each of the traffic scenarios. This explains why the existing and future traffic volumes and vehicle mixes vary between seemingly identical study area roadway segments.

## 7 OFF-SITE TRANSPORTATION NOISE IMPACTS

To assess the off-site transportation CNEL noise level impacts associated with the proposed Project, noise contours were developed based on the *Alessandro Warehouse Traffic Analysis*. (22) Noise contour boundaries represent the equal levels of noise exposure and are measured in CNEL from the center of the roadway.

### 7.1 TRAFFIC NOISE CONTOURS

Noise contours were used to assess the Project's incremental 24-hour dBA CNEL traffic-related noise impacts at land uses adjacent to roadways conveying Project traffic. The noise contours represent the distance to noise levels of a constant value and are measured from the center of the roadway for the 70, 65, and 60 dBA CNEL noise levels. The noise contours do not consider the effect of any existing noise barriers or topography that may attenuate ambient noise levels. In addition, because the noise contours reflect modeling of vehicular noise on area roadways, they appropriately do not reflect noise contributions from the surrounding stationary noise sources within the Project study area.

Tables 7-1 through 7-4 present a summary of the exterior dBA CNEL traffic noise levels without barrier attenuation. Roadway segments are analyzed from the without Project to the with Project conditions in each of the following timeframes: Existing (2020), and Existing plus Ambient Growth plus Project (EAP). Appendix 7.1 includes a summary of the dBA CNEL traffic noise level contours for each of the traffic scenarios.

**TABLE 7-1: EXISTING WITHOUT PROJECT NOISE CONTOURS**

ID	Road	Segment	Receiving Existing Land Use <sup>1</sup>	CNEL at Receiving Land Use (dBA) <sup>2</sup>	Distance to Contour from Centerline (Feet)		
					70 dBA CNEL	65 dBA CNEL	60 dBA CNEL
1	Graham St.	s/o Alessandro Bl.	Non-Sensitive	66.9	RW	59	127

<sup>2</sup> The CNEL is calculated at the boundary of the right-of-way of the receiving adjacent land use.

"RW" = Location of the respective noise contour falls within the right-of-way of the road.

## 7.2 EXISTING PROJECT TRAFFIC NOISE LEVEL INCREASES

An analysis of existing traffic noise levels plus traffic noise generated by the proposed Project has been included in this report to fully analyze all the existing traffic scenarios identified in the *Alessandro Warehouse Traffic Analysis*. This condition is provided solely for informational purposes and will not occur, since the Project will not be fully developed and occupied under Existing conditions. Table 7-1 shows the Existing without Project conditions CNEL noise levels. The Existing without Project exterior noise levels are expected to range from 66.9 to 73.1 dBA CNEL, without accounting for any noise attenuation features such as noise barriers or topography. Table 7-2 shows the Existing with Project conditions will range from 68.9 to 73.3 dBA CNEL. Table 7-5 shows that the Project off-site traffic noise level impacts will range from 0.0 to 2.0 dBA CNEL. Based on the significance criteria for off-site traffic noise presented in Table 4-1, land uses adjacent to the study area roadway segments would experience *less than significant* noise level increases on receiving land uses due to the Project-related traffic.

## 7.3 EXISTING PLUS AMBIENT GROWTH PROJECT TRAFFIC NOISE LEVEL INCREASES

Table 7-3 presents the Existing plus Ambient Growth without Project conditions CNEL noise levels. The Existing plus Ambient Growth without Project exterior noise levels are expected to range from 67.1 to 73.2 dBA CNEL, without accounting for any noise attenuation features such as noise barriers or topography. Table 7-4 shows the Existing plus Ambient Growth with Project conditions will range from 69.0 to 73.5 dBA CNEL. Table 7-6 shows that the Project off-site traffic noise level increases will range from 0.0 to 1.9 dBA CNEL. Based on the significance criteria for off-site traffic noise presented in Table 4-1, land uses adjacent to the study area roadway segments would experience *less than significant* noise level increases on receiving land uses due to the Project-related traffic.

**TABLE 7-5: EXISTING WITH PROJECT TRAFFIC NOISE LEVEL INCREASES**

ID	Road	Segment	Receiving Existing Land Use <sup>1</sup>	CNEL at Receiving Land Use (dBA) <sup>2</sup>			Incremental Noise Level Increase Threshold <sup>3</sup>	
				No Project	With Project	Project Addition	Limit	Exceeded?
1	Graham St.	s/o Alessandro Bl.	Non-Sensitive	66.9	68.9	2.0	n/a	No
2	Alessandro Bl.	w/o Frederick St.	Sensitive	72.7	72.7	0.0	1.5	No
3	Alessandro Bl.	w/o Graham St.	Sensitive	72.8	73.3	0.6	1.5	No
4	Alessandro Bl.	e/o Graham St.	Non-Sensitive	73.1	73.1	0.0	3.0	No

<sup>1</sup> Based on a review of existing aerial imagery. Noise sensitive uses limited to existing residential land uses.

<sup>2</sup> The CNEL is calculated at the boundary of the right-of-way of each roadway and the property line of the receiving land use.

<sup>3</sup> Does the Project create an incremental noise level increase exceeding the significance criteria (Table 4-1)?

**TABLE 7-6: EXISTING PLUS AMBIENT GROWTH WITH PROJECT TRAFFIC NOISE INCREASES**

ID	Road	Segment	Receiving Existing Land Use <sup>1</sup>	CNEL at Receiving Land Use (dBA) <sup>2</sup>			Incremental Noise Level Increase Threshold <sup>3</sup>	
				No Project	With Project	Project Addition	Limit	Exceeded?
1	Graham St.	s/o Alessandro Bl.	Non-Sensitive	67.1	69.0	1.9	n/a	No
2	Alessandro Bl.	w/o Frederick St.	Sensitive	72.9	72.9	0.0	1.5	No
3	Alessandro Bl.	w/o Graham St.	Sensitive	72.9	73.5	0.5	1.5	No
4	Alessandro Bl.	e/o Graham St.	Non-Sensitive	73.2	73.2	0.0	3.0	No

<sup>1</sup> Based on a review of existing aerial imagery. Noise sensitive uses limited to existing residential land uses.

<sup>2</sup> The CNEL is calculated at the boundary of the right-of-way of each roadway and the property line of the receiving land use.

<sup>3</sup> Does the Project create an incremental noise level increase exceeding the significance criteria (Table 4-1)?

## 8 SENSITIVE RECEIVER LOCATIONS

To assess the potential for long-term operational and short-term construction noise impacts, the following sensitive receiver locations, as shown on Exhibit 8-A, were identified as representative locations for analysis. Sensitive receivers are generally defined as locations where people reside or where the presence of unwanted sound could otherwise adversely affect the use of the land. Noise-sensitive land uses are generally considered to include schools, hospitals, single-family dwellings, mobile home parks, churches, libraries, and recreation areas. Moderately noise-sensitive land uses typically include multi-family dwellings, hotels, motels, dormitories, outpatient clinics, cemeteries, golf courses, country clubs, athletic/tennis clubs, and equestrian clubs. Land uses that are considered relatively insensitive to noise include business, commercial, and professional developments. Land uses that are typically not affected by noise include: industrial, manufacturing, utilities, agriculture, undeveloped land, parking lots, warehousing, liquid and solid waste facilities, salvage yards, and transit terminals.

To describe the potential off-site Project noise levels, five receiver locations in the vicinity of the Project site were identified. All distances are measured from the Project site boundary to the outdoor living areas (e.g., private backyards) or at the building façade, whichever is closer to the Project site. The selection of receiver locations is based on FHWA guidelines and is consistent with additional guidance provided by Caltrans and the FTA, as previously described in Section 5.2. Other sensitive land uses in the Project study area that are located at greater distances than those identified in this noise study will experience lower noise levels than those presented in this report due to the additional attenuation from distance and the shielding of intervening structures. Distance is measured in a straight line from the project boundary to each receiver location.

- R1: Location R1 represents the existing noise sensitive residence at 13994 Chagall Court, approximately 152 feet north of the Project site. Since there are no private outdoor living areas (backyards) facing the Project site, receiver R1 is placed at the residential building façade. A 24-hour noise measurement was taken near this location, L1, to describe the existing ambient noise environment.
- R2: Location R2 represents the Motel 6 at 23581 Alessandro Blvd, approximately 1,023 feet east of the Project site. Receiver R2 is placed at the building façade. A 24-hour noise measurement was taken near this location, L2, to describe the existing ambient noise environment.
- R3: Location R3 represents the Moreno Valley City Hall at 14177 Frederick Street, approximately 744 feet west of the Project site. Receiver R3 is placed at the building façade. A 24-hour noise measurement near this location, L3, is used to describe the existing ambient noise environment.
- R4: Location R4 represents the existing noise sensitive residence at 13979 Frederick Street, approximately 784 feet northwest of the Project site. Since there are no private outdoor living areas (backyards) facing the Project site, receiver R4 is placed at the residential building façade. A 24-hour noise measurement near this location, L4, is used to describe the existing ambient noise environment.

R5: Location R5 represents the existing noise sensitive residences at 13933 Chagall Court, approximately 217 feet north of the Project site. Since there are no private outdoor living areas (backyards) facing the Project site, receiver R5 is placed at the residential building façade. A 24-hour noise measurement near this location, L5, is used to describe the existing ambient noise environment.

**EXHIBIT 8-A: SENSITIVE RECEIVER LOCATIONS**

Attachment: Appendix J-Noise Study (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

## 9 OPERATIONAL NOISE IMPACTS

This section analyzes the potential stationary-source operational noise impacts at the nearest receiver locations, identified in Section 8, resulting from the operation of the proposed Compass Danbe Centerpointe Project. Exhibit 9-A identifies the representative noise source locations used to assess the operational noise levels.

### 9.1 OPERATIONAL NOISE SOURCES

At the time this noise analysis was prepared the future tenants of the proposed Project were unknown. Therefore, this operational noise analysis is intended to describe noise level impacts associated with the expected typical of daytime and nighttime activities at the Project site. To present the potential worst-case noise conditions, this analysis assumes the Project would be operational 24 hours per day, seven days per week. Consistent with similar warehouse uses, the Project business operations would primarily be conducted within the enclosed buildings, except for traffic movement, parking, as well as loading and unloading of trucks at designated loading bays. The on-site Project-related noise sources are expected to include: loading dock activity, entry gate & truck movements, roof-top air conditioning units, and trash enclosure activity.

### 9.2 REFERENCE NOISE LEVELS

To estimate the Project operational noise impacts, reference noise level measurements were collected from similar types of activities to represent the noise levels expected with the development of the proposed Project. This section provides a detailed description of the reference noise level measurements shown on Table 9-1 used to estimate the Project operational noise impacts. It is important to note that the following projected noise levels assume the worst-case noise environment with the loading dock activity, entry gate & truck movements, roof-top air conditioning units, and trash enclosure activity all operating continuously. These sources of noise activity will likely vary throughout the day.

EXHIBIT 9-A: OPERATIONAL NOISE SOURCE LOCATIONS

- LEGEND:**
- Site Boundary
  - Roof-Top Air Conditioning Unit
  - Entry Gate & Truck Movements
  - Loading Dock Activity
  - Trash Enclosure Activity

Attachment: Appendix J-Noise Study (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

**TABLE 9-1: REFERENCE NOISE LEVEL MEASUREMENTS**

Noise Source <sup>1</sup>	Noise Source Height (Feet)	Min./Hour <sup>2</sup>		Reference Noise Level (dBA Leq) @ 50 Feet	Sound Power Level (dBA) <sup>3</sup>
		Day	Night		
Loading Dock Activity	8'	60	60	65.7	111.5
Entry Gate & Truck Movements	8'	- <sup>4</sup>	- <sup>4</sup>	58.0	89.7
Roof-Top Air Conditioning Units	5'	39	28	57.2	88.9
Trash Enclosure Activity	5'	5	5	57.3	89.0

<sup>1</sup> As measured by Urban Crossroads, Inc.

<sup>2</sup> Anticipated duration (minutes within the hour) of noise activity during typical hourly conditions expected at the Project site. "Daytime" = 8:00 a.m. - 10:00 p.m.; "Nighttime" = 10:01 p.m. - 7:59 a.m.

<sup>3</sup> Sound power level represents the total amount of acoustical energy (noise level) produced by a sound source independent of distance or surroundings. Sound power levels calculated using the CadnaA noise model at the reference distance to the noise source. Numbers may vary due to size differences between point and area noise sources.

<sup>4</sup> Entry Gate & Truck Movements are calculate based on the number of events by time of day (See Table 9-2).

### 9.2.1 MEASUREMENT PROCEDURES

The reference noise level measurements presented in this section were collected using a Larson Davis LxT Type 1 precisions sound level meter (serial number 01146). The LxT sound level meter was calibrated using a Larson-Davis calibrator, Model CAL 200, was programmed in "slow" mode to record noise levels in "A" weighted form and was located at approximately five feet above the ground elevation for each measurement. The sound level meters and microphones were equipped with a windscreen during all measurements. All noise level measurement equipment satisfies the American National Standards Institute (ANSI) standard specifications for sound level meters ANSI S1.4-2014/IEC 61672-1:2013. (18)

### 9.2.2 LOADING DOCK ACTIVITY

To describe the loading dock activities, a reference noise level measurement was collected to represent the truck activities. The reference noise level measurement was taken in the center of the loading dock activity area and represents multiple concurrent noise sources resulting in a combined noise level of 65.7 dBA Leq at a uniform distance of 50 feet. Specifically, the reference noise level measurement represents one truck located approximately 30 feet from the noise level meter with another truck passing by to park roughly 20 feet away, both with their engines idling. Throughout the reference noise level measurement, a separate docked and running reefer truck was located approximately 50 feet east of the measurement location. Additional background noise sources included truck pass-by noise, truck drivers talking to each other next to docked trucks, and air brake release noise when trucks parked.

### 9.2.3 ENTRY GATE & TRUCK MOVEMENTS

An entry gate and truck movements reference noise level measurement were taken over a 15-minute period and represents multiple noise sources producing a reference noise level of 58.0 dBA Leq at 50 feet. The noise sources included at this measurement location account for the

rattling and squeaking during normal opening and closing operations, the gate closure equipment, truck engines idling outside the entry gate, truck movements through the entry gate, and background truck court activities and forklift backup alarm noise.

Consistent with the *Alessandro Warehouse Traffic Analysis*, the Project is expected to generate a total of approximately 742 trip-ends per day (actual vehicles) and includes 224 truck trip-ends per day. (22) This noise study relies on the actual Project trips (as opposed to the passenger car equivalents) to accurately account for the effect of individual truck trips on the study area roadway network. Using the estimated number of truck trips in combination with time of day vehicle splits, the number of entry gate and truck movements by driveway location were calculated. As shown on Table 9-2, this information is then used to calculate the entry gate and truck movements operational noise source activity based on the number of events by time of day.

**TABLE 9-2: ENTRY GATE & TRUCK MOVEMENTS BY LOCATION**

Entry Gate & Truck Movement Location <sup>1</sup>	Total Project Truck Trips <sup>2</sup>	Trip Dist. <sup>3</sup>		Truck Trips by Location <sup>4</sup>	Time of Day Vehicle Splits <sup>5</sup>			Truck Movements <sup>6</sup>		
		In	Out		Day	Evening	Night	Day	Evening	Night
Driveway 1	224	90%	10%	112	86.50%	2.70%	10.80%	97	3	12
Driveway 3		10%	90%	112	86.50%	2.70%	10.80%	97	3	12

<sup>3</sup> Project truck trip distribution according to Exhibit 4-2 of the Alessandro Warehouse Traffic Analysis.

<sup>4</sup> Calculated trip trucks per location represents the product of the total (inbound and outbound) project truck trips by and the trip distribution.

<sup>5</sup> Heavy truck time of day vehicle splits as shown on Table 6-3.

<sup>6</sup> Calculated time of day entry gate and truck movements by location.

## 9.2.4 ROOF-TOP AIR CONDITIONING UNITS

The noise level measurements describe a single mechanical roof-top air conditioning unit. The reference noise level represents a Lennox SCA120 series 10-ton model packaged air conditioning unit. At the uniform reference distance of 50 feet, the reference noise levels are 57.2 dBA  $L_{eq}$ . Based on the typical operating conditions observed over a four-day measurement period, the roof-top air conditioning units are estimated to operate for and average 39 minutes per hour during the daytime hours, and 28 minutes per hour during the nighttime hours. These operating conditions reflect peak summer cooling requirements with measured temperatures approaching 96 degrees Fahrenheit (°F) with average daytime temperatures of 82°F. For this noise analysis, the air conditioning units are expected to be located on the roof of the Project buildings.

## 9.2.5 TRASH ENCLOSURE ACTIVITY

The measured reference noise level at the uniform 50-foot reference distance is 57.3 dBA  $L_{eq}$  for the trash enclosure activity. The trash enclosure activity noise levels include two metal gates opening and closing, metal scraping against concrete floor sounds, dumpster movement on metal wheels, trash dropping into the metal dumpster, and background parking lot vehicle movements.

Noise associated with trash enclosure activities is conservatively expected to occur for 5 minutes per hour.

### 9.3 CADNAA NOISE PREDICTION MODEL

To fully describe the exterior operational noise levels from the Project, Urban Crossroads, Inc. developed a noise prediction model using the CadnaA (Computer Aided Noise Abatement) computer program. CadnaA can analyze multiple types of noise sources using the spatially accurate Project site plan, georeferenced Nearmap aerial imagery, topography, buildings, and barriers in its calculations to predict outdoor noise levels.

Using the ISO 9613 protocol, CadnaA will calculate the distance from each noise source to the noise receiver locations, using the ground absorption, distance, and barrier/building attenuation inputs to provide a summary of noise level at each receiver and the partial noise level contributions by noise source. Consistent with the ISO 9613 protocol, the CadnaA noise prediction model relies on the reference sound power level ( $L_w$ ) to describe individual noise sources. While sound pressure levels (e.g.  $L_{eq}$ ) quantify in decibels the intensity of given sound sources at a reference distance, sound power levels ( $L_w$ ) are connected to the sound source and are independent of distance. Sound pressure levels vary substantially with distance from the source and diminish as a result of intervening obstacles and barriers, air absorption, wind, and other factors. Sound power is the acoustical energy emitted by the sound source and is an absolute value that is not affected by the environment.

The operational noise level calculations provided in this noise study account for the distance attenuation provided due to geometric spreading, when sound from a localized stationary source (i.e., a point source) propagates uniformly outward in a spherical pattern. A default ground attenuation factor of 0.5 was used in the noise analysis to account for mixed ground representing a combination of hard and soft surfaces. Appendix 9.1 includes the detailed noise model inputs used to estimate the Project operational noise levels presented in this section.

### 9.4 PROJECT OPERATIONAL NOISE LEVELS

Using the reference noise levels to represent the proposed Project operations that include loading dock activity, entry gate & truck movements, roof-top air conditioning units, and trash enclosure activity, Urban Crossroads, Inc. calculated the operational source noise levels that are expected to be generated at the Project site and the Project-related noise level increases that would be experienced at each of the sensitive receiver locations and at 200 feet from the property line of the source. Tables 9-3 shows the Project operational noise levels during the daytime hours of 8:00 a.m. to 10:00 p.m. The daytime hourly noise levels at the off-site receiver locations are expected to range from 35.1 to 55.6 dBA  $L_{eq}$ .

**TABLE 9-3: DAYTIME PROJECT OPERATIONAL NOISE LEVELS**

Noise Source <sup>1</sup>	Operational Noise Levels by Receiver Location (dBA Leq)					
	R1	R2	R3	R4	R5	at 200'

<b>Total (All Noise Sources)</b>	<b>39.5</b>	<b>43.6</b>	<b>48.9</b>	<b>35.1</b>	<b>38.8</b>	<b>55.6</b>

<sup>1</sup> See Exhibit 9-A for the noise source locations. CadnaA noise model calculations are included in Appendix 9.1.

Table 9-4 shows the Project operational noise levels during the nighttime hours of 10:01 p.m. to 7:59 a.m. The nighttime hourly noise levels at the off-site receiver locations are expected to range from 32.8 to 55.4 dBA  $L_{eq}$ . The differences between the daytime and nighttime noise levels is largely related to the duration of noise activity (Table 9-1).

**TABLE 9-4: NIGHTTIME PROJECT OPERATIONAL NOISE LEVELS**

Noise Source <sup>1</sup>	Operational Noise Levels by Receiver Location (dBA Leq)					
	R1	R2	R3	R4	R5	at 200'

<sup>1</sup> See Exhibit 9-A for the noise source locations. CadnaA noise model calculations are included in Appendix 9.1.

## 9.5 PROJECT OPERATIONAL NOISE LEVEL COMPLIANCE

To demonstrate compliance with local noise regulations, the Project-only operational noise levels are evaluated against exterior noise level thresholds based on the City of Moreno Valley exterior noise level standards at the nearest noise-sensitive receiver locations. Table 9-5 shows the operational noise levels associated with Compass Danbe Centerpointe Project will satisfy the City of Moreno Valley 65 dBA  $L_{eq}$  daytime and 60 dBA  $L_{eq}$  nighttime exterior noise level standards at all the nearest receiver locations and at 200 feet from the property line of the source. Therefore, the operational noise impacts are considered *less than significant* at the nearest noise-sensitive receiver locations.

TABLE 9-5: OPERATIONAL NOISE LEVEL COMPLIANCE

Receiver Location <sup>1</sup>	Project Operational Noise Levels (dBA Leq) <sup>2</sup>		Noise Level Standards (dBA Leq) <sup>3</sup>		Noise Level Standards Exceeded? <sup>4</sup>	
	Daytime	Nighttime	Daytime	Nighttime	Daytime	Nighttime

<sup>2</sup> Proposed Project operational noise levels as shown on Tables 9-3 and 9-4.

<sup>3</sup> Exterior noise level standards for source (commercial) land use, as shown on Table 4-1.

<sup>4</sup> Do the estimated Project operational noise source activities exceed the noise level standards?

"Daytime" = 8:00 a.m. - 10:00 p.m.; "Nighttime" = 10:01 p.m. - 7:59 a.m.

## 9.6 PROJECT OPERATIONAL NOISE LEVEL INCREASES

To describe the Project operational noise level increases, the Project operational noise levels are combined with the existing ambient noise levels measurements for the nearest receiver locations potentially impacted by Project operational noise sources. Since the units used to measure noise, decibels (dB), are logarithmic units, the Project-operational and existing ambient noise levels cannot be combined using standard arithmetic equations. (2) Instead, they must be logarithmically added using the following base equation:

$$SPL_{Total} = 10\log_{10}[10^{SPL1/10} + 10^{SPL2/10} + \dots 10^{SPLn/10}]$$

Where "SPL1," "SPL2," etc. are equal to the sound pressure levels being combined, or in this case, the Project-operational and existing ambient noise levels. The difference between the combined Project and ambient noise levels describe the Project noise level increases to the existing ambient noise environment. As indicated on Tables 9-6 and 9-7, the Project is not expected to generate a measurable daytime and nighttime operational noise level increase dBA Leq at the nearest receiver locations and at 200 feet from the property line of the source. Project-related operational noise level increases will satisfy the operational noise level increase significance criteria presented in Table 4-1. Therefore, the incremental Project operational noise level increase is considered *less than significant* at all receiver locations.

**TABLE 9-6: DAYTIME PROJECT OPERATIONAL NOISE LEVEL INCREASES**

## 10 CONSTRUCTION IMPACTS

This section analyzes potential impacts resulting from the short-term construction activities associated with the development of the Project. Exhibit 10-A shows the construction noise source locations in relation to the nearest sensitive receiver locations previously described in Section 8.

To prevent high levels of construction noise from impacting noise-sensitive land uses, City of Moreno Valley Municipal Code Section 11.80.030 (D)(7) limits general construction activities within 200 feet of residential uses to weekdays, between 7:00 a.m. and 8:00 p.m. In addition, grading operations shall be limited to the hours identified in Section 8.21.050 (O) of 7:00 a.m. to 6:00 p.m., Monday through Friday, and 8:00 a.m. to 4:00 p.m. on weekends and holidays or as approved by the City Engineer.

### 10.1 CONSTRUCTION NOISE LEVELS

Noise generated by the Project construction equipment will include a combination of trucks, power tools, concrete mixers, and portable generators that when combined can reach high levels. The number and mix of construction equipment is expected to occur in the following stages:

- Site Preparation
- Grading
- Building Construction
- Paving
- Architectural Coating

This construction noise analysis was prepared using reference noise level measurements taken by Urban Crossroads, Inc. to describe the typical construction activity noise levels for each stage of Project construction. The construction reference noise level measurements represent a list of typical construction activity noise levels.

### 10.2 CONSTRUCTION REFERENCE NOISE LEVELS

To describe the Project construction noise levels, measurements were collected for similar activities at several construction sites. Table 10-1 provides a summary of the construction reference noise level measurements. Since the reference noise levels were collected at varying distances of 30 feet and 50 feet, all construction noise level measurements presented on Table 10-1 have been adjusted for consistency to describe a uniform reference distance of 50 feet.

### 10.3 TYPICAL CONSTRUCTION NOISE ANALYSIS

Using the reference construction equipment noise levels and the CadnaA noise prediction model, calculations of the Project construction noise level impacts at the nearest sensitive receiver locations were completed. To assess the worst-case construction noise levels, the Project construction noise analysis relies on the highest noise level impacts when the equipment with the highest reference noise level is operating at the closest point from the edge of primary construction activity (Project site boundary) to each receiver location. As shown on Table 10-2, the construction noise levels are expected to range from 56.3 to 63.7 dBA Leq at the nearest receiver locations and at 200 feet from the property line of the source. Appendix 10.1 includes the detailed CadnaA construction noise model inputs.

TABLE 10-2: TYPICAL CONSTRUCTION EQUIPMENT NOISE LEVEL SUMMARY

Receiver Location <sup>1</sup>	Construction Noise Levels (dBA Leq)					
	Site Preparation	Grading	Building Construction	Paving	Architectural Coating	Highest Levels <sup>2</sup>
R1	61.0	61.9	60.0	56.5	53.6	61.9
R2	55.4	56.3	54.4	50.9	48.0	56.3
R3	57.0	57.9	56.0	52.5	49.6	57.9
R4	56.4	57.3	55.4	52.3	49.0	57.3
R5	59.0	59.9	58.0	54.7	51.6	59.9
at 200'	62.8	63.7	61.8	57.6	55.4	63.7

<sup>1</sup> Noise receiver locations are shown on Exhibit 10-A.

<sup>2</sup> Construction noise level calculations based on distance from the project site boundaries (construction activity area) to the nearest receiver locations. CadnaA construction noise model inputs are included in Appendix 10.1.

## 10.4 TYPICAL CONSTRUCTION NOISE LEVEL COMPLIANCE

The construction noise analysis shows that the nearest receiver locations will satisfy the City of Moreno Valley daytime 65 dBA Leq significance threshold during Project construction activities as shown on Table 10-3. Therefore, the noise impacts due to Project construction noise is considered *less than significant* at all receiver locations and at 200 feet from the property line of the source.

TABLE 10-3: TYPICAL CONSTRUCTION NOISE LEVEL COMPLIANCE

Receiver Location <sup>1</sup>	Construction Noise Levels (dBA Leq)		
	Highest Construction Noise Levels <sup>2</sup>	Threshold <sup>3</sup>	Threshold Exceeded? <sup>4</sup>
R1	61.9	65	No
R2	56.3	65	No
R3	57.9	65	No
R4	57.3	65	No
R5	59.9	65	No

<sup>3</sup> Construction noise level thresholds as shown on Table 4-1.

<sup>4</sup> Do the estimated Project construction noise levels exceed the construction noise level threshold?

## 10.5 NIGHTTIME CONCRETE POUR NOISE ANALYSIS

Nighttime concrete pouring activities may occur as a part of Project construction activities. Nighttime concrete pouring activities are often used to support reduced concrete mixer truck transit times and lower air temperatures than during the daytime hours and are generally limited to the actual buildings area as shown on Exhibit 10-B. Since the nighttime concrete pours may take place outside the permitted City of Moreno Valley Municipal Code, Section 11.80.030 (D)(7)

hours of 7:00 a.m. to 8:00 p.m. on any day and grading is limited to 7:00 a.m. to 6:00 p.m. Monday to Friday and 8:00 a.m. to 4:00 p.m. on weekends and holidays, the Project Applicant will be required to obtain authorization for nighttime work from the City of Moreno Valley. Table 10-4 shows the concrete pour activities (paving) noise will range from 50.9 to 57.6 dBA  $L_{eq}$  at the nearest sensitive receiver locations and at 200 feet from the property line of the source. Therefore, the unmitigated nighttime concrete pour noise level impacts are considered *less than significant* at the nearest noise-sensitive receiver locations and at 200 feet from the property line.

**TABLE 10-4: NIGHTTIME CONCRETE POUR NOISE LEVEL COMPLIANCE**

Receiver Location <sup>1</sup>	Construction Noise Levels (dBA $L_{eq}$ )		
	Paving Construction <sup>2</sup>	Nighttime Construction Standard <sup>3</sup>	Threshold Exceeded? <sup>4</sup>
R1	56.5	60	No

<sup>3</sup> Construction noise level standards as shown on Table 3-2.

<sup>4</sup> Do the estimated Project construction noise levels exceed the construction noise level threshold?

## 10.6 TYPICAL CONSTRUCTION VIBRATION IMPACTS

Construction activity can result in varying degrees of ground vibration, depending on the equipment and methods used, distance to the affected structures and soil type. It is expected that ground-borne vibration from Project construction activities would cause only intermittent, localized intrusion. Ground-borne vibration levels resulting from typical construction activities occurring within the Project site were estimated by data published by the Federal Transit Administration (FTA). (7) However, while vehicular traffic is rarely perceptible, construction has the potential to result in varying degrees of temporary ground vibration, depending on the specific construction activities and equipment used. Ground vibration levels associated with various types of construction equipment are summarized on Table 10-5. Based on the representative vibration levels presented for various construction equipment types, it is possible to estimate the potential Project construction vibration levels using the following vibration assessment methods defined by the FTA. To describe the human response (annoyance) associated with vibration impacts the FTA provides the following equation:  $L_{vdB}(D) = L_{vdB}(25 \text{ ft}) - 30\log(D/25)$

**EXHIBIT 10-B: NIGHTTIME CONCRETE POUR NOISE SOURCE AND RECEIVER LOCATIONS**

- LEGEND:**

  - Existing Barrier
  - Existing Barrier Height (in feet)

Attachment: Appendix J-Noise Study (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

**TABLE 10-5: VIBRATION SOURCE LEVELS FOR CONSTRUCTION EQUIPMENT**

Equipment	Vibration Decibels (VdB) at 25 feet
Small bulldozer	58
Jackhammer	79
Loaded Trucks	86
Large bulldozer	87

Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual

Table 10-6 presents the expected typical construction equipment vibration levels at the nearest receiver locations. At distances ranging from 152 feet to 1,023 feet from typical Project construction activities (at the Project site boundary), construction vibration levels are estimated to range from 38.6 to 63.5 VdB and will remain below the FTA Transit Noise and Vibration Impact Assessment maximum acceptable vibration criteria of 78 VdB for daytime residential uses, and 84 VdB for daytime office use at all receiver locations and at 200 feet from the property line of the source. Therefore, the Project-related vibration impacts are considered *less than significant* during typical construction activities at the Project site.

**TABLE 10-6: TYPICAL CONSTRUCTION EQUIPMENT VIBRATION LEVELS**

Receiver Location <sup>1</sup>	Distance to Construction Activity (Feet)	Receiver Vibration Levels (VdB) <sup>2</sup>					Threshold VdB <sup>3</sup>	Threshold Exceeded? <sup>4</sup>
		Small Bulldozer	Jack-hammer	Loaded Trucks	Large Bulldozer	Highest Vibration Levels		
R1	152'	34.5	55.5	62.5	63.5	63.5	78	No
R2	1,023'	9.6	30.6	37.6	38.6	38.6	78	No
R3	744'	13.8	34.8	41.8	42.8	42.8	84	No
R4	784'	13.1	34.1	41.1	42.1	42.1	78	No
R5	217'	29.8	50.8	57.8	58.8	58.8	78	No
at 200'	200'	30.9	51.9	58.9	59.9	59.9	78	No

<sup>1</sup> Noise receiver locations are shown on Exhibit 10-A.

<sup>2</sup> Based on the Vibration Source Levels of Construction Equipment included on Table 10-5.

<sup>3</sup> FTA Transit Noise and Vibration Impact Assessment maximum acceptable vibration criteria as shown in Section 3.5.

<sup>4</sup> Does the vibration level exceed the maximum acceptable vibration threshold?

Further, vibration levels at the site of the closest sensitive receiver are unlikely to be sustained during the entire construction period but will occur rather only during the times that heavy construction equipment is operating simultaneously adjacent to the Project site perimeter.

## Chapter 11.80 NOISE REGULATION

### 11.80.010 Legislative findings.

It is found and declared that:

- A. Excessive sound within the limits of the city is a condition which has existed for some time, and the amount and intensity of such sound is increasing.
- B. Such excessive sound is a detriment to the public health, safety, and welfare and quality of life of the residents of the city.
- C. The necessity in the public interest for the provisions and prohibitions hereinafter contained and enacted is declared as a matter of legislative determination and public policy, and it is further declared that the provisions and prohibitions hereinafter contained and enacted are in pursuance of and for the purpose of securing and promoting the public health, safety, welfare and quality of life of the city and its inhabitants. (Ord. 740 § 1.2, 2007)

### 11.80.020 Definitions.

For purposes of this chapter, certain words and phrases used herein are defined as follows:

“A-weighted sound level” means the sound pressure level in decibels as measured with a sound level meter using the A-weighting network. The unit of measurement is the dB(A).

“Commercial” means all uses of land not otherwise classified as residential, as defined in this section.

“Construction” means any site preparation, and/or any assembly, erection, repair, or alteration, excluding demolition, of any structure, or improvements to real property.

“Continuous airborne sound” means sound that is measured by the slow-response setting of a meter manufactured to the specifications of ANSI Section 1.4-1983 (R2006) “Specification for Sound Level Meters,” or its successor.

“Daytime” means eight a.m. to ten p.m. the same day.

“Decibel” (dB) means a unit for measuring the amplitude of sound, equal to twenty (20) times the logarithm to the base ten (10) of the ratio of the pressure of the sound measured to the reference pressure, which is twenty (20) microPascals (twenty (20) microNewtons per square meter.)

“Demolition” means any dismantling, intentional destruction or removal of structures or other improvements to real property.

“Disturb” means to interrupt, interfere with, or hinder the enjoyment of peace or quiet or the normal listening activities or the sleep, rest or mental concentration of the hearer.

“Emergency” means any occurrence or set of circumstances involving actual or imminent physical trauma or significant property damage which necessitates immediate action. Economic loss alone shall not constitute an emergency. It shall be the burden of an alleged violator to prove an “emergency.”

“Emergency work” means any work made necessary to restore property to a safe condition following an emergency, or to protect persons or property threatened by an imminent emergency, to the extent such work is, in fact, necessary to protect persons or property from exposure to imminent danger or damage.

“Frequency” means the number of complete oscillation cycles per unit of time.

“Impulsive sound” means sound of short duration, usually less than one second, with an abrupt onset and rapid decay. Examples of sources of impulsive sound include explosions, drop forge impacts, and discharge of firearms.

“Nighttime” means 10:01 p.m. to 7:59 a.m. the following day.

“Noise disturbance” means any sound which:

1. Disturbs a reasonable person of normal sensitivities;

- 2. Exceeds the sound level limits set forth in this chapter; or
- 3. Is plainly audible as defined in this section. Where no specific distance is set forth for the determination of audibility, references to noise disturbance shall be deemed to mean plainly audible at a distance of two hundred (200) feet from the real property line of the source of the sound, if the sound occurs on privately owned property, or from the source of the sound, if the sound occurs on public right-of-way, public space or other publicly owned property.

“Person” means any person, person’s firm, association, copartnership, joint venture, corporation, or any entity public or private in nature.

“Plainly audible” means that the sound or noise produced or reproduced by any particular source, can be clearly distinguished from ambient noise by a person using his/her normal hearing faculties.

“Public right-of-way” means any street, avenue, boulevard, sidewalk, bike path or alley, or similar place normally accessible to the public which is owned or controlled by a governmental entity.

“Public space” means any park, recreational or community facility, or lot which contains at least one building that is open to the general public during its hours of operation.

“Residential” means all uses of land primarily for dwelling units, as well as hospitals, schools, colleges and universities, and places of religious assembly.

“Sound” means an oscillation in pressure, particle displacement, particle velocity or other physical parameter, in a medium with internal forces that causes compression and rarefaction of that medium capable of producing an auditory impression. The description of sound may include any characteristic of such sound, including duration, intensity and frequency.

“Sound level” means the weighted sound pressure level as measured in dB(A) by a sound level meter and as specified in American National Standards Institute (ANSI) specifications for sound-level meters (ANSI Section 1.4-1971 (R1976)). If the frequency weighting employed is not indicated, the A-weighting shall apply.

“Sound level meter” means an instrument, demonstrably capable of accurately measuring sound levels as defined above.

All technical definitions not defined above shall be in accordance with applicable publications and standards of the American National Standards Institute (ANSI). (Ord. 740 § 1.2, 2007)

**11.80.030 Prohibited acts.**

A. General Prohibition. It is unlawful and a violation of this chapter to maintain, make, cause, or allow the making of any sound that causes a noise disturbance, as defined in Section [11.80.020](#).

B. Sound causing permanent hearing loss.

1. Sound level limits. Based on statistics from the Center for Disease Control and Prevention and the National Institute for Occupational Safety and Health, Table 1 and Table 1-A specify sound level limits which, if exceeded, will have a high probability of producing permanent hearing loss in anyone in the area where the sound levels are being exceeded. No sound shall be permitted within the city which exceeds the parameters set forth in Tables 11.80.030-1 and 11.80.030-1-A of this chapter:

**Table 11.80.030-1  
MAXIMUM CONTINUOUS SOUND LEVELS\***

<b>Duration per Day</b>	
<b>Continuous Hours</b>	<b>Sound level [db(A)]</b>
8	90
6	92
4	95
3	97

2	100
1.5	102
1	105
0.5	110
0.25	115

\* When the daily sound exposure is composed of two or more periods of sound exposure at different levels, the combined effect of all such periods shall constitute a violation of this section if the sum of the percent of allowed period of sound exposure at each level exceeds 100 percent

**Table 11.80.030-1A  
MAXIMUM IMPULSIVE SOUND  
LEVELS**

<b>Number of Repetitions per 24-Hour Period</b>	<b>Sound level [dB(A)]</b>
1	145
10	135
100	125

2. Exemptions. No violation shall exist if the only persons exposed to sound levels in excess of those listed in Tables 11.80.030-1 and 11.80.030-1A are exposed as a result of:

- a. Trespass;
- b. Invitation upon private property by the person causing or permitting the sound; or
- c. Employment by the person or a contractor of the person causing or permitting the sound.

C. Nonimpulsive Sound Decibel Limits. No person shall maintain, create, operate or cause to be operated on private property any source of sound in such a manner as to create any nonimpulsive sound which exceeds the limits set forth for the source land use category (as defined in Section 11.80.020) in Table 11.80.030-2 when measured at a distance of two hundred (200) feet or more from the real property line of the source of the sound, if the sound occurs on privately owned property, or from the source of the sound, if the sound occurs on public right-of-way, public space or other publicly owned property. Any source of sound in violation of this subsection shall be deemed prima facie to be a noise disturbance.

**Table 11.80.030-2  
MAXIMUM SOUND LEVELS (IN dB(A)) FOR SOURCE LAND USES**

<b>Residential</b>		<b>Commercial</b>	
<b>Daytime</b>	<b>Nighttime</b>	<b>Daytime</b>	<b>Nighttime</b>
60	55	65	60

D. Specific Prohibitions. In addition to the general prohibitions set out in subsection A of this section, and unless otherwise exempted by this chapter, the following specific acts, or the causing or permitting thereof, are regulated as follows:

1. Motor Vehicles. No person shall operate or cause to be operated a public or private motor vehicle, or combination of vehicles towed by a motor vehicle, that creates a sound exceeding the sound level limits in Table 11.80.030-2 when the vehicle(s) are not otherwise subject to noise regulations provided for by the California [Vehicle Code](#).

2. Radios, Televisions, Electronic Audio Equipment, Musical Instruments or Similar Devices from a Stationary Source. No person shall operate, play or permit the operation or playing of any radio, tape player, television, electronic audio equipment, musical instrument, sound amplifier or other mechanical or electronic sound making device that produces, reproduces or amplifies sound in such a manner as to create a noise disturbance. However, this subsection shall not apply to any use or activity exempted in subsection E of this section and any use or activity for which a special permit has been issued pursuant to Section [11.80.040](#).

3. Radios, Electronic Audio Equipment, or Similar Devices from a Mobile Source Such as a Motor Vehicle. Sound amplification or reproduction equipment on or in a motor vehicle is subject to regulation in accordance with the California [Vehicle Code](#) when upon the public right-of-way. When upon public space or publicly owned property other than the public right-of-way or upon private property open to the public, sound amplification or reproduction equipment shall not be operated in such a manner that it is plainly audible at a distance of fifty (50) feet in any direction from the vehicle.

4. Portable, Hand-Held Music or Sound Amplification or Reproduction Equipment. Such equipment shall not be operated on a public right-of-way, public space or other publicly owned property in such a manner as to be plainly audible at a distance of fifty (50) feet in any direction from the operator.

5. Loudspeakers and Public Address Systems.

a. Except as permitted by Section [11.80.040](#), no person shall operate, or permit the operation of, any loudspeaker, public address system or similar device, for any commercial purpose:

1. Which produces, reproduces or amplifies sound in such a manner as to create a noise disturbance; or
2. During nighttime hours on a public right-of-way, public space or other publicly owned property.

b. No person shall operate, or permit the operation of, any loudspeaker, public address system or similar device, for any noncommercial purpose, during nighttime hours in such a manner as to create a noise disturbance.

6. Animals. No person shall own, possess or harbor an animal or bird that howls, barks, meows, squawks, or makes other sounds that:

- a. Create a noise disturbance;
- b. Are of frequent or continued duration for ten (10) or more consecutive minutes and are plainly audible at a distance of fifty (50) feet from the real property line of the source of the sound; or
- c. Are intermittent for a period of thirty (30) or more minutes and are plainly audible at a distance of fifty (50) feet from the real property line of the source of the sound.

7. Construction and Demolition. No person shall operate or cause the operation of any tools or equipment used in construction, drilling, repair, alteration or demolition work between the hours of eight p.m. and seven a.m. the following day such that the sound there from creates a noise disturbance, except for emergency work by public service utilities or for other work approved by the city manager or designee. This section shall not apply to the use of power tools as provided in subsection (D)(9) of this section.

8. Emergency Signaling Devices. No person shall intentionally sound or permit the sounding outdoors of any fire, burglar or civil defense alarm, siren or whistle, or similar stationary emergency signaling device, except for emergency purposes or for testing as follows:

- a. Testing of a stationary emergency signaling device shall not occur between seven p.m. and seven a.m. the following day;
- b. Testing of a stationary emergency signaling device shall use only the minimum cycle test time, in no case to exceed sixty (60) seconds;
- c. Testing of a complete emergency signaling system, including the functioning of the signaling device and the personnel response to the signaling device, shall not occur more than once in each calendar month. Such testing shall only occur only on weekdays between seven a.m. and seven p.m. and shall be exempt from the time limit specified in subsection (D)(8)(2) of this section.

9. Power Tools. No person shall operate or permit the operation of any mechanically, electrically or gasoline motor-driven tool during nighttime hours so as to cause a noise disturbance across a residential real property boundary.

10. Pumps, Air Conditioners, Air-Handling Equipment and Other Continuously Operating Equipment. Notwithstanding the general prohibitions of subsection a of this section, no person shall operate or permit the operation of any pump, air

conditioning, air-handling or other continuously operating motorized equipment in a state of disrepair or in a manner which otherwise creates a noise disturbance distinguishable from normal operating sounds.

**E. Exemptions. The following uses and activities shall be exempt from the sound level regulations except the maximum sound levels provided in Tables 11.80.030-1 and 11.80.030-1A:**

1. Sounds resulting from any authorized emergency vehicle when responding to an emergency call or acting in time of an emergency.
  2. Sounds resulting from emergency work as defined in Section [11.80.020](#)
  3. Any aircraft operated in conformity with, or pursuant to, federal law, federal air regulations and air traffic control instruction used pursuant to and within the duly adopted federal air regulations; and any aircraft operating under technical difficulties in any kind of distress, under emergency orders of air traffic control, or being operated pursuant to and subsequent to the declaration of an emergency under federal air regulations.
  4. All sounds coming from the normal operations of interstate motor and rail carriers, to the extent that local regulation of sound levels of such vehicles has been preempted by the Noise Control Act of 1972 (42 U.S.C. § 4901 et seq.) or other applicable federal laws or regulations
  5. Sounds from the operation of motor vehicles, to the extent they are regulated by the California [Vehicle Code](#).
  6. Any constitutionally protected noncommercial speech or expression conducted within or upon a any public right-of-way, public space or other publicly owned property constituting an open or a designated public forum in compliance with any applicable reasonable time, place and manner restrictions on such speech or expression or otherwise pursuant to legal authority.
  7. Sounds produced at otherwise lawful and permitted city-sponsored events, organized sporting events, school assemblies, school playground activities, by permitted fireworks, and by permitted parades on public right-of-way, public space or other publicly owned property.
  8. An event for which a temporary use permit or special event permit has been issued under other provisions of this code, where the provisions of Section [11.80.040](#) are met, the permit granted expressly grants an exemption from specific standards contained in this chapter, and the permittee and all persons under the permittee's reasonable control actually comply with all conditions of such permit. Violation of any condition of such a permit related to sound or sound equipment shall be a violation of this chapter and punishable as such.
- F. Nothing in this chapter shall be construed to limit, modify or repeal any other regulation elsewhere in this code relating to the regulation of noise sources, nor shall any such other regulation be read to permit the emission of noise in violation of any provision of this chapter. (Ord. 740 § 1.2, 2007)

#### **11.80.040 Special provisions for temporary use and special event permits.**

The exemption by permit set forth in Section [11.80.030](#)(E)(8) shall be subject to the following requirements and conditions:

- A. The permit application shall include the name, address and telephone number of the permit applicant; the date, hours and location for which the permit is requested; and the nature of the event or activity. It shall also specify the types of sounds and/or sound equipment to be permitted, the proposed duration of such sound, the specific standards from which the sound is to be exempted, and the reasons for each requested exemption.
- B. The permit shall be issued provided the proposed activity meets the requirements of this section and the issuing official determines that the sound to be emitted at the event as proposed would not be detrimental to the public health, safety or welfare, that the event cannot reasonably achieve its legitimate aims and purposes without the exemption and that the sound levels proposed will not unreasonably damage the peace and quiet enjoyment of the lawful users of surrounding properties, nor constitute a public nuisance.
- C. The official issuing the permit may prescribe any reasonable conditions or requirements he/she deems necessary to minimize noise disturbances upon the community or the surrounding neighborhood, and/or to protect the health, safety or welfare of the public, including participants in the permitted event, including use of mufflers, screens or other sound-attenuating devices.
- D. Any permit granted must be in writing and shall contain all conditions upon which the permit shall be effective.

E. No more than six events requiring a sound limit exemption may be held at any particular location upon privately owned or controlled property per calendar year, provided further that the number of events shall not exceed the number permitted under the regulations for the type of permit issued. For purposes of this subsection, “location” means a legal parcel of real property or a complete shopping or commercial center or mall sharing common parking and access even if comprised of multiple legal parcels.

F. The exemption from sound limits under such permit shall not exceed maximum period of four hours in one twenty-four (24) hour day.

G. The permit will only be granted for hours between nine a.m. and ten p.m. on all days other than Friday and Saturday; and, on Friday and Saturday, between the hours of nine a.m. and one a.m. of the following day, except in the following circumstances:

1. A permit may be granted for hours between nine a.m. on New Year’s Eve and one a.m. the following day (New Year’s Day).

2. A permit may be granted for hours between nine a.m. and two a.m. the following day if there are no residences, hospitals, or nursing homes within a 0.5 mile radius of the property where the function is taking place.

H. Functions for which the permits are issued shall be limited to a continuous airborne sound level not to exceed seventy (70) dB(A), as measured two hundred (200) feet from the real property boundary of the source property if on private property, or from the source if on public right-of-way, public space or other publicly owned property. (Ord. 740 § 1.2, 2007)

### **11.80.050 Measurement or assessment of sound.**

#### **A. Measurement With Sound Meter.**

1. The measurement of sound shall be made with a sound level meter meeting the standards prescribed by ANSI Section 1.4-1983 (R2006). The instruments shall be maintained in calibration and good working order. A calibration check shall be made of the system at the time of any sound level measurement. Measurements recorded shall be taken so as to provide a proper representation of the source of the sound. The microphone during measurement shall be positioned so as not to create any unnatural enhancement or diminution of the measured sound. A windscreen for the microphone shall be used at all times. However, a violation of this chapter may occur without the occasion of the measurements being made as otherwise provided.

2. The slow meter response of the sound level meter shall be used in order to best determine the average amplitude.

3. The measurement shall be made at any point on the property into which the sound is being transmitted and shall be made at least three feet away from any ground, wall, floor, ceiling, roof and other plane surface.

4. In case of multiple occupancy of a property, the measurement may be made at any point inside the premises to which any complainant has right of legal private occupancy; provided that the measurement shall not be made within three feet of any ground, wall, floor, ceiling, roof or other plane surface.

5. All measurements of sound provided for in this chapter will be made by qualified officials of the city who are designated by the city manager or designee to operate the apparatus used to make the measurements.

**B. Assessment Without Sound Level Meter.** Any police officer, code enforcement officer, or other official designated by the city manager or designee who hears a noise or sound that is plainly audible, as defined in Section [11.80.020](#), in violation of this chapter, may enforce this chapter and shall assess the noise or sound according to the following standards:

1. The primary means of detection shall be by means of the official’s normal hearing faculties, not artificially enhanced.

2. The official shall first attempt to have a direct line of sight and hearing to the vehicle or real property from which the sound or noise emanates so that the official can readily identify the offending source of the sound or noise and the distance involved. If the official is unable to have a direct line of sight and hearing to the vehicle or real property from which the sound or noise emanates, then the official shall confirm the source of the sound or noise by approaching the suspected vehicle or real property until the official is able to obtain a direct line of sight and hearing, and confirm the source of the sound or noise that was heard at the place of the original assessment of the sound or noise.

3. The official need not be required to identify song titles, artists, or lyrics in order to establish a violation. (Ord. 740 § 1.2, 2007)

#### **11.80.060 Violation.**

---

A. **Violation of Sound Level Limits.** Any person violating any of the provisions of this chapter shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be punishable by a fine not to exceed one thousand dollars (\$1,000.00) and/or six months in the county jail, or both. Notwithstanding the foregoing, any violation of the provisions of this chapter may, in the discretion of the citing officer or the city attorney, be cited and/or prosecuted as an infraction or be subject to civil citation pursuant to Chapter [1.10](#).

B. **Joint and Several Responsibility.** In addition to the person causing the offending sound, the owner, tenant or lessee of property, or a manager, overseer or agent, or any other person lawfully entitled to possess the property from which the offending sound is emitted at the time the offending sound is emitted, shall be responsible for compliance with this chapter if the additionally responsible party knows or should have known of the offending noise disturbance. It shall not be a lawful defense to assert that some other person caused the sound. The lawful possessor or operator of the premises shall be responsible for operating or maintaining the premises in compliance with this chapter and may be cited regardless of whether or not the person actually causing the sound is also cited.

C. **Violation May be Declared a Public Nuisance.** The operation or maintenance of any device, equipment, instrument, vehicle or machinery in violation of any provisions of this chapter which endangers the public health, safety and quality of life of residents in the area is declared to be a public nuisance, and may be subject to abatement summarily or by a restraining order or injunction issued

by a court of competent jurisdiction. (Ord. 824 § 1.2, 2011; Ord. 740 § 1.2, 2007)

### 24-Hour Noise Level Measurement Summary

Date: Wednesday, September 16, 2020  
Project: Compass Danbe Centerpointe

Location: L4 - Located northwest of the Project site on Fredrick Street near existing single-family residential home at 13979 Frederick Street.

Meter: Piccolo II

JN: 13661  
Analyst: P. Mara

## Calculation Configuration

Configuration	
Parameter	Value
General	
Country	(user defined)
Max. Error (dB)	0.00
Max. Search Radius (#(Unit,LEN))	2000.01
Min. Dist Src to Rcvr	0.00
Partition	
Raster Factor	0.50
Max. Length of Section (#(Unit,LEN))	999.99
Min. Length of Section (#(Unit,LEN))	1.01
Min. Length of Section (%)	0.00
Proj. Line Sources	On
Proj. Area Sources	On
Ref. Time	
Reference Time Day (min)	960.00
Reference Time Night (min)	480.00
Daytime Penalty (dB)	0.00
Recr. Time Penalty (dB)	5.00
Night-time Penalty (dB)	10.00
DTM	
Standard Height (m)	0.00
Model of Terrain	Triangulation
Reflection	
max. Order of Reflection	2
Search Radius Src	100.00
Search Radius Rcvr	100.00
Max. Distance Source - Rcvr	1000.00 1000.00
Min. Distance Rcvr - Reflector	1.00 1.00
Min. Distance Source - Reflector	0.10
Industrial (ISO 9613)	
Lateral Diffraction	some Obj
Obst. within Area Src do not shield	On
Screening	
	Incl. Ground Att. over Barrier
	Dz with limit (20/25)
Barrier Coefficients C1,2,3	3.0 20.0 0.0
Temperature (#(Unit,TEMP))	10
rel. Humidity (%)	70
Ground Absorption G	0.50
Wind Speed for Dir. (#(Unit,SPEED))	3.0
Roads (RLS-90)	
Strictly acc. to RLS-90	
Railways (FTA/FRA)	
Aircraft (???)	
Strictly acc. to AzB

# 1 SUMMARY OF FINDINGS

This report presents the results of the traffic analysis (TA) for the proposed Alessandro Warehouse development (“Project”) located south of Alessandro Boulevard on either side of Chagall Court in the City of Moreno Valley as shown on Exhibit 1-1.

The purpose of this traffic analysis is to evaluate the potential circulation system deficiencies that may result from the development of the proposed Project, to recommend improvements to achieve acceptable circulation system operational conditions, and determine conformance with the General Plan goals and policies. This traffic study has been prepared in accordance with the City of Moreno Valley Transportation Engineering Division’s Traffic Impact Analysis Preparation Guide (June 2020) and consultation with City of Moreno Valley staff during the scoping process. (1) The approved Project Traffic Study Scoping agreement is provided in Appendix 1.1 of this TA.

## 1.1 SUMMARY OF FINDINGS

The Project is proposing to construct the following improvements as design features in conjunction with development of the site:

- Project to construct Alessandro Boulevard at its ultimate half-section width as a divided major arterial (134-foot right-of-way) between the Project’s western and eastern boundaries in compliance with applicable City of Moreno Valley standards.
- Project to construct Driveway 1, Driveway 2, and Driveway 3 with stop controls for the northbound traffic in order to facilitate site access. All driveways will be restricted to right-in/right-out access only. If receiving lanes are available to the west and east, the third eastbound through lane should also be striped per the ultimate roadway cross-section.
- The Project should modify the existing eastbound left turn pocket at the intersection of Graham Street and Alessandro Boulevard to accommodate a 250-foot left turn lane.

Additional details and intersection lane geometrics are provided in Section 1.6 *Recommended Improvements* of this report.

## 1.2 PROJECT OVERVIEW

In an effort to calculate and evaluate a conservative trip generation for the proposed Project, the following mix of uses have been evaluated for the Project:

- Building 1: 206,665 square feet (sf) of warehousing (70% of total building sf) and 88,571 sf of high-cube cold storage warehouse use (30% of total building sf) for a total of 295,236 sf for Building 1
- Building 2: 70,876 sf of warehousing (70% of total building sf) and 30,376 sf of high-cube cold storage warehouse use (30% of total building sf) for a total of 101,252 sf for Building 2

The Project will be developed in a single phase and has a projected Opening Year of 2022. Vehicular access will be provided via 3 driveways along Alessandro Boulevard (see Exhibit 1-1). All driveways are proposed to be restricted to right-in/right-out access only.

EXHIBIT 1-1: PRELIMINARY SITE PLAN

LEGEND:

- RIRO = RIGHT-IN/RIGHT-OUT ONLY ACCESS
- FULL = FULL ACCESS
- P = PASSENGER CARS ONLY
- PT = PASSENGER CARS AND TRUCKS

13276 - siteplan.dwg

Trips generated by the Project's proposed land uses have been estimated based on trip generation rates collected by the Institute of Transportation Engineers (ITE) Trip Generation Manual, 10<sup>th</sup> Edition, 2017. (2) The Project is estimated to generate a net total of 742 trip-ends per day on a typical weekday with approximately 59 AM peak hour trips and 64 PM peak hour trips (actual vehicles). The assumptions and methods used to estimate the Project's trip generation characteristics are discussed in greater detail in Section 4.1 *Project Trip Generation* of this report.

### 1.2.1 SITE PLAN DRIVEWAY LOCATIONS

As shown on Exhibit 1-1 and based on the City of Moreno Valley General Plan classification as a Divided Major Arterial, all driveways are anticipated to meet the minimum required driveway spacing of 250-feet between driveways per the City of Moreno Valley Municipal Code (9.11.080-14). However, access at these driveways will be restricted to right-in/right-out access only due to the existing raised median between Frederick Street and Graham Street.

## 1.3 ANALYSIS SCENARIOS

For the purposes of this traffic study, potential deficiencies to traffic and circulation have been assessed for each of the following conditions:

- Existing (2020)
- Existing plus Ambient Growth plus Project (EAP)

### 1.3.1 EXISTING (2020) CONDITIONS

Information for Existing (2020) conditions is disclosed to represent the baseline traffic conditions as they existed at the time this report was prepared. Due to the currently ongoing COVID-19 pandemic, schools and businesses within the study area were closed or operating at less than full capacity at the time this study was prepared. As such, historic traffic counts from 2018 were utilized in conjunction with a 4.04% growth factor to reflect 2020 conditions (2% per year, compounded annually).

### 1.3.2 EAP (2022) CONDITIONS

To account for growth in traffic between Existing (2020) and EAP (2022) traffic conditions, a compounded annual traffic growth rate of 2.0 percent per year compounded annually was assumed (4.04 percent total aggregate growth in background traffic for the period from 2020 through 2022). The 2.0 percent annual growth rate is intended to capture non-specific ambient traffic growth. The purpose of this analysis scenario is to determine if the addition of Project traffic is anticipated to result in any new deficiencies.

## 1.4 STUDY AREA

To ensure that this TA satisfies the City of Moreno Valley's traffic study requirements, Urban Crossroads, Inc. prepared a project traffic study scoping package for review by City of Moreno Valley staff prior to the preparation of this report.

The 5 study area intersections shown on Exhibit 1-2 and listed in Table 1-1 were selected for this TA based on the City of Moreno Valley's Traffic Study Guidelines and in consultation with City of Moreno Valley staff. Pursuant to the Traffic Study Guidelines, the City requires analysis of intersections where the Project would contribute 50 or more peak hour trips.<sup>1</sup> In an effort to conduct a conservative analysis, the trip generation for the proposed Project has been utilized to determine if the 50 peak hour trip criteria has been met at the study area intersections.

**TABLE 1-1: INTERSECTION ANALYSIS LOCATIONS**

ID	Intersection Location	Jurisdiction	CMP?
1	Frederick St. & Alessandro Bl.	City of Moreno Valley	No
2	Driveway 1 & Alessandro Bl. – Future Intersection	City of Moreno Valley	No
3	Driveway 2 & Alessandro Bl. – Future Intersection	City of Moreno Valley	No
4	Driveway 3 & Alessandro Bl. – Future Intersection	City of Moreno Valley	No
5	Graham St. & Alessandro Bl.	City of Moreno Valley	No

The intent of a Congestion Management Program (CMP) is to more directly link land use, transportation, and air quality, thereby prompting reasonable growth management programs that will effectively utilize new transportation funds, alleviate traffic congestion and related deficiencies, and improve air quality. Counties within California have developed CMPs with varying methods and strategies to meet the intent of the CMP legislation. The County of Riverside CMP became effective with the passage of Proposition 111 in 1990 and updated most recently in 2011. The Riverside County Transportation Commission (RCTC) adopted the 2011 CMP for the County of Riverside in December 2011. (3) There are no CMP intersections in this study area.

<sup>1</sup> The "50 or more peak hour trips" intersection analytic protocol stipulated in the City's Traffic Study Guidelines is consistent with standard industry practice. It is noted further that the 50 peak hour trip threshold is employed by other agencies throughout Southern California including the County of Riverside, County of San Bernardino, and the County of Orange.

EXHIBIT 1-2: LOCATION MAP

LEGEND:

-  = EXISTING INTERSECTION ANALYSIS LOCATION
-  = FUTURE INTERSECTION ANALYSIS LOCATION

13276 - locmap.dwg

## 1.5 ANALYSIS FINDINGS

This section provides a summary of analysis findings. Section 2 *Methodologies* provides information on the methodologies used in the analysis and Section 5 *EAP (2022) Traffic Analysis* includes the detailed analysis. A summary of LOS results for all analysis scenarios is presented on Exhibit 1-3. Based on a comparison of Existing to EAP (2022) traffic conditions, the addition of Project traffic is not anticipated result in any deficiencies at the study area intersections. All study area intersections are anticipated to continue to operate at acceptable levels and no improvements are necessary for EAP (2022) traffic conditions.

## 1.6 RECOMMENDED IMPROVEMENTS

### 1.6.1 SITE ADJACENT ROADWAY IMPROVEMENTS

The recommended site-adjacent roadway improvements for the Project are described below. Exhibit 1-4 illustrates the site-adjacent roadway improvement recommendations.

**Alessandro Boulevard** – Alessandro Boulevard is an east-west oriented roadway located along the Project’s northern boundary. Construct Alessandro Boulevard at its ultimate half-section width as a Divided Major Arterial (134-foot right-of-way) between the Project’s western boundary and the Project’s eastern boundary in compliance with applicable City of Moreno Valley standards.

On-site traffic signing and striping should be implemented in conjunction with detailed construction plans for the Project site.

Sight distance at each project access point should be reviewed with respect to standard Caltrans and City of Moreno Valley sight distance standards at the time of preparation of final grading, landscape and street improvement plans.

**EXHIBIT 1-3: SUMMARY OF LOS**

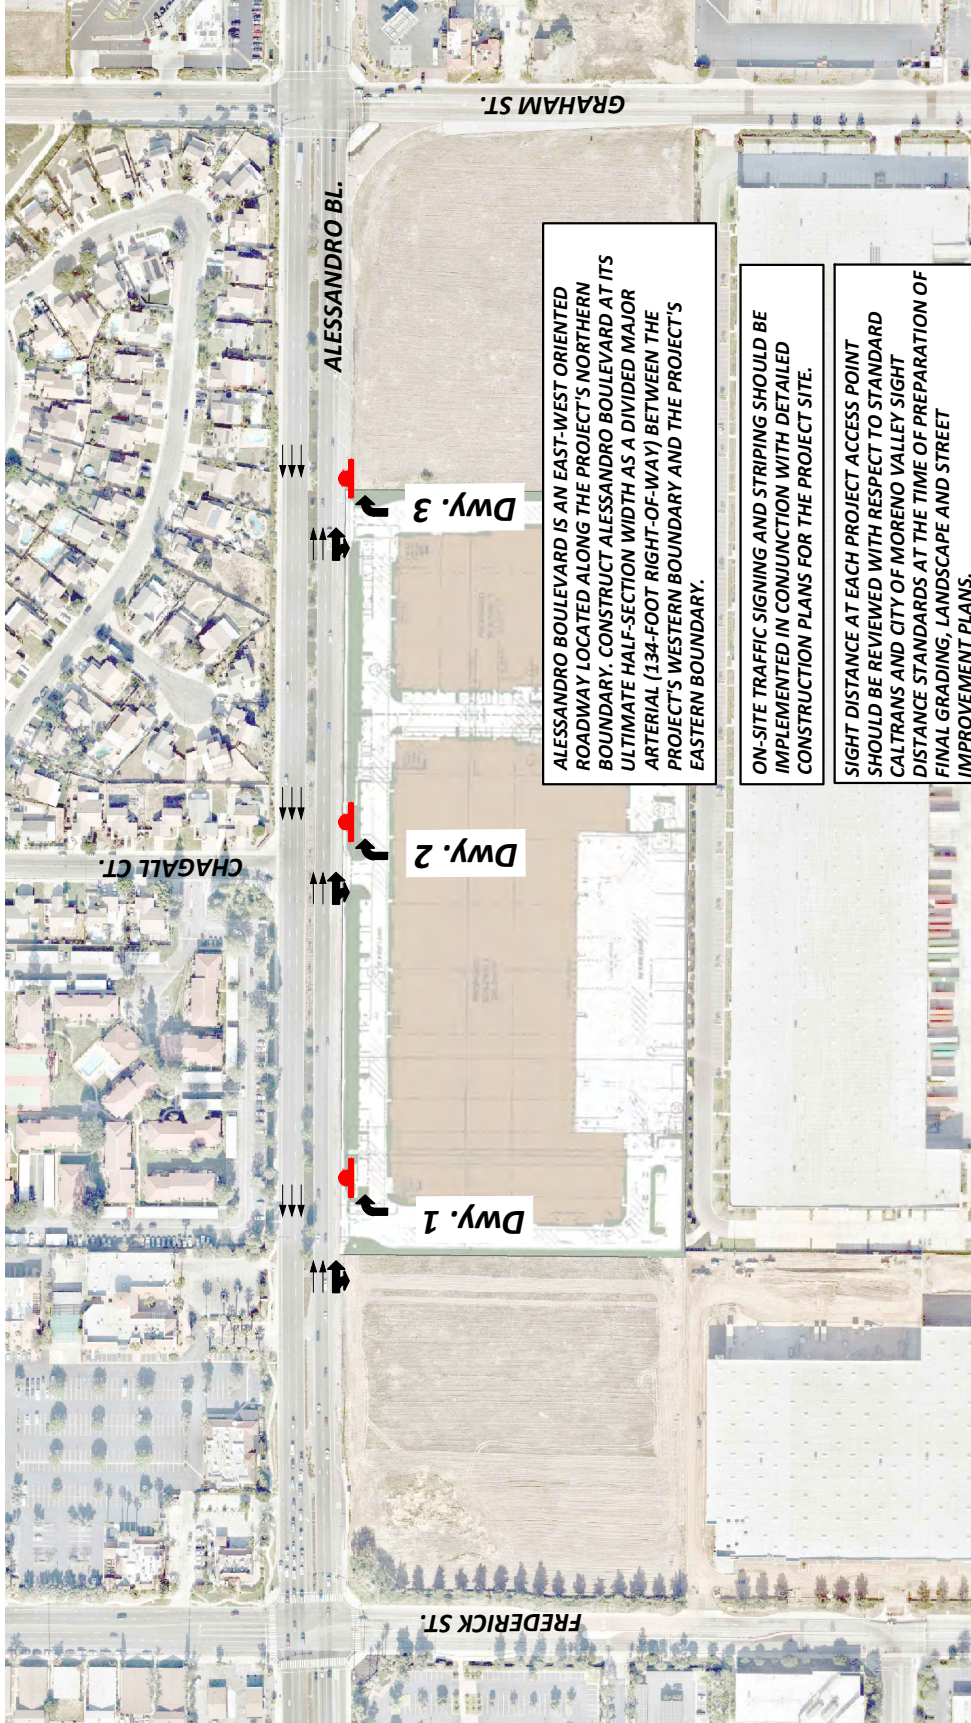

#	Intersection	Existing (2020)	EAP (2022)
1	Frederick St. & Alessandro Bl.		
2	Dwy. 1 & Alessandro Bl.	NA	
3	Dwy. 2 & Alessandro Bl.	NA	
4	Dwy. 3 & Alessandro Bl.	NA	
5	Graham St. & Alessandro Bl.		

**LEGEND:**

- NA = NOT AN ANALYSIS LOCATION FOR THIS SCENARIO

Attachment: Appendix K1-Traffic Impact Analysis (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

EXHIBIT 1-4: SITE ADJACENT ROADWAY AND SITE ACCESS RECOMMENDATIONS

## 1.6.2 SITE ACCESS IMPROVEMENTS

The recommended site access driveway improvements for the Project are described below. Exhibit 1-4 also illustrates the site access improvements. Construction of on-site and site adjacent improvements shall occur in conjunction with adjacent Project development activity or as needed for Project access purposes.

**Driveway 1, Driveway 2, and Driveway 3 on Alessandro Boulevard** – Install a stop control on the northbound approach and construct the intersection with the following geometrics:

- Northbound Approach: One right turn lane.
- Southbound Approach: Not Applicable (N/A)
- Eastbound Approach: Two through lanes and one shared through-right turn lane. 3<sup>rd</sup> shared through-right turn lane should be accommodated if the receiving lanes are in place on either side of the project between Frederick Street and Graham Street.
- Westbound Approach: Three through lanes.

**Graham Street at Alessandro Boulevard** – A queueing analysis has been evaluated during the morning and evening peak hours at the intersection of Graham Street and Alessandro Boulevard to determine if there is sufficient stacking in the northbound and eastbound left turn pockets to accommodate Project traffic. The northbound left turn lane on Graham Street provides 185-feet of stacking while the eastbound left turn lane on Alessandro Boulevard provides 150-feet of stacking. Based on the queueing analysis, the existing northbound left turn pocket is anticipated to accommodate the 95<sup>th</sup> percentile peak hour queues under EAP (2022) traffic conditions with at most 105-feet of stacking required during the PM peak hour. The Project should modify the existing eastbound left turn pocket at the intersection of Graham Street and Alessandro Boulevard to accommodate a 250-foot left turn lane.

Wherever necessary, roadways adjacent to the Project, site access points and site-adjacent intersections will be constructed to be consistent with the identified roadway classifications and respective cross-sections in the City of Moreno Valley General Plan Circulation Element.

## 1.7 TRUCK ACCESS AND CIRCULATION

Due to the typical wide turning radius of large trucks, a truck turning template has been overlaid on the site plan at each applicable Project driveway and site adjacent intersection anticipated to be utilized by heavy trucks in order to determine appropriate curb radii and to verify that trucks will have sufficient space to execute turning maneuvers (see Exhibit 1-5). As shown, Driveway 1 and Driveway 3 on Alessandro Boulevard are anticipated to accommodate the wide turning radius of heavy trucks as currently designed.

EXHIBIT 1-5: TRUCK ACCESS

LEGEND:

## 2 METHODOLOGIES

This section of the report presents the methodologies used to perform the traffic analyses summarized in this report. The methodologies described are consistent with City of Moreno Valley's traffic study guidelines for LOS-based traffic operations analysis. (1)

### 2.1 LEVEL OF SERVICE

Traffic operations of roadway facilities are described using the term "Level of Service" (LOS). LOS is a qualitative description of traffic flow based on several factors such as speed, travel time, delay, and freedom to maneuver. Six levels are typically defined ranging from LOS A, representing completely free-flow conditions, to LOS F, representing breakdown in flow resulting in stop-and-go conditions. LOS E represents operations at or near capacity, an unstable level where vehicles are operating with the minimum spacing for maintaining uniform flow.

### 2.2 INTERSECTION CAPACITY ANALYSIS

The definitions of LOS for interrupted traffic flow (flow restrained by the existence of traffic signals and other traffic control devices) differ slightly depending on the type of traffic control. The LOS is typically dependent on the quality of traffic flow at the intersections along a roadway. The Highway Capacity Manual (HCM) methodology expresses the LOS at an intersection in terms of delay time for the various intersection approaches. (4) The HCM uses different procedures depending on the type of intersection control.

#### 2.2.1 SIGNALIZED INTERSECTIONS

The City of Moreno Valley requires signalized intersection operations analysis based on the methodology described in the HCM. (4) Intersection LOS operations are based on an intersection's average control delay. Control delay includes initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay. For signalized intersections, LOS is directly related to the average control delay per vehicle and is correlated to a LOS designation as described in Table 2-1. Study area intersections have been evaluated using the Synchro (Version 10) analysis software package.

Synchro is a macroscopic traffic software program that is based on the signalized intersection capacity analysis as specified in the HCM. Macroscopic level models represent traffic in terms of aggregate measures for each movement at the study intersections. Equations are used to determine measures of effectiveness such as delay and queue length. The level of service and capacity analysis performed by Synchro takes into consideration optimization and coordination of signalized intersections within a network.

**TABLE 2-1: SIGNALIZED INTERSECTION LOS THRESHOLDS**

Description	Average Control Delay (Seconds), V/C ≤ 1.0	Level of Service, V/C ≤ 1.0	Level of Service, V/C > 1.0
Operations with very low delay occurring with favorable progression and/or short cycle length.	0 to 10.00	A	F
Operations with low delay occurring with good progression and/or short cycle lengths.	10.01 to 20.00	B	F
Operations with average delays resulting from fair progression and/or longer cycle lengths. Individual cycle failures begin to appear.	20.01 to 35.00	C	F
Operations with longer delays due to a combination of unfavorable progression, long cycle lengths, or high V/C ratios. Many vehicles stop and individual cycle failures are noticeable.	35.01 to 55.00	D	F
Operations with high delay values indicating poor progression, long cycle lengths, and high V/C ratios. Individual cycle failures are frequent occurrences. This is considered to be the limit of acceptable delay.	55.01 to 80.00	E	F
Operation with delays unacceptable to most drivers occurring due to over saturation, poor progression, or very long cycle lengths	80.01 and up	F	F

Source: HCM 6<sup>th</sup> Edition

The peak hour traffic volumes have been adjusted using a peak hour factor (PHF) to reflect peak 15-minute volumes. Common practice for LOS analysis is to use a peak 15-minute rate of flow. However, flow rates are typically expressed in vehicles per hour. The PHF is the relationship between the peak 15-minute flow rate and the full hourly volume (e.g.  $PHF = \frac{\text{Hourly Volume}}{4 \times \text{Peak 15-minute Flow Rate}}$ ). The use of a 15-minute PHF produces a more detailed analysis as compared to analyzing vehicles per hour. Existing PHFs have been used for all analysis scenarios. Per the HCM, PHF values over 0.95 often are indicative of high traffic volumes with capacity constraints on peak hour flows, while lower PHF values are indicative of greater variability of flow during the peak hour. (4)

### 2.2.2 UNSIGNALIZED INTERSECTIONS

The City of Moreno Valley requires the operations of unsignalized intersections be evaluated using the methodology described in the HCM. (4) The LOS rating is based on the weighted average control delay expressed in seconds per vehicle (see Table 2-2).

TABLE 2-2: UNSIGNALIZED INTERSECTION LOS THRESHOLDS

Description	Average Control Delay Per Vehicle (Seconds)	Level of Service, V/C $\leq 1.0$	Level of Service, V/C $> 1.0$
Little or no delays.	0 to 10.00	A	F
Short traffic delays.	10.01 to 15.00	B	F
Average traffic delays.	15.01 to 25.00	C	F
Long traffic delays.	25.01 to 35.00	D	F
Very long traffic delays.	35.01 to 50.00	E	F
Extreme traffic delays with intersection capacity exceeded.	> 50.00	F	F

Source: HCM 6<sup>th</sup> Edition

At two-way or side-street stop-controlled intersections, LOS is calculated for each controlled movement and for the left turn movement from the major street, as well as for the intersection as a whole. For approaches composed of a single lane, the delay is computed as the average of all movements in that lane. For all-way stop controlled intersections, LOS is computed for the intersection as a whole.

### 2.3 TRAFFIC SIGNAL WARRANT ANALYSIS METHODOLOGY

The term "signal warrants" refers to the list of established criteria used by the California Department of Transportation (Caltrans) and other public agencies to quantitatively justify or ascertain the potential need for installation of a traffic signal at an otherwise unsignalized intersection. The existing intersections are currently signalized and with the proposed access restrictions, the driveway locations would not be suitable for the implementation of a traffic signal. As such, no traffic signal warrant analysis has been prepared for this TA.

### 2.4 MINIMUM LEVEL OF SERVICE (LOS)

The definition of an intersection deficiency in the City of Moreno Valley is based on the City of Moreno Valley General Plan Circulation Element. The City of Moreno Valley General Plan states that target LOS C or LOS D be maintained along City roads (including intersections) wherever possible. Exhibit 2-1 depicts the level of service standards within the City. LOS D is applicable to intersections and roadway segments that are adjacent to freeway on/off ramps and/or adjacent to employment generating land uses. LOS C is applicable to all other intersections and roadway segments. Boundary intersections are assumed to be LOS D.

## 2.5 THRESHOLDS OF SIGNIFICANCE

This section outlines the methodology used in this analysis related to identifying circulation system deficiencies.

### 2.5.1 SIGNALIZED INTERSECTIONS

Per the City of Moreno Valley TA Guidelines, the following LOS will be utilized for signalized study area intersections:

- Any signalized study intersection operating at acceptable LOS without project traffic in which the addition of project traffic causes the intersection to degrade to unacceptable LOS shall identify improvements to provide acceptable LOS.
- Any signalized study intersection that is operating at unacceptable LOS without project traffic where the project increases delay by 5.0 or more seconds shall identify improvements to offset the increase in delay.

### 2.5.2 UNSIGNALIZED INTERSECTIONS

Per the City of Moreno Valley TA Guidelines, the following LOS will be utilized for unsignalized study area intersections:

- a) The addition of project related traffic causes the intersection to degrade from an acceptable LOS to unacceptable LOS.  
OR
- b) The project adds 5.0 seconds or more of delay to an intersection that is already projected to operate without project traffic at unacceptable LOS,  
AND
- c) The intersection meets the peak hour traffic signal warrant after the addition of project traffic.

The proposed significance thresholds will be applied at study area intersections for the purposes of determining project-related impacts. If the conditions above are satisfied, improvements should be identified that achieve LOS D or better for a) above or to pre-project LOS and delay for case b) above.

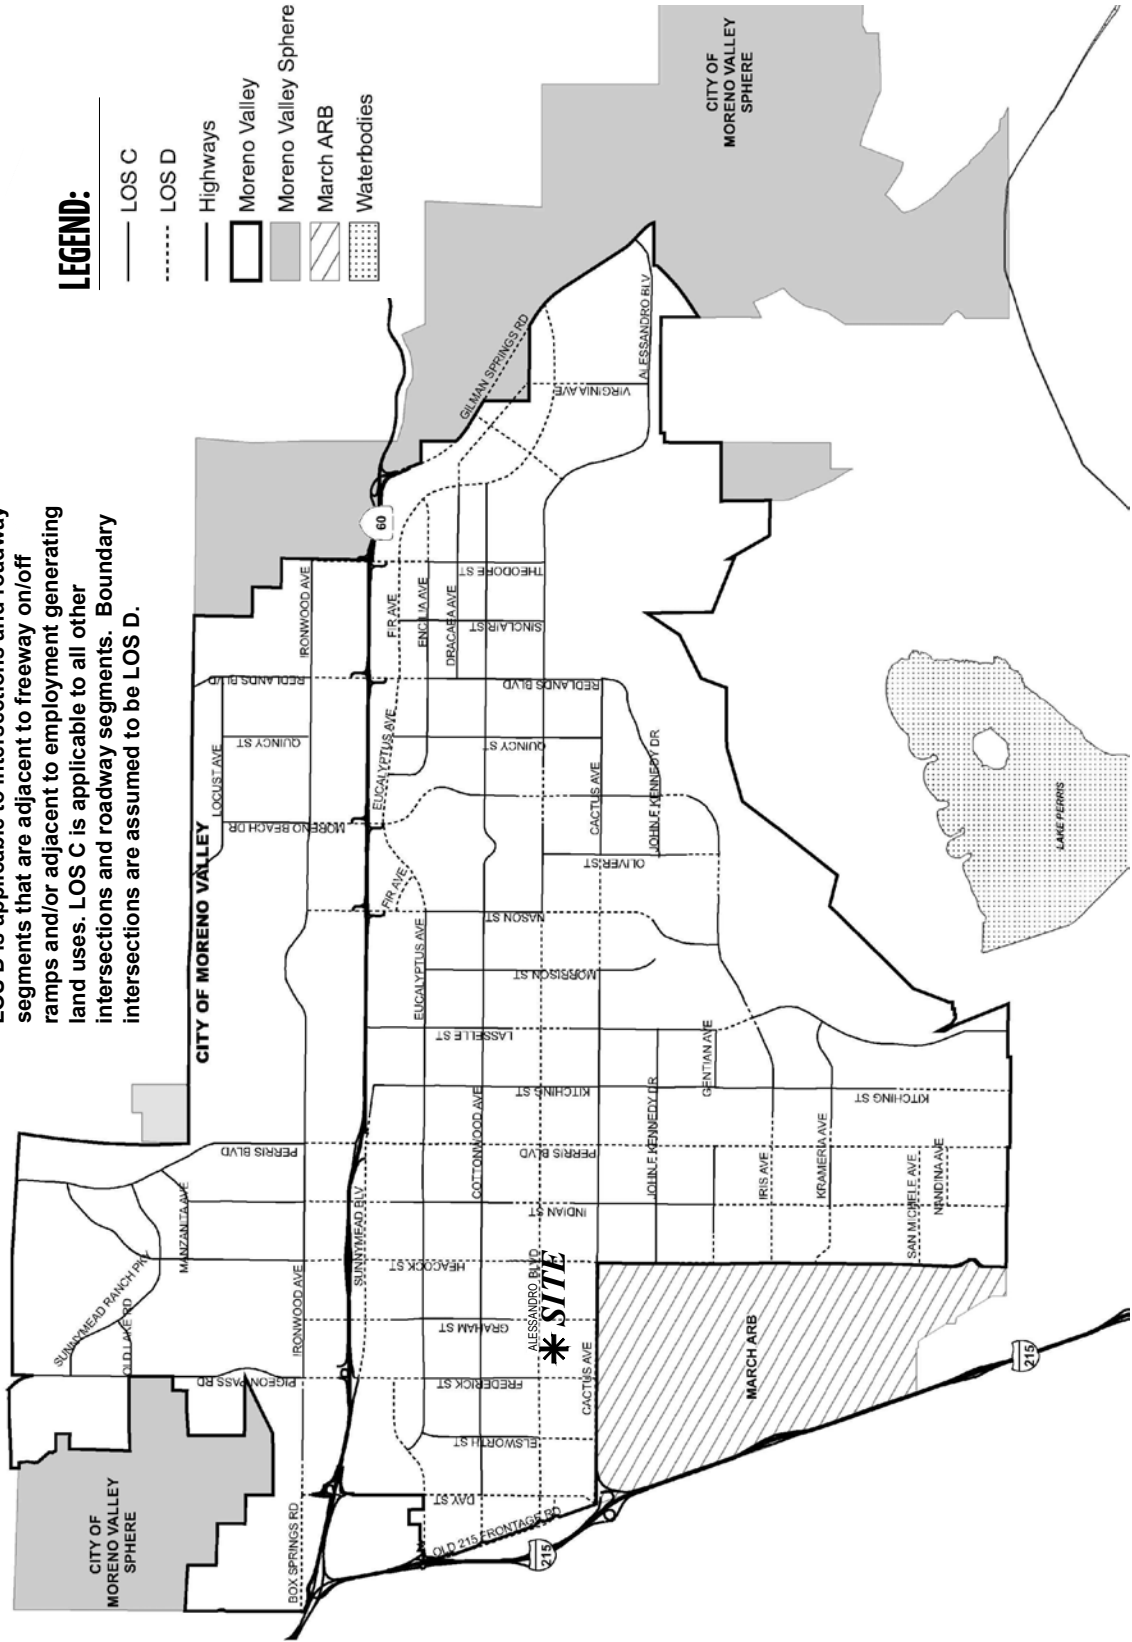

**EXHIBIT 2-1: CITY OF MORENO VALLEY LEVEL OF SERVICE (LOS) STANDARDS**

LOS D is applicable to intersections and roadway segments that are adjacent to freeway on/off ramps and/or adjacent to employment generating land uses. LOS C is applicable to all other intersections and roadway segments. Boundary intersections are assumed to be LOS D.

### 3 AREA CONDITIONS

This section provides a summary of the existing circulation network, the City of Moreno Valley General Plan Circulation Network, and a review of existing peak hour intersection operations analysis.

#### 3.1 EXISTING CIRCULATION NETWORK

Pursuant to the scoping agreement with City of Moreno Valley staff (Appendix 1.1), the study area includes a total of 5 existing and future intersections as shown previously on Exhibit 1-2. Exhibit 3-1 illustrates the study area intersections located near the proposed Project and identifies the number of through traffic lanes for existing roadways and intersection traffic controls.

#### 3.2 CITY OF MORENO VALLEY GENERAL PLAN CIRCULATION ELEMENT

The roadway classifications and planned (ultimate) roadway cross-sections of the major roadways within the study area, as identified on the City of Moreno Valley General Plan Circulation Element, are described subsequently. Exhibit 3-2 shows the City of Moreno Valley General Plan Circulation Element and Exhibit 3-3 illustrates the City of Moreno Valley General Plan roadway cross-sections.

**Divided Major Arterials** can accommodate six travel lanes. These facilities typically provide access between the regional highway system and minor arterials. An example of a Divided Arterial within the study area includes:

- Alessandro Boulevard

**Arterials** can accommodate four travel lanes (with a 20-foot outer lane in each direction of travel). These facilities typically provide access between divided arterials and collector streets. An example of an Arterial within the study area includes:

- Frederick Street, north of Alessandro Boulevard

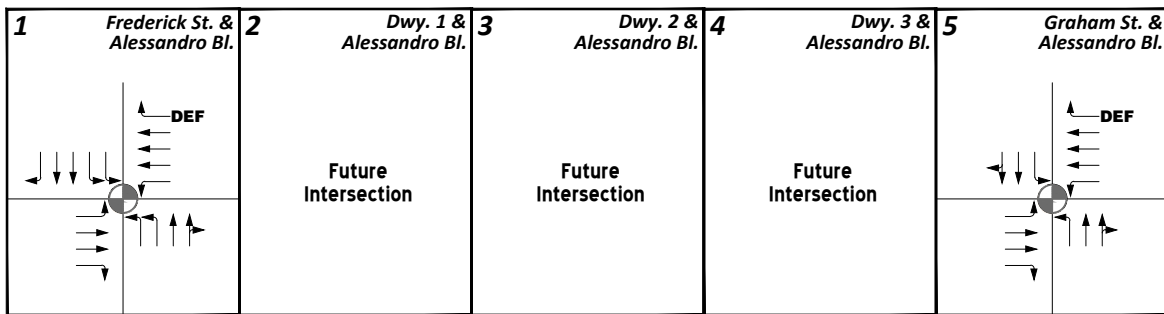

**Minor Arterials** can accommodate four travel lanes. These facilities typically provide access between divided arterials and collector streets. Examples of Minor Arterials within the study area includes:

- Frederick Street, south of Alessandro Boulevard
- Graham Street

#### 3.3 TRUCK ROUTES

The City of Moreno Valley designated truck route map is shown on Exhibit 3-4. As shown on Exhibit 3-4, Alessandro Boulevard, Frederick Street, and Graham Street (between Alessandro Boulevard and Cactus Avenue only) are designated truck routes within the study area in City of Moreno Valley. The designated truck route map has been utilized to route truck traffic for Project trips throughout the study area.

### 3.4 TRANSIT SERVICE

The study area is currently served by the Riverside Transit Authority (RTA), a public transit agency serving the unincorporated Riverside County region. As shown on Exhibit 3-5, RTA Route 20 serves Alessandro Boulevard within the study area and would likely serve the Project site. There are existing bus stops on south side at Frederick Street, Chagall Court, and Graham Street along Alessandro Boulevard. RTA Route 11 also serves the study area and runs along Frederick Street. Transit service is reviewed and updated by RTA periodically to address ridership, budget, and community demands. Changes in land use can affect these periodic adjustments which may lead to either enhanced or reduced service where appropriate.

### 3.5 BICYCLE & PEDESTRIAN FACILITIES

Exhibit 3-6 illustrates the existing pedestrian facilities, including sidewalks and crosswalk locations. Bus stop locations are also identified, which are on both the north and south sides of Alessandro Boulevard at Frederick Street, Chagall Court, and Graham Street. Both intersections on Alessandro Boulevard at Frederick Street and Graham Street have crosswalks on all approaches. Alessandro Boulevard is currently striped with Class II (on-street) bike lanes. Sidewalks are in place along most of the study area roadways and intersections, with most of the southern side of Alessandro Boulevard between Frederick Street and Graham Street and also along the west side of Graham Street south of Alessandro Boulevard.

### 3.6 EXISTING (2020) TRAFFIC COUNTS

The intersection LOS analysis is based on the traffic volumes observed during the peak hour conditions using traffic count data collected in April and May of 2018. The following peak hours were selected for analysis:

- Weekday AM Peak Hour (peak hour between 7:00 AM and 9:00 AM)
- Weekday PM Peak Hour (peak hour between 4:00 PM and 6:00 PM)

Due to the currently ongoing COVID-19 pandemic, schools and businesses within the study area were closed or operating at less than full capacity at the time this study was prepared. As such, historic (2018) traffic counts were utilized in conjunction with a 4.04% growth factor to reflect 2020 conditions (2% per year, compounded annually). The 2018 weekday AM and weekday PM peak hour count data is representative of typical weekday peak hour traffic conditions in the study area. There were no observations made in the field that would indicate atypical traffic conditions on the count dates, such as construction activity or detour routes and near-by schools were in session and operating on normal schedules. The raw manual peak hour turning movement traffic count data sheets are included in Appendix 3.1.

13276 - peds.dwg

The traffic counts collected in April and May of 2018 include the following vehicle classifications: Passenger Cars, 2-Axle Trucks, 3-Axle Trucks, and 4 or More Axle Trucks. To represent the effects large trucks, buses and recreational vehicles have on traffic flow; all trucks were converted into passenger car equivalent (PCE). By their size alone, these vehicles occupy the same space as two or more passenger cars. In addition, the time it takes for them to accelerate and slow-down is much longer than for passenger cars and varies depending on the type of vehicle and number of axles. For the purpose of this analysis, a PCE factor of 1.5 has been applied to 2-axle trucks, 2.0 for 3-axle trucks, and 3.0 for 4+-axle trucks to estimate each turning movement. These factors are consistent with the City's traffic study guidelines.

Existing weekday ADT volumes are shown on Exhibit 3-7. Consistent with other projects in the area, Existing ADT volumes were based upon factored intersection peak hour counts collected by Urban Crossroads, Inc. using the following formula for each intersection leg:

$$\text{Weekday PM Peak Hour (Approach Volume + Exit Volume)} \times 14.32 = \text{Leg Volume}$$

A comparison of the PM peak hour and daily traffic volumes of various roadway segments within the study area indicated that the peak-to-daily relationship is approximately 6.98 percent. As such, the above equation utilizing a factor of 10.08 estimates the ADT volumes on the study area roadway segments assuming a peak-to-daily relationship of approximately 6.98 percent (i.e.,  $1/0.0698 = 14.32$ ) and was assumed to sufficiently estimate average daily traffic (ADT) volumes for planning-level analyses. Existing weekday AM and weekday PM peak hour intersection volumes (in PCE) are also shown on Exhibit 3-7.

### 3.7 INTERSECTION OPERATIONS ANALYSIS

Existing peak hour traffic operations have been evaluated for the study area intersections based on the analysis methodologies presented in Section 2.2 *Intersection Capacity Analysis* of this report. The intersection operations analysis results are summarized in Table 3-1 which indicates that the existing study area intersections are currently operating at an acceptable LOS during the peak hours. Consistent with Table 3-1, a summary of the peak hour intersection LOS for Existing conditions is shown on Exhibit 3-8. The intersection operations analysis worksheets are included in Appendix 3.2 of this TA.

### 3.8 RECOMMENDED IMPROVEMENTS

All study area intersections are currently operating at an acceptable LOS for Existing (2020) traffic conditions. As such, no improvements have been recommended.

## 4 PROJECTED FUTURE TRAFFIC

This section presents the traffic volumes estimated to be generated by the Project, as well as the Project's trip assignment onto the study area roadway network. In an effort to calculate and evaluate a conservative trip generation for the proposed Project, the following mix of uses have been evaluated for the Project:

- Building 1: 206,665 sf of warehousing (70% of total building sf) and 88,571 sf of high-cube cold storage warehouse use (30% of total building sf) for a total of 295,236 sf for Building 1
- Building 2: 70,876 sf of warehousing (70% of total building sf) and 30,376 sf of high-cube cold storage warehouse use (30% of total building sf) for a total of 101,252 sf for Building 2

The Project will be developed in a single phase and has a projected Opening Year of 2022. Vehicular access will be provided via 3 driveways along Alessandro Boulevard. All driveways are proposed to be restricted to right-in/right-out access only. Regional access to the Project site is available from the I-215 Freeway via Alessandro Boulevard and Cactus Avenue interchanges. Frederick Street to the north also provides access to the SR-60 Freeway.

### 4.1 PROJECT TRIP GENERATION

Trip generation represents the amount of traffic that is attracted and produced by a development and is based upon the specific land uses planned for a given project. Trip generation rates (in actual vehicles and PCE) for the Project are shown in Table 4-1. The Project's trip generation has been calculated using the Institute of Transportation Engineers (ITE) Trip Generation Manual, 10<sup>th</sup> Edition, 2017, for the following land uses. (2)

- ITE land use code 150 (Warehousing) has been used to derive site specific trip generation estimates for up to 277,541 sf (70% of Buildings 1 and 2). The vehicle mix has been obtained from the ITE's Trip Generation Manual Supplement (dated February 2020). (5) This study provides the following vehicle mix: AM Peak Hour: 87.0% passenger cars and 13.0% trucks; PM Peak Hour: 85.0% passenger cars and 15.0% trucks; Weekday Daily: 73.0% passenger cars and 27.0% trucks. The truck percentages were further broken down by axle type per the following South Coast Air Quality Management District (SCAQMD) recommended truck mix: 2-Axle = 16.7%; 3-Axle = 20.7%; 4+-Axle = 62.6%. (6)
- ITE land use code 157 (High-Cube Cold Storage Warehouse) has been used to derive site specific trip generation estimates for up to 118,947 sf (30% of Buildings 1 and 2). High-cube cold storage warehouses include warehouses characterized by the storage and/or consolidation of manufactured goods (and to a lesser extent, raw materials) prior to their distribution to retail locations or other warehouses. High-cube cold storage warehouses are facilities typified by temperature-controlled environments for frozen food or other perishable products. The High-Cube Cold Storage Warehouse vehicle mix (passenger cars versus trucks) has been obtained from the ITE's Trip Generation Manual Supplement (dated February 2020). (5) This study provides the following vehicle mix: AM Peak Hour: 73.0% passenger cars and 27.0% trucks; PM Peak Hour: 77.0% passenger cars and 23.0% trucks; Weekday Daily: 65.0% passenger cars and 35.0% trucks. The truck percentages were further broken down by axle type per the following SCAQMD recommended truck mix: 2-Axle = 34.7%; 3-Axle = 11.0%; 4+-Axle = 54.3%. (6)

<sup>1</sup> Trip Generation Source: Institute of Transportation Engineers (ITE), Trip Generation Manual, Tenth Edition (2017).

<sup>2</sup> TSF = thousand square feet

<sup>3</sup> Vehicle Mix Source: ITE Trip Generation Handbook Supplement (2020), Appendix C.

Truck Mix: South Coast Air Quality Management District's (SCAQMD) recommended truck mix, by axle type.

Normalized % - Without Cold Storage: 16.7% 2-Axle trucks, 20.7% 3-Axle trucks, 62.6% 4-Axle trucks.

Normalized % - With Cold Storage: 34.7% 2-Axle trucks, 11.0% 3-Axle trucks, 54.3% 4-Axle trucks.

<sup>4</sup> PCE factors per City of Moreno Valley's TIA Guidelines: 2-axle = 1.5; 3-axle = 2.0; 4+-axle = 3.0.

PCE factors were applied to the trip generation rates for heavy trucks (large 2-axles, 3-axles, 4+-axles). PCEs allow the typical “real-world” mix of vehicle types to be represented as a single, standardized unit, such as the passenger car, to be used for the purposes of capacity and level of service analyses. The PCE factors are consistent with the recommended PCE factors in the City’s traffic study guidelines.

The trip generation summary illustrating daily, and peak hour trip generation estimates for the proposed Project in actual vehicles and PCE are shown in Table 4-2 and Table 4-3, respectively. The proposed Project is anticipated to generate 742 vehicle trip-ends per day with 59 AM peak hour trips and 64 PM peak hour trips (of which 224 trip-ends per day are associated with trucks with 8 AM peak hour truck trips and 9 PM peak hour truck trips) (see Table 4-2). The operations analyses utilize the PCE trip generation consistent with the City’s traffic study guidelines.

The site is currently zoned for commercial retail use (0.25 floor to area ratio which would allow 192,426 square feet of commercial retail use on 17.67 acres). As shown on Table 4-4, the proposed Project General Plan Amendment (light industrial) is anticipated to result in a reduction in trips as compared to the currently adopted General Plan Land Use (commercial).

## 4.2 PROJECT TRIP DISTRIBUTION

Trip distribution is the process of identifying the probable destinations, directions, or traffic routes that will be utilized by Project traffic. The potential interaction between the planned land uses and surrounding regional access routes are considered to identify the route where the Project traffic would distribute.

The Project trip distribution was developed based on anticipated travel patterns to and from the Project site for both passenger cars and truck traffic and are consistent with other similar projects that have been reviewed and approved by City of Moreno Valley staff. The Project trip distribution patterns for both passenger cars and trucks were developed based on an understanding of existing travel patterns in the area, the geographical location of the site, and the site’s proximity to the regional arterial and state highway system.

The Project passenger car trip distribution pattern is graphically depicted on Exhibit 4-1, while the Project truck trip distribution pattern is graphically depicted on Exhibit 4-2. Each of these distribution patterns was reviewed by the City of Moreno Valley as part of the traffic study scoping process (see Appendix 1.1).

## 4.3 MODAL SPLIT

The traffic reducing potential of public transit, walking, or bicycling have not been considered in this TA. Essentially, the traffic projections are "conservative" in that these alternative travel modes might be able to reduce the forecasted traffic volumes (employee trips only).

#### 4.4 PROJECT TRIP ASSIGNMENT

The assignment of traffic from the Project area to the adjoining roadway system is based upon the Project trip generation, trip distribution, and the arterial highway and local street system improvements that would be in place by the time of initial occupancy of the Project. Based on the identified Project traffic generation and trip distribution patterns, Project ADT and peak hour intersection turning movements volumes in PCE are shown on Exhibit 4-3.

#### 4.5 BACKGROUND TRAFFIC

To account for growth in traffic between Existing (2020) and EAP (2022) traffic conditions, an annual traffic growth rate of 2.0 percent per year, compounded annually, was assumed (4.04 percent total aggregate growth in background traffic for the period between 2020 and 2022). The 2.0 percent annual growth rate is intended to capture non-specific ambient traffic growth.

#### 4.6 NEAR-TERM TRAFFIC FORECASTS

To provide a comprehensive assessment of potential transportation network deficiencies, a “buildup” analysis was performed in support of this work effort. The “buildup” method was used to approximate the EAP traffic forecasts and is intended to identify the deficiencies on both the existing and planned near-term circulation system. The “buildup” approach combines existing traffic counts with a background ambient growth factor to forecast the near-term 2022 traffic conditions. An ambient growth factor of 4.04% (2022) accounts for background (area-wide) traffic increases that occur over time, up to the year 2020 from the year 2020 (compounded two percent per year growth over a 2-year period). Traffic volumes generated by the Project are then added to assess the EAP (2022) traffic conditions. The 2022 roadway network is similar to the existing conditions roadway network with the exception of future roadways and intersections proposed to be developed by the Project.

## 5 EAP (2022) TRAFFIC CONDITIONS

This section discusses the traffic forecasts for Existing plus Ambient Growth plus Project (EAP) conditions and the resulting intersection operations analysis.

### 5.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for EAP conditions are consistent with those shown previously on Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for EAP conditions only (e.g., intersection and roadway improvements at the Project's frontage and driveways).

### 5.2 EAP TRAFFIC VOLUME FORECASTS

This scenario includes Existing traffic volumes and ambient growth factor of 4.04% (2022) which accounts for background (area-wide) traffic plus Project traffic. Exhibit 5-1 shows the ADT and peak hour intersection turning movement volumes in PCE, which can be expected for EAP (2022) traffic conditions.

### 5.3 INTERSECTION OPERATIONS ANALYSIS

EAP peak hour traffic operations have been evaluated for the study area intersections based on the analysis methodologies presented in Section 2 *Methodologies* of this TA. The intersection analysis results are summarized in Table 5-1, which indicates all of the study area intersections are anticipated to continue to operate at an acceptable LOS during the peak hours with the addition of Project traffic, consistent with Existing (2020) traffic conditions. Exhibit 5-2 summarizes the weekday AM and PM peak hour study area intersection LOS under EAP (2022) traffic conditions, consistent with the results provided in Table 5-1. The intersection operations analysis worksheets are included in Appendix 5.1 of this TA.

### 5.4 QUEUEING ANALYSIS

A queueing analysis has been evaluated during the morning and evening peak hours at the intersection of Graham Street and Alessandro Boulevard to determine if there is sufficient stacking in the northbound and eastbound left turn pockets to accommodate Project traffic. The northbound left turn lane on Graham Street provides 185-feet of stacking while the eastbound left turn lane on Alessandro Boulevard provides 150-feet of stacking. Based on the queueing analysis, the existing northbound left turn pocket is anticipated to accommodate the 95<sup>th</sup> percentile peak hour queues under EAP (2022) traffic conditions with at most 105-feet during the PM peak hour, however, the eastbound left turn lane should be modified to accommodate a minimum of 250-feet of storage (see Appendix 5.2).

Table 5-1

Intersection Analysis for EAP (2022) Conditions

#	Intersection	Traffic Control <sup>2</sup>	Existing (2020)				EAP (2022)			
			Delay <sup>1</sup> (secs.)		Level of Service		Delay <sup>1</sup> (secs.)		Level of Service	
			AM	PM	AM	PM	AM	PM	AM	PM
1	Frederick St. & Alessandro Bl.	TS	22.4	30.7	C	C	23.4	33.8	C	C
2	Driveway 1 & Alessandro Bl.	<u>CSS</u>	Future Intersection				11.8	21.0	B	C
3	Driveway 2 & Alessandro Bl.	<u>CSS</u>	Future Intersection				11.8	22.3	B	C
4	Driveway 3 & Alessandro Bl.	<u>CSS</u>	Future Intersection				11.7	21.8	B	C
5	Graham St. & Alessandro Bl.	TS	20.4	32.6	C	C	22.0	34.0	C	C

<sup>1</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>2</sup> CSS = Cross-street Stop; TS = Traffic Signal; CSS = Improvement

## 5.5 RECOMMENDED IMPROVEMENTS

The study area intersections are anticipated to operate at an acceptable LOS under EAP (2022) traffic conditions. As such, no intersection improvements have been recommended.

## 6 LOCAL AND REGIONAL FUNDING MECHANISMS

Transportation improvements throughout the City of Moreno Valley are funded through a combination of project mitigation, fair share contributions or development impact fee programs, such as the Transportation Uniform Mitigation Fee (TUMF) program or the City's Development Impact Fee (DIF) program.

### 6.1 TRANSPORTATION UNIFORM MITIGATION FEE (TUMF) PROGRAM

The Western Riverside Council of Governments (WRCOG) is responsible for establishing and updating TUMF rates. The County may grant to developers a credit against the specific components of fees for the dedication of land or the construction of facilities identified in the list of improvements funded by each of these fee programs. Fees are based upon projected land uses and a related transportation need to address growth based upon a 2016 Nexus study.

TUMF is an ambitious regional program created to address cumulative impacts of growth throughout western Riverside County. Program guidelines are being handled on an iterative basis. Exemptions, credits, reimbursements and local administration are being deferred to primary agencies. The County of Riverside serves this function for the proposed Project. Fees submitted to the County are passed on to the WRCOG as the ultimate program administrator.

TUMF guidelines empower a local zone committee to prioritize and arbitrate certain projects. The Project is located in the Central Zone. The zone has developed a 5-year capital improvement program to prioritize public construction of certain roads. TUMF is focused on improvements necessitated by regional growth.

### 6.2 CITY OF MORENO VALLEY DEVELOPMENT IMPACT FEE (DIF) PROGRAM

The City of Moreno Valley has created its own local DIF program to impose and collect fees from new residential, commercial and industrial development for the purpose of funding roadways and intersections necessary to accommodate City growth as identified in the City's General Plan Circulation Element. The City's DIF program includes facilities that are not part of, or which may exceed improvements identified and covered by the TUMF program. As a result, the pairing of the regional and local fee programs provides a more comprehensive funding and implementation plan to ensure an adequate and interconnected transportation system. Under the City's DIF program, the City may grant to developers a credit against specific components of fees when those developers construct certain facilities and landscaped medians identified in the list of improvements funded by the DIF program.

The timing to use the DIF fees is established through periodic capital improvement programs which are overseen by the City's Public Works Department. Periodic traffic counts, review of traffic accidents, and a review of traffic trends throughout the City are also periodically performed by City staff and consultants. The City uses this data to determine the timing of implementing the improvements listed in its facilities list. The Project Applicant would pay requisite DIF pursuant to incumbent City ordinance requirements.

# Project Scoping Form

This scoping form shall be submitted to the Lead Agency to assist in identifying infrastructure improvements that may be required to support traffic from the proposed project.

**Project Identification:**

*Approved*  
*John Lj* 9/14/20

Case Number:	PPA19-0025
Related Cases:	
SP No.	
EIR No.	
GPA No.	
CZ No.	
Project Name:	Alessandro Warehouse
Project Address:	South of Alessandro Boulevard on either side of Chagall Court
Project Opening Year:	2022
Project Description:	295,236 SF warehouse building (Building 1) & 101,252 SF warehouse building (Building 2). For the purposes of the traffic study, a mix of 30% high-cube cold storage warehouse (ITE 157) and 70% warehousing (ITE 150) is proposed.

Trip Internalization:  Yes  No (\_\_\_\_% Trip Discount)

Pass-By Allowance:  Yes  No (\_\_\_\_% Trip Discount)

### Potential Screening Checks

Is your project screened from specific analyses (see Page 3 of the guidelines related to LOS assessment and Pages 22-23 for VMT screening criteria).

**Is the project screened from LOS assessment?**  Yes  No

LOS screening justification (see Page 3 of the guidelines): \_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

**Is the project screened from VMT assessment?**       Yes       No

VMT screening justification (see Pages 22-23 of the guidelines): \_\_\_\_\_  
Although the TAZ is a low VMT generating zone, the existing RivTAM inputs indicate that the existing employment within the zone consists of non-industrial employment.  
 \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

### Level of Service Scoping

- Proposed Trip Distribution (Attach Graphic for Detailed Distribution): See graphics

North	South	East	West
Varies      %	Varies      %	Varies      %	Varies      %

**Link level of service and data collection:**

X will be required Due to COVID-19, if there are no historic daily counts then we will estimate the ADT for the study area segments  
 \_\_\_\_\_ will not be required

- Attach list of study intersections (and roadway segments if applicable) See Exhibit 2
- Attach site plan See Exhibit 1
- Other specific items to be addressed:
  - Site access
  - On-site circulation
  - Parking
  - Consistency with Plans supporting Bikes/Peds/Transit
  - Other Truck Turns at the Driveways
- Date of Traffic Counts We will obtain pre-COVID traffic counts and adjust using 2% per year
- Attach proposed analysis scenarios (years plus proposed forecasting approach)
- Attach proposed phasing approach (if the project is phased) No Phasing

## VMT Scoping

For projects that are not screened, identify the following:

- Travel Demand Forecasting Model Used RivTAM
- Attach WRCOG Screening VMT Assessment output or describe why it is not appropriate for use
- Attach proposed Model Land Use Inputs and Assumed Conversion Factors (attach)

Analysis scenarios:

1. Existing (2020)
2. Existing plus Ambient Growth plus Project (2022)

As shown on Table 4, the proposed Project General Plan Amendment (light industrial) is anticipated to result in a reduction in trips as compared to the current General Plan Land Use (commercial). As such, no Horizon Year (2040) traffic conditions has been added.

### VMT

Although TAZ 3712 is a low VMT generating zone based on home-based work VMT per worker, the existing RivTAM socioeconomic data indicate that the existing employment within the zone consists of non-industrial employment. As such, the Project is not screened out.

### Assumed Conversion Factors

1,030 sf per employee (source: County of Riverside General Plan Appendix E Socioeconomic Build-Out Assumptions and Methodology)

### Model Land Use Inputs

396,488 total sf / 1,030 sf per employee = 385 total employees (193 warehouse employees / 192 transportation employees)

Ms. Deirdre McCollister  
 MIG, Inc.  
 1500 Iowa Avenue, Suite 110  
 Riverside, California 92507

**SUBJECT: ALESSANDRO WAREHOUSE VEHICLE MILES TRAVELLED (VMT) ANALYSIS**

Dear Ms. Deirdre McCollister:

The following Vehicle Miles Travelled (VMT) Analysis has been prepared for the proposed Alessandro Warehouse (**Project**), which is located south of Alessandro Boulevard on either side of Chagall Court in the City of Moreno Valley.

**PROJECT OVERVIEW**

The Project is proposed to consist of up to 396,488 square feet (sf) of warehouse use. Trips generated by the Project's proposed land uses have been estimated based on trip generation rates collected by the Institute of Transportation Engineers (ITE) Trip Generation Manual, 10<sup>th</sup> Edition, 2017. (1) The proposed Project is anticipated to generate a total of 742 vehicle trip-ends per day (expressed in actual vehicles). (2) The site is currently designated as Commercial in the City's General Plan, which would require a land use and zoning change to Light Industrial use.

**BACKGROUND**

Changes to California Environmental Quality Act (CEQA) Guidelines were adopted in December 2018, which requires all lead agencies to adopt VMT as a replacement for automobile delay-based level of service (LOS) as the new measure for identifying transportation impacts for land use projects. This statewide mandate went into effect July 1, 2020. To aid in this transition, the Governor's Office of Planning and Research (OPR) released a Technical Advisory on Evaluating Transportation Impacts in CEQA (December of 2018) (**Technical Advisory**). (3) Based on OPR's Technical Advisory, the City of Moreno Valley has prepared their Transportation Impact Analysis Preparation Guide for Vehicle Miles Traveled and Level of Service Assessment (**City Guidelines**). (4) This analysis has been prepared based on the City Guidelines.

**PROJECT SCREENING**

Consistent with City Guidelines, projects that meet certain screening criteria based on their location and project type may be presumed to result in a less than significant transportation impact. Consistent with

Attachment: Appendix K2-VMT Assessment Compressed (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

Ms. Deirdre McCollister  
 MIG, Inc.  
 June 15, 2021  
 Page 2 of 9

the screening criteria recommended in City Guidelines, the City of Moreno Valley will utilize the following project screening thresholds that may be applicable to the Project:

- Transit Priority Area (TPA) Screening
- Low VMT Area Screening
- Project Type Screening

A land use project need only meet one of the above screening criteria to result in a less than significant impact.

### **TPA SCREENING**

Consistent with guidance identified in the City Guidelines, projects located within a Transit Priority Area (TPA) (i.e., within ½ mile of an existing “major transit stop”<sup>1</sup> or an existing stop along a “high-quality transit corridor”<sup>2</sup>) may be presumed to have a less than significant impact absent substantial evidence to the contrary. However, the presumption may not be appropriate if a project:

- Has a Floor Area Ratio (FAR) of less than 0.75;
- Includes more parking for use by residents, customers, or employees of the project than required by the jurisdiction (if the jurisdiction requires the project to supply parking);
- Is inconsistent with the applicable Sustainable Communities Strategy (as determined by the lead agency, with input from the Metropolitan Planning Organization); or
- Replaces affordable residential units with a smaller number of moderate- or high-income residential units.

The Project is not located within ½ mile of an existing major transit stop, or along a high-quality transit corridor.

**The TPA screening threshold is not met.**

### **LOW VMT AREA SCREENING**

The City Guidelines also states that, “residential and office projects located within a low VMT-generating area may be presumed to have a less than significant impact absent substantial evidence to the contrary. In addition, other employment-related and mixed-use land use projects may qualify for the use of screening if the project can reasonably be expected to generate VMT per resident, per worker, or per service population that is similar to the existing land uses in the low VMT area.”<sup>3</sup>

<sup>1</sup> Pub. Resources Code, § 21064.3 (“Major transit stop’ means a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods.”).

<sup>2</sup> Pub. Resources Code, § 21155 (“For purposes of this section, a high-quality transit corridor means a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours.”).

<sup>3</sup> City Guidelines; page 23.

Ms. Deirdre McCollister  
 MIG, Inc.  
 June 15, 2021  
 Page 3 of 9

Based on the Screening Tool results provided in Attachment A, the Project is located within a low VMT generating zone. The Project resides within TAZ 3712 and was shown to generate 10.64 VMT per worker whereas the City's impact threshold is 11.01 VMT per worker. As stated previously, the site is currently designated as Commercial in the City's General Plan, which would require a land use/zoning change to Light Industrial use. After further research into the TAZ, the socioeconomic area for TAZ 3712 consists primarily of retail employment and not industrial use.

**The Low VMT Area screening threshold is not met.**

### **PROJECT TYPE SCREENING**

The City Guidelines identify that local serving retail with buildings less than 50,000 square feet or other local serving essential services (e.g., day care centers, public schools, medical/dental office buildings, etc.) are presumed to have a less than significant impact absent substantial evidence to the contrary. In addition, small projects anticipated to generate low traffic volumes and by association low greenhouse gas (GHG) emissions are also assumed to cause a less than significant impact. The City's small project threshold of 285,700 square feet of high cube transload and short-term storage warehouse land use would be exceeded by the proposed Project's total building square footage.

**The Project Type screening threshold is not met.**

### **PROJECT GENERATED VMT**

Projects that do not meet one or more of the above described VMT screening criteria should prepare a project level VMT analysis. RIVTAM is a useful tool to estimate VMT as it considers interaction between different land uses based on socio-economic data such as population, households, and employment. RIVTAM is a travel forecasting model that represents a sub-area (Riverside County) of the Southern California Association of Governments (SCAG) regional traffic model. RIVTAM was designed to provide a greater level of detail and sensitivity in the Riverside County area as compared to the regional SCAG model. City Guidelines identifies RIVTAM as the appropriate tool for conducting VMT modeling for land use projects within the County of Riverside.

Project generated VMT has been calculated using the most current version of RIVTAM. Adjustments in socio-economic data (SED) (i.e., employment) for the Project have been made to a separate TAZ within the model to reflect the Project's industrial warehouse land use. A separate TAZ has been utilized to isolate vehicle trips to/from the Project. Table 1 summarizes the employment factors and employment estimates for the Project. As shown, the Project is estimated to generate 385 employees.

**TABLE 1: EMPLOYMENT DENSITY FACTORS**

	Project
Building Square Footage	396,488
Employment Density Factor <sup>4</sup>	1 employee/1,030 SF
Employment	385

Adjustments to employment for the Project's TAZ were made to both the base year model (2012) and the cumulative year model (2040). The base year model and cumulative year model were both run inclusive of the Project's employment. Project-generated home-based work VMT was then calculated following the VMT calculation procedures identified in Exhibit C of the City Guidelines and includes home-based work trips that are both internal and external to the RIVTAM model boundaries. The home-based work VMT value is then normalized by dividing by the number of Project employees. Finally, the base year and cumulative VMT results were interpolated to derive the existing VMT. As shown in Table 2, the existing (2020) Project generated VMT per employee is 12.35.

**TABLE 2: PROJECT VMT PER EMPLOYEE**

	Base Year (2012)	Cumulative (2040)	Existing (2020)
Home-based Work VMT	4,754	5,234	4,891
Employment	385	385	385
VMT per Employee	12.35	13.59	12.71

Western Riverside Council of Governments (WRCOG) publishes VMT data for each of its member agencies as derived from the RIVTAM model for both the base year (2012) model and the cumulative year (2040) model. Urban Crossroads has obtained these published results and similar to the project generated VMT calculation used linear interpolation to determine the City's existing (2020) VMT per employee.

The adopted City Guidelines state that the City of Moreno Valley has selected a threshold based on the existing VMT performance in the City. More specifically, the City Guidelines state that a project would have a significant VMT impact if, in the Existing Plus Project scenario, its net VMT per capita (for residential projects) or per employee (for office and industrial projects) exceeds the per capita VMT for Moreno Valley. For all other uses, a net increase in VMT would be considered a significant impact.<sup>5</sup>

Table 3 illustrates a comparison between the baseline (2020) project generated VMT per employee to the existing (2020) City of Moreno Valley VMT per employee. As shown, project generated VMT per employee would be 11.69 percent above the existing City of Moreno Valley VMT per employee. As such, the Project's impact based on project generated VMT is potentially significant.

<sup>4</sup> Employee Density Factor was obtained from the County of Riverside General Plan Appendix E-2: Socioeconomic Build-Out Assumptions and Methodology (see Table E-5, Commercial Employment Factors, Page 3).

<sup>5</sup> City Guidelines; page 26.

**TABLE 3: PROJECT VMT PER EMPLOYEE COMPARISON**

	Existing (2020) City of Moreno Valley	Baseline (2020) Project
VMT per employee	11.38	12.71
Percent Change	+11.69%	
Potential Impact?	Yes	

### PROJECT'S CUMULATIVE IMPACT ON VMT

The General Plan land use designations and zoning for the Project site are Commercial. The proposed Project results in jobs within the total number of jobs projected by the current Southern California Association of Governments (SCAG) Regional Transportation Plan and Sustainable Communities Strategy (RTP/SCS). However, the proposed Project is not consistent with the underlying employment assumptions upon which the current RTP/SCS was based. The adopted City Guidelines state that "if it is not consistent with the RTP/SCS, then it would have a significant VMT impact if for office and industrial projects its net VMT per employee exceeds the average VMT per employee for Moreno Valley in the RTP/SCS horizon year." <sup>6</sup>

As presented in Table 4, the cumulative VMT per employee within the City of Moreno Valley does increase under the plus project condition. As such, the Project's contribution to cumulative impacts for VMT is considered potentially significant.

**TABLE 4: CUMULATIVE VMT PER EMPLOYEE**

	Moreno Valley	Project
VMT		5,234
Employee		385
VMT per Employee	12.31 <sup>7</sup>	13.59
Change in VMT	+1.28	
Percent Change	+10.40%	
Potential Impact?	Yes	

### POTENTIAL VMT REDUCTION MEASURES

Transportation demand management (TDM) strategies have been evaluated for reducing VMT impacts determined to be potentially significant. The effectiveness of TDM strategies to reduce VMT has been

<sup>6</sup> City Guidelines; page 26.

<sup>7</sup> Obtained from WRCOG

Ms. Deirdre McCollister  
 MIG, Inc.  
 June 15, 2021  
 Page 6 of 9

determined based on the SB 743 Implementation TDM Strategy Assessment (November 11, 2019 Fehr & Peers) (**WRCOG Report**) prepared for WRCOG and the Quantifying Greenhouse Gas Mitigation Measures (CAPCOA, 2010). The WRCOG Report indicates that of the 50 transportation measures presented by CAPCOA, only 41 are applicable at a building and site level. The remaining 9 measures are functions of, or depend on, site location and/or actions by local and regional agencies or funders.

The WRCOG Report goes on to provide a review of the 41 transportation measures identified by CAPCOA and determines that for areas within the WRCOG region only 7 of those measures may be effective at an individual project level. Evaluation of potentially applicable TDM strategies in the context of the proposed Project is summarized below.

- ***Measure 1: Increase Diversity of Land Uses (LUT-3).*** Having different types of land uses near one another can decrease VMT since trips between land use types are shorter and may be accommodated by non-auto modes of transportation. For example, when residential areas are in the same neighborhood as retail and office buildings, a resident does not need to travel outside of the neighborhood to meet his/her trip needs.

***Remarks:*** The Project consists of the development of warehouse use with a combined building area of approximately 396,488 sf. In order for the above measure to apply, at least three of the following will be located within ¼ mile of the Project: Residential Development, Retail Development, Park, Open Space, or Office (or institutional uses). There is residential, retail, and office/institutional developments located off-site within ¼ mile of the Project. As noted by CAPCOA (Quantifying Greenhouse Gas Mitigation Measures, p. 162), the diversity of uses within close proximity of the Project can result in a VMT reduction between 9.0 and 30.0%. As the proposed Project does not include a mix of land uses within the development site, but is instead located within a sphere of influence to high density residential, retail, and office/institutional uses (i.e., walking distance), this particular TDM measure may be evaluated further as a means of providing a reduction in Project VMT. It should be noted that RIVTAM is a sub-regional travel demand model and is not designed to accurately capture all potential project-level interactions with local land uses and alternative transportation modes (i.e., walking and biking). Based on a review of the land uses within ¼ mile of the Project (walking distance), there is single family and multi-family residential, local serving retail, and other employment uses. As noted by CAPCOA, the proximity of these complementary land uses helps to further reduce VMT. Based on the calculations conducted for the ¼-mile area around the Project site (see Attachment B), the VMT reduction is estimated to be 37% or up to a maximum of 30%. As such, the diverse mix of land uses has the potential to reduce VMT by as much as 30%.

- ***Measure 2: Provide Pedestrian Network Improvements (SDT-1).*** Providing a pedestrian access network to link areas of the Project site encourages people to walk instead of drive assuming that desirable destinations are within walking distance of the Project. This mode shift results in people driving less and a reduction in VMT.

***Remarks:*** Limited pedestrian access exists along the Project's frontage. The Project's implementation of this measure through the construction of on-site connections to the existing sidewalks off-site could provide for a nominal reduction in Project VMT. As noted by CAPCOA (Quantifying Greenhouse Gas Mitigation Measures, p. 187), the provision of sidewalks on-site that connect to off-site pedestrian walkways linking to other complementary land uses within a suburban center context can result in a VMT reduction between 0 and 2.0%. Given the complementary land uses within walking distance of the Project site, this particular TDM measure may be evaluated further as a means of providing a reduction in Project VMT. As the Project is to

Ms. Deirdre McCollister  
 MIG, Inc.  
 June 15, 2021  
 Page 7 of 9

provide pedestrian accommodations along the Project's frontage, the improvement is estimated to provide a 1% VMT reduction. Supporting calculations are provided in Attachment B.

- Measure 3: Provide Traffic Calming Measure (SDT-2). Providing traffic calming measures encourages people to walk or bike instead of using a vehicle. This mode shift will result in a decrease in VMT. Traffic calming features may include: marked crosswalks, count-down signal timers, curb extensions, speed tables, raised crosswalks, raised intersections, median islands, tight corner radii, roundabouts or mini-circles, on-street parking, planter strips with street trees, chicanes/chokers, and others.

Remarks: There is limited opportunity for the Project to implement meaningful enhanced traffic calming measures in the area that would encourage a shift in travel mode to walking or biking. This measure is therefore not evaluated further as means of providing a reduction in Project VMT.

- Measure 4: Implement Car-Sharing Program (TRT-9). Implementing a car-sharing program would allow individuals to have on-demand access to a shared fleet of vehicles on an as-needed basis. User costs are typically determined through mileage or hourly rates, with deposits and/or annual membership fees.

Remarks: This particular TDM measure would be solely dependent on a future building tenant and may be considered as infeasible due to lack of available service providers in the area. For these reasons, the measure is not evaluated further as means of providing a reduction in Project VMT.

- Measure 5: Implement Transit Access Improvements (TST-2). This measure improves access to transit facilities through sidewalk/crosswalk safety enhancements and bus shelter improvements.

Remarks: The Riverside Transit Agency (RTA), a public transit agency serving various jurisdictions within Riverside County currently provides service in the area. RTA Routes 11 and 20 directly serves the study area with existing nearby bus stops located east of the intersection of Fredrick Street at Alessandro Boulevard and another located just east of the Graham Street at Alessandro Boulevard intersection. Although providing improved pedestrian access to these existing bus stops will help to increase usage by future Project employees, CAPCOA does not identify specific VMT reduction percentages based on this measure alone. As such, no additional VMT reduction amount is taken.

- Measure 6: Encourage Telecommuting and Alternative Work Schedule (TRT-6). Encouraging telecommuting and alternative work schedules reduces the number of commute trips and therefore VMT traveled by employees. Alternative work schedules could take the form of staggered starting times, flexible schedules, or compressed work weeks.

Remarks: The effectiveness of this measure is dependent on the ultimate building tenant(s) which are unknown currently. As such, this measure is therefore not evaluated further as means of providing a reduction in Project VMT.

- Measure 7: Provide Ride-Sharing Programs (TRT-3). This strategy focuses on encouraging carpooling and vanpooling but its ultimate implementation is limited as Measure 6 above.

Remarks: The effectiveness of this measure is dependent on the ultimate building tenant(s) which are unknown currently. As such, this measure is therefore not evaluated further as means of providing a reduction in Project VMT.

In total, the combined VMT reduction may be 31% between Mitigation Measures 1 and 2. As noted by CAPCOA, the maximum cross-category reduction for any combination of land use, neighborhood enhancements, parking and transit strategies for projects located within a suburban center context is

Ms. Deirdre McCollister  
 MIG, Inc.  
 June 15, 2021  
 Page 8 of 9

15.0%.<sup>8</sup> The suburban center serves the population of the suburb with office, retail and housing which is denser than the surrounding suburb. Table 5 provides justification for the suburban center classification:

**TABLE 5: SUBURBAN CENTER CLASSIFICATION**

Characteristic	Justification
Ratio or relationship between jobs and housing	The area includes multiple land uses which serves the population with office, retail, and housing. The suburban setting has a characteristic of having a poor job-to-housing ratio whereas the suburban center is classified as having a balanced ratio. CAPCOA defines a balanced job-to-population ratio as a ratio ranging from 0.9 to 1.2. In the RivTAM base model, it is estimated that the housing within 1 to 1 ½ miles is 3,893, the population within 1 to 1 ½ miles is 15,740, and the employment within 1 to 1 ½ miles is 14,426. The resulting job-to-housing ratio is 0.92. This would suggest that the ratio between jobs and housing are balanced and the location setting is a suburban center. Suburban settings have a poor job-to-housing ratio.
Transit availability	The City of Moreno Valley and nearby jurisdiction of City of Riverside operate in a typical grid street pattern. A commuter rail station exists within two miles to the west (i.e., Moreno Valley/March Field Metrolink Station) and the existing RTA Route 20 includes a direct route/bus stops from the study area to the Metrolink Station. The bus stop is located along Alessandro Boulevard 400 feet west of the Project frontage. Suburban settings have no immediate access to commuter rail stations.

Therefore, for the purposes of this evaluation, the VMT reduction strategies described previously (i.e., Measures 1 and 2) would combine for a maximum VMT reduction of 15.0%.

**CONCLUSION**

Project generated VMT per employee was found to exceed citywide baseline VMT per employee threshold by 11.69% and citywide cumulative VMT per employee threshold by 10.40%. With implementation of the aforementioned TDM measures (Measures 1 and 2), a maximum reduction in VMT of 15.0% could be achieved, which would reduce the Project’s impact to less than significant.

**Mitigation Method:**

$\% \text{ VMT Reduction} = \text{Land Use} * B$  [not to exceed 30%]

Where

Land Use = Percentage increase in land use index versus single use development  
= (land use index – 0.15)/0.15 (see Appendix C for detail)

Land use index =  $-a / \ln(6)$

(from [2])

$a = \sum_{i=1}^6 a_i \times \ln(a_i)$

$a_i$  = building floor area of land use  $i$  / total square feet of area considered

- residential  $a_1$  = single family
- $a_2$  = multifamily residential
- $a_3$  = commercial
- $a_4$  = industrial
- $a_5$  = institutional
- $a_6$  = park

if land use is not present and  $a_i$  is equal to 0, set  $a_i$  equal to 0.01

B

= elasticity of VMT

with respect to land use index (0.09 from [1])

not to exceed 500%

increase

**Mitigation Method 1 Calculation for the Project (based Exhibit A: Land Use Area Map):**

$a_1$  = single family residential = 0.26

$a_2$  = multifamily residential = 0.08

$a_3$  = commercial = 0.07

$a_4$  = industrial = 0.48

$a_5$  = institutional/office = 0.10

$a_6$  = park = 0.01

Land Use Index =  $-[0.26 \times \ln(0.26) + 0.08 \times \ln(0.08) + 0.07 \times \ln(0.07) + 0.48 \times \ln(0.48) + 0.10 \times \ln(0.10) + 0.01 \times \ln(0.01)] / \ln(6) = 0.76$

Low Range % VMT Reduction =  $(0.76 - 0.15) / 0.15 * 0.09 = 37\%$

**Mitigation Method 2: Provide Pedestrian Network Improvements (SDT-1) Mitigation Method Calculation for the Project:**

**Mitigation Method:**

Estimated VMT Reduction	Extent of Pedestrian Accommodations	Context
2%	Within Project Site and Connecting Off-Site	Urban/Suburban
1%	Within Project Site	Urban/Suburban
< 1%	Within Project Site and Connecting Off-Site	Rural

The proposed Project is responsible for constructing Alessandro Boulevard at its ultimate half-section width. The site-adjacent improvement includes constructing pedestrian facilities along the Project's frontage. As such, the VMT reduction is estimated to be 1%.

**APN:** 297-170-002 and 297-170-003

**Location:** Alessandro Boulevard east of Frederick Street, west of Graham Street

**Proposal:** Applicant is requesting approval of the following entitlements for the Compass Danbe Centerpointe project: 1) a General Plan Amendment (GPA) amending the City's General Plan from Commercial to Business Park, 2); a Change of Zone from Community Commercial District (CC) to Light Industrial District (LI); 3) a Plot Plan for an approximately 290,726 square foot light industrial building; and 4) a Plot Plan for an approximately 98,877 square foot light industrial warehouse building located on a 17.67-acre site.

**Council District:** 1

**Environmental Determination:** The project has been evaluated against the criteria set forth in the California Environmental Quality Act (CEQA) and CEQA Guidelines and staff has determined that a Mitigated Negative Declaration is the appropriate environmental document for the proposed project.

The Draft Initial Study/Mitigated Negative Declaration was circulated for public review by responsible and trustee agencies and other interested parties for a review period commencing July 26, 2021, through August 25, 2021. The documents can be obtained in electronic format via email by request. The final document may be inspected by appointment at the Community Development Department at 14177 Frederick Street, Moreno Valley, California by calling (951) 413-3206 during normal business hours (7:30 a.m. to 5:30 p.m., Monday through Thursday, 7:30a.m. to 4:30p.m. Friday).

**PUBLIC TESTIMONY:** All interested parties will be provided an opportunity to submit oral testimony during the Public Hearing and/or provide written testimony during or prior to the Public Hearing. The application file and related environmental documents may be inspected at the Community Development Department at 14177 Frederick Street, Moreno Valley, California by calling (951) 413-3206 during normal business hours (7:30 a.m. to 5:30 p.m., Monday through Thursday, and 7:30 a.m. to 4:30 p.m., Friday).

**PLEASE NOTE:** The City Council may consider and approve changes to the proposed items under consideration during the Public Hearing.

**GOVERNMENT CODE § 65009 NOTICE:** If you challenge any of the proposed actions taken by the City Council in court, you may be limited to raising only those issues you or someone else raised during the Public Hearing described in this notice, or in written correspondence delivered to the Planning Division of the City of Moreno Valley during or prior to the Public Hearing.

**ACCESSIBILITY:** Upon request and in compliance with the Americans with Disabilities Act of 1990, any person with a disability who requires a modification or accommodation in order to participate in a meeting should direct such request to James Verdugo, ADA Coordinator, at (951) 413-3350 at least 48 hours before the meeting. The 48-hour notification will enable the City to make reasonable arrangements to ensure accessibility to this meeting.

**Date and Time:** October 5, 2021 6:00 p.m.  
**Location:** City Hall Council Chamber  
14177 Frederick Street, Moreno Valley, CA 92553  
**Planner:** Julia Descoteaux, Associate Planner  
**Contact:** (951) 413-3209 or [juliad@moval.org](mailto:juliad@moval.org)

Impact	Mitigation Measure (MM)	Responsible Party	Monitoring Party	Implementation Stage	Level of Significance
<b>Biological Resources</b>					
<p><b>Thresholds a &amp; d:</b> There is potential for the Project to impact special-status wildlife species, including protected nesting and migratory birds.</p>	<p><b>MM BR-1:</b> Within 30 days prior to grading, a qualified biologist shall conduct a survey of suitable habitat on site and make a determination regarding the presence or absence of the burrowing owl. The determination shall be documented in a report and shall be submitted, reviewed, and accepted by the City of Moreno Valley prior to the issuance of a grading permit and subject to the following provisions:</p> <p>a) In the event that the pre-construction survey identifies no burrowing owls on the property a grading permit may be issued without restriction.</p> <p>b) In the event that the pre-construction survey identifies the presence of at least one individual but less than three (3) mating pairs of burrowing owl, then prior to the issuance of a grading permit and prior to the commencement of ground-disturbing activities on the property, the qualified biologist shall passively or actively relocate any burrowing owls. Passive relocation, including the required use of one-way doors to exclude owls from the site and the collapsing of burrows, will occur if the biologist determines that the proximity and availability of alternate habitat is suitable for successful passive relocation. Passive</p>	Project Biologist	City of Moreno Valley Planning Division and Building and Safety Division	Within 30 days prior to initiating vegetation clearing or ground disturbance	Less than significant with mitigation incorporated

	<p>relocation shall follow CDFW relocation protocol and shall only occur between September 15 and February 1. If proximate alternate habitat is not present as determined by the biologist, active relocation shall follow CDFW relocation protocol. The biologist shall confirm in writing that the species has fledged the site or been relocated prior to the issuance of a grading permit.</p> <p>c) In the event that the pre-construction survey identifies the presence of three (3) or more mating pairs of burrowing owl, the requirements of MSCHP Species-Specific Conservation Objectives 5 for the burrowing owl shall be followed. Objective 5 states that if the site (including adjacent areas) supports three (3) or more pairs of burrowing owls and supports greater than 35 acres of suitable habitat, at least 90 percent of the area with long-term conservation value and burrowing owl pairs will be conserved onsite until it is demonstrated that Objectives 1-4 have been met. A grading permit shall be issued, either:</p> <p>i) Upon approval and implementation of a property-specific Determination of Biologically Superior Preservation (DBESP) report for the burrowing owl by the CDFW; or</p>

Impact	Mitigation Measure (MM)	Responsible Party	Monitoring Party	Implementation Stage	Level of Significance
	<p>ii) A determination by the biologist that the site is part of an area supporting less than 35 acres of suitable Habitat, and upon passive or active relocation of the species following accepted CDFW protocols. Passive relocation, including the required use of one-way doors to exclude owls from the site and the collapsing of burrows, will occur if the biologist determines that the proximity and availability of alternate habitat is suitable for successful passive relocation. Passive relocation shall follow CDFW relocation protocol and shall only occur between September 15 and February 1. If proximate alternate habitat is not present as determined by the biologist, active relocation shall follow CDFW relocation protocol. The biologist shall confirm in writing that the species has fledged the site or been relocated prior to the issuance of a grading permit.</p> <p><b>MM BR-2:</b> All vegetation clearing and ground disturbance shall be prohibited during the bird nesting season (February 1 through September 15), unless a nesting bird survey is completed in accordance with the following requirements:</p> <p>a) A bird nesting survey of the Project Site, including suitable habitat within a 100-foot radius, shall be conducted by a qualified biologist</p>	<p>Project Biologist</p>	<p>City of Moreno Valley Planning Division and Building and Safety Division</p>	<p>Within 5 days prior to initiating vegetation clearing or ground disturbance that occurs between February 1 and September 15</p>	

Impact	Mitigation Measure (MM)	Responsible Party	Monitoring Party	Implementation Stage	Level of Significance
	<p>within five (5) days prior to initiating vegetation clearing or ground disturbance at the respective property. A copy of the nesting bird survey results report shall be provided to the City of Moreno Valley.</p> <p>b) If the survey does not identify the presence of any active nests, then construction activities can proceed without restriction.</p> <p>c) If the survey identifies the presence of active nests, then the qualified biologist shall provide the City with a copy of maps showing the location of all nests and a species-appropriate buffer zone around each nest sufficient to protect the nest from substantial adverse direct and/or indirect impacts. The size and location of all buffer zones, if required, shall be subject to review and approval by the City but shall be no less than a 100-foot radius around the nest for non-raptor species and no more than a 500-foot radius around the nest for raptor species and any endangered, threatened, or candidate species.</p> <p>i) The nests and buffer zones shall be field checked weekly by a qualified biological monitor. The approved buffer zone shall be marked in the field with construction fencing. No construction vehicles</p>				

Impact	Mitigation Measure (MM)	Responsible Party	Monitoring Party	Implementation Stage	Level of Significance
	<p>shall be permitted within restricted areas (i.e., bird protection zones), unless directly related to the management or protection of the legally protected species, until after the nest becomes inactive (or the nest has failed), the young have fledged, the young are no longer being fed by the parents, the young have left the area, or the young will no longer be impacted by the activities.</p> <p>ii) In the event that a nest is abandoned despite efforts to minimize disturbance and, if the nestlings are still alive, the Project Applicant/Developer shall contact the California Department of Fish and Wildlife (CDFW) and, subject to CDFW approval, fund the recovery and hacking (controlled release of captive reared young) of the nestling(s).</p>				
<p><b>Thresholds b and c:</b> The Project site contains wetland habitat that meets the definition of riparian/riverine habitat and sensitive natural community; these on-site habitats would be removed by the Project.</p>	<p><b>MM BR-3:</b> Prior to the issuance of grading permits, the Project Applicant shall obtain all applicable permits for impacts to jurisdictional features, which may include a 1602 Streambed Alteration Agreement from CDFW and a 401 Certification issued by the RWQCB pursuant to the California Water Code Section 13260. In addition, the Project Applicant shall purchase a minimum of 0.81-acre of re-establishment credits (a 1:1 mitigation-to-impact</p>	<p>Project Applicant</p>	<p>City of Moreno Valley Planning Division and Building and Safety Division</p>	<p>Prior to issuance of grading permits.</p>	<p>Less than significant with mitigation incorporated</p>

	ratio for impacts to wetland meadow habitat) and 0.82-acre of rehabilitation credits (a 2:1 mitigation-to-impact ratio for impacts to black willow riparian woodland and disturbed wetland-cattail habitats). Habitat mitigation credits can be purchased either at an approved Habitat Mitigation Bank (e.g., Riverpark Mitigation Bank) or via an In-Lieu Fee Program (e.g., Riverside-Corona Resource Conservation District and the Southwest Resource Management Association Santa Ana River Watershed In-Lieu Fee Program). Approval to purchase the mitigation credits must be granted in advance by the resource agencies. The Project Applicant shall provide evidence to the City of Moreno Valley that the applicable permits have been obtained and that the required habitat mitigation credits have been purchased prior to issuance of grading permits.				
<b>Threshold f:</b> The Project would result in the removal of MSCHP riparian habitat and suitable habitat for the burrowing owl from the Project site. 	<p>Project construction. The Project Archaeologist, in consultation with the Consulting Tribe(s), the contractor, and the City, shall develop a Cultural Resources Management Plan (CRMP) in consultation pursuant to the definition in AB52 to address the details, timing and responsibility of all archaeological and cultural activities that will occur on the project site. A consulting tribe is defined as a tribe that initiated the AB 52 tribal consultation process for the Project, has not opted out of the AB52 consultation process, and has completed AB 52 consultation with the City as provided for in Cal Pub Res Code Section 21080.3.2(b)(1) of AB52. Details in the Plan shall include:</p> <p>a) Project grading and development scheduling;</p> <p>b. The Project archeologist and the Consulting Tribes(s) as defined in MM TCR-1 shall attend the pre-grading meeting with the City, the construction manager and any contractors and will conduct a mandatory Cultural Resources Worker Sensitivity Training to those in attendance. The Training will include a brief review of the cultural sensitivity of the Project and the surrounding area; what resources could potentially be identified during</p>

## RESOLUTION NUMBER 2022-XX

**A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, APPROVING GENERAL PLAN AMENDMENT PEN20-0118 TO AMEND THE GENERAL PLAN LAND USE MAP, CHANGING THE LAND USE DESIGNATION FROM COMMERCIAL TO BUSINESS PARK FOR THE PROPERTY LOCATED ON THE SOUTH SIDE OF ALESSANDRO BOULEVARD BETWEEN FREDERICK STREET AND GRAHAM STREET (APN'S 297-170-002 AND 003) AND THE NECESSARY AND CORRESPONDING AMENDMENTS TO THE CITY'S ZONING ATLAS**

**WHEREAS**, the City of Moreno Valley ("City") is a general law city and a municipal corporation of the State of California, and has the authority to approve amendments to the City's General Plan and the City's Zoning Atlas and;

**WHEREAS**, CDRE Holdings LLC., ("Developer") has filed an application for the approval of General Plan Amendment PEN20-0118 ("Application") to amend the Moreno Valley General Plan from Commercial to Business Park for the project located on the south side of Alessandro Boulevard between Frederick Street and Graham Street, (APN's 297-170-002 and 003) ("Site"), which shall also require any necessary and corresponding amendment to the City's Zoning Atlas to reflect the proposed changes in the zoning classification and/or redistricting associated with the General Plan Amendment; and

**WHEREAS**, pursuant to the provisions of Section 9.02.200 (Public Hearing and Notification Procedures) of the Moreno Valley Municipal Code and Government Code section 65905, a public hearing was scheduled for January 18, 2022, and notice thereof was duly published and posted, and mailed to all property owners of record within 600 feet of the Site; and

**WHEREAS**, on August 26, 2021, the public hearing to consider the Application was duly conducted by the Planning Commission at which time all interested persons were provided with an opportunity to testify and to present evidence; and

**WHEREAS**, on August 26, 2021 a hearing was conducted by the Planning Commission to consider General Plan Amendment PEN20-0118, whereby the Planning Commission approved Planning Commission Resolution 2021-25, a recommendation that the City Council approve the General Plan Amendment; and

**WHEREAS**, on August 26, 2021, in accordance with the provisions of the California Environmental Quality Act (CEQA<sup>1</sup>) and CEQA Guidelines,<sup>2</sup> the Planning Commission considered and approved Planning Commission Resolution 2021-24

---

<sup>1</sup> Public Resources Code §§ 21000-21177

<sup>2</sup> 14 California Code of Regulations §§15000-15387

recommending that the City Council adopt a Mitigated Negative Declaration and Mitigation Monitoring Plan for The District Moreno Valley project.

**WHEREAS**, on October 15, 2021, the City Council continued the item to a date uncertain.

**WHEREAS**, on January 18, 2022, the public hearing to consider the Application was duly conducted by the City Council at which time all interested persons were provided with an opportunity to testify and to present evidence; and

**WHEREAS**, on January 18, 2022, in accordance with the provisions of the California Environmental Quality Act (CEQA) and CEQA Guidelines, the City Council considered and approved Resolution 2022-XX adopting a Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program for the Compass Danbe Centerpointe Project located on the south side of Alessandro Boulevard between Frederick Street and Graham Street (APN's 297-170-002 and, 003).

**NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:**

**Section 1. Recitals and Exhibits**

That the foregoing Recitals and attached exhibits are true and correct and are hereby incorporated by this reference.

**Section 2. Notice**

That pursuant to Government Code section 66020(d)(1), notice is hereby given that the proposed Project is subject to certain fees, dedications, reservations and other exactions as provided herein.

**Section 3. Evidence**

That the City Council has considered all of the evidence submitted into the administrative record for the General Plan Amendment, including, but not limited to, the following:

- (a) Moreno Valley General Plan and all relevant provisions contained therein;
- (b) Title 9 (Planning and Zoning) of the Moreno Valley Municipal Code and all relevant provisions referenced therein;
- (c) The Moreno Valley General Plan amendment changing the land use designation from Commercial to Business Park and all relevant provisions contained therein as shown on Exhibit A;
- (d) Application for the approval of a General Plan Amendment PEN20-0118 and all documents, records and references contained therein;
- (e) Staff Report prepared for the City Council's consideration and all documents, records and references related thereto, and Staff's presentation at the public hearing;

Attachment: Resolution 2022- General Plan Amendment (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

- (f) Testimony and/or comments from Applicant and its representatives during the public hearing; and
- (g) Testimony, comments and correspondence from all persons that were provided in written format or correspondence, at, or prior to, the public hearing.

**Section 4. Findings**

That based on the foregoing Recitals and the Evidence contained in the Administrative Record as set forth above, the City Council makes the following findings:

- (a) The proposed General Plan amendment is consistent with the existing goals, objectives, policies and programs of the General Plan; and
- (b) The proposed General Plan amendment will not adversely affect the public health, safety or general welfare.

**Section 5. Approval**

That based on the foregoing Recitals, Evidence contained in the Administrative Record and Findings, as set forth herein, the City Council hereby approves General Plan Amendment PEN20-0118 as depicted in the exhibit attached hereto as Exhibit A, and any necessary and corresponding amendment to the City’s Zoning Atlas to reflect the proposed changes in the zoning classification and/or redistricting associated with the General Plan Amendment.

**Section 6. Repeal of Conflicting Provisions**

That all the provisions as heretofore adopted by the City Council that are in conflict with the provisions of this Resolution are hereby repealed.

**Section 7. Severability**

That the City Council declares that, should any provision, section, paragraph, sentence or word of this Resolution be rendered or declared invalid by any final court action in a court of competent jurisdiction or by reason of any preemptive legislation, the remaining provisions, sections, paragraphs, sentences or words of this Resolution as hereby adopted shall remain in full force and effect.

**Section 8. Effective Date**

That this Resolution shall take effect immediately upon the date of adoption.

**Section 9. Certification**

That the City Clerk for the City Council shall certify to the passage of this Resolution.

**PASSED AND ADOPTED THIS \_\_\_ day of \_\_\_\_\_, 2022**

**ORDINANCE NO. 2022-**

**AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, APPROVING CHANGE OF ZONE PEN20-0119 TO AMEND THE LAND USE DESIGNATION OF THE 17.67-ACRE PROJECT SITE FROM COMMUNITY COMMERCIAL DISTRICT (CC) TO LIGHT INDUSTRIAL DISTRICT (LI) FOR THE COMPASS DANBE CENTERPOINTE PROJECT LOCATED ON THE SOUTH SIDE OF ALESSANDRO BOULEVARD BETWEEN FREDERICK STREET AND GRAHAM STREET (APN'S 297-170-002 AND 003)**

**The City Council of the City of Moreno Valley does ordain as follows:**

**SECTION 1 GENERAL:**

1.1 CDRE Holdings, LLC., ("Developer") has filed an application for the approval of Change of Zone PEN20-0119 ("Application") to change the zoning designation of the site from Community Commercial District (CC) to Light Industrial District (LI) for the project located on the south side of Alessandro Boulevard between Frederick Street and Graham Street (APN's 297-170-002 and 003) ("Site"), which shall also require any necessary and corresponding amendment to the City's Zoning Atlas to reflect the proposed changes in the zoning classification and/or redistricting associated with the project site; and

1.2 At its August 26, 2021 meeting, the Planning Commission considered the Change of Zone for Compass Danbe Centerpointe project and recommended approval to the City Council; and

1.3 Pursuant to the provisions of the law, a public hearing was held before the City Council on January 18, 2022, for deliberations and decision.

1.4 The matter was fully discussed, and the public and other agencies were given opportunity to present testimony and documentation.

1.5 An Initial Study has been prepared for the Project for the purpose of compliance with the California Environmental Quality Act (CEQA). Based on the Initial Study including all supporting technical evidence, it was determined that the project impacts are expected to be less than significant with mitigation, and approval of a Mitigated Negative Declaration is an appropriate environmental determination for the Project.

**SECTION 2 EVIDENCE:**

That the City Council has considered all of the evidence submitted into the administrative record for Change of Zone PEN20-0119, including, but not limited to, the following:

1  
Ordinance No. 2022-XX  
Date Adopted: \_\_\_\_\_, 2022

Attachment: Ordinance XXX - Change of Zone (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

- (a) Moreno Valley General Plan and all relevant provisions contained therein;
- (b) Title 9 (Planning and Zoning) of the Moreno Valley Municipal Code and all relevant provisions referenced therein;
- (c) The change the zoning designation of the site from Community Commercial District (CC) to Light Industrial District (LI) and all other relevant provisions contained therein as shown on Exhibit A;
- (d) Application for the approval of Change of Zone PEN20-0119 and all documents, records and references contained therein;
- (e) Staff Report prepared for the City Council’s consideration and all documents, records and references related thereto, and Staff’s presentation at the public hearing;
- (f) Testimony and/or comments from Applicant and its representatives during the public hearing; and
- (g) Testimony comments and/or correspondence from all persons that were provided in written format or correspondence, at, or prior to, the public hearing.

**SECTION 3 FINDINGS:**

That based on the foregoing Recitals and the Evidence contained in the Administrative Record as set forth above, the City Council hereby finds as follows:

- (a) The proposed amendment is consistent with the existing goals, objectives, policies and programs of the General Plan;
- (b) The proposed amendment will not adversely affect the public health, safety or general welfare; and
- (c) The proposed amendment is consistent with the purposes and intent of Title 9.

**SECTION 4 AMENDMENT OF THE OFFICIAL ZONING ATLAS:**

4.1 The City of Moreno Valley Official Zoning Atlas, as adopted by Ordinance No. 981, on August 3, 2021, of the City of Moreno Valley, and as amended thereafter from time to time by the City Council of the City of Moreno Valley, is further amended by placing in effect the zone or zone classification to page 96 of the Official Zoning Atlas as shown on the attached map marked “Exhibit A” and included herein by reference and on file in the office of the City Clerk.

**SECTION 5 EFFECT OF ENACTMENT:**

5.1 Except as specifically provided herein, nothing contained in this ordinance shall be deemed to modify or supersede any prior enactment of the City Council which addresses the same subject addressed herein.

Attachment: Ordinance XXX - Change of Zone (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

**SECTION 6 NOTICE OF ADOPTION:**

6.1 Within fifteen days after the date of adoption hereof, the City Clerk shall certify to the adoption of this ordinance and cause it to be posted in three public places within the city.

**SECTION 7 EFFECTIVE DATE:**

7.1 This ordinance shall take effect thirty days after the date of its adoption.

**APPROVED AND ADOPTED** this \_\_\_\_\_ day of \_\_\_\_\_, \_\_\_\_\_.

PEN20-0119 - Change of Zone

Community Commercial (CC) to Light Industrial (LI)

Attachment: Ordinance XXX - Change of Zone (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

**RESOLUTION NUMBER 2022-**

**A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY APPROVING TENTATIVE PARCEL MAP 37944 FOR THE COMPASS DANBE CENTERPOINTE PROJECT LOCATED ON THE SOUTH SIDE OF ALESSANDRO BOULEVARD BETWEEN FREDERICK STREET AND GRAHAM STREET (APN'S 297-170-002 AND 003)**

**WHEREAS**, the City of Moreno Valley ("City") is a general law city and a municipal corporation of the State of California, and the lead agency for the preparation and consideration of environmental documents for local projects that are subject to requirements of the California Environmental Quality Act (CEQA) and CEQA Guidelines; and

**WHEREAS**, CDRE Holdings LLC., ("Developer") has filed an application for the approval of Tentative Parcel Map 37944 PEN20-0122 ("Application") for the Compass Danbe Centerpointe Project, ("Project") located on the south side of Alessandro Boulevard between Frederick Street and Graham Street (APN's 297-170-002 and 003) ("Site"); and

**WHEREAS**, the Application has been evaluated in accordance with Chapter 9.14 (Land Divisions) of the Municipal Code with consideration given to the City's General Plan, Zoning Ordinance, and other applicable laws and regulations; and

**WHEREAS**, Chapter 9.14 of the Municipal Code imposes conditions of approval upon projects for which a Tentative Parcel Map is required, which conditions may be imposed by the City Council to address on-site improvements, off-site improvements, the manner in which the site is used and any other conditions as may be deemed necessary to protect the public health, safety and welfare and ensure that the proposed Project will be developed in accordance with the purpose and intent of Title 9 ("Planning and Zoning") of the Municipal Code; and

**WHEREAS**, Staff has presented for the City Council's consideration Conditions of Approval to be imposed upon Tentative Parcel Map 37944 PEN20-0122 (TPM), which conditions have been deemed necessary to protect the public health, safety and welfare and ensure that the proposed Project will be developed in accordance with the purpose and intent of Title 9 ("Planning and Zoning") of the Municipal Code; and

**WHEREAS**, pursuant to the provisions of Section 9.02.200 (Public Hearing and Notification Procedures) of the Municipal Code and Government Code section 65905, a public hearing was scheduled for January 18, 2022 and notice thereof was duly published and posted, and mailed to all property owners of record within 600 feet of the Site; and

**WHEREAS**, on August 26, 2021, the public hearing to consider the Application was duly conducted by the Planning Commission at which time all interested persons were provided with an opportunity to testify and to present evidence; and

**WHEREAS**, on August 26, 2021 a hearing was conducted by the Planning Commission to consider a recommendation that the City Council approve the Mitigated Negative Declaration and the Mitigation Monitoring Plan and approve the proposed Project; and

**WHEREAS**, on August 26, 2021 a hearing was conducted by the Planning Commission whereby the Planning Commission approved Planning Commission Resolution 2021-27, a recommendation that the City Council approve the Tentative Tract Map 37944; and

**WHEREAS**, on October 15, 2021, the City Council continued the item to a date uncertain.

**WHEREAS**, on January 18, 2022, the public hearing to consider the Application was duly conducted by the City Council at which time all interested persons were provided with an opportunity to testify and to present evidence; and

**WHEREAS**, consistent with the requirements of Chapter 9.14 (Land Divisions) of the Municipal Code, at the public hearing the City Council considered Conditions of Approval to be imposed upon Tentative Parcel Map 37944 PEN20-0122, which conditions were prepared by Planning Division staff who deemed said conditions to be necessary to protect the public health, safety and welfare and to ensure the proposed Project will be developed in accordance with the purpose and intent of Title 9 ("Planning and Zoning") of the Municipal Code; and

**WHEREAS**, at the public hearing, the City Council considered whether each of the requisite findings specified in Section 9.14.070 of the Municipal Code and set forth herein could be made with respect to the proposed Project as conditioned by Conditions of Approval; and

**WHEREAS**, on January 18, 2022, in accordance with the provisions of the California Environmental Quality Act (CEQA) and CEQA Guidelines, the City Council approved Resolution 2022-XX adopting a Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program for the Compass Danbe Centerpointe Project located on the south side of Alessandro Boulevard between Frederick Street and Graham Street (APN's 297-170-002 and 003).

**NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:**

**Section 1.                      Recitals and Exhibits**

That the foregoing Recitals and attached Exhibits are true and correct and are hereby incorporated by this reference.

**Section 2.                      Notice**

That pursuant to Government Code section 66020(d)(1), notice is hereby given that the proposed project is subject to certain fees, dedications, reservations and other exactions as provided herein.

### **Section 3. Evidence**

That the City Council has considered all of the evidence submitted into the administrative record for the proposed Tentative Parcel Map 37944 PEN20-0122, including, but not limited to, the following:

- (a) Moreno Valley General Plan and all other relevant provisions contained therein;
- (b) Title 9 (Planning and Zoning) of the Moreno Valley Municipal Code and all other relevant provisions referenced therein;
- (c) Application for the approval of Tentative Parcel Map 37944 PEN20-0122 and all documents, records and references contained therein;
- (d) Conditions of Approval for Tentative Parcel Map 37944 PEN20-0122, attached hereto as Exhibit A;
- (e) Staff Report prepared for the City Council's consideration and all documents, records and references related thereto, and Staff's presentation at the public hearing;
- (f) Testimony and/or comments from Applicant and its representatives during the public hearing; and
- (g) Testimony and/or comments from all persons that was provided in written format or correspondence, at, or prior to, the public hearing.

### **Section 4. Findings**

That based on the foregoing Recitals and the Evidence contained in the Administrative Record as set forth above, the City Council makes the following findings in approving Tentative Parcel Map 37944 PEN20-0122.

- (a) That the proposed map is consistent with applicable general and specific plans and the zoning ordinance;
- (b) That the design or improvement of the proposed subdivision is consistent with applicable general and specific plans;
- (c) That the site is physically suitable for the type of development;
- (d) That the site of the proposed land division is physically suitable for the proposed density of the development;
- (e) That the design of the subdivision or the proposed improvements are not likely to cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat;
- (f) That the design of the subdivision or type of improvements is not likely to cause serious public health problems;
- (g) That the design of the subdivision or the type of improvements will not conflict with easements, acquired by the public at large, for access through or use of, property within the proposed subdivision;

- (h) That the proposed land division is not subject the Williamson Act pursuant to the California Land Conservation Act of 1965.
- (i) That the proposed land division and the associated design and improvements are not consistent with applicable ordinances of the city.
- (j) That the design of the land division provides, to the extent feasible, for future passive or natural heating and cooling opportunities in the subdivision.
- (k) That the effect of the proposed land division on the housing needs of the region were considered and balanced against the public service needs of the residents of Moreno Valley and available fiscal and environmental resources.

**Section 5. Approval**

That based on the foregoing Recitals, Evidence contained in the Administrative Record and Findings set forth above, the City Council hereby approves Tentative Parcel Map 37944 PEN20-0122 subject to the Conditions of Approval for Tentative Parcel Map 37944 PEN20-0122 attached hereto as Exhibit A.

**Section 6. Repeal of Conflicting Provisions**

That all the provisions as heretofore adopted by the City Council that are in conflict with the provisions of this Resolution are hereby repealed.

**Section 7. Severability**

That the City Council declares that, should any provision, section, paragraph, sentence or word of this Resolution be rendered or declared invalid by any final court action in a court of competent jurisdiction or by reason of any preemptive legislation, the remaining provisions, sections, paragraphs, sentences or words of this Resolution as hereby adopted shall remain in full force and effect.

**Section 8. Effective Date**

That this Resolution shall take effect immediately upon the date of adoption.

**Section 9. Certification**

That the City Clerk for the City Council shall certify to the passage of this Resolution.

EFFECTIVE DATE:

EXPIRATION DATE:

**COMMUNITY DEVELOPMENT DEPARTMENT****Planning Division**

1. A change or modification to the land use or the approved site plans may require a separate approval. Prior to any change or modification, the property owner shall contact the City of Moreno Valley Community Development Department to determine if a separate approval is required.
2. Any expansion to this use or exterior alterations will require the submittal of a separate application(s) and shall be reviewed and approved under separate permit(s). (MC 9.02.080)
3. The developer, or the developer's successor-in-interest, shall be responsible for maintaining any undeveloped portion of the site in a manner that provides for the control of weeds, erosion and dust. (MC 9.02.030)
4. The site shall be developed in accordance with the approved plans on file in the Community Development Department - Planning Division, the Municipal Code regulations, General Plan, and the conditions contained herein. Prior to any use of the project site or business activity being commenced thereon, all Conditions of Approval shall be completed to the satisfaction of the Planning Official. (MC 9.14.020)
5. Any signs indicated on the submitted plans are not included with this approval. Any signs, whether permanent (e.g. wall, monument) or temporary (e.g. banner, flag), require separate application and approval by the Planning Division. No signs are permitted in the public right of way. (MC 9.12)

**Special Conditions**

6. All site plans, grading plans, landscape and irrigation plans, lighting plans and street improvement plans shall be coordinated for consistency with this approval.
7. This approval shall comply with all applicable requirements of the City of Moreno Valley Municipal Code.

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 2

8. Prior to building final, the developer/owner or developer's/owner's successor-in-interest shall pay all applicable impact fees, including but not limited to Transportation Uniform Mitigation fees (TUMF), and the City's adopted Development Impact Fees. (Ord)
9. Prior to the issuance of grading permits, final erosion control landscape and irrigation plans for all cut or fill slopes over 3 feet in height shall be submitted to and approved by the Planning Division. The plans shall be designed in accordance with the slope erosion plan as required by the City Engineer. Man-made slopes greater than 10 feet in height shall be "land formed" to conform to the natural terrain and shall be landscaped and stabilized to minimize visual scarring. (GP Objective 1.5, MC 9.08.080, DG)
10. Prior to recordation of the final map, final median enhancement/landscape/irrigation plans shall be submitted to and approved by the Planning Division, and Public Works Department - Special Districts Division for review and approval by each division. (GP - Circulation Master Plan)
11. All landscaped areas in perpetuity shall be maintained in a healthy and thriving condition, free from weeds, trash and debris. (MC 9.02.030)
12. This tentative map and plot plans shall expire three years after the approval date of this tentative map unless extended as provided by the City of Moreno Valley Municipal Code; otherwise it shall become null and void and of no effect whatsoever in the event the applicant or any successor in interest fails to properly file a final map before the date of expiration. (MC 9.02.230, 9.14.050, 080)
13. Prior to the issuance of grading permits, mitigation measures contained in the Mitigation Monitoring Program approved with this project shall be implemented as provided therein.
14. Prior to any site disturbance and/or grading plan submittal, and or final map recordation, a mitigation monitoring fee, as provided by City ordinance, shall be paid by the applicant/owner. No City permit or approval shall be issued until such fee is paid. (CEQA)
15. Prior to issuance of a building permit, the developer/property owner or developer's successor-in-interest shall pay all applicable impact fees due at permit issuance, including but not limited to Multi-species Habitat Conservation Plan (MSHCP) mitigation fees. (Ord.)
16. Within thirty (30) days prior to any grading or other land disturbance, a pre-construction survey for Burrowing Owls shall be conducted pursuant to the established guidelines of Multiple Species Habitat Conservation Plan. The pre-construction survey shall be submitted to the Planning Division prior to any

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 3

disturbance of the site and/or grading permit issuance.

17. Prior to the issuance of grading permits, a temporary project identification sign shall be erected on the site in a secure and visible manner. The sign shall be conspicuously posted at the site and remain in place until occupancy of the project. The sign shall include the following: The name and address of the development and the developer's name and address to include a 24-hour emergency phone number.
18. Prior to approval of any grading permits, plans for any security gate system shall be submitted to and approved by to the Planning Division.
19. Prior to issuance of grading permits, the developer shall pay the applicable Stephen's' Kangaroo Rat (SKR) Habitat Conservation Plan mitigation fee.
20. Prior to the issuance of any grading permits and prior to any physical disturbance of any natural drainage course, or any wetland determined to contain riparian vegetation, the applicant shall obtain a stream bed alteration agreement or permit, or a written waiver of the requirement for such an agreement or permit, from both the California Department of Fish and Game and the U.S. Army Corps of Engineers. Written verification of such a permit or waiver shall be provided to both the Planning Division and the Public Works Department - Land Development Division. (CEQA, State and Federal codes)
21. Prior to recordation of the final subdivision map, the following documents shall be submitted to and approved by the Planning Division which shall demonstrate that the project will be developed and maintained in accordance with the intent and purpose of the approval:
  - a. The document to convey title
  - b. Deed restrictions, easements, or Covenants, Conditions and Restrictions to be recorded

The approved documents shall be recorded at the same time that the subdivision map is recorded. The documents shall contain provisions for general maintenance of the site, joint access to proposed parcels, open space use restrictions, conservation easements, parking, feeder trails, water quality basins, lighting, landscaping and common area use items such as general building maintenance. The approved documents shall also contain a provision, which provides that they may not be terminated and/or substantially amended without the consent of the City and the developer's successor-in-interest. (MC 9.14.090)

In addition, the following deed restrictions and disclosures shall be included within the document and grant deed of the properties:

- a. The developer shall promote the use of native plants and trees and drought

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 4

tolerant species.

b. All lots designated for open space and or detention basins, shall be included as an easement to, and maintained by a Homeowners Association (HOA) or other private maintenance entity. All reverse frontage landscape areas shall also be maintained by the onsite HOA. Language to this effect shall be included and reviewed within the required Covenant Conditions and Restrictions (CC&Rs) prior to the approval of the final map.

c. Maintenance of any and all common facilities.

22. Applicant/Developer shall defend, indemnify and hold harmless City, city council, commissions, boards, subcommittees and City's elected and appointed officials, commissioners, board members, officers, agents, consultants and employees ("City Parties") from and against any and all liabilities, demands, claims, actions or proceedings and costs and expenses incidental thereto (including costs of defense, settlement and reasonable attorneys' fees), which any or all of them may suffer, incur, be responsible for or pay out as a result of or in connection with any challenge to the legality, validity or adequacy of any of the following items: (i) any agreements by and among City and Developer including without limitation any Development Agreement, (ii) any and all permits, licenses and entitlements approved by City; (iii) any environmental determination made by City in connection with the Project Site or Project; and (iv) any proceedings or other actions undertaken by City in connection with the adoption or approval of any of the above.
23. The project shall be designed and constructed to meet LEED Silver Equivalent with evidence provided to the City. A change or modification shall require separate approval.
24. The site has been approved for a Tentative Parcel Map 37944 to subdivide the lots into two parcels and two light industrial warehouse buildings. Building 1 will be approximately 290,726 square feet and Building 2 will be approximately 98,877 square feet with associated on-site and off-site improvements designed per the approved plans.
25. This approval includes the Tentative Parcel Map 37944 and two Plot Plans for the construction of two light industrial buildings to be completed as one project. All improvements both on-site and off-site shall be completed prior to building shell final of any one building. If the construction of one building is postponed, the parcel/pad area shall be maintained with landscaping and screening as approved by the Community Development Director.
26. Should the applicant/property owner elect to not construct one of the buildings, the building pad shall be precise graded and hydroseeded to prevent dust and erosion.
27. Prior to the start of any construction, temporary security fencing shall be erected. The fencing shall be a minimum of six (6) feet high with locking, gated access and

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 5

shall remain through the duration of construction. Security shall remain in place until the project is completed or the above conditions no longer exist. (Security fencing is required if there is: construction, unsecured structures, unenclosed storage of materials and/or equipment, and/or the condition of the site constitutes a public hazard).

Prior to Building Permit

28. Prior to issuance of any building permits, final landscaping and irrigation plans shall be submitted for review and approved by the Planning Division. The plans shall be prepared in accordance with the City's Landscape Requirements to include a drought tolerant palette. (9.17)
29. Prior to issuance of any building permit, all Conditions of Approval, Mitigation Measures and Airport Land Use Commission Conditions of Approval shall be printed on the building plans.
30. Prior to the issuance of grading permits, decorative (e.g. colored/scored concrete or as approve by the Planning Official) pedestrian pathways across circulation aisles/paths shall be provided throughout the development to connect dwellings with open spaces and/or recreational uses or commercial/industrial buildings with open space and/or parking. and/or the public right-of-way. The pathways shall be shown on the precise grading plan. (GP Objective 46.8, DG)
31. Prior to issuance of building permits, the Planning Division shall review and approve the location and method of enclosure or screening of transformer cabinets, commercial gas meters and back flow preventers as shown on the final working drawings. Location and screening shall comply with the following criteria: transformer cabinets and commercial gas meters shall not be located within required setbacks and shall be screened from public view either by architectural treatment or landscaping; multiple electrical meters shall be fully enclosed and incorporated into the overall architectural design of the building(s); back-flow preventers shall be screened by landscaping. (GP Objective 43.30)
32. Prior to issuance of any grading permit, all Conditions of Approval, Mitigation Measures and Airport Land Use Commission Conditions of Approval shall be printed on the grading plans.
33. Prior to approval of any grading permits, plans for any security gate system shall be submitted to and approved by to the Planning Division.
34. Prior to issuance of grading permits, the developer shall submit fence/wall plans to be included in the Building and Safety submittal for review and approval consistent with the approved plans, the Landscape Requirements and the Municipal Code.

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 6

35. Prior to the issuance of grading permits, a temporary project identification sign shall be erected on the site in a secure and visible manner. The sign shall be conspicuously posted at the site and remain in place until occupancy of the project. The sign shall include the following:
  - a. The name (if applicable) and address of the development.
  - b. The developer's name, address, and a 24-hour emergency telephone number.
36. Photometric Plans shall be submitted to the Building and Safety Division for review and approval as part of the lighting and electrical building plan submittal.
37. Prior to the issuance of grading permits, the site plan and grading plans shall show decorative hardscape (e.g. colored concrete, stamped concrete, pavers or as approved by the Planning Official) consistent and compatible with the design, color and materials of the proposed development for all driveway ingress/egress locations of the project.

Prior to Building Final or Occupancy

38. Prior to building final, all required landscaping and irrigation shall be installed per plan, certified by the Landscape Architect and inspected by the Planning Division. (MC 9.03.040, MC 9.17).
39. Prior to building final, all required and proposed fences and walls shall be constructed according to the approved plans on file in the Planning Division. (MC 9.080.070).

Building Division

40. The proposed non-residential project shall comply with the latest Federal Law, Americans with Disabilities Act, and State Law, California Code of Regulations, Title 24, Chapter 11B for accessibility standards for the disabled including access to the site, exits, bathrooms, work spaces, etc.
41. Building plans submitted shall be signed and sealed by a California licensed design professional as required by the State Business and Professions Code.
42. All new structures shall be designed in conformance to the latest design standards adopted by the State of California in the California Building Code, (CBC) Part 2, Title 24, California Code of Regulations including requirements for allowable area, occupancy separations, fire suppression systems, accessibility, etc.

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 7

43. Prior to submittal, all new development, including residential second units, are required to obtain a valid property address prior to permit application. Addresses can be obtained by contacting the Building Safety Division at 951.413.3350.
44. Contact the Building Safety Division for permit application submittal requirements.
45. All new buildings 10,000 square feet and over, shall include building commissioning in the design and construction processes of the building project to verify that the building systems and components meet the owner's or owner representative's project requirements (OPR). All requirements in The 2016 California Green Building Standards Code, sections 5.410.2 - 5.410.2.6 must be met.
46. Any construction within the city shall only be as follows: Monday through Friday seven a.m. to seven p.m.(except for holidays which occur on weekdays), eight a.m. to four p.m.; weekends and holidays (as observed by the city and described in the Moreno Valley Municipal Code Chapter 2.55), unless written approval is first obtained from the Building Official or City Engineer.
47. The proposed development shall be subject to the payment of required development fees as required by the City's current Fee Ordinance at the time a building application is submitted or prior to the issuance of permits as determined by the City.
48. The proposed project will be subject to approval by the Eastern Municipal Water District and all applicable fees and charges shall be paid prior to permit issuance. Contact the water district at 951.928.3777 for specific details.
49. The proposed project's occupancy shall be classified by the Building Official and must comply with exiting, occupancy separation(s) and minimum plumbing fixture requirements. Minimum plumbing fixtures shall be provided per the 2016 California Plumbing Code, Table 422.1. The occupant load and occupancy classification shall be determined in accordance with the California Building Code.
50. Prior to permit issuance, every applicant shall submit a properly completed Waste Management Plan (WMP), as a portion of the building or demolition permit process. (MC 8.80.030)

**ECONOMIC DEVELOPMENT DEPARTMENT (EDD)**

51. New Moreno Valley businesses may work with the Economic Development Department to coordinate job recruitment fairs.
52. New Moreno Valley businesses may adopt a "First Source" approach to employee recruitment that gives notice of job openings to Moreno Valley residents for one

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 8

week in advance of public recruitment.

53. New Moreno Valley businesses are encouraged to hire local residents.
54. New Moreno Valley businesses are encouraged to provide a job fair flyer and/or web announcement to the City in advance of job recruitments, so that the City can assist in publicizing these events.
55. New Moreno Valley businesses may utilize the workforce recruitment services provided by the Moreno Valley Business & Employment Resource Center ("BERC").

The BERC offers free assistance to Moreno Valley businesses recruiting and training potential employees. Complimentary services include:

- Job Announcements
- Applicant testing / pre-screening
- Interviewing
- Job Fair support
- Training space

**FIRE DEPARTMENT****Fire Prevention Bureau**

56. All Fire Department access roads or driveways shall not exceed 12 percent grade. (CFC 503.2.7 and MVMC 8.36.060[G])
57. The Fire Department emergency vehicular access road shall be (all weather surface) capable of sustaining an imposed load of 80,000 lbs. GVW, based on street standards approved by the Public Works Director and the Fire Prevention Bureau. The approved fire access road shall be in place during the time of construction. Temporary fire access roads shall be approved by the Fire Prevention Bureau. (CFC 501.4, and MV City Standard Engineering Plan 108d)
58. The angle of approach and departure for any means of Fire Department access shall not exceed 1 ft drop in 20 ft (0.3 m drop in 6 m), and the design limitations of the fire apparatus of the Fire Department shall be subject to approval by the AHJ. (CFC 503 and MVMC 8.36.060)
59. Prior to construction, all locations where structures are to be built shall have an approved Fire Department access based on street standards approved by the Public Works Director and the Fire Prevention Bureau. (CFC 501.4)
60. Prior to issuance of Building Permits, the applicant/developer shall provide the Fire

Page 9

- Prevention Bureau with an approved site plan for Fire Lanes and signage. (CFC 501.3)
61. Prior to issuance of Certificate of Occupancy or Building Final, "Blue Reflective Markers" shall be installed to identify fire hydrant locations in accordance with City specifications. (CFC 509.1 and MVLT 440A-0 through MVLT 440C-0)
  62. Prior to issuance of building permits, plans specifying the required structural materials for building construction in high fire hazard severity zones shall be submitted to the Fire Prevention Bureau for approval. (CFC, 4905)
  63. Prior to issuance of Certificate of Occupancy or Building Final, all commercial buildings shall display street numbers in a prominent location on the street side and rear access locations. The numerals shall be a minimum of twelve inches in height. (CFC 505.1, MVMC 8.36.060[I])
  64. Existing fire hydrants on public streets are allowed to be considered available. Existing fire hydrants on adjacent properties shall not be considered available unless fire apparatus access roads extend between properties and easements are established to prevent obstruction of such roads. (CFC 507, 501.3) a - After the local water company signs the plans, the originals shall be presented to the Fire Prevention Bureau for signatures. The required water system, including fire hydrants, shall be installed, made serviceable, and be accepted by the Moreno Valley Fire Department prior to beginning construction. They shall be maintained accessible.
  65. Final fire and life safety conditions will be addressed when the Fire Prevention Bureau reviews building plans. These conditions will be based on occupancy, use, California Building Code (CBC), California Fire Code (CFC), and related codes, which are in effect at the time of building plan submittal.
  66. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall install a fire alarm system monitored by an approved Underwriters Laboratory listed central station based on a requirement for monitoring the sprinkler system, occupancy or use. Fire alarm panel shall be accessible from exterior of building in an approved location. Plans shall be submitted to the Fire Prevention Bureau for approval prior to installation. (CFC Chapter 9 and MVMC 8.36.100)
  67. The Fire Code Official is authorized to enforce the fire safety during construction requirements of Chapter 33. (CFC Chapter 33 & CBC Chapter 33)
  68. Fire lanes and fire apparatus access roads shall have an unobstructed width of not less than twenty-four (24) feet and an unobstructed vertical clearance of not less than the thirteen (13) feet six (6) inches. (CFC 503.2.1 and MVMC 8.36.060[E])

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 10

69. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall install a fire sprinkler system based on square footage and type of construction, occupancy or use. Fire sprinkler plans shall be submitted to the Fire Prevention Bureau for approval prior to installation. (CFC Chapter 9, MVMC 8.36.100[D])
70. Prior to issuance of the building permit for development, independent paved access to the nearest paved road, maintained by the City shall be designed and constructed by the developer within the public right of way in accordance with City Standards. (MVMC 8.36.060, CFC 501.4)
71. Prior to issuance of a Certificate of Occupancy or Building Final, a "Knox Box Rapid Entry System" shall be provided. The Knox-Box shall be installed in an accessible location approved by the Fire Code Official. All exterior security emergency access gates shall be electronically operated and be provided with Knox key switches for access by emergency personnel. (CFC 506.1)
72. The minimum number of fire hydrants required, as well as the location and spacing of fire hydrants, shall comply with the C.F.C., MVMC, and NFPA 24. Fire hydrants shall be located no closer than 40 feet to a building. A fire hydrant shall be located within 50 feet of the fire department connection for buildings protected with a fire sprinkler system. The size and number of outlets required for the approved fire hydrants are (6" x 4" x 2 ½" x 2 ½") (CFC 507.5.1, 507.5.7, Appendix C, NFPA 24-7.2.3, MVMC 912.2.1)
73. During phased construction, dead end roadways and streets which have not been completed shall have a turn-around capable of accommodating fire apparatus. (CFC 503.1 and 503.2.5)
74. If construction is phased, each phase shall provide an approved emergency vehicular access way for fire protection prior to any building construction. (CFC 501.4)
75. Plans for private water mains supplying fire sprinkler systems and/or private fire hydrants shall be submitted to the Fire Prevention Bureau for approval. (CFC 105 and CFC 3312.1)
76. The Fire Prevention Bureau is required to set a minimum fire flow for the remodel or construction of all commercial buildings per CFC Appendix B and Table B105.1. The applicant/developer shall provide documentation to show there exists a water system capable of delivering said waterflow for 2 hour(s) duration at 20-PSI residual operating pressure. The required fire flow may be adjusted during the approval process to reflect changes in design, construction type, or automatic fire protection measures as approved by the Fire Prevention Bureau. Specific requirements for

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 11

the project will be determined at time of submittal. (CFC 507.3, Appendix B)

77. Prior to construction, all traffic calming designs/devices must be approved by the Fire Marshal and City Engineer.
78. Prior to issuance of Building Permits, the applicant/developer shall furnish one copy of the water system plans to the Fire Prevention Bureau for review. Plans shall:
  - a. Be signed by a registered civil engineer or a certified fire protection engineer;
  - b. Contain a Fire Prevention Bureau approval signature block; and
  - c. Conform to hydrant type, location, spacing of new and existing hydrants and minimum fire flow required as determined by the Fire Prevention Bureau. The required water system, including fire hydrants, shall be installed, made serviceable, and be accepted by the Moreno Valley Fire Department prior to beginning construction. They shall be maintained accessible.

**FINANCIAL & MANAGEMENT SERVICES DEPARTMENT****Moreno Valley Utility**

79. This project requires the installation of electric distribution facilities. A non-exclusive easement shall be provided to Moreno Valley Utility and shall include the rights of ingress and egress for the purpose of operation, maintenance, facility repair, and meter reading.
80. This project requires the installation of electric distribution facilities. The developer shall submit a detailed engineering plan showing design, location and schematics for the utility system to be approved by the City Engineer. In accordance with Government Code Section 66462, the Developer shall execute an agreement with the City providing for the installation, construction, improvement and dedication of the utility system following recordation of final map and/or concurrent with trenching operations and other improvements so long as said agreement incorporates the approved engineering plan and provides financial security to guarantee completion and dedication of the utility system.

The Developer shall coordinate and receive approval from the City Engineer to install, construct, improve, and dedicate to the City all utility infrastructure including but not limited to, conduit, equipment, vaults, ducts, wires (including fiber optic cable), switches, conductors, transformers, and “bring-up” facilities including electrical capacity to serve the identified development and other adjoining, abutting, or benefiting projects as determined by Moreno Valley Utility – collectively referred to as “utility system”, to and through the development, along with any appurtenant real property easements, as determined by the City Engineer necessary for the distribution and/or delivery of any and all “utility services” to and within the project.

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 12

For purposes of this condition, “utility services” shall mean electric, cable television, telecommunication (including video, voice, and data) and other similar services designated by the City Engineer. “Utility services” shall not include sewer, water, and natural gas services, which are addressed by other conditions of approval.

The City, or the City’s designee, shall utilize dedicated utility facilities to ensure safe, reliable, sustainable and cost effective delivery of utility services and maintain the integrity of streets and other public infrastructure. Developer shall, at developer’s sole expense, install or cause the installation of such interconnection facilities as may be necessary to connect the electrical distribution infrastructure within the project to the Moreno Valley Utility owned and controlled electric distribution system.

81. Existing Moreno Valley Utility electrical infrastructure shall be preserved in place. The developer will be responsible, at developer’s expense, for any and all costs associated with the relocation of any of Moreno Valley Utility’s underground electrical distribution facilities, as determined by Moreno Valley Utility, which may be in conflict with any developer planned construction on the project site.
82. This project is subject to a Reimbursement Agreement. The Developer is responsible for a proportionate share of costs associated with electrical distribution infrastructure previously installed that directly benefits the project.

**PUBLIC WORKS DEPARTMENT****Land Development**

83. Aggregate slurry, as defined in Section 203-5 of Standard Specifications for Public Works Construction, shall be required prior to 90% security reduction or the end of the one-year warranty period of the public streets as approved by the City Engineer. If slurry is required, a slurry mix design shall be submitted for review and approved by the City Engineer. The latex additive shall be Ultra Pave 70 (for anionic) or Ultra Pave 65 K (for cationic) or an approved equal per the geotechnical report. The latex shall be added at the emulsion plant after weighing the asphalt and before the addition of mixing water. The latex shall be added at a rate of two to two-and-one-half (2 to 2½) parts to one-hundred (100) parts of emulsion by volume. Any existing striping shall be removed prior to slurry application and replaced per City standards.
84. The developer shall comply with all applicable City ordinances and resolutions including the City’s Municipal Code (MC) and if subdividing land, the Government Code (GC) of the State of California, specifically Sections 66410 through 66499.58, said sections also referred to as the Subdivision Map Act (SMA). [MC 9.14.010]
85. The final approved conditions of approval (COAs) issued and any applicable

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 13

Mitigation Measures by the Planning Division shall be photographically or electronically placed on mylar sheets and included in the Grading and Street Improvement plans.

86. The developer shall monitor, supervise and control all construction related activities, so as to prevent these activities from causing a public nuisance, including but not limited to, insuring strict adherence to the following:
- (a) Removal of dirt, debris, or other construction material deposited on any public street no later than the end of each working day.
  - (b) Observance of working hours as stipulated on permits issued by the Land Development Division.
  - (c) The construction site shall accommodate the parking of all motor vehicles used by persons working at or providing deliveries to the site.
  - (d) All dust control measures per South Coast Air Quality Management District (SCAQMD) requirements during the grading operations.
- Violation of any condition, restriction or prohibition set forth in these conditions shall subject the owner, applicant, developer or contractor(s) to remedy as noted in City Municipal Code 8.14.090. In addition, the City Engineer or Building Official may suspend all construction related activities for violation of any condition, restriction or prohibition set forth in these conditions until such time as it has been determined that all operations and activities are in conformance with these conditions.
87. Drainage facilities (e.g., catch basins, water quality basins, etc.) with sump conditions shall be designed to convey the tributary 100-year storm flows. Secondary emergency escape shall also be provided.
88. In the event right-of-way or offsite easements are required to construct offsite improvements necessary for the orderly development of the surrounding area to meet the public health and safety needs, the developer shall make a good faith effort to acquire the needed right-of-way in accordance with the Land Development Division's administrative policy. If unsuccessful, the Developer shall enter into an agreement with the City to acquire the necessary right-of-way or offsite easements and complete the improvements at such time the City acquires the right-of-way or offsite easements which will permit the improvements to be made. The developer shall be responsible for all costs associated with the right-of-way or easement acquisition. [GC 66462.5]
89. If improvements associated with this project are not initiated within two (2) years of the date of approval of the Public Improvement Agreement (PIA), the City Engineer may require that the engineer's estimate for improvements associated with the project be modified to reflect current City construction costs in effect at the time of request for an extension of time for the PIA or issuance of a permit. [MC 9.14.210(B)(C)]

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 14

90. The developer shall protect downstream properties from damage caused by alteration of drainage patterns (i.e. concentration or diversion of flow, etc). Protection shall be provided by constructing adequate drainage facilities, including, but not limited to, modifying existing facilities or by securing a drainage easement. [MC 9.14.110]
91. Public drainage easements, when required, shall be a minimum of 25 feet wide and shall be shown on the map and plan, and noted as follows: "Drainage Easement – no structures, obstructions, or encroachments by land fills are allowed." In addition, the grade within the easement area shall not exceed a 3:1 (H:V) slope, unless approved by the City Engineer.
92. The maintenance responsibility of the proposed storm drain line shall be clearly identified. Unless otherwise noted on improvement plans, storm drain lines within private property will be privately maintained and those within public streets will be publicly maintained.
93. This project shall submit civil engineering design plans, reports and/or documents (prepared by a registered/licensed civil engineer) for review and approval by the City Engineer per the current submittal requirements, prior to the indicated threshold or as required by the City Engineer. The submittal consists of, but is not limited to, the following:
- a. Parcel Map (recordation prior to building permit issuance);
  - b. Rough grading w/ erosion control plan (prior to grading permit issuance);
  - c. Precise grading w/ erosion control plan (prior to building permit issuance);
  - d. Street improvement plan w/ Signing & Striping (prior to parcel map approval);
  - e. RCFC&WCD storm drain plans (prior to parcel map approval);
  - f. Cooperative Agreement between the City, RCFC&WCD and the developer (prior to RCFC&WCD storm drain plan approval);
  - g. Final drainage study (prior to rough grading plan and storm drain plan approval);
  - h. Final WQMP (prior to grading plan approval);
  - i. As-Built revision for all plans (prior to Occupancy release)
94. Water quality best management practices (BMPs) designed to meet Water Quality Management Plan (WQMP) requirements for single-family residential development shall not be used as a construction BMP. Water quality BMPs shall be maintained for the entire duration of the project construction and be used to treat runoff from those developed portions of the project. Water quality BMPs shall be protected from upstream construction related runoff by having proper best management practices in place and maintained. Water quality BMPs shall be graded per the approved design plans and once landscaping and irrigation has been installed, it and its maintenance shall be turned over to an established Homeowner's

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 15

Association (HOA). The Homeowner's Association shall enter into an agreement with the City for basin maintenance.

95. When any proposed private storm drain system connects to a public storm drain system, a storm drain manhole shall be placed at the right-of-way or property line to mark the beginning of the publicly maintained portion of the storm drain system.

Prior to Grading Plan Approval

96. Resolution of all drainage issues shall be as approved by the City Engineer.
97. A final detailed drainage study (prepared by a registered/licensed civil engineer) shall be submitted for review and approved by the City Engineer. The study shall include, but not be limited to: existing and proposed hydrologic conditions as well as hydraulic calculations for all drainage control devices and storm drain lines. The study shall analyze 1, 3, 6 and 24-hour duration events for the 2, 5, 10 and 100-year storm events [MC 9.14.110(A.1)]. A digital (pdf) copy of the approved drainage study shall be submitted to the Land Development Division.
98. Emergency overflow areas shall be shown at all applicable drainage improvement locations in the event that the drainage improvement fails or exceeds full capacity. This may include, but not be limited to, secondary storm drains, riser inlets, concrete spillways, or redundancy in pump systems.
99. A final project-specific Water Quality Management Plan (WQMP) shall be submitted for review and approved by the City Engineer, which:
- Addresses Site Design Best Management Practices (BMPs) such as minimizing impervious areas, maximizing permeability, minimizes directly connected impervious areas to the City's street and storm drain systems, and conserves natural areas;
  - Incorporates Source Control BMPs and provides a detailed description of their implementation;
  - Describes the long-term operation and maintenance requirements for BMPs requiring maintenance; and
  - Describes the mechanism for funding the long-term operation and maintenance of the BMPs.
- A copy of the final WQMP template can be obtained on the City's Website or by contacting the Land Development Division. A digital (pdf) copy of the approved final project-specific Water Quality Management Plan (WQMP) shall be submitted to the Land Development Division.
100. The final project-specific Water Quality Management Plan (WQMP) shall be consistent with the approved P-WQMP, as well as in full conformance with the document: "Water Quality Management Plan - A Guidance Document for the Santa Ana Region of Riverside County" dated October 22, 2012. The F-WQMP shall be

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 16

submitted and approved prior to application for and issuance of grading permits. At a minimum, the F-WQMP shall include the following: Site Design BMPs; Source Control BMPs, Treatment Control BMPs, Operation and Maintenance requirements for BMPs and sources of funding for BMP implementation.

a. The Applicant has proposed to incorporate the use of two (2) modular wetland systems along the southerly project boundary and three (3) bio-retention swales along the northerly project boundary . Final design and sizing details of all BMPs must be provided in the first submittal of the F-WQMP. The Applicant acknowledges that more area than currently shown on the plans may be required to treat site runoff as required by the WQMP guidance document.

b. The Applicant shall substantiate the applicable Hydrologic Condition of Concerns (HCOC) in Section F of the F-WQMP. <The HCOC designates that the project will be required to provide HCOC mitigation..

c. All proposed LID BMP's shall be designed in accordance with the RCFC&WCD's Design Handbook for Low Impact Development Best Management Practices, dated September 2011.

d. The proposed LID BMP's as identified in the project-specific P-WQMP shall be incorporated into the Final WQMP.

e. The NPDES notes per City Standard Drawing No. MVFE-350-0 shall be included in the grading plans.

f. Post-construction treatment control BMPs, once placed into operation for post-construction water quality control, shall not be used to treat runoff from construction sites or unstabilized areas of the site.

g. Prior to precise grading plan approval, the grading plan shall show any proposed trash enclosure to include a cover (roof) and sufficient size for dual bin (1 for trash and 1 for recyclables). The architecture shall be approved by the Planning Division and any structural approvals shall be made by the Building and Safety Division.

101. The developer shall ensure compliance with the City Grading ordinance, these Conditions of Approval and the following criteria:

a. The project street and lot grading shall be designed in a manner that perpetuates the existing natural drainage patterns with respect to tributary drainage area and outlet points. Unless otherwise approved by the City Engineer, lot lines shall be located at the top of slopes.

b. Any grading that creates cut or fill slopes adjacent to the street shall provide erosion control, sight distance control, and slope easements as approved by the City Engineer.

c. All improvement plans are substantially complete and appropriate clearance letters are provided to the City.

d. A soils/geotechnical report (addressing the soil's stability and geological conditions of the site) shall be submitted to the Land Development Division for review. A digital (pdf) copy of the soils/geotechnical report shall be submitted to the Land Development Division.

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 17

102. Grading plans (prepared by a registered/licensed civil engineer) shall be submitted for review and approved by the City Engineer per the current submittal requirements.
103. The developer shall select Low Impact Development (LID) Best Management Practices (BMPs) designed per the latest version of the Water Quality Management Plan (WQMP) - a guidance document for the Santa Ana region of Riverside County.
104. The developer shall pay all remaining plan check fees.
105. The proposed private storm drain Line "E" on Parcel 2 shall connect to the existing public storm drain lateral crossing Alessandro Boulevard and connect to storm drain Line "E" located on APN 297-170-089. Storm drain manholes shall be placed at the point of connections (at right of way or property line) to mark the separation of the publicly maintained storm drain and privately maintained storm drain.
106. A Storm Water Pollution Prevention Plan (SWPPP) shall be prepared in conformance with the State's current Construction Activities Storm Water General Permit. A copy of the current SWPPP shall be kept at the project site and be available for review upon request.
107. For projects that will result in discharges of storm water associated with construction with a soil disturbance of one or more acres of land, the developer shall submit a Notice of Intent (NOI) and obtain a Waste Discharger's Identification number (WDID#) from the State Water Quality Control Board (SWQCB) which shall be noted on the grading plans.

Prior to Grading Permit

108. A receipt showing payment of the Area Drainage Plan (ADP) fee to Riverside County Flood Control and Water Conservation District shall be submitted. [MC 9.14.100(O)]
109. For non-subdivision projects, a copy of the Covenants, Conditions and Restrictions (CC&Rs) shall be submitted for review by the City Engineer. The CC&Rs shall include, but not be limited to, access easements, reciprocal access, private and/or public utility easements as may be relevant to the project.
110. If the developer chooses to construct the project in phases, a Construction Phasing Plan for the construction of on-site public or private improvements shall be submitted for review and approved by the City Engineer.
111. Prior to the payment of the Development Impact Fee (DIF), the developer may enter

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 18

into a DIF Improvement Credit Agreement to secure credit for the construction of applicable improvements. If the developer fails to complete this agreement prior to the timing specified above, credits may not be given. The developer shall pay current DIF fees adopted by the City Council. [Ord. 695 § 1.1 (part), 2005] [MC 3.38.030, 040, 050]

112. A digital (pdf) copy of all approved grading plans shall be submitted to the Land Development Division.
113. Security, in the form of a cash deposit (preferable), bond or letter of credit shall be submitted as a guarantee of the implementation and maintenance of erosion control measures. At least twenty-five (25) percent of the required security shall be in the form of a cash deposit with the City. [MC 8.21.160(H)]
114. Security, in the form of a cash deposit (preferable), bond or letter of credit shall be submitted as a guarantee of the completion of the grading operations for the project. [MC 8.21.070]
115. The developer shall pay all applicable inspection fees.
116. Prior to the payment of the Transportation Uniform Mitigation Fee (TUMF), the developer may enter into a TUMF Improvement Credit Agreement to secure credit for the construction of applicable improvements. If the developer fails to complete this agreement by the timing specified above, credits may not be given. The developer shall pay current TUMF fees adopted by the City Council. [Ord. 835 § 2.1, 2012] [MC 3.44.060]

Prior to Map Approval

117. A copy of the Covenants, Conditions and Restrictions (CC&R's) shall be submitted for review and approved by the City Engineer. The CC&R's shall include, but not be limited to, access easements, reciprocal access, private and/or public utility easements as may be relevant to the project. Alternatively, access easements, reciprocal access, private and/or public utility easements may be submitted for review and approval by separate instruments that will be recorded once approved.
118. The developer shall enter into a Cooperative Agreement with the City and Riverside County Flood Control and Water Conservation District establishing the terms and conditions covering the inspection, operation and maintenance of Master Drainage Plan facilities required to be constructed as part of the project.
119. After recordation, a digital (pdf) copy of the recorded map shall be submitted to the Land Development Division.

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 19

120. Resolution of all drainage issues shall be as approved by the City Engineer.
121. A parcel map (prepared by a registered civil engineer and/or licensed surveyor) shall be submitted for review and approved by the City Engineer per the current submittal requirements.
122. The developer shall guarantee the completion of all related improvements required for this project by executing a Public Improvement Agreement (PIA) with the City and posting the required security. [MC 9.14.220]
123. All public improvement plans required for this project shall be approved by the City Engineer in order to execute the Public Improvement Agreement (PIA).
124. The developer shall comply with the requirements of the City Engineer based on recommendations of the Riverside County Flood Control District regarding the construction of County Master Plan Facilities.
125. All street dedications shall be free of all encumbrances, irrevocably offered to the public and shall continue in force until the City accepts or abandons such offers, unless otherwise approved by the City Engineer.

Prior to Improvement Plan Approval

126. The developer is required to bring any existing access ramps adjacent to and fronting the project to current ADA (Americans with Disabilities Act) requirements. However, when work is required in an intersection that involves or impacts existing access ramps, all access ramps in that intersection shall be retrofitted to comply with current ADA requirements, unless otherwise approved by the City Engineer.
127. The developer shall submit clearances from all applicable agencies, and pay all applicable plan check fees.
128. The street improvement plans shall comply with current City policies, plans and applicable City standards (i.e. MVSI-160 series, etc.) throughout this project.
129. The design plan and profile shall be based upon a centerline, extending beyond the project boundaries a minimum distance of 300 feet at a grade and alignment approved by the City Engineer.
130. Drainage facilities (i.e. catch basins, etc.) with sump conditions shall be designed to convey the tributary 100-year storm flows. Secondary emergency escape shall also be provided.
131. The hydrology study shall be designed to accept and properly convey all off-site drainage flowing onto or through the site. In the event that the City Engineer permits

**CONDITIONS OF APPROVAL**

(PEN20-0120)

Page 20

the use of streets for drainage purposes, the provisions of current City standards shall apply. Should the quantities exceed the street capacity or the use of streets be prohibited for drainage purposes, as in the case where one travel lane in each direction shall not be used for drainage conveyance for emergency vehicle access on streets classified as minor arterials and greater, the developer shall provide adequate facilities as approved by the City Engineer. [MC 9.14.110 A.2]

132. All public improvement plans (prepared by a licensed/registered civil engineer) shall be submitted for review and approved by the City Engineer per the current submittal requirements.
133. Any missing or deficient existing improvements along the project frontage within Alessandro Boulevard shall be constructed or secured for construction. The City Engineer may require the ultimate structural section for pavement to half-street width plus 18 feet or provide core test results confirming that the existing pavement section is per current City Standards; additional signing & striping to accommodate increased traffic imposed by the development, removal and replacement of improvements due to wear or damage from construction activity, or additional transitional improvements for the orderly development of public infrastructure..
134. Storm drain improvement plans for Sunnymead Broadiaea Avenue Storm Drain Line "A" Extension, from Alessandro Boulevard to the existing Line "A" located on APN 297-170-089, shall be submitted for review and approval by the City and RCFC&WCD. This storm drain has been identified as a future RCFC&WCD maintained facility as shown on Drawing No. 4-888, Sheet 8A (Preliminary Alignment Study) and referenced as Stage 3 of that certain Cooperative Agreement recorded on July 12, 2016 as Document No. 2016-0289060. This project will be required to satisfy all RCFC&WCD requirements for the acceptance and maintenance by RCFC&WCD including, but not limited to, the following:
- a. Enter into a Cooperative Agreement between the City, RCFC&WCD, and the developer;
  - b. Provide storm drain improvement plans of Stage 3 storm drain;
  - c. Provide security for the construction of storm drain improvements; and
  - d. Upon commencement of Stage 3 storm drain improvements and to the satisfaction of the City and RCFC&WCD, inspect, clean, repair, and maintain the existing portion of Line "A" (also referred to as Stage 2) from the current inlet at the northerly property line of APN 297-170-089 to the point of connection located within Broadiaea Avenue.

In the event that Stage 3 does not meet the requirements and satisfaction of RCFC&WCD to assume maintenance responsibility, the storm drain shall be privately owned and maintained by the property owner.

**CONDITIONS OF APPROVAL**

(PEN20-0120)

Page 21

135. For non-subdivision projects, all street dedications shall be free of encumbrances, irrevocably offered to the public and shall continue in force until the City accepts or abandons such offers, unless otherwise approved by the City Engineer.
136. The plans shall indicate any restrictions on trench repair pavement cuts to reflect the City's moratorium on disturbing newly-constructed pavement less than three (3) years old and recently slurry sealed streets less than one (1) year old. Pavement cuts may be allowed for emergency repairs or as specifically approved in writing by the City Engineer. Special requirements shall be imposed for repaving, limits to be determined by the City Engineer.
137. All dry and wet utilities shall be shown on the plans and any crossings shall be potholed to determine actual location and elevation. Any conflicts shall be identified and addressed on the plans. The pothole survey data shall be submitted to Land Development with the public improvement plans for reference purposes only. The developer is responsible to coordinate with all affected utility companies and bear all costs of any utility relocation.
138. Alessandro Boulevard, Major Divided Arterial, City Standard MVSI-101A (134-foot RW / 110-foot CC) shall be constructed to half-width plus an additional 18 feet north of the centerline, along the entire project's north frontage. At a minimum, the existing street shall receive a 1.5" grind and overlay (PG 64-16 ARHM-GG-C). Pavement core samples will be required to determine the extent of pavement rehabilitation of the existing pavement which may include the removal and replacement of the entire structural section. All 4-foot right-of-way dedications at the driveway approaches, per City Standard MVSI-112C-0, shall be shown on the parcel map. Improvements shall consist of, but not be limited to, pavement, base, curb, gutter, sidewalk, driveway approaches, removal and replacement of existing storm drain and catch basins, any necessary offsite improvement transition/joins to existing, streetlights, relocation of any power poles with electrical lines of 115,000 volts or greater to meet an 18 inch minimum distance from the face of curb to the face of pole, undergrounding of any power poles with overhead utility lines or electrical lines less than 115,000 volts, and dry and wet utilities.

Prior to Encroachment Permit

139. A digital (pdf) copy of all approved improvement plans shall be submitted to the Land Development Division.
140. All applicable inspection fees shall be paid.
141. For non-subdivision projects, execution of a Public Improvement Agreement (PIA) and/or security (in the form of a cash deposit or other approved means) may be required as determined by the City Engineer. [MC 9.14.220]

**CONDITIONS OF APPROVAL**

(PEN20-0120)

Page 22

142. The plans shall indicate any restrictions on trench repair pavement cuts to reflect the City's moratorium on disturbing newly-constructed pavement less than three (3) years old and recently slurry sealed streets less than one (1) year old. Pavement cuts may be allowed for emergency repairs or as specifically approved in writing by the City Engineer. Special requirements shall be imposed for repaving, limits to be determined by the City Engineer.
143. Any work performed within public right-of-way requires an encroachment permit.

Prior to Occupancy

144. All outstanding fees shall be paid.
145. All required as-built plans (prepared by a registered/licensed civil engineer) shall be submitted for review and approved by the City Engineer per the current submittal requirements.
146. The final/precise grade certification shall be submitted for review and approved by the City Engineer.
147. For commercial, industrial and multi-family projects, in compliance with Proposition 218, the developer shall agree to approve the City of Moreno Valley NPDES Regulatory Rate Schedule that is in place at the time of certificate of occupancy issuance. Under the current permit for storm water activities required as part of the National Pollutant Discharge Elimination System (NPDES) as mandated by the Federal Clean Water Act, this project is subject to the following requirements:
- a. Select one of the following options to meet the financial responsibility to provide storm water utilities services for the required continuous operation, maintenance, monitoring system evaluations and enhancements, remediation and/or replacement, all in accordance with Resolution No. 2002-46.
    - i. Participate in the mail ballot proceeding in compliance with Proposition 218, for the Common Interest, Commercial, Industrial and Quasi-Public Use NPDES Regulatory Rate Schedule and pay all associated costs with the ballot process; or
    - ii. Establish an endowment to cover future City costs as specified in the Common Interest, Commercial, Industrial and Quasi-Public Use NPDES Regulatory Rate Schedule.
  - b. Notify the Special Districts Division of the intent to request building permits 90 days prior to their issuance and the financial option selected. The financial option selected shall be in place prior to the issuance of certificate of occupancy. [California Government Code & Municipal Code]
148. The developer shall complete all public improvements in conformance with current

**CONDITIONS OF APPROVAL**

(PEN20-0120)

Page 23

City standards, except as noted in the Special Conditions, including but not limited to the following:

a. Street improvements including, but not limited to: pavement, base, curb and/or gutter, cross gutters, spandrel, sidewalks, drive approaches, pedestrian ramps, street lights (<MVU: SL-2 / SCE: LS-2>), signing, striping, under sidewalk drains, landscaping and irrigation, medians, pavement tapers/transitions and traffic control devices as appropriate.

b. Storm drain facilities including, but not limited to: storm drain pipe, storm drain laterals, open channels, catch basins and local depressions.

c. City-owned utilities.

d. Sewer and water systems including, but not limited to: sanitary sewer, potable water and recycled water.

e. Under grounding of all existing and proposed utilities adjacent to and on-site. [MC 9.14.130]

f. Relocation of overhead electrical utility lines including, but not limited to: electrical, cable and telephone.

149. All punch list work for off-site and on-site improvements shall be completed.
150. For commercial, industrial and multi-family projects, a Stormwater Treatment Device and Control Measure Access and Maintenance Covenant", "Maintenance Agreement for Water Quality Improvements located in the public right-of-way" and a "Declaration of Restrictive Covenants (encroachment on City easement)" shall be recorded to provide public notice of the maintenance requirements to be implemented per the approved final project-specific WQMP. A boilerplate copy of the covenants and agreements can be obtained by contacting the Land Development Division.
151. The applicant shall ensure the following, pursuant to Section XII. I. of the 2010 NPDES Permit:
- a. Field verification that structural Site Design, Source Control and Treatment Control BMPs are designed, constructed and functional in accordance with the approved Final Water Quality Management Plan (WQMP).
- b. Certification of best management practices (BMPs) from a state licensed civil engineer. An original WQMP BMP Certification shall be submitted for review and approved by the City Engineer.
152. The Developer shall comply with the following water quality related items:
- a. Notify the Land Development Division prior to construction and installation of all structural BMPs so that an inspection can be performed.
- b. Demonstrate that all structural BMPs described in the approved final project-specific WQMP have been constructed and installed in conformance with the approved plans and specifications;
- c. Demonstrate that Developer is prepared to implement all non-structural BMPs

**CONDITIONS OF APPROVAL**

(PEN20-0120)

Page 24

described in the approved final project-specific WQMP; and

d. Demonstrate that an adequate number of copies of the approved final project-specific WQMP are available for future owners/occupants.

e. Clean and repair the water quality BMP's, including re-grading to approved civil drawing if necessary.

f. Obtain approval and complete installation of the irrigation and landscaping.

Special Districts Division

153. This project is located within the boundary of Community Facilities District No. 4–Maintenance (CFD No. 4-M) and is subject to hydrology study determination based upon the final tentative parcel map. The project is conditioned to provide a funding source which will be used for maintenance of stormwater and detention basin improvements. The Developer shall satisfy the condition with one of the financing options outlined below.

a. In compliance with Proposition 218, the property owner shall agree to approve the special election for annexation into CFD No. 4-M and pay all associated costs with the special election process and formation costs, if any; or

b. Establish an endowment fund which shall be used to cover future maintenance costs for storm water and detention basin improvements benefiting this project.

The Developer must notify the Special Districts Division at 951.413.3480 or at [specialdistricts@moval.org](mailto:specialdistricts@moval.org) of its selected financing option when submitting the application for building permit issuance. The option for participating in a special election requires 90 days to complete the special election process. This allows adequate time to be in compliance with the provisions of Article 13C of the California Constitution.

The financial option selected shall be in place prior to the first issuance of certificate of occupancy for this project.

154. MAJOR INFRASTRUCTURE FINANCING DISTRICT. This project has been identified to potentially be included in the formation of a special financing district for the construction and maintenance of major infrastructure improvements which may include but are not limited to thoroughfares, bridges, and certain flood control improvements. The property owner(s) shall participate in such district and pay any special tax, assessment, or fee levied upon the project property for such district. At the time of the public hearing to consider formation of or annexation into the district, the qualified elector(s) will not protest the formation or annexation, but will retain the right to object to any eventual tax/assessment/fee that is not equitable should the financial burden of the tax/assessment/fee not be reasonably proportionate to the

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 25

benefit the affected property obtains from the improvements to be installed and/or maintained. The Developer must notify the Special Districts Division at 951.413.3480 or at [specialdistricts@moval.org](mailto:specialdistricts@moval.org) when submitting an application for the first building permit to determine whether the development will be subjected to this condition. If subject to the condition, the special election requires a minimum 90-day process in compliance with the provisions of Article 13C of the California Constitution.

155. The parcel(s) associated with this project have been incorporated into the Moreno Valley Community Services District Zone A (Parks & Community Services) and Zone C (Arterial Street Lighting). All assessable parcels therein shall be subject to annual parcel taxes for Zone A and Zone C for operations and capital improvements.
156. This project is conditioned to provide a funding source for the operation and maintenance of public improvements and/or services associated with new development in that territory. The Developer shall satisfy this condition with one of the options below.

a. Participate in a special election for maintenance/services and pay all associated costs of the election process and formation, if any. Financing may be structured through a Community Facilities District, Landscape and Lighting Maintenance District, or other financing structure as determined by the City; or

b. Establish an endowment fund to cover the future maintenance and/or service costs.

The Developer must notify the Special Districts Division at 951.413.3480 or at [specialdistricts@moval.org](mailto:specialdistricts@moval.org) of its selected financial option prior to City Council action authorizing recordation of the final map for the development. A minimum of 90 days is needed to complete the special election process. This allows adequate time to be in compliance with the provisions of Article 13C of the California Constitution for conducting a special election.

The financial option selected shall be in place prior to the issuance of the first building permit for the project.

157. This project is conditioned to provide a funding source for the following special financing program(s):

a. Landscape Maintenance Services for parkway, open space, and/or median landscaping on Alessandro Blvd.

The Developer's responsibility is to provide a funding source for the capital

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 26

improvements and the continued maintenance of the landscaped area. The Developer shall satisfy this condition with one of the options below.

i. Participate in a special election (mail ballot proceeding) and pay all associated costs of the special election and formation, if any. Financing may be structured through a Community Services District zone, Community Facilities District, Landscape and Lighting Maintenance District, or other financing structure as determined by the City; or

ii. Establish a Property Owner's Association (POA) or Home Owner's Association (HOA) which will be responsible for any and all operation and maintenance costs.

The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org of its selected financial option prior to City Council action authorizing recordation of the final map for the development. The option for participating in a special election requires approximately 90 days to complete the special election process. This allows adequate time to be in compliance with the provisions of Article 13C of the California Constitution for conducting a special election.

The financial option selected shall be in place prior to the issuance of the first building permit for this project.

158. Commercial (R) If Land Development, a Division of the Public Works Department, requires this project to supply a funding source necessary to provide for, but not limited to, stormwater utilities services for the continuous operation, remediation and/or replacement, maintenance, monitoring, systems evaluation and enhancements of on-site facilities and performing annual inspections of the affected areas to ensure compliance with state mandated stormwater regulations, a funding source needs to be established. The Developer must notify the Special Districts Division at 951.413.3480 or specialdistricts@moval.org of its selected financial option for the National Pollution Discharge Elimination System (NPDES) program (see Land Development's related condition) 90 days prior to City Council action authorizing recordation of the final map for the development and participate in a special election process. This allows adequate time to be in compliance with the provisions of Article 13D of the California Constitution. (California Health and Safety Code Sections 5473 through 5473.8 (Ord. 708 Section 3.1, 2006) & City of Moreno Valley Municipal Code Title 3, Section 3.50.050.)
159. This project has been identified to be included in the formation of a Community Facilities District for Public Safety services including but not limited to Police, Fire Protection, Paramedic Services, Park Rangers, and Animal Control services. The property owner(s) shall not protest the formation; however, they retain the right to

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 27

object to the rate and method of maximum special tax. In compliance with Proposition 218, the property owner shall agree to approve the mail ballot proceeding (special election) for either formation of the CFD or annexation into an existing district that may already be established. The Developer must notify the Special Districts Division at 951.413.3480 or specialdistricts@moval.org of its intent to record the final map for the development 90 days prior to City Council action authorizing recordation of the map. This allows adequate time to be in compliance with the provisions of Article 13C of the California Constitution. (California Government Code Section 53313 et. seq.)

160. The existing parkway/median along the frontage of the project shall be brought to current City Standards. Improvements may include but are not limited to: plant material, irrigation, and hardscape.
161. The ongoing maintenance of any landscaping required to be installed behind the curb shall be the responsibility of the property owner.
162. Any damage to existing landscape areas maintained by the City of Moreno Valley due to project construction shall be repaired/replaced by the Developer, or Developer's successors in interest, at no cost to the City of Moreno Valley.
163. **PARKS MAINTENANCE FUNDING.** Prior to applying for the 1st Building Permit, the qualified elector (e.g. property owner) must initiate the process (i.e. pay the annexation fee or fund an endowment) to provide an ongoing funding source for the continued maintenance, enhancement, and or retrofit of parks, open spaces, linear parks, and/or trails systems, and programs.
- This condition must be fully satisfied prior to issuance of the 1st Certificate of Occupancy. This condition will be satisfied with the successful annexation/formation (i.e. special election process) into a special financing district and payment of all costs associated with the special election process. Annexation into a special financing district requires an annual payment of the annual special tax, assessment, or fee levied against the property tax bill, or other lawful means, of the parcels of the project for such district. At the time of the public hearing to consider annexation into or formation of the district, the qualified elector(s) will not protest the annexation or formation, but will retain the right to object to any eventual tax/assessment/fee that is not equitable should the financial burden of the tax/assessment/fee not be reasonably proportionate to the benefit the affected property receives from the improvements to be installed and/or maintained or services provided. The special election requires a minimum 90-day process in compliance with the provisions of Article 13C of the California Constitution, Proposition 218, or other applicable legislation, and consistent with the scheduling for City Council meetings.
- Alternatively, the condition can be satisfied by the Developer funding an endowment in an amount sufficient to yield an annual revenue stream that meets the annual obligation. The Developer must contact Special Districts Administration at

Page 28

951.413.3470 or at SAdmin@moval.org to satisfy this condition.

Transportation Engineering Division

164. Conditions of approval may be modified or added if a phasing plan is submitted for this development.
165. All proposed on-site traffic signing and striping should be accordance with the latest California Manual on Uniform Traffic Control Devices (CAMUTCD).
166. Sight distance at the proposed roadways and driveways shall conform to City of Moreno Valley Standard No. MVSI-164A,B,C-0 at the time of preparation of final grading, landscape, and street improvement plans.
167. Communication conduit along Alessandro Boulevard shall be required per City Standard No. MVSI-186-0. Any improvements undertaken by this project shall be consistent with the City standards for this facility.
168. Alessandro Boulevard is designated as a 6-Lane Divided Arterial (134' RW/110'CC) per City Standard Plan No. MVSI-101A and shall be improved to its ultimate half-width plus 23' with median and necessary transition improvements. The existing eastbound left turn pocket at the intersection of Graham Street and Alessandro Boulevard shall be modified to provide 250 feet of vehicle storage. A Class II Bikeway shall be provided along project frontage.
169. Prior to issuance of an encroachment permit, construction traffic control plans shall be prepared by a qualified, registered Civil or Traffic engineer and submitted for plan approval.
170. Prior to final approval of any landscaping or monument sign plans, the project plans shall demonstrate that sight distance at the project driveways conforms to City Standard Plan No. MVSI-164A, B, C-0.
171. Prior to the final approval of the street improvement plans, a signing and striping plan shall be prepared per City of Moreno Valley Standard Plans - Section 4 for Alessandro Boulevard.
172. Prior to issuance of a Building Final or Certificate of Occupancy, all approved signing and striping shall be installed per current City Standards
173. All project driveways shall conform to Section 9.11.080, and Table 9.11.080-14 of the City's Development Code – Design Guidelines and City of Moreno Valley Standard Plans No. MVSI-112C-0 for commercial driveway approaches. Access at all driveways shall be right-in and right-out access only.

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 & PEN20-0124)

Page 29

174. Prior to final approval of the street improvement plans, a median modification plan shall be required to modify the existing raised, landscaped median on Alessandro Boulevard, west of Graham Street. The median shall be designed per current City Standards to extend the eastbound left-turn storage length to 250 feet at the Alessandro Boulevard/Graham Street intersection.
175. During construction activity, developer is responsible for regularly scheduled street sweeping per approved street sweeping schedule. Failure to provide regularly scheduled street sweeping during construction activity at the approved times shall result in re-inspection fees (amounts to be determined by City Engineer) and/or project suspension until street sweeping is provided.

**RESOLUTION NUMBER 2022-XX**

**A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY APPROVING PLOT PLANS PEN20-0121 AND PEN20-0124 FOR THE COMPASS DANBE CENTERPOINTE PROJECT LOCATED ON THE SOUTH SIDE OF ALESSANDRO BOULEVARD BETWEEN FREDERICK STREET AND GRAHAM STREET (APN'S 297-170-002 AND 003)**

**WHEREAS**, the City of Moreno Valley ("City") is a general law city and a municipal corporation of the State of California, and

**WHEREAS**, CDRE Holdings LLC., ("Developer") has filed an application for the approval of the Compass Danbe Centerpointe Project, which includes the approval of Plot Plans PEN20-0121 and PEN20-0124 ("Applications") for the development of two light industrial buildings approximately 290,726 and 98,877 square feet in size with associated public improvements ("Project") located on the south side of Alessandro Boulevard between Frederick Street and Graham Street (APN's 297-170-002 and 003) ("Project Site"); and

**WHEREAS**, Section 9.02.070 (Plot Plan) of the Moreno Valley Municipal Code acknowledges that the purpose of plot plans is to provide a mechanism by which all new construction of industrial, commercial or multiple-family residential can be reviewed when not subject to other discretionary review processes which have review authority over project design; and

**WHEREAS**, the Application has been evaluated in accordance with Section 9.02.070 (Plot Plan) of the Municipal Code with consideration given to the City's General Plan, Zoning Ordinance, and other applicable laws and regulations; and

**WHEREAS**, Section 9.02.070 of the Municipal Code imposes conditions of approval upon projects for which a Plot Plan is required, which conditions may be imposed by the City to address on-site improvements, off-site improvements, the manner in which the site is used and any other conditions as may be deemed necessary to protect the public health, safety and welfare and ensure that the proposed Project will be developed in accordance with the purpose and intent of Title 9 (Planning and Zoning) of the Municipal Code; and

**WHEREAS**, Staff has presented for the City Council's consideration Conditions of Approval to be imposed upon Plot Plans PEN20-0121 and PEN20-0124, which conditions have been deemed necessary to protect the public health, safety and welfare and ensure that the proposed Project will be developed in accordance with the purpose and intent of Title 9 (Planning and Zoning) of the Municipal Code; and

**WHEREAS**, pursuant to the provisions of Section 9.02.200 (Public Hearing and Notification Procedures) of the Municipal Code and Government Code section 65905, a public hearing before the Planning Commission was scheduled for August 26, 2021, and

notice thereof was duly published and posted, and mailed to all property owners of record within 600 feet of the Site; and

**WHEREAS**, on August 21, 2021, the public hearing to consider the Application was duly conducted by the Planning Commission at which time all interested persons were provided with an opportunity to testify and to present evidence; and

**WHEREAS**, on August 21, 2021 a hearing was conducted by the Planning Commission to consider a recommendation that the City Council approve the Plot Plan; and

**WHEREAS**, on August 21, 2021 a hearing was conducted by the Planning Commission whereby the Planning Commission approved Planning Commission Resolution 2021-28, a recommendation that the City Council approve the Plot Plan; and

**WHEREAS**, pursuant to the provisions of Section 9.02.200 (Public Hearing and Notification Procedures) of the Municipal Code and Government Code section 65905, a public hearing was scheduled for January 18, 2022 and notice thereof was duly published and posted, and mailed to all property owners of record within 600 feet of the Project Site; and

**WHEREAS**, on October 15, 2021, the City Council continued the item to a date uncertain.

**WHEREAS**, on January 18, 2022, the public hearing to consider the Applications was duly conducted by the City Council at which time all interested persons were provided with an opportunity to testify and to present evidence; and

**WHEREAS**, consistent with the requirements of Section 9.02.070 (Plot Plan) of the Municipal Code, at the public hearing the City Council considered Conditions of Approval to be imposed upon Plot Plans PEN20-0121 and PEN20-0124, which conditions were prepared by Planning Division staff who deemed said conditions to be necessary to protect the public health, safety and welfare and to ensure the proposed Project will be developed in accordance with the purpose and intent of Title 9 (Planning and Zoning) of the Municipal Code; and

**WHEREAS**, at the public hearing, the City Council considered whether each of the requisite findings specified in Section 9.02.070 of the Municipal Code and set forth herein could be made with respect to the proposed Project as conditioned by Conditions of Approval; and

**WHEREAS**, on January 18, 2022, in accordance with the provisions of the California Environmental Quality Act (CEQA) and CEQA Guidelines, the City Council approved Resolution 2022-XX adopting a Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program for the Compass Danbe Centerpointe Project located on the south side of Alessandro Boulevard between Frederick Street and Graham Street (APN's 297-170-002 and 003).

**NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:**

**Section 1. Recitals and Exhibits**

That the foregoing Recitals and attached Exhibits are true and correct and are hereby incorporated by this reference.

**Section 2. Notice**

That pursuant to Government Code section 66020(d)(1), notice is hereby given that the proposed project is subject to certain fees, dedications, reservations and other exactions as provided herein.

**Section 3. Evidence**

That the City Council has considered all of the evidence submitted into the administrative record for the proposed Plot Plans, including, but not limited to, the following:

- (a) Moreno Valley General Plan and all other relevant provisions contained therein;
- (b) Title 9 (Planning and Zoning) of the Moreno Valley Municipal Code and all other relevant provisions referenced therein;
- (c) Application for the approval of Plot Plans PEN20-0121 and PEN20-0124 and all documents, records and references contained therein;
- (d) Conditions of Approval for Plot Plans PEN20-0121 and PEN20-0124, attached hereto as Exhibit A;
- (e) Staff Report prepared for the City Council's consideration and all documents, records and references related thereto, and Staff's presentation at the public hearing;
- (f) Testimony and/or comments from Applicant and its representatives during the public hearing; and
- (g) Testimony and/or comments from all persons that was provided in written format or correspondence, at, or prior to, the public hearing.

**Section 4. Findings**

That based on the foregoing Recitals and the Evidence contained in the Administrative Record as set forth above, the City Council makes the following findings in approving Plot Plans PEN20-0121 and PEN20-0124

- (a) The proposed project is consistent with the goals, objectives, policies and programs of the general plan;
- (b) The proposed project complies with all applicable zoning and other regulations;
- (c) The proposed project will not be detrimental to the public health, safety or welfare or materially injurious to properties or improvements in the vicinity;

(d) The location, design and operation of the proposed project will be compatible with existing and planned land uses in the vicinity.

**Section 5. Approval**

That based on the foregoing Recitals, Evidence contained in the Administrative Record and Findings set forth above, the City Council hereby approves Plot Plans PEN20-0121 and PEN20-0124 subject to the Conditions of Approval for Plot Plans PEN20-0121 and PEN20-0124 attached hereto as Exhibit A.

**Section 6. Repeal of Conflicting Provisions**

That all the provisions as heretofore adopted by the City Council that are in conflict with the provisions of this Resolution are hereby repealed.

**Section 7. Severability**

That the City Council declares that, should any provision, section, paragraph, sentence or word of this Resolution be rendered or declared invalid by any final court action in a court of competent jurisdiction or by reason of any preemptive legislation, the remaining provisions, sections, paragraphs, sentences or words of this Resolution as hereby adopted shall remain in full force and effect.

**Section 8. Effective Date**

That this Resolution shall take effect immediately upon the date of adoption.

**Section 9. Certification**

That the City Clerk for the City Council shall certify to the passage of this Resolution.

**PASSED AND ADOPTED THIS \_\_\_ day of \_\_\_\_\_, 2022**

CITY OF MORENO VALLEY CONDITIONS OF APPROVAL  
(PEN20-0120, PEN20-0121 & PEN20-0124)

EFFECTIVE DATE:

EXPIRATION DATE:

**COMMUNITY DEVELOPMENT DEPARTMENT****Planning Division**

1. A change or modification to the land use or the approved site plans may require a separate approval. Prior to any change or modification, the property owner shall contact the City of Moreno Valley Community Development Department to determine if a separate approval is required.
2. Any expansion to this use or exterior alterations will require the submittal of a separate application(s) and shall be reviewed and approved under separate permit(s). (MC 9.02.080)
3. The developer, or the developer's successor-in-interest, shall be responsible for maintaining any undeveloped portion of the site in a manner that provides for the control of weeds, erosion and dust. (MC 9.02.030)
4. The site shall be developed in accordance with the approved plans on file in the Community Development Department - Planning Division, the Municipal Code regulations, General Plan, and the conditions contained herein. Prior to any use of the project site or business activity being commenced thereon, all Conditions of Approval shall be completed to the satisfaction of the Planning Official. (MC 9.14.020)
5. Any signs indicated on the submitted plans are not included with this approval. Any signs, whether permanent (e.g. wall, monument) or temporary (e.g. banner, flag), require separate application and approval by the Planning Division. No signs are permitted in the public right of way. (MC 9.12)

**Special Conditions**

6. All site plans, grading plans, landscape and irrigation plans, lighting plans and street improvement plans shall be coordinated for consistency with this approval.
7. This approval shall comply with all applicable requirements of the City of Moreno Valley Municipal Code.

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 2

8. Prior to building final, the developer/owner or developer's/owner's successor-in-interest shall pay all applicable impact fees, including but not limited to Transportation Uniform Mitigation fees (TUMF), and the City's adopted Development Impact Fees. (Ord)
9. Prior to the issuance of grading permits, final erosion control landscape and irrigation plans for all cut or fill slopes over 3 feet in height shall be submitted to and approved by the Planning Division. The plans shall be designed in accordance with the slope erosion plan as required by the City Engineer. Man-made slopes greater than 10 feet in height shall be "land formed" to conform to the natural terrain and shall be landscaped and stabilized to minimize visual scarring. (GP Objective 1.5, MC 9.08.080, DG)
10. Prior to recordation of the final map, final median enhancement/landscape/irrigation plans shall be submitted to and approved by the Planning Division, and Public Works Department - Special Districts Division for review and approval by each division. (GP - Circulation Master Plan)
11. All landscaped areas in perpetuity shall be maintained in a healthy and thriving condition, free from weeds, trash and debris. (MC 9.02.030)
12. This tentative map and plot plans shall expire three years after the approval date of this tentative map unless extended as provided by the City of Moreno Valley Municipal Code; otherwise it shall become null and void and of no effect whatsoever in the event the applicant or any successor in interest fails to properly file a final map before the date of expiration. (MC 9.02.230, 9.14.050, 080)
13. Prior to the issuance of grading permits, mitigation measures contained in the Mitigation Monitoring Program approved with this project shall be implemented as provided therein.
14. Prior to any site disturbance and/or grading plan submittal, and or final map recordation, a mitigation monitoring fee, as provided by City ordinance, shall be paid by the applicant/owner. No City permit or approval shall be issued until such fee is paid. (CEQA)
15. Prior to issuance of a building permit, the developer/property owner or developer's successor-in-interest shall pay all applicable impact fees due at permit issuance, including but not limited to Multi-species Habitat Conservation Plan (MSHCP) mitigation fees. (Ord.)
16. Within thirty (30) days prior to any grading or other land disturbance, a pre-construction survey for Burrowing Owls shall be conducted pursuant to the established guidelines of Multiple Species Habitat Conservation Plan. The pre-construction survey shall be submitted to the Planning Division prior to any

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 3

disturbance of the site and/or grading permit issuance.

17. Prior to the issuance of grading permits, a temporary project identification sign shall be erected on the site in a secure and visible manner. The sign shall be conspicuously posted at the site and remain in place until occupancy of the project. The sign shall include the following: The name and address of the development and the developer's name and address to include a 24-hour emergency phone number.
18. Prior to approval of any grading permits, plans for any security gate system shall be submitted to and approved by to the Planning Division.
19. Prior to issuance of grading permits, the developer shall pay the applicable Stephen's' Kangaroo Rat (SKR) Habitat Conservation Plan mitigation fee.
20. Prior to the issuance of any grading permits and prior to any physical disturbance of any natural drainage course, or any wetland determined to contain riparian vegetation, the applicant shall obtain a stream bed alteration agreement or permit, or a written waiver of the requirement for such an agreement or permit, from both the California Department of Fish and Game, the U.S. Army Corps of Engineers, and Regional Water Quality Control Board, as required. Written verification of such a permits or waivers shall be provided to both the Planning Division and the Public Works Department - Land Development Division. (CEQA, State and Federal codes)
21. Prior to recordation of the final subdivision map, the following documents shall be submitted to and approved by the Planning Division which shall demonstrate that the project will be developed and maintained in accordance with the intent and purpose of the approval:
  - a. The document to convey title
  - b. Deed restrictions, easements, or Covenants, Conditions and Restrictions to be recorded

The approved documents shall be recorded at the same time that the subdivision map is recorded. The documents shall contain provisions for general maintenance of the site, joint access to proposed parcels, open space use restrictions, conservation easements, parking, feeder trails, water quality basins, lighting, landscaping and common area use items such as general building maintenance. The approved documents shall also contain a provision, which provides that they may not be terminated and/or substantially amended without the consent of the City and the developer's successor-in-interest. (MC 9.14.090)

In addition, the following deed restrictions and disclosures shall be included within the document and grant deed of the properties:

- a. The developer shall promote the use of native plants and trees and drought

**CONDITIONS OF APPROVAL**

Page 4

tolerant species.

b. All lots designated for open space and or detention basins, shall be included as an easement to, and maintained by a Homeowners Association (HOA) or other private maintenance entity. All reverse frontage landscape areas shall also be maintained by the onsite HOA. Language to this effect shall be included and reviewed within the required Covenant Conditions and Restrictions (CC&Rs) prior to the approval of the final map.

c. Maintenance of any and all common facilities.

22. Applicant/Developer shall defend, indemnify and hold harmless City, city council, commissions, boards, subcommittees and City's elected and appointed officials, commissioners, board members, officers, agents, consultants and employees ("City Parties") from and against any and all liabilities, demands, claims, actions or proceedings and costs and expenses incidental thereto (including costs of defense, settlement and reasonable attorneys' fees), which any or all of them may suffer, incur, be responsible for or pay out as a result of or in connection with any challenge to the legality, validity or adequacy of any of the following items: (i) any agreements by and among City and Developer including without limitation any Development Agreement, (ii) any and all permits, licenses and entitlements approved by City; (iii) any environmental determination made by City in connection with the Project Site or Project; and (iv) any proceedings or other actions undertaken by City in connection with the adoption or approval of any of the above.
23. The project shall be designed and constructed to meet LEED Silver Equivalent with evidence provided to the City. A change or modification shall require separate approval.
24. The site has been approved for a Tentative Parcel Map 37944 to subdivide the lots into two parcels and two light industrial warehouse buildings. Building 1 will be approximately 290,726 square feet and Building 2 will be approximately 98,877 square feet with associated on-site and off-site improvements designed per the approved plans.
25. This approval includes the Tentative Parcel Map 37944 and two Plot Plans for the construction of two light industrial buildings to be completed as one project. All improvements both on-site and off-site shall be completed prior to building shell final of any one building. If the construction of one building is postponed, the parcel/pad area shall be maintained with landscaping and screening as approved by the Community Development Director.
26. Should the applicant/property owner elect to not construct one of the buildings, the building pad shall be precise graded and hydroseeded to prevent dust and erosion.
27. Prior to the start of any construction, temporary security fencing shall be erected. The fencing shall be a minimum of six (6) feet high with locking, gated access and

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 5

shall remain through the duration of construction. Security shall remain in place until the project is completed or the above conditions no longer exist. (Security fencing is required if there is: construction, unsecured structures, unenclosed storage of materials and/or equipment, and/or the condition of the site constitutes a public hazard).

Prior to Building Permit

28. Prior to issuance of any building permits, final landscaping and irrigation plans shall be submitted for review and approved by the Planning Division. The plans shall be prepared in accordance with the City's Landscape Requirements to include a drought tolerant palette. (9.17)
29. Prior to issuance of any building permit, all Conditions of Approval, Mitigation Measures and Airport Land Use Commission Conditions of Approval shall be printed on the building plans.
30. Prior to the issuance of grading permits, decorative (e.g. colored/scored concrete or as approve by the Planning Official) pedestrian pathways across circulation aisles/paths shall be provided throughout the development to connect dwellings with open spaces and/or recreational uses or commercial/industrial buildings with open space and/or parking. and/or the public right-of-way. The pathways shall be shown on the precise grading plan. (GP Objective 46.8, DG)
31. Prior to issuance of building permits, the Planning Division shall review and approve the location and method of enclosure or screening of transformer cabinets, commercial gas meters and back flow preventers as shown on the final working drawings. Location and screening shall comply with the following criteria: transformer cabinets and commercial gas meters shall not be located within required setbacks and shall be screened from public view either by architectural treatment or landscaping; multiple electrical meters shall be fully enclosed and incorporated into the overall architectural design of the building(s); back-flow preventers shall be screened by landscaping. (GP Objective 43.30)
32. Prior to issuance of any grading permit, all Conditions of Approval, Mitigation Measures and Airport Land Use Commission Conditions of Approval shall be printed on the grading plans.
33. Prior to approval of any grading permits, plans for any security gate system shall be submitted to and approved by to the Planning Division.
34. Prior to issuance of grading permits, the developer shall submit fence/wall plans to be included in the Building and Safety submittal for review and approval consistent with the approved plans, the Landscape Requirements and the Municipal Code.

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 6

35. Prior to the issuance of grading permits, a temporary project identification sign shall be erected on the site in a secure and visible manner. The sign shall be conspicuously posted at the site and remain in place until occupancy of the project. The sign shall include the following:
  - a. The name (if applicable) and address of the development.
  - b. The developer's name, address, and a 24-hour emergency telephone number.
36. Photometric Plans shall be submitted to the Building and Safety Division for review and approval as part of the lighting and electrical building plan submittal.
37. Prior to the issuance of grading permits, the site plan and grading plans shall show decorative hardscape (e.g. colored concrete, stamped concrete, pavers or as approved by the Planning Official) consistent and compatible with the design, color and materials of the proposed development for all driveway ingress/egress locations of the project.

Prior to Building Final or Occupancy

38. Prior to building final, all required landscaping and irrigation shall be installed per plan, certified by the Landscape Architect and inspected by the Planning Division. (MC 9.03.040, MC 9.17).
39. Prior to building final, all required and proposed fences and walls shall be constructed according to the approved plans on file in the Planning Division. (MC 9.080.070).

Building Division

40. The proposed non-residential project shall comply with the latest Federal Law, Americans with Disabilities Act, and State Law, California Code of Regulations, Title 24, Chapter 11B for accessibility standards for the disabled including access to the site, exits, bathrooms, work spaces, etc.
41. Building plans submitted shall be signed and sealed by a California licensed design professional as required by the State Business and Professions Code.
42. All new structures shall be designed in conformance to the latest design standards adopted by the State of California in the California Building Code, (CBC) Part 2, Title 24, California Code of Regulations including requirements for allowable area, occupancy separations, fire suppression systems, accessibility, etc.

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 7

43. Prior to submittal, all new development, including residential second units, are required to obtain a valid property address prior to permit application. Addresses can be obtained by contacting the Building Safety Division at 951.413.3350.
44. Contact the Building Safety Division for permit application submittal requirements.
45. All new buildings 10,000 square feet and over, shall include building commissioning in the design and construction processes of the building project to verify that the building systems and components meet the owner's or owner representative's project requirements (OPR). All requirements in The 2016 California Green Building Standards Code, sections 5.410.2 - 5.410.2.6 must be met.
46. Any construction within the city shall only be as follows: Monday through Friday seven a.m. to seven p.m.(except for holidays which occur on weekdays), eight a.m. to four p.m.; weekends and holidays (as observed by the city and described in the Moreno Valley Municipal Code Chapter 2.55), unless written approval is first obtained from the Building Official or City Engineer.
47. The proposed development shall be subject to the payment of required development fees as required by the City's current Fee Ordinance at the time a building application is submitted or prior to the issuance of permits as determined by the City.
48. The proposed project will be subject to approval by the Eastern Municipal Water District and all applicable fees and charges shall be paid prior to permit issuance. Contact the water district at 951.928.3777 for specific details.
49. The proposed project's occupancy shall be classified by the Building Official and must comply with exiting, occupancy separation(s) and minimum plumbing fixture requirements. Minimum plumbing fixtures shall be provided per the 2016 California Plumbing Code, Table 422.1. The occupant load and occupancy classification shall be determined in accordance with the California Building Code.
50. Prior to permit issuance, every applicant shall submit a properly completed Waste Management Plan (WMP), as a portion of the building or demolition permit process. (MC 8.80.030)

**ECONOMIC DEVELOPMENT DEPARTMENT (EDD)**

51. New Moreno Valley businesses may work with the Economic Development Department to coordinate job recruitment fairs.
52. New Moreno Valley businesses may adopt a "First Source" approach to employee recruitment that gives notice of job openings to Moreno Valley residents for one

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 8

week in advance of public recruitment.

53. New Moreno Valley businesses are encouraged to hire local residents.
54. New Moreno Valley businesses are encouraged to provide a job fair flyer and/or web announcement to the City in advance of job recruitments, so that the City can assist in publicizing these events.
55. New Moreno Valley businesses may utilize the workforce recruitment services provided by the Moreno Valley Business & Employment Resource Center ("BERC").

The BERC offers free assistance to Moreno Valley businesses recruiting and training potential employees. Complimentary services include:

- Job Announcements
- Applicant testing / pre-screening
- Interviewing
- Job Fair support
- Training space

**FIRE DEPARTMENT****Fire Prevention Bureau**

56. All Fire Department access roads or driveways shall not exceed 12 percent grade. (CFC 503.2.7 and MVMC 8.36.060[G])
57. The Fire Department emergency vehicular access road shall be (all weather surface) capable of sustaining an imposed load of 80,000 lbs. GVW, based on street standards approved by the Public Works Director and the Fire Prevention Bureau. The approved fire access road shall be in place during the time of construction. Temporary fire access roads shall be approved by the Fire Prevention Bureau. (CFC 501.4, and MV City Standard Engineering Plan 108d)
58. The angle of approach and departure for any means of Fire Department access shall not exceed 1 ft drop in 20 ft (0.3 m drop in 6 m), and the design limitations of the fire apparatus of the Fire Department shall be subject to approval by the AHJ. (CFC 503 and MVMC 8.36.060)
59. Prior to construction, all locations where structures are to be built shall have an approved Fire Department access based on street standards approved by the Public Works Director and the Fire Prevention Bureau. (CFC 501.4)
60. Prior to issuance of Building Permits, the applicant/developer shall provide the Fire

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 9

- Prevention Bureau with an approved site plan for Fire Lanes and signage. (CFC 501.3)
61. Prior to issuance of Certificate of Occupancy or Building Final, "Blue Reflective Markers" shall be installed to identify fire hydrant locations in accordance with City specifications. (CFC 509.1 and MVLT 440A-0 through MVLT 440C-0)
  62. Prior to issuance of building permits, plans specifying the required structural materials for building construction in high fire hazard severity zones shall be submitted to the Fire Prevention Bureau for approval. (CFC, 4905)
  63. Prior to issuance of Certificate of Occupancy or Building Final, all commercial buildings shall display street numbers in a prominent location on the street side and rear access locations. The numerals shall be a minimum of twelve inches in height. (CFC 505.1, MVMC 8.36.060[I])
  64. Existing fire hydrants on public streets are allowed to be considered available. Existing fire hydrants on adjacent properties shall not be considered available unless fire apparatus access roads extend between properties and easements are established to prevent obstruction of such roads. (CFC 507, 501.3) a - After the local water company signs the plans, the originals shall be presented to the Fire Prevention Bureau for signatures. The required water system, including fire hydrants, shall be installed, made serviceable, and be accepted by the Moreno Valley Fire Department prior to beginning construction. They shall be maintained accessible.
  65. Final fire and life safety conditions will be addressed when the Fire Prevention Bureau reviews building plans. These conditions will be based on occupancy, use, California Building Code (CBC), California Fire Code (CFC), and related codes, which are in effect at the time of building plan submittal.
  66. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall install a fire alarm system monitored by an approved Underwriters Laboratory listed central station based on a requirement for monitoring the sprinkler system, occupancy or use. Fire alarm panel shall be accessible from exterior of building in an approved location. Plans shall be submitted to the Fire Prevention Bureau for approval prior to installation. (CFC Chapter 9 and MVMC 8.36.100)
  67. The Fire Code Official is authorized to enforce the fire safety during construction requirements of Chapter 33. (CFC Chapter 33 & CBC Chapter 33)
  68. Fire lanes and fire apparatus access roads shall have an unobstructed width of not less than twenty-four (24) feet and an unobstructed vertical clearance of not less than the thirteen (13) feet six (6) inches. (CFC 503.2.1 and MVMC 8.36.060[E])

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 10

69. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall install a fire sprinkler system based on square footage and type of construction, occupancy or use. Fire sprinkler plans shall be submitted to the Fire Prevention Bureau for approval prior to installation. (CFC Chapter 9, MVMC 8.36.100[D])
70. Prior to issuance of the building permit for development, independent paved access to the nearest paved road, maintained by the City shall be designed and constructed by the developer within the public right of way in accordance with City Standards. (MVMC 8.36.060, CFC 501.4)
71. Prior to issuance of a Certificate of Occupancy or Building Final, a "Knox Box Rapid Entry System" shall be provided. The Knox-Box shall be installed in an accessible location approved by the Fire Code Official. All exterior security emergency access gates shall be electronically operated and be provided with Knox key switches for access by emergency personnel. (CFC 506.1)
72. The minimum number of fire hydrants required, as well as the location and spacing of fire hydrants, shall comply with the C.F.C., MVMC, and NFPA 24. Fire hydrants shall be located no closer than 40 feet to a building. A fire hydrant shall be located within 50 feet of the fire department connection for buildings protected with a fire sprinkler system. The size and number of outlets required for the approved fire hydrants are (6" x 4" x 2 ½" x 2 ½") (CFC 507.5.1, 507.5.7, Appendix C, NFPA 24-7.2.3, MVMC 912.2.1)
73. During phased construction, dead end roadways and streets which have not been completed shall have a turn-around capable of accommodating fire apparatus. (CFC 503.1 and 503.2.5)
74. If construction is phased, each phase shall provide an approved emergency vehicular access way for fire protection prior to any building construction. (CFC 501.4)
75. Plans for private water mains supplying fire sprinkler systems and/or private fire hydrants shall be submitted to the Fire Prevention Bureau for approval. (CFC 105 and CFC 3312.1)
76. The Fire Prevention Bureau is required to set a minimum fire flow for the remodel or construction of all commercial buildings per CFC Appendix B and Table B105.1. The applicant/developer shall provide documentation to show there exists a water system capable of delivering said waterflow for 2 hour(s) duration at 20-PSI residual operating pressure. The required fire flow may be adjusted during the approval process to reflect changes in design, construction type, or automatic fire protection measures as approved by the Fire Prevention Bureau. Specific requirements for

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 11

the project will be determined at time of submittal. (CFC 507.3, Appendix B)

77. Prior to construction, all traffic calming designs/devices must be approved by the Fire Marshal and City Engineer.
78. Prior to issuance of Building Permits, the applicant/developer shall furnish one copy of the water system plans to the Fire Prevention Bureau for review. Plans shall:
  - a. Be signed by a registered civil engineer or a certified fire protection engineer;
  - b. Contain a Fire Prevention Bureau approval signature block; and
  - c. Conform to hydrant type, location, spacing of new and existing hydrants and minimum fire flow required as determined by the Fire Prevention Bureau. The required water system, including fire hydrants, shall be installed, made serviceable, and be accepted by the Moreno Valley Fire Department prior to beginning construction. They shall be maintained accessible.

**FINANCIAL & MANAGEMENT SERVICES DEPARTMENT****Moreno Valley Utility**

79. This project requires the installation of electric distribution facilities. A non-exclusive easement shall be provided to Moreno Valley Utility and shall include the rights of ingress and egress for the purpose of operation, maintenance, facility repair, and meter reading.
80. This project requires the installation of electric distribution facilities. The developer shall submit a detailed engineering plan showing design, location and schematics for the utility system to be approved by the City Engineer. In accordance with Government Code Section 66462, the Developer shall execute an agreement with the City providing for the installation, construction, improvement and dedication of the utility system following recordation of final map and/or concurrent with trenching operations and other improvements so long as said agreement incorporates the approved engineering plan and provides financial security to guarantee completion and dedication of the utility system.

The Developer shall coordinate and receive approval from the City Engineer to install, construct, improve, and dedicate to the City all utility infrastructure including but not limited to, conduit, equipment, vaults, ducts, wires (including fiber optic cable), switches, conductors, transformers, and “bring-up” facilities including electrical capacity to serve the identified development and other adjoining, abutting, or benefiting projects as determined by Moreno Valley Utility – collectively referred to as “utility system”, to and through the development, along with any appurtenant real property easements, as determined by the City Engineer necessary for the distribution and/or delivery of any and all “utility services” to and within the project.

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 12

For purposes of this condition, “utility services” shall mean electric, cable television, telecommunication (including video, voice, and data) and other similar services designated by the City Engineer. “Utility services” shall not include sewer, water, and natural gas services, which are addressed by other conditions of approval.

The City, or the City’s designee, shall utilize dedicated utility facilities to ensure safe, reliable, sustainable and cost effective delivery of utility services and maintain the integrity of streets and other public infrastructure. Developer shall, at developer’s sole expense, install or cause the installation of such interconnection facilities as may be necessary to connect the electrical distribution infrastructure within the project to the Moreno Valley Utility owned and controlled electric distribution system.

81. Existing Moreno Valley Utility electrical infrastructure shall be preserved in place. The developer will be responsible, at developer’s expense, for any and all costs associated with the relocation of any of Moreno Valley Utility’s underground electrical distribution facilities, as determined by Moreno Valley Utility, which may be in conflict with any developer planned construction on the project site.
82. This project is subject to a Reimbursement Agreement. The Developer is responsible for a proportionate share of costs associated with electrical distribution infrastructure previously installed that directly benefits the project.

**PUBLIC WORKS DEPARTMENT****Land Development**

83. Aggregate slurry, as defined in Section 203-5 of Standard Specifications for Public Works Construction, shall be required prior to 90% security reduction or the end of the one-year warranty period of the public streets as approved by the City Engineer. If slurry is required, a slurry mix design shall be submitted for review and approved by the City Engineer. The latex additive shall be Ultra Pave 70 (for anionic) or Ultra Pave 65 K (for cationic) or an approved equal per the geotechnical report. The latex shall be added at the emulsion plant after weighing the asphalt and before the addition of mixing water. The latex shall be added at a rate of two to two-and-one-half (2 to 2½) parts to one-hundred (100) parts of emulsion by volume. Any existing striping shall be removed prior to slurry application and replaced per City standards.
84. The developer shall comply with all applicable City ordinances and resolutions including the City’s Municipal Code (MC) and if subdividing land, the Government Code (GC) of the State of California, specifically Sections 66410 through 66499.58, said sections also referred to as the Subdivision Map Act (SMA). [MC 9.14.010]
85. The final approved conditions of approval (COAs) issued and any applicable

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 13

Mitigation Measures by the Planning Division shall be photographically or electronically placed on mylar sheets and included in the Grading and Street Improvement plans.

86. The developer shall monitor, supervise and control all construction related activities, so as to prevent these activities from causing a public nuisance, including but not limited to, insuring strict adherence to the following:
- (a) Removal of dirt, debris, or other construction material deposited on any public street no later than the end of each working day.
  - (b) Observance of working hours as stipulated on permits issued by the Land Development Division.
  - (c) The construction site shall accommodate the parking of all motor vehicles used by persons working at or providing deliveries to the site.
  - (d) All dust control measures per South Coast Air Quality Management District (SCAQMD) requirements during the grading operations.
- Violation of any condition, restriction or prohibition set forth in these conditions shall subject the owner, applicant, developer or contractor(s) to remedy as noted in City Municipal Code 8.14.090. In addition, the City Engineer or Building Official may suspend all construction related activities for violation of any condition, restriction or prohibition set forth in these conditions until such time as it has been determined that all operations and activities are in conformance with these conditions.
87. Drainage facilities (e.g., catch basins, water quality basins, etc.) with sump conditions shall be designed to convey the tributary 100-year storm flows. Secondary emergency escape shall also be provided.
88. In the event right-of-way or offsite easements are required to construct offsite improvements necessary for the orderly development of the surrounding area to meet the public health and safety needs, the developer shall make a good faith effort to acquire the needed right-of-way in accordance with the Land Development Division's administrative policy. If unsuccessful, the Developer shall enter into an agreement with the City to acquire the necessary right-of-way or offsite easements and complete the improvements at such time the City acquires the right-of-way or offsite easements which will permit the improvements to be made. The developer shall be responsible for all costs associated with the right-of-way or easement acquisition. [GC 66462.5]
89. If improvements associated with this project are not initiated within two (2) years of the date of approval of the Public Improvement Agreement (PIA), the City Engineer may require that the engineer's estimate for improvements associated with the project be modified to reflect current City construction costs in effect at the time of request for an extension of time for the PIA or issuance of a permit. [MC 9.14.210(B)(C)]

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 14

90. The developer shall protect downstream properties from damage caused by alteration of drainage patterns (i.e. concentration or diversion of flow, etc). Protection shall be provided by constructing adequate drainage facilities, including, but not limited to, modifying existing facilities or by securing a drainage easement. [MC 9.14.110]
91. Public drainage easements, when required, shall be a minimum of 25 feet wide and shall be shown on the map and plan, and noted as follows: "Drainage Easement – no structures, obstructions, or encroachments by land fills are allowed." In addition, the grade within the easement area shall not exceed a 3:1 (H:V) slope, unless approved by the City Engineer.
92. The maintenance responsibility of the proposed storm drain line shall be clearly identified. Unless otherwise noted on improvement plans, storm drain lines within private property will be privately maintained and those within public streets will be publicly maintained.
93. This project shall submit civil engineering design plans, reports and/or documents (prepared by a registered/licensed civil engineer) for review and approval by the City Engineer per the current submittal requirements, prior to the indicated threshold or as required by the City Engineer. The submittal consists of, but is not limited to, the following:
- a. Parcel Map (recordation prior to building permit issuance);
  - b. Rough grading w/ erosion control plan (prior to grading permit issuance);
  - c. Precise grading w/ erosion control plan (prior to building permit issuance);
  - d. Street improvement plan w/ Signing & Striping (prior to parcel map approval);
  - e. RCFC&WCD storm drain plans (prior to parcel map approval);
  - f. Cooperative Agreement between the City, RCFC&WCD and the developer (prior to RCFC&WCD storm drain plan approval);
  - g. Final drainage study (prior to rough grading plan and storm drain plan approval);
  - h. Final WQMP (prior to grading plan approval);
  - i. As-Built revision for all plans (prior to Occupancy release)
94. Water quality best management practices (BMPs) designed to meet Water Quality Management Plan (WQMP) requirements for single-family residential development shall not be used as a construction BMP. Water quality BMPs shall be maintained for the entire duration of the project construction and be used to treat runoff from those developed portions of the project. Water quality BMPs shall be protected from upstream construction related runoff by having proper best management practices in place and maintained. Water quality BMPs shall be graded per the approved design plans and once landscaping and irrigation has been installed, it and its maintenance shall be turned over to an established Homeowner's

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 15

Association (HOA). The Homeowner's Association shall enter into an agreement with the City for basin maintenance.

95. When any proposed private storm drain system connects to a public storm drain system, a storm drain manhole shall be placed at the right-of-way or property line to mark the beginning of the publicly maintained portion of the storm drain system.

Prior to Grading Plan Approval

96. Resolution of all drainage issues shall be as approved by the City Engineer.
97. A final detailed drainage study (prepared by a registered/licensed civil engineer) shall be submitted for review and approved by the City Engineer. The study shall include, but not be limited to: existing and proposed hydrologic conditions as well as hydraulic calculations for all drainage control devices and storm drain lines. The study shall analyze 1, 3, 6 and 24-hour duration events for the 2, 5, 10 and 100-year storm events [MC 9.14.110(A.1)]. A digital (pdf) copy of the approved drainage study shall be submitted to the Land Development Division.
98. Emergency overflow areas shall be shown at all applicable drainage improvement locations in the event that the drainage improvement fails or exceeds full capacity. This may include, but not be limited to, secondary storm drains, riser inlets, concrete spillways, or redundancy in pump systems.
99. A final project-specific Water Quality Management Plan (WQMP) shall be submitted for review and approved by the City Engineer, which:
- a. Addresses Site Design Best Management Practices (BMPs) such as minimizing impervious areas, maximizing permeability, minimizes directly connected impervious areas to the City's street and storm drain systems, and conserves natural areas;
  - b. Incorporates Source Control BMPs and provides a detailed description of their implementation;
  - c. Describes the long-term operation and maintenance requirements for BMPs requiring maintenance; and
  - d. Describes the mechanism for funding the long-term operation and maintenance of the BMPs.
- A copy of the final WQMP template can be obtained on the City's Website or by contacting the Land Development Division. A digital (pdf) copy of the approved final project-specific Water Quality Management Plan (WQMP) shall be submitted to the Land Development Division.
100. The final project-specific Water Quality Management Plan (WQMP) shall be consistent with the approved P-WQMP, as well as in full conformance with the document: "Water Quality Management Plan - A Guidance Document for the Santa Ana Region of Riverside County" dated October 22, 2012. The F-WQMP shall be

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 16

submitted and approved prior to application for and issuance of grading permits. At a minimum, the F-WQMP shall include the following: Site Design BMPs; Source Control BMPs, Treatment Control BMPs, Operation and Maintenance requirements for BMPs and sources of funding for BMP implementation.

a. The Applicant has proposed to incorporate the use of two (2) modular wetland systems along the southerly project boundary and three (3) bio-retention swales along the northerly project boundary . Final design and sizing details of all BMPs must be provided in the first submittal of the F-WQMP. The Applicant acknowledges that more area than currently shown on the plans may be required to treat site runoff as required by the WQMP guidance document.

b. The Applicant shall substantiate the applicable Hydrologic Condition of Concerns (HCOC) in Section F of the F-WQMP. <The HCOC designates that the project will be required to provide HCOC mitigation..

c. All proposed LID BMP's shall be designed in accordance with the RCFC&WCD's Design Handbook for Low Impact Development Best Management Practices, dated September 2011.

d. The proposed LID BMP's as identified in the project-specific P-WQMP shall be incorporated into the Final WQMP.

e. The NPDES notes per City Standard Drawing No. MVFE-350-0 shall be included in the grading plans.

f. Post-construction treatment control BMPs, once placed into operation for post-construction water quality control, shall not be used to treat runoff from construction sites or unstabilized areas of the site.

g. Prior to precise grading plan approval, the grading plan shall show any proposed trash enclosure to include a cover (roof) and sufficient size for dual bin (1 for trash and 1 for recyclables). The architecture shall be approved by the Planning Division and any structural approvals shall be made by the Building and Safety Division.

101. The developer shall ensure compliance with the City Grading ordinance, these Conditions of Approval and the following criteria:

a. The project street and lot grading shall be designed in a manner that perpetuates the existing natural drainage patterns with respect to tributary drainage area and outlet points. Unless otherwise approved by the City Engineer, lot lines shall be located at the top of slopes.

b. Any grading that creates cut or fill slopes adjacent to the street shall provide erosion control, sight distance control, and slope easements as approved by the City Engineer.

c. All improvement plans are substantially complete and appropriate clearance letters are provided to the City.

d. A soils/geotechnical report (addressing the soil's stability and geological conditions of the site) shall be submitted to the Land Development Division for review. A digital (pdf) copy of the soils/geotechnical report shall be submitted to the Land Development Division.

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 17

102. Grading plans (prepared by a registered/licensed civil engineer) shall be submitted for review and approved by the City Engineer per the current submittal requirements.
103. The developer shall select Low Impact Development (LID) Best Management Practices (BMPs) designed per the latest version of the Water Quality Management Plan (WQMP) - a guidance document for the Santa Ana region of Riverside County.
104. The developer shall pay all remaining plan check fees.
105. The proposed private storm drain Line "E" on Parcel 2 shall connect to the existing public storm drain lateral crossing Alessandro Boulevard and connect to storm drain Line "E" located on APN 297-170-089. Storm drain manholes shall be placed at the point of connections (at right of way or property line) to mark the separation of the publicly maintained storm drain and privately maintained storm drain.
106. A Storm Water Pollution Prevention Plan (SWPPP) shall be prepared in conformance with the State's current Construction Activities Storm Water General Permit. A copy of the current SWPPP shall be kept at the project site and be available for review upon request.
107. For projects that will result in discharges of storm water associated with construction with a soil disturbance of one or more acres of land, the developer shall submit a Notice of Intent (NOI) and obtain a Waste Discharger's Identification number (WDID#) from the State Water Quality Control Board (SWQCB) which shall be noted on the grading plans.

Prior to Grading Permit

108. A receipt showing payment of the Area Drainage Plan (ADP) fee to Riverside County Flood Control and Water Conservation District shall be submitted. [MC 9.14.100(O)]
109. For non-subdivision projects, a copy of the Covenants, Conditions and Restrictions (CC&Rs) shall be submitted for review by the City Engineer. The CC&Rs shall include, but not be limited to, access easements, reciprocal access, private and/or public utility easements as may be relevant to the project.
110. If the developer chooses to construct the project in phases, a Construction Phasing Plan for the construction of on-site public or private improvements shall be submitted for review and approved by the City Engineer.
111. Prior to the payment of the Development Impact Fee (DIF), the developer may enter

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 18

into a DIF Improvement Credit Agreement to secure credit for the construction of applicable improvements. If the developer fails to complete this agreement prior to the timing specified above, credits may not be given. The developer shall pay current DIF fees adopted by the City Council. [Ord. 695 § 1.1 (part), 2005] [MC 3.38.030, 040, 050]

112. A digital (pdf) copy of all approved grading plans shall be submitted to the Land Development Division.
113. Security, in the form of a cash deposit (preferable), bond or letter of credit shall be submitted as a guarantee of the implementation and maintenance of erosion control measures. At least twenty-five (25) percent of the required security shall be in the form of a cash deposit with the City. [MC 8.21.160(H)]
114. Security, in the form of a cash deposit (preferable), bond or letter of credit shall be submitted as a guarantee of the completion of the grading operations for the project. [MC 8.21.070]
115. The developer shall pay all applicable inspection fees.
116. Prior to the payment of the Transportation Uniform Mitigation Fee (TUMF), the developer may enter into a TUMF Improvement Credit Agreement to secure credit for the construction of applicable improvements. If the developer fails to complete this agreement by the timing specified above, credits may not be given. The developer shall pay current TUMF fees adopted by the City Council. [Ord. 835 § 2.1, 2012] [MC 3.44.060]

Prior to Map Approval

117. A copy of the Covenants, Conditions and Restrictions (CC&R's) shall be submitted for review and approved by the City Engineer. The CC&R's shall include, but not be limited to, access easements, reciprocal access, private and/or public utility easements as may be relevant to the project. Alternatively, access easements, reciprocal access, private and/or public utility easements may be submitted for review and approval by separate instruments that will be recorded once approved.
118. The developer shall enter into a Cooperative Agreement with the City and Riverside County Flood Control and Water Conservation District establishing the terms and conditions covering the inspection, operation and maintenance of Master Drainage Plan facilities required to be constructed as part of the project.
119. After recordation, a digital (pdf) copy of the recorded map shall be submitted to the Land Development Division.

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 19

120. Resolution of all drainage issues shall be as approved by the City Engineer.
121. A parcel map (prepared by a registered civil engineer and/or licensed surveyor) shall be submitted for review and approved by the City Engineer per the current submittal requirements.
122. The developer shall guarantee the completion of all related improvements required for this project by executing a Public Improvement Agreement (PIA) with the City and posting the required security. [MC 9.14.220]
123. All public improvement plans required for this project shall be approved by the City Engineer in order to execute the Public Improvement Agreement (PIA).
124. The developer shall comply with the requirements of the City Engineer based on recommendations of the Riverside County Flood Control District regarding the construction of County Master Plan Facilities.
125. All street dedications shall be free of all encumbrances, irrevocably offered to the public and shall continue in force until the City accepts or abandons such offers, unless otherwise approved by the City Engineer.

Prior to Improvement Plan Approval

126. The developer is required to bring any existing access ramps adjacent to and fronting the project to current ADA (Americans with Disabilities Act) requirements. However, when work is required in an intersection that involves or impacts existing access ramps, all access ramps in that intersection shall be retrofitted to comply with current ADA requirements, unless otherwise approved by the City Engineer.
127. The developer shall submit clearances from all applicable agencies, and pay all applicable plan check fees.
128. The street improvement plans shall comply with current City policies, plans and applicable City standards (i.e. MVSI-160 series, etc.) throughout this project.
129. The design plan and profile shall be based upon a centerline, extending beyond the project boundaries a minimum distance of 300 feet at a grade and alignment approved by the City Engineer.
130. Drainage facilities (i.e. catch basins, etc.) with sump conditions shall be designed to convey the tributary 100-year storm flows. Secondary emergency escape shall also be provided.
131. The hydrology study shall be designed to accept and properly convey all off-site drainage flowing onto or through the site. In the event that the City Engineer permits

**CONDITIONS OF APPROVAL**

(PEN20-0120)

Page 20

the use of streets for drainage purposes, the provisions of current City standards shall apply. Should the quantities exceed the street capacity or the use of streets be prohibited for drainage purposes, as in the case where one travel lane in each direction shall not be used for drainage conveyance for emergency vehicle access on streets classified as minor arterials and greater, the developer shall provide adequate facilities as approved by the City Engineer. [MC 9.14.110 A.2]

132. All public improvement plans (prepared by a licensed/registered civil engineer) shall be submitted for review and approved by the City Engineer per the current submittal requirements.
133. Any missing or deficient existing improvements along the project frontage within Alessandro Boulevard shall be constructed or secured for construction. The City Engineer may require the ultimate structural section for pavement to half-street width plus 18 feet or provide core test results confirming that the existing pavement section is per current City Standards; additional signing & striping to accommodate increased traffic imposed by the development, removal and replacement of improvements due to wear or damage from construction activity, or additional transitional improvements for the orderly development of public infrastructure..
134. Storm drain improvement plans for Sunnymead Broadiaea Avenue Storm Drain Line "A" Extension, from Alessandro Boulevard to the existing Line "A" located on APN 297-170-089, shall be submitted for review and approval by the City and RCFC&WCD. This storm drain has been identified as a future RCFC&WCD maintained facility as shown on Drawing No. 4-888, Sheet 8A (Preliminary Alignment Study) and referenced as Stage 3 of that certain Cooperative Agreement recorded on July 12, 2016 as Document No. 2016-0289060. This project will be required to satisfy all RCFC&WCD requirements for the acceptance and maintenance by RCFC&WCD including, but not limited to, the following:
- a. Enter into a Cooperative Agreement between the City, RCFC&WCD, and the developer;
  - b. Provide storm drain improvement plans of Stage 3 storm drain;
  - c. Provide security for the construction of storm drain improvements; and
  - d. Upon commencement of Stage 3 storm drain improvements and to the satisfaction of the City and RCFC&WCD, inspect, clean, repair, and maintain the existing portion of Line "A" (also referred to as Stage 2) from the current inlet at the northerly property line of APN 297-170-089 to the point of connection located within Broadiaea Avenue.

In the event that Stage 3 does not meet the requirements and satisfaction of RCFC&WCD to assume maintenance responsibility, the storm drain shall be privately owned and maintained by the property owner.

**CONDITIONS OF APPROVAL**

(PEN20-0120)

Page 21

135. For non-subdivision projects, all street dedications shall be free of encumbrances, irrevocably offered to the public and shall continue in force until the City accepts or abandons such offers, unless otherwise approved by the City Engineer.
136. The plans shall indicate any restrictions on trench repair pavement cuts to reflect the City's moratorium on disturbing newly-constructed pavement less than three (3) years old and recently slurry sealed streets less than one (1) year old. Pavement cuts may be allowed for emergency repairs or as specifically approved in writing by the City Engineer. Special requirements shall be imposed for repaving, limits to be determined by the City Engineer.
137. All dry and wet utilities shall be shown on the plans and any crossings shall be potholed to determine actual location and elevation. Any conflicts shall be identified and addressed on the plans. The pothole survey data shall be submitted to Land Development with the public improvement plans for reference purposes only. The developer is responsible to coordinate with all affected utility companies and bear all costs of any utility relocation.
138. Alessandro Boulevard, Major Divided Arterial, City Standard MVSI-101A (134-foot RW / 110-foot CC) shall be constructed to half-width plus an additional 18 feet north of the centerline, along the entire project's north frontage. At a minimum, the existing street shall receive a 1.5" grind and overlay (PG 64-16 ARHM-GG-C). Pavement core samples will be required to determine the extent of pavement rehabilitation of the existing pavement which may include the removal and replacement of the entire structural section. All 4-foot right-of-way dedications at the driveway approaches, per City Standard MVSI-112C-0, shall be shown on the parcel map. Improvements shall consist of, but not be limited to, pavement, base, curb, gutter, sidewalk, driveway approaches, removal and replacement of existing storm drain and catch basins, any necessary offsite improvement transition/joins to existing, streetlights, relocation of any power poles with electrical lines of 115,000 volts or greater to meet an 18 inch minimum distance from the face of curb to the face of pole, undergrounding of any power poles with overhead utility lines or electrical lines less than 115,000 volts, and dry and wet utilities.

Prior to Encroachment Permit

139. A digital (pdf) copy of all approved improvement plans shall be submitted to the Land Development Division.
140. All applicable inspection fees shall be paid.
141. For non-subdivision projects, execution of a Public Improvement Agreement (PIA) and/or security (in the form of a cash deposit or other approved means) may be required as determined by the City Engineer. [MC 9.14.220]

**CONDITIONS OF APPROVAL**

(PEN20-0120)

Page 22

142. The plans shall indicate any restrictions on trench repair pavement cuts to reflect the City's moratorium on disturbing newly-constructed pavement less than three (3) years old and recently slurry sealed streets less than one (1) year old. Pavement cuts may be allowed for emergency repairs or as specifically approved in writing by the City Engineer. Special requirements shall be imposed for repaving, limits to be determined by the City Engineer.
143. Any work performed within public right-of-way requires an encroachment permit.

Prior to Occupancy

144. All outstanding fees shall be paid.
145. All required as-built plans (prepared by a registered/licensed civil engineer) shall be submitted for review and approved by the City Engineer per the current submittal requirements.
146. The final/precise grade certification shall be submitted for review and approved by the City Engineer.
147. For commercial, industrial and multi-family projects, in compliance with Proposition 218, the developer shall agree to approve the City of Moreno Valley NPDES Regulatory Rate Schedule that is in place at the time of certificate of occupancy issuance. Under the current permit for storm water activities required as part of the National Pollutant Discharge Elimination System (NPDES) as mandated by the Federal Clean Water Act, this project is subject to the following requirements:
- a. Select one of the following options to meet the financial responsibility to provide storm water utilities services for the required continuous operation, maintenance, monitoring system evaluations and enhancements, remediation and/or replacement, all in accordance with Resolution No. 2002-46.
    - i. Participate in the mail ballot proceeding in compliance with Proposition 218, for the Common Interest, Commercial, Industrial and Quasi-Public Use NPDES Regulatory Rate Schedule and pay all associated costs with the ballot process; or
    - ii. Establish an endowment to cover future City costs as specified in the Common Interest, Commercial, Industrial and Quasi-Public Use NPDES Regulatory Rate Schedule.
  - b. Notify the Special Districts Division of the intent to request building permits 90 days prior to their issuance and the financial option selected. The financial option selected shall be in place prior to the issuance of certificate of occupancy. [California Government Code & Municipal Code]
148. The developer shall complete all public improvements in conformance with current

**CONDITIONS OF APPROVAL**

(PEN20-0120)

Page 23

City standards, except as noted in the Special Conditions, including but not limited to the following:

a. Street improvements including, but not limited to: pavement, base, curb and/or gutter, cross gutters, spandrel, sidewalks, drive approaches, pedestrian ramps, street lights (<MVU: SL-2 / SCE: LS-2>), signing, striping, under sidewalk drains, landscaping and irrigation, medians, pavement tapers/transitions and traffic control devices as appropriate.

b. Storm drain facilities including, but not limited to: storm drain pipe, storm drain laterals, open channels, catch basins and local depressions.

c. City-owned utilities.

d. Sewer and water systems including, but not limited to: sanitary sewer, potable water and recycled water.

e. Under grounding of all existing and proposed utilities adjacent to and on-site. [MC 9.14.130]

f. Relocation of overhead electrical utility lines including, but not limited to: electrical, cable and telephone.

149. All punch list work for off-site and on-site improvements shall be completed.
150. For commercial, industrial and multi-family projects, a Stormwater Treatment Device and Control Measure Access and Maintenance Covenant", "Maintenance Agreement for Water Quality Improvements located in the public right-of-way" and a "Declaration of Restrictive Covenants (encroachment on City easement)" shall be recorded to provide public notice of the maintenance requirements to be implemented per the approved final project-specific WQMP. A boilerplate copy of the covenants and agreements can be obtained by contacting the Land Development Division.
151. The applicant shall ensure the following, pursuant to Section XII. I. of the 2010 NPDES Permit:
- a. Field verification that structural Site Design, Source Control and Treatment Control BMPs are designed, constructed and functional in accordance with the approved Final Water Quality Management Plan (WQMP).
- b. Certification of best management practices (BMPs) from a state licensed civil engineer. An original WQMP BMP Certification shall be submitted for review and approved by the City Engineer.
152. The Developer shall comply with the following water quality related items:
- a. Notify the Land Development Division prior to construction and installation of all structural BMPs so that an inspection can be performed.
- b. Demonstrate that all structural BMPs described in the approved final project-specific WQMP have been constructed and installed in conformance with the approved plans and specifications;
- c. Demonstrate that Developer is prepared to implement all non-structural BMPs

**CONDITIONS OF APPROVAL**

(PEN20-0120)

Page 24

described in the approved final project-specific WQMP; and

d. Demonstrate that an adequate number of copies of the approved final project-specific WQMP are available for future owners/occupants.

e. Clean and repair the water quality BMP's, including re-grading to approved civil drawing if necessary.

f. Obtain approval and complete installation of the irrigation and landscaping.

Special Districts Division

153. This project is located within the boundary of Community Facilities District No. 4–Maintenance (CFD No. 4-M) and is subject to hydrology study determination based upon the final tentative parcel map. The project is conditioned to provide a funding source which will be used for maintenance of stormwater and detention basin improvements. The Developer shall satisfy the condition with one of the financing options outlined below.

a. In compliance with Proposition 218, the property owner shall agree to approve the special election for annexation into CFD No. 4-M and pay all associated costs with the special election process and formation costs, if any; or

b. Establish an endowment fund which shall be used to cover future maintenance costs for storm water and detention basin improvements benefiting this project.

The Developer must notify the Special Districts Division at 951.413.3480 or at [specialdistricts@moval.org](mailto:specialdistricts@moval.org) of its selected financing option when submitting the application for building permit issuance. The option for participating in a special election requires 90 days to complete the special election process. This allows adequate time to be in compliance with the provisions of Article 13C of the California Constitution.

The financial option selected shall be in place prior to the first issuance of certificate of occupancy for this project.

154. MAJOR INFRASTRUCTURE FINANCING DISTRICT. This project has been identified to potentially be included in the formation of a special financing district for the construction and maintenance of major infrastructure improvements which may include but are not limited to thoroughfares, bridges, and certain flood control improvements. The property owner(s) shall participate in such district and pay any special tax, assessment, or fee levied upon the project property for such district. At the time of the public hearing to consider formation of or annexation into the district, the qualified elector(s) will not protest the formation or annexation, but will retain the right to object to any eventual tax/assessment/fee that is not equitable should the financial burden of the tax/assessment/fee not be reasonably proportionate to the

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 25

benefit the affected property obtains from the improvements to be installed and/or maintained. The Developer must notify the Special Districts Division at 951.413.3480 or at [specialdistricts@moval.org](mailto:specialdistricts@moval.org) when submitting an application for the first building permit to determine whether the development will be subjected to this condition. If subject to the condition, the special election requires a minimum 90-day process in compliance with the provisions of Article 13C of the California Constitution.

155. The parcel(s) associated with this project have been incorporated into the Moreno Valley Community Services District Zone A (Parks & Community Services) and Zone C (Arterial Street Lighting). All assessable parcels therein shall be subject to annual parcel taxes for Zone A and Zone C for operations and capital improvements.
156. This project is conditioned to provide a funding source for the operation and maintenance of public improvements and/or services associated with new development in that territory. The Developer shall satisfy this condition with one of the options below.

a. Participate in a special election for maintenance/services and pay all associated costs of the election process and formation, if any. Financing may be structured through a Community Facilities District, Landscape and Lighting Maintenance District, or other financing structure as determined by the City; or

b. Establish an endowment fund to cover the future maintenance and/or service costs.

The Developer must notify the Special Districts Division at 951.413.3480 or at [specialdistricts@moval.org](mailto:specialdistricts@moval.org) of its selected financial option prior to City Council action authorizing recordation of the final map for the development. A minimum of 90 days is needed to complete the special election process. This allows adequate time to be in compliance with the provisions of Article 13C of the California Constitution for conducting a special election.

The financial option selected shall be in place prior to the issuance of the first building permit for the project.

157. This project is conditioned to provide a funding source for the following special financing program(s):

a. Landscape Maintenance Services for parkway, open space, and/or median landscaping on Alessandro Blvd.

The Developer's responsibility is to provide a funding source for the capital

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 26

improvements and the continued maintenance of the landscaped area. The Developer shall satisfy this condition with one of the options below.

i. Participate in a special election (mail ballot proceeding) and pay all associated costs of the special election and formation, if any. Financing may be structured through a Community Services District zone, Community Facilities District, Landscape and Lighting Maintenance District, or other financing structure as determined by the City; or

ii. Establish a Property Owner's Association (POA) or Home Owner's Association (HOA) which will be responsible for any and all operation and maintenance costs.

The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org of its selected financial option prior to City Council action authorizing recordation of the final map for the development. The option for participating in a special election requires approximately 90 days to complete the special election process. This allows adequate time to be in compliance with the provisions of Article 13C of the California Constitution for conducting a special election.

The financial option selected shall be in place prior to the issuance of the first building permit for this project.

158. Commercial (R) If Land Development, a Division of the Public Works Department, requires this project to supply a funding source necessary to provide for, but not limited to, stormwater utilities services for the continuous operation, remediation and/or replacement, maintenance, monitoring, systems evaluation and enhancements of on-site facilities and performing annual inspections of the affected areas to ensure compliance with state mandated stormwater regulations, a funding source needs to be established. The Developer must notify the Special Districts Division at 951.413.3480 or specialdistricts@moval.org of its selected financial option for the National Pollution Discharge Elimination System (NPDES) program (see Land Development's related condition) 90 days prior to City Council action authorizing recordation of the final map for the development and participate in a special election process. This allows adequate time to be in compliance with the provisions of Article 13D of the California Constitution. (California Health and Safety Code Sections 5473 through 5473.8 (Ord. 708 Section 3.1, 2006) & City of Moreno Valley Municipal Code Title 3, Section 3.50.050.)
159. This project has been identified to be included in the formation of a Community Facilities District for Public Safety services including but not limited to Police, Fire Protection, Paramedic Services, Park Rangers, and Animal Control services. The property owner(s) shall not protest the formation; however, they retain the right to

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 &amp; PEN20-0124)

Page 27

object to the rate and method of maximum special tax. In compliance with Proposition 218, the property owner shall agree to approve the mail ballot proceeding (special election) for either formation of the CFD or annexation into an existing district that may already be established. The Developer must notify the Special Districts Division at 951.413.3480 or specialdistricts@moval.org of its intent to record the final map for the development 90 days prior to City Council action authorizing recordation of the map. This allows adequate time to be in compliance with the provisions of Article 13C of the California Constitution. (California Government Code Section 53313 et. seq.)

160. The existing parkway/median along the frontage of the project shall be brought to current City Standards. Improvements may include but are not limited to: plant material, irrigation, and hardscape.
161. The ongoing maintenance of any landscaping required to be installed behind the curb shall be the responsibility of the property owner.
162. Any damage to existing landscape areas maintained by the City of Moreno Valley due to project construction shall be repaired/replaced by the Developer, or Developer's successors in interest, at no cost to the City of Moreno Valley.
163. **PARKS MAINTENANCE FUNDING.** Prior to applying for the 1st Building Permit, the qualified elector (e.g. property owner) must initiate the process (i.e. pay the annexation fee or fund an endowment) to provide an ongoing funding source for the continued maintenance, enhancement, and or retrofit of parks, open spaces, linear parks, and/or trails systems, and programs.
- This condition must be fully satisfied prior to issuance of the 1st Certificate of Occupancy. This condition will be satisfied with the successful annexation/formation (i.e. special election process) into a special financing district and payment of all costs associated with the special election process. Annexation into a special financing district requires an annual payment of the annual special tax, assessment, or fee levied against the property tax bill, or other lawful means, of the parcels of the project for such district. At the time of the public hearing to consider annexation into or formation of the district, the qualified elector(s) will not protest the annexation or formation, but will retain the right to object to any eventual tax/assessment/fee that is not equitable should the financial burden of the tax/assessment/fee not be reasonably proportionate to the benefit the affected property receives from the improvements to be installed and/or maintained or services provided. The special election requires a minimum 90-day process in compliance with the provisions of Article 13C of the California Constitution, Proposition 218, or other applicable legislation, and consistent with the scheduling for City Council meetings.
- Alternatively, the condition can be satisfied by the Developer funding an endowment in an amount sufficient to yield an annual revenue stream that meets the annual obligation. The Developer must contact Special Districts Administration at

**CONDITIONS OF APPROVAL**

Page 28

951.413.3470 or at SAdmin@moval.org to satisfy this condition.

Transportation Engineering Division

164. Conditions of approval may be modified or added if a phasing plan is submitted for this development.
165. All proposed on-site traffic signing and striping should be accordance with the latest California Manual on Uniform Traffic Control Devices (CAMUTCD).
166. Sight distance at the proposed roadways and driveways shall conform to City of Moreno Valley Standard No. MVSI-164A,B,C-0 at the time of preparation of final grading, landscape, and street improvement plans.
167. Communication conduit along Alessandro Boulevard shall be required per City Standard No. MVSI-186-0. Any improvements undertaken by this project shall be consistent with the City standards for this facility.
168. Alessandro Boulevard is designated as a 6-Lane Divided Arterial (134' RW/110'CC) per City Standard Plan No. MVSI-101A and shall be improved to its ultimate half-width plus 23' with median and necessary transition improvements. The existing eastbound left turn pocket at the intersection of Graham Street and Alessandro Boulevard shall be modified to provide 250 feet of vehicle storage. A Class II Bikeway shall be provided along project frontage.
169. Prior to issuance of an encroachment permit, construction traffic control plans shall be prepared by a qualified, registered Civil or Traffic engineer and submitted for plan approval.
170. Prior to final approval of any landscaping or monument sign plans, the project plans shall demonstrate that sight distance at the project driveways conforms to City Standard Plan No. MVSI-164A, B, C-0.
171. Prior to the final approval of the street improvement plans, a signing and striping plan shall be prepared per City of Moreno Valley Standard Plans - Section 4 for Alessandro Boulevard.
172. Prior to issuance of a Building Final or Certificate of Occupancy, all approved signing and striping shall be installed per current City Standards
173. All project driveways shall conform to Section 9.11.080, and Table 9.11.080-14 of the City's Development Code – Design Guidelines and City of Moreno Valley Standard Plans No. MVSI-112C-0 for commercial driveway approaches. Access at all driveways shall be right-in and right-out access only.

**CONDITIONS OF APPROVAL**

(PEN20-0120, PEN20-0121 & PEN20-0124)

Page 29

174. Prior to final approval of the street improvement plans, a median modification plan shall be required to modify the existing raised, landscaped median on Alessandro Boulevard, west of Graham Street. The median shall be designed per current City Standards to extend the eastbound left-turn storage length to 250 feet at the Alessandro Boulevard/Graham Street intersection.
175. During construction activity, developer is responsible for regularly scheduled street sweeping per approved street sweeping schedule. Failure to provide regularly scheduled street sweeping during construction activity at the approved times shall result in re-inspection fees (amounts to be determined by City Engineer) and/or project suspension until street sweeping is provided.

# NOTICE OF PUBLIC HEARING

F.1.ab

**PROPOSAL:** Applicant is requesting approval of the following entitlements for the Compass Danbe Centerpointe project: 1) a General Plan Amendment (GPA) amending the City's General Plan from Commercial to Business Park, 2); a Change of Zone from Community Commercial District (CC) to Light Industrial District (LI); 3) a Plot Plan for an approximately 290,726 square foot light industrial building; and, 4) a Plot Plan for a 98,877 square foot light industrial building located on a 17.67 acre site.

**ENVIRONMENTAL DETERMINATION:** The project has been evaluated against the criteria set forth in the California Environmental Quality Act (CEQA) and CEQA Guidelines and staff has determined that a Mitigated Negative Declaration is the appropriate environmental document for the proposed project.

The Draft Initial Study/Mitigated Negative Declaration was circulated for public review by responsible and trustee agencies and other interested parties for a review period commencing July 26, 2021 through August 25, 2021. The documents can be obtained in electronic format via email by request. The final document may be inspected by appointment at the Community Development Department at 14177 Frederick Street, Moreno Valley, California by calling (951) 413-3206 during normal business hours (7:30 a.m. to 5:30 p.m., Monday through Thursday, 7:30 a.m. to 4:30 p.m., Friday).

**PUBLIC HEARING:** All interested parties will be provided an opportunity to submit oral testimony during the Public Hearing and/or provide written testimony during or prior to the Public Hearing. The application file and related environmental documents may be inspected at the Community Development Department at 14177 Frederick Street, Moreno Valley, California during normal business hours (7:30 a.m. to 5:30 p.m., Monday through Thursday, and 7:30 a.m. to 4:30 p.m. Friday).

**PLEASE NOTE:** The City Council may consider and approve changes to the proposed items under consideration during the Public Hearing.

**GOVERNMENT CODE § 65009 NOTICE:** If you challenge any of the proposed actions taken by the City Council in court, you may be limited to raising only those issues you or someone else raised during the Public Hearing described in this notice, or in written correspondence delivered to the Planning Division of the City of Moreno Valley during or prior to, the Public Hearing.

*Upon request and in compliance with the Americans with Disabilities Act of 1990, any person with a disability who requires a modification or accommodation in order to participate in a meeting should direct such request to James Verdugo, ADA Coordinator, at 951.413.3350 at least 48 hours before the meeting. The 48-hour notification will enable the City to make reasonable arrangements to ensure accessibility to this meeting.*

## PLANNING COMMISSION

### STAFF REPORT

Meeting Date: August 26, 2021

PROPOSED GENERAL PLAN AMENDMENT AND CHANGE OF ZONE AMENDING "MAP LCC-4: GENERAL PLAN LAND USE" OF THE MORENO VALLEY GENERAL PLAN AND THE CITY ZONING ATLAS, RESPECTIVELY, PROPOSED TENTATIVE PARCEL MAP 37944 FOR TWO (2) LOTS, A PLOT PLAN FOR AN APPROXIMATELY 290,726 SQUARE FOOT LIGHT INDUSTRIAL BUILDING, AND A PLOT PLAN FOR AN APPROXIMATELY 98,877 SQUARE FOOT LIGHT INDUSTRIAL BUILDING

Case: PEN20-0118 General Plan Amendment  
 PEN20-0119 Change of Zone  
 PEN20-0120 Tentative Parcel Map 37944  
 PEN20-0121 Plot Plan  
 PEN20-0124 Plot Plan

Applicant: CDRE Holdings 17 LLC, Mark Bachli

Property Owner: Moreno Valley Centerpoint LLC

Representative: MIG, Inc., Pamela Steele

Location: South side of Alessandro Boulevard between Frederick Street and Graham Street (297-170-002 and 003)

Case Planner: Julia Descoteaux

Council District: 1

Proposal: The applicant requests approval of the following entitlements for a 17.67 acre site: 1) General Plan Amendment (GPA) amending "Map LCC-4: General Plan Land Use Map of the Moreno Valley General Plan to change the land use designation of the Project Site from Commercial (C) to Business Park (BP); 2)

Change of Zone amending the City of Moreno Valley Zoning Atlas to rezone the Project Site from Community Commercial District (CC) to Light Industrial District (LI); 3) Tentative Parcel Map 37944 for two (2) lots; 4) Plot Plan for an approximately 290,729 square foot light industrial building; and 5) Plot Plan for an approximately 98,877 square foot light industrial building with associated public improvements.

## **SUMMARY**

CDRE Holdings 17, LLC (“Applicant”) is requesting approval of the following: a General Plan Amendment (PEN20-0118) to amend the General Plan land use designation from Commercial (C) to Business Park (BP), a Change of Zone (PEN20-0119) to amend the Zoning Atlas from Community Commercial District (CC) to Light Industrial District (LI), a Tentative Parcel Map (PEN20-0120) for two parcels, a Plot Plan (PEN20-0121) for a 290,726 square foot light industrial building and a Plot Plan (PEN20-0124), a Plot Plan for a 98,877 square foot light industrial building located on the south side of Alessandro Boulevard between Frederick Street and Graham Street, Assessor Parcel Nos. 297-170-002 and 003.

## **PROJECT DESCRIPTION**

### **General Plan Amendment**

The City of Moreno Valley General Plan Land Use Map designates the Project Site, as described in the Summary above, as Commercial (C) and the proposal would change this land use designation to Business Park (BP).

The primary purpose of areas designated Commercial (C) is to provide property for business purposes, including, but not limited to, retail stores, restaurants, banks, hotels, professional offices, personal services and repair services. The primary purpose of the Business Park (BP) is to provide for manufacturing, research and development, warehousing and distribution, as well as office and support for commercial activities. While the purpose of the two land use designations are different, the proposed General Plan Amendment will be consistent with adjacent parcels to the south and east, and would result in a total increase of approximately 17.67-acres of the Business Park (BP) land use designation and a corresponding reduction of approximately 17.67-acres of the Commercial (C) land use designation.

### **Change of Zone**

The Project site is currently zoned Community Commercial District (CC), and the proposal would rezone it to Light Industrial District (LI).

The primary purpose of the Community Commercial District (CC) is to provide for the general shopping needs of area residents and workers with a variety of business, retail, personal and related or similar services.

The primary purpose of the Light Industrial District (LI) is to provide light manufacturing, light industrial, research and development, warehousing and distribution and multitenant industrial uses, as well as certain supporting administrative and professional offices and commercial on a limited basis. While the purpose of the two zoning designations are different the proposed Change of Zone will be consistent with adjacent parcels to the south.

### Tentative Parcel Map

The Applicant is proposing a Tentative Parcel Map 37944 to relocate the existing property line to provide separate parcels for Building 1 and Building 2. Staff has reviewed the proposed Tentative Parcel Map and confirmed that the proposed lots comply with the City's development standards.

### Plot Plan

The Applicant is proposing the construction of two light industrial buildings, one approximately 290,726 square feet in size and one approximately 98,877 square feet in size ("Project") with associated parking, landscape improvements and off-site public improvements.

The current proposal anticipates both buildings will be constructed in conjunction with each other. However, should one building be delayed, all on-site and off-site improvements shall be constructed with the first building, prior to building final. Conditions have been included to address the improvements and the maintenance of an unconstructed parcel should this situation arise.

### Site/ Surrounding Area

The approximately 17.67-acre site is located on the south side of Alessandro Boulevard between Frederick Street and Graham Street in the center of the block.

The surrounding area includes existing Neighborhood Commercial District (NC), Residential 20 District (R20), and Residential 5 District (R5) to the north across Alessandro Boulevard. The property to the west is vacant land zoned Community Commercial District (CC), to the south are developed with industrial buildings within Light Industrial District (LI), and to the east are vacant land within the Business Park-Mixed Use District (BPX) and Community Commercial District (CC).

### Access/Parking

Access to the Project site will be from three new driveways on Alessandro Boulevard. All driveways will be right-in right-out only, with two driveways designed to accommodate truck traffic.

Parking for both automobiles and trucks exceed the Municipal Code requirements. Overall, a total of 217 parking spaces are provided for both buildings which include standard automobile, ADA, EV, EVCS and Clean Air spaces, as well as, 44-truck space in the truck court areas. Bicycle parking is also included in the site design as required.

### **Design/Landscaping**

The proposed light industrial type buildings incorporate a contemporary architectural design. Dark bronze metal tower elements at the building corners provide a focal point with textured concrete sections, glass, tile and various awning types, bringing an office aesthetic to the buildings. The elements are included on the side elevations for continuity of the buildings. The colors of off-white, taupe and warm grey provide the background for the dark bronze metal tower and brown metal window treatments, which include flat awnings above the pained windows and elongated awnings at intervals, which break up the massing of the buildings.

Extensive landscaping is provided along the building frontage in addition to the required front set back and right of way landscaping which includes plant, ground covers, street trees and on-site trees.

### **REVIEW PROCESS**

The Project has been considered by all appropriate agencies within and outside of the City, consistent with the standard review process required for these types of development applications. The Project was reviewed by the Project Review Staff Committee as required by the Municipal Code. Following subsequent revisions and review by various staff, the Project's entitlement package was deemed complete for processing for Planning Commission review and consideration, and staff is recommending the Planning Commission recommend to the City Council approval of the Project as designed and conditioned.

### **ENVIRONMENTAL**

An Initial Study was prepared by T&B Planning, Inc., in compliance with the California Environmental Quality Act (CEQA) and the CEQA Guidelines. The Initial Study examined the potential Project impacts on the environment. The Initial Study/Mitigation Negative Declaration (IS/MND) provides information in support of the finding that a Mitigated Negative Declaration serves as the appropriate CEQA documentation for the proposed Project in that the proposed Project, with the implementation of the proposed mitigation measures, will not have a significant effect on the environment. Technical studies prepared in support of the IS/MND include the following: Air Quality Impact Analysis, Mobile Source Health Risk Assessment, MSHCP General Biological Resources Assessment & Compliance Analysis, Jurisdictional Delineation Report and Impact Analysis, MSHCP Determination of Biologically Equivalent or Superior Preservation, Burrowing Owl Focused Survey Report, Least Bell's Vireo Focused Survey Report, Phase I Cultural Resources Survey, Energy Analysis, Geotechnical

Engineering Investigation, Greenhouse Gas Analysis, Phase I Environmental Site Assessment Report, Paleontological Assessment, Preliminary Water Quality Management Plan, Preliminary Drainage Study, Noise Impact Analysis, Traffic Analysis, and Vehicle Miles Traveled (VMT) Analysis. The electronic files for the IS/MND with appendices are attached to this staff report. Anyone wishing to view the documents can also do so at City Hall.

Mitigation Measures are recommended for the proposed Project in the following areas: Biological Resources, Geology and Soils, and Tribal Cultural Resources. The measures for Tribal resources have been included to address input from the Tribal governments. The measures are intended to ensure that potential resources that might be discovered are protected. However, these measures are not required to address a known significant impact. Based on the Initial Study, and the proposed mitigation measures, the Project will not cause any significant impacts or environmental damage.

The public comment period for the Notice of Availability for the Initial Study/Mitigated Negative Declaration began on July 26, 2021, and ends on August 25, 2021, which satisfies the required 30-day, review period. As of the preparation of this staff report, no comments have been received. Should comments regarding the Project be received prior to the Planning Commission they will be provided at the public hearing.

### **NOTIFICATION**

Notice of the public hearing was sent to all property owners of record within 600 feet of the Project Site. The public hearing notice was also posted on the Project Site and published in the Press Enterprise newspaper.

### **REVIEW AGENCY COMMENTS**

Staff has coordinated with outside trustee and responsible agencies where applicable, as is the standard review process with these types of development applications.

### **STAFF RECOMMENDATION**

Staff recommends that the Planning Commission take the following actions:

- A. That the Planning Commission **ADOPT** Resolution No. 2021-24, attached hereto, **RECOMMENDING** that the City Council:
  1. **APPROVE** the Initial Study/Mitigated Negative Declaration prepared for General Plan Amendment PEN20-0118, Change of Zone PEN20-0119, Tentative Parcel Map 37944 PEN20-0120 and Plot Plans PEN20-0121 and PEN20-0124 on file with the Community Development Department, incorporated herein by this reference, and any necessary and corresponding amendment to the City's Zoning Atlas to reflect the proposed changes in the zoning classification and/or redistricting associated with the General Plan Amendment and Change of Zone, which was completed in compliance with CEQA and the CEQA Guidelines, and

reflects that the Planning Commission reviewed and considered the information contained in the Initial Study/Mitigated Negative Declaration, and exercised its independent judgment and analysis of the proposed Project's potential environmental impacts; and

- 2. **ADOPT** the Mitigation Monitoring and Reporting Program prepared for the Project, which consists of General Plan Amendment PEN20-0118, Change of Zone PEN20-0119, Tentative Parcel Map 37944 PEN20-0120, and Plot Plans PEN20-0121 and PEN20-0124 and any necessary and corresponding amendment to the City's Zoning Atlas to reflect the proposed changes in the zoning classification and/or redistricting associated with the General Plan Amendment and Change of Zone pursuant to CEQA and the CEQA Guidelines.

B. That the Planning Commission **ADOPT** Resolution No. 2021-25 attached hereto, **RECOMMENDING** that the City Council:

- 1. **APPROVE** PEN20-0118 General Plan Amendment based on the Recitals, Evidence contained in the Administrative Record and Findings set forth in Resolution No. 2021-25 and any necessary and corresponding amendment to the City's Zoning Atlas to reflect the proposed changes in the zoning classification and/or redistricting associated with the General Plan Amendment.

C. That the Planning Commission **ADOPT** Resolution No. 2021-26, attached hereto, **RECOMMENDING** that the City Council:

- 1. **APPROVE** PEN20-0119 Change of Zone based on the Recitals, Evidence contained in the Administrative Record and Findings as set forth in Resolution No. 2021-26 and any necessary and corresponding amendment to the City's Zoning Atlas to reflect the proposed change in the zoning classification and/or redistricting associated with the Change of Zone.

D. That the Planning Commission **ADOPT** Resolution No. 2021-27, attached hereto, **RECOMMENDING** that the City Council:

- 1. **APPROVE** Tentative Parcel Map PEN21-0120 based on the Recitals, Evidence contained in the Administrative Records and Findings as set forth in Resolution No. 2021-27.

E. That the Planning Commission **ADOPT** Resolution No. 2021-28, attached hereto, **RECOMMENDING** that the City Council:

- 1. **APPROVE** Plot Plans PEN20-0121 and PEN20-0124 based on the Recitals, Evidence contained in the Administrative Records and Findings as set forth in Resolution No. 2021-28.

**RESOLUTION NUMBER 2021-24**

**A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF MORENO VALLEY, CALIFORNIA, RECOMMENDING THAT THE CITY COUNCIL ADOPT A MITIGATED NEGATIVE DECLARATION AND MITIGATION MONITORING AND REPORTING PROGRAM FOR THE COMPASS DANBE CENTERPOINTE PROJECT LOCATED ON THE SOUTH SIDE OF ALESSANDRO BOULEVARD BETWEEN FREDERICK STREET AND GRAHAM STREET (APN'S 297-170-002 AND 003)**

**WHEREAS**, the City of Moreno Valley (“City”) is a general law city and a municipal corporation of the State of California, and the lead agency for the preparation and consideration of environmental documents for local projects that are subject to requirements of the California Environmental Quality Act (CEQA) and CEQA Guidelines; and

**WHEREAS**, CDRE Holdings, LLC., (“Developer”) is seeking approval for the development of the Compass Danbe Centerpointe project, a two building light industrial complex on a 17.67-acre site that includes: 1) a General Plan Amendment (GPA) (PEN20-0118) amending the “Land Use Map” (Map LCC-4) of the Moreno Valley General Plan to change the land use designation of the Project site from Commercial to Business Park; 2) a Change of Zone (PEN20-0119) to change the zoning designation of the site from Community Commercial District (CC) to Light Industrial District (LI); 3) a Tentative Parcel Map (PEN20-0120) for two lots; 4) a Plot Plan (PEN20-0121) for an approximately 290,726 square foot light industrial building; 5) a Plot Plan (PEN21-0124) for an approximately 98,877 square foot light industrial building with associated public improvements located on the south side of Alessandro Boulevard between Frederick Street and Graham Street (APN'S 297-170-002-003); and

**WHEREAS**, the proposed “Project” shall include not only the General Plan Amendment (GPA) (PEN20-0118), Change of Zone (PEN20-0119), Tentative Parcel Map (PEN20-0120), and two Plot Plans (PEN20-0121 and PEN20-0124), but also a corresponding amendment to the City’s Zoning Atlas to reflect the proposed changes in the zoning classification and/or redistricting associated with the General Plan Amendment; and

**WHEREAS**, Planning Division Staff completed an environmental assessment for the proposed Project, and, based on the assessment, decided to prepare an Initial Study (“IS”) and a Mitigated Negative Declaration (“MND”) in accordance with Section 6 (ND Procedures) of the City’s Rules and Procedures for the Implementation of the California Environmental Quality Act and the requirements of the CEQA Guidelines Sections 15070 – 15075; and

**WHEREAS**, a Notice of Intent to Adopt a Mitigated Negative Declaration was duly noticed and circulated for public review for a period of 30 days commencing on July 26, 2021, through August 25, 2021; and

Attachment: Planning Commission Staff Report and Resolutions (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

**WHEREAS**, in conformance with CEQA and the CEQA Guidelines, a Mitigation Monitoring and Reporting Program (“MMRP”) that includes a program for reporting on and monitoring Project mitigation measures was prepared for the proposed Project and noticed with the Mitigated Negative Declaration; and

**WHEREAS**, on August 26, 2021, a hearing was conducted by the Planning Commission to consider a recommendation that the City Council approve the Mitigated Negative Declaration and the Mitigation Monitoring and Reporting Program and approve the proposed Project; and

**WHEREAS**, at the conclusion of the public hearing, in the exercise of its own independent judgment, the Planning Commission recommends that the City Council determine that the Mitigated Negative Declaration and the Mitigation Monitoring and Reporting Program will reduce the environmental impacts of the Project to levels of insignificance and that there is no substantial evidence supporting a fair argument that the Project will have a significant effect on the environment.

**NOW, THEREFORE, THE PLANNING COMMISSION OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:**

**Section 1. Recitals and Exhibits**

That the foregoing Recitals and attached exhibits are true and correct and are hereby incorporated by this reference.

**Section 2. Evidence**

That the Planning Commission has considered all the evidence submitted into the Administrative Record for the Mitigated Negative Declaration and Mitigation Monitoring Plan, including, but not limited to, the following:

- (a) Mitigated Negative Declaration/Initial Study prepared for the proposed Project, attached hereto as Exhibit A;
- (b) Notice of Intent to Adopt a Mitigated Negative Declaration/Newspaper Notice, attached hereto as Exhibit B;
- (c) Mitigation Monitoring and Reporting Program, attached hereto as Exhibit C;
- (d) Staff Report prepared for the Planning Commission’s consideration and all documents, records and references related thereto, and Staff’s presentation at the public hearing; and
- (e) Testimony, comments and correspondence from all persons that were provided at, or prior to, the public hearing.

**Section 3. Findings**

That based on the content of the foregoing Recitals and the Evidence contained in the Administrative Record as set forth above, the Planning Commission makes the following findings:

Attachment: Planning Commission Staff Report and Resolutions (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

- (a) That the City has independently reviewed, analyzed, and considered the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program, and the whole record before it, including, the Initial Study and comments received;
- (b) That the proposed mitigation measures will reduce all environmental impacts of the proposed Project to levels of insignificance and there is no substantial evidence supporting a fair argument that the Project will have a significant effect on the environment;
- (c) That the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program have been completed in compliance with CEQA and the CEQA Guidelines consistent the City's Rules and Procedures for the Implementation of the California Environmental Quality Act.
- (d) That the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program reflect the independent judgment and analysis of the City as lead agency for the proposed Project; and
- (e) That the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program are adequate to serve as the required CEQA environmental documentation for the proposed Project.

**Section 4. Adoption**

That based on the foregoing Recitals, Evidence contained in the Administrative Record and Findings, as set forth herein, the Planning Commission hereby recommends that the City Council adopt the Mitigated Negative Declaration/Initial Study attached hereto as Exhibit A and the Mitigation Monitoring and Reporting Program attached hereto as Exhibit C.

**Section 5. Repeal of Conflicting Provisions**

That all the provisions as heretofore adopted by the Planning Commission that are in conflict with the provisions of this Resolution are hereby repealed.

**Section 6. Severability**

That the Planning Commission declares that, should any provision, section, paragraph, sentence or word of this Resolution be rendered or declared invalid by any final court action in a court of competent jurisdiction or by reason of any preemptive legislation, the remaining provisions, sections, paragraphs, sentences or words of this Resolution as hereby adopted shall remain in full force and effect.

**Section 7. Effective Date**

That this Resolution shall take effect immediately upon the date of adoption.

**Section 8. Certification**

That the Secretary of the Planning Commission shall certify to the passage of this Resolution.

**RESOLUTION NUMBER 2021-25**

**A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF MORENO VALLEY, CALIFORNIA, RECOMMENDING THAT THE CITY COUNCIL APPROVE GENERAL PLAN AMENDMENT PEN20-0118 TO AMEND THE GENERAL PLAN LAND USE MAP, CHANGING THE LAND USE DESIGNATION FROM COMMERCIAL TO BUSINESS PARK FOR THE PROPERTY LOCATED ON THE SOUTH SIDE OF ALESSANDRO BOULEVARD BETWEEN FREDERICK STREET AND GRAHAM STREET (APN'S 297-170-002 AND 003) AND THE NECESSARY AND CORRESPONDING AMENDMENTS TO THE CITY'S ZONING ATLAS**

**WHEREAS**, the City of Moreno Valley ("City") is a general law city and a municipal corporation of the State of California, and has the authority to approve amendments to the City's General Plan and the City's Zoning Atlas; and

**WHEREAS**, CDRE Holdings LLC., ("Developer") has filed an application for the approval of General Plan Amendment PEN20-0118 ("Application") to amend the Moreno Valley General Plan from Commercial to Business Park for the project located on the south side of Alessandro Boulevard between Frederick Street and Graham Street, (APN's 297-170-002 and 003) ("Site"), which shall also require any necessary and corresponding amendment to the City's Zoning Atlas to reflect the proposed changes in the zoning classification and/or redistricting associated with the General Plan Amendment; and

**WHEREAS**, pursuant to the provisions of Section 9.02.200 (Public Hearing and Notification Procedures) of the Moreno Valley Municipal Code and Government Code section 65905, a public hearing was scheduled for August 26, 2021, and notice thereof was duly published and posted, and mailed to all property owners of record within 600 feet of the Site; and

**WHEREAS**, on August 26, 2021, the public hearing to consider the Application was duly conducted by the Planning Commission at which time all interested persons were provided with an opportunity to testify and to present evidence; and

**WHEREAS**, on August 26, 2021, in accordance with the provisions of the California Environmental Quality Act (CEQA<sup>1</sup>) and CEQA Guidelines,<sup>2</sup> the Planning Commission considered and recommended that the City Council approve Resolution 2021-24 recommending that the City Council adopt a Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program for the Compass Danbe Centerpointe Project located on the south side of Alessandro Boulevard between Frederick Street and Graham Street (APN's 297-170-002 and, 003).

<sup>1</sup> Public Resources Code §§ 21000-21177

<sup>2</sup> 14 California Code of Regulations §§15000-15387

**NOW, THEREFORE, THE PLANNING COMMISSION OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:**

**Section 1. Recitals and Exhibits**

That the foregoing Recitals and attached exhibits are true and correct and are hereby incorporated by this reference.

**Section 2. Notice**

That pursuant to Government Code section 66020(d)(1), notice is hereby given that the proposed Project is subject to certain fees, dedications, reservations and other exactions as provided herein.

**Section 3. Evidence**

That the Planning Commission has considered all of the evidence submitted into the administrative record for the General Plan Amendment, including, but not limited to, the following:

- (a) Moreno Valley General Plan and all relevant provisions contained therein;
- (b) Title 9 (Planning and Zoning) of the Moreno Valley Municipal Code and all relevant provisions referenced therein;
- (c) The Moreno Valley General Plan amendment changing the land use designation from Commercial to Business Park and all relevant provisions contained therein as shown on Exhibit A;
- (d) Application for the approval of a General Plan Amendment PEN20-0118 and all documents, records and references contained therein;
- (e) Staff Report prepared for the Planning Commission’s consideration and all documents, records and references related thereto, and Staff’s presentation at the public hearing;
- (f) Testimony and/or comments from Applicant and its representatives during the public hearing; and
- (g) Testimony, comments and correspondence from all persons that were provided in written format or correspondence, at, or prior to, the public hearing.

**Section 4. Findings**

That based on the foregoing Recitals and the Evidence contained in the Administrative Record as set forth above, the Planning Commission makes the following findings:

- (a) The proposed General Plan amendment is consistent with the existing goals, objectives, policies and programs of the General Plan; and
- (b) The proposed General Plan amendment will not adversely affect the public health, safety or general welfare.

Attachment: Planning Commission Staff Report and Resolutions (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

**Section 5. Approval**

That based on the foregoing Recitals, Evidence contained in the Administrative Record and Findings, as set forth herein, the Planning Commission hereby recommends that the City Council approve General Plan Amendment PEN20-0118 as depicted in the exhibit attached hereto as Exhibit A, and any necessary and corresponding amendment to the City's Zoning Atlas to reflect the proposed changes in the zoning classification and/or redistricting associated with the General Plan Amendment.

**Section 6. Repeal of Conflicting Provisions**

That all the provisions as heretofore adopted by the Planning Commission that are in conflict with the provisions of this Resolution are hereby repealed.

**Section 7. Severability**

That the Planning Commission declares that, should any provision, section, paragraph, sentence or word of this Resolution be rendered or declared invalid by any final court action in a court of competent jurisdiction or by reason of any preemptive legislation, the remaining provisions, sections, paragraphs, sentences or words of this Resolution as hereby adopted shall remain in full force and effect.

**Section 8. Effective Date**

That this Resolution shall take effect immediately upon the date of adoption.

**Section 9. Certification**

That the Secretary of the Planning Commission shall certify to the passage of this Resolution.

**RESOLUTION NUMBER 2021-26**

**A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF MORENO VALLEY, CALIFORNIA, RECOMMENDING THAT THE CITY COUNCIL APPROVE CHANGE OF ZONE PEN20-0119 TO AMEND THE CITY ZONING ATLAS FROM COMMUNITY COMMERCIAL DISTRICT (CC) TO LIGHT INDUSTRIAL DISTRICT (LI), FOR THE PROPERTY LOCATED ON THE SOUTH SIDE OF ALESSANDRO BOULEVARD BETWEEN FREDERICK STREET AND GRAHAM STREET (APN'S 297-170-002 AND 003)**

**WHEREAS**, the City of Moreno Valley ("City") is a general law city and a municipal corporation of the State of California, and the lead agency for the preparation and consideration of environmental documents for local projects that are subject to requirements of the California Environmental Quality Act (CEQA) and CEQA Guidelines; and

**WHEREAS**, CDRE Holdings LLC., ("Developer") has filed an application for the approval of Change of Zone PEN20-0119 ("Application") a request to amend the City's Zoning Atlas from Community Commercial District (CC) to Light Industrial District (LI) for the property located on the south side of Alessandro Boulevard between Frederick Street and Graham Street (APN's 297-170-002 and 003) ("Site"); and

**WHEREAS**, pursuant to the provisions of Section 9.02.200 (Public Hearing and Notification Procedures) of the Moreno Valley Municipal Code and Government Code section 65905, a public hearing was scheduled for August 26, 2021, and notice thereof was duly published and posted, and mailed to all property owners of record within 600 feet of the Site; and

**WHEREAS**, on August 26, 2021, the public hearing to consider the Application was duly conducted by the Planning Commission at which time all interested persons were provided with an opportunity to testify and to present evidence; and

**WHEREAS**, on August 26, 2021, in accordance with the provisions of the California Environmental Quality Act (CEQA) and CEQA Guidelines, the Planning Commission considered and recommended that the City Council approve Resolution 2021-24 recommending that the City Council adopt a Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program for the Compass Danbe Centerpointe Project located on the south side of Alessandro Boulevard between Frederick Street and Graham Street (APN's 297-170-002 and 003).

**NOW, THEREFORE, THE PLANNING COMMISSION OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:**

**Section 1. Recitals and Exhibits**

That the foregoing Recitals and attached exhibits are true and correct and are hereby incorporated by this reference.

**Section 2. Notice**

That pursuant to Government Code section 66020(d)(1), notice is hereby given that the proposed project is subject to certain fees, dedications, reservations and other exactions as provided herein.

**Section 3. Evidence**

That the Planning Commission has considered all of the evidence submitted into the administrative record for the General Plan Amendment, including, but not limited to, the following:

- (a) Moreno Valley General Plan and all other relevant provisions contained therein;
- (b) Title 9 (Planning and Zoning) of the Moreno Valley Municipal Code and all other relevant provisions referenced therein;
- (c) The Change of Zone to amend the City’s Zoning Atlas from Community Commercial District (CC) to Light Industrial District (LI) and all other relevant provisions contained therein as shown on Exhibit A;
- (d) Application for the approval of a Change of Zone PEN20-0119 and all documents, records and references contained therein;
- (e) Staff Report prepared for the Planning Commission’s consideration and all documents, records and references related thereto, and Staff’s presentation at the public hearing;
- (f) Testimony and/or comments from Applicant and its representatives during the public hearing; and
- (g) Testimony and/or comments from all persons that was provided in written format or correspondence, at, or prior to, the public hearing.

**Section 4. Findings**

That based on the foregoing Recitals and the Evidence contained in the Administrative Record as set forth above, the Planning Commission hereby finds as follows:

- (a) The proposed Change of Zone is consistent with the existing goals, objectives, policies and programs of the General Plan;
- (b) The proposed Change of Zone will not adversely affect the public health, safety or general welfare; and
- (c) The proposed Change of Zone is consistent with the purposes and intent of Title 9.

**Section 5. Approval**

That based on the foregoing Recitals, Evidence in the Administrative Record and Findings, the Planning Commission hereby recommends that the City Council approve Change of Zone PEN20-0119 attached hereto as Exhibit A.

**Section 6. Repeal of Conflicting Provisions**

That all the provisions as heretofore adopted by the Planning Commission that are in conflict with the provisions of this Resolution are hereby repealed.

**Section 7. Severability**

That the Planning Commission declares that, should any provision, section, paragraph, sentence or word of this Resolution be rendered or declared invalid by any final court action in a court of competent jurisdiction or by reason of any preemptive legislation, the remaining provisions, sections, paragraphs, sentences or words of this Resolution as hereby adopted shall remain in full force and effect.

**Section 8. Effective Date**

That this Resolution shall take effect immediately upon the date of adoption.

**Section 9. Certification**

That the Secretary of the Planning Commission shall certify to the passage of this Resolution.

**RESOLUTION NUMBER 2021-27**

**A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF MORENO VALLEY, CALIFORNIA, RECOMMENDING THAT THE CITY COUNCIL APPROVE TENTATIVE PARCEL MAP 37944 FOR THE COMPASS DANBE CENTERPOINTE PROJECT LOCATED ON THE SOUTH SIDE OF ALESSANDRO BOULEVARD BETWEEN FREDERICK STREET AND GRAHAM STREET (APN'S 297-170-002 AND 003)**

**WHEREAS**, the City of Moreno Valley ("City") is a general law city and a municipal corporation of the State of California, and the lead agency for the preparation and consideration of environmental documents for local projects that are subject to requirements of the California Environmental Quality Act (CEQA) and CEQA Guidelines; and

**WHEREAS**, CDRE Holdings LLC., ("Developer") has filed an application for the approval of Tentative Parcel Map 37944 PEN20-0122 ("Application") for the Compass Danbe Centerpointe Project, ("Project") located on the south side of Alessandro Boulevard between Frederick Street and Graham Street (APN's 297-170-002 and 003) ("Site"); and

**WHEREAS**, the Application has been evaluated in accordance with Chapter 9.14 (Land Divisions) of the Municipal Code with consideration given to the City's General Plan, Zoning Ordinance, and other applicable laws and regulations; and

**WHEREAS**, Chapter 9.14 of the Municipal Code imposes conditions of approval upon projects for which a Tentative Parcel Map is required, which conditions may be imposed by the Planning Commission to address on-site improvements, off-site improvements, the manner in which the site is used and any other conditions as may be deemed necessary to protect the public health, safety and welfare and ensure that the proposed Project will be developed in accordance with the purpose and intent of Title 9 ("Planning and Zoning") of the Municipal Code; and

**WHEREAS**, Staff has presented for the Planning Commission's consideration Conditions of Approval to be imposed upon Tentative Parcel Map 37944 PEN20-0122 (TPM), which conditions have been deemed necessary to protect the public health, safety and welfare and ensure that the proposed Project will be developed in accordance with the purpose and intent of Title 9 ("Planning and Zoning") of the Municipal Code; and

**WHEREAS**, pursuant to the provisions of Section 9.02.200 (Public Hearing and Notification Procedures) of the Municipal Code and Government Code section 65905, a public hearing was scheduled for August 26, 2021 and notice thereof was duly published and posted, and mailed to all property owners of record within 600 feet of the Site; and

**WHEREAS**, on August 26, 2021, the public hearing to consider the Application was duly conducted by the Planning Commission at which time all interested persons were provided with an opportunity to testify and to present evidence; and

Attachment: Planning Commission Staff Report and Resolutions (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

**WHEREAS**, consistent with the requirements of Chapter 9.14 (Land Divisions) of the Municipal Code, at the public hearing the Planning Commission considered Conditions of Approval to be imposed upon Tentative Parcel Map 37944 PEN20-0122 , which conditions were prepared by Planning Division staff who deemed said conditions to be necessary to protect the public health, safety and welfare and to ensure the proposed Project will be developed in accordance with the purpose and intent of Title 9 (“Planning and Zoning”) of the Municipal Code; and

**WHEREAS**, at the public hearing, the Planning Commission considered whether each of the requisite findings specified in Section 9.14.070 of the Municipal Code and set forth herein could be made with respect to the proposed Project as conditioned by Conditions of Approval; and

**WHEREAS**, on August 26, 2021, in accordance with the provisions of the California Environmental Quality Act (CEQA<sup>1</sup>) and CEQA Guidelines, the Planning Commission considered and recommended that the City Council approve Resolution 2021-24 recommending that the City Council adopt a Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program for the Compass Danbe Centerpointe Project located on the south side of Alessandro Boulevard between Frederick Street and Graham Street (APN’s 297-170-002 and 003).

**NOW, THEREFORE, THE PLANNING COMMISSION OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:**

**Section 1. Recitals and Exhibits**

That the foregoing Recitals and attached Exhibits are true and correct and are hereby incorporated by this reference.

**Section 2. Notice**

That pursuant to Government Code section 66020(d)(1), notice is hereby given that the proposed project is subject to certain fees, dedications, reservations and other exactions as provided herein.

**Section 3. Evidence**

That the Planning Commission has considered all of the evidence submitted into the administrative record for the proposed Tentative Parcel Map 37944 PEN20-0122, including, but not limited to, the following:

- (a) Moreno Valley General Plan and all other relevant provisions contained therein;
- (b) Title 9 (Planning and Zoning) of the Moreno Valley Municipal Code and all other relevant provisions referenced therein;

---

- (c) Application for the approval of Tentative Parcel Map 37944 PEN20-0122 and all documents, records and references contained therein;
- (d) Conditions of Approval for Tentative Parcel Map 37944 PEN20-0122, attached hereto as Exhibit A;
- (e) Staff Report prepared for the Planning Commission’s consideration and all documents, records and references related thereto, and Staff’s presentation at the public hearing;
- (f) Testimony and/or comments from Applicant and its representatives during the public hearing; and
- (g) Testimony and/or comments from all persons that was provided in written format or correspondence, at, or prior to, the public hearing.

**Section 4. Findings**

That based on the foregoing Recitals and the Evidence contained in the Administrative Record as set forth above, the Planning Commission makes the following findings in approving Tentative Parcel Map 37944 PEN20-0122.

- (a) That the proposed map is consistent with applicable general and specific plans and the zoning ordinance;
- (b) That the design or improvement of the proposed subdivision is consistent with applicable general and specific plans;
- (c) That the site is physically suitable for the type of development;
- (d) That the site of the proposed land division is physically suitable for the proposed density of the development;
- (e) That the design of the subdivision or the proposed improvements are not likely to cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat;
- (f) That the design of the subdivision or type of improvements is not likely to cause serious public health problems;
- (g) That the design of the subdivision or the type of improvements will not conflict with easements, acquired by the public at large, for access through or use of, property within the proposed subdivision;
- (h) That the proposed land division is not subject the Williamson Act pursuant to the California Land Conservation Act of 1965.
- (i) That the proposed land division and the associated design and improvements are not consistent with applicable ordinances of the city.
- (j) That the design of the land division provides, to the extent feasible, for future passive or natural heating and cooling opportunities in the subdivision.
- (k) That the effect of the proposed land division on the housing needs of the region were considered and balanced against the public service needs of the residents of Moreno Valley and available fiscal and environmental resources.

**Section 5. Approval**

That based on the foregoing Recitals, Evidence contained in the Administrative Record and Findings set forth above, the Planning Commission hereby recommends that the City Council approve Tentative Parcel Map 37944 PEN20-0122 subject to the Conditions of Approval for Tentative Parcel Map 37944 PEN20-0122 attached hereto as Exhibit A.

**Section 6. Repeal of Conflicting Provisions**

That all the provisions as heretofore adopted by the Planning Commission that are in conflict with the provisions of this Resolution are hereby repealed.

**Section 7. Severability**

That the Planning Commission declares that, should any provision, section, paragraph, sentence or word of this Resolution be rendered or declared invalid by any final court action in a court of competent jurisdiction or by reason of any preemptive legislation, the remaining provisions, sections, paragraphs, sentences or words of this Resolution as hereby adopted shall remain in full force and effect.

**Section 8. Effective Date**

That this Resolution shall take effect immediately upon the date of adoption.

**Section 9. Certification**

That the Secretary of the Planning Commission shall certify to the passage of this Resolution.

**PASSED AND ADOPTED THIS \_\_\_ day of \_\_\_\_\_, 2021**

CONDITIONS OF APPROVAL PEN20-0122

**RESOLUTION NUMBER 2021-28**

**A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF MORENO VALLEY, CALIFORNIA, RECOMMENDING THAT THE CITY COUNCIL APPROVE PLOT PLANS PEN20-0121 AND PEN20-0124 FOR THE COMPASS DANBE CENTERPOINTE PROJECT LOCATED ON THE SOUTH SIDE OF ALESSANDRO BOULEVARD BETWEEN FREDERICK STREET AND GRAHAM STREET (APN'S 297-170-002 AND 003)**

**WHEREAS**, the City of Moreno Valley ("City") is a general law city and a municipal corporation of the State of California; and

**WHEREAS**, CDRE Holdings LLC., ("Developer") has filed an application for the approval of the Compass Danbe Centerpointe Project, which includes the approval of Plot Plans PEN20-0121 and PEN20-0124 ("Applications") for the development of two light industrial buildings approximately 290,726 and 98,877 square feet in size with associated public improvements ("Project") located on the south side of Alessandro Boulevard between Frederick Street and Graham Street (APN's 297-170-002 and 003) ("Project Site"); and

**WHEREAS**, Section 9.02.070 (Plot Plan) of the Moreno Valley Municipal Code acknowledges that the purpose of plot plans is to provide a mechanism by which all new construction of industrial, commercial or multiple-family residential can be reviewed when not subject to other discretionary review processes which have review authority over project design; and

**WHEREAS**, the Application has been evaluated in accordance with Section 9.02.070 (Plot Plan) of the Municipal Code with consideration given to the City's General Plan, Zoning Ordinance, and other applicable laws and regulations; and

**WHEREAS**, Section 9.02.070 of the Municipal Code imposes conditions of approval upon projects for which a Plot Plan is required, which conditions may be imposed by the City to address on-site improvements, off-site improvements, the manner in which the site is used and any other conditions as may be deemed necessary to protect the public health, safety and welfare and ensure that the proposed Project will be developed in accordance with the purpose and intent of Title 9 (Planning and Zoning) of the Municipal Code; and

**WHEREAS**, Staff has presented for the Planning Commission's consideration Conditions of Approval to be imposed upon Plot Plans PEN20-0121 and PEN20-0124, which conditions have been deemed necessary to protect the public health, safety and welfare and ensure that the proposed Project will be developed in accordance with the purpose and intent of Title 9 (Planning and Zoning) of the Municipal Code; and

**WHEREAS**, pursuant to the provisions of Section 9.02.200 (Public Hearing and Notification Procedures) of the Municipal Code and Government Code section 65905, a public hearing was scheduled for August 26, 2021, and notice thereof was duly published

Attachment: Planning Commission Staff Report and Resolutions (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

and posted, and mailed to all property owners of record within 600 feet of the Project Site; and

**WHEREAS**, on August 26, 2021, the public hearing to consider the Applications was duly conducted by the Planning Commission at which time all interested persons were provided with an opportunity to testify and to present evidence; and

**WHEREAS**, consistent with the requirements of Section 9.02.070 (Plot Plan) of the Municipal Code, at the public hearing the Planning Commission considered Conditions of Approval to be imposed upon Plot Plans PEN20-0121 and PEN20-0124, which conditions were prepared by Planning Division staff who deemed said conditions to be necessary to protect the public health, safety and welfare and to ensure the proposed Project will be developed in accordance with the purpose and intent of Title 9 (Planning and Zoning) of the Municipal Code; and

**WHEREAS**, at the public hearing, the Planning Commission considered whether each of the requisite findings specified in Section 9.02.070 of the Municipal Code and set forth herein could be made with respect to the proposed Project as conditioned by Conditions of Approval; and

**WHEREAS**, on August 26, 2021, in accordance with the provisions of the California Environmental Quality Act (CEQA) and CEQA Guidelines, the Planning Commission considered and recommended that the City Council approve Resolution 2021-24 recommending that the City Council adopt a Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program for the Compass Danbe Centerpointe Project located on the south side of Alessandro Boulevard between Frederick Street and Graham Street (APN's 297-170-002 and 003).

**NOW, THEREFORE, THE PLANNING COMMISSION OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:**

**Section 1. Recitals and Exhibits**

That the foregoing Recitals and attached Exhibits are true and correct and are hereby incorporated by this reference.

**Section 2. Notice**

That pursuant to Government Code section 66020(d)(1), notice is hereby given that the proposed project is subject to certain fees, dedications, reservations and other exactions as provided herein.

**Section 3. Evidence**

That the Planning Commission has considered all of the evidence submitted into the administrative record for the proposed Plot Plans, including, but not limited to, the following:

Attachment: Planning Commission Staff Report and Resolutions (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

- (a) Moreno Valley General Plan and all other relevant provisions contained therein;
- (b) Title 9 (Planning and Zoning) of the Moreno Valley Municipal Code and all other relevant provisions referenced therein;
- (c) Application for the approval of Plot Plans PEN20-0121 and PEN20-0124 and all documents, records and references contained therein;
- (d) Conditions of Approval for Plot Plans PEN20-0121 and PEN20-0124, attached hereto as Exhibit A;
- (e) Staff Report prepared for the Planning Commission’s consideration and all documents, records and references related thereto, and Staff’s presentation at the public hearing;
- (f) Testimony and/or comments from Applicant and its representatives during the public hearing; and
- (g) Testimony and/or comments from all persons that was provided in written format or correspondence, at, or prior to, the public hearing.

**Section 4. Findings**

That based on the foregoing Recitals and the Evidence contained in the Administrative Record as set forth above, the Planning Commission makes the following findings in approving Plot Plans PEN20-0121 and PEN20-0124

- (a) The proposed project is consistent with the goals, objectives, policies and programs of the general plan;
- (b) The proposed project complies with all applicable zoning and other regulations;
- (c) The proposed project will not be detrimental to the public health, safety or welfare or materially injurious to properties or improvements in the vicinity;
- (d) The location, design and operation of the proposed project will be compatible with existing and planned land uses in the vicinity.

**Section 5. Approval**

That based on the foregoing Recitals, Evidence contained in the Administrative Record and Findings set forth above, the Planning Commission hereby recommends that the City Council approve Plot Plans PEN20-0121 and PEN20-0124 subject to the Conditions of Approval for Plot Plans PEN20-0121 and PEN20-0124 attached hereto as Exhibit A.

**Section 6. Repeal of Conflicting Provisions**

That all the provisions as heretofore adopted by the Planning Commission that are in conflict with the provisions of this Resolution are hereby repealed.

**Section 7. Severability**

That the Planning Commission declares that, should any provision, section, paragraph, sentence or word of this Resolution be rendered or declared invalid by any

Attachment: Planning Commission Staff Report and Resolutions (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

final court action in a court of competent jurisdiction or by reason of any preemptive legislation, the remaining provisions, sections, paragraphs, sentences or words of this Resolution as hereby adopted shall remain in full force and effect.

**Section 8.                    Effective Date**

That this Resolution shall take effect immediately upon the date of adoption.

**Section 9.                    Certification**

That the Secretary of the Planning Commission shall certify to the passage of this Resolution.

Dear Julia,

Thank you for contacting the San Manuel Band of Mission Indians (SMBMI) regarding the above-referenced project. SMBMI appreciates the opportunity to review the project documentation, which was received by the Cultural Resources Management Department on July 28th. The proposed project is located outside of Serrano ancestral territory and, as such, SMBMI will not be requesting to receive consulting party status with the lead agency or to participate in the scoping, development, or review of documents created pursuant to legal and regulatory mandates.

Kind regards,

Ryan Nordness

Cultural Resource Analyst

## **Mitigated Negative Declaration (MND) for the Proposed Compass Danbe Centerpointe Project (Proposed Project)**

South Coast Air Quality Management District (South Coast AQMD) staff appreciates the opportunity to comment on the above-mentioned document. The City of Moreno Valley is the California Environmental Quality Act (CEQA) Lead Agency for the Proposed Project. The following comments included recommended air quality mitigation measures and information on South Coast AQMD Rules 2305 and 316 that the Lead Agency should include in the Final MND.

Based on the MND, the Proposed Project consists of two warehouses totaling 389,603 square feet on 17.7 acres. The Proposed Project is located on the southeast corner of Alessandro Boulevard and Frederick Street in the City of Moreno Valley. Based on a review of aerial photographs, South Coast AQMD staff found that existing residential uses are located within 120 feet of the Proposed Project's northern boundary facing Alessandro Boulevard. Construction of the Proposed Project will occur in a nine-month period. At full buildout in June 2022, the Proposed Project will generate 742 vehicle trips per day, including 518 passenger vehicle trips and 224 truck trips. Forty-two loading docks will be located along the southern boundary of the Proposed Project away from residents<sup>1</sup>. However, three truck entrances will be located at the Proposed Project's northern boundary directly facing the existing residential uses. Based on the technical appendix<sup>2</sup>, trucks will be traveling on Alessandro Boulevard next to the existing residential uses.

### South Coast AQMD Staff's Comments

Based on a review of the MND and supporting technical appendices, South Coast AQMD staff has two comments.

#### 1. Recommended Air Quality Mitigation Measures during Operation

The Proposed Project will generate 224 truck trips per day, which is estimated by South Coast AQMD staff to be 102 trucks per day. These truck trips will be sharing the same Alessandro Boulevard as residents living north of the Proposed Project. The California Air Resources

<sup>1</sup> MND. Page 21.

<sup>2</sup> Appendix A2: Mobile Source Health Risk Assessment Technical. Exhibit 2-A. Page 12.

Board's (CARB) *Air Quality and Land Use Handbook: A Community Health Perspective*<sup>3</sup> is a general reference guide for evaluating and reducing air pollution impacts associated with new projects that go through the land use decision-making process. Based on the *Handbook*, CARB recommends a 1,000-foot separation between sensitive land uses and a distribution center that accommodates more than 100 trucks per day. To reduce the Proposed Project's air quality and health risk impacts on nearby residents, South Coast AQMD staff recommends that the Lead Agency include air quality mitigation measures in the Final MND.

Mitigation measures for operational air quality impacts from mobile sources that the Lead Agency should include in the Final MND consist of the following:

- Require zero-emissions (ZE) or near-zero emission (NZE) on-road haul trucks such as heavy-duty trucks with natural gas engines that meet the CARB's adopted optional NOx emissions standard at 0.02 grams per brake horsepower-hour (g/bhp-hr), if and when feasible. Given the state's clean truck rules and regulations aiming to accelerate the utilization and market penetration of ZE and NZE trucks such as the Advanced Clean Trucks Rule<sup>4</sup> and the Heavy-Duty Low NOx Omnibus Regulation<sup>5</sup>, ZE and NZE trucks will become increasingly more available to use. The Lead Agency should require a phase-in schedule to incentive the use of these cleaner operating trucks to reduce any significant adverse air quality impacts. South Coast AQMD staff is available to discuss the availability of current and upcoming truck technologies and incentive programs with the Lead Agency. At a minimum, require the use of 2010 model year<sup>6</sup> that meet CARB's 2010 engine emissions standards at 0.01 g/bhp-hr of particulate matter (PM) and 0.20 g/bhp-hr of NOx emissions or newer, cleaner trucks. Include environmental analyses to evaluate and identify sufficient electricity and supportive infrastructures in the Energy and Utilities and Service Systems Sections in the CEQA document, where appropriate. Include the requirement in applicable bid documents, purchase orders, and contracts. Operators shall maintain records of all trucks associated with project construction to document that each truck used meets these emission standards, and make the records available for inspection. The Lead Agency should conduct regular inspections to the maximum extent feasible to ensure compliance.
- Provide electric vehicle (EV) charging stations or at a minimum, provide the electrical infrastructure and electrical panels should be appropriately sized. Electrical hookups should be provided for truckers to plug in any onboard auxiliary equipment.

<sup>3</sup> CARB's *Air Quality and Land Use Handbook: A Community Health Perspective* can be found at: <http://www.arb.ca.gov/ch/handbook.pdf>.

<sup>4</sup> CARB. June 25, 2020. *Advanced Clean Trucks Rule*. Accessed at: <https://ww2.arb.ca.gov/our-work/programs/advanced-clean-trucks>.

<sup>5</sup> CARB has recently passed a variety of new regulations that require new, cleaner heavy-duty truck technology to be sold and used in state. For example, on August 27, 2020, CARB approved the Heavy-Duty Low NOx Omnibus Regulation, which will require all trucks to meet the adopted emission standard of 0.05 g/hp-hr starting with engine model year 2024. Accessed at: <https://ww2.arb.ca.gov/rulemaking/2020/hdomnibuslownox>.

<sup>6</sup> CARB adopted the statewide Truck and Bus Regulation in 2010. The Regulation requires diesel trucks and buses that operate in California to be upgraded to reduce emissions. Newer heavier trucks and buses must meet particulate matter filter requirements beginning January 1, 2012. Lighter and older heavier trucks must be replaced starting January 1, 2015. By January 1, 2023, nearly all trucks and buses will need to have 2010 model year engines or equivalent. More information on the CARB's Truck and Bus Regulation is available at: <https://www.arb.ca.gov/msprog/onrdiesel/onrdiesel.htm>.

Mitigation measures for operational air quality impacts from other area sources that the Lead Agency should include in the Final MND consist of the following:

- Maximize use of solar energy by installing solar energy arrays.
- Use light colored paving and roofing materials.
- Utilize only Energy Star heating, cooling, and lighting devices, and appliances.
- Use of water-based or low VOC cleaning products that go beyond the requirements of South Coast AQMD Rule 1113.

Design considerations for the Proposed Project that the Lead Agency should consider to further reduce air quality and health risk impacts include the following:

- Re-design the Proposed Project such that truck entry and exit points are not facing sensitive receptors and are not located along Alessandro Boulevard.
- Prohibit trucks from traveling on Alessandro Boulevard and passing next to sensitive land uses to enter or leave the Proposed Project site.
- Re-design the Proposed Project such that any check-in point for trucks is inside the Proposed Project site to ensure that there are no trucks queuing and/or idling outside on Alessandro Boulevard next to sensitive land uses (e.g., residences).
- Clearly mark truck routes with trailblazer signs, so that trucks will not travel next to or near sensitive land uses (e.g., residences).
- Design the Proposed Project to ensure that truck traffic inside the Proposed Project site is as far away as feasible from sensitive receptors.
- Restrict overnight truck parking in sensitive land uses by providing overnight truck parking inside the Proposed Project site.

## 2. South Coast AQMD Rule 2305 and Rule 316

On May 7, 2021, South Coast AQMD's Governing Board adopted Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program, and Rule 316 – Fees for Rule 2305. Rules 2305 and 316 are new rules that will reduce regional and local emissions of nitrogen oxides (NO<sub>x</sub>) and particulate matter (PM), including diesel PM. These emission reductions will reduce public health impacts for communities located near warehouses from mobile sources that are associated with warehouse activities. Also, the emission reductions will help the region attain federal and state ambient air quality standards. Rule 2305 applies to owners and operators of warehouses greater than or equal to 100,000 square feet. Under Rule 2305, operators are subject to an annual WAIRE Points Compliance Obligation that is calculated based on the annual number of truck trips to the warehouse. WAIRE Points can be earned by implementing actions in a prescribed menu in Rule 2305, implementing a site-specific custom plan, or paying a mitigation fee. Warehouse owners are only required to submit limited information reports, but they can opt in to earn Points on behalf of their tenants if they so choose because certain actions to reduce emissions may be better achieved at the warehouse development phase, for instance the installation of solar and charging infrastructure. Rule 316 is a companion fee rule for Rule 2305 to allow South Coast AQMD to recover costs associated with Rule 2305 compliance activities. Since the Proposed Project consists of the development of 389,603 square feet that would be used for warehouse activities, the Proposed Project's warehouse owners and operators will be required to comply with Rule 2305 once the warehouse

Julia Descoteaux

August 17, 2021

is occupied. Therefore, South Coast AQMD staff recommends that the Lead Agency review South Coast AQMD Rule 2305 to determine the potential WAIRE Points Compliance Obligation for future operators and explore whether additional project requirements and CEQA mitigation measures can be identified and implemented at the Proposed Project that may help future warehouse operators meet their compliance obligation<sup>7</sup>. South Coast AQMD staff is available to answer questions concerning Rule 2305 implementation and compliance by phone or email at (909) 396-3140 or [waire-program@aqmd.gov](mailto:waire-program@aqmd.gov). For implementation guidance documents and compliance and reporting tools, please visit South Coast AQMD's WAIRE Program webpage<sup>8</sup>.

### Conclusion

Pursuant to CEQA Guidelines Section 15074, prior to approving the Proposed Project, the Lead Agency shall consider the MND for adoption together with any comments received during the public review process. Please provide South Coast AQMD with written responses to all comments contained herein prior to the adoption of the Final MND. When responding to issues raised in the comments, responses should provide sufficient details giving reasons why specific comments and suggestions are not accepted. There should be good faith, reasoned analysis in response. Conclusory statements unsupported by factual information do not facilitate the purpose and goal of CEQA on public disclosure and are not meaningful, informative, or useful to decision makers and the public who are interested in the Proposed Project. Further, when the Lead Agency makes the finding that the recommended air quality mitigation measures are not feasible, the Lead Agency should describe the specific reasons supported by substantial evidence for rejecting it in the Final MND (CEQA Guidelines Sections 15070 and 15074.1).

South Coast AQMD staff is available to work with the Lead Agency to address any air quality questions that may arise from this comment letter. Please contact me at [lsun@aqmd.gov](mailto:lsun@aqmd.gov), should you have any questions.

Sincerely,

*Lijin Sun*

**SUBJECT: COMMENTS ON COMPASS DANBE CENTERPOINTE MND (SCH NO. 2021070466)**

To whom it may concern:

Thank you for the opportunity to comment on the Mitigated Negative Declaration (MND) for the proposed Compass Danbe Centerpointe Project. Please accept and consider these comments on behalf of Golden State Environmental Justice Alliance. Also, Golden State Environmental Justice Alliance formally requests to be added to the public interest list regarding any subsequent environmental documents, public notices, public hearings, and notices of determination for this project. Send all communications to Golden State Environmental Justice Alliance P.O. Box 79222 Corona, CA 92877.

### 1.0 Summary

The project proposes the construction and operation of two industrial warehouse buildings (Buildings 1 and 2). Building 1 proposes approximately 290,726 square feet (s.f.) of building floor area, including 280,726 s.f. of warehouse space, 5,000 s.f. of office space, and 5,000 s.f. of

mezzanine. Building 2 proposes approximately 98,877 s.f. of building floor area, including 93,77 s.f. of warehouse space, 2,500 s.f. of office space, and 2,500 s.f. of mezzanine. The total combined building floor area for Building 1 and Building 2 is approximately 389,603 s.f. Building 1 includes 32 loading docks, 34 truck trailer parking stalls, 144 passenger vehicle parking spaces. Building 2 includes 10 loading bays, 10 truck trailer parking stalls, and 73 passenger vehicle parking spaces. Both buildings are proposed at a maximum height of approximately 46 feet measured from finished floor to the highest point of the rooftop parapet walls.

The project requests a General Plan Amendment to change the existing land use designations from “Commercial” to “Business Park/Light Industrial” and a Change of Zone to change the existing Zoning designation from “Community Commercial” to “Light Industrial. The buildings are proposed as speculative and future occupants of the building are unknown. The Project Applicant expects that the building primarily would be occupied by warehouse distribution operators. The proposed buildings are designed with the potential to utilize up to 30 percent of their floor area for cold storage or refrigerated uses. The Project is expected to be operational 24 hours per day, seven days per week.

## 2.0 Project Description

It is notable that the MND does not include a floor plan for either of the buildings. The basic components of a Planning Application include a site plan, floor plan, and elevations. Additionally, the elevations provided in Figure 12 do not provide any detailed information such as the overall building height. The MND has excluded the proposed floor plans and detailed elevations from public review, which does not comply with CEQA’s requirements for adequate informational documents and meaningful disclosure (CEQA § 15121). An EIR must be prepared which includes these items.

## III. Air Quality

The CalEEModeling includes manual changes to the default individual construction phase lengths. The architectural coating phase was increased by 100%, from the default value of 20 to 40 days. The building construction phase was reduced by 50%, from the default value of 300 to 150 days. The CalEEMod User’s Guide requires any changes to model defaults be justified<sup>1</sup>. According to the “User Entered Comments & Non-Default Data” table, the justification provided

---

<sup>1</sup> CalEEMod User Guide <http://www.caleemod.com/>

for these changes is: “Construction is anticipated to occur over an 8-month timeframe” and “Rule 1113” for Architectural Coating. SCAQMD Rule 113<sup>2</sup> lists VOC limits for architectural coatings and colorants. It does not provide any timeframe parameters. As a result, the revised individual construction phase lengths are unsubstantiated.

These unsubstantiated changes present an issue, as the architectural coatings changes improperly spread out construction emissions over a longer period of time than is actually anticipated and the building construction changes improperly reduce the amount of construction emissions. Thus, by including unsubstantiated increases to the default individual construction phase lengths, the model may underestimate the Project’s construction-related emissions and should not be relied upon to determine the significance of the Project’s air quality impacts.

Further, the CalEEMod output sheets depict unsubstantiated reduced construction trip lengths during project construction. The commercial-nonwork (“C-NW”), commercial–customer (“C-C”), and commercial-work (“C-W”) operational vehicle trip lengths and trip types were manually reduced from their default values to 0.00-miles and 0 trips. As previously mentioned, the CalEEMod User’s Guide requires any changes to model defaults be justified. There is no justification given for these changes in the “User Entered Comments & Non-Default Data” table or in the MND. The Tentative Parcel Map depicts the project site as 1,320 feet in length, which is 0.25 miles. As such, the revised vehicle trip lengths are underestimated by *at least* 0.25 miles and this along with the reduced trip types are unsubstantiated. This presents an issue, as CalEEMod uses vehicle trip types and lengths to calculate motor vehicle emissions associated with Project construction. By relying upon an underestimated on-site construction vehicle trip length of 0.00 miles and 0 trips, the models underestimate the Project’s mobile-source construction emissions and should not be relied upon to determine Project significance.

The CalEEMod output sheets also depict unsubstantiated changes to the default energy use values for passenger car operations and truck operations modeling. The lighting energy intensity (“LightingElect”), Title 24 electricity energy intensity (“T24E”), and Title 24 natural gas energy intensity (“T24NG”) were each manually reduced in the model as seen below:

Table Name	Column Name	Default Value	New Value
tblEnergyUse	LightingElect	2.37	1.66
tblEnergyUse	LightingElect	1.17	0.82
tblEnergyUse	T24E	1.06	0.74
tblEnergyUse	T24E	0.37	0.26
tblEnergyUse	T24NG	3.25	2.28
tblEnergyUse	T24NG	2.00	1.40

Attachment: PC Comment Letters (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

According to the “User Entered Comments & Non-Default Data” table, the justification provided for these changes is that “The Project will design building shells and building components to meet 2019 Title 24 Standards which expects 30% less energy for nonresidential uses.” However, this justification is not adequate for analysis. The 2019 Title 24 standards may expect a reduction in building energy consumption; however, this expectation alone does not ensure that these reductions will be implemented on the project site. The MND has not provided additional information demonstrating that these reductions would be achieved through the implementation, monitoring, and enforcement of energy-related mitigation measures. It is not possible to verify the revised energy use values utilized for analysis in CalEEMod. Including these unsubstantiated reductions to the default energy use values serves to skew emissions downward and underestimate the project’s energy-source operational emissions.

Further, the Project Description lists offsite roadway improvements that are not included as part of the construction analysis. This includes improving the south side of Alessandro Boulevard to its ultimate half-section width as a Divided Major Arterial (a 55-foot- wide travel way, new curb and gutter, a 6-foot- wide sidewalk abutting the curb, and a bioretention swale), removing an existing bus stop along the south side of Alessandro Boulevard at the approximate midpoint of the northern Project site boundary, and construction of three driveways along the Northern Project site boundary onto Alessandro Boulevard (which would require striping for lane transitions). The construction analysis must be revised to include these improvements for analysis.

The Traffic Analysis (TA) uses a truck trip generation rate of 0.742-truck trips per 1,000 sf for Institute of Transportation Engineers (“ITE”) land use code 157. However, the 10th Edition ITE Trip Generation Manual lists the truck trip generation rate for land use code 157 is 0.75 truck trips per 1,000 sf. The truck trip generation rate used by the TA underestimate the actual project truck trips and the project’s mobile source emissions as well. All unsubstantiated changes in CalEEMod must be revised as part of a project EIR circulated for public review.

Additionally, Tables 4.2 - Trip Summary Information for each of the CalEEMod scenarios provided provides weekday, Saturday, and Sunday average daily trips (ADT) for passenger cars and trucks. However, Table 4.2 - Project Trip Generation Summary within the Traffic Analysis does not break down the ADT to varying weekday, Saturday, and Sunday rates. The ADT provided in the Traffic Analysis is only used as the weekday scenario for CalEEMod modeling. The Saturday and Sunday scenarios reduce ADT by approximately 54%-58% for each scenario

without providing meaningful evidence to support this change. All unsubstantiated changes in CalEEMod must be revised as part of a project EIR circulated for public review.

The MND does not include for analysis relevant environmental justice issues in reviewing potential impacts, including cumulative impacts from the proposed project. This is especially significant as the surrounding community is highly burdened by pollution. According to CalEnviroScreen 3.0, CalEPA's screening tool that ranks each census tract in the state for pollution and socioeconomic vulnerability, the proposed project's census tract (6065042512) ranks worse than 90 percent of the rest of the state overall. The project's census tract is in the 70th percentile for pollution burden, meaning it is among the most highly polluted ranks of all census tracts in the state of California. The surrounding community, including the apartments and single family residences to the north, bears the impact of multiple sources of pollution and is more polluted than average on every pollution indicator measured by CalEnviroScreen. For example, the project census tract has a higher burden of ozone than 98 percent of the state and more PM 2.5 impacts than 93 percent of the state, which are attributed to traffic and truck activity.

The project's census tract is a diverse community including 71 percent Hispanic residents and 14 percent African-American residents, which are especially vulnerable to the impacts of pollution. The community has a high rate of low educational attainment, meaning the census tract ranks in the 87th percentile for residents over age 25 that have not attained a high school diploma, which is an indication that they may lack health insurance or access to medical care. Additionally, the surrounding community ranks in the 88th percentile for poverty and 92nd percentile for housing burden, which further limit household funds available for medical care. The community ranks in the 85th percentile for incidence of cardiovascular disease and 82nd percentile for asthma, which are exacerbated by Air Quality and Greenhouse Gas impacts generated by increased vehicular traffic and the presence of truck traffic. The environmental burden is heightened further as the census tract is comprised of 21% children under the age of 10 compared to an average 13% children under the age of 10 per census tract in California. The surrounding community also has a higher proportion of babies born with low birth weights than 64% of the state, which makes those children more vulnerable to asthma and other health issues.

The Health Risk Assessment (Appendix A2) sources OEHHA Guidelines as the standard for residential, worker, and school child modeling analysis. It must be noted that the HRA is misleading as it only models detailed risk calculation scenarios for residential age bins -0.25 to 0, 0-2, 2-16, and 16-30 and the 25 year worker exposure averaged over a 70-year Lifetime Cancer

Risk, which is the maximum averaging time and serves to skew impacts downward. Notably, OEHHA's 2015 Guidance Manual for Preparation of Health Risk Assessments<sup>3</sup> state that, "together, the 9-, 30-, and 70-year cancer risk calculations provide a useful presentation of cancer risk and the relationship to duration of residency and, thus, exposure to a facility's emissions." An EIR must be prepared to include modeling scenarios for the 9-, 30-, and 70-year cancer risk calculations in order to provide a useful presentation of cancer risk in accordance with the guidelines utilized for modeling. Additionally, the 16-70 age bin for sensitive receptors must be modeled as well.

The HRA provides no distinction as to whether the modeling scenarios are for construction or operations; both construction and operations must be analyzed. The MND is not a reliable informational document and does not present meaningful evidence to support the conclusion that the project will result in less than significant health impacts to sensitive receptors. An EIR must be prepared to include construction and operations modeling for all residential age bins including -0.25 - 0, 0-2, 2-16, 16-30, and 16 - 70 for operations and construction analysis, 9 year school child analysis for operations and construction, and 25 year worker exposure with all scenarios reflecting Package N exposure factors in the detailed risk calculations.

#### **IV. Biological Resources**

According to Appendix B4: Burrowing Owl Survey Report, a focused burrow survey was conducted on May 21, 2020 and focused burrowing owl/burrow surveys were conducted on June 20, July 10, and July 30, 2020. The May 21, 2020 survey concluded that burrowing owl habitat and burrows were present on the project site. The Western Riverside MSHCP Burrowing Owl Survey Instructions<sup>4</sup> require that the "location of all suitable burrowing owl habitat, potential owl burrows, burrowing owl sign, and any owls observed should be recorded and mapped, including GPS coordinates." The MND does not include maps or photographs of this data and an EIR must be prepared to include this information in order to provide an accurate and adequate analysis in compliance with the Burrowing Owl Survey Instructions.

---

<sup>3</sup> OEHHA 2015 Guidance Manual for Preparation of Health Risk Assessments <https://oehha.ca.gov/media/downloads/crnr/2015guidancemanual.pdf>

<sup>4</sup> Western Riverside MSHCP Burrowing Owl Survey Instructions [https://www.rctlma.org/Portals/3/EPD/consultant/burrowing\\_owl\\_survey\\_instructions.pdf](https://www.rctlma.org/Portals/3/EPD/consultant/burrowing_owl_survey_instructions.pdf)

## VI. Energy

The State of California lists two approved compliance modeling softwares<sup>5</sup> for non-residential buildings: CBECC-Com and EnergyPro. CalEEMod is not listed as an approved software. The modeling provided in the MND does not comply with the 2019 Building Energy Efficiency Standards and under reports the project's potentially significant GHG and Energy impacts to the public and decision makers. Since the MND did not accurately or adequately model the Energy impacts in compliance with Title 24, a finding of significance must be made. An EIR with modeling in one of the two approved software types must be prepared and circulated for public review in order to adequately analyze the project's potentially significant environmental impacts. This is vital as the MND utilizes the CalEEMod defaults for construction equipment/operational sources, which is clearly not one of the approved softwares.

## VIII. Greenhouse Gas Emissions

There are discrepancies within the CalEEMod Output Sheets regarding CO<sub>2</sub>e emissions and the emissions reported in the MND. It must first be noted that an annual CalEEMod analysis was not included for construction or operational phases; only winter and summer were modeled. The construction analysis determined the project will emit 13,020 MTCO<sub>2</sub>e during the summer and 12,462 MTCO<sub>2</sub>e during the winter.

The Building 1 summer analysis determined the project will emit 6,363 MTCO<sub>2</sub>e during project operations (passenger cars) and 18,261 MTCO<sub>2</sub>e during project operations (trucks). The Building 1 winter analysis determined the project will emit 6,014 MTCO<sub>2</sub>e during project operations (passenger cars) and 18,103 MTCO<sub>2</sub>e during project operations (trucks). The Building 2 summer analysis determined the project will emit 2,381 MTCO<sub>2</sub>e during project operations (passenger cars) and 6,562 MTCO<sub>2</sub>e during project operations (trucks). The Building 2 winter analysis determined the project will emit 2,262 MTCO<sub>2</sub>e during project operations (passenger cars) and 6,508 MTCO<sub>2</sub>e during project operations (trucks).

Table 7: Total Annual Project Greenhouse Gas Emissions within the MND states that the total annual project emissions are 6,649.16 MTCO<sub>2</sub>e including both construction (amortized) and operational emissions. Table 7 attributes 759 MTCO<sub>2</sub>e to mobile source emissions (passenger cars) and 3,039 MTCO<sub>2</sub>e to mobile source emissions (trucks). Within the CalEEMod analysis, an annual emissions modeling scenario is not included. The MND's Table 7 is unsupported by

---

<sup>5</sup> 2019 Building Energy Efficiency Standards Approved Computer Compliance Programs, California Energy Commission. <https://www.energy.ca.gov/programs-and-topics/programs/building-energy-efficiency-standards/2019-building-energy-efficiency-2>

meaningful evidence within the technical appendices. Based on the CalEEMod output sheets, the combined summer analysis for Buildings 1 and 2 truck trips shows 24,823 MTCO<sub>2</sub>e will be generated by the project. The annual analysis within Table 7 has reduced the trucks seasonal scenarios by approximately 87% to achieve the annual operational MTCO<sub>2</sub>e. There is no explanation for the reductions given or the manner in which the reductions were achieved. These reductions serve to skew emissions downwards, specifically below the SCAQMD 10,000 MTCO<sub>2</sub>e significance threshold for industrial projects. Additionally, modeling errors such as those noted in the Energy, Air Quality, and Transportation discussions must be corrected in order to adequately analyze the project's GHG emissions. An EIR must be prepared to present this for analysis and include a finding of significance.

### **IX. Hazards and Hazardous Materials**

The MND states “there are no schools located within 0.25-mile of the Project site.” However, this is erroneous and misleading to the public and decision makers as SIATech Charter High School is located on the parcel approximately 150 feet to the north of the project site at 23080 Alessandro Blvd #232, Moreno Valley, CA 92553. An EIR must be prepared which includes this information for analysis in order to provide an adequate, accurate environmental analysis.

The proposed project site is within March Air Reserve Base (MARB)/Inland Port Airport Compatibility Zones D and E. The MND states that the project was “determined by the ALUC to be consistent with the ALUCP during their January 14, 2021 public meeting,” resulting in less than significant impacts. However, the MND does not include the Airport Land Use Commission (ALUC) or FAA determination reports as part of the MND. CEQA § 15150 (f) states that incorporation by reference is most appropriate for including long, descriptive, or technical materials that provide general background but do not contribute directly to the analysis of the problem at hand. The ALUC and FAA determination reports contribute directly to the analysis of the problem at hand. Not including the ALUC and FAA determination reports as an attachment for public review is in violation of CEQA § 15150 (f). An EIR must be prepared and circulated for public review including the ALUC and FAA determination reports. This is especially vital as the building elevations provided in Figure 12 do not include pertinent information such as the overall height of each building which would assist the public and decision makers in determining compliance with these requirements.

## XI. Land Use and Planning

The Project requests an amendment to the City of Moreno Valley General Plan Land Use Map to change the Project site's land use designation from "Commercial" to "Business Park/Light Industrial." The MND concludes that the project will not result in any significant impacts because "approval of the requested General Plan Amendment would eliminate any potential inconsistency between proposed land use and the site's existing land use designation." This conclusion is not supported by meaningful evidence or any analysis, including a consistency analysis with General Plan policies. The MND has not provided any technical analysis to support the approval of a General Plan Amendment and Change of Zone, in violation of CEQA's requirements for meaningful disclosure (CEQA § 21003(b)). The MND is inadequate as an informational document and an EIR must be prepared with this technical analysis and a consistency analysis with all General Plan policies, including the following:

Policy 2.5.1 The primary purpose of areas designated Business Park/Industrial is to provide for manufacturing, research and development, warehousing and distribution, as well as office and support commercial activities. The zoning regulations shall identify the particular uses permitted on each parcel of land. Development intensity should not exceed a Floor Area Ratio of 1.00 and the average floor area ratio should be significantly less.

Policy 2.5.2 Locate manufacturing and industrial uses to avoid adverse impacts on surrounding land uses.

Policy 2.5.3 Screen manufacturing and industrial uses where necessary to reduce glare, noise, dust, vibrations and unsightly views.

Policy 2.5.4 Design industrial developments to discourage access through residential areas.

The MND also states that the project "would not conflict with any applicable goals, objectives, and policies of the SCAQMD's AQMP, SCAG's Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) (including the tentatively approved *Connect SoCal 2020-2045 RTP/SCS*)," resulting in less than significant impact. However, the MND does not provide any meaningful supporting evidence or consistency analysis with SCAG's 2020-2045 Connect SoCal RTP/SCS (which was adopted by SCAG's Regional Council on September 3, 2020) to support this conclusion, in violation of CEQA's requirements for meaningful disclosure (CEQA § 21003(b)). Due to errors in modeling and modeling without supporting evidence, as noted throughout this comment letter, the proposed project has significant potential for inconsistency

with Goal 5 to reduce greenhouse gas emissions and improve air quality, Goal 6 to support healthy and equitable communities, and Goal 7 to adapt to a changing climate. The CalEEMod output sheets modeling for Operational Mobile Source Assumptions Summary from Appendix A1: Air Quality concludes that the project will generate 5,292,179 vehicle miles traveled (VMT) annually with 2,555,502 VMT attributed to passenger cars and 2,736,677 to trucks. The total annual VMT for the project results in an average of 14,499 VMT per day. An EIR must be prepared to include revised Air Quality/HRA, Energy, and GHG modeling in order to accurately analyze potential consistency or inconsistency with the 2020-2045 RTP/SCS document.

Further, the Project Description states that “Sight distance at each Project driveway will be reviewed by the City of Moreno Valley *at the time of preparation of final grading, landscape and street improvement plans* to ensure that standard Caltrans and City of Moreno Valley sight distance standards are met.” The City’s General Plan includes the following requirement for sight distances:

Policy 5.5.10 Provide adequate sight distances for safe vehicular movement at all intersections and driveways.

Delaying sight distance review until the time of preparation of final grading, landscape, and street improvement plans represents deferred mitigation in violation of CEQA. The MND has not demonstrated that the project complies with this policy and a finding of significance must be made as part of an EIR.

#### **XIV. Population and Housing**

The MND utilizes uncertain language and does not provide any meaningful analysis or supporting evidence to substantiate the conclusion that there will be no significant impact to population and housing. The MND states that “it is *anticipated* that the employment base for both the construction and operational phases of the Project would come from the existing population in the Inland Empire, which comprises western Riverside County and southwestern San Bernardino County.” Relying on the workforce population of the entire Inland Empire region will increase project related VMT. The MND does not provide a calculation of jobs created by the project during construction or operations.

The MND has not provided any calculation of the jobs generated by the project or evidence that the Inland Empire region’s workforce population is qualified for or interested in work in the

industrial sector. SCAG's Employment Density Study<sup>6</sup> provides the following applicable employment generation rates for Riverside County:

Warehouse: 1 employee per 581 square feet

Office: 1 employee per 481 square feet

Applying these ratios results in the following calculation:

Warehouse:  $374,603 \text{ sf} / 581 = 645$

Office:  $15,000 \text{ sf} / 481 \text{ sf} = 32$

Total: 677 employees

Utilizing SCAG's Employment Density Study ratios, the proposed project will generate 677 employees. The MND utilizes uncertain and misleading language which does not provide any meaningful analysis of the project's population and employment generation. In order to comply with CEQA's requirements for meaningful disclosure, an EIR must be prepared to provide an accurate estimate of employees generated by all uses of the proposed project. It must also provide demographic and geographic information on the location of qualified workers to fill these positions.

Additionally, the MND concludes "the project's labor demand is not expected to draw substantial numbers of new residents to the area" without providing any meaningful evidence to support this claim, such as the current number of residents or the anticipated increase in residents generated by approved projects or cumulative projects in the pipeline. The analysis must provide meaningful evidence to support the conclusion that the project will not induce unplanned indirect or direct population growth.

SCAG's Connect SoCal Demographics and Growth Forecast<sup>7</sup> notes that the City will add 29,400 jobs between 2016 - 2045. Utilizing SCAG's Employment Density Study calculation of 677 employees, the project represents 2.3% of the City's employment growth from 2016 - 2045. SCAG's Growth Forecast notes that the City's population will increase by 61,100 residents

<sup>6</sup> SCAG Employment Density Study <http://www.mwcog.org/file.aspx?A=QTTITR24POOOUIw5mPNzK8F4d8djdJe4LF9Exj6lXOU%3D>

<sup>7</sup> SCAG Connect SoCal Demographics and Growth Forecast adopted September 3, 2020 [https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial\\_demographics-and-growth-forecast.pdf?1606001579](https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_demographics-and-growth-forecast.pdf?1606001579)

between 2016 - 2045. Utilizing SCAG's Employment Density Study calculation of 677 employees, the project represents 1.1% of the City's population growth from 2016 - 2045. A single project accounting for more than 1% of the projected employment and/or population over 29 years represents a significant amount of growth. An EIR must be prepared to include this analysis, and also provide a cumulative analysis discussion of projects approved since 2016 and projects "in the pipeline" to determine if the project will exceed SCAG's employment growth forecast for the City. Additionally, an EIR must also provide demographic and geographic information on the location of qualified workers to fill these positions in order to provide an accurate environmental analysis.

## **XVII. Transportation**

The study area for the MND is arbitrary and capricious in that it does not include for analysis all potentially significant impacts on the transportation facilities providing access to the site. The MND only analyzes five intersections, three of which are proposed future driveways for the site. This is not adequate as the project will generate 5,292,179 annual VMT according to the CalEEMod analysis utilized for air quality modeling. An EIR must be prepared and circulated for public review to include analysis of the following transportation facilities providing direct access to the project site:

### *Intersections*

Alessandro Blvd. at Elsworth St.  
 Alessandro Blvd. at Day St.  
 Alessandro Blvd. at Old 215 Frontage Rd.  
 Graham St. at Brodiaea Ave.  
 Graham St. at Cactus Ave.  
 Frederick St. at Cactus Ave.  
 Frederick St. at Brodiaea Ave.  
 Graham St. at Cottonwood Ave.  
 Graham St. at Dracaea Ave.  
 Graham St. at Eucalyptus Ave.  
 Graham St. at Sunnymead Blvd.  
 Frederick St. at Sunnymead Blvd.  
 Frederick St. at Eucalyptus Ave.  
 Frederick St. at Dracaea Ave.  
 Frederick St. at Cottonwood Ave.

*Freeway Merge/Diverge*

I-215 at SR-60

I-215 at SR-91

I-215 at I-10

I-215 at SR-210

I-215 at I-15

*Freeway On/Off Ramps*

I-215 at Alessandro Blvd.

I-215 at Cactus Ave.

I-215 at Eucalyptus Ave.

SR-60 at Frederick St.

SR-60 at Heacock St.

This is especially vital for analysis since Exhibit 4-2 Project (Truck) Trip Distribution within Appendix K1 - Traffic Analysis depicts 100% of truck trips traveling eastbound on Alessandro Blvd. from the I-215 offramp to enter the project site. The exhibit also shows 100% of truck trips traveling eastbound on Alessandro Blvd. and turning right onto Graham St. In order to follow the City's truck routes, 100% of trucks exiting the site will need to then turn right on Cactus Ave., then turn right on Frederick St., then either proceed to turn left at the intersection of Frederick St. and Alessandro Blvd. to access the I-215 onramp or continue traveling northbound on Frederick St. to access the SR-60 onramp. Further, Heacock St. is a designated truck route. Trucks that exit the site onto eastbound Alessandro Blvd. also have the option to continue east one block to Heacock St., turn left onto northbound Heacock St., and continue north to access the I-215 onramp.

Exhibit 4-1 Project (Passenger Car) Trip Distribution within Appendix K1 - Traffic Analysis depicts 50% of passenger cars traveling eastbound on Alessandro Blvd. from the I-215 offramp to enter the project site. The exhibit also shows 60% of passenger cars traveling eastbound on Alessandro Blvd. and turning right onto Graham St. If the car continues southbound on Graham St., they will end up in the March Air Reserve Base once they pass Cactus Ave. It is nonsensical for the majority of passenger cars to travel this dead end route which does not access any freeways, arterial roads, or residential neighborhoods. An EIR must be prepared to provide a realistic passenger car trip distribution.

Additionally, the I-215 provides direct access to the project site from the Southern California Logistics Airport. An EIR must be prepared that includes analysis of all transportation facilities providing direct access to the project site.

Further, the Project Description states that “Sight distance at each Project driveway will be reviewed by the City of Moreno Valley *at the time of preparation of final grading, landscape and street improvement plans* to ensure that standard Caltrans and City of Moreno Valley sight distance standards are met.” The City’s General Plan includes the following requirement for sight distances:

Policy 5.5.10 Provide adequate sight distances for safe vehicular movement at all intersections and driveways.

Delaying sight distance review until the time of preparation of final grading, landscape, and street improvement plans represents deferred mitigation in violation of CEQA. The MND has not demonstrated that the project complies with this policy and a finding of significance must be made.

The Traffic Analysis (TA) uses a truck trip generation rate of 0.742-truck trips per 1,000 sf for Institute of Transportation Engineers (“ITE”) land use code 157. However, the 10th Edition ITE Trip Generation Manual lists the truck trip generation rate for land use code 157 is 0.75 truck trips per 1,000 sf. The truck trip generation rate used by the TA underestimate the actual project truck trips and the project’s mobile source emissions as well. All unsubstantiated changes in CalEEMod must be revised as part of a project EIR circulated for public review.

Appendix K2: VMT Assessment concludes that “Project generated VMT per employee was found to exceed citywide baseline VMT per employee threshold by 11.69% and citywide cumulative VMT per employee threshold by 10.40%. With implementation of the aforementioned TDM measures (Measures 1 and 2), a maximum reduction in VMT of 15.0% could be achieved, which would reduce the Project’s impact to less than significant.” However, the VMT analysis does not consider the significant annual truck traffic VMT generated by the project. Appendix A1 determined the project will generate 2,736,677 annual VMT from trucks and 2,555,502 annual VMT from passenger cars for a combined total of 5,292,179 annual VMT. The total annual VMT for the project results in an average of 14,499 VMT per day. Excluding truck VMT analysis does not comply with CEQA’s requirements for meaningful disclosure. Information regarding project truck VMT must be included for analysis as part of an EIR.

## Conclusion

For the foregoing reasons, GSEJA believes the MND is flawed and an EIR must be prepared for the proposed project and circulated for public review. Golden State Environmental Justice Alliance requests to be added to the public interest list regarding any subsequent environmental documents, public notices, public hearings, and notices of determination for this project. Send all communications to Golden State Environmental Justice Alliance P.O. Box 79222 Corona, CA 92877.

Sincerely,

Board of Directors  
Golden State Environmental Justice Alliance

To: City of Moreno Valley Planning Commission

From: Golden State Environmental Justice Alliance

Subject: Compass Danbe Centerpointe Project

This letter is to serve as further comment in addition to all previously submitted comments and documents by Golden State Environmental Justice Alliance.

### **CalEnviroScreen 4.0 Information**

CalEnviroScreen is a mapping tool that helps identify California communities that are most affected by many sources of pollution, and where people are often especially vulnerable to pollution's effects. CalEnviroScreen uses environmental, health, and socioeconomic information to produce scores for every census tract in the state. The scores are mapped so that different communities can be compared. An area with a high score is one that experiences a much higher pollution burden than areas with low scores. CalEnviroScreen ranks communities based on data that are available from state and federal government sources. CalEnviroScreen is updated and maintained by The Office of Environmental Health Hazard Assessment, on behalf of the California Environmental Protection Agency.

### **CalEnviroScreen Data on Compass Danbe Centerpointe Project Location/Area**

The above listed project sits in the south east of census tract 6065042512. Overall, when compared to other census tracts, the project site census tract is in the 80th percentile regarding pollution. As far as pollution burden is concerned, this census tract is in the 49th percentile. In terms of Ozone, this census tract is in the 98th percentile, Particulate Matter 2.5 60th percentile, Diesel Particulate Matter 69th percentile, Toxic Releases 62nd percentile and Traffic 33rd percentile. Additionally, the census tract the project site shares its western border with and is to the immediate south of the project site (6065046700) has some of the worst pollution in the state; being in the 98<sup>th</sup> percentile for overall pollution and 94<sup>th</sup> in pollution burden on its residents. This data represents that only 2 percent of other census tracts have worse overall pollution, it also means this census tract has worse pollution burden on its population than 93 percent of the state. In terms of Ozone, this census tract is in the 97th percentile, Particulate Matter 2.5 60th percentile, Diesel Particulate Matter 40th percentile, Toxic Releases 61st percentile and Traffic 82nd percentile.

**Conclusion**

Consider the above referenced information when making this important decision. Realize that you and the citizens of this area face some of the WORST POLLUTION in the entire state of California.

It is the responsibility of the City’s elected and appointed officials to make environmentally responsible development decisions. Based on the CalEnviroScreen data, this is more than sufficient evidence of the further air quality impacts that the citizenry of Moreno Valley and its surrounding area will continue to encounter with further development of another warehouse/distribution center. We are not against development, as we believe it is necessary for further economic growth in our current society. Development needs to be conducted with the highest of expectations to ensure the local population does not suffer further air quality burdens.

We stand by our comments and believe the MND is flawed and a full Environmental Impact Report must be completed and circulated for public review.

Respectfully Submitted,

*Steven Piepkorn*

Steven Piepkorn  
GSEJA

Attachment: PC Comment Letters (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

**Glossary of Terms**

Ozone - Amount of daily maximum 8-hour Ozone concentration

Particulate Matter 2.5 - Annual mean PM 2.5 concentrations

Diesel Particulate Matter - Diesel PM emissions from on-road and non-road sources

Toxic Releases - Toxicity-weighted concentrations of modeled chemical releases to air from facility emissions and off-site incineration.

Traffic -Traffic density, in vehicle-kilometers per hour per road length, within 150 meters of the census tract boundary.

## MEMORANDUM

**TO:** Julia Descoteaux, Project Planner  
City of Moreno Valley  
14177 Frederick Street  
Moreno Valley, California 92552

**FROM:** Nicole Morse, Esq., Principal

**DATE:** August 25, 2021

**RE:** Compass Danbe Centerpointe Project - Responses to MND Comment Letters

T&B Planning, Inc. is the CEQA consultant for the Applicant of the Compass Danbe Centerpointe project. During the MND's public review period, which lasted from July 26 to August 25, 2021, the City of Moreno Valley received correspondence from three public agencies and interested parties. A list of agencies, organizations, and persons that submitted comments on the MND during the public review period is presented in Table 1, *Organizations, Persons, & Public Agencies that Commented on the MND*. In consultation with the Applicant's technical experts, we have prepared responses to each substantive comment raised by the individual agencies and interested parties which are provided on the following pages. Copies of each of the comment letters referenced in Table 1 are provided on the following pages, followed by responses to each individual comment. None of the comment letters submitted to the City of Moreno Valley regarding the MND have produced substantial new information requiring substantial revisions resulting in the need for recirculation or additional environmental review under CEQA Guidelines § 15073.5.

**Table 1 Organizations, Persons, & Public Agencies that Commented on the MND**

**To:** Julia Descoteaux  
**Subject:** RE: MND for two light industrial buildings between Frederick St and Graham St., Moreno Valley

**Warning: External Email – Watch for Email Red Flags!**

Dear Julia,

Thank you for contacting the San Manuel Band of Mission Indians (SMBMI) regarding the above-referenced project. SMBMI appreciates the opportunity to review the project documentation, which was received by the Cultural Resources Management Department on July 28th. The proposed project is located outside of Serrano ancestral territory and, as such, SMBMI will not be requesting to receive consulting party status with the lead agency or to participate in the scoping, development, or review of documents created pursuant to legal and regulatory mandates.

A-1

Kind regards,  
Ryan Nordness  
Cultural Resource Analyst  
San Manuel Band of Mission Indians

**Responses to Comment Letter A from San Manuel Band of Mission Indians (SMBMI)**

A-1 The commenter states that the Project site is located outside of the Serrano ancestral territory and SMBMI will not be requesting to receive consulting party status with the lead agency or to participate in the scoping, development, or review of documents created pursuant to legal and regulatory mandates. The City of Moreno Valley acknowledges that this communication concludes SMBMI’s input on the Project and that no other consultation is required. Therefore, no further response is needed. No additions, revisions, or corrections to the MND are needed.

**Mitigated Negative Declaration (MND) for the Proposed  
Compass Danbe Centerpointe Project (Proposed Project)**

South Coast Air Quality Management District (South Coast AQMD) staff appreciates the opportunity to comment on the above-mentioned document. The City of Moreno Valley is the California Environmental Quality Act (CEQA) Lead Agency for the Proposed Project. The following comments included recommended air quality mitigation measures and information on South Coast AQMD Rules 2305 and 316 that the Lead Agency should include in the Final MND.

C-1

Based on the MND, the Proposed Project consists of two warehouses totaling 389,603 square feet on 17.7 acres. The Proposed Project is located on the southeast corner of Alessandro Boulevard and Frederick Street in the City of Moreno Valley. Based on a review of aerial photographs, South Coast AQMD staff found that existing residential uses are located within 120 feet of the Proposed Project's northern boundary facing Alessandro Boulevard. Construction of the Proposed Project will occur in a nine-month period. At full buildout in June 2022, the Proposed Project will generate 742 vehicle trips per day, including 518 passenger vehicle trips and 224 truck trips. Forty-two loading docks will be located along the southern boundary of the Proposed Project away from residents<sup>1</sup>. However, three truck entrances will be located at the Proposed Project's northern boundary directly facing the existing residential uses. Based on the technical appendix<sup>2</sup>, trucks will be traveling on Alessandro Boulevard next to the existing residential uses.

C-2

South Coast AQMD Staff's Comments

Based on a review of the MND and supporting technical appendices, South Coast AQMD staff has two comments.

1. Recommended Air Quality Mitigation Measures during Operation

C-3

The Proposed Project will generate 224 truck trips per day, which is estimated by South Coast AQMD staff to be 102 trucks per day. These truck trips will be sharing the same Alessandro Boulevard as residents living north of the Proposed Project. The California Air Resources

August 17, 2021

Board's (CARB) *Air Quality and Land Use Handbook: A Community Health Perspective*<sup>3</sup> is a general reference guide for evaluating and reducing air pollution impacts associated with new projects that go through the land use decision-making process. Based on the *Handbook*, CARB recommends a 1,000-foot separation between sensitive land uses and a distribution center that accommodates more than 100 trucks per day. To reduce the Proposed Project's air quality and health risk impacts on nearby residents, South Coast AQMD staff recommends that the Lead Agency include air quality mitigation measures in the Final MND.

Mitigation measures for operational air quality impacts from mobile sources that the Lead Agency should include in the Final MND consist of the following:

- Require zero-emissions (ZE) or near-zero emission (NZE) on-road haul trucks such as heavy-duty trucks with natural gas engines that meet the CARB's adopted optional NOx emissions standard at 0.02 grams per brake horsepower-hour (g/bhp-hr), if and when feasible. Given the state's clean truck rules and regulations aiming to accelerate the utilization and market penetration of ZE and NZE trucks such as the Advanced Clean Trucks Rule<sup>4</sup> and the Heavy-Duty Low NOx Omnibus Regulation<sup>5</sup>, ZE and NZE trucks will become increasingly more available to use. The Lead Agency should require a phase-in schedule to incentive the use of these cleaner operating trucks to reduce any significant adverse air quality impacts. South Coast AQMD staff is available to discuss the availability of current and upcoming truck technologies and incentive programs with the Lead Agency. At a minimum, require the use of 2010 model year<sup>6</sup> that meet CARB's 2010 engine emissions standards at 0.01 g/bhp-hr of particulate matter (PM) and 0.20 g/bhp-hr of NOx emissions or newer, cleaner trucks. Include environmental analyses to evaluate and identify sufficient electricity and supportive infrastructures in the Energy and Utilities and Service Systems Sections in the CEQA document, where appropriate. Include the requirement in applicable bid documents, purchase orders, and contracts. Operators shall maintain records of all trucks associated with project construction to document that each truck used meets these emission standards, and make the records available for inspection. The Lead Agency should conduct regular inspections to the maximum extent feasible to ensure compliance.
- Provide electric vehicle (EV) charging stations or at a minimum, provide the electrical infrastructure and electrical panels should be appropriately sized. Electrical hookups should be provided for truckers to plug in any onboard auxiliary equipment.

<sup>3</sup> CARB's *Air Quality and Land Use Handbook: A Community Health Perspective* can be found at: <http://www.arb.ca.gov/ch/handbook.pdf>.

<sup>4</sup> CARB. June 25, 2020. *Advanced Clean Trucks Rule*. Accessed at: <https://ww2.arb.ca.gov/our-work/programs/advanced-clean-trucks>.

<sup>5</sup> CARB has recently passed a variety of new regulations that require new, cleaner heavy-duty truck technology to be sold and used in state. For example, on August 27, 2020, CARB approved the Heavy-Duty Low NOx Omnibus Regulation, which will require all trucks to meet the adopted emission standard of 0.05 g/hp-hr starting with engine model year 2024. Accessed at: <https://ww2.arb.ca.gov/rulemaking/2020/hdomibuslownox>.

<sup>6</sup> CARB adopted the statewide Truck and Bus Regulation in 2010. The Regulation requires diesel trucks and buses that operate in California to be upgraded to reduce emissions. Newer heavier trucks and buses must meet particulate matter filter requirements beginning January 1, 2012. Lighter and older heavier trucks must be replaced starting January 1, 2015. By January 1, 2023, nearly all trucks and buses will need to have 2010 model year engines or equivalent. More information on the CARB's Truck and Bus Regulation is available at: <https://www.arb.ca.gov/msprog/onrdiesel/onrdiesel.htm>.

Julia Descoteaux

August 17, 2021

Mitigation measures for operational air quality impacts from other area sources that the Lead Agency should include in the Final MND consist of the following:

- Maximize use of solar energy by installing solar energy arrays.
- Use light colored paving and roofing materials.
- Utilize only Energy Star heating, cooling, and lighting devices, and appliances.
- Use of water-based or low VOC cleaning products that go beyond the requirements of South Coast AQMD Rule 1113.

← C-6  
 ← C-7  
 ← C-8  
 ↪ C-9

Design considerations for the Proposed Project that the Lead Agency should consider to further reduce air quality and health risk impacts include the following:

- Re-design the Proposed Project such that truck entry and exit points are not facing sensitive receptors and are not located along Alessandro Boulevard.
- Prohibit trucks from traveling on Alessandro Boulevard and passing next to sensitive land uses to enter or leave the Proposed Project site.
- Re-design the Proposed Project such that any check-in point for trucks is inside the Proposed Project site to ensure that there are no trucks queuing and/or idling outside on Alessandro Boulevard next to sensitive land uses (e.g., residences).
- Clearly mark truck routes with trailblazer signs, so that trucks will not travel next to or near sensitive land uses (e.g., residences).
- Design the Proposed Project to ensure that truck traffic inside the Proposed Project site is as far away as feasible from sensitive receptors.
- Restrict overnight truck parking in sensitive land uses by providing overnight truck parking inside the Proposed Project site.

2. South Coast AQMD Rule 2305 and Rule 316

On May 7, 2021, South Coast AQMD’s Governing Board adopted Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program, and Rule 316 – Fees for Rule 2305. Rules 2305 and 316 are new rules that will reduce regional and local emissions of nitrogen oxides (NOx) and particulate matter (PM), including diesel PM. These emission reductions will reduce public health impacts for communities located near warehouses from mobile sources that are associated with warehouse activities. Also, the emission reductions will help the region attain federal and state ambient air quality standards. Rule 2305 applies to owners and operators of warehouses greater than or equal to 100,000 square feet. Under Rule 2305, operators are subject to an annual WAIRE Points Compliance Obligation that is calculated based on the annual number of truck trips to the warehouse. WAIRE Points can be earned by implementing actions in a prescribed menu in Rule 2305, implementing a site-specific custom plan, or paying a mitigation fee. Warehouse owners are only required to submit limited information reports, but they can opt in to earn Points on behalf of their tenants if they so choose because certain actions to reduce emissions may be better achieved at the warehouse development phase, for instance the installation of solar and charging infrastructure. Rule 316 is a companion fee rule for Rule 2305 to allow South Coast AQMD to recover costs associated with Rule 2305 compliance activities. Since the Proposed Project consists of the development of 389,603 square feet that would be used for warehouse activities, the Proposed Project’s warehouse owners and operators will be required to comply with Rule 2305 once the warehouse

↪ C-16

Julia Descoteaux

August 17, 2021

is occupied. Therefore, South Coast AQMD staff recommends that the Lead Agency review South Coast AQMD Rule 2305 to determine the potential WAIRE Points Compliance Obligation for future operators and explore whether additional project requirements and CEQA mitigation measures can be identified and implemented at the Proposed Project that may help future warehouse operators meet their compliance obligation<sup>7</sup>. South Coast AQMD staff is available to answer questions concerning Rule 2305 implementation and compliance by phone or email at (909) 396-3140 or [waire-program@aqmd.gov](mailto:waire-program@aqmd.gov). For implementation guidance documents and compliance and reporting tools, please visit South Coast AQMD's WAIRE Program webpage<sup>8</sup>.

C-16  
(cont)

### Conclusion

Pursuant to CEQA Guidelines Section 15074, prior to approving the Proposed Project, the Lead Agency shall consider the MND for adoption together with any comments received during the public review process. Please provide South Coast AQMD with written responses to all comments contained herein prior to the adoption of the Final MND. When responding to issues raised in the comments, responses should provide sufficient details giving reasons why specific comments and suggestions are not accepted. There should be good faith, reasoned analysis in response. Conclusory statements unsupported by factual information do not facilitate the purpose and goal of CEQA on public disclosure and are not meaningful, informative, or useful to decision makers and the public who are interested in the Proposed Project. Further, when the Lead Agency makes the finding that the recommended air quality mitigation measures are not feasible, the Lead Agency should describe the specific reasons supported by substantial evidence for rejecting it in the Final MND (CEQA Guidelines Sections 15070 and 15074.1).

C-17

South Coast AQMD staff is available to work with the Lead Agency to address any air quality questions that may arise from this comment letter. Please contact me at [lsun@aqmd.gov](mailto:lsun@aqmd.gov), should you have any questions.

### **Responses to Comment Letter C from South Coast Air Quality Management District (South Coast AQMD)**

- C-1 This introductory comment is acknowledged; no response is required.
- C-2 The South Coast AQMD's provides a summary of the Project description. Contrary to the commenter's assertion that existing residential uses are located within 120 feet of the Project's northern boundary facing Alessandro Boulevard, the nearest existing residence is located at 13994 Chagall Court, approximately 152 feet north of the Project site (see the Air Quality Impact Analysis and Mobile Source Health Risk Assessment (*Technical Appendices A1 and A2*)). Note also that construction would occur over an 8-month period. With respect to the driveways along Alessandro Boulevard, the middle driveway would be accessible to only passenger vehicles and the westernmost driveway and easternmost driveway would be accessible to both passenger vehicles and trucks. All driveways would be restricted to right turn movements when entering/exiting the site.
- C-3 The commenter summarizes the truck trips generated by the Project and recommends mitigation measures to reduce the Project's air quality and health risk impacts on nearby residents that are further discussed below. As concluded in the MND (see p. 31-36) and the Air Quality Impact Analysis and Mobile Source Health Risk Assessment (*Technical Appendices A1 and A2*), air quality and health risk impacts were determined to be less than significant and no mitigation measures are required.
- C-4 The commenter asserts that the Project should be required to use zero-emission, near-zero-emission, or 2010 model year heavy-duty trucks to reduce ongoing and long-term NO<sub>x</sub> emissions. Regarding a requirement for 2010 model year heavy duty trucks, all trucks registered in California were required to comply with this requirement per State law by January 1, 2023 (13 California Code of Regulations Section 2025; the "CARB Truck and Bus Regulation"). Therefore, the Project's future building users will be required to comply with the applicable phase-in timeline.

First, it was concluded in the MND that operational NO<sub>x</sub> emissions are less than significant based on the South Coast AQMD's daily significance thresholds (see p. 33-35). Therefore, no mitigation measures are required.

At present, requiring zero-emission vehicles is economically and technologically infeasible; also, such vehicles are not available on a large enough scale to be relied upon. In a report titled "Transitioning to Zero-Emission Heavy Duty Freight Vehicles," the International Council on Clean Transportation (ICCT) provides an overview of advancing technologies (ICCT, September 2017)<sup>1</sup>. The ICCT reports that although the technology is advancing and although at some point in the distant future non-diesel technology will likely be used in mass to power freight movement, "zero-emission vehicle technologies do present considerable challenges. They have a combination of near- and long-term barriers, issues, and questions that will have to be addressed before they can become widespread replacements for conventional trucks and tractor-trailers that are typically diesel fueled" (ICCT, p. 31). "Tesla's announced battery electric semi-tractor prototype is the only (emphasis added) battery electric project we found in our [world-wide]

<sup>1</sup> [https://www.theicct.org/sites/default/files/publications/Zero-emission-freight-trucks\\_ICCT-white-paper\\_26092017\\_vF.pdf](https://www.theicct.org/sites/default/files/publications/Zero-emission-freight-trucks_ICCT-white-paper_26092017_vF.pdf)

assessment targeting long-haul heavy-duty applications” (ICCT, p. 31). Imposing extensive requirements on the proposed Project related to emerging technology, when the various types of technological advancements and their timeframes for common availability are not known with any certainty, is not a feasible mitigation measure.

It is also important to note that the analysis provided in the MND presents a “snapshot in time” of the Project’s worst-case air pollutant emissions under the current regulatory environment. The MND recognizes that by January 1, 2023, the CARB’s Truck and Bus Regulation will be in full effect and that all heavy-duty trucks traveling to and from the Project site will be required to comply with applicable engine standards to minimize air pollutant emissions. After the Truck and Bus Regulation becomes fully effective, the air pollutant emissions reported in the MND would be reduced commensurately once the more stringent engine requirements go into effect.

Further, the South Coast AQMD recently adopted a Warehouse Indirect Source Rule (ISR), Rule 2305, in May 2021. The ISR applies to warehouse operators and owners of warehouses greater than or equal to 100,000 square feet of indoor floor space within a single building that may be used for warehousing activities. The Project would be subject to compliance. In general, the Rule establishes the Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program, which is a points system that is based upon the actual number of trucks that come to and leave the warehouse. Each year the operator will be obligated to determine how many points the warehouse is required to achieve using a formula set out in the Rule. If the required number of points are not achieved, the warehouse operator would be required to pay a fee to the South Coast AQMD, which would use collected funds to improve air quality. Although compliance with Rule 2305 is not mitigation and the South Coast AQMD has not published a nexus study showing how the use of collected funds has nexus to the warehouse’s air quality impacts, the ISR program is intended to reduce air quality effects associated with the warehouse industry, including the Project, throughout the Air Basin.

- C-5 The commenter requests that electrical vehicle (EV) charging station or appropriately sized electrical infrastructure and electrical panels be provided. As shown in Figure 11, *Site Plan*, there are a total of 8 EV charging stations provided in the Project site. The Project Applicant or successor in interest is also required to provide documentation to the City of Moreno Valley demonstrating that the Project includes the energy efficiency design features such as installation of the minimum number of passenger vehicle EV charging stations and documentation that the electrical system has adequate capacity for the future load as required by Title 24. The MND adequately included electrical vehicle charging stations and accommodations for additional capacity in the future; thus, no additional mitigation measures are needed.
- C-6 The commenter requests that the Project maximize use of solar energy by the installation of solar panels to reduce area source emissions. As shown on Table 4 of the MND, only a small percentage of the Project’s air pollutant emissions are associated with energy use; as such, the installation of solar panels does not have a proportional nexus to a majority of the Project’s air pollutant emissions, which are attributed to area source (architectural coating, consumer products, and landscape maintenance equipment).

Additionally, as concluded in the MND, the Project would result in less than significant impacts related to air quality emissions. Therefore, no additional mitigation measures are needed.

- C-7 The commenter requests that light-colored paving materials be used. The Project applicant already proposes light-colored concrete materials, comprised of various neutral, earth-toned colors, including shades of white, beige, gray, and dark brown, as discussed in the Project Description of the MND, Figure 12, *Architectural Elevations*, of the MND, and indicated on the Project's site plans on file with the City of Moreno Valley. Therefore, no additions, revisions, or corrections to the MND are needed.
- C-8 The commenter requests that the MND be revised to include a mitigation measure that requires the use of energy efficient heating and cooling equipment, appliances, and fixtures. The Project already will be required by the California Green Building Standards Code to comply with the Title 24 Building Energy Efficiency Standards (Nonresidential) published by the California Energy Commission which contain mandatory standards for mechanical systems, lighting (indoor and outdoor), and appliances to minimize energy use. Therefore, no additions, revisions, or corrections to the MND are needed.
- C-9 The commenter requests the use of water-based or low VOC cleaning products. The Project's operational VOC emissions are less than significant (refer to p. 33-34); therefore, mitigation is not required to reduce the Project's operational VOC emissions. Furthermore, the City does not have an enforcement mechanism or the staffing resources to monitor and enforce the chemical composition of cleaning products used during the normal course of private business operations. CEQA Guidelines §15091 provides that mitigation measures must be within the responsibility and jurisdiction of the lead agency and have a proportional nexus to the Project's impact on the environment. Therefore, the City has determined that this recommendation is not feasible to require as a mitigation measure.
- C-10 The commenter suggests that the Project's truck entrances and exits be redesigned such that they do not face sensitive receptors and not located along Alessandro Boulevard. As shown in Figure 6, *Aerial Photograph*, the Project site is bounded by Alessandro Boulevard to the north, vacant land to the east and west, and industrial development to the south. Alessandro Boulevard is the only roadway providing access to the Project site. Therefore, Project entry and exit points must be located on Alessandro Boulevard.

The majority of emissions are generated in the truck courts/loading areas. As shown in Figure 11, *Site Plan*, the truck courts for both Buildings 1 and 2 would be located on the southern side of each building away from residences north of Alessandro Boulevard. Neither truck court would be visible from Alessandro Boulevard. As such, the truck courts/loading areas would be enclosed and screened from public viewing areas and sensitive receptors. Therefore, no additions, revisions, or corrections to the MND are needed.

- C-11 The commenter suggests that the Project's trucks not to travel on Alessandro Boulevard and pass next to sensitive land uses to enter or leave the Project site. As shown in the City of Moreno Valley designated truck route map (Exhibit 3-4 of Technical Appendix K1), Alessandro Boulevard, Frederick Street, and Graham Street (between Alessandro Boulevard and Cactus Avenue only) are designated truck routes in the City of Moreno Valley. Therefore, no additions, revisions, or corrections to the MND are needed.

- C-12 The commenter suggests that check-in points be placed well inside the Project site to prevent truck queuing and idling on public streets. As discussed above, the truck courts for both Buildings 1 and 2 would be located on the southern side of each building. Check-in gates for trucks at the Project site would be located at each end of the truck courts and away from Alessandro Boulevard to prevent queuing of trucks outside the property. Therefore, no additions, revisions, or corrections to the MND are needed.
- C-13 The commenter suggests that truck routes be marked with trailblazer signs. The City of Moreno Valley has designated truck routes. As discussed above, in the vicinity of the Project site, Alessandro Boulevard, Frederick Street, and Graham Street (between Alessandro Boulevard and Cactus Avenue only) are designated truck routes in the City. Truck traffic, including trucks traveling to and from the Project site, are required to use legal truck routes. For these reasons, the commenter's suggestion is accommodated and no revisions to the DEIR are warranted.
- C-14 The commenter suggests that truck traffic inside the Project site is as far away as feasible from sensitive receptors. The existing residential homes located north of Alessandro Boulevard, approximately 152 feet north of the Project site, would be the closest sensitive receptors to the Project. As shown in Figure 11, Site Plan, the truck courts for both Buildings 1 and 2 would be located on the southern side of each building. Neither truck court would be visible from Alessandro Boulevard. As such, the truck courts/loading areas would be enclosed and screened from public viewing areas and sensitive receptors. Therefore, no additions, revisions, or corrections to the MND are needed.
- C-15 The commenter suggests prohibiting trucks from parking in residential areas overnight. The Project's design provides off-street parking on the Project site in accordance with applicable provisions of the City of Moreno Valley Municipal Code. Furthermore, City of Moreno Valley Municipal Code Section 17-14, titled "Commercial vehicles and/or trailers prohibited from stopping, standing or parking on public streets or highway" prohibits commercial vehicles exceeding a manufacturer's gross vehicle weight (commonly referred to as GVW) rating of 10,000 pounds (as defined by California Vehicle Code § 390) from stopping, standing, or parking on any public street or highway, or any portion thereof. For these reasons, it is not reasonably foreseeable that vehicles accessing the Project site would park in residential areas overnight. Therefore, no additions, revisions, or corrections to the MND are needed.
- C-16 The commenter states that the Project's warehouse owner and operators will be required to comply with the requirements of the South Coast AQMD Rule 2305 and provides information language on Rule 316. The City of Moreno Valley acknowledges that the Project will be subjected to the applicable provisions of Rule 2305 and 316. No further response is needed.
- C-17 Written responses to the South Coast AQMD's comments are included herein. As required by CEQA, these responses are included in the City's staff report and included in the City's consideration of the MND for adoption. No further response is needed.
- C-18 The City acknowledges Lijin Sun as the South Coast AQMD contact person; no response is required.

Re: Compass Danbe (APN 297-170-002 and 003)

Dear Members of the City of Moreno Valley City Council and Planning Commission:

On behalf of the Golden State Environmental Justice Alliance (“GSEJA”), I am writing to you regarding the Compass Danbe Project (“Project”).

GSEJA is withdrawing its comment letter and opposition to the Project. The Project’s developer has addressed GSEJA’s concerns about environmental mitigation.

Sincerely,

Joe Bourgeois  
Executive Director

To: Julia Descoteaux  
Subject: Compass Danbe Center Point Warehouse Project

**Warning: External Email – Watch for Email Red Flags!**

Dear Ms Descoteaux,

I am writing to voice my concerns regarding the Compass Danbe Center Point Warehouse Project, that would be located across the street from existing residential homes as well as a Charter Independent Study School, SIATech Moreno Valley, that holds classes on campus.

As a home owner, educator, parent and grandparent, the location of this warehouse and its close proximity to a school and homes makes the location unsuitable for Business Park/Light Industrial activity without significant reduction to air, noise, and light pollution, enhanced safe street design, and changes to the proposed project that incorporate the latest solar, electric truck/vehicle requirements, and on-site EV charging stations to reduce the project's carbon footprint to net zero.

Respectfully,  
Keri Then

Dr. Keri Then, D.B.A., M.S.  
Moreno Valley, CA

## SUPPLEMENTAL INFORMATION

[SEE ATTACHED]

# MEMORANDUM

**TO:** Julia Descoteaux, Project Planner  
City of Moreno Valley  
14177 Frederick Street  
Moreno Valley, California 92552

**FROM:** Nicole Morse, Esq., Principal

**DATE:** August 25, 2021

**RE:** Compass Danbe Centerpointe Project - Responses to MND Comment Letters

T&B Planning, Inc. is the CEQA consultant for the Applicant of the Compass Danbe Centerpointe project. During the MND’s public review period, which lasted from July 26 to August 25, 2021, the City of Morena Valley received correspondence from three public agencies and interested parties. A list of agencies, organizations, and persons that submitted comments on the MND during the public review period is presented in Table 1, *Organizations, Persons, & Public Agencies that Commented on the MND*. In consultation with the Applicant’s technical experts, we have prepared responses to each substantive comment raised by the individual agencies and interested parties which are provided on the following pages. Copies of each of the comment letters referenced in Table 1 are provided on the following pages, followed by responses to each individual comment. None of the comment letters submitted to the City of Moreno Valley regarding the MND have produced substantial new information requiring substantial revisions resulting in the need for recirculation or additional environmental review under CEQA Guidelines § 15073.5.

**Table 1 Organizations, Persons, & Public Agencies that Commented on the MND**

**Subject:** RE: MND for two light industrial buildings between Frederick St and Graham St., Moreno Valley

**Warning: External Email – Watch for Email Red Flags!**

Dear Julia,

Thank you for contacting the San Manuel Band of Mission Indians (SMBMI) regarding the above-referenced project. SMBMI appreciates the opportunity to review the project documentation, which was received by the Cultural Resources Management Department on July 28th. The proposed project is located outside of Serrano ancestral territory and, as such, SMBMI will not be requesting to receive consulting party status with the lead agency or to participate in the scoping, development, or review of documents created pursuant to legal and regulatory mandates.

**Mitigated Negative Declaration (MND) for the Proposed  
Compass Danbe Centerpointe Project (Proposed Project)**

South Coast Air Quality Management District (South Coast AQMD) staff appreciates the opportunity to comment on the above-mentioned document. The City of Moreno Valley is the California Environmental Quality Act (CEQA) Lead Agency for the Proposed Project. The following comments included recommended air quality mitigation measures and information on South Coast AQMD Rules 2305 and 316 that the Lead Agency should include in the Final MND.

C-1

Based on the MND, the Proposed Project consists of two warehouses totaling 389,603 square feet on 17.7 acres. The Proposed Project is located on the southeast corner of Alessandro Boulevard and Frederick Street in the City of Moreno Valley. Based on a review of aerial photographs, South Coast AQMD staff found that existing residential uses are located within 120 feet of the Proposed Project's northern boundary facing Alessandro Boulevard. Construction of the Proposed Project will occur in a nine-month period. At full buildout in June 2022, the Proposed Project will generate 742 vehicle trips per day, including 518 passenger vehicle trips and 224 truck trips. Forty-two loading docks will be located along the southern boundary of the Proposed Project away from residents<sup>1</sup>. However, three truck entrances will be located at the Proposed Project's northern boundary directly facing the existing residential uses. Based on the technical appendix<sup>2</sup>, trucks will be traveling on Alessandro Boulevard next to the existing residential uses.

C-2

South Coast AQMD Staff's Comments

Based on a review of the MND and supporting technical appendices, South Coast AQMD staff has two comments.

1. Recommended Air Quality Mitigation Measures during Operation

C-3

The Proposed Project will generate 224 truck trips per day, which is estimated by South Coast AQMD staff to be 102 trucks per day. These truck trips will be sharing the same Alessandro Boulevard as residents living north of the Proposed Project. The California Air Resources

August 17, 2021

Board's (CARB) *Air Quality and Land Use Handbook: A Community Health Perspective*<sup>3</sup> is a general reference guide for evaluating and reducing air pollution impacts associated with new projects that go through the land use decision-making process. Based on the *Handbook*, CARB recommends a 1,000-foot separation between sensitive land uses and a distribution center that accommodates more than 100 trucks per day. To reduce the Proposed Project's air quality and health risk impacts on nearby residents, South Coast AQMD staff recommends that the Lead Agency include air quality mitigation measures in the Final MND.

Mitigation measures for operational air quality impacts from mobile sources that the Lead Agency should include in the Final MND consist of the following:

- Require zero-emissions (ZE) or near-zero emission (NZE) on-road haul trucks such as heavy-duty trucks with natural gas engines that meet the CARB's adopted optional NOx emissions standard at 0.02 grams per brake horsepower-hour (g/bhp-hr), if and when feasible. Given the state's clean truck rules and regulations aiming to accelerate the utilization and market penetration of ZE and NZE trucks such as the Advanced Clean Trucks Rule<sup>4</sup> and the Heavy-Duty Low NOx Omnibus Regulation<sup>5</sup>, ZE and NZE trucks will become increasingly more available to use. The Lead Agency should require a phase-in schedule to incentive the use of these cleaner operating trucks to reduce any significant adverse air quality impacts. South Coast AQMD staff is available to discuss the availability of current and upcoming truck technologies and incentive programs with the Lead Agency. At a minimum, require the use of 2010 model year<sup>6</sup> that meet CARB's 2010 engine emissions standards at 0.01 g/bhp-hr of particulate matter (PM) and 0.20 g/bhp-hr of NOx emissions or newer, cleaner trucks. Include environmental analyses to evaluate and identify sufficient electricity and supportive infrastructures in the Energy and Utilities and Service Systems Sections in the CEQA document, where appropriate. Include the requirement in applicable bid documents, purchase orders, and contracts. Operators shall maintain records of all trucks associated with project construction to document that each truck used meets these emission standards, and make the records available for inspection. The Lead Agency should conduct regular inspections to the maximum extent feasible to ensure compliance.
- Provide electric vehicle (EV) charging stations or at a minimum, provide the electrical infrastructure and electrical panels should be appropriately sized. Electrical hookups should be provided for truckers to plug in any onboard auxiliary equipment.

<sup>3</sup> CARB's *Air Quality and Land Use Handbook: A Community Health Perspective* can be found at:

<http://www.arb.ca.gov/ch/handbook.pdf>.

<sup>4</sup> CARB. June 25, 2020. *Advanced Clean Trucks Rule*. Accessed at: <https://ww2.arb.ca.gov/our-work/programs/advanced-clean-trucks>.

<sup>5</sup> CARB has recently passed a variety of new regulations that require new, cleaner heavy-duty truck technology to be sold and used in state. For example, on August 27, 2020, CARB approved the Heavy-Duty Low NOx Omnibus Regulation, which will require all trucks to meet the adopted emission standard of 0.05 g/hp-hr starting with engine model year 2024. Accessed at: <https://ww2.arb.ca.gov/rulemaking/2020/hdomibuslownox>.

<sup>6</sup> CARB adopted the statewide Truck and Bus Regulation in 2010. The Regulation requires diesel trucks and buses that operate in California to be upgraded to reduce emissions. Newer heavier trucks and buses must meet particulate matter filter requirements beginning January 1, 2012. Lighter and older heavier trucks must be replaced starting January 1, 2015. By January 1, 2023, nearly all trucks and buses will need to have 2010 model year engines or equivalent. More information on the CARB's Truck and Bus Regulation is available at: <https://www.arb.ca.gov/msprog/onrdiesel/onrdiesel.htm>.

# Letter C

Julia Descoteaux

August 17, 2021

Mitigation measures for operational air quality impacts from other area sources that the Lead Agency should include in the Final MND consist of the following:

- Maximize use of solar energy by installing solar energy arrays.
- Use light colored paving and roofing materials.
- Utilize only Energy Star heating, cooling, and lighting devices, and appliances.
- Use of water-based or low VOC cleaning products that go beyond the requirements of South Coast AQMD Rule 1113.

← C-6  
 ← C-7  
 ← C-8  
 ↪ C-9

Design considerations for the Proposed Project that the Lead Agency should consider to further reduce air quality and health risk impacts include the following:

- Re-design the Proposed Project such that truck entry and exit points are not facing sensitive receptors and are not located along Alessandro Boulevard.
- Prohibit trucks from traveling on Alessandro Boulevard and passing next to sensitive land uses to enter or leave the Proposed Project site.
- Re-design the Proposed Project such that any check-in point for trucks is inside the Proposed Project site to ensure that there are no trucks queuing and/or idling outside on Alessandro Boulevard next to sensitive land uses (e.g., residences).
- Clearly mark truck routes with trailblazer signs, so that trucks will not travel next to or near sensitive land uses (e.g., residences).
- Design the Proposed Project to ensure that truck traffic inside the Proposed Project site is as far away as feasible from sensitive receptors.
- Restrict overnight truck parking in sensitive land uses by providing overnight truck parking inside the Proposed Project site.

↪ C-10  
 ← C-11  
 ↪ C-12  
 ↪ C-13  
 ↪ C-14  
 ↪ C-15

2. *South Coast AQMD Rule 2305 and Rule 316*

On May 7, 2021, South Coast AQMD’s Governing Board adopted Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program, and Rule 316 – Fees for Rule 2305. Rules 2305 and 316 are new rules that will reduce regional and local emissions of nitrogen oxides (NOx) and particulate matter (PM), including diesel PM. These emission reductions will reduce public health impacts for communities located near warehouses from mobile sources that are associated with warehouse activities. Also, the emission reductions will help the region attain federal and state ambient air quality standards. Rule 2305 applies to owners and operators of warehouses greater than or equal to 100,000 square feet. Under Rule 2305, operators are subject to an annual WAIRE Points Compliance Obligation that is calculated based on the annual number of truck trips to the warehouse. WAIRE Points can be earned by implementing actions in a prescribed menu in Rule 2305, implementing a site-specific custom plan, or paying a mitigation fee. Warehouse owners are only required to submit limited information reports, but they can opt in to earn Points on behalf of their tenants if they so choose because certain actions to reduce emissions may be better achieved at the warehouse development phase, for instance the installation of solar and charging infrastructure. Rule 316 is a companion fee rule for Rule 2305 to allow South Coast AQMD to recover costs associated with Rule 2305 compliance activities. Since the Proposed Project consists of the development of 389,603 square feet that would be used for warehouse activities, the Proposed Project’s warehouse owners and operators will be required to comply with Rule 2305 once the warehouse

↪ C-16

Julia Descoteaux

August 17, 2021

is occupied. Therefore, South Coast AQMD staff recommends that the Lead Agency review South Coast AQMD Rule 2305 to determine the potential WAIRE Points Compliance Obligation for future operators and explore whether additional project requirements and CEQA mitigation measures can be identified and implemented at the Proposed Project that may help future warehouse operators meet their compliance obligation<sup>7</sup>. South Coast AQMD staff is available to answer questions concerning Rule 2305 implementation and compliance by phone or email at (909) 396-3140 or [waire-program@aqmd.gov](mailto:waire-program@aqmd.gov). For implementation guidance documents and compliance and reporting tools, please visit South Coast AQMD's WAIRE Program webpage<sup>8</sup>.

C-16  
(cont)

### Conclusion

Pursuant to CEQA Guidelines Section 15074, prior to approving the Proposed Project, the Lead Agency shall consider the MND for adoption together with any comments received during the public review process. Please provide South Coast AQMD with written responses to all comments contained herein prior to the adoption of the Final MND. When responding to issues raised in the comments, responses should provide sufficient details giving reasons why specific comments and suggestions are not accepted. There should be good faith, reasoned analysis in response. Conclusory statements unsupported by factual information do not facilitate the purpose and goal of CEQA on public disclosure and are not meaningful, informative, or useful to decision makers and the public who are interested in the Proposed Project. Further, when the Lead Agency makes the finding that the recommended air quality mitigation measures are not feasible, the Lead Agency should describe the specific reasons supported by substantial evidence for rejecting it in the Final MND (CEQA Guidelines Sections 15070 and 15074.1).

C-17

South Coast AQMD staff is available to work with the Lead Agency to address any air quality questions that may arise from this comment letter. Please contact me at [lsun@aqmd.gov](mailto:lsun@aqmd.gov), should you have any questions.

### **Responses to Comment Letter C from South Coast Air Quality Management District (South Coast AQMD)**

- C-1 This introductory comment is acknowledged; no response is required.
- C-2 The South Coast AQMD's provides a summary of the Project description. Contrary to the commenter's assertion that existing residential uses are located within 120 feet of the Project's northern boundary facing Alessandro Boulevard, the nearest existing residence is located at 13994 Chagall Court, approximately 152 feet north of the Project site (see the Air Quality Impact Analysis and Mobile Source Health Risk Assessment (*Technical Appendices A1 and A2*)). Note also that construction would occur over an 8-month period. With respect to the driveways along Alessandro Boulevard, the middle driveway would be accessible to only passenger vehicles and the westernmost driveway and easternmost driveway would be accessible to both passenger vehicles and trucks. All driveways would be restricted to right turn movements when entering/exiting the site.
- C-3 The commenter summarizes the truck trips generated by the Project and recommends mitigation measures to reduce the Project's air quality and health risk impacts on nearby residents that are further discussed below. As concluded in the MND (see p. 31-36) and the Air Quality Impact Analysis and Mobile Source Health Risk Assessment (*Technical Appendices A1 and A2*), air quality and health risk impacts were determined to be less than significant and no mitigation measures are required.
- C-4 The commenter asserts that the Project should be required to use zero-emission, near-zero-emission, or 2010 model year heavy-duty trucks to reduce ongoing and long-term NO<sub>x</sub> emissions. Regarding a requirement for 2010 model year heavy duty trucks, all trucks registered in California were required to comply with this requirement per State law by January 1, 2023 (13 California Code of Regulations Section 2025; the "CARB Truck and Bus Regulation"). Therefore, the Project's future building users will be required to comply with the applicable phase-in timeline.

First, it was concluded in the MND that operational NO<sub>x</sub> emissions are less than significant based on the South Coast AQMD's daily significance thresholds (see p. 33-35). Therefore, no mitigation measures are required.

At present, requiring zero-emission vehicles is economically and technologically infeasible; also, such vehicles are not available on a large enough scale to be relied upon. In a report titled "Transitioning to Zero-Emission Heavy Duty Freight Vehicles," the International Council on Clean Transportation (ICCT) provides an overview of advancing technologies (ICCT, September 2017)<sup>1</sup>. The ICCT reports that although the technology is advancing and although at some point in the distant future non-diesel technology will likely be used in mass to power freight movement, "zero-emission vehicle technologies do present considerable challenges. They have a combination of near- and long-term barriers, issues, and questions that will have to be addressed before they can become widespread replacements for conventional trucks and tractor-trailers that are typically diesel fueled" (ICCT, p. 31). "Tesla's announced battery electric semi-tractor prototype is the only (emphasis added) battery electric project we found in our [world-wide]

<sup>1</sup> [https://www.theicct.org/sites/default/files/publications/Zero-emission-freight-trucks\\_ICCT-white-paper\\_26092017\\_vF.pdf](https://www.theicct.org/sites/default/files/publications/Zero-emission-freight-trucks_ICCT-white-paper_26092017_vF.pdf)

assessment targeting long-haul heavy-duty applications” (ICCT, p. 31). Imposing extensive requirements on the proposed Project related to emerging technology, when the various types of technological advancements and their timeframes for common availability are not known with any certainty, is not a feasible mitigation measure.

It is also important to note that the analysis provided in the MND presents a “snapshot in time” of the Project’s worst-case air pollutant emissions under the current regulatory environment. The MND recognizes that by January 1, 2023, the CARB’s Truck and Bus Regulation will be in full effect and that all heavy-duty trucks traveling to and from the Project site will be required to comply with applicable engine standards to minimize air pollutant emissions. After the Truck and Bus Regulation becomes fully effective, the air pollutant emissions reported in the MND would be reduced commensurately once the more stringent engine requirements go into effect.

Further, the South Coast AQMD recently adopted a Warehouse Indirect Source Rule (ISR), Rule 2305, in May 2021. The ISR applies to warehouse operators and owners of warehouses greater than or equal to 100,000 square feet of indoor floor space within a single building that may be used for warehousing activities. The Project would be subject to compliance. In general, the Rule establishes the Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program, which is a points system that is based upon the actual number of trucks that come to and leave the warehouse. Each year the operator will be obligated to determine how many points the warehouse is required to achieve using a formula set out in the Rule. If the required number of points are not achieved, the warehouse operator would be required to pay a fee to the South Coast AQMD, which would use collected funds to improve air quality. Although compliance with Rule 2305 is not mitigation and the South Coast AQMD has not published a nexus study showing how the use of collected funds has nexus to the warehouse’s air quality impacts, the ISR program is intended to reduce air quality effects associated with the warehouse industry, including the Project, throughout the Air Basin.

- C-5 The commenter requests that electrical vehicle (EV) charging station or appropriately sized electrical infrastructure and electrical panels be provided. As shown in Figure 11, *Site Plan*, there are a total of 8 EV charging stations provided in the Project site. The Project Applicant or successor in interest is also required to provide documentation to the City of Moreno Valley demonstrating that the Project includes the energy efficiency design features such as installation of the minimum number of passenger vehicle EV charging stations and documentation that the electrical system has adequate capacity for the future load as required by Title 24. The MND adequately included electrical vehicle charging stations and accommodations for additional capacity in the future; thus, no additional mitigation measures are needed.
- C-6 The commenter requests that the Project maximize use of solar energy by the installation of solar panels to reduce area source emissions. As shown on Table 4 of the MND, only a small percentage of the Project’s air pollutant emissions are associated with energy use; as such, the installation of solar panels does not have a proportional nexus to a majority of the Project’s air pollutant emissions, which are attributed to area source (architectural coating, consumer products, and landscape maintenance equipment).

Additionally, as concluded in the MND, the Project would result in less than significant impacts related to air quality emissions. Therefore, no additional mitigation measures are needed.

- C-7 The commenter requests that light-colored paving materials be used. The Project applicant already proposes light-colored concrete materials, comprised of various neutral, earth-toned colors, including shades of white, beige, gray, and dark brown, as discussed in the Project Description of the MND, Figure 12, *Architectural Elevations*, of the MND, and indicated on the Project's site plans on file with the City of Moreno Valley. Therefore, no additions, revisions, or corrections to the MND are needed.
- C-8 The commenter requests that the MND be revised to include a mitigation measure that requires the use of energy efficient heating and cooling equipment, appliances, and fixtures. The Project already will be required by the California Green Building Standards Code to comply with the Title 24 Building Energy Efficiency Standards (Nonresidential) published by the California Energy Commission which contain mandatory standards for mechanical systems, lighting (indoor and outdoor), and appliances to minimize energy use. Therefore, no additions, revisions, or corrections to the MND are needed.
- C-9 The commenter requests the use of water-based or low VOC cleaning products. The Project's operational VOC emissions are less than significant (refer to p. 33-34); therefore, mitigation is not required to reduce the Project's operational VOC emissions. Furthermore, the City does not have an enforcement mechanism or the staffing resources to monitor and enforce the chemical composition of cleaning products used during the normal course of private business operations. CEQA Guidelines §15091 provides that mitigation measures must be within the responsibility and jurisdiction of the lead agency and have a proportional nexus to the Project's impact on the environment. Therefore, the City has determined that this recommendation is not feasible to require as a mitigation measure.
- C-10 The commenter suggests that the Project's truck entrances and exits be redesigned such that they do not face sensitive receptors and not located along Alessandro Boulevard. As shown in Figure 6, *Aerial Photograph*, the Project site is bounded by Alessandro Boulevard to the north, vacant land to the east and west, and industrial development to the south. Alessandro Boulevard is the only roadway providing access to the Project site. Therefore, Project entry and exit points must be located on Alessandro Boulevard.

The majority of emissions are generated in the truck courts/loading areas. As shown in Figure 11, *Site Plan*, the truck courts for both Buildings 1 and 2 would be located on the southern side of each building away from residences north of Alessandro Boulevard. Neither truck court would be visible from Alessandro Boulevard. As such, the truck courts/loading areas would be enclosed and screened from public viewing areas and sensitive receptors. Therefore, no additions, revisions, or corrections to the MND are needed.

- C-11 The commenter suggests that the Project's trucks not to travel on Alessandro Boulevard and pass next to sensitive land uses to enter or leave the Project site. As shown in the City of Moreno Valley designated truck route map (Exhibit 3-4 of Technical Appendix K1), Alessandro Boulevard, Frederick Street, and Graham Street (between Alessandro Boulevard and Cactus Avenue only) are designated truck routes in the City of Moreno Valley. Therefore, no additions, revisions, or corrections to the MND are needed.

- C-12 The commenter suggests that check-in points be placed well inside the Project site to prevent truck queuing and idling on public streets. As discussed above, the truck courts for both Buildings 1 and 2 would be located on the southern side of each building. Check-in gates for trucks at the Project site would be located at each end of the truck courts and away from Alessandro Boulevard to prevent queuing of trucks outside the property. Therefore, no additions, revisions, or corrections to the MND are needed.
- C-13 The commenter suggests that truck routes be marked with trailblazer signs. The City of Moreno Valley has designated truck routes. As discussed above, in the vicinity of the Project site, Alessandro Boulevard, Frederick Street, and Graham Street (between Alessandro Boulevard and Cactus Avenue only) are designated truck routes in the City. Truck traffic, including trucks traveling to and from the Project site, are required to use legal truck routes. For these reasons, the commenter's suggestion is accommodated and no revisions to the DEIR are warranted.
- C-14 The commenter suggests that truck traffic inside the Project site is as far away as feasible from sensitive receptors. The existing residential homes located north of Alessandro Boulevard, approximately 152 feet north of the Project site, would be the closest sensitive receptors to the Project. As shown in Figure 11, Site Plan, the truck courts for both Buildings 1 and 2 would be located on the southern side of each building. Neither truck court would be visible from Alessandro Boulevard. As such, the truck courts/loading areas would be enclosed and screened from public viewing areas and sensitive receptors. Therefore, no additions, revisions, or corrections to the MND are needed.
- C-15 The commenter suggests prohibiting trucks from parking in residential areas overnight. The Project's design provides off-street parking on the Project site in accordance with applicable provisions of the City of Moreno Valley Municipal Code. Furthermore, City of Moreno Valley Municipal Code Section 17-14, titled "Commercial vehicles and/or trailers prohibited from stopping, standing or parking on public streets or highway" prohibits commercial vehicles exceeding a manufacturer's gross vehicle weight (commonly referred to as GVW) rating of 10,000 pounds (as defined by California Vehicle Code § 390) from stopping, standing, or parking on any public street or highway, or any portion thereof. For these reasons, it is not reasonably foreseeable that vehicles accessing the Project site would park in residential areas overnight. Therefore, no additions, revisions, or corrections to the MND are needed.
- C-16 The commenter states that the Project's warehouse owner and operators will be required to comply with the requirements of the South Coast AQMD Rule 2305 and provides information language on Rule 316. The City of Moreno Valley acknowledges that the Project will be subjected to the applicable provisions of Rule 2305 and 316. No further response is needed.
- C-17 Written responses to the South Coast AQMD's comments are included herein. As required by CEQA, these responses are included in the City's staff report and included in the City's consideration of the MND for adoption. No further response is needed.
- C-18 The City acknowledges Lijin Sun as the South Coast AQMD contact person; no response is required.

Moreno Valley, CA 92553

**RE: COMPASS DANBE CENTERPOINTE - RESPONSE TO SIERRA CLUB COMMENT LETTERS**

Dear Ms. Descoteaux:

T&B Planning, Inc. (T&B Planning) is the environmental consulting firm that prepared the Initial Study/Mitigated Negative Declaration (IS/MND) for the Compass Danbe Centerpointe project. T&B Planning has prepared this letter in response to two letters sent to the City by Andrew Miller of Shute, Mihaly, and Weinberger LLP (hereinafter "Commenter") on behalf of the Moreno Valley Group Sierra Club. The responses provided below and on the following pages are numbered to correspond with the individual comments from the two comment letters.

Reponses to October 1, 2021 Comment Letter

*I-A: Response to comment that "The Project is Vertically Inconsistent with the General Plan"*

The Commenter states their general opinion that the Project is inconsistent with the City's General Plan based on statements in the General Plan that industrial uses and residential uses should not be located adjacent to each other. That is not the intent of the City's General Plan. Instead, all projects should be designed with existing land uses in mind. Warehouses and residential uses exist in harmony throughout the City.

Without specific examples, it is difficult to determine what land use conflicts the Commenter asserts to be present. The City's development standards and the Project's design ensure smooth transitions between the various land uses. The Project does, in fact, minimize potential health risks and the assertion that significant buffers between residential and nonresidential uses are required is significantly outdated.<sup>1</sup>

A City's determination that a project is consistent with its general plan "carries a strong presumption of regularity. This determination can be overturned only if the [City] abused its discretion—that is, did not proceed legally, or if the determination is not supported by findings, or if the findings are not supported by substantial evidence." (*Sequoyah Hills Homeowners Assn. v. City of Oakland* (1993) 23 Cal.App.4th 704, 717). "State law does not require perfect conformity between a proposed project and the applicable general plan" because "it is nearly, if not absolutely, impossible for a project to be in perfect conformity with each and every policy set forth in the applicable plan." (*Pfeiffer v. City of Sunnyvale City Council* (2011) 200 Cal.App.4th 1552, 1563).

## COMPASS DANBE CENTERPOINTE - RESPONSE TO SIERRA CLUB COMMENT LETTERS

October 5, 2021

Page 2 of 11

“A project is consistent with the general plan if, considering all its aspects, it will further the objectives and policies of the general plan and not obstruct their attainment.” (*Clover Valley Foundation v. City of Rocklin* (2011) 197 Cal.App.4th 200, 238, citing *Sequoyah Hills*, supra, 23 Cal.App.4th at 719. To be consistent, a project must simply be “compatible” with the objectives, policies, general land uses and programs specified. (*Sequoyah Hills*, supra, 23 Cal.App.4th at 717–718; *Families Unafraid to Uphold Rural etc. v. County v. Board of Supervisors* (“FUTURE”) (1998) 62 Cal.App.4th 1332, 1336).

Courts accord great deference to a City’s determination of general plan consistency, “because the body which adopted the general plan policies in its legislative capacity has unique competence to interpret those policies when applying them in its adjudicatory capacity. Because policies in a general plan reflect a range of competing interests, the governmental agency must be allowed to weigh and balance the plan’s policies when applying them, and it has broad discretion to construe its policies in light of the plan’s purposes. (*Pfeiffer*, supra, 200 Cal.App.4th 1552, 1563). The record demonstrates that the City considered all applicable land use plans, including the City’ General Plan and determined that the Project conformed to those policies.

Allowing business to develop and grow, and a resulting increase in truck traffic (or automobile traffic) in the City is not inconsistent with the General Plan. Warehouses and other non-residential uses are able to harmoniously coexist with residential uses throughout the City. Contrary to the assertion otherwise, the City did not flatly reject recommendations from the South Coast Air Quality Management District (SCAQMD). As an initial point, the Project does not result in any transportation or air quality significant impacts and mitigation is not required. In addition, the SCAQMD recently adopted a Warehouse Indirect Source Rule (ISR), Rule 2305, in May 2021, which is intended to reduce air quality effects associated with the warehouse industry throughout the South Coast Air Basin. The proposed Project would be subject to compliance with the ISR; the Project’s compliance with the ISR is not reflected in the air emissions totals presented in the IS/MND. In general, the Rule establishes the Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program, which is a points system that is based upon the actual number of trucks that come to and leave the warehouse. Each year the Project’s operator(s) will be obligated to determine how many points the warehouse is required to achieve using a formula set out in the Rule. If the required number of points is not achieved, the warehouse operator would be required to pay a fee to the SCAQMD, which would use collected funds to improve air quality in the South Coast Air Basin.

### I-B: Response to comment that “The Project Would Create Horizontal Inconsistencies in the General Plan”

See Response to Comment I-B. The comment is based on the false premise that industrial and residential land uses are incompatible and that the General Plan “discourages” this type of development.

The policies listed in the General Plan do not discourage the Project or the Project being built at this site. Instead, the policies cited are intended to allow these various uses to coexist. As an example, Policy LCC.3-17 states an objective of “[s]creen[ing] and buffer[ing] nonresidential projects to protect adjacent residential property and other sensitive land uses when necessary to mitigate noise, glare and other adverse effects on adjacent uses.” As another example, Policy N.1-2 states an objective to “[g]uide the location and design of transportation facilities, industrial uses, and other potential noise generators to minimize the effects of noise on adjacent land uses.”

## COMPASS DANBE CENTERPOINTE - RESPONSE TO SIERRA CLUB COMMENT LETTERS

October 5, 2021

Page 3 of 11

### II-A: Response to comment that “The MND’s Transportation Analysis Is Inadequate, and There is a Fair Argument that the Project May Have Significant Transportation Impacts”

The Commenter asserts that the Project’s transportation analysis is inadequate because of various purported deficiencies with the forecasted distribution of truck trips to roadways in proximity of the Project site.

In response to the assertion that the transportation analysis is inadequate because it does not assign truck traffic trips to either Frederick Street or Heacock Street, both the City and the Project’s transportation engineer – Urban Crossroads, Inc., a professional transportation engineering firm and expert on traffic analyses in the Inland Empire – concurred that truck traffic is most likely to use Alessandro Boulevard to access the Project site from I-215 due to the lack of turns required upon exiting the freeway and that truck traffic leaving the Project site is most likely to return to I-215 from Cactus Avenue (via Graham Street) due to the ease of access to the freeway. Because left turns out of the Project site are not possible due to the raised median in Alessandro Boulevard, trucks would be required to make a loop with three right turns upon exiting the Project site to reach Frederick Street; this path of travel is considered highly unlikely because trucks avoid having to make excessive turns and vehicle miles traveled would be longer than simply returning to I-215. Similarly, trucks exiting the Project site are not considered likely to use Heacock Street to access SR-60 due to the extra turns and travel distance required. Accordingly, the truck travel routes used in the transportation analysis were devised in a good-faith effort at full disclosure based on reasoned analysis of the Project site’s location in the context of the regional transportation network and City of Moreno Valley truck routes. Notwithstanding the above, the Project Applicant is requesting a condition of approval from the City that will require outbound truck traffic from the Project site to proceed directly to I-215 via Graham Street and Cactus Avenue.

In response to the Commenter’s assertion that the Project’s transportation analysis should have assigned traffic to Cactus Avenue, as noted above, outbound Project truck traffic is expected to utilize Cactus Avenue because it is the quickest travel route from the Project site for outgoing trucks to reach the State highway system. The Project’s peak hour truck traffic volumes along Cactus Avenue would not meet the City’s standard for a quantitative transportation analysis and would not substantially cause or contribute to the need for additional improvements because they are relatively low would not be discernable from existing background traffic.

Lastly, the Commenter commits a fallacy of exclusion by asserting the Project’s transportation analysis is flawed because very few trucks utilize the travel route (i.e., south bound travel on Graham Street) that is forecasted to be used by the Project. The commenter excludes consideration of the primary consideration why Graham Street may be underutilized under existing conditions by trucks: there is no existing development on the south side of Alessandro Boulevard between Frederick Street and Graham Street, thusly, there is no need under existing conditions for trucks to return to I-215 from this location. If the Project site were to be developed, it is indisputable that truck usage of Graham Street would increase because Graham Street is the first southbound route upon exiting the Project site that connects to Cactus Avenue (and provides access to I-215).

## COMPASS DANBE CENTERPOINTE - RESPONSE TO SIERRA CLUB COMMENT LETTERS

October 5, 2021

Page 4 of 11

### II-B.1: Response to comment that "The MND Fails to Accurately Describe the Project's Setting in Relation to Sensitive Receptors"

The Commenter claims that the MND's air quality analysis is inadequate because it does not account for potential health risks at nine school locations in the general vicinity of the Project site and/or City-designated truck routes. Three (3) of the schools cited by the commenter are located adjacent to Frederick Street (north of Alessandro Boulevard). As explained in Response II-A, Project truck traffic is not expected to use Frederick Street because it is an inefficient path of travel from the Project site. Because Project trucks are not expected to use Frederick Street, the Project would not expose school receptors adjacent to Frederick Street to substantial adverse health effects from diesel particulate matter (DPM) emissions. Three (3) additional schools cited by the Commenter are located adjacent to Heacock Street (north of Alessandro Boulevard). As explained in Response II-A, Project truck traffic is not expected to use Heacock Street because it is an inefficient path of travel from the Project site. Because Project trucks are not expected to use Heacock Street, the Project would not expose school receptors adjacent to Heacock Street to substantial adverse health effects from diesel particulate matter (DPM) emissions. Further, it should be noted that the City's certified EIR for the Brodiaea Commerce Center (SCH No. 2017111042), which is herein incorporated by reference, found that truck travel along Heacock Street would not expose any of the schools adjacent to Heacock Street (north of Alessandro Boulevard) to substantial adverse health effects from DPM emissions. Based on the foregoing, the analysis in the MND was adequate and appropriately analyzed the Project's likely impacts. Notwithstanding, the Project Applicant is requesting a condition of approval from the City that will require outbound truck traffic from the Project site to proceed directly to I-215 via Graham Street and Cactus Avenue, and will ensure that Project trucks do not expose school receptors adjacent to Frederick Street and Heacock Street to DPM emissions.

The final three (3) schools cited by the Commenter are located adjacent to Alessandro Boulevard: SIATech Moreno Valley Independent Study High School, Pacific View Charter School, and Garvey/Allen Visual & Performing Arts Academy. For purposes of health risk assessments, a school-use sensitive receptor is a location where a school-aged child would remain for 8-hours per day throughout the course of a traditional school year. None of the schools cited by the Commenter meet this definition. SIATech Moreno Valley Independent Study High School is an online-based, independent study program where most assignments are completed from home with some in-person learning opportunities.<sup>2</sup> Pacific View Charter School is a home study program for elementary school students, a blended home study and in-person program for middle school, and a customizable (at home or blended) program for high school students.<sup>3</sup> Garvey/Allen Visual & Performing Arts Academy offers a combination of online-based instruction and at-home independent study.<sup>4</sup> Accordingly, the MND was not deficient by not evaluating potential health risks at these schools because students would not be present on-site for a substantial enough time period to even be subject to potential health risks associated from the proposed Project

Notwithstanding, a health risk assessment was performed for SIATech Moreno Valley Independent Study High School. This location was selected for analysis because it is the closest of the schools cited by the Commenter to the Project site and, therefore, would be exposed to the highest health hazard risks from trucks traveling to/from the Project site and from trucks idling on the Project site. Although only high school students have the potential to be present at SIATech Moreno Valley Independent Study High School, the health risk assessment assumed a

<sup>2</sup> <https://www.siatechschoools.org/schools/california-charter-schools/moreno-valley-charter-school/>

<sup>3</sup> <https://pacificview.org/moreno-valley/>

<sup>4</sup> <https://4.files.edl.io/d6b1/10/03/20/212848-b6bf9aad-2d8a-4caf-9592-acb3362b6bc3.pdf>

nine (9) year exposure duration as a conservative measure. Even with this conservative assumption, the maximum health risk at this location would be 0.33 in one million, which is less than the maximum risk already identified in the MND. Furthermore, any other school locations in the vicinity of the Project site or along the truck routes used by the Project, would experience a lesser concentration and consequently a lesser risk than what could occur at the SIATech Moreno Valley Independent Study High School location modeled. See Attachment A for additional details on the HRA calculation and modeling outputs.

*II-B.2 Response to comment that “The MND Underestimates the Project’s Operational NO<sub>x</sub> Impacts, Which Are Potentially Significant”*

The Commenter alleges that the MND underestimates the Project’s Operational NO<sub>x</sub> impacts and claims that they are potentially significant if emissions from transport refrigeration units (TRUs) and an emergency generator were included in the analysis. The Commenter attempts to calculate TRU emissions however makes several flawed assumptions. Although the Commenter correctly identifies that the refrigerated portions of the Project’s warehouse buildings would generate 90 trips per day, the Commenter goes on to conflate truck trips with the actual trucks on the Project site, essentially doubling the number of trucks equipped with TRUs. For example, 90 truck trips associated with the refrigerated portion of the Project’s warehouse buildings represents 45 trucks equipped with TRUs entering, then exiting the Project site per day. In other words, 90 truck trips (two-way) equals 45 inbound trucks (one-way) and 45 outbound trucks (one-way). Additionally, the Commenter attempts to overstate the truck trips and associated NO<sub>x</sub> emissions by utilizing survey data from SCAQMD that identifies that there may be an increase in trucking activity during peak seasons. As stated in the MND, the Project’s truck trips, and associated emissions are based on survey data conducted by the Institute of Transportation Engineers for the subject land use types and represent reasonable assumptions for good-faith disclosure (also see Response I-A to the October 4, 2021 comment letter).

It should be noted that emissions from TRUs are not a consideration in the California Emissions Estimator Model (CalEEMod), which is the model recommended for use in CEQA analysis by various air districts, including SCAQMD, in which the Project is located, therefore inclusion of TRUs likely represents a negligible amount of emissions for most land-use development projects. When attempting to include emissions from TRUs the Commenter relies on the California Air Resources Board (CARB) emissions limits set for various engine sizes. When calculating emissions from TRUs it would be more appropriate to utilize the 2017 Off-road Emissions model, version 1.0.1 (Orion), developed by the CARB. Orion does not provide emission rates per hour or mile as with the on-road emission model and only provides emission inventories. Emission results are produced in tons per day while all activity, fuel consumption and horsepower hours were reported at annual levels. The emission inventory is based on specific assumptions including the average horsepower rating of specific types of equipment and the hours of operation annually. These assumptions are not always consistent with assumptions used in the modeling of project level emissions. Therefore, the emissions inventory was converted into emission rates to accurately calculate emissions from TRU operation associated with project level details. This was accomplished by converting the annual horsepower hours to daily operational characteristics and converting the daily emission levels into hourly emission rates based on the total emission of each criteria pollutant by equipment type and the average daily hours of operation. If the Project were to include TRU emissions associated with the cold-storage use, up to 45 trucks (one-way) or 90 truck trips (two-way) would include TRUs. Using CARB’s Orion model, and the 1.5 hours of operation cited by the commenter this would result in an additional 1.10 pounds of NO<sub>x</sub> emissions per day, when added to

the 52.7 pounds of NO<sub>x</sub> from the Project, as disclosed in the MND, the Project would result in no more than 53.8 pounds of NO<sub>x</sub> emissions, which is still less than the threshold of 55 pounds per day for NO<sub>x</sub> emissions, even if TRUs were manually added to the emissions total. See Attachment B for additional details on TRU emissions calculation.

With respect to the potential of emergency diesel generators, the Commenter assumes that one would exist, which is speculative in nature. Additionally, the function of an emergency generator is such that it would only operate in emergency situations, which is outside the scope of the CEQA-level analysis. Further, the “testing” that the commenter purportedly accounts for, based on a 1 hour per day estimate, is loosely derived by the Commenter’s misreading of the applicable SCAQMD rule which typically allows for up to 50 hours of operation for testing. This does not mean that every permitted generator operates for that time period, it is simply the upper limit allowed for testing purposes. The Commenter provides no substantial evidence to support its claim of 1 hour of operation.

*II-B.3: Response to comment that “The MND Employs Faulty Construction Equipment Assumptions”*

The Commenter claims that the MND employs faulty construction equipment assumptions simply because changes were made to the model defaults. As noted in the MND and the Air Quality Impact Analysis (Technical Appendix A1, see Page 38), the construction duration and schedule was based on the Project’s anticipated opening year and represents a reasonable approximation of the expected construction fleet as required by CEQA guidelines. Further, the Commenter’s claim that construction equipment often operates for 10 hours per day is unfounded and not supported by substantial evidence. To the contrary, the default assumptions in CalEEMod which are based on construction survey data, concludes that the equipment on average does not operate more than 8 hours per day, which is the assumptions that were utilized in the MND.

*II-C: Response to the comment that “The MND’s Noise Analysis Is Inadequate, and There is a Fair Argument that the Project May Have Significant Noise Impacts”*

The Commenter asserts that the MND’s noise analysis is inadequate because it does not account for Project-related truck traffic along Heacock Street, Frederick Street, or Cactus Avenue.

Refer to Response II-A for an explanation of why it is unlikely that Project truck traffic would utilize Heacock Street and Frederick Street. Because the Project is not expected to send truck traffic to Heacock Street or Frederick Street, it was appropriate for the noise analysis to omit an analysis of these street segments. Furthermore, as also noted in Response II-A, the Project Applicant is requesting a condition of approval from the City that will require outbound truck traffic from the Project site to proceed directly to I-215 via Graham Street and Cactus Avenue. With application of this condition of approval, there will be no potential for the Project to cause or contribute excessive traffic noise to sensitive receptors adjacent to Heacock Street or Frederick Street.

Also, as noted in Response II-A, the Project would contribute low numbers of truck traffic to Cactus Avenue; Project truck traffic – and its noise – would not be discernable from existing background levels. Furthermore, there are no existing sensitive receptors along Cactus Avenue between Graham Street and I-215 that could be adversely affected by traffic noise. Accordingly, there is no potential for Project truck traffic traveling along Cactus Avenue to expose sensitive receptors to excessive traffic noise.

Responses to October 4, 2021 Comment Letter

I-A: Response to the comment that “The MND Underestimates the Project’s Operational NO<sub>x</sub> Impacts, Which Are Potentially Significant”

The Commenter asserts that the NO<sub>x</sub> impacts disclosed in the MND underestimate the Project’s actual effect because truck trips are undercounted. Also, the Commenter reiterates comments from the October 1, 2021 comment letter related to the use of TRUs and emergency generator operation.

The Commenter’s assertion that truck trips are undercounted in the MND analysis is based on an incorrect application of peaking factors from a 2014 white paper published by SCAQMD. The Commenter applied seasonal peaking factors to traffic from Building 2. However, the SCAQMD white paper only identifies seasonal peaking factors for buildings in excess of 200,000 square feet and that utilize a high-cube warehouse land use code for traffic analysis. Proposed Building 2 has a floor area of less than 100,000 square feet; therefore, the peaking recommendations from the SCAQMD white paper are not applicable to Building 2. Additionally, the non-refrigerated portions of Buildings 1 and 2 were modeled as a standard warehouse use (ITE Land Use Code 150) and not as a high-cube warehouse use (ITE Land Use Code 154). The peaking recommendations in the SCAQMD white paper are not intended to apply to ITE Land Use Code 150. Because ITE Land Use Code 150 is more conservative than ITE Land Use Code 154, applying a peaking factor to Land Use Code 150 results in traffic volumes that were not supported by the SCAQMD white paper. Were the SCAQMD white paper peaking factors correctly applied to the Project – which also would require the entire Project to be modeled only with high-cube land use codes – the Project’s traffic would generate 200 truck trips per day, which is less than the 224 trucks trips disclosed in the MND and less than the 286 truck trips purported by the Commenter. Because the MND provides an analysis that is more conservative than the methodology from the SCAQMD white paper, the air quality analysis in the MND does not undercount NO<sub>x</sub> emissions and no changes to the analysis are warranted.

Land Use	Project Bldg Area (TSF)	Average Daily Trip Rate (Trips/TSF)	Peak Season Trip Rate (Trips/TSF)	Average Daily Truck Trips (MND)	Peak Season Daily Truck Trips
Building 1:					
Non-Refrigerated High-Cube Warehouse	206.665	0.223	0.297	98	61
Refrigerated High-Cube Warehouse	88.571	0.742	0.890	68	79
Building 2:					
Non-Refrigerated Warehouse	70.876	0.469	0.469	36	33
Refrigerated High-Cube Warehouse	30.376	0.742	0.890	22	27
Total Trucks				224	200

Refer to Response II.B-2 from the October 1, 2021 comment letter for responses to the Commenter’s assertion related to emissions from TRUs and emergency generators.

I-B: Response to the comment that “The MND Fails to Analyze Fully the Project’s Health Risks

The Commenter alleges that the MND fails to fully analyze the Project’s health risks. The Commenter states that the MND should include potential impacts associated with emergency diesel generators and include construction-related health risks. See Response to Comment II-B.2 from the October 1, 2021 comment letter, above, for a rebuttal of the Commenter’s claims regarding emergency diesel generators.

Attachment: SUPPLEMENTAL INFORMATION (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

## COMPASS DANBE CENTERPOINTE - RESPONSE TO SIERRA CLUB COMMENT LETTERS

October 5, 2021

Page 8 of 11

The Commenter attempts to calculate construction health risks, however it appears that the underlying assumptions of the Commenter may be flawed; there are several references to the Sacramento Metropolitan Air Quality Management District (SMAQMD) in Attachment B of the Commenter's supporting calculation – it is unclear what relevance parameters from SMAQMD have for purposes of the Project's health risk analysis because the Project is located in a completely different air district, the SCAQMD. The MND concluded that construction emissions would not exceed SCAQMD thresholds established to protect public health and air quality, and therefore the health risk associated with construction emissions for the surrounding sensitive land uses would be less than significant. However, to address the commenter's concerns regarding construction emissions, a construction health risk has been prepared utilizing the appropriate AERMOD modeling software (the same model used in the MND for the Project's operational health risk assessment), which allows for calculation of annual average concentrations and allows for the geospatial placing of the source and receptors. The results of the construction health risk assessment identify a potential cancer risk associated with construction activity of 1.31 in one million at the nearest receptor, which is substantially below the applicable significance thresholds. Lastly, it is not appropriate to "stack" and add up the construction health risks with the operational health risks because the duration of exposure varies and the point of impact can also be different due to the location of the receptors relative to the source. See Attachment C for additional details on the construction HRA calculation and modeling outputs.

### Conclusion

Based on the comments and the responses provided above, there are no changes needed to the analyses contained in the IS/MND. The IS/MND is fundamentally adequate, and all of the conclusions presented in the IS/MND are supported by evidence provided within the IS/MND, its Technical Appendices, and the administrative record for the proposed Project.

Sincerely,  
T&B PLANNING, INC.

David Ornelas

\*\*\* MODELOPTs: RegDEFAULT CONC ELEV URBAN ADJ\_U\*

\*\*\* MODEL SETUP OPTIONS SUMMARY

\*\*\*

-----  
-----

\*\*Model Is Setup For Calculation of Average CONCentration Values.

-- DEPOSITION LOGIC --

\*\*NO GAS DEPOSITION Data Provided.  
\*\*NO PARTICLE DEPOSITION Data Provided.  
\*\*Model Uses NO DRY DEPLETION. DRYDPLT = F  
\*\*Model Uses NO WET DEPLETION. WETDPLT = F

\*\*Model Uses URBAN Dispersion Algorithm for the SBL for 577 Source(s),  
for Total of 1 Urban Area(s):  
Urban Population = 2189641.0 ; Urban Roughness Length = 1.000 m

\*\*Model Uses Regulatory DEFAULT Options:  
1. Stack-tip Downwash.  
2. Model Accounts for ELEVated Terrain Effects.

Attachment: SUPPLEMENTAL INFORMATION (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

- 3. Use Calms Processing Routine.
- 4. Use Missing Data Processing Routine.
- 5. No Exponential Decay.
- 6. Urban Roughness Length of 1.0 Meter Assumed.

\*\*Other Options Specified:

ADJ\_U\* - Use ADJ\_U\* option for SBL in AERMET  
 CCVR\_Sub - Meteorological data includes CCVR substitutions  
 TEMP\_Sub - Meteorological data includes TEMP substitutions

\*\*Model Assumes No FLAGPOLE Receptor Heights.

\*\*The User Specified a Pollutant Type of: OTHER

\*\*Model Calculates ANNUAL Averages Only

\*\*This Run Includes: 577 Source(s); 1 Source Group(s); and 6  
 Receptor(s)

with: 0 POINT(s), including  
 0 POINTCAP(s) and 0 POINTHOR(s)  
 and: 577 VOLUME source(s)  
 and: 0 AREA type source(s)  
 and: 0 LINE source(s)  
 and: 0 RLINE/RLINEXT source(s)  
 and: 0 OPENPIT source(s)  
 and: 0 BUOYANT LINE source(s) with 0 line(s)

\*\*Model Set To Continue RUNNING After the Setup Testing.

\*\*The AERMET Input Meteorological Data Version Date: 16216

\*\*Output Options Selected:

Model Outputs Tables of ANNUAL Averages by Receptor  
 Model Outputs External File(s) of High Values for Plotting (PLOTFILE  
 Keyword)  
 Model Outputs Separate Summary File of High Ranked Values (SUMMFILE  
 Keyword)

\*\*NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours  
 m for Missing  
 Hours  
 b for Both Calm  
 and Missing Hours

\*\*Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 442.00 ; Decay  
 Coef. = 0.000 ; Rot. Angle = 0.0  
 Emission Units = GRAMS/SEC ;  
 Emission Rate Unit Factor = 0.10000E+07

Attachment: SUPPLEMENTAL INFORMATION (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

Output Units = MICROGRAMS/M\*\*3

\*\*Approximate Storage Requirements of Model = 3.7 MB of RAM.

\*\*Input Runstream File: aermod.inp

\*\*Output Print File: aermod.out

\*\*Detailed Error/Message File: 13661 HRA (REV).ERR

\*\*File for Summary of Results: 13661 HRA (REV).SUM

TRU Emission Calculation

The TRU calculations are based on the 2017 Offroad Emissions model, version 1.0.1 (Orion), developed by the California Air Resources Board. The following parameters were used to generate the emissions database:

Region: County

Scenario: All Adopted Rules – Exhaust

Vehicle Classification: Types – All TRU Types

Orion does not provide emission rates per hour or mile as with the on-road emission model and only provides emission inventories. Emission results are produced in tons per day while all activity, fuel consumption and horsepower hours were reported at annual levels. The emission inventory is based on specific assumptions including the average horsepower rating of specific types of equipment and the hours of operation annually. These assumptions are not always consistent with assumptions used in the modeling of project level emissions. Therefore, the emissions inventory was converted into emission rates to accurately calculate emissions from TRU operation associated with project level details. This was accomplished by converting the annual horsepower hours to daily operational characteristics and converting the daily emission levels into hourly emission rates based on the total emission of each criteria pollutant by equipment type and the average daily hours of operation.

Daily Emission Rates

- RESP Respiratory System
- CNS/PNS Central/Peripheral Nervous System
- CV/BL Cardiovascular/Blood System
- IMMUN Immune System
- KIDN Kidney
- GI/LV Gastrointestinal System/Liver
- REPRO Reproductive System (e.g. teratogenic and developmental effects)
- EYES Eye irritation and/or other effects

Note: Exposure factors used to calculate contaminant intake

exposure frequency (days/year)	264
exposure duration (years)	0.44
inhalation rate (L/kg-day)	1090
inhalation absorption factor	1
averaging time (years)	70
fraction of time at home	0.85
age sensitivity factor (0 to 2 years old)	10

1.31E-06

PAGE 1  
\*\*\* MODELOPTs: RegDEFAULT CONC ELEV URBAN ADJ\_U\*

\*\*\* MODEL SETUP OPTIONS SUMMARY

\*\*\*

-----  
-----

\*\*Model Is Setup For Calculation of Average CONCentration Values.

-- DEPOSITION LOGIC --

\*\*NO GAS DEPOSITION Data Provided.

\*\*NO PARTICLE DEPOSITION Data Provided.

\*\*Model Uses NO DRY DEPLETION. DRYDPLT = F

\*\*Model Uses NO WET DEPLETION. WETDPLT = F

\*\*Model Uses URBAN Dispersion Algorithm for the SBL for 2 Source(s),  
for Total of 1 Urban Area(s):  
Urban Population = 2189641.0 ; Urban Roughness Length = 1.000 m

\*\*Model Uses Regulatory DEFAULT Options:

- 1. Stack-tip Downwash.
- 2. Model Accounts for ELEVated Terrain Effects.
- 3. Use Calms Processing Routine.
- 4. Use Missing Data Processing Routine.
- 5. No Exponential Decay.
- 6. Urban Roughness Length of 1.0 Meter Assumed.

\*\*Other Options Specified:

- ADJ\_U\* - Use ADJ\_U\* option for SBL in AERMET
- CCVR\_Sub - Meteorological data includes CCVR substitutions
- TEMP\_Sub - Meteorological data includes TEMP substitutions

\*\*Model Assumes No FLAGPOLE Receptor Heights.

\*\*The User Specified a Pollutant Type of: OTHER

\*\*Model Calculates ANNUAL Averages Only

\*\*This Run Includes: 2 Source(s); 1 Source Group(s); and 5  
Receptor(s)

with: 0 POINT(s), including

Attachment: SUPPLEMENTAL INFORMATION (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

```

and:      0 POINTCAP(s) and      0 POINTHOR(s)
and:      2 VOLUME source(s)
and:      0 AREA type source(s)
and:      0 LINE source(s)
and:      0 RLINE/RLINEXT source(s)
and:      0 OPENPIT source(s)
and:      0 BUOYANT LINE source(s) with      0 line(s)

```

\*\*Model Set To Continue RUNNING After the Setup Testing.

\*\*The AERMET Input Meteorological Data Version Date: 16216

\*\*Output Options Selected:

```

Model Outputs Tables of ANNUAL Averages by Receptor
Model Outputs External File(s) of High Values for Plotting (PLOTFILE

```

Keyword)

```

Model Outputs Separate Summary File of High Ranked Values (SUMMFILE

```

Keyword)

```

**NOTE: The Following Flags May Appear Following CONC Values:  c for Calm Hours
                                                                m for Missing

```

Hours

b for Both Calm

and Missing Hours

```

**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 442.00 ; Decay
Coef. = 0.000 ; Rot. Angle = 0.0
Emission Units = GRAMS/SEC ;
Emission Rate Unit Factor = 0.10000E+07
Output Units = MICROGRAMS/M**3

```

\*\*Approximate Storage Requirements of Model = 3.5 MB of RAM.

\*\*Input Runstream File: aermod.inp

\*\*Output Print File: aermod.out

\*\*Detailed Error/Message File: 13661 CONS HRA.ERR

\*\*File for Summary of Results: 13661 CONS HRA.SUM

Sent By E-mail

October 5, 2021

Julia Descoteaux, Associate Planner  
City of Moreno Valley  
Community Development Department, Planning Division  
14177 Frederick Street  
Moreno Valley, CA 92553

**RE: COMPASS DANBE CENTERPOINTE - RESPONSE TO SIERRA CLUB COMMENT LETTERS**

Dear Ms. Descoteaux:

T&B Planning, Inc. (T&B Planning) is the environmental consulting firm that prepared the Initial Study/Mitigated Negative Declaration (IS/MND) for the Compass Danbe Centerpointe project. T&B Planning has prepared this letter in response to two letters sent to the City by Andrew Miller of Shute, Mihaly, and Weinberger LLP (hereinafter "Commenter") on behalf of the Moreno Valley Group Sierra Club. The responses provided below and on the following pages are numbered to correspond with the individual comments from the two comment letters.

Reponses to October 1, 2021 Comment Letter

*I-A: Response to comment that "The Project is Vertically Inconsistent with the General Plan"*

The Commenter states their general opinion that the Project is inconsistent with the City's General Plan based on statements in the General Plan that industrial uses and residential uses should not be located adjacent to each other. That is not the intent of the City's General Plan. Instead, all projects should be designed with existing land uses in mind. Warehouses and residential uses exist in harmony throughout the City.

Without specific examples, it is difficult to determine what land use conflicts the Commenter asserts to be present. The City's development standards and the Project's design ensure smooth transitions between the various land uses. The Project does, in fact, minimize potential health risks and the assertion that significant buffers between residential and nonresidential uses are required is significantly outdated.<sup>1</sup>

A City's determination that a project is consistent with its general plan "carries a strong presumption of regularity. This determination can be overturned only if the [City] abused its discretion—that is, did not proceed legally, or if the determination is not supported by findings, or if the findings are not supported by substantial evidence." (*Sequoyah Hills Homeowners Assn. v. City of Oakland* (1993) 23 Cal.App.4th 704, 717). "State law does not require perfect conformity between a proposed project and the applicable general plan" because "it is nearly, if not absolutely, impossible for a project to be in perfect conformity with each and every policy set forth in the applicable plan." (*Pfeiffer v. City of Sunnyvale City Council* (2011) 200 Cal.App.4th 1552, 1563).

## COMPASS DANBE CENTERPOINTE - RESPONSE TO SIERRA CLUB COMMENT LETTERS

October 5, 2021

Page 2 of 11

“A project is consistent with the general plan if, considering all its aspects, it will further the objectives and policies of the general plan and not obstruct their attainment.” (*Clover Valley Foundation v. City of Rocklin* (2011) 197 Cal.App.4th 200, 238, citing *Sequoyah Hills*, supra, 23 Cal.App.4th at 719. To be consistent, a project must simply be “compatible” with the objectives, policies, general land uses and programs specified. (*Sequoyah Hills*, supra, 23 Cal.App.4th at 717–718; *Families Unafraid to Uphold Rural etc. v. County v. Board of Supervisors* (“FUTURE”) (1998) 62 Cal.App.4th 1332, 1336).

Courts accord great deference to a City’s determination of general plan consistency, “because the body which adopted the general plan policies in its legislative capacity has unique competence to interpret those policies when applying them in its adjudicatory capacity. Because policies in a general plan reflect a range of competing interests, the governmental agency must be allowed to weigh and balance the plan’s policies when applying them, and it has broad discretion to construe its policies in light of the plan’s purposes. (*Pfeiffer*, supra, 200 Cal.App.4th 1552, 1563). The record demonstrates that the City considered all applicable land use plans, including the City’ General Plan and determined that the Project conformed to those policies.

Allowing business to develop and grow, and a resulting increase in truck traffic (or automobile traffic) in the City is not inconsistent with the General Plan. Warehouses and other non-residential uses are able to harmoniously coexist with residential uses throughout the City. Contrary to the assertion otherwise, the City did not flatly reject recommendations from the South Coast Air Quality Management District (SCAQMD). As an initial point, the Project does not result in any transportation or air quality significant impacts and mitigation is not required. In addition, the SCAQMD recently adopted a Warehouse Indirect Source Rule (ISR), Rule 2305, in May 2021, which is intended to reduce air quality effects associated with the warehouse industry throughout the South Coast Air Basin. The proposed Project would be subject to compliance with the ISR; the Project’s compliance with the ISR is not reflected in the air emissions totals presented in the IS/MND. In general, the Rule establishes the Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program, which is a points system that is based upon the actual number of trucks that come to and leave the warehouse. Each year the Project’s operator(s) will be obligated to determine how many points the warehouse is required to achieve using a formula set out in the Rule. If the required number of points is not achieved, the warehouse operator would be required to pay a fee to the SCAQMD, which would use collected funds to improve air quality in the South Coast Air Basin.

### I-B: Response to comment that “The Project Would Create Horizontal Inconsistencies in the General Plan”

See Response to Comment I-B. The comment is based on the false premise that industrial and residential land uses are incompatible and that the General Plan “discourages” this type of development.

The policies listed in the General Plan do not discourage the Project or the Project being built at this site. Instead, the policies cited are intended to allow these various uses to coexist. As an example, Policy LCC.3-17 states an objective of “[s]creen[ing] and buffer[ing] nonresidential projects to protect adjacent residential property and other sensitive land uses when necessary to mitigate noise, glare and other adverse effects on adjacent uses.” As another example, Policy N.1-2 states an objective to “[g]uide the location and design of transportation facilities, industrial uses, and other potential noise generators to minimize the effects of noise on adjacent land uses.”

## COMPASS DANBE CENTERPOINTE - RESPONSE TO SIERRA CLUB COMMENT LETTERS

October 5, 2021

Page 3 of 11

### II-A: Response to comment that “The MND’s Transportation Analysis Is Inadequate, and There is a Fair Argument that the Project May Have Significant Transportation Impacts”

The Commenter asserts that the Project’s transportation analysis is inadequate because of various purported deficiencies with the forecasted distribution of truck trips to roadways in proximity of the Project site.

In response to the assertion that the transportation analysis is inadequate because it does not assign truck traffic trips to either Frederick Street or Heacock Street, both the City and the Project’s transportation engineer – Urban Crossroads, Inc., a professional transportation engineering firm and expert on traffic analyses in the Inland Empire – concurred that truck traffic is most likely to use Alessandro Boulevard to access the Project site from I-215 due to the lack of turns required upon exiting the freeway and that truck traffic leaving the Project site is most likely to return to I-215 from Cactus Avenue (via Graham Street) due to the ease of access to the freeway. Because left turns out of the Project site are not possible due to the raised median in Alessandro Boulevard, trucks would be required to make a loop with three right turns upon exiting the Project site to reach Frederick Street; this path of travel is considered highly unlikely because trucks avoid having to make excessive turns and vehicle miles traveled would be longer than simply returning to I-215. Similarly, trucks exiting the Project site are not considered likely to use Heacock Street to access SR-60 due to the extra turns and travel distance required. Accordingly, the truck travel routes used in the transportation analysis were devised in a good-faith effort at full disclosure based on reasoned analysis of the Project site’s location in the context of the regional transportation network and City of Moreno Valley truck routes. Notwithstanding the above, the Project Applicant is requesting a condition of approval from the City that will require outbound truck traffic from the Project site to proceed directly to I-215 via Graham Street and Cactus Avenue.

In response to the Commenter’s assertion that the Project’s transportation analysis should have assigned traffic to Cactus Avenue, as noted above, outbound Project truck traffic is expected to utilize Cactus Avenue because it is the quickest travel route from the Project site for outgoing trucks to reach the State highway system. The Project’s peak hour truck traffic volumes along Cactus Avenue would not meet the City’s standard for a quantitative transportation analysis and would not substantially cause or contribute to the need for additional improvements because they are relatively low would not be discernable from existing background traffic.

Lastly, the Commenter commits a fallacy of exclusion by asserting the Project’s transportation analysis is flawed because very few trucks utilize the travel route (i.e., south bound travel on Graham Street) that is forecasted to be used by the Project. The commenter excludes consideration of the primary consideration why Graham Street may be underutilized under existing conditions by trucks: there is no existing development on the south side of Alessandro Boulevard between Frederick Street and Graham Street, thusly, there is no need under existing conditions for trucks to return to I-215 from this location. If the Project site were to be developed, it is indisputable that truck usage of Graham Street would increase because Graham Street is the first southbound route upon exiting the Project site that connects to Cactus Avenue (and provides access to I-215).

## COMPASS DANBE CENTERPOINTE - RESPONSE TO SIERRA CLUB COMMENT LETTERS

October 5, 2021

Page 4 of 11

### II-B.1: Response to comment that "The MND Fails to Accurately Describe the Project's Setting in Relation to Sensitive Receptors"

The Commenter claims that the MND's air quality analysis is inadequate because it does not account for potential health risks at nine school locations in the general vicinity of the Project site and/or City-designated truck routes. Three (3) of the schools cited by the commenter are located adjacent to Frederick Street (north of Alessandro Boulevard). As explained in Response II-A, Project truck traffic is not expected to use Frederick Street because it is an inefficient path of travel from the Project site. Because Project trucks are not expected to use Frederick Street, the Project would not expose school receptors adjacent to Frederick Street to substantial adverse health effects from diesel particulate matter (DPM) emissions. Three (3) additional schools cited by the Commenter are located adjacent to Heacock Street (north of Alessandro Boulevard). As explained in Response II-A, Project truck traffic is not expected to use Heacock Street because it is an inefficient path of travel from the Project site. Because Project trucks are not expected to use Heacock Street, the Project would not expose school receptors adjacent to Heacock Street to substantial adverse health effects from diesel particulate matter (DPM) emissions. Further, it should be noted that the City's certified EIR for the Brodiaea Commerce Center (SCH No. 2017111042), which is herein incorporated by reference, found that truck travel along Heacock Street would not expose any of the schools adjacent to Heacock Street (north of Alessandro Boulevard) to substantial adverse health effects from DPM emissions. Based on the foregoing, the analysis in the MND was adequate and appropriately analyzed the Project's likely impacts. Notwithstanding, the Project Applicant is requesting a condition of approval from the City that will require outbound truck traffic from the Project site to proceed directly to I-215 via Graham Street and Cactus Avenue, and will ensure that Project trucks do not expose school receptors adjacent to Frederick Street and Heacock Street to DPM emissions.

The final three (3) schools cited by the Commenter are located adjacent to Alessandro Boulevard: SIATech Moreno Valley Independent Study High School, Pacific View Charter School, and Garvey/Allen Visual & Performing Arts Academy. For purposes of health risk assessments, a school-use sensitive receptor is a location where a school-aged child would remain for 8-hours per day throughout the course of a traditional school year. None of the schools cited by the Commenter meet this definition. SIATech Moreno Valley Independent Study High School is an online-based, independent study program where most assignments are completed from home with some in-person learning opportunities.<sup>2</sup> Pacific View Charter School is a home study program for elementary school students, a blended home study and in-person program for middle school, and a customizable (at home or blended) program for high school students.<sup>3</sup> Garvey/Allen Visual & Performing Arts Academy offers a combination of online-based instruction and at-home independent study.<sup>4</sup> Accordingly, the MND was not deficient by not evaluating potential health risks at these schools because students would not be present on-site for a substantial enough time period to even be subject to potential health risks associated from the proposed Project

Notwithstanding, a health risk assessment was performed for SIATech Moreno Valley Independent Study High School. This location was selected for analysis because it is the closest of the schools cited by the Commenter to the Project site and, therefore, would be exposed to the highest health hazard risks from trucks traveling to/from the Project site and from trucks idling on the Project site. Although only high school students have the potential to be present at SIATech Moreno Valley Independent Study High School, the health risk assessment assumed a

<sup>2</sup> <https://www.siatechschoools.org/schools/california-charter-schools/moreno-valley-charter-school/>

<sup>3</sup> <https://pacificview.org/moreno-valley/>

## COMPASS DANBE CENTERPOINTE - RESPONSE TO SIERRA CLUB COMMENT LETTERS

October 5, 2021

Page 5 of 11

nine (9) year exposure duration as a conservative measure. Even with this conservative assumption, the maximum health risk at this location would be 0.33 in one million, which is less than the maximum risk already identified in the MND. Furthermore, any other school locations in the vicinity of the Project site or along the truck routes used by the Project, would experience a lesser concentration and consequently a lesser risk than what could occur at the SIATech Moreno Valley Independent Study High School location modeled. See Attachment A for additional details on the HRA calculation and modeling outputs.

### *II-B.2 Response to comment that “The MND Underestimates the Project’s Operational NO<sub>x</sub> Impacts, Which Are Potentially Significant”*

The Commenter alleges that the MND underestimates the Project’s Operational NO<sub>x</sub> impacts and claims that they are potentially significant if emissions from transport refrigeration units (TRUs) and an emergency generator were included in the analysis. The Commenter attempts to calculate TRU emissions however makes several flawed assumptions. Although the Commenter correctly identifies that the refrigerated portions of the Project’s warehouse buildings would generate 90 trips per day, the Commenter goes on to conflate truck trips with the actual trucks on the Project site, essentially doubling the number of trucks equipped with TRUs. For example, 90 truck trips associated with the refrigerated portion of the Project’s warehouse buildings represents 45 trucks equipped with TRUs entering, then exiting the Project site per day. In other words, 90 truck trips (two-way) equals 45 inbound trucks (one-way) and 45 outbound trucks (one-way). Additionally, the Commenter attempts to overstate the truck trips and associated NO<sub>x</sub> emissions by utilizing survey data from SCAQMD that identifies that there may be an increase in trucking activity during peak seasons. As stated in the MND, the Project’s truck trips, and associated emissions are based on survey data conducted by the Institute of Transportation Engineers for the subject land use types and represent reasonable assumptions for good-faith disclosure (also see Response I-A to the October 4, 2021 comment letter).

It should be noted that emissions from TRUs are not a consideration in the California Emissions Estimator Model (CalEEMod), which is the model recommended for use in CEQA analysis by various air districts, including SCAQMD, in which the Project is located, therefore inclusion of TRUs likely represents a negligible amount of emissions for most land-use development projects. When attempting to include emissions from TRUs the Commenter relies on the California Air Resources Board (CARB) emissions limits set for various engine sizes. When calculating emissions from TRUs it would be more appropriate to utilize the 2017 Off-road Emissions model, version 1.0.1 (Orion), developed by the CARB. Orion does not provide emission rates per hour or mile as with the on-road emission model and only provides emission inventories. Emission results are produced in tons per day while all activity, fuel consumption and horsepower hours were reported at annual levels. The emission inventory is based on specific assumptions including the average horsepower rating of specific types of equipment and the hours of operation annually. These assumptions are not always consistent with assumptions used in the modeling of project level emissions. Therefore, the emissions inventory was converted into emission rates to accurately calculate emissions from TRU operation associated with project level details. This was accomplished by converting the annual horsepower hours to daily operational characteristics and converting the daily emission levels into hourly emission rates based on the total emission of each criteria pollutant by equipment type and the average daily hours of operation. If the Project were to include TRU emissions associated with the cold-storage use, up to 45 trucks (one-way) or 90 truck trips (two-way) would include TRUs. Using CARB’s Orion model, and the 1.5 hours of operation cited by the commenter this would result in an additional 1.10 pounds of NO<sub>x</sub> emissions per day, when added to

www.tbplanning.com

PLANNING • DESIGN • ENVIRONMENTAL • GRAPHICS

the 52.7 pounds of NO<sub>x</sub> from the Project, as disclosed in the MND, the Project would result in no more than 53.8 pounds of NO<sub>x</sub> emissions, which is still less than the threshold of 55 pounds per day for NO<sub>x</sub> emissions, even if TRUs were manually added to the emissions total. See Attachment B for additional details on TRU emissions calculation.

With respect to the potential of emergency diesel generators, the Commenter assumes that one would exist, which is speculative in nature. Additionally, the function of an emergency generator is such that it would only operate in emergency situations, which is outside the scope of the CEQA-level analysis. Further, the “testing” that the commenter purportedly accounts for, based on a 1 hour per day estimate, is loosely derived by the Commenter’s misreading of the applicable SCAQMD rule which typically allows for up to 50 hours of operation for testing. This does not mean that every permitted generator operates for that time period, it is simply the upper limit allowed for testing purposes. The Commenter provides no substantial evidence to support its claim of 1 hour of operation.

*II-B.3: Response to comment that “The MND Employs Faulty Construction Equipment Assumptions”*

The Commenter claims that the MND employs faulty construction equipment assumptions simply because changes were made to the model defaults. As noted in the MND and the Air Quality Impact Analysis (Technical Appendix A1, see Page 38), the construction duration and schedule was based on the Project’s anticipated opening year and represents a reasonable approximation of the expected construction fleet as required by CEQA guidelines. Further, the Commenter’s claim that construction equipment often operates for 10 hours per day is unfounded and not supported by substantial evidence. To the contrary, the default assumptions in CalEEMod which are based on construction survey data, concludes that the equipment on average does not operate more than 8 hours per day, which is the assumptions that were utilized in the MND.

*II-C: Response to the comment that “The MND’s Noise Analysis Is Inadequate, and There is a Fair Argument that the Project May Have Significant Noise Impacts”*

The Commenter asserts that the MND’s noise analysis is inadequate because it does not account for Project-related truck traffic along Heacock Street, Frederick Street, or Cactus Avenue.

Refer to Response II-A for an explanation of why it is unlikely that Project truck traffic would utilize Heacock Street and Frederick Street. Because the Project is not expected to send truck traffic to Heacock Street or Frederick Street, it was appropriate for the noise analysis to omit an analysis of these street segments. Furthermore, as also noted in Response II-A, the Project Applicant is requesting a condition of approval from the City that will require outbound truck traffic from the Project site to proceed directly to I-215 via Graham Street and Cactus Avenue. With application of this condition of approval, there will be no potential for the Project to cause or contribute excessive traffic noise to sensitive receptors adjacent to Heacock Street or Frederick Street.

Also, as noted in Response II-A, the Project would contribute low numbers of truck traffic to Cactus Avenue; Project truck traffic – and its noise – would not be discernable from existing background levels. Furthermore, there are no existing sensitive receptors along Cactus Avenue between Graham Street and I-215 that could be adversely affected by traffic noise. Accordingly, there is no potential for Project truck traffic traveling along Cactus Avenue to expose sensitive receptors to excessive traffic noise.

### Responses to October 4, 2021 Comment Letter

#### I-A: Response to the comment that “The MND Underestimates the Project’s Operational NO<sub>x</sub> Impacts, Which Are Potentially Significant”

The Commenter asserts that the NO<sub>x</sub> impacts disclosed in the MND underestimate the Project’s actual effect because truck trips are undercounted. Also, the Commenter reiterates comments from the October 1, 2021 comment letter related to the use of TRUs and emergency generator operation.

The Commenter’s assertion that truck trips are undercounted in the MND analysis is based on an incorrect application of peaking factors from a 2014 white paper published by SCAQMD. The Commenter applied seasonal peaking factors to traffic from Building 2. However, the SCAQMD white paper only identifies seasonal peaking factors for buildings in excess of 200,000 square feet and that utilize a high-cube warehouse land use code for traffic analysis. Proposed Building 2 has a floor area of less than 100,000 square feet; therefore, the peaking recommendations from the SCAQMD white paper are not applicable to Building 2. Additionally, the non-refrigerated portions of Buildings 1 and 2 were modeled as a standard warehouse use (ITE Land Use Code 150) and not as a high-cube warehouse use (ITE Land Use Code 154). The peaking recommendations in the SCAQMD white paper are not intended to apply to ITE Land Use Code 150. Because ITE Land Use Code 150 is more conservative than ITE Land Use Code 154, applying a peaking factor to Land Use Code 150 results in traffic volumes that were not supported by the SCAQMD white paper. Were the SCAQMD white paper peaking factors correctly applied to the Project – which also would require the entire Project to be modeled only with high-cube land use codes – the Project’s traffic would generate 200 truck trips per day, which is less than the 224 trucks trips disclosed in the MND and less than the 286 truck trips purported by the Commenter. Because the MND provides an analysis that is more conservative than the methodology from the SCAQMD white paper, the air quality analysis in the MND does not undercount NO<sub>x</sub> emissions and no changes to the analysis are warranted.

Land Use	Project Bldg Area (TSF)	Average Daily Trip Rate (Trips/TSF)	Peak Season Trip Rate (Trips/TSF)	Average Daily Truck Trips (MND)	Peak Season Daily Truck Trips
Building 1:					
Non-Refrigerated High-Cube Warehouse	206.665	0.223	0.297	98	61
Refrigerated High-Cube Warehouse	88.571	0.742	0.890	68	79
Building 2:					
Non-Refrigerated Warehouse	70.876	0.469	0.469	36	33
Refrigerated High-Cube Warehouse	30.376	0.742	0.890	22	27
Total Trucks				224	200

Refer to Response II.B-2 from the October 1, 2021 comment letter for responses to the Commenter’s assertion related to emissions from TRUs and emergency generators.

#### I-B: Response to the comment that “The MND Fails to Analyze Fully the Project’s Health Risks

The Commenter alleges that the MND fails to fully analyze the Project’s health risks. The Commenter states that the MND should include potential impacts associated with emergency diesel generators and include construction-related health risks. See Response to Comment II-B.2 from the October 1, 2021 comment letter, above, for a rebuttal of the Commenter’s claims regarding emergency diesel generators.

## COMPASS DANBE CENTERPOINTE - RESPONSE TO SIERRA CLUB COMMENT LETTERS

October 5, 2021

Page 8 of 11

The Commenter attempts to calculate construction health risks, however it appears that the underlying assumptions of the Commenter may be flawed; there are several references to the Sacramento Metropolitan Air Quality Management District (SMAQMD) in Attachment B of the Commenter's supporting calculation – it is unclear what relevance parameters from SMAQMD have for purposes of the Project's health risk analysis because the Project is located in a completely different air district, the SCAQMD. The MND concluded that construction emissions would not exceed SCAQMD thresholds established to protect public health and air quality, and therefore the health risk associated with construction emissions for the surrounding sensitive land uses would be less than significant. However, to address the commenter's concerns regarding construction emissions, a construction health risk has been prepared utilizing the appropriate AERMOD modeling software (the same model used in the MND for the Project's operational health risk assessment), which allows for calculation of annual average concentrations and allows for the geospatial placing of the source and receptors. The results of the construction health risk assessment identify a potential cancer risk associated with construction activity of 1.31 in one million at the nearest receptor, which is substantially below the applicable significance thresholds. Lastly, it is not appropriate to "stack" and add up the construction health risks with the operational health risks because the duration of exposure varies and the point of impact can also be different due to the location of the receptors relative to the source. See Attachment C for additional details on the construction HRA calculation and modeling outputs.

### Conclusion

Based on the comments and the responses provided above, there are no changes needed to the analyses contained in the IS/MND. The IS/MND is fundamentally adequate, and all of the conclusions presented in the IS/MND are supported by evidence provided within the IS/MND, its Technical Appendices, and the administrative record for the proposed Project.

Sincerely,  
T&B PLANNING, INC.

\*\*\* MODELOPTs: RegDFault CONC ELEV URBAN ADJ\_U\*
\*\*\* MODEL SETUP OPTIONS SUMMARY

-----

\*\*Model Is Setup For Calculation of Average CONCentration Values.

-- DEPOSITION LOGIC --
\*\*NO GAS DEPOSITION Data Provided.
\*\*NO PARTICLE DEPOSITION Data Provided.
\*\*Model Uses NO DRY DEPLETION. DRYDPLT = F
\*\*Model Uses NO WET DEPLETION. WETDPLT = F

\*\*Model Uses URBAN Dispersion Algorithm for the SBL for 577 Source(s),
for Total of 1 Urban Area(s):
Urban Population = 2189641.0 ; Urban Roughness Length = 1.000 m

\*\*Model Uses Regulatory DEFAULT Options:
1. Stack-tip Downwash.
2. Model Accounts for ELEVated Terrain Effects.

Attachment: SUPPLEMENTAL INFORMATION (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

- 3. Use Calms Processing Routine.
- 4. Use Missing Data Processing Routine.
- 5. No Exponential Decay.
- 6. Urban Roughness Length of 1.0 Meter Assumed.

\*\*Other Options Specified:

ADJ\_U\* - Use ADJ\_U\* option for SBL in AERMET  
 CCVR\_Sub - Meteorological data includes CCVR substitutions  
 TEMP\_Sub - Meteorological data includes TEMP substitutions

\*\*Model Assumes No FLAGPOLE Receptor Heights.

\*\*The User Specified a Pollutant Type of: OTHER

\*\*Model Calculates ANNUAL Averages Only

\*\*This Run Includes: 577 Source(s); 1 Source Group(s); and 6 Receptor(s)

with: 0 POINT(s), including  
 0 POINTCAP(s) and 0 POINTHOR(s)  
 and: 577 VOLUME source(s)  
 and: 0 AREA type source(s)  
 and: 0 LINE source(s)  
 and: 0 RLINE/RLINEXT source(s)  
 and: 0 OPENPIT source(s)  
 and: 0 BUOYANT LINE source(s) with 0 line(s)

\*\*Model Set To Continue RUNNING After the Setup Testing.

\*\*The AERMET Input Meteorological Data Version Date: 16216

\*\*Output Options Selected:

Model Outputs Tables of ANNUAL Averages by Receptor  
 Model Outputs External File(s) of High Values for Plotting (PLOTFILE  
 Keyword)  
 Model Outputs Separate Summary File of High Ranked Values (SUMMFILE  
 Keyword)

\*\*NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours  
 m for Missing  
 Hours  
 b for Both Calm  
 and Missing Hours

\*\*Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 442.00 ; Decay  
 Coef. = 0.000 ; Rot. Angle = 0.0  
 Emission Units = GRAMS/SEC ;  
 Emission Rate Unit Factor = 0.10000E+07

Attachment: SUPPLEMENTAL INFORMATION (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

Output Units = MICROGRAMS/M\*\*3

\*\*Approximate Storage Requirements of Model = 3.7 MB of RAM.

\*\*Input Runstream File: aermod.inp

\*\*Output Print File: aermod.out

\*\*Detailed Error/Message File: 13661 HRA (REV).ERR

\*\*File for Summary of Results: 13661 HRA (REV).SUM

TRU - Instate Truck TRU	0.06	0.56	0.00	0.02	0.02	11.28

**TRU Emission Calculation**

The TRU calculations are based on the 2017 Offroad Emissions model, version 1.0.1 (Orion), developed by the California Air Resources Board. The following parameters were used to generate the emissions database:

Region: County

Scenario: All Adopted Rules – Exhaust

Vehicle Classification: Types – All TRU Types

Orion does not provide emission rates per hour or mile as with the on-road emission model and only provides emission inventories. Emission results are produced in tons per day while all activity, fuel consumption and horsepower hours were reported at annual levels. The emission inventory is based on specific assumptions including the average horsepower rating of specific types of equipment and the hours of operation annually. These assumptions are not always consistent with assumptions used in the modeling of project level emissions. Therefore, the emissions inventory was converted into emission rates to accurately calculate emissions from TRU operation associated with project level details. This was accomplished by converting the annual horsepower hours to daily operational characteristics and converting the daily emission levels into hourly emission rates based on the total emission of each criteria pollutant by equipment type and the average daily hours of operation.

Daily Emission Rates

\*\*\* MODELOPTs: RegDEFAULT CONC ELEV URBAN ADJ\_U\*

\*\*\* MODEL SETUP OPTIONS SUMMARY

\*\*\*

\*\*Model Is Setup For Calculation of Average CONCentration Values.

-- DEPOSITION LOGIC --

\*\*NO GAS DEPOSITION Data Provided.  
\*\*NO PARTICLE DEPOSITION Data Provided.  
\*\*Model Uses NO DRY DEPLETION. DRYDPLT = F  
\*\*Model Uses NO WET DEPLETION. WETDPLT = F

\*\*Model Uses URBAN Dispersion Algorithm for the SBL for 2 Source(s),  
for Total of 1 Urban Area(s):  
Urban Population = 2189641.0 ; Urban Roughness Length = 1.000 m

\*\*Model Uses Regulatory DEFAULT Options:  
1. Stack-tip Downwash.  
2. Model Accounts for ELEVated Terrain Effects.  
3. Use Calms Processing Routine.  
4. Use Missing Data Processing Routine.  
5. No Exponential Decay.  
6. Urban Roughness Length of 1.0 Meter Assumed.

\*\*Other Options Specified:  
ADJ\_U\* - Use ADJ\_U\* option for SBL in AERMET  
CCVR\_Sub - Meteorological data includes CCVR substitutions  
TEMP\_Sub - Meteorological data includes TEMP substitutions

\*\*Model Assumes No FLAGPOLE Receptor Heights.

\*\*The User Specified a Pollutant Type of: OTHER

\*\*Model Calculates ANNUAL Averages Only

\*\*This Run Includes: 2 Source(s); 1 Source Group(s); and 5 Receptor(s)

with: 0 POINT(s), including

Attachment: SUPPLEMENTAL INFORMATION (5554 : PEN20-0118-0119, PEN20-0122 and PEN 20-0124 Compass Danbe)

```

and:      0 POINTCAP(s) and      0 POINTHOR(s)
and:      2 VOLUME source(s)
and:      0 AREA type source(s)
and:      0 LINE source(s)

and:      0 OPENPIT source(s)
and:      0 BUOYANT LINE source(s) with      0 line(s)

```

\*\*Model Set To Continue RUNNING After the Setup Testing.

\*\*The AERMET Input Meteorological Data Version Date: 16216

\*\*Output Options Selected:

```

Model Outputs Tables of ANNUAL Averages by Receptor
Model Outputs External File(s) of High Values for Plotting (PLOTFILE

```

Keyword)

```

Model Outputs Separate Summary File of High Ranked Values (SUMMFILE

```

Keyword)

```

**NOTE: The Following Flags May Appear Following CONC Values:  c for Calm Hours
                                                                m for Missing

```

Hours

b for Both Calm

and Missing Hours

```

**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 442.00 ; Decay
Coef. = 0.000 ; Rot. Angle = 0.0
Emission Units = GRAMS/SEC ;
Emission Rate Unit Factor = 0.10000E+07
Output Units = MICROGRAMS/M**3

```

\*\*Approximate Storage Requirements of Model = 3.5 MB of RAM.

\*\*Input Runstream File: aermod.inp

\*\*Output Print File: aermod.out

\*\*Detailed Error/Message File: 13661 CONS HRA.ERR

\*\*File for Summary of Results: 13661 CONS HRA.SUM

Julia Descoteaux, Associate Planner  
City of Moreno Valley  
Community Development Department, Planning Division  
14177 Frederick Street  
Moreno Valley, CA 92553

**RE: COMPASS DANBE CENTERPOINTE - RESPONSE TO OSCAR ALVAREZ COMMENT LETTER**

Dear Ms. Descoteaux:

T&B Planning, Inc. (T&B Planning) is the environmental consulting firm that prepared the Initial Study/Mitigated Negative Declaration (IS/MND) for the Compass Danbe Centerpointe project. T&B Planning has prepared this letter in response to a letter sent to the City on October 4, 2021 by Oscar Alvarez (hereinafter "Commenter"). The responses provided below and on the following pages are numbered to correspond with the individual comments from the comment letter

*I: Response to comment that "The Compass Danbe Centerpointe fails to mitigate GHG and other gases emissions, worsening the already fragile local, regional, national and world-wide environment we live in. The should not be approved."*

The Commenter provides general information related to global climate change and asserts that the Project will worsen the environment because it does not provide GHG mitigation measures. The IS/MND and the Project's Greenhouse Gas Analysis (Technical Appendix F) demonstrate that the Project is calculated to generate 6,649.16 metric tons of carbon dioxide equivalent per year (MTCO2e/yr), which is below the level (10,000 MTCO2e/yr) at which the SCAQMD determined an industrial project could substantially contribute to global climate change. The MND's conclusion that the Project would result in less than significant impacts related greenhouse gas emissions and that mitigation was not required was appropriate.

*II. Response to comment that "The Compass Danbe Centerpointe fails to mitigate GHG and other gases emissions, making even worse the air quality in Riverside County, one of the highest polluted counties in the US. The project should not be approved."*

*III. Response to comment that "The Compass Danbe Centerpointe fails to mitigate GHG and other gases emissions, making even worse the current air contaminants that Moreno Valley is experiencing, and that contribute to residents' heart attacks and strokes. Project should not be approved."*

The Commenter provides general information related to air quality conditions in Riverside County. The commenter also provides general information related to adverse health conditions associated with air pollutants. Potential health effects from exposure to air pollution resulting from the development proposed by the Project was disclosed

## COMPASS DANBE CENTERPOINTE - RESPONSE TO OSCAR ALVAREZ COMMENT LETTER

October 5, 2021

Page 2 of 3

in the IS/MND, the Project's Air Quality Impact Analysis (Technical Appendix A1) and the Project's Mobile Source Health Risk Assessment (Technical Appendix A1). The Air Quality Impact Analysis and Mobile Source Health Risk Assessment were prepared by Urban Crossroads, Inc., a professional consulting firm and recognized expert in air quality pollutant emissions analysis. The IS/MND and Air Quality Impact Analysis demonstrate that the Project would not exceed the regional or localized significance thresholds established by the South Coast Air Quality Management District (SCAQMD) for any criteria air pollutant after mitigation. By not exceeding the regional or significance thresholds, the Project would not hinder the SCAQMD's ability to meet the National Ambient Air Quality Standards (NAAQS) or the California Ambient Air Quality Standards (CAAQS), which were developed to protect human health. Also, the IS/MND and Mobile Source Health Risk Assessment demonstrate that the Project would not expose sensitive receptors near the Project site and the Project's truck travel route to carcinogenic and non-carcinogenic (chronic) health hazard risks that exceed the SCAQMD's significance thresholds.

*IV. Response to comment that "The Compass Danbe Centerpointe project fails to mitigate GHG and other gases emissions, making even worse the current air contaminants that Moreno Valley is already experiencing, and does not pursue mitigating measures as recommended by the Warehouse Indirect Source Rule (PR 2305), which include: acquiring zero-emissions or near-zero-emissions trucks, installing charging infrastructure, solar panels, and/or filter systems in schools, hospitals, community centers, and other locations. Project should not be approved."*

The Commenter makes general statements regarding health effects associated with air pollution. The Commenter also provides a general summary of the SCAQMD Indirect Source Rule (ISR). Responses II and III, above, address the Commenter's comments related to health effects from air pollutant emissions.

The Commenter's assertion that the Project does not pursue measures recommended by the ISR is incorrect. As a matter of local regulation – not mitigation – the Project would be subject to compliance with the ISR which is intended to reduce air quality effects associated with the warehouse industry throughout the South Coast Air Basin. In general, the ISR establishes the Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program, which is a points system that is based upon the actual number of trucks that come to and leave the warehouse. Each year the operator of the Project will be obligated to determine how many points the warehouse is required to achieve using a formula set out in the Rule. If the required number of points is not achieved, the warehouse operator would be required to pay a fee to the SCAQMD, which would use collected funds to improve air quality in the South Coast Air Basin.

*V. Response to the comment that "By reference, I support and fully concur with the comments provided by Shute, Mihaly and Weinberger LLP on this matter."*

Without evidence, the Commenter makes general statements that an Environmental Impact Report (EIR) should be prepared for the Project. The Commenter also cites comments sent separately to the City by Shute, Mihaly and Weinberger LLP on behalf of the Sierra Club. Responses to the comment letter by Shute, Mihaly and Weinberger LLP were provided to the City under separate cover and are incorporated by reference herein. The responses to the Shute, Mihaly, and Weinberger LLP comment letter demonstrate that the IS/MND's conclusion that the Project would not result in a significant environmental effect (with incorporation of the mitigation measures listed in the IS/MND) is correct and based on substantial evidence. An EIR is not required for the Project.

## COMPASS DANBE CENTERPOINTE - RESPONSE TO OSCAR ALVAREZ COMMENT LETTER

October 5, 2021

Page 3 of 3

*VI. Response to comment that “These are some of the areas that the City of Moreno Valley needs to emphasize and build upon, as we fight the existential threat of Climate Change, and these tall commitments need to be taken into consideration as plans are laid out for the future of the City of Moreno Valley. Doing otherwise is not fulfilling your leadership role to protect and provide the Moreno Valley residents with a healthy, safe and clean-living environment for the present, and future generations.”*

The Commenter lists goals to reduce GHG emissions, conserve energy, and support alternative forms of transportation. The Commenter does provide any comments specific to the Project or its environmental analysis. No further response is necessary.

### Conclusion

Based on the comments and the responses provided above, there are no changes needed to the analyses contained in the IS/MND. The IS/MND is fundamentally adequate, and all of the conclusions presented in the IS/MND are supported by evidence provided within the IS/MND, its Technical Appendices, and the administrative record for the proposed Project.

Sincerely,  
T&B PLANNING, INC.

David Ornelas  
Senior Project Manager

## Report to City Council

---

**TO:** Mayor and City Council

**FROM:** Manuel A. Mancha, Community Development Director

**AGENDA DATE:** January 18, 2022

**TITLE:** PEN21-0112 THROUGH PEN21-0114: COURTYARDS AT COTTONWOOD PHASE II A PROPOSED GENERAL PLAN AMENDMENT, CHANGE OF ZONE, AND PLOT PLAN FOR A 32-UNIT AFFORDABLE RESIDENTIAL DEVELOPMENT ON 1.61 ACRES, LOCATED NORTH OF COTTONWOOD AVENUE ON THE EAST SIDE OF INDIAN STREET

---

### **RECOMMENDED ACTION**

#### **Recommendations: That the City Council:**

1. **ADOPT** Resolution 2022-XX: A Resolution of the City Council of the City of Moreno Valley, California denying the appeal of the Planning Commission's recommendation for Amendment to General Plan (PEN21-0113); Change of Zone (PEN21-0114); Plot Plan (PEN21-0112); and Mitigated Negative Declaration;
2. **ADOPT** Resolution 2022-XX: A Resolution of the City Council of the City of Moreno Valley **CERTIFYING** that the Initial Study/Mitigated Negative Declaration prepared for General Plan Amendment (PEN21-0113), Change of Zone (PEN21-0114), and Plot Plan (PEN21-0112) on file with the Community Development Department, incorporated herein by this reference, was completed in compliance with the California Environmental Quality Act Guidelines, and that the City Council reviewed and considered the information contained in the Initial Study/Mitigated Negative Declaration and that the document reflects the City's independent judgment and analysis, and **ADOPTING** the Mitigation Monitoring and Reporting Program prepared for the above-referenced Mitigated Negative Declaration; and
3. **ADOPT** Resolution 2022-XX: A Resolution of the City Council of the City of Moreno Valley approving a General Plan Amendment (PEN21-0113) based on the Recitals Evidence contained in the Administrative Record and Findings as

set for in the Resolution No. 2022-\_\_ to amend the General Plan Land Use Map as described in the Resolution, based on the findings contained in the Resolution, and the revised Land Use Map; and

4. **INTRODUCE** and conduct the first reading by title only of Ordinance No. \_\_\_\_, approving a Change of Zone (PEN21-0114) to amend the City Zoning Atlas based on the Recitals, Evidence contained in the Administrative Records, and Findings as set forth in Ordinance No. \_\_\_\_; and
5. **ADOPT** Resolution No. 2022-XX, A Resolution of the City of Moreno Valley approving Plot Plan (PEN21-0112) based on the findings contained in this resolution, and subject to the conditions of approval included as Exhibit A; and
6. **SCHEDULE** the second reading and adoption of Ordinance No.\_\_\_\_ for the next regular meeting.

## **SUMMARY**

This report recommends approval of development applications for the Courtyards at Cottonwood Phase II that includes the development of a 32-unit affordable apartment project ("Proposed Project") on a 1.61-acre site located on the east side of Indian Street north of Cottonwood Avenue. The recommended actions for the project include a General Plan Amendment, Change of Zone, and a Plot Plan for multi-family residential development.

## **DISCUSSION**

### Advisory Board/Commission Recommendation

At its December 9, 2021 meeting, the Planning Commission held a public hearing and voted to recommend that the City Council certify the Mitigated Negative Declaration, adopt a Mitigation Monitoring and Reporting Program, and approve the General Plan Amendment, Change of Zone, and Plot Plan for the Courtyards at Cottonwood Phase II project.

### Appeal Filed

On December 17, 2021, an appeal was filed with the Community Development Director for the Courtyards at Cottonwood Phase II project stating the following:

Appeal of Amendment to General Plan and Plot Plan, Appeal of Negative Declaration, Appeal of Mitigated Negative Declaration, and request for City Council Hearing.

The appeal was filed per the Municipal Code requirements (Section 9.02.240) with a letter and the appropriate fee. The appellant is Julio J. Ramos, Law Offices of Julio J. Ramos on behalf of the Oneida Street Bike Club and Angelina Ramos, adjacent landowner.

### Project

Rancho Belago Developers, Inc., (“Applicant”) is requesting the approval of the following: 1) a General Plan Amendment (PEN21-0113) to amend the General Plan Land Use Designation from Public (P) to Residential 15 (R15); 2) a Change of Zone (PEN21-0114) to amend the Zoning Atlas from Public (P) District to Residential 15 (R15) District; and 3) a Plot Plan (PEN21-0112) for a 32-unit affordable apartment project (“Proposed Project”) on a 1.61-acre site located on the east side of Indian Street north of Cottonwood Avenue, Assessor Parcel No. 482-161-026 (“Project Site”). In addition to the above entitlement applications, the Applicant is seeking the City’s certification of a Mitigated Negative Declaration (MND) and the approval of a Mitigation Monitoring and Reporting Program (MMRP) pursuant to the California Environmental Quality Act (CEQA) and CEQA Guidelines.

### General Plan Amendment

The City of Moreno Valley General Plan, Land Use and Community Character Element designates the Project site as Public (P) and the proposal would change this to Residential 15 (R15).

Public (P), in general, provides for public and institutional uses; whereas Residential 15 (R15) will allow for the development of fifteen dwelling units per acre. The applicant needs the R15 designation in order to develop the 32-units (with the affordable density bonus) on the 1.61-acre site.

### Change of Zone

The proposed Change of Zone (PEN21-0114) from Public (P) District to Residential 15 (R15) District is also necessary to allow the development of the 32-units (with the affordable density bonus) on the 1.61-acre site.

### Plot Plan

Plot Plan (PEN21-0112), which is required for multiple-family residential projects shows the layout of the Proposed Project consisting of two 16-unit, two-story buildings, and a laundry building – a total of three buildings. The proposed project will share ingress and egress with the Phase I Project located to the south. The Phase I Project was approved in 2019 and is currently under construction. The Proposed Project will be served by a full-time onsite property manager and will include a community building, mail kiosk, a community pool, tot lot, basketball courts, and walking paths that will be situated within the Phase I Project but will provide for reciprocal access to the residents of the Proposed Project.

The Proposed Project’s two residential buildings will be located on the westerly portion of the Project Site with parking to the east and south, creating a buffer between the Proposed Project and the existing single-family homes to the east. A block wall will be constructed along the easterly property line between the existing single-family residential zone and the Proposed Project.

The Phase 1 Project extends Myrna Street westerly to form a cul-de-sac. This improves the circulation within the neighborhood to the east. Neither the Phase I Project nor the Proposed Project will allow any vehicle or pedestrian access from the cul-de-sac.

### **Affordable Housing Incentives**

The proposed development will be an affordable housing project that will be rented to extremely low-income households (up to 30% of median income), very low households (up to 50% of median income), low-income households (up to 60% median income), and moderate-income households (up to 80% median income). All income-restricted units will be offered at rents that do not exceed affordable rents as defined in the California Health and Safety Code, and these affordable rents will be enforced via the recordation of affordability covenants.

Per the City's Density Bonus Program for affordable housing, as set forth in MVMC Section 9.03.050, and applicable State requirements, the Proposed Project is eligible for a number of incentives or concessions in exchange for the recordation of long term affordability covenants. These incentives and concessions include the following:

1. Increased Density – The Proposed Project is eligible for a thirty-five (35%) percent density bonus. This means the base density of 15 dwelling units per acre may be increase to 20.25 dwelling units per acre. As such, the Proposed Project's density may be increased from 15 dwelling units per acre to 19.88 dwelling units per acre, which is needed in order to construct the 32 dwelling units on the 1.16-acre Project Site.
2. Affordable Parking Reduction – The Density Bonus Program for the Proposed Project allows for a 20% parking reduction since all of the Proposed Project's 32 units will be made available to extremely low, very low, low, or moderate-income households. With the 20% parking reduction, the Proposed Project will only be required to provide 52 parking spaces; however the Proposed Project will provide 53 parking spaces.
3. Modification of Development Standards – Consistent with the City's Density Bonus Program the Applicant is requesting a reduction in the private open space requirement for each ground floor unit. Specifically, the Applicant is seeking a reduction from the required 150 sq. ft. per ground floor unit to 100 sq. ft. per ground floor unit. The proposed 100 sq. ft. private open area, however, is consistent with the requirements for the Proposed Project's second-story units. This reduction in private open space for the ground floor units will not result in any reductions or variations in the Proposed Project's other requirement for open space, landscaping, or any lot coverage restrictions.
4. Development Impact and Park Impact Fee Reductions – Consistent with the City's Density Bonus Program, the Applicant is requesting a reduction in the Development Impact Fees and Park Land Impact Mitigation Fees. The Density Bonus Program allows for a fifty (50%) percent reduction in these fees for each unit that is made affordable to very low-income households and a twenty-five

(25%) percent reduction for each unit made affordable to low-income households.

The details of these aforementioned incentives and associated affordability requirements will be memorialized and incorporated into a Density Bonus Housing Agreement between the owner and the City and the affordable rents will also be enforceable via the recordation of long-term affordability covenants recorded against the Project Site.

### Site / Surrounding Area

The vacant 1.61-acre site is located north of Cottonwood Avenue on the east side of Indian Street between the existing school site and the Courtyards at Cottonwood Phase I which is under construction. Surrounding uses include Moreno Valley Adult/March Mountain High School to the north within the Public (P) District, and single-family residential development within the Residential 5 (R5) District to the east and west, with the Residential 10 (R10) District to the south. The Proposed Project has been designed to be compatible with the adjacent uses by providing appropriate setbacks between the residential structures and the existing residences.

### Access

Access to the Project Site will be from the access points approved with Phase I Project, with full access also being provided on Cottonwood Avenue. There will be an “exit only” on Indian Street.

### Parking

Parking will be located on the easterly portion of the Project Site and along the southerly boundary adjacent to the Proposed Project’s main drive aisle. Both covered and open parking spaces will be provided with a total of 53 parking spaces which, as discussed above, complies with parking requirements after the parking reductions the Proposed Project is entitled to under the City’s Density Bonus Program.

### Design/Landscaping

The buildings reflect a contemporary architecture style with high quality durability materials which include concrete flat tile style roofing, metal awnings, and energy-efficient windows, consistent with the Phase 1 project to the south.

The proposed project complies with the development standards for the Residential 15 (R15) District and the City’s Municipal Code. Landscaping is designed to meet the landscape standards set forth in the City’s Municipal Code Section 9.17.

### Environmental

An Initial Study was prepared by Kimley-Horn & Associates in compliance with the California Environmental Quality Act (CEQA) and the CEQA Guidelines. The Initial Study examined the Proposed Project’s impacts on the environment. The Initial

Study/Mitigation Negative Declaration (IS/MND) provides information in support of the finding that a Mitigated Negative Declaration serves as the appropriate CEQA documentation for the Proposed Project in that the Proposed Project, with the implementation of the proposed mitigation measures, will not have a significant effect on the environment.

Mitigation Measures are recommended for the Proposed Project in the following areas: Biological Resources, Cultural, Noise, and Tribal Cultural Resources. However, these measures are not required to address a known significant impact. Based on the Initial Study, and the proposed mitigation measures, the Project will not cause any significant impacts or environmental damage. Notwithstanding, the measures for Tribal resources have been included to address input from the Tribal governments. The measures are specifically intended to ensure that potential Tribal cultural resources that might be discovered are adequately protected from destruction.

The public comment period for the Notice of Availability for the Initial Study/Mitigated Negative Declaration began on November 10, 2021, and ended on December 2, 2021, which satisfies the required 20-day, Public Comment Period. As of the preparation of this staff report, no comments have been received.

### **ALTERNATIVES**

1. Conduct a public hearing and take action to certify the Initial Study/Mitigated Negative Declaration and Mitigated Monitoring and Reporting Program, and approve the General Plan Amendment, Change of Zone, and the Plot Plan consistent with the Staff recommendations to the Planning Commission. Staff recommends this alternative.
2. Conduct a public hearing on the Project and do not approve the applications. Staff does not recommend this alternative.

### **FISCAL IMPACT**

Not applicable

### **NOTIFICATION**

Public notice was sent to all property owners of record within 600' of the project. The public hearing notice for this project was also posted for the Proposed Project on the Project Site and published in the Press Enterprises Newspaper.

## **CITY COUNCIL GOALS**

**Positive Environment.** Create a positive environment for the development of Moreno Valley's future.

**Community Image, Neighborhood Pride and Cleanliness.** Promote a sense of community pride and foster an excellent image about our City by developing and executing programs which will result in quality development, enhanced neighborhood preservation efforts, including home rehabilitation and neighborhood restoration.

## **CITY COUNCIL STRATEGIC PRIORITIES**

1. Economic Development
2. Public Safety
3. Library
4. Infrastructure
5. Beautification, Community Engagement, and Quality of Life
6. Youth Programs

**RESOLUTION NUMBER 2022-XX**

**A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, TO DENY THE APPEAL (PAA21-0002) OF THE PLANNING COMMISSION'S RECOMMENDATION TO THE CITY COUNCIL TO APPROVE A 32-UNIT AFFORDABLE HOUSING PROJECT LOCATED ON INDIAN STREET NORTH OF COTTONWOOD AVENUE (APN 482-161-026)**

**WHEREAS**, the City of Moreno Valley ("City") is a general law city and a municipal corporation of the State of California; and

**WHEREAS**, Julio J. Ramos ("Appellant") has filed an appeal of the Planning Commission's recommendation for the approval of the Courtyards at Cottonwood – Phase II Project, which includes the approval for the development of a 32-unit affordable housing apartment project with associated public improvements ("Project") located on the east side of Indian Street north of Cottonwood Avenue (APN 482-161-026) ("Project Site"); and

**WHEREAS**, Section 9.02.240 (Appeals) of the Moreno Valley Municipal Code acknowledges that the purpose of the appeal process is to provide a mechanism by which any affected person may appeal a decision of the planning commission to the city council.; and

**WHEREAS**, the Appeal has been filed in accordance with Section 9.02.240 (Appeals) of the Municipal Code; and

**WHEREAS**, Staff has presented for the City Council's consideration the Courtyards at Cottonwood Phase II project; and

**WHEREAS**, pursuant to the provisions of Section 9.02.200 (Public Hearing and Notification Procedures) of the Municipal Code and Government Code section 65905, a public hearing was scheduled for January 18, 2022 and notice thereof was duly published and posted, and mailed to all property owners of record within 600 feet of the Project Site; and

**WHEREAS**, on January 18, 2022, the public hearing to consider the whether each of the requisite findings specified in Section 9.02.210 of the Municipal code, Appeal was duly conducted by the City Council at which time all interested persons were provided with an opportunity to testify and to present evidence; and

**WHEREAS**, on January 18, 2022, the public hearing to consider the "Project" Applications was duly conducted by the City Council at which time all interested persons were provided with an opportunity to testify and to present evidence; and

**NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:**

### **Section 1. Recitals and Exhibits**

That the foregoing Recitals and attached Exhibits are true and correct and are hereby incorporated by this reference.

### **Section 2. Notice**

That pursuant to Government Code section 66020(d)(1), notice is hereby given that the proposed project is subject to certain fees, dedications, reservations and other exactions as provided herein.

### **Section 3. Evidence**

That the City Council has considered all of the evidence submitted into the Administrative Record related to the Project on file with the Community Development Department, including, but not limited to, the following:

- (a) Appeal, as provided for as Exhibit A;
- (b) Moreno Valley General Plan and all other relevant provisions contained therein;
- (c) Title 9 (Planning and Zoning) of the Moreno Valley Municipal Code and all other relevant provisions referenced therein;
- (d) Application for the General Plan Amendment (PEN21-0113) to amend the Moreno Valley General Plan to change the land use of the Project Site from Public (P) to Residential (15) and all documents, records and references contained therein;
- (e) Application for the Change of Zone (PEN21-0114) from Public (P) District to Residential 15 (R15) District;
- (f) Mitigated Negative Declaration and all related notices, studies, reports, public comments;
- (g) Proposed Mitigation Monitoring and Reporting Program (MMRP) and findings and determinations contained therein;
- (h) Application for a Plot Plan (PEN21-0112), with Conditions of Approval;
- (i) Planning Commission Staff Report and all documents, records and references related thereto, and Staff's presentation at the public hearing;
- (j) Testimony and/or comments from Applicant and its representatives during the public hearing; and
- (k) Testimony and/or comments from all persons that was provided in written format or correspondence, at, or prior to, the public hearing.

### **Section 4. Findings**

That based on the foregoing Recitals and the Evidence contained in the Administrative Record as set forth above, the City Council makes the following findings in denying Appeal PAA21-0002

- (a) The proposed project is consistent with the goals, objectives, policies and programs of the general plan;

- (b) The proposed project complies with all applicable zoning and other regulations;
- (c) The proposed project will not be detrimental to the public health, safety or welfare or materially injurious to properties or improvements in the vicinity;
- (d) The location, design and operation of the proposed project will be compatible with existing and planned land uses in the vicinity.

**Section 5. Approval**

That based on the foregoing Recitals, Evidence contained in the Administrative Record and Findings set forth above, the City Council hereby denies the Appeal.

**Section 6. Repeal of Conflicting Provisions**

That all the provisions as heretofore adopted by the City Council that are in conflict with the provisions of this Resolution are hereby repealed.

**Section 7. Severability**

That the City Council declares that, should any provision, section, paragraph, sentence or word of this Resolution be rendered or declared invalid by any final court action in a court of competent jurisdiction or by reason of any preemptive legislation, the remaining provisions, sections, paragraphs, sentences or words of this Resolution as hereby adopted shall remain in full force and effect.

**Section 8. Effective Date**

That this Resolution shall take effect immediately upon the date of adoption.

**Section 9. Certification**

That the City Clerk for the City Council shall certify to the passage of this Resolution.

**PASSED AND ADOPTED THIS 18<sup>th</sup> day of January, 2022**

VIA SIMPLICITY FILING  
CITY OF MORENO VALLEY  
CITY COUNCIL  
CITY HALL COUNCIL CHAMBER – 14177 FREDERICK STREET

Dear COUNCILMEMEBERS:

APPEAL OF AMENDMENTS  
TO GENERAL PLAN AND PLOT PLAN  
APPEAL OF NEGATIVE DECLARATION  
APPEAL OF MITIGATED NEGATIVE DECLARATION  
REQUEST FOR CITY COUNCIL HEARING

AGENDA ITEM 3. Case: General Plan Amendment (PEN21-0113)  
Change of Zone (PEN21-0114)  
Plot Plan (PEN21-0112)  
Applicant: Rancho Belago Developers, Inc  
Property Owner Moreno Valley Housing Authority  
Representative James Jernigan  
Location: North of Cottonwood Avenue on the east side of Indian  
Street (APN: 482-161-026)  
Case Planner: Julia Descoteaux  
Council District: 1

Proposal The Applicant is requesting the approval of the following entitlements for the development of Courtyards at Cottonwood Phase II which consists of a 32-unit affordable apartment complex located on a 1.61-acre site: 1) a General Plan Amendment (GPA) amending the City’s General Plan from Public (P) to Residential 15 (R15); 2) a Change of Zone from Public (P) District to Residential 15 (R15) District and 3) a Plot Plan for a 32-unit affordable apartment complex.

Dear Honorable Members of the Moreno Valley City Council,

On behalf of the Oneida Street Bike Club and Angelina Ramos adjacent landowner to project this letter pursuant to Moreno Valley Administrative Code Section 9.02.240 formally opposes elements of the proposed amendments to the general plan, and plot plan due to serious public/traffic safety, and the negative declarations relating to traffic circulation, noise and environmental issues.

The project as proposed has significant environmental impacts that cannot be mitigated to a level of insignificance, an Environmental Impact Report (“EIR”) must be prepared. An EIR is required even if the city believes there is a significant chance that adequate mitigation measures can be constructed. All that is necessary for an EIR to be required is for there to be a “fair argument” that there may be a potentially significant impact that cannot be mitigated to insignificance.

The project as currently proposed does not comply with the Level of Service (LOS) policies currently reflected in the City of Moreno Valley General Plan and legislative traffic reduction policies. The project contains no mitigation discussion related to increased traffic flows in the immediate area and in the City of Moreno Valley in general. There is no detailed discussion of traffic circulation and safety of adjacent streets as the traffic patterns currently exist. The LOS for large portions of Indian Street is rated D meaning “High-density, but stable, flow. Speed and freedom to maneuver are severely restricted, and the driver or pedestrian experiences a generally poor level of comfort and convenience. Small increases in traffic flow will generally cause operational problems at this level.” (Figure 5.2-7 CITY OF MORENO VALLEY GENERAL PLAN TRAFFIC STUDY (TRAFFIC STUDY), PREPARED BY URBAN CROSSROADS, INC. (JUNE 30, 2004, REVISED). In other words, the City of Moreno valley needs to identify and mitigate the traffic and noise consequences resulting from this project under current conditions and not those of twenty years ago.

I. THE TRAFFIC IMPACT ANALYSIS FAILED TO ANALYZE THE PROJECT’S IMPACTS AGAINST EXISTING, PRESENT-DAY CONDITIONS AND IS INCOMPLETE AS A RESULT

The traffic impact analysis fails to take into account the actual conditions as they exist today. Under CEQA Guidelines section 15125, “[a]n EIR must include a description of the physical environmental conditions in the vicinity of the projects, as they exist at the time the notice of preparation is published, or if no notice of preparation is published, at the time environmental analysis is commenced, both from a local and regional perspective. This environmental setting will normally constitute the baseline physical conditions by which a lead agency determines whether an impact is significant.” Further, CEQA Guidelines section 15126.2 provides that “[a]n EIR shall identify and focus on the significant environmental effects of the proposed project. In assessing the impact of a proposed project on the environment, the lead agency should normally limit its examination to changes in the existing physical conditions in the affected area as they exist at the time the notice of preparation is published, or if no notice of preparation is published, at the time environmental analysis is commenced.” The Kimley Horn study

did not take into account the project impacts in combination with existing conditions in the area, and its exclusion of a VMT analysis is unlawful due to this defect. For example, it uses a 7,500 daily traffic flow for Indian Street that has not changed since 2004. The Phase 1 and Phase 2 Courtyard at Cottonwood projects should be examined together and not in discrete elements for purposes of a TIA. There is no analysis regarding reductions in traffic flows per the 15% state goal in traffic reduction. Development proposals that also include a General Plan Amendment, Specific Plan, Zone Change or other approval that increases traffic beyond what was approved in the General Plan are required to perform a General Plan Buildout analysis to assess long term impacts. This analysis will determine if the Circulation Element of the General Plan is adequate to accommodate projected traffic at the required LOS, or if additional mitigation is necessary. This lack of analysis is violative of CEQA and denies the public reasoned review of the impacts to quality of life and the environment cumulative to prior projects and projected growth.

II. THE PROJECT FAILS IN ALL RESPECTS TO ADHERE TO SENATE BILL 743 (SB 743) AND THE CITY OF MORENO VALLEY TRANSPORTATION IMPACT ANALYSIS PREPARATION GUIDE FOR VEHICLE MILES TRAVELED AND LEVEL OF SERVICE ASSESSMENT (JUNE 2020)<sup>1</sup>

C.2-1 DESIGN, PLAN, MAINTAIN, AND OPERATE STREETS USING COMPLETE STREETS PRINCIPLES FOR ALL TYPES OF TRANSPORTATION PROJECTS INCLUDING DESIGN, PLANNING, CONSTRUCTION, MAINTENANCE, AND OPERATIONS OF NEW AND EXISTING STREETS AND FACILITIES. ENCOURAGE STREET CONNECTIVITY THAT AIMS TO CREATE A COMPREHENSIVE, INTEGRATED, CONNECTED NETWORK FOR ALL MODES.

C.2-2 IMPLEMENT A LAYERED NETWORK APPROACH BY PRIORITIZING CONFLICTING MODES, SUCH AS TRUCKS AND BICYCLISTS, ON ALTERNATIVE PARALLEL ROUTES TO PROVIDE SAFE FACILITIES FOR EACH MODE.

C.2-9 REQUIRE CONNECTIVITY AND ACCESSIBILITY TO A MIX OF LAND USES THAT MEETS RESIDENTS' DAILY NEEDS WITHIN WALKING DISTANCE. TYPICALLY, THIS MEANS CREATING WALKABLE NEIGHBORHOODS WITH BLOCK LENGTHS BETWEEN 330 FEET AND 660 FEET IN LENGTH, BASED ON DIVISIONS OF THE SQUARE MILE GRID ON WHICH THE CITY IS LAID OUT.

---

<sup>1</sup> Date: March 30, 2021 DRAFT MEMORANDUM  
To: Michael Lloyd, P.E., City of Moreno Valley  
From: Jason D. Pack, P.E.  
Paul Herrmann, P.E.  
Subject: Moreno Valley General Plan Circulation Element Vehicle Miles Traveled (VMT) Impact Assessment

C.2-10 ENSURE THAT COMPLETE STREETS APPLICATIONS INTEGRATE THE NEIGHBORHOOD AND COMMUNITY IDENTITY INTO THE STREET DESIGN AND RETROFITS. THIS CAN INCLUDE SPECIAL PROVISIONS FOR PEDESTRIANS AND BICYCLES THAT COMPLEMENT THE CONTEXT OF EACH COMMUNITY.

C.2-B CONTINUE TO IMPLEMENT THE BICYCLE MASTER PLAN TO PROVIDE LOW-STRESS BICYCLE NETWORK IMPROVEMENTS CITYWIDE.

C.2-C DEVELOP CURB SPACE MANAGEMENT GUIDELINES THAT INCORPORATE BEST PRACTICES AND STRATEGIES FOR DELIVERIES AND DROP-OFFS IN COMMERCIAL AND MIXED-USE AREAS.

C.2-F AS NEW TRANSPORTATION TECHNOLOGIES AND MOBILITY SERVICES, INCLUDING CONNECTED AND AUTONOMOUS VEHICLES, ELECTRIC VEHICLES, ELECTRIC BICYCLES AND SCOOTERS, AND TRANSPORTATION NETWORK COMPANIES (E.G., UBER AND LYFT) ARE USED BY THE PUBLIC, REVIEW AND UPDATE CITY POLICIES AND PLANS TO MAXIMIZE THE BENEFIT TO THE PUBLIC OF SUCH TECHNOLOGIES AND SERVICES WITHOUT ADVERSELY AFFECTING THE CITY'S TRANSPORTATION NETWORK. UPDATES TO THE CITY'S POLICIES AND PLANS MAY COVER TOPICS SUCH AS ELECTRIC VEHICLE CHARGING STATIONS, CURB SPACE MANAGEMENT, CHANGES IN PARKING SUPPLY REQUIREMENTS, SHARED PARKING, ELECTRIC SCOOTER USE POLICIES, ETC.

C.2-H EVALUATE OPPORTUNITIES TO IMPLEMENT ROUNDABOUTS AS TRAFFIC CONTROL AS NEW DEVELOPMENT PROJECTS ARE PROPOSED, CONSIDERING SAFETY, TRAFFIC CALMING, COST, MAINTENANCE AND GREENHOUSE GAS REDUCTION RELATED TO IDLING.

C.3-4 REQUIRE DEVELOPMENT PROJECTS TO COMPLETE TRAFFIC IMPACT STUDIES THAT CONDUCT VEHICLE MILES TRAVELED ANALYSIS AND LEVEL OF SERVICE ASSESSMENT AS APPROPRIATE PER TRAFFIC IMPACT STUDY GUIDELINES.

C.3-7 SUPPORT REGIONAL EFFORTS IN THE DEVELOPMENT OF A VMT MITIGATION IMPACT FEE PROGRAM.

C.3-10 EMPLOY PARKING MANAGEMENT STRATEGIES, SUCH AS SHARED PARKING IN MIXED USE AREAS, ON-STREET

RESIDENTIAL PARKING, AND SPILL-OVER PARKING TO AVOID CONSTRUCTION OF UNNECESSARY PARKING.

C.4-4 ALL NEW DEVELOPMENTS SHALL PROVIDE SIDEWALKS IN CONFORMANCE WITH THE CITY'S STREETS CROSS-SECTION STANDARDS, AND APPLICABLE POLICIES FOR DESIGNATED URBAN AND RURAL AREAS.

C.4-5 RECOGNIZE THAT HIGH-SPEED STREETS, HIGH-VOLUME STREETS AND TRUCK ROUTES CAN INCREASE PEDESTRIAN AND BICYCLE STRESS LEVELS AND DECREASE COMFORTABILITY. PROVIDE INCREASED BUFFERS AND PROTECTED BICYCLE LANES IN HIGH-STRESS AREAS, WHERE FEASIBLE. PROVIDE LANDSCAPED BUFFERS WHERE FEASIBLE TO SEPARATE PEDESTRIAN ENVIRONMENTS FROM THE TRAVEL WAY ADJACENT TO MOTOR VEHICLES. PROVIDE CONVENIENT AND HIGHVISIBILITY CROSSINGS FOR PEDESTRIANS.

C.4-A PREPARE AND MAINTAIN A PEDESTRIAN ACCESS PLAN SUPPORTING A SAFER AND MORE CONVENIENT NETWORK OF IDENTIFIED PEDESTRIAN ROUTES WITH ACCESS TO MAJOR EMPLOYMENT CENTERS, SHOPPING DISTRICTS, REGIONAL TRANSIT CENTERS, SCHOOLS, AND RESIDENTIAL NEIGHBORHOODS; THE PLAN SHOULD ADDRESS SAFER ROUTES TO SCHOOLS, SAFER ROUTES FOR SENIORS, AND INCREASE ACCESSIBILITY FOR PERSONS WITH DISABILITIES.

C.4-B THE CITY SHALL ACTIVELY PURSUE FUNDING FOR THE INFILL OF SIDEWALKS IN DEVELOPED AREAS. THE HIGHEST PRIORITY SHALL BE TO PROVIDE SIDEWALKS ON DESIGNATED SCHOOL ROUTES.

C.4-C CONTINUE ON-GOING COORDINATION WITH TRANSIT AUTHORITIES TOWARD THE EXPANSION OF TRANSIT FACILITIES INTO NEWLY DEVELOPED AREAS.

C.4-D WORK WITH MAJOR EMPLOYERS, THE HOSPITAL COMPLEXES, AND MORENO VALLEY COLLEGE TO STUDY ALTERNATIVES TO CONVENTIONAL BUS SYSTEMS, SUCH AS SMALLER SHUTTLE BUSES (MICRO-TRANSIT), ON-DEMAND TRANSIT SERVICES, OR TRANSPORTATION NETWORKING COMPANY SERVICES THAT CONNECT NEIGHBORHOOD CENTERS TO LOCAL ACTIVITY CENTERS WITH GREATER COST EFFICIENCY.

C.4-E PURSUE REGIONAL, STATE AND FEDERAL GRANT OPPORTUNITIES TO FUND DESIGN AND CONSTRUCTION OF THE CITY BIKEWAY SYSTEM.

C.5-1 WORK TO REDUCE VMT THROUGH LAND USE PLANNING, ENHANCED TRANSIT ACCESS, LOCALIZED ATTRACTIONS, AND ACCESS TO NON-AUTOMOTIVE MODES.

C.5-2 ENCOURAGE PUBLIC TRANSPORTATION THAT ADDRESSES THE PARTICULAR NEEDS OF TRANSIT-DEPENDENT INDIVIDUALS, INCLUDING SENIOR CITIZENS, THE DISABLED, AND LOW - INCOME RESIDENTS.

C.5-3 ENCOURAGE BICYCLING AS AN ALTERNATIVE TO SINGLE OCCUPANT VEHICLE TRAVEL FOR THE PURPOSE OF REDUCING FUEL CONSUMPTION, TRAFFIC CONGESTION, AND AIR POLLUTION.

C.5-4 PARTICULARLY IN CORRIDORS AND CENTERS, WORK WITH TRANSIT SERVICE PROVIDERS TO PROVIDE FIRST-RATE AMENITIES TO SUPPORT PEDESTRIAN, BICYCLE AND TRANSIT USAGE, SUCH AS BUS SHELTERS AND BENCHES, BIKE RACKS ON BUSES, HIGH-VISIBILITY CROSSINGS, AND MODERN BIKE STORAGE.

C.5-5 ENCOURAGE LOCAL EMPLOYERS TO IMPLEMENT TDM STRATEGIES, INCLUDING SHARED RIDE PROGRAMS, PARKING CASH OUT, TRANSIT BENEFITS, ALLOWING TELECOMMUTING AND ALTERNATIVE WORK SCHEDULES. C.5-A MAINTAIN A LIST OF RECOMMENDED TRANSPORTATION DEMAND MANAGEMENT (TDM) STRATEGIES FOR EMPLOYERS AND NEW DEVELOPMENTS.

C.5-A KEEP THE CITY'S TRAFFIC IMPACT STUDY GUIDELINES CURRENT AND REVISE THE CEQA THRESHOLD OF SIGNIFICANCE FOR VMT AS APPROPRIATE.

C.5-B MAINTAIN A LIST OF RECOMMENDED TRANSPORTATION DEMAND MANAGEMENT (TDM) STRATEGIES FOR EMPLOYERS AND NEW DEVELOPMENTS.

C.5-C REMAIN FLEXIBLE IN THE PURSUIT AND ADOPTION OF TRANSPORTATION FUNDING MECHANISMS THAT FUND INNOVATIVE TRANSPORTATION SOLUTIONS.

C.5-D WORK WITH RTA AND METROLINK TO INCREASE TRANSIT SERVICE FREQUENCY, SPEED, AND RELIABILITY AND INCREASE RIDERSHIP. STRENGTHEN LINKAGES AND ACCESS TO THE METROLINK STATION.

C.5-E INTEGRATE TRANSIT ACCESS AND INFORMATION SYSTEMS INTO EMPLOYMENT CENTERS, MAJOR DESTINATIONS AND NEW MULTI-FAMILY RESIDENTIAL DEVELOPMENT.

C.5-F DEVELOP A PARK ONCE STRATEGY TO PROMOTE WALKABILITY IN MIXED USE CENTERS AND CORRIDORS.

C.5-G STUDY THE FEASIBILITY OF IMPLEMENTING CAR-SHARING PROGRAM, WORKING WITH ESTABLISHED PROVIDERS.

C.6-2 SUPPORT IMPLEMENTATION OF NEW TECHNOLOGIES AND BEST PRACTICES THAT MAKE LOGISTICS OPERATIONS CLEANER, GREENER, AND MORE EFFICIENT, INCLUDING ELECTRIC TRUCK CHARGING STATIONS, AUTONOMOUS VEHICLE SENSORS AND COMMUNICATIONS.

### III. THE CUMULATIVE IMPACT OF THE PROJECT PLACES PUBLIC SAFETY AT UNREASONABLE RISK

Many children, students, bicyclists, and pedestrian safety measures are deficient in this quadrant of the Indian Street artery, and further traffic volumes resulting from the allocation of 53 additional parking spaces to the area will further expose life and limb to unreasonable danger. Police activity and traffic volumes have already caused great bodily injury to young people at the junction. The bicycle plan for Indian should be upgraded and publicly improved in order to mitigate the unreasonable risk imposed by the project. It should be designated a bicycle first transit artery. Thus, reducing carbon emissions at this crucial time in the environment. The parking element of the plot plan requires amendment in the form of reduced parking to reduce carbon emissions and improve traffic safety. Bicycle lanes should be clearly marked and indicated, within the project and the outlying arterial roadways as required by the terms of the general plan. Green areas that incorporate the native plants of the area should be imposed with greater emphasis on water preservation and recycling to support the green areas on a basis that will encourage the migratory bird and resident bird populations.

Increased traffic volumes will substantially add to the existing presence of ozone, ozone precursors, and other contaminants, such as carcinogenic diesel particulate matter, in an air basin that already suffers from some of the worst air quality in the nation. The Basin experiences complex and significant air quality issues caused by an extremely high concentration of a variety of industrial activities and on-road vehicle traffic including diesel emissions from heavy-duty truck traffic. As a result, the Basin exceeds federal public health standards for both ozone and PM, resulting in its residents experiencing some of the worst air pollution in the nation. The area has also experienced worsening air quality as a result of increased diesel pollution from trucks used to transport goods into the region's growing number of warehouses and other storage and distribution facilities. Notably, diesel exhaust, or diesel particulate matter ("DPM"), which is highly prevalent throughout the Basin and throughout Riverside and San Bernardino counties, contains

dangerous levels of PM, carbon, soot, and other harmful and carcinogenic contaminants that can cause a host of short-term acute exposure impacts such as respiratory diseases, including asthma, and lung cancer.

#### IV. A NEW EIR IS REQUIRED

The City has also failed to require re-circulation of the EIR in light of critical information that must be analyzed in the document, and for which the public must be allowed the opportunity to provide comments regarding traffic safety issues in particular along the High School-Indian Street -Oneida junction. Most of these residents also lack the financial means to address the health problems caused by these exposures. Children, who are among the most vulnerable residents, are not only subject to these avoidable health impacts, but they also experience some of the highest rates of school absences, which means lost work days for parents and caregivers, all of which only further impacts families and these communities. The introduction of the COVID-19 virus into these communities places them at even greater risk because people exposed to elevated levels of air pollution face worse outcomes if they contract the virus. The Ramos family are currently recovering from Covid as a result of healthcare work related exposure.

#### V. THE CITY OF MORENO VALLEY HAS FAILED TO ACCESS FUNDING FOR BICYCLE AND PEDESTRIAN FACILITIES

##### Transportation and Health Connection

Funding for bicycle and pedestrian facilities and programs supports the notion that all users should be considered in the development of a transportation system. Creating safe and convenient places for active transportation ties the health components of physical activity and safety to transportation, and this indicator is one measure of how states use federal funding to support these strategies.

The built environment influences physical activity levels by contributing to safety and convenience of walking and bicycling. Poor accessibility contributes to sedentary behaviors that are associated with poor health outcomes such as obesity, diabetes, and cardiovascular disease (CDC, 2013). Federal funds are available for states to invest in bicycle and pedestrian infrastructure, leading states to spend a total of \$7.2 billion on dedicated bicycle and pedestrian projects between 1992 and 2012 (Alliance for Biking & Walking). In reality, this figure likely understates federal funding used for bicycle and pedestrian projects because these projects can be included as part of larger infrastructure projects, and the portion of the funds used for the bicycle and pedestrian component may not be separately tracked.

Disparities in implementation of bicycle and pedestrian projects have been identified. A review of 3,140 counties demonstrated that those with higher levels of poverty or low educational status were less likely to implement projects (Cradock et al., 2009). Understanding the characteristics and needs of a community is the first step for implementing bicycle and pedestrian efforts. Improvements to the built environment,

such as safety measures, street connectivity, and bicycle lanes, may lead to increased physical activity and enhanced health outcomes in a community (Humpel, Owen, Leslie, 2002).

Under the most recent federal surface transportation law, entitled MAP-21, dedicated funding for bicycle and pedestrian efforts was consolidated into the Transportation Alternatives Program. Half of the funds are distributed to metropolitan planning organizations. The remaining funds are available to states to distribute through a competitive grant process. Federal funding for bicycle and pedestrian projects is also available under the Congestion Mitigation Air Quality (CMAQ) Program (U.S. DOT, 2013). These funds are available to both states and metropolitan planning organizations that have been identified as having air quality problems. Beyond these two funding programs, the Federal Highway Administration states that “[v]irtually all the major transportation funding programs can be used for bicycle and pedestrian-related projects.” Decision makers can evaluate the FMIS data to further understand how federal dollars are spent and what areas can most benefit from infrastructure upgrades.

#### VI. A DENSITY BONUS CANNOT OVERRIDE TRAFFIC CIRCULATION IMPACTS THAT HARM THE ENVIRONMENT AND PUBLIC SAFETY

The present public facilities are inadequate due to lack of measures to mitigate traffic safety by encouraging pedestrian and bicycle lanes, markings, signage, traffic calming design, bike racks. 53 additional parking spaces and increased density will substantially increase the traffic flow in the quadrant and create unreasonable risks to children and senior citizens in the area. The

#### VII. CONCLUSION

The amendments to the general plan require further traffic safety and environmental analysis and consequently the project should be denied. This appeal incorporates by reference the administrative record in General Plan Amendment (PEN21-0113) Change of Zone (PEN21-0114) Plot Plan (PEN21-0112), the comments and written objections submitted to the Moreno Valley Planning Commission, the public testimony and the public hearing dated December 9, 2021 regarding the above referenced project.

Sincerely,

*/s/ Julio J. Ramos*

## RESOLUTION NUMBER 2022-XX

### A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, ADOPTING A MITIGATED NEGATIVE DECLARATION AND MITIGATION MONITORING AND REPORTING PROGRAM FOR THE COURTYARDS AT COTTONWOOD PHASE II PROJECT LOCATED ON THE EAST SIDE OF INDIAN STREET NORTH OF COTTONWOOD AVENUE (APN 482-161-026)

**WHEREAS**, the City of Moreno Valley (“City”) is a general law city and a municipal corporation of the State of California, and the lead agency for the preparation and consideration of environmental documents for local projects that are subject to requirements of the California Environmental Quality Act (CEQA) and CEQA Guidelines; and

**WHEREAS**, Rancho Belago Developers Inc., (“Applicant”) is seeking approval for the development of the Courtyards at Cottonwood Phase II project which includes the development of a 32-unit affordable housing apartment project with associated public improvements (“Project”), located on the east side of Indian Street north of Cottonwood Avenue (APN 482-161-026) (“Project Site”); and

**WHEREAS**, the proposed “Project” shall include not only the General Plan Amendment (GPA) (PEN21-0113), Change of Zone (PEN21-0114), and a Plot Plan (PEN21-0112), and corresponding amendment to the City’s Zoning Atlas to reflect the proposed changes in the zoning classification and/or redistricting associated with the General Plan Amendment (PEN21-0113); and

**WHEREAS**, Planning Division Staff completed an environmental assessment for the proposed Project, and, based on the assessment, decided to prepare an Initial Study (“IS”) and a Mitigated Negative Declaration (“MND”) in accordance with Section 6 (Negative Declaration Procedures) of the City’s Rules and Procedures for the Implementation of the California Environmental Quality Act and the requirements of the CEQA Guidelines Sections 15070 – 15075; and

**WHEREAS**, a Notice of Intent to Adopt a Mitigated Negative Declaration was duly noticed and circulated for public review for a period of 20 days commencing on November 10, 2021, through December 2, 2021; and

**WHEREAS**, in conformance with CEQA and the CEQA Guidelines, a Mitigation Monitoring and Reporting Program (“MMRP”) that includes a program for reporting on and monitoring Proposed Project mitigation measures was prepared for the proposed Project and noticed with the Mitigated Negative Declaration; and

**WHEREAS**, on December 9, 2021 a hearing was conducted by the Planning Commission whereby the Planning Commission approved Planning Commission Resolution 2021-48, recommending the City Council approve the Mitigated Negative Declaration/Initial Study, Mitigation Monitoring and Reporting Program, and the Proposed Project; and

**WHEREAS**, on January 18, 2022 a hearing was conducted by the City Council to approve the Mitigated Negative Declaration/Initial Study, Mitigation Monitoring and Reporting Program, and the Proposed Project; and

**WHEREAS**, at the conclusion of the public hearing, in the exercise of its own independent judgment, the City Council determine the Mitigated Negative Declaration/Initial Study and the Mitigation Monitoring and Reporting Program will reduce the environmental impacts of the Project to levels of insignificance and that there is no substantial evidence supporting a fair argument that the Project will have a significant effect on the environment.

**NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:**

**Section 1. Recitals and Exhibits**

That the foregoing Recitals and attached exhibits are true and correct and are hereby incorporated by this reference.

**Section 2. Evidence**

That the City Council has considered all the evidence submitted into the Administrative Record for the Mitigated Negative Declaration and Mitigation Monitoring Plan, including, but not limited to, the following:

- (a) Mitigated Negative Declaration/Initial Study prepared for the proposed Project, attached hereto as Exhibit A;
- (b) Notice of Intent to Adopt a Mitigated Negative Declaration/Newspaper Notice, attached hereto as Exhibit B;
- (c) Mitigation Monitoring and Reporting Program, attached hereto as Exhibit C;
- (d) Staff Report prepared for the City Council's consideration and all documents, records and references related thereto, and Staff's presentation at the public hearing; and
- (e) Testimony, comments and correspondence from all persons that were provided at, or prior to, the public hearing.

**Section 3. Findings**

That based on the content of the foregoing Recitals and the Evidence contained in the Administrative Record as set forth above, the City Council makes the following findings:

- (a) That the City has independently reviewed, analyzed, and considered the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program, and the whole record before it, including, the Initial Study and comments received; and
- (b) That the proposed mitigation measures will reduce all environmental impacts of the proposed Project to levels of insignificance and there is no

- substantial evidence supporting a fair argument that the Project will have a significant effect on the environment; and
- (c) That the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program have been completed in compliance with CEQA and the CEQA Guidelines consistent the City's Rules and Procedures for the Implementation of the California Environmental Quality Act; and
  - (d) That the Mitigated Negative Declaration/Initial Study and Mitigation Monitoring and Reporting Program reflect the independent judgment and analysis of the City as lead agency for the proposed Project; and
  - (e) That the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program are adequate to serve as the required CEQA environmental documentation for the proposed Project.

**Section 4. Adoption**

That based on the foregoing Recitals, Evidence contained in the Administrative Record and Findings, as set forth herein, the City Council adopts the Mitigated Negative Declaration/Initial Study attached hereto as Exhibit A and the Mitigation Monitoring and Reporting Program attached hereto as Exhibit C.

**Section 5. Repeal of Conflicting Provisions**

That all the provisions as heretofore adopted by the City Council that are in conflict with the provisions of this Resolution are hereby repealed.

**Section 6. Severability**

That the City Council declares that, should any provision, section, paragraph, sentence or word of this Resolution be rendered or declared invalid by any final court action in a court of competent jurisdiction or by reason of any preemptive legislation, the remaining provisions, sections, paragraphs, sentences or words of this Resolution as hereby adopted shall remain in full force and effect.

**Section 7. Effective Date**

That this Resolution shall take effect immediately upon the date of adoption.

**Section 8. Certification**

That the City Clerk for the City Council shall certify to the passage of this Resolution.

**PASSED AND ADOPTED THIS 18<sup>th</sup> day of January 2022**

# MITIGATED NEGATIVE DECLARATION FOR THE COURTYARDS AT COTTONWOOD FAMILY APARTMENTS

## Project Description:

The Courtyards at Cottonwood Phase II Gated Affordable Community proposes to construct 32 affordable housing units arranged in two low rise multi-family residential buildings. The project will also include a separate laundry building, assigned covered parking, open parking, and outdoor BBQ / Picnic amenities. The development includes 2, 3, and 4-bedroom dwelling units ranging in size from 800 square feet to 1146 square feet. Each 16-unit building would have two stories and be approximately 17,772 square feet in building area. The 121-square-foot laundry facility will be situated adjacent to the two apartment buildings. The project will provide 53 total parking spaces as allowed by state density bonus law. Parking will include 32 assigned covered spaces, 16 open spaces, and 5 open electric vehicle charging stations (EVCS) spaces. A percentage of the parking spaces will be accessible in compliance with California Building Code (CBC) Chapter 11B and as required by federal and state laws. The project will be served by a full-time onsite property manager, community building, mail kiosk, community pool, Tot Lot, Basketball Court, and walking paths located in Phase I via reciprocal access agreements.

## Project Location: (Exhibit 1: Location Map)

The Project site is located on the northeast corner of Cottonwood Avenue and Indian Street in southwest Moreno Valley, Riverside County, California. (Assessor Parcel Number (APN): 482-161-026); see **Exhibit 1: Location Map** and **Exhibit 2: Regional Map**.

 Corona, CA 92879  
 (951) 268-1650

## Findings:

It is hereby determined that, based on the information contained in the attached Initial Study, the project would not have a significant adverse effect on the environment.

## Mitigation Measures (Attachment 3):

No.	Mitigation Measure
BIO-1	Vegetation clearing, and ground disturbance shall be prohibited during the migratory bird nesting season (February 1 through September 15), unless a migratory bird nesting survey is completed in accordance with the following requirements: <ol style="list-style-type: none"> <li data-bbox="370 1734 1421 1822">a. A migratory bird nesting survey of the Project’s impact footprint, including suitable habitat within a 500-foot radius, shall be conducted by a qualified biologist within three (3) days prior to initiating vegetation clearing or ground disturbance.</li> <li data-bbox="370 1839 1421 1953">b. A copy of the migratory nesting bird survey results report shall be provided to the City of Moreno Valley. If the survey identifies the presence of active nests, then the qualified biologist shall provide the City with a copy of maps showing the location of all nests and an appropriate buffer zone around each nest sufficient to protect the nest from direct and indirect impact. The</li> </ol>

Attachment: Exhibit A to Resolution No. 2022-XX Mitigated Negative Declaration/Initial Study [Revision 1] (5641 : Courtyards at Cottonwood

	<p>size and location of all buffer zones, if required, shall be subject to review and approval by the City and shall be no less than a 100-foot radius around the nest for non-raptors and no more than a 500-foot radius around the nest for raptors. The nests and buffer zones shall be field checked weekly by a qualified biological monitor. The approved buffer zone shall be marked in the field with construction fencing, within which no vegetation clearing or ground disturbance shall commence until the qualified biologist and the City verify that the nests are no longer occupied and juvenile birds can survive independently from the nests.</p>
<p>BIO-2</p>	<p>Within 30 days prior to grading, a qualified biologist shall conduct a survey of suitable habitat on-site and make a determination regarding the presence or absence of the burrowing owl. The determination shall be documented in a report and shall be submitted, reviewed, and accepted by the City of Moreno Valley prior to the issuance of a grading permit and subject to the following provisions:</p> <ol style="list-style-type: none"> <li>a. In the event that the pre-construction survey identifies no burrowing owls on the property, a grading permit may be issued without restriction.</li> <li>b. In the event that the pre-construction survey identifies the presence of at least one individual but less than three (3) mating pairs of burrowing owls, then prior to the issuance of a grading permit and prior to the commencement of ground-disturbing activities on the property, the qualified biologist shall passively or actively relocate any burrowing owls. Passive relocation, including the required use of one-way doors to exclude owls from the site and the collapsing of burrows, will occur if the biologist determines that the proximity and availability of alternate habitat is suitable for successful passive relocation. Passive relocation shall follow California Department of Fish and Wildlife (CDFW) relocation protocol and shall only occur between September 15 and February 1. If proximate alternate habitat is not present as determined by the biologist, active relocation shall follow CDFW relocation protocol. The biologist shall confirm in writing that the species has fledged the site or been relocated prior to the issuance of a grading permit.</li> <li>c. In the event that the pre-construction survey identifies the presence of three (3) or more mating pairs of burrowing owls, the requirements of MSHCP Species-Specific Conservation Objectives 5 for the burrowing owl shall be followed. Objective 5 states that if the site (including adjacent areas) supports three (3) or more pairs of burrowing owls and supports greater than 35 acres of suitable habitat, at least 90 percent of the area with long-term conservation value and burrowing owl pairs will be conserved on-site until it is demonstrated that Objectives 1-4 have been met. A grading permit shall be issued, either: <ul style="list-style-type: none"> <li>• Upon approval and implementation of a property-specific Determination of Biologically Superior Preservation (DBESP) report for the burrowing owl by the CDFW; or</li> <li>• A determination by the biologist that the site is part of an area supporting less than 35 acres of suitable Habitat, and upon passive or active relocation of the species following accepted CDFW protocols. Passive relocation, including the required use of one-way doors to exclude owls from the site and the collapsing of burrows, will occur if the biologist determines that the proximity and availability of alternate habitat is suitable for successful passive relocation. Passive relocation shall follow CDFW relocation protocol and shall only occur between September 15 and February 1. If proximate alternate habitat is not present as determined by the biologist, active relocation shall follow CDFW relocation protocol. The biologist shall confirm in writing that the species has fledged the site or been relocated prior to the issuance of a grading permit.</li> </ul> </li> </ol>
<p>BIO-3</p>	<p>Prior to Grading Permit issuance, the Project Applicant shall demonstrate, to the satisfaction of the Moreno Valley Planning Department that the Project complies with the following:</p> <ol style="list-style-type: none"> <li>a. Tree Removal— Trees shall not be removed from the site during the avian nesting season from February 1 through August 31. If ground disturbance and vegetation removal cannot occur outside of the nesting season, a pre-construction clearance survey for nesting birds should be conducted within three (3) days of the start of any ground disturbing activities to ensure that no nesting birds will be disturbed during construction. The biologist conducting the clearance survey should document a negative survey with avian nest will occur. If an active avian nest is discovered during the pre-construction clearance survey, construction activities should stay outside a 300-foot buffer around the active nest. For raptors and special-status species this buffer will be expanded to 500 feet. It is recommended that a biological monitor be present to</li> </ol>

	delineate the boundaries of the buffer area and to monitor the active best to ensure that nesting behavior is not adversely affected by the construction activity. Once the young have fledged and left the nest, or the best otherwise becomes inactive under natural conditions, normal construction activities can occur.
CUL-1	Prior to the issuance of a grading permit, the Project Applicant shall provide evidence to the City of Moreno Valley that a qualified paleontologist has been retained by the Project Applicant to conduct monitoring of excavation activities and has the authority to halt and redirect earthmoving activities in the event that suspected paleontological resources are unearthed.
CUL-2	The paleontological monitor shall conduct full-time monitoring during grading and excavation operations in undisturbed, very old alluvial fan sediments at or below four (4) feet below ground surface and shall be equipped to salvage fossils if they are unearthed to avoid construction delays and to remove samples of sediments that are likely to contain the remains of small fossil invertebrates and vertebrates. The paleontological monitor shall be empowered to temporarily halt or divert equipment to allow for removal of abundant and large specimens in a timely manner. Monitoring may be reduced if the potentially fossiliferous units are not present in the subsurface, or if present, are determined upon exposure and examination by qualified paleontological personnel to have a low potential to contain or yield fossil resources.
CUL-3	Recovered specimens shall be properly prepared to a point of identification and permanent preservation, including screen washing sediments to recover small invertebrates and vertebrates, if necessary. Identification and curation of specimens into a professional, accredited public museum repository with a commitment to archival conservation and permanent retrievable storage, such as the Western Science Museum in Hemet, California, is required for significant discoveries. The paleontologist must have a written repository agreement in hand prior to initiation of mitigation activities.
CUL-4	A final monitoring and mitigation report of findings and significance shall be prepared, including lists of all fossils recovered, if any, and necessary maps and graphics to accurately record the original location of the specimens. The report shall be submitted to the City of Moreno Valley prior to building final.
NOI-1	<p>Prior to issuance of a grading permit, the developer shall prepare a Construction Noise Control Plan (CNCP) and submit it to the City for review and approval.</p> <p>The plan shall include but will not be limited to the following:</p> <ol style="list-style-type: none"> <li>a. During all project site excavation and grading, contractors shall equip all construction equipment, fixed or mobile, with properly operating and maintained mufflers consistent with manufacturers' standards.</li> <li>b. The project contractor shall place all stationary construction equipment so that emitted noise is directed away from sensitive receptors nearest the project site.</li> <li>c. The construction contractor shall locate equipment staging in areas that will create the greatest distance between construction-related noise sources and noise-sensitive receptors nearest the project site during all project construction.</li> <li>d. A temporary construction barrier with a minimum height of 8 feet shall be placed along the project's property line during project grading and construction.</li> <li>e. During all project site construction, the construction contractor shall limit all construction-related activities, including maintenance of construction equipment and the staging of haul trucks, to between the hours of 8:00 a.m. to 4:00 p.m. Monday through Friday. Any work to be completed on Saturday shall be by prior appointment only. No construction is permitted on Sundays and government code holidays. Per City Standard Plans MVS1-166A-0 and MSV-166B-1.</li> <li>f. Prior to issuance of a grading or building permit, the developer shall prepare a haul route and staging plan for any trucks hauling earth or construction materials to or from the project site to where material will be disposed (i.e., export). The plan shall be reviewed and approved by the City before a grading permit is issued by the City. To the extent feasible, haul routes and truck staging areas shall not pass sensitive land uses or residential dwellings not on a direct driving route to the closest freeway.</li> </ol>

<p>NOI-2</p>	<p>Prior to issuance of a grading or building permit, the developer shall prepare a haul route and staging plan for any trucks hauling earth or construction materials to or from the project site to where material will be disposed (i.e., export). The plan shall be reviewed and approved by the City before a grading permit is issued by the City. To the extent feasible, haul routes and truck staging areas shall not pass sensitive land uses or residential dwellings not on a direct driving route to the closest freeway.</p> <p>Haul truck and other construction-related trucks traveling to and from the project site shall be restricted to the same hours specified for the operation of construction equipment. To the extent feasible, construction haul routes shall not pass directly by sensitive land uses or residential dwellings.</p>
<p>TCR-1</p>	<p>Prior to the issuance of a grading permit, the Developer shall retain a professional archaeologist to conduct monitoring of all mass grading and trenching activities. The Project Archaeologist shall have the authority to temporarily redirect earthmoving activities in the event that suspected archaeological resources are unearthed during Project construction. The Project Archaeologist, in consultation with the Consulting Tribe(s), the contractor, and the City, shall develop a Cultural Resources Management Plan (CRMP) in consultation pursuant to the definition in AB52 to address the details, timing and responsibility of all archaeological and cultural activities that will occur on the project site. A consulting tribe is defined as a tribe that initiated the AB 52 tribal consultation process for the Project, has not opted out of the AB52 consultation process, and has completed AB52 consultation with the City as provided for in Cal Pub Res Code Section 21080.3.2 (b)(1) of AB52. Details in the Plan shall include:</p> <ul style="list-style-type: none"> <li>• Project grading and development scheduling.</li> <li>• The Project archeologist and the Consulting Tribes(s) as defined in CR-1 shall attend the pre-grading meeting with the City, the construction manager and any contractors and will conduct a mandatory Cultural Resources Worker Sensitivity Training to those in attendance. The Training will include a brief review of the cultural sensitivity of the Project and the surrounding area; what resources could potentially be identified during earthmoving activities; the requirements of the monitoring program; the protocols that apply in the event inadvertent discoveries of cultural resources are identified, including who to contact and appropriate avoidance measures until the find(s) can be properly evaluated; and any other appropriate protocols. All new construction personnel that will conduct earthwork or grading activities that begin work on the Project following the initial Training must take the Cultural Sensitivity Training prior to beginning work and the Project archaeologist and Consulting Tribe(s) shall make themselves available to provide the training on an as-needed basis;</li> <li>• The protocols and stipulations that the contractor, City, Consulting Tribe(s) and Project archaeologist will follow in the event of inadvertent cultural resources discoveries, including any newly discovered cultural resource deposits that shall be subject to a cultural resources evaluation.</li> </ul>
<p>TCR-2</p>	<p>Prior to the issuance of a grading permit, the Developer shall secure agreements with the Pechanga Band of Luiseño Indians and Soboba Band of Luiseño Indians for tribal monitoring. The Developer is also required to provide a minimum of 30 days advance notice to the tribes of all mass grading and trenching activities. The Native American Tribal Representatives shall have the authority to temporarily halt and redirect earth moving activities in the affected area in the event that suspected archaeological resources are unearthed. If the Native American Tribal Representatives suspect that an archaeological resource may have been unearthed, the Project Archaeologist or the Tribal Representatives shall immediately redirect grading operations in a 100-foot radius around the find to allow identification and evaluation of the suspected resource. In consultation with the Native American Tribal Representatives, the Project Archaeologist shall evaluate the suspected resource and make a determination of significance pursuant to California Public Resources Code Section 21083.2.</p>
<p>TCR-3</p>	<p>In the event that Native American cultural resources are discovered during the course of grading (inadvertent discoveries), the following procedures shall be carried out for final disposition of the discoveries:</p> <ol style="list-style-type: none"> <li>a. One or more of the following treatments, in order of preference, shall be employed with the tribes. Evidence of such shall be provided to the City of Moreno Valley Planning Department:</li> </ol>

	<p>i. Preservation-In-Place of the cultural resources, if feasible. Preservation in place means avoiding the resources, leaving them in the place they were found with no development affecting the integrity of the resources.</p> <p>ii. Onsite reburial of the discovered items as detailed in the treatment plan required pursuant to Mitigation Measure CR-1. This shall include measures and provisions to protect the future reburial area from any future impacts in perpetuity. Reburial shall not occur until all legally required cataloging and basic recordation have been completed. No recordation of sacred items is permitted without the written consent of all Consulting Native American Tribal Governments as defined in CR-1.</p>
TCR-4	<p>The City shall verify that the following note is included on the Grading Plan:          "If any suspected archaeological resources are discovered during ground-disturbing activities and the Project Archaeologist or Native American Tribal Representatives are not present, the construction supervisor is obligated to halt work in a 100-foot radius around the find and call the Project Archaeologist and the Tribal Representatives to the site to assess the significance of the find."</p>
TCR-5	<p>If potential historic or cultural resources are uncovered during excavation or construction activities at the project site, work in the affected area must cease immediately and a qualified person meeting the Secretary of the Interior's standards (36 CFR 61), Tribal Representatives, and all site monitors per the Mitigation Measures, shall be consulted by the City to evaluate the find, and as appropriate recommend alternative measures to avoid, minimize or mitigate negative effects on the historic, or prehistoric resource. Determinations and recommendations by the consultant shall be immediately submitted to the Planning Division for consideration and implemented as deemed appropriate by the Community Development Director, in consultation with the State Historic Preservation Officer (SHPO) and any and all Consulting Native American Tribes as defined in CR-1 before any further work commences in the affected area.</p>
TCR-6	<p>If human remains are discovered, no further disturbance shall occur in the affected area until the County Coroner has made necessary findings as to origin. If the County Coroner determines that the remains are potentially Native American, the California Native American Heritage Commission shall be notified within 24 hours of the published finding to be given a reasonable opportunity to identify the "most likely descendant." The "most likely descendant" shall then make recommendations and engage in consultations concerning the treatment of the remains (California Public Resources Code 5097.98). (GP Objective 23.3, CEQA).</p>

# Project Data

## Property Information

- Building F: Pending City Assignment
- Building G: Pending City Assignment
- Building H: Pending City Assignment

## FEMA Information

This project is located within FEMA flood zone X. This project is located outside 0.2% annual chance floodplain

## Easement Notes

No Existing or Proposed Recorded Easements

## Land Use and Zoning Information

- Existing General Plan: P (Public Facility)
- Proposed General Plan: R15 (Residential 15 DU/Acre)
- Existing Zoning: P (Public Facility)
- Proposed Zoning: R15 (Residential 15 DU/Acre)

## Site Data

- Area:
  - Total Site Area: 1.61 Acres Gross / 1.61 Acres Net
  - Proposed Development: 1.61 Acres Gross / 1.61 Acres Net (zoned R15)
  - Disturbed Area: 1.61 Acres

- Open Space:
  - Min. Space Required 32x300 SF = 9,600 SF
  - Open Space Provided = 34,236 SF

- Landscape Area:
  - Min. Area Required 70,206 x 0.35 = 24,572 SF
  - Landscape Area (incl. walks) = --- SF

- Hard Surface Area:
  - Paved Parking & Drive Area = --- SF

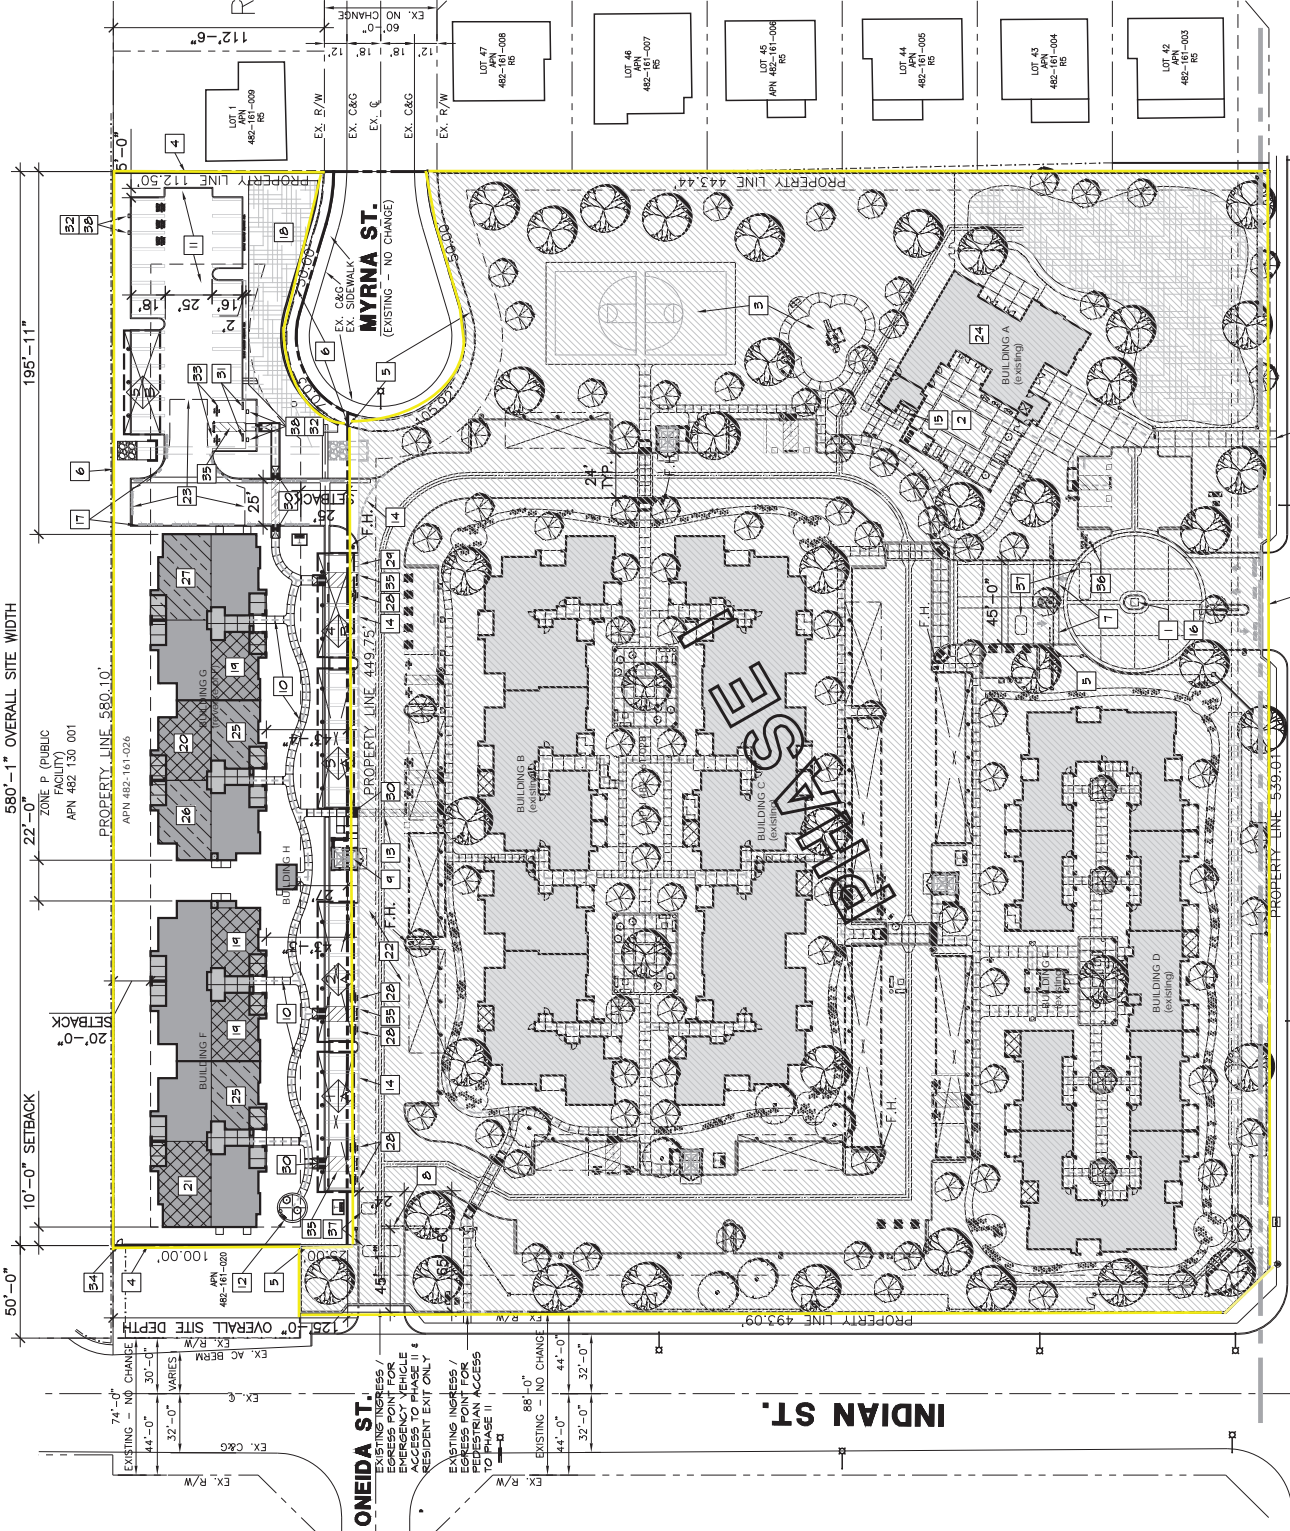

## Floor Area Ratio

- Building F - Family Apartment Building: 15,252 SF
- Building G - Family Apartment Building: 15,252 SF
- Building H - Laundry Building: 121 SF
- Aggregate Total Floor Area = 30,625 SF
- 30,625 (floor area) / 70,206 (net project area) = 0.44 FAR
- Allowable per R15 District = 0.75 FAR

## SITE PLAN

# INITIAL STUDY (IS) FOR COURTYARDS AT COTTONWOOD PHASE II PROJECT

## BACKGROUND INFORMATION AND PROJECT DESCRIPTION:

1. **Project Case Number(s):** General Plan Amendment No. PEN21-0113, Change of Zone No. PEN21-0114, Plot Plan No. PEN21-0112
2. **Project Title:** The Courtyards at Cottonwood Family Apartments Phase II
3. **Public Comment Period:** 20 Days from November 10, 2021 through November 30, 2021
4. **Lead Agency:**

City of Moreno Valley  
 Julia Descoteaux, Planning Department  
 14177 Frederick Street  
 Moreno Valley, CA 92552  
 (951) 413-3224
5. **Documents Posted At:** City of Moreno Valley City Hall  
 14177 Frederick Street  
 Moreno Valley, CA 92552  
 (951) 413-3224
6. **Prepared By:**

Kimley-Horn & Associates  
 Kevin Thomas  
 3880 Lemon Street, Suite 420  
 Riverside, CA 92501
7. **Project Sponsor:**

<b>Applicant/Developer</b>	<b>Property Owner</b>
William Atkins, President	Moreno Valley Housing Authority
Derra Design	14177 Frederick Street
495 E. Rincon Street Suite 204	Moreno Valley, CA 92552
Corona, CA 92879	(951) 413-3024
(951) 268-1650	
8. **Project Location:** The Project site is located on the northeast corner of Cottonwood Avenue and Indian Street in southwest Moreno Valley, Riverside County, California. (Assessor Parcel Number (APN): 482-161-026); see **Exhibit 1 Location Map**.
9. **General Plan Designation:** Public Facilities (P)
10. **Specific Plan Name and Designation:** N/A
11. **Existing Zoning:** Public Facilities (P)

12. Surrounding Land Uses and Setting:

**Table 1: Project Site and Surrounding Parcels Existing Land Use and Zoning**

Location	Official Existing Land Use	Official Existing Zoning
Project Site	Public Facilities (P)	Public Facilities (P)
North	Public Facilities (P) Residential: Max 15 du/ac (R15)	Public Facilities (P) Specific Plan 204- Village Residential (SP204)

13. Description of the Site and Project:

**Environmental Setting:** The Courtyard at Cottonwood Phase II (hereafter, “Project or proposed Project”) is in the City of Moreno Valley, Riverside County, California. The Project site is located approximately 1.0 mile south of the California State Route 60 (SR-60) and 2.6 miles east of the Interstate 215 Highway (I-215). The surrounding cities around Moreno Valley are City of Redlands (north), City of Banning (east), City of Perris (south), and City of Riverside (west) (see **Exhibit 2: Regional Map**). The Project is approximately net total of 1.61 acres located on Assessor Parcel Number (APN): 482-161-026. The Project site is located north of previously approved 6.79-acre Phase I Courtyards at Cottonwood Family Apartments parcel. Phase II site will be accessed from Indian Street via shared existing ingress/egress driveway points with Phase I for resident and will have pedestrian access entering from Indian Street and Cottonwood Avenue. Surrounding major roadways include Eucalyptus Avenue to the north, Cottonwood Avenue and Alessandro Boulevard to the south, Indian Street and Heacock Street to the west, and Perris Boulevard to the east (see **Exhibit 3: Project Vicinity**). Currently, the site is vacant and undeveloped with light vegetation.

**Project Description:** The Courtyards at Cottonwood Phase II Gated Affordable Community proposes to construct 32 affordable housing units arranged in two low rise multi-family residential buildings. The project will also include a separate laundry building, assigned covered parking, open parking, and outdoor BBQ/ Picnic amenities. The development includes 2, 3, and 4-bedroom dwelling units ranging in size from 800 square feet to 1146 square feet. Each 16-unit building would have two stories and be approximately 17,772 square feet in building area. The 121-square-foot laundry facility will be situated adjacent to the two apartment buildings. The project will provide 53 total parking spaces as allowed by state density bonus law. Parking will include 32 assigned covered spaces, 16 open spaces, and 5 open electric vehicle charging stations (EVCS) spaces. A percentage of the parking spaces will be accessible in compliance with the California Building Code (CBC) Chapter 11B and as required by federal and state laws. The project will be served by a full-time onsite property manager, community building, mail kiosk, community pool, Tot Lot, Basketball Court, and walking paths located in Phase I via reciprocal access agreements.

The specific discretionary actions associated with the proposed Project are summarized below:

**PEN21-0113 (General Plan Amendment)** would amend the City of Moreno Valley Land Use Map to change the existing land designation of the Project site from P (Public Facilities) to R15 (Residential: Max. 15 dwelling units per acre).

Attachment: Exhibit A to Resolution No. 2022-XX Mitigated Negative Declaration/Initial Study [Revision 1] (5641 : Courtyards at Cottonwood

**PEN21-0114 (Change of Zone)** would amend the City of Moreno Valley Zoning Map to change the existing zoning designation of the Project site from P (Public Facilities) to R15 (Multi-family).

**PEN21-0112 (Plot Plan)** provides a development plan for the construction of multiple family residential development consisting of 32 units on a 1.61 net acre parcel.

14. **Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.3.1? If so, is there a plan for consultation that includes, for example, the determination of significance of impacts to tribal cultural resources, procedures regarding confidentiality, etc.?**

Note: Conducting consultation early in the CEQA process allows tribal governments, lead agencies, and project proponents to discuss the level of environmental review, identify and address potential adverse impacts to tribal cultural resources, and reduce the potential for delay and conflict in the environmental review process. (See Public Resources Code section 21080.3.2.) Information may also be available from the California Native American Heritage Commission's Sacred Lands File per Public Resources Code section 5097.96 and the California Historical Resources Information System administered by the California Office of Historic Preservation. Please also note that Public Resources Code section 21082.3(c) contains provisions specific to confidentiality.

The City of Moreno Valley is required to consult with interested California Native American tribes regarding the Project pursuant to Senate Bill 18 (SB18) and Assembly Bill 52 (AB52). Consultation efforts have been completed. Monitoring from the Pechanga Band of Luiseño Indians and Soboba Band of Luiseño Indians is required, and an applicable mitigation measure has been added to this IS/MND. Further details from the consultation are included in Section XVIII – Tribal Cultural Resources in this IS/MND.

16. **Other Technical Studies Referenced in this Initial Study (Provided as Appendices):**

The following technical studies are anticipated to be prepared as part of the Draft Initial Study:

- a. Project Specific Water Quality Management Plan
- b. Preliminary Hydrology Report
- c. Trip Generation Memo
- d. Mitigation Monitoring and Reporting Program

17. **Acronyms:**

ALUC -	Airport Land Use Commission
ALUCP -	Airport Land Use Compatibility Plan

**DETERMINATION (To be completed by the Lead Agency):**

On the basis of this initial evaluation:

- I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
- I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.
- I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
- I find that the proposed project MAY have a "potentially significant" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
- I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

**EVALUATION OF ENVIRONMENTAL IMPACTS:**

- 1) A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a Lead Agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).
- 2) All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
- 3) Once the Lead Agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect is significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.
- 4) "Less Than Significant with Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less than Significant Impact." The Lead Agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from Section XVII, "Earlier Analyses," may be cross-referenced).
- 5) Earlier analyses may be used where, pursuant to the tiering, program EIR, or another CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:
  - a) Earlier Analyses Used. Identify and state where they are available for review.
  - b) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
  - c) Mitigation Measures. For effects that are "Less than Significant with Mitigation Measures Incorporated," describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.
- 6) Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.
- 7) Supporting Information Sources. A source list should be attached, and other sources used, or individuals contacted should be cited in the discussion.
- 8) This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.
- 9) The explanation of each issue should identify:
  - a) the significance criteria or threshold, if any, used to evaluate each question; and
  - b) the mitigation measure identified, if any, to reduce the impact to less than significance.

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>I. AESTHETICS</b> – Except as provided in <a href="#">Public Resources Code §21099</a> – Modernization of Transportation Analysis for Transit-Oriented Infill Projects. <b>Would the project:</b>				
a) Have a substantial adverse effect on a scenic vista?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p><b>Response:</b> The Project site is undeveloped and vacant and is relatively flat. Based on the City’s MoVal 2040 General Plan (GP), Chapter 10: Open Space and Resource Conservation - Map OSRC-3: <i>Scenic Resources and Ridgelines</i>, the Project site is not within a view corridor of the Box Springs Mountains, Reche Canyon, the Badlands, or Mount Russell. Furthermore, the Project site is surrounded by built environment with existing residential (south, east, and west), commercial (far west) and March Mountain High School (north) (See <b>Exhibit 3: Project Vicinity</b>). The Project site is not considered to be in a scenic area or vista, designated by the City. Thus, the Project would not have a substantial adverse effect on a scenic vista and no impact would occur.</p>				
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p><b>Response:</b> As previously mentioned above, in Response I (a), the Project site is currently undeveloped and does not contain any structures which have a formal historic designation based on the State Office of Historic Preservation database. There are no trees on the Project site. Additionally, there are no rock outcroppings. Scenic highway designation is not within the vicinity of the project site, the nearest state-eligible highway is SR-71 (from I-10 near Pomona to SR-91 near Corona) is about 35 miles southwest. The nearest officially designated highway is SR-74 (from I-5 near San Juan Capistrano to SR-111 near Palm Desert) is about 13 miles southwest of the Project site. Therefore, no impact would occur.</p>				
c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> The Project site is located in an “urbanized” area as defined by CEQA Status Section 21071 (a) as an incorporated city that has a population of at least 100,000 persons. The implementation of the Project would result in the development of multi-family apartments. As previously mentioned, the Project would also change land use and zoning designations from Public Facilities (P) to Multi-family (R15) land use and zoning designations. The proposed land use and zoning changes would be compatible and would not be in conflict with surrounding existing residential uses to the east, west, south, and north of March Mountain High School. Additionally, the proposed building height of approximately 30.58 feet would not significantly obstruct the visual characteristics of the site and would be below the required 50 feet maximum building height in Multi-family (R15). The Project design would adhere to the City of Moreno Valley’s aesthetic qualities to match the surrounding residential developments. The anticipated impact would be less than significant.</p>				

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> The construction of a multi-family development would create new sources of light and glare during both construction and occupancy phases at the Project site. As mentioned, the Project is in an urbanized area and is surrounded by built environment. The Project would include low to moderate levels of interior and exterior lighting for security, parking, and architectural highlighting. During construction phase of the Project site, the hours of construction as proposed in the City of Moreno Valley between 8:00 a.m. to 4:00 p.m. Monday through Friday. Any work to be completed on Saturday shall be by prior appointment only. No construction is permitted on Sundays and government code holidays. Per City Standard Plans MVS1-166A-0 and MSVI-166B-1. Therefore, there would be no nighttime light or glare in the Project site during this phase that could disturb surrounding neighborhoods. Additionally, the Project would be constructed to meet with all applicable regulations such as construction, performance standards, and design guidelines as required in the Moreno Valley Municipal Code (Sections 9.12, 9.08.100, 9.10.110, and 9.16.280). Post-construction, it is not anticipated that occupants of the multi-family buildings would significantly contribute to light or glare as residential lighting methods like energy saving lightbulbs, curtains and/or blinds for privacy would be used. Therefore, the impact would be less than significant as a result the Project implementation.</p>				
<p><b>Sources:</b></p> <ol style="list-style-type: none"> <li>1. <p><b>II. AGRICULTURE AND FOREST RESOURCES</b> – In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state’s inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest protocols adopted by the California Air Resources Board. <b>Would the project:</b></p>				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p><b>Response:</b> The Project is currently zoned for public facilities use and is classified as Urban and Built-Up Land based on the Important Farmlands Map provided in the Final EIR Section 4.2 Agriculture and Forestry Resources (Figure 4.2-1). The Project is not designated as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown in the California Important Farmland Finder tool which maps the most recent designated farmland throughout the state. Therefore, no impact would occur, and no mitigation measures are necessary.</p>				
<p>b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p><b>Response:</b> As previously mentioned in Response II (a), the Project is not zoned for agricultural use and is in the Public facilities (P) zone, surrounded by residential uses. There is no agricultural zoning or need for agriculture zoning. Similarly, there are no neighboring agricultural zone or lands enrolled under Williamson Act. Thus, no conversion is necessary, and no impact would occur. No mitigation measures are required.</p>				
<p>c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in <a href="#">Public Resources Code section 12220(g)</a>), timberland (as defined by <a href="#">Public Resources Code section 4526</a>), or timberland zoned Timberland Production (as defined by <a href="#">Government Code section 51104(g)</a>)?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p><b>Response:</b> The Project site is not currently zoned for or causes rezoning of forest land (as defined in Public Resources Code section 12220(g)), timberland or timberland zoned, Timberland Production (as defined by Government Code section 51104(g)). Therefore, the project site would have no impact related to forest land or timberland loss.</p>				
<p>d) Result in the loss of forest land or conversion of forest land to non-forest use?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p><b>Response:</b> The Project is not in or near forest land. It is surrounded by urban uses. The site is vacant, and implementation of the Project would not result in the loss of forest land or conversion of forest land to non-forest use. No impact would occur.</p>				
<p>e) Involve other changes in the existing environment which, due to their location or nature, could result in the conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p><b>Response:</b> Since the Project site is not located in Farmland and would not result in the conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use. No impact would occur.</p>				
<p><b>Sources:</b></p> <ol style="list-style-type: none"> <li>1. City of Moreno Valley. MoVal 2040 General Plan. ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
3. California Department of Conservation California Important Farmland Finder, <a href="https://maps.conservation.ca.gov/dlrp/ciff/">https://maps.conservation.ca.gov/dlrp/ciff/</a>				
<b>III. AIR QUALITY</b> – Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. <b>Would the project:</b>				
a) Conflict with or obstruct implementation of the applicable air quality plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> The Project site is in the South Coast Air Basin (Air Basin). It is one of several regional air basins designated by the State of California to manage air quality and air pollution in Southern California. The air basin includes Orange County, and the non-desert portions of Los Angeles County, San Bernardino County, and Riverside County. The South Coast Air Quality Management District (SCAQMD) and the California Air Resources Board (CARB) monitor the air quality within the Air Basin. The current Air Quality Management Plan (AQMP) is prepared by SCAQMD and the Southern California Association of Governments (SCAG). This AQMP describes air pollution control strategies and measures that are to be implemented within the Air Basin. Currently, the ambient air quality in the Air Basin exceeds the state air quality standards established by the California Clean Air Act as well as the National Ambient Air Quality Standards (NAAQS) set forth by the United States Environmental Protection Agency (USEPA) under the authority of the federal Clean Air Act.</p> <p>The Project is adjacent to the Courtyards at Cottonwood Phase I project. However, the Project consists of fewer buildings, less of a footprint, and fewer overall construction activities than that of the Phase I project. Calculations and modeling for Phase I, prepared by Maxsum Development, LLC (June 2019), were completed as a part of the <i>Air Quality &amp; Greenhouse Gas Emissions Quantification Report (“AQ/GHG Report”)</i> (See <b>Appendix A</b>). Phase I calculations and modeling were used for the Project and scaled according to a ratio of floor area and lot coverage. This calculation is shown below and is based on Floor Area and Lot Coverage information provided on the Project Plot Plans (See <b>Appendix B</b>).</p> $Phase\ II : Phase\ I = \frac{Floor\ Area_{Phase\ II} + Lot\ Coverage_{Phase\ II}}{Floor\ Area_{Phase\ I} + Lot\ Coverage_{Phase\ I}} =$ $\frac{(30,625\ SF + 25,839\ SF)}{(83,741\ SF + 75,787\ SF)} = 35.4\%$ <p>This ratio is calculated to be 35.4%. As Phase I was found to create less than a significant impact in the <i>AG/GHG Report</i> and the proposed Project is estimated to create approximately one-third of the impact of Phase I, then it can qualitatively be confirmed that the proposed Project would also have a less than significant impact.</p>				
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> Riverside County and the Air Basin are currently in nonattainment for two NAAQS pollutants: ozone and particulate matter. Nonattainment indicates that the ambient air quality of the local region exceeds the thresholds set forth by the proper State and Federal guidelines. The Project’s construction activities would generate short-term emissions for criteria air pollutants. Construction generated emissions are short term and only last as long as construction activities occur. While the emissions from construction activities are short term, they would create a significant impact should the total nominal volume of pollutants exceed the SCAQMD’s thresholds of significance.</p>				

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p>The MND for the adjacent approved Phase I Project concluded that there would be no significant air quality impacts, in consideration of standard City construction and operational requirements as well as compliance with applicable SCAQMD and CARB regulations, such as dust control. The Phase II Project will construct approximately 40% as many units approved in Phase I Project, and therefore is similarly not anticipated to have any significant air quality impacts. Impacts would be less than significant.</p>				
<p>c) Expose sensitive receptors to substantial pollutant concentrations?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> Air quality impacts are analyzed relative to the population with the greatest sensitivity to air pollution exposure. These people are called “sensitive receptors.” Sensitive populations include young, elder, and acutely and chronically ill people. The most sensitive group tends to be those that suffer from cardio-respiratory diseases. Residential areas are considered highly sensitive areas because they tend to be occupied for long periods of time and residents can be outdoors when exposure is high. While the residential areas to the East, South, and West of the proposed Project are sensitive receptors the air emissions during the lifetime of the proposed Project will not exceed the adopted air emission thresholds. There will not be a substantial concentration of criteria pollutants and will be a less than substantial impact.</p> <p>Construction activities would result in short-term, Project-based exposure to diesel particulate matter (DPM) from the exhaust of off-road, heavy-duty diesel equipment used during various construction activities such as, site preparation, grading, foundation laying, paving, etc. CARB has identified DPM as a toxic air contaminate and the health risk related to exposure to DPM is related to the dose at which sensitive receptors are exposed. Dosage is related to the concentration of DPM in the air and by the duration of exposure. The Office of Environmental Health Hazard Assessment has stated that health risk assessments should be based on a 30-year exposure period, however, the assessment is limited to the duration of the Project. During construction of the proposed Project, there will be relatively few heavy-duty pieces of equipment operating at any one time and the duration of the proposed Project is relatively short when compared to a 30-year period. Due to the way that DPM disperses in the atmosphere and the reduction of emissions from new construction, construction emissions would not expose sensitive receptors to substantial emissions of toxic air contaminants and there would be a less than significant impact.</p> <p>Off-site exposure to toxic air contaminants would be minimal as the proposed Project is more than 500-feet away from any freeway or major urban road with greater than 100,000 vehicles traveled per day, is not within 1,000-feet of any major rail yard, is not within 300-feet of a large gas station, is not within 500-feet of any dry-cleaning operations, and the proposed Project does not involve any emission sources that will produce substantial emissions of toxic air contaminants. As such, impacts would be less than significant.</p>				
<p>d) Result in other emissions (such as those leading to odors adversely affecting a substantial number of people?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> Some odors are anticipated as a result of construction or operation of the proposed Project. However, residential buildings are not typically considered a substantial point source for objectionable odors. The proposed Project is anticipated to be constructed with conventional building materials typical of similar construction projects and building materials with oppressive olfactory qualities are not expected to be used. Any odors emitted from the proposed Project would be temporary and localized and would not impact a substantial number of people. According to the SCAQMD CEQA Air Quality Handbook, residential buildings are not associated with odors and therefore odor impact would be less than significant during operation.</p>				

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p><b>Sources:</b></p> <ol style="list-style-type: none"> <li>City of Moreno Valley. <i>MoVal 2040 General Plan, June 15, 2021.</i> <ul style="list-style-type: none"> <li>Chapter 4—Circulation</li> <li>Chapter 6—Safety</li> </ul> </li> <li>City of Moreno Valley. <i>Final Environmental Impact Report for the MoVal 2040 General Plan, June 15, 2021.</i> <ul style="list-style-type: none"> <li>Section 4.3 Air Quality                             <ul style="list-style-type: none"> <li>Table 4.3-3 SCAQMD Air Quality Significance Thresholds—Mass Daily Thresholds</li> </ul> </li> </ul> </li> <li>Air Quality &amp; Greenhouse Gas Emissions Quantification Report, June 2019, prepared by Maxsum Development, LLC</li> <li>Title 9 – Planning and Zoning of the Moreno Valley Municipal Code                             <ul style="list-style-type: none"> <li>Section 9.10.050 – Air Quality of the Moreno Valley Municipal Code</li> <li>Section 9.10.150 – Odors of the Moreno Valley Municipal Code</li> <li>Section 9.10.170 – Vibration of the Moreno Valley Municipal Code</li> <li>Section 12.50.040 – Limitations on Engine Idling</li> </ul> </li> </ol>				
<p><b>IV. BIOLOGICAL RESOURCES – Would the project:</b></p>				
<p>a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?</p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> Currently, the Project site currently is undeveloped and vacant but does have the potential to contain species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service. Additionally, to comply with state regulations, the federal Endangered Species Act of 1973 and the Natural Communities Conservation Plan, the Habitat Conservation Plan were formed to list both threatened and endangered species in the state. Specifically, the Western Riverside Multiple Specific Habitat Conservation Plan (MSHCP) covers the Project site under the Reche Canyon/Badlands Area Plan.</p> <p>For the purposes of this report, an MSHCP Consistency Report was previously prepared by Maxsum Development (June 2019) and concluded no special-status wildlife or plant species were observed during field surveys on the Project site. Furthermore, the Western Riverside County Regional Conservation Authority (RCA) MSHCP Information Map was utilized to research if MSHCP indicates any additional requirements. As such, it was concluded that the Project site is outside of a MSHCP Criteria Cells, also known as core habitat and wildlife movement corridors identified for conservation. However, the Project site is located within a survey area for Burrowing Owl (<i>Athene cuicularia</i>) which according to the MSHCP Sections 6.3.2 requires additional surveys. Based on field surveys, the Project area consists of low-grade vegetation, open spaces, and small mammal burrows. Since the Project site is surrounded by residential and public uses, it is uncommon the burrowing owl favors this type of land with many potential disturbances. Maxsum Development also conducted focused surveys of the site and found no burrowing owls or sign (pellets, feathers, castings, or whitewash) were observed on or within 500 feet of the site. It could be presumed the burrowing owl is absent from the Project site.</p> <p>Although no burrowing owls were observed on-site, mitigation measures would still need to be implemented to void any potential impacts. Mitigation Measure BIO-1 &amp; Mitigation Measure BIO-2 (See <b>Attachment 3</b>) recommend that a burrowing owl preconstruction clearance survey be conducted prior to any activities at least 30 days in advance and a final report shall be submitted to corresponding agencies. As such, with the proposed mitigation measures and payment of the mitigation fees for the MSHCP and Stephan’s Kangaroo Rat (SKR) Habitat Conservation Plan the impact will be less than significant on special status species.</p>				

**Mitigation Measure BIO-1:**

Vegetation clearing, and ground disturbance shall be prohibited during the migratory bird nesting season (February 1 through September 15), unless a migratory bird nesting survey is completed in accordance with the following requirements:

- A migratory bird nesting survey of the Project's impact footprint, including suitable habitat within a 500-foot radius, shall be conducted by a qualified biologist within three (3) days prior to initiating vegetation clearing or ground disturbance.
- A copy of the migratory nesting bird survey results report shall be provided to the City of Moreno Valley. If the survey identifies the presence of active nests, then the qualified biologist shall provide the City with a copy of maps showing the location of all nests and an appropriate buffer zone around each nest sufficient to protect the nest from direct and indirect impact. The size and location of all buffer zones, if required, shall be subject to review and approval by the City and shall be no less than a 100-foot radius around the nest for non-raptors and no more than a 500-foot radius around the nest for raptors. The nests and buffer zones shall be field checked weekly by a qualified biological monitor. The approved buffer zone shall be marked in the field with construction fencing, within which no vegetation clearing or ground disturbance shall commence until the qualified biologist and the City verify that the nests are no longer occupied and juvenile birds can survive independently from nests.

**Mitigation Measure BIO-2:**

Within 30 days prior to grading, a qualified biologist shall conduct a survey of suitable habitat on-site and make a determination regarding the presence or absence of the burrowing owl. The determination shall be documented in a report and shall be submitted, reviewed, and accepted by the City of Moreno Valley prior to the issuance of a grading permit and subject to the following provisions:

- In the event that the pre-construction survey identifies no burrowing owls on the property, a grading permit may be issued without restriction.
- In the event that the pre-construction survey identifies the presence of at least one individual but less than three (3) mating pairs of burrowing owls, then prior to the issuance of a grading permit and prior to the commencement of ground-disturbing activities on the property, the qualified biologist shall passively or actively relocate any burrowing owls. Passive relocation, including the required use of one-way doors to exclude owls from the site and the collapsing of burrows, will occur if the biologist determines that the proximity and availability of alternate habitat is suitable for successful passive relocation. Passive relocation shall follow California Department of Fish and Wildlife (CDFW) relocation protocol and shall only occur between September 15 and February 1. If the proximate alternate habitat is not present as determined by the biologist, active relocation shall follow CDFW relocation protocol. The biologist shall confirm in writing that the species has fledged the site or been relocated prior to the issuance of a grading permit.
- In the event that the pre-construction survey identifies the presence of three (3) or more mating pairs of burrowing owls, the requirements of MSHCP Species-Specific Conservation Objectives 5 for the burrowing owl shall be followed. Objective 5 states that if the site (including adjacent areas) supports three (3) or more pairs of burrowing owls and supports greater than 35 acres of suitable habitat, at least 90 percent of the area with long-term conservation value and burrowing owl pairs will be conserved onsite until it is demonstrated that Objectives 1-4 have been met. A grading permit shall be issued, either:
  - Upon approval and implementation of a property-specific Determination of Biologically Superior Preservation (DBESP) report for the burrowing owl by the CDFW; or
  - A determination by the biologist that the site is part of an area supporting less than 35 acres of suitable Habitat, and upon passive or active relocation of the species following accepted CDFW protocols. Passive relocation, including the required use of one-way doors to exclude owls from the site and the collapsing of burrows, will occur if the biologist determines that the

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p>proximity and availability of alternate habitat is suitable for successful passive relocation. Passive relocation shall follow CDFW relocation protocol and shall only occur between September 15 and February 1. If proximate alternate habitat is not present as determined by the biologist, active relocation shall follow CDFW relocation protocol. The biologist shall confirm in writing that the species has fledged the site or been relocated prior to the issuance of a grading permit.</p>				
<p>b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p><b>Response:</b> Based on CEQA (Article 13 § 15206) sensitive wildlife habitats are defined as riparian lands, wetlands, bays, estuaries, and marshes and habitats of rare or endangered species. According to the City’s Final EIR (June 2021), Figure 4.4-1 <i>Vegetation Communities</i>, the Project site is not located in any riparian habitat or other sensitive natural community. Additionally, the Project site is not located within a significant ecological area, rather the site is located in a highly urbanized area. Hence, no riparian habitat or other sensitive natural resources exist on-site. No sensitive habitat was identified in the June 2019 biological survey by Maxsum. Thus, impact on substantial adverse effects on sensitive natural communities are to have no impact by the proposed Project.</p>				
<p>c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p><b>Response:</b> As mentioned above, Response IV (b), the Project site is not categorized as being a state or federally protected wetlands based on the City’s Final EIR (June 2021) Figure 4.4-1. The Project site is currently on vacant undeveloped land, as such, there is no impact to having a substantial adverse effect to protected wetlands through direct removal filling, or hydrological interruption.</p>				
<p>d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with an established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?</p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> Based on the Multiple Species Habitat Conservation Plan Consistency Analysis (June 2019), the Project site currently has a couple of trees remaining on the vacant plot of land. These trees could be habitat for migratory birds. Following the Migratory Bird Treaty Act (MBTA), it is forbidden to remove any trees, shrubs, or any other potential nesting habitat. As such, any removal should occur outside the migratory bird nesting period which is February 1st through August 31st. Therefore, the proposed Mitigation Measure BIO-3 will outline any additional plans to coordinate tree removal outside the nesting period. As previously mentioned, if removal of any trees were to occur outside the migratory bird nesting period then a preconstruction survey is required outlining detailed instruction and conducted by a qualified biologist. As mentioned before, there are no bodies of water on the Project site, therefore no impact will be placed on migratory fish species or impede the use of native wildlife nursery on-site. Thus, with the proposed mitigation measure plan the interference with the movement of any native resident or migratory fish or wildlife species would be less than significant.</p>				

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p><b>Mitigation Measure BIO-3:</b>                      Prior to Grading Permit issuance, the Project Applicant shall demonstrate, to the satisfaction of the Moreno Valley Planning Department that the project complies with the following:</p> <ul style="list-style-type: none"> <li>Tree Removal - Trees shall not be removed from the site during the avian nesting season from February 1 through August 31. If ground disturbance and vegetation removal cannot occur outside of the nesting season, a pre- construction clearance survey for nesting birds should be conducted within three (3) days of the start of any ground disturbing activities to ensure that no nesting birds will be disturbed during construction. The biologist conducting the clearance survey should document a negative survey with a brief letter report indicating that no impacts to active avian nests will occur. If an active avian nest is discovered during the pre-construction clearance survey, construction activities should stay outside of a 300-foot buffer around the active nest. For raptors and special-status species, this buffer will be expanded to 500 feet. It is recommended that a biological monitor be present to delineate the boundaries of the buffer area and to monitor the active nest to ensure that nesting behavior is not adversely affected by the construction activity. Once the young have fledged and left the nest, or the nest otherwise becomes inactive under natural conditions, normal construction activities can occur.</li> </ul>				
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> As mentioned above, IV (d), the consistency analysis identified some trees on the Project site. However, this Project site does not contain any significant sensitive vegetation, protected trees, or protected biological resources based on the Arborist Report, prepared by James Carrera/Consulting Arborist (June 2019). Additionally, the Moreno Valley Municipal Code (Section 8.60 Threatened and Endangered Species) requires new development projects to pay fees for MSHCP implementation and the Stephens' Kangaroo Rat to minimize any potential adverse impacts. Therefore, the Project would not conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or another approved local, regional, or state habitat conservation plan with any local policies or ordinances. Impact is anticipated to be less than significant.</p>				
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or another approved local, regional, or state habitat conservation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> According to the Riverside Regional Conservation Authority's Multiple Species Habitat Conservation Plan (MSHCP), the Project site falls within the jurisdiction of the Reche Canyon/Badlands Area Plan. Additionally, the Project site is not defined as any Criteria Cells or MSHCP Conservation Areas which would classify it as sensitive area. The RCA MSHCP Information Map identifies the Project site parcel as designated survey area for the burrowing owl (<i>Athene cunicularia</i>). As such, with the identified species, the Project site will adhere with the guidelines and regulations put forth by the Burrowing Owl Survey Instructions for the Western Riverside Multiple Species Habitat Conservation Plan Area. Thus, with the proposed mitigation plans discussed previously in Response IV (a-d), the Project implementation would have a less than significant impact.</p>				

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p><b>Sources:</b></p> <ol style="list-style-type: none"> <li>City of Moreno Valley. <i>MoVal 2040 General Plan, June 15, 2021</i> <ul style="list-style-type: none"> <li>Chapter 10—Open Space &amp; Resource Conservation                             <ul style="list-style-type: none"> <li>Map OSRC-1: Regional Open Space and Trails</li> <li>Map OSRC-2: Special Status Species</li> </ul> </li> </ul> </li> <li>City of Moreno Valley. <i>Final Environmental Impact Report for the MoVal 2040 General Plan, June 15, 2021</i> <ul style="list-style-type: none"> <li>Section 4.4 Biological Resources                             <ul style="list-style-type: none"> <li>Figure 4.4-1 Vegetation Communities</li> <li>Figure 4.4-2 MSHCP Covered Species, CNDDDB and USWFS Species</li> <li>Figure 4.4-3 MSHCP Covered Lands and Criteria Cells</li> <li>Figure 4.4-4 Stephens’ Kangaroo Rat Core Reserve Area</li> <li>Figure 4.4-7 MSHCP Covered and USFWS Species Observations</li> </ul> </li> </ul> </li> <li>Title 9 – Planning and Zoning of the Moreno Valley Municipal Code                     <ul style="list-style-type: none"> <li>Section 9.17.030 G – Heritage Trees</li> </ul> </li> <li>Moreno Valley Municipal Code Chapter 8.60 – Threatened and Endangered Species</li> <li>Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP), <a href="https://www.wrc-rca.org/annual_reports/RCA_2019_Annual_Reportc.pdf">https://www.wrc-rca.org/annual_reports/RCA_2019_Annual_Reportc.pdf</a>, <a href="https://rctlma.org/Portals/0/mshcp/volume1/index.html">https://rctlma.org/Portals/0/mshcp/volume1/index.html</a></li> <li>Western Riverside Regional Conservation Authority (RCA) MSHCP Information Map, <a href="https://wrcrca.maps.arcgis.com/apps/webappviewer/index.html?id=a73e69d2a64d41c29ebd3acd67467abd">https://wrcrca.maps.arcgis.com/apps/webappviewer/index.html?id=a73e69d2a64d41c29ebd3acd67467abd</a> <ul style="list-style-type: none"> <li>Appendix E. <b>V. CULTURAL RESOURCES – Would the project:</b>				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to <a href="#">§15064.5</a> ?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p><b>Response:</b> CEQA § 15064.5 defines the term “historical resources” as a) a resources listed in, or determined to be eligible by the State Historical Resources Commission, for listing in the California Register of Historical Resources b) a resource included in a local register of historical resources c) any object, building, structure, site, area, place, record, which a lead agency determines to be historically significant or significant in the architectural, engineering, or cultural annals of California may be considered to be a historical resource. Additionally, a substantial adverse change in the significance of a historical resource means physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of a historical resource would be materially impaired. Based on the City’s Final EIR (June 2021), Table 4.5-1 <i>List of Historic Resources and their Eligibility Status</i>, the Project site does not contain any historic resource. As previously stated, the Project site is vacant and undeveloped. Therefore, there is no impact anticipated to cause a substantial adverse change in the significance of a historical resource.</p>				
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to <a href="#">§15064.5</a> ?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> A cultural resource assessment (CRA) was prepared by Maxsum Development for Phase I that also includes Phase II area (June 2019). The CRA record search and field survey did not identify any cultural resources within the site. The CRA Report concluded that the site does have potential for</p>				

Attachment: Exhibit A to Resolution No. 2022-XX Mitigated Negative Declaration/Initial Study [Revision 1] (5641 : Courtyards at Cottonwood

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p>significant archaeological resources, but it is unlikely that the Project would potentially disturb unidentified archaeological resources. However, subsurface archaeological resources may still exist, and construction activities could potentially uncover these resources. For this reason, the following mitigation measures (See <b>Appendix C</b>) from Phase I would also apply to the Project in the event that cultural resources are discovered during ground-disturbance activities as a result of Project construction:</p> <p><b>Mitigation Measure CUL-1:</b> Prior to the issuance of a grading permit, the Project Applicant shall provide evidence to the City of Moreno Valley that a qualified paleontologist has been retained by the Project Applicant to conduct monitoring of excavation activities and has the authority to halt and redirect earthmoving activities in the event that suspected paleontological resources are unearthed.</p> <p><b>Mitigation Measure CUL-2:</b> The paleontological monitor shall conduct full-time monitoring during grading and excavation operations in undisturbed, very old alluvial fan sediments at or below four (4) feet below ground surface and shall be equipped to salvage fossils if they are unearthed to avoid construction delays and to remove samples of sediments that are likely to contain the remains of small fossil invertebrates and vertebrates. The paleontological monitor shall be empowered to temporarily halt or divert equipment to allow of removal of abundant and large specimens in a timely manner. Monitoring may be reduced if the potentially fossiliferous units are not present in the subsurface, or if present, are determined upon exposure and examination by qualified paleontological personnel to have a low potential to contain or yield fossil resources.</p> <p><b>Mitigation Measure CUL-3:</b> Recovered specimens shall be properly prepared to a point of identification and permanent preservation, including screen washing sediments to recover small invertebrates and vertebrates, if necessary. Identification and curation of specimens into a professional, accredited public museum repository with a commitment to archival conservation and permanent retrievable storage, such as the Western Science Museum in Hemet, California, is required for significant discoveries. The paleontologist must have a written repository agreement in hand prior to initiation of mitigation activities.</p> <p><b>Mitigation Measure CUL-4:</b> A final monitoring and mitigation report of findings and significance shall be prepared, including lists of all fossils recovered, if any, and necessary maps and graphics to accurately record the original location of the specimens. The report shall be submitted to the City of Moreno Valley prior to building final.</p>				
<p>c) Disturb any human remains, including those interred outside of formally dedicated cemeteries?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> As previously mentioned, the CRA record search and field survey did not identify any cultural resources within the site. There was also no evidence of human remains found on site. However, ground-disturbing activities during construction phase could have the potential to reveal buried deposits not observed during field survey. It is not anticipated that the Project would result in such impact, but should any human remains be accidentally uncovered, all construction activities must cease, and the Riverside County Coroner will be immediately contacted and notified of such discovery. As required by State Law, the Project is anticipated to adhere to the following during construction activities:</p> <ul style="list-style-type: none"> <li>• If human remains or funerary objects are encountered during any activities associated with the Project, work in the immediate vicinity (within a 100-foot buffer of the find) shall cease and the</li> </ul>				

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p>County Coroner shall be contacted pursuant to State Health and Safety Code §7050.5 and that code enforced for the duration of the Project; and</p> <ul style="list-style-type: none"> <li>The Lead Agency and the Project Applicant shall immediately contact the San Bernardino County Coroner and the applicable designated tribal entity in the event that any human remains are discovered during implementation of the Project. If the Coroner recognizes the human remains to be those of a Native American or has reason to believe that they are those of a Native American, the Coroner shall ensure that notification is provided to the Native American Heritage Commission (NAHC) within 24 hours of the determination, as required by California Health and Safety Code §7050.5 (c). The NAHC-identified Most Likely Descendant (MLD), shall be allowed, under California PRC §5097.98 (a), to (1) inspect the site of the discovery and (2) make determinations as to how the human remains and funerary objects shall be treated and disposed of with appropriate dignity. The MLD, Project Applicant/developer/landowner, and Lead Agency agree to discuss in good faith what constitutes "appropriate dignity" as that term is used in the applicable statutes. The MLD shall complete its inspection and make recommendations within 48 hours of being granted access to the site, as required by California PRC §5097.98. Reburial of human remains and/or funerary objects shall be accomplished in compliance with the California PRC §5097.98 (a) and (b). The MLD, in consultation with the Project Applicant/developer/landowner, shall make the final discretionary determination regarding the appropriate disposition and treatment of human remains and funerary objects.</li> </ul> <p>The Project is anticipated to have a less than significant impact on human remains, including those interred outside of dedicated cemeteries with compliance to applicable laws.</p>				
<p><b>Sources:</b></p> <ol style="list-style-type: none"> <li>City of Moreno Valley. <i>MoVal 2040 General Plan, June 15, 2021.</i> <ul style="list-style-type: none"> <li>Chapter 10—Open Space &amp; Resource Conservation                             <ul style="list-style-type: none"> <li>Map OSRC-1: Regional Open Space and Trails</li> </ul> </li> </ul> </li> <li>City of Moreno Valley. <i>Final Environmental Impact Report for the MoVal 2040 General Plan, June 15, 2021.</i> <ul style="list-style-type: none"> <li>Section 4.5 Cultural and Tribal Cultural Resources                             <ul style="list-style-type: none"> <li>Table 4.5-1 List of Historic Resources and their Eligibility Status</li> <li>Table 4.5-2 List of Archaeological Resources and their Eligibility Status</li> <li>Figure 4.5-1 Historic Resources</li> <li>Figure 4.5-2 Archaeological Sensitive Areas</li> </ul> </li> </ul> </li> <li>Title 9 – Planning and Zoning of the Moreno Valley Municipal Code</li> <li>Title 7 – Cultural Preservation of the Moreno Valley Municipal Code</li> <li>Cultural Resources Inventory for the City of Moreno Valley, Riverside County, California, prepared by Daniel F. <b>VI. ENERGY – Would the project:</b>				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p><b>Response:</b> The majority of the wasteful, inefficient, or unnecessary consumption of energy resources would occur during the construction phase of the Project site. This can be attributed to heavy construction machinery requiring fossil fuels. At a final stage, the Project site would consume natural gas/electricity during its operation. However, in accordance with Moreno Valley General Plan 2040 (Chapter 10 <i>Water and Energy Conservation</i>), the Project site will follow construction methods and building energy conservations measures for residential structures. Additionally, the California Building Efficiency Standards – Title 24 would be thoroughly followed as well as the construction requirements outlaid in the City Municipal Code. The Project would mitigate wasteful and inefficient use of transportation fuel. As such, less than significant impact can be expected. No mitigation measures are required.</p>				
<p>b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> The electrical service provider is Moreno Valley Electricity Utility and its main gas provider is Southern California Gas Company. As stated in the City’s MoVal 2040 General Plan the general plan requires new buildings to be constructed in an energy efficient manner. Therefore, additions and alterations must conform to the energy efficiency standards. The City’s Final EIR (June 2021) anticipates that the increased electricity demand generated by new development will not place a significant increase in demand upon the state electricity supply system. The Project would be required to comply with federal and state standards and would not be in conflict with or obstruct a state or local plan for renewable energy or energy efficiency. Therefore, the Project would have less than significant impact and no mitigation measures would be necessary.</p>				
<p><b>Sources:</b></p> <ol style="list-style-type: none"> <li>1. City of Moreno Valley. <i>MoVal 2040 General Plan, = June 15, 2021.</i> <ul style="list-style-type: none"> <li>• Chapter 10—Open Space &amp; Resource Conservation</li> </ul> </li> <li>2. City of Moreno Valley. <i>Final Environmental Impact Report for the MoVal 2040 General Plan, June 15, 2021.</i> <ul style="list-style-type: none"> <li>• Section 4.6 Energy</li> </ul> </li> <li>3. Title 9 – Planning and Zoning of the Moreno Valley Municipal Code</li> <li>4. California Energy Commissions— Building Energy Efficiency Standards—Title 24</li> </ol>				
<p><b>VII. GEOLOGY AND SOILS – Would the project:</b></p>				
<p>a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving:</p>				
<p>i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to <a href="https://www.conservation.ca.gov/cgs/Documents/SP_042.pdf">https://www.conservation.ca.gov/cgs/Documents/SP_042.pdf</a></p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> According to the Earthquake Zones Hazards Zone Application provided by the California Department of Conservation, the Project is not located in the Alquist-Priolo Earthquake Fault Zones. The nearest fault zone to the Project site is the San Jacinto Fault which lies approximately 6 miles northwest of the site. The Project would be required to adhere to the seismic safety requirements in the most recent California Building Code (CBC), City of Moreno Valley Local Hazards Mitigation Plan, and City of Moreno Valley Municipal Code. Thus, the Project is anticipated to have a less than significant impact.</p>				

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
ii) Strong seismic ground shaking?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> The Project site is located in a seismically active area of Southern California. The City is located near three major fault lines the San Andreas Fault, the San Jacinto Fault Zone, and the Elsinore Fault Zone. The San Jacinto Fault is noted to be highly active throughout Southern California. As outlined by the Earthquake Shaking Potential for California map from the California Department of Conservation, the Project area is in an area of high regional seismicity. The Project would be required to be in conformance with the current 2019 CBC, City regulations, and other applicable standards. The current CBC design standards correspond to the level of seismic risk in each location and are intended primarily to protect public safety and secondly to minimize property damage. Conformance with standard engineering practices and design criteria established in the current CBC, would reduce the effects of seismic ground shaking to a less than significant level.</p>				
iii) Seismic-related ground failure, including liquefaction?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> Per the definition provided by USGS, liquefaction takes place when loosely packed water-logged sediments at or near the ground surface lose their strength in response to strong ground shaking. This can cause major damage during earthquakes if the liquefaction occurs beneath buildings and structures (<a href="#">Natural Hazards, USGS</a>). The City’s MoVal 2040 General Plan – Chapter 6: Safety, Map S-2: Liquefaction Hazards identifies the Project site to be in a low liquefaction hazard area. Therefore, there is less than a significant impact of seismic-related ground failure. All Project design and construction would comply with the most recent California Building Standards Code and the Moreno Valley Municipal Code (Section 8.20) for seismic related hazards. Compliance with the noted Codes would reduce any potential impacts with regards to seismic-related ground failure, including liquefaction to less than significant.</p>				
iv) Landslides?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> Since the Project site is located on vacant land surrounded by Public Facilities (north) and residential uses (south, east, west) it does not sit on top of a hill or large slope. Based on the California Earthquake Hazard Zones, the Project area is not located in a landslide hazard zone. As previously mentioned, mitigation measures will be followed based on the California Building Code and the City of Moreno Valley Municipal Code standards. Therefore, less than a significant impact for landslides is expected.</p>				
b) Result in substantial soil erosion or the loss of topsoil?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> As previously mentioned, the Project site is undeveloped, as such construction of the new multi-family developments would move topsoil or soil erosion during construction phase. Despite this, all construction related work would adhere to the Moreno Valley Municipal Building Code Chapter 8.20 and the most recent California building Standards Code and would obtain all necessary permits, plans, inspections, etc. Consequently, with accordance to the National Pollutant Discharge Elimination System (NPDES), a permit is required for stormwater runoff plan (SWPPP) associated with construction activity and the City of Moreno Valley Municipal Code (Section 8.21) an erosion control plan is required when all earth moving. Post-construction a paved lot with buildings is expected to lessen sediment runoff at the time of completion. As such, the potential for substantial soil erosion or loss of topsoil is less than significant.</p>				

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> According to the City’s Final EIR (June 2021), the Project site mainly lies on the Perris Block bedrock. This bedrock is relatively stable. The materials within the valley area are characterized by Pliocene-Pleistocene alluvium. As stated in the preliminary soil and geology report, the Project site is composed of Hanford fine sandy loam, 0 to 2 percent slopes (1.5% AOI) and Pachappa fine sandy loam, 0 to 2 percent slopes (98.5% AOI). As discussed previously, the risk for liquefaction on the site is low and the potential for landslides is not identified as a high risk. Additionally, since the Project site has no free-faces or slopes, the lateral spreading risk is also low. Per the definition of USGS, land subsidence occurs when large amount of groundwater has been withdrawn from certain types of rocks, such as fine-grained sediments (<a href="#">Groundwater Topics, USGS</a>). The Project site is not classified as known subsidence associated with oil or groundwater. Consequently, no groundwater extraction occurs within the Project site, therefore this risk is low. The Project site would adhere to the City of Moreno Valley Municipal Code and safety guidelines. Therefore, a less than significant impact is anticipated.</p>				
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> According to Preliminary Geotechnical and Infiltration Feasibility Investigation, prepared by LOR Geotechnical Group, Inc (September 2019), the Project site is made up of alluvial deposits, some clay is present which can expand when wet and shrink when dried. Specifically, the composition is as follows, Hanford fine sandy loam (1.5% AOI) and Pachappa fine sandy loam (98.5% AOI). As part of the standard construction policy, the impact would be lessened by replacing the soils during the construction. Hence, less than significant impact is intended for the project implementation.</p>				
e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p><b>Response:</b> As stated in the City’s MoVal 2040 General Plan (Chapter 10), the City currently has two entities providing sewer service in Moreno Valley. The Project is in an urbanized area and would be served by existing sewer service, therefore no septic tanks are required. Accordingly, no impacts on soils supporting wastewater disposal systems are expected.</p>				
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p><b>Response:</b> As described in the Riverside County Planning General Plan, Cultural and Paleontological Resources (Section 4.9) it is expected that many archeological and historical resources occur within the county that are unknown or undiscovered. It is common when construction activities occur, discovery of these items are found when grading or trenching are initiated. In addition, the plan states that field surveys and documentation conclude the lands having low potential for containing significant paleontological resources. It is concluded that based on these plans, implementation of the Project would not directly or indirectly destroy a unique paleontological resource or site directly or indirectly</p>				

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
--	--------------------------------	--	------------------------------	-----------

will be displayed. As such, no direct or indirect impact on destroying a unique paleontological resource is anticipated.

**VIII. GREENHOUSE GAS EMISSIONS – Would the project:**

a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
---	--------------------------	--------------------------	-------------------------------------	--------------------------

**Response:** Greenhouse gas (GHG) emissions refer to a group of gasses emitted into the atmosphere that have a capability to trap energy within the atmosphere and create impacts to global and local climate conditions. GHG emissions are a by-product of many human activities and would include the construction of this proposed Project. There would be short-term and long-term impacts to GHG emissions through construction and operation of the multi-family dwellings. Direct emissions include CO<sub>2</sub>, CH<sub>4</sub>, and N<sub>2</sub>O from the combustion of fuel in heavy construction equipment and motor vehicles as well as from electrical demand in the post-construction use phase of the Project. Indirect emissions would include emissions created from water consumption, wastewater treatment, and solid waste generation. See **Table 2** below for the calculated emissions values for the proposed Project.

<b>ISSUES &amp; SUPPORTING INFORMATION SOURCES:</b>	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
---	--------------------------------	--	------------------------------	-----------

**Table 2: Estimated Project Greenhouse Gas Emissions**

Operational GHG Emissions from Mobile and Indirect Sources	GHG Emissions (MTCO <sub>2</sub> e/yr)
Construction Sources	4.78
Operational Sources	538.69
Area Sources	0.0004
Energy Sources	127.65
Waste Sources	9.64
Water Sources	11.72
<b>Total Project</b>	<b>543.47</b>
SCAQMD Threshold (For All Land Use Projects)	3000
Exceed Threshold?	No

*Source: Air Quality & Greenhouse Gas Emissions Quantification Report, Prepared by Maxsum Development, LLC (June 2019)*

Operational GHG emission calculations were calculated in the Air Quality & Greenhouse Gas Emissions Quantification Report (AQ/GHG Report), prepared by Maxsum Development, LLC (June 2019) and were scaled by a factor of relative floor area and lot coverage. It is assumed that the emissions for proposed Project will be 35.4% of those values calculated in the AQ/GHG Report. In addition, the proposed multi-family residential project will provide additional housing opportunities to assist the City in meeting its Regional Housing Needs Assessment (RHNA) goals, consistent with the State’s goals to balance housing and job opportunities to reduce vehicle miles traveled (VMT). No significant impacts are anticipated, impacts would be less than significant.

b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emission of greenhouse gases?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
---	--------------------------	--------------------------	-------------------------------------	--------------------------

**Response:** As described above, the proposed Project would result in an increase in GHG emissions that falls well below the SCAQMD’s thresholds for land use projects. As GHG emissions will be relatively minimal for the proposed Project it will not affect the State of California’s goal to reduce GHG emissions per AB 32. It should also be noted that the existing site zoning would allow for a variety of uses that would likely exceed the traffic, VMT and associated GHG emissions of the proposed Project (applying a 50% floor area ratio to adult education uses results in an estimated 600 daily trips, nearly triple that of the Project, using ITE land use code 540 for Junior/Community/Technical college). As such, a less than significant impact is anticipated, as there will not be a conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases.

**IX. HAZARDS AND HAZARDOUS MATERIALS – Would the project:**

a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
---	--------------------------	--------------------------	-------------------------------------	--------------------------

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p><b>Response:</b> The Project would result in the development of two apartment buildings and one laundry facility. Residential land use is not usually expected to create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials. However, potentially hazardous, and toxic materials such as solvents, paint products, lubricants, fuels, and cleaning products may be transported, used and/or stored on-site during construction. The transport, use, and storage of hazardous materials during the construction and operation of the site would be conducted and kept in accordance with all applicable State, local and Federal regulations. Compliance with all applicable laws and regulations would reduce the potential impact associated with the routine transport, use, storage, or disposal of hazardous materials to a less than significant level and no mitigation is required.</p>				
<p>b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> As mentioned above, Response IX (a), the Project is not expected to create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazards materials Based on the Geotechnical Report prepared by LOR Geotechnical Group, Inc., April 10, 2019 no evidence of RECs, HRECs, or CREC which are released on, at, in, or to the Project site. Additionally, the report concluded that there are no concentrations of TPH-G or volatile organic compounds (VOCs) in the soil vapor probe locations. Thus, less than significant impact is anticipated for the Project development.</p>				
<p>c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> Although the project site is located south of the March Mountain High School, the proposed residential development is not anticipated to emit hazardous emissions or hazardous materials, substances, or waste after occupancy. In addition, construction activities are not expected to pose a risk to the adjacent school. As mentioned in Response IX (a), potentially hazardous and toxic materials such as solvents, paint products, lubricants, fuels, and cleaning products may be transported, used and/or stored on-site during construction. The transport, use, and storage of hazardous materials during the construction and operation of the site would be conducted and kept in accordance with all applicable State, local and Federal regulations. Compliance with all applicable laws and regulations would reduce the potential impact associated with the routine transport, use, storage, or disposal of hazardous materials to a less than significant level and no mitigation is required.</p>				
<p>d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to <a href="#">Government Code section 65962.5</a> and, as a result, would it create a significant hazard to the public or the environment?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> According to the Geotechnical Report findings, which researches through local, state, and federal hazardous waste databases, there was no known evidence of the Project site being located on a hazardous waste site or near a hazardous waste site. Based on the City’s Final EIR (June 2021), Figure 4.9-1 <i>Hazardous Materials Sites</i>, the nearest location is a hazardous materials handler, which is classified as, dry cleaning, film processing, landscaping, and automotive maintenance, located about</p>				

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p>east of the Project site, however, it is not of concern as it is not in the direct vicinity of the proposed development. Additionally, the hazardous waste handler locations are directly monitored by the U.S. Environmental Protection Agency (EPA). There are no Cortese List sites within the Project boundaries. As such, there is no concern a less than significant impact to the public or the environment is expected at this time.</p>				
<p>e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p><b>Response:</b> The Riverside County Airport Land Use Commission adopted the Airport Land Use Compatibility Plan (ALUCP) for the March Air Reverse Base in 2014. The ALUCP incorporates noise and safety protection measures for the Air Installation Compatibility Use Zones (AICUZ). The nearest airport relative to the Project site is the March Air Reserve Base, approximately 2.9 miles northeast. The Project area is not within the Airport Compatibility Zones, as such sits outside the Airport Influence Area Boundary. According to the Final EIR for the City’s MoVal 2040 General Plan (June 2021) Figure 4.9-2 <i>Airport Compatibility Zones</i>, the Project site is currently not classified to be within airport land use, either “Accident Potential Zone” or “Clear Zone.” Therefore, Project implementation would not result in a safety hazard or excessive noise for people residing or working in the area. Thus, there is no impact is anticipated.</p>				
<p>f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> As previously mentioned, the proposed Project is in a highly urbanized area with major intersections and roadways allowing to be accessible for emergency evacuation plans. Also, the site plan outlines Phase I and II (See <b>Exhibit 4: Site Plan</b>) sharing ingress street roadways, Oneida Street, for entering/exiting avenues. During construction phase, all emergency exits would be outlined to ensure traffic safety as suggested by the City of Moreno Valley Fire Department. The apartment building developments would adhere to building and code safety standards. As such, the emergency plans would direct consultation with the City of Moreno Valley Fire Department to include the mapping of emergency exists, evacuation routes for both pedestrians and vehicles, nearest hospitals, and fire departments. Additionally, all the appropriate building emergency plans would be prepared and determined prior to allowing residents. Accordingly, there is a less than significant impact of the implementation of or interference with an adopted emergency response plan.</p>				
<p>g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p><b>Response:</b> Based on the City’s Final EIR (June 2021), the area north of the State Highway 60 is prone to Very High Fire Risk, Figure 4.18-1, however, this does not cover the Project site area therefore it is not expected dangerous for wildland fires. Currently, the Project site is located on a vacant property in a highly urbanized area, this would conclude that only structural fires are probable once development is complete. Overall, due to limited wildland features the development would not expose people or structures to fires. Thus, it is anticipated that no impact is foreseeable.</p>

**X. HYDROLOGY AND WATER QUALITY – Would the project:**

a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
--	--------------------------	--------------------------	-------------------------------------	--------------------------

**Response:** As previously mentioned, the Project site is currently vacant and undeveloped. The Project proposes to construct 32 apartment units and a laundry facility. Construction of the Project site would involve clearing, grading, paving, utility installation, building construction, and landscaping activities, which would result in the generation of potential water quality pollutants such as silt, debris, chemicals, paints, and other solvents with the potential to adversely affect water quality. As such, short-term water quality impacts have the potential to occur during construction of the Project in the absence of any protective or avoidance measures. To minimize water quality impacts during construction, construction activities would be required to comply with a SWPPP consistent with the General Permit for Storm Water Discharge Associated with Construction Activity (Construction Activity General

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p>Permit). To obtain coverage, the Project Applicant is required to submit a Notice of Intent prior to construction activities and develop and implement an SWPPP and monitoring plan. The SWPPP identifies erosion-control and sediment-control BMPs that would meet or exceed measures required by the Construction Activity General Permit to control potential construction-related pollutants. Erosion-control BMPs are designed to prevent erosion, whereas sediment controls are designed to trap sediment once it has been mobilized. Typical BMPs include but are not limited to construction scheduling, proper construction equipment staging, hydroseeding, straw mulch, sandbags, and silt fences. These requirements would ensure that potential Project impacts related to soil erosion, siltation, and sedimentation remain less than significant and avoid violation of any water quality standards or waste discharge requirements.</p> <p>The Project would disturb approximately 1.61 acres of land and would be required to obtain coverage under the NPDES stormwater program, administered by the State Water Resources Control Board (SWRCB) for disturbing more than one acre of land surface. The SWRCB works with the Regional Water Quality Control Board (RWQCB) to preserve, enhance, and restore the quality of water resources in California. The City is located in the Santa Ana RWQCB.</p> <p>In addition, urban runoff generally occurs with impervious surfaces, such as paved areas, rooftops, etc. The development of the Project would result in an urban runoff that would contain minor amounts of pollutants, such as pesticides and fertilizers. However, the Project is not expected to generate hazardous wastewater that would require special waste discharge permits. All wastewater associated with residential uses, including plumbing systems would be discharged into the existing sewer system for treatment. A Preliminary Water Quality Management Plan (WQMP) (see <b>Appendix G</b>) has been prepared for the Project. The Preliminary WQMP includes BMPs and source control BMPs to protect downstream water courses after construction. The Project would not violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality as it would adhere to the recommended BMPs and comply with all applicable permit to ensure any water quality impacts associated with the Project would be reduced to less than significant.</p>				
<p>b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> The Eastern Municipal Water District (EMWD) has been the primary water purveyor in Moreno Valley since the 1950s. The EMWD would provide imported water supply to the Project site, as noted in the City’s MoVal 2040 General Plan, Figure OSRC-4: <i>Water Use in Moreno Valley</i>. According to the GP, groundwater no longer provides a significant percentage of the local water supply. However, as noted in the Final MoVal 2040 General Plan EIR (June 2021), the groundwater basins within the EMWD are among the largest un-adjudicated groundwater systems in Southern California. The California State Department of Water Resources (DWR) has estimated the groundwater basins in Moreno Valley planning area to have capacity for approximately one million acre-feet (AF) of water. As mentioned, the Project would primarily rely on imported water supply from the EMWD and would not rely on groundwater sources, and therefore, would not significantly affect groundwater supplies. Additionally, as noted in the GP EIR, increases in impervious surfaces will result in a reduction in the amounts of rainwater that can infiltrate the soil to the groundwater table; however, onsite landscaping improvements and a bio-retention basin would provide a means for groundwater recharge. As such, the Project would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge and less than significant impact is anticipated as a result of the implementation of the Project.</p>				

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
i) Result in substantial erosion or siltation on- or off-site?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> Per the Preliminary Hydrology Report (See <b>Appendix H</b>), the Project site currently drains in a southeast direction and discharges to a southern parcel. Storm water flows are then intercepted by an existing headwall southeast of the Project site. Then the water flows are conveyed south to an existing catch basin on Cottonwood Avenue. From the catch basin, flows are conveyed south via an existing storm drain system and discharge at Vellanto Way. Runoff continues downstream through local streets and is intercepted by existing catch basins on Bay Avenue, which is the commencement of Line M-13 per Sunnymead Master Drainage Plan.</p> <p>The proposed grading for the Project site would maintain the natural flow pattern of the existing site condition and would drain in a southeast direction. The northern offsite tributary area would be left untreated and will be intercepted by a proposed headwall northeast of the property to be conveyed through an existing reinforced concrete box. The proposed box will connect to an existing box southeast of the property. After which, the flows will be conveyed south to an existing catch basin on Cottonwood Avenue. Under the proposed condition, the Project site has been subdivided into drainage sub-areas for hydrologic analyses. All site drainage is tributary to bio-retention basin (BIO-1). Overflows from BIO-1 will be conveyed to a proposed storm drain system that will connect to the proposed box conveying offsite flows.</p> <p>During construction, erosion and siltation reduction measures would be implemented. The development of the Project would result in a substantial increase in impervious surfaces and would significantly reduce any erosion or siltation impacts from occurring on site. Additionally, based on the soil study, it was determined the predominant hydrologic soil group classification onsite is B. This is defined as soils having fair infiltration rates (low runoff potential) and have a fair rate of water transmission. Less than a significant impact in substantial erosion or siltation on or off-site is anticipated, as a result of the implementation of the Project.</p>				
ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> As previously mentioned, the site is currently vacant and undeveloped. The development of the Project would greatly increase impervious areas; and therefore, would increase the rate and amount of surface runoff. According to the Preliminary Hydrology Report (See <b>Appendix H</b>), during the pre-development condition, the project site is impacted from the north by 10-year storm event (<math>Q_{10}</math>) = 1.84 cubic feet per second (cfs) and 100-year storm event (<math>Q_{100}</math>) = 3.12 cfs offsite stormwater runoff (<b>Appendix H, Preliminary Hydrology Report, Table 1</b>). The accumulated unmitigated post-development condition of onsite runoff flows are <math>Q_{10}</math> = 2.40 cfs and <math>Q_{100}</math> = 3.84 cfs (<b>Appendix H, Preliminary Hydrology Report, Table 2</b>). However, the Project would include a bio-retention basin for stormwater quality treatment and mitigation. The volume of storage provided in the basin along with the size of the outflow riser structure is intended to restrict peak flows in the proposed condition to levels equal to or less than the existing flows. With the incorporation of the bio-retention basin, the Project would not substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite. Less than significant impact is anticipated.</p>				

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> Based on the Preliminary Hydrology Report (See <b>Appendix H</b>), stormwater mitigation is needed to ensure the proposed flows do not exceed the existing flows. Since the site is in a highly urbanized area, polluted runoff is plausible in minor increments due to fertilizers, pesticides, etc. Similarly, the Preliminary Water Quality Management Plan identifies pollutants of concern such as bacterial indicators, nutrients, sediments, and/or trash debris. However, as referenced in Response X (c)(ii), a bio-retention basin for stormwater quality treatment and mitigation would be constructed as part of the Project. The proposed bio-retention basin would treat onsite runoffs and restrict peak flows in the proposed condition to levels equal to or less than the existing flows. The overflows from the bio-retention basin would be conveyed to a proposed storm drain system that would connect to the proposed box conveying offsite flows. <i>Table 5</i> of the Preliminary Hydrology Report (See <b>Appendix H</b>) provides an analysis for the proposed bio-retention basin with an estimated basin retention volume required of 5,112 cubic feet (cf) and an estimated retention volume proposed of 5,612 cf. With these estimates, the Project is not expected to create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted and any impacts would be considered less than significant.</p>				
iv) Impede or redirect flood flows?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p><b>Response:</b> As previously mentioned, under the existing condition, the site drains in a southeast direction and discharges to the southern parcel. The Project would not impede or redirect flood flows as the proposed grading for the site would drain in a southeast direction to main the natural flow pattern of the existing site to the maximum extent possible (Preliminary WQMP, <b>Appendix G</b>). In addition, according to the Preliminary Hydrology Report (See <b>Appendix H</b>), the Project is located in Zone X per the Federal Emergency Management Administration (FEMA) Flood Insurance Rate Map (FIRM) panel 06065C0761G, dated August 28, 2008. Flood Zone X is defined by FEMA as the area determined to be outside the 100-year flood. No portion of the site is located within the special flood hazard area inundated by the 100-year flood. Therefore, implementation of the Project would not impede, or redirect flood flows and no impact would occur.</p>				
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p><b>Response:</b> As mentioned in Response X (c)(iv), the Project site is not characterized as a flood zone according to the Federal Emergency Management Administration (FEMA) Flood Insurance Rate Map (FIRM), August 28, 2008. It is considered as Zone X, where no portion of the site is located within the special flood hazard area inundated by the 100-year flood (Preliminary Hydrology Report, <b>Appendix H</b>, FIRM Map). The nearest body of water are Perris Lake, located approximately 7.9 miles northwest and Mystic Lake approximately 12 miles northeast. According to the City of Moreno Valley General Plan Final Program EIR runoff from the Project area does not enter or affect the lake. In a similar manner, based on the California Tsunami Inundation map for Emergency Planning, the Project site is not at risk of exposure to tsunami hazards during a tsunami event. The Riverside County Flood Control and Water Conservation District is responsible for the regional flood control system. The agency has prepared Master Drainage Plans for each portion of the city. As such, any new development is required to build master drainage plan facilities and pay fees that are used to build the facilities. For the proposed Project, there is no indication of risk of seiche, tsunami, or mudflow. Thus, there is no impact to flood hazard, seiche zone due to project inundation.</p>				

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

**Response:** The Project would not conflict with or obstruct implementation of water quality control plan or sustainable groundwater management plan. As previously mentioned in Response X (b), the Project would primarily rely on imported water supply from the EMWD and would not rely on groundwater sources, and therefore, would not significantly affect groundwater supplies.

In addition, the Project site lies within the vicinity of the Eastern Municipal Water District, the Riverside County Flood Control and Water Conservation District, the Santa Ana Regional WQCB and the development of the Project would be subject to all existing water quality regulations and programs, including all applicable construction permits. A Preliminary WQMP (See **Appendix G**), has been prepared for the Project that include recommended BMPs to protect water quality during construction and occupancy periods. For these reasons, the Project would not conflict with or obstruct implementation of water quality control plan or sustainable groundwater management plan and less than significant impact is anticipated.

**XI. LAND USE AND PLANNING – Would the project:**

a) Physically divide an established community?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
--	--------------------------	--------------------------	--------------------------	-------------------------------------

**Response:** As discussed above, the Project site is in a highly urbanized area of the City. The site is located in the Public Facilities (P) land use and zoning designations and is surrounded by the same P land use and zoning designations and March Mountain High School to the north, Residential 5 (R5) land use and zoning designations and single-family residential to the east and west, and Residential 10 (R10) land use and zoning designations and vacant land (approved proposed Cottonwood Phase I multi-family development) to the south. The Project also proposes to change the existing land use and zoning from Public facilities (P) to Multi-family (R15) to develop 32 apartment units. The proposed Multi-family (R15) land use and zoning designation would be compatible with the existing surrounding residential uses. Implementation of the Project would not physically divide an established community as it would be

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
built within the two undeveloped parcels. No impact is anticipated to occur, and no mitigation measures would be necessary.				
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> As previously mentioned in Response XI (a), the Project site is in Public Facilities (P) zoning and land use. The Project proposal includes the development of two 35-foot high apartment buildings with 32 dwelling units, a laundry facility, and associated improvements, as well as a request to change land use and zoning from Public facilities (P) to Multi-family (R15) via General Plan Amendment (GPA) PEN21- 0113 and Zone Change (ZC) PEN21-0114. The GPA and ZC request would allow the site to be developed for multi-family residential use and would be compatible with the existing surrounding residential uses to the east, west, and south. Approval of the GPA and ZC applications would not cause the Project to be in conflict with any land use plan, policy or regulation adopted for the purpose of avoiding or mitigating an environmental effect. Less than significant impact is anticipated.</p>				
<p><b>Sources:</b></p> <ol style="list-style-type: none"> <li>1. City of Moreno Valley. <i>MoVal 2040 General Plan 2040, June 15, 2021.</i> <ul style="list-style-type: none"> <li>• Chapter 2—Land Use &amp; Community Character                             <ul style="list-style-type: none"> <li>- Map LCC-1: Moreno Valley Structure</li> <li>- Map LCC-2: Concept Areas and Major Specific Plans</li> <li>- Map LCC-4: Proposed General Plan Land Use</li> </ul> </li> </ul> </li> <li>2. <b>XII. MINERAL RESOURCES – Would the project:</b>				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p><b>Response:</b> As indicated in the City’s Final EIR for the MoVal 2040 General Plan (June 2021), the California Surface and Mining Reclamation Act (SMARA) of 1975 requires local governments to address mineral recovery activities through the direct regulation of mining operations. In accordance, the California Department of Conversation, Division of Mines and Geology has not identified significant mineral resources within the City. Based on the noted Final EIR (June 2021), the mineral resources known to be located within the City are common materials: sand, gravel, and rock. There was one recently active sand and gravel quarry on record, the Jack Rabbit Canyon Quarry, which was inactive as of 2001. Since the proposed Project site is located in a highly urbanized area and the surrounded by a school to the north and residential development to the east, west, and south, the potential of uncovering mineral resources during construction is relatively low. As such, there would be no impact which will result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state.</p>				
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p><b>Response:</b> As mentioned above, Response XII (a), the Project site is not currently under designated Mineral Resource Zone or a mineral producing area according to City’s Final EIR for the MoVal 2040</p>				

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p>General Plan (June 2021). Similarly, no mineral resources are within the vicinity of the Project site as it is surrounded by built environment. Thus, no impact is anticipated as a result of the Project implementation in the loss of availability of a locally important mineral resource recovery site on a local general plan, specific plan, or other land use plan.</p>				
<p><b>Sources:</b></p> <ol style="list-style-type: none"> <li>City of Moreno Valley. <i>MoVal 2040 General Plan 2040, June 15, 2021.</i> <ul style="list-style-type: none"> <li>Chapter 10—Open Space &amp; Resource Conservation                             <ul style="list-style-type: none"> <li>Map OSRC-1: Regional Open Space and Trails</li> </ul> </li> </ul> </li> <li>City of Moreno Valley. <i>Final Environmental Impact Report for the MoVal 2040, June 15, 2021.</i> <ul style="list-style-type: none"> <li>Section 4.12 Mineral Resources                             <ul style="list-style-type: none"> <li>Figure 4.12-1 Mineral Resource Zones</li> </ul> </li> </ul> </li> <li>Title 9 – Planning and Zoning of the Moreno Valley Municipal Code                     <ul style="list-style-type: none"> <li>Section 9.02.120 – Surface Mining Permits</li> </ul> </li> <li>Moreno Valley Municipal Code Section 8.21.020 A 7 – Permits Required</li> <li>The Surface Mining and Reclamation Act of 1975 (SMARA, Public Resources Code, Sections 2710-2796), <a href="https://www.conservation.ca.gov/dmr/lawsandregulations">https://www.conservation.ca.gov/dmr/lawsandregulations</a></li> </ol>				
<p><b>XIII. NOISE – Would the project result in:</b></p>				
<p>a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?</p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> Noise is defined as unwanted sound, most typical noises in the highly urbanized Project site include traffic, heavy machinery, commercial and industrial centers, and other outdoor activities. Sound is described as “loudness” or “pitch” in terms of amplitude and frequency. The standard unit of measurement is decibels (dB) quantified using a logarithmic scale. Since the human ear cannot capture sound at all frequencies, a frequency-dependent response has been created to relate noise to human sensitivity called the A-weighting system. It is adjusted to measure sound levels and is expressed as dBA. There have been many rating scales developed to analyze the effect of community noise because it is dependent on the duration, pitch, loudness and frequently fluctuates. For the purposes of this Project, the following scales were used:</p> <ol style="list-style-type: none"> <li><math>L_{eq}</math>: The equivalent continuous sound pressure level is the constant noise level that would result in the same total sound energy being produced over a given period. Therefore, the <math>L_{eq}</math> of a time-varying noise and that of a steady noise are the same if they deliver the same acoustic energy to the ear during exposure. During day or night, this rating scale does not vary for analyzing community impacts.</li> <li><math>L_{max}</math>: The highest RMS, or root mean squared, sound pressure level within the measuring period.</li> <li><math>L_{min}</math>: The lowest RMS, or root mean squared, sound pressure level within the measuring period.</li> <li>CNEL: The California Community Noise Equivalent Level is the average sound level over a 24-hour period with a penalty of 5 dB added for the evening hours during 7:00 PM to 10:00 PM and a penalty of 10 dB added for the hours of 10:00 PM to 7:00 AM. It is a single number that is calculated for a 24-hour period and usually made up of shorter intervals such as 5 minutes or 1 hour then average for 24 hours.</li> </ol> <p>For residential uses, CNEL ranges from below 60 dBA (low), 60-70 dBA (moderate), and 70 dBA (high). Noise levels greater than 85 dBA can cause temporary or permanent hearing loss. Residents are sensitive to nighttime noises that interfere with sleep which can be above 45 dBA. It is noted that</p>				

<b>ISSUES &amp; SUPPORTING INFORMATION SOURCES:</b>	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
---	--------------------------------	--	------------------------------	-----------

moderate level noise environments are urban residential areas at 55-60 dBA and commercial locations at 60 dBA.

The proposed Project would increase ambient noise levels during construction and operation. For instance, construction requires heavy machinery for clearing, grading, and excavation. The amount of noise would vary based on the equipment and location of each activity. For the purposes of this Project, the U.S. Environmental Protection Activity (EPA) Noise Range of Typical Construction Equipment (**Table 3**) and Typical Outdoor Construction Noise Levels (**Table 3**) are highlighted below for the different equipment required at the Project site. The initial stages of construction would generate around 82-86 dBA noise levels at 50 feet with mufflers. As such, these levels would decrease at a rate of approximately 6 dBA per doubling of distance.

**Table 5**, as listed below, highlights CNEL levels for different land uses such as similar type of land uses found in the vicinity of the Project site including single-family residential homes and public schools. The land uses identified are the ones that will be sensitive to the construction phase of the Project. The California Office of Planning and Research has a set definition for each of the levels. For example, Normally Acceptable specified land use is satisfactory, based upon the assumption that any buildings involved are normally conventional construction without any special noise insulation requirements.

**Table 3: Noise Range of Typical Construction Equipment**

Construction Equipment	Noise level in dBA $L_{eq}$ at 50 Feet
Front Loader	73-86
Trucks	82-95
Cranes	75-88
Vibrator	68-82
Saws	72-82
Pneumatic Impact Equipment	82-88
Jackhammers	81-98
Pumps	68-72
Generators	71-83
Compressors	75-87
Concrete Mixers	75-88
Concrete Pumps	81-85
Back Hoe	73-95
Tractor	77-98
Scraper/Grader	80-93
Paver	85-88

<b>ISSUES &amp; SUPPORTING INFORMATION SOURCES:</b>	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
---	--------------------------------	--	------------------------------	-----------

Conditionally acceptable is new construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and needed noise insulation features included in the design. Conventional construction, but with closed windows and fresh air supply systems or air conditioning will normally suffice. Normally unacceptable is new construction or development should generally be discouraged. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design. Clearly unacceptable is new construction or development should generally not be undertaken.

**Table 5: Community Noise Exposure (CNEL)**

Land Use	Normally Acceptable	Conditionally Acceptable	Normally Unacceptable	Clearly Unacceptable
Single-family, Duplex, Mobile Homes	50-60	55-70	70-75	Above 75
Multi-family homes	50-65	60-70	70-75	Above 75
Schools, Libraries, Churches, Hospitals, Nursing Homes	50-70	60-70	70-80	Above 80
Playgrounds, Neighborhood Parks	50-70	--	67-75	Above 75
Office Buildings, Business and Professional Commercial	50-70	67-77	Above 75	--

*Source: Office of Planning and Research, State of California General Plan Guidelines, October 2003 (in coordination with the California Department of Health Services); City of Los Angeles, General Plan Noise Element, adopted February 1999.*

For the Project, noise measurements were taken at the Project site with a Larson Davis 824 sound level meter. Accordingly, the instrument was operated as specified in the manufacturer’s specifications. The microphone was placed at the northern portion of the Project site, assigned No. 3 (See **Exhibit 7: Noise Monitoring Receptors Location Map**). The microphone was placed at a height of approximately five feet above grade. **Table 6** highlights the Existing Ambient Daytime Noise Levels in the Project site. As such, it is expected that the existing adult school site would temporarily be impacted by daytime construction for an approximate 18-24-month construction activities. However, this would not violate the maximum sound levels outlined in Section 11.80.030 in the municipal code, which sets 8 hours duration per day continuous hours at a maximum sound level of 90 dBA. The Project would follow the City of Moreno Valley Standard Plans MVS1-166A-0 and MSVI-166B-1 which regulate construction hours to be between 8:00 a.m. to 4:00 p.m. Monday through Friday. Any work to be completed on Saturday shall be by prior appointment only. No construction is permitted on Sundays and government code holidays. The following mitigation measures recommended, consistent with mitigation from the Phase I Project: Mitigation Measure NOI-1 and Mitigation Measure NOI-2 to avoid additional disturbances during construction. The proposed Project would comply with applicable City Municipal Code requirements; therefore, impacts are not expected to be significant.

<b>ISSUES &amp; SUPPORTING INFORMATION SOURCES:</b>	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
---	--------------------------------	--	------------------------------	-----------

**Table 6: Existing Ambient Daytime Noise Levels in Project Site Vicinity**

No.	Location	Primary Noise Sources	L <sub>eq</sub>	L <sub>min</sub>	L <sub>max</sub>
1	North Side of Cottonwood Avenue	Traffic noise along Cottonwood	68.4	55.2	86.3
2	East Side of Indian Street	Traffic noise along Indian Street	50.1	41.4	73.2
3	North Side of the Project Site mid parcel along the property line.	School parkinglot	28.1	28.3	38.4
4	West Side of property along the east property line	Rear yard of residential uses along the east property line	27.5	27.7	37.6

*Note: Table 9 has been adapted for the Project.  
Source: MaxSum Development, LLC, June 2019.*

**Mitigation Measure NOI-1:**

Prior to issuance of a grading permit, the developer shall prepare a Construction Noise Control Plan (CNCP) and submit it to the City for review and approval. The plan shall include but will not be limited to the following:

- During all project site excavation and grading, contractors shall equip all construction equipment, fixed or mobile with properly operating and maintained mufflers consistent with manufacturers' standards.
- The project contractor shall place all stationary construction equipment so that emitted noise is directed away from sensitive receptors nearest the project site.
- The construction contractor shall locate equipment staging in areas that will create the greatest distance between construction-related noise sources and noise-sensitive receptors nearest the project site during all project construction.
- A temporary construction barrier with a minimum height of 8 feet shall be placed along the project's property line during project grading and construction.
- During all project site construction, the construction contractor shall limit all construction-related activities, including maintenance of construction equipment and the staging of haul trucks, to between the hours of 8:00 a.m. to 4:00 p.m. Monday through Friday. Any work to be completed on Saturday shall be by prior appointment only. No construction is permitted on Sundays and government code holidays. Per City Standard Plans MVS1-166A-0 and MSVI-166B-1.
- Prior to issuance of a grading or building permit, the developer shall prepare a haul route and staging plan for any trucks hauling earth or construction materials to or from the project site to where material will be disposed (i.e., export). The plan shall be reviewed and approved by the City before a grading permit is issued by the City. To the extent feasible, haul routes and truck staging areas shall not pass sensitive land uses or residential dwellings not on a direct driving route to the closest freeway.

**Mitigation Measure NOI-2:**

Prior to issuance of a grading or building permit, the developer shall prepare a haul route and staging plan for any trucks hauling earth or construction materials to or from the project site to where material will be disposed (i.e., export). The plan shall be reviewed and approved by the City before a grading permit is issued by the City. To the extent feasible, haul routes and truck staging areas shall not pass sensitive land uses or residential dwellings not on a direct driving route to the closest freeway.

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p>Haul truck and other construction-related trucks traveling to and from the project site shall be restricted to the same hours specified for the operation of construction equipment. To the extent feasible, construction haul routes shall not pass directly by sensitive land uses or residential dwellings.</p>				
<p>b) Generation of excessive groundborne vibration or groundborne noise levels?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> During the construction phase of the Project implementation, low vibration is potentially expected to occur. This is because the operation of construction equipment generates ground vibrations with the highest intensity being closer to the site and the lowest intensity furthest from the site. In turn, the vibrations can range in impact from no effects to damage of buildings at highest levels. Typically, the newer buildings are energy efficient, therefore, they tend to be insulated better for both heat and noise. As such, the level of annoyance should be lower in newer housing developments than older. Based on previous sections, it was noted that there are no historical buildings on and within the vicinities of the Project site. As such, there should be no damage with regards to groundborne vibration or noise levels.</p> <p>According to the City’s Final EIR for MoVal 2040 General Plan Table 4.13-9 <i>Typical Construction Equipment Noise Levels</i>, it is expected that most equipment generate noise levels at 50 feet between 60 to 96 dBA, as such, this is the most common annoyance is to be expected of the Project site. As noted, construction activity is temporary, and these levels will cease once the Project is complete. With accordance to the City of Moreno Valley Municipal Code, which dictates construction activity scheduling to take place from 6 a.m and 8 p.m. during the week and 7 a.m and 8 p.m. on weekends and holidays. Additionally, Moreno Valley enforces the State Noise Insulation Standards (Title 24) which specifies indoor noise for multi-family living spaces should not exceed 45 dBA. As such, groundborne vibrations due to construction activities are also expected to be temporary during construction. The operation of construction equipment would not cause major vibration levels which would be concerning for residents and businesses. However, the immediate vicinities may experience groundborne vibration and noise levels with heavy duty vehicles such as refuse trucks which would go through the major intersections during construction. Thus, the anticipated impacts of generation of excessive groundborne vibration or groundborne noise levels are projected to be less than significant.</p>				
<p>c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p><b>Response:</b> As previously mentioned in Response IX (e), the Project site is not located within the vicinity of a private airstrip or an airport land use plan. The nearest airport, the March Reserve Air Base is approximately 2.5 miles southeast of the Project site. Based on the noted City’s Final EIR (June 2021), the March Reserve Air Base Noise Impact Area map, or Figure 4-13.3, the Project site is not within the vicinity of a high noise impact area where the noise contour depicts the Community Noise Equivalent Level (CNEL) to be 60-80 dBA. Therefore, there is no impact to expose people residing or working in the Project area to excessive noise levels. Currently, no mitigation measure is necessary since the Project site is outside a public airport.</p>

**XIV. POPULATION AND HOUSING – Would the project:**

a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of road or other infrastructure)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
--	--------------------------	--------------------------	-------------------------------------	--------------------------

**Response:** The Project is located in an urbanized area, surrounded by existing residential uses and a school. As previously mentioned, the Project proposes to change from the currently Public facilities(P) land use and zoning designations to Multi-family (R15) to accommodate for the multi-family residential development. The Multi-family (R15) land use and zoning would be compatible and consistent with the surrounding existing residential uses. The Project would be considered an infill development project, as it is located in an area with surrounding built environment that has already been served by local and regional infrastructure. The Project site would adequately be served by existing public roads, public utilities (sewers, water, natural gas, electricity), services (fire, police, schools, parks), and public transit.

According to the City’s Final EIR for MoVal 2040 General Plan (June 2021), the forecast for population growth trend shows an increase within the City. The Project is a small residential development that includes only 32 dwelling units and would minimally contribute the City’s population growth. As such, the proposed land use and zone change the City will accommodate population growth, resulting from the Project implementation. Based on the Southern California Associations of Governments (SCAG) Population/Households Forecast for the City, the forecast depicts growth of 61,100 additional persons (2016 through 2045). Utilizing similar methodology from Phase I projections which assumed resident increases based on dwelling unit with 2, 3 and 4 bedrooms the following population increase was estimated. Adult tenants and children were estimated with resident increase estimations. For 2-bedroom units, 4 residents were estimated. For 3-bedroom units, 6 residents were assumed. Lastly, for 4-bedroom units, 8 residents were estimated. With the construction of 32 dwelling units, this would result in an estimated additional net permanent population increase of 192 net residents in the City of Moreno Valley.

Attachment: Exhibit A to Resolution No. 2022-XX Mitigated Negative Declaration/Initial Study [Revision 1] (5641 : Courtyards at Cottonwood

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
--	--------------------------------	--	------------------------------	-----------

The City of Moreno Valley’s RHNA goals for its current Housing Element update is an additional 13,627 dwelling units. The Project would serve to assist the City in meeting this goal, especially through provision of higher density dwelling units. The Project is also seeking federal funding through the County of Riverside, for provision of affordable housing units.

As such, the proposed Project would not cause growth or accelerate development in an undeveloped area that does not follow current forecasts. Therefore, impacts related to population growth would be less than significant. No mitigation measure is necessary.

**Table 7: SCAG’s Growth Forecast for the City of Moreno Valley**

Year	Population	Households
2016	205,700	52,700
2045	266,800	76,200

Source: SCAG Final Connect SoCal Demographics and Growth Forecast, Adopted September 3, 2020.

b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
---	--------------------------	--------------------------	--------------------------	-------------------------------------

**Response:** The Project site is currently vacant and undeveloped, as previously mentioned. The proposed land use and zone change from Public facilities (P) to Multi-family (R15) would provide new housing units. Therefore, the implementation of the Project and the proposed land use and zone change would not displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere. No impact would occur.

**XV. PUBLIC SERVICES – Would the project:**

a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

i) Fire protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
---------------------	--------------------------	--------------------------	-------------------------------------	--------------------------

**Response:** The City of Moreno Valley Fire Services contracts with the Riverside County Fire Department to serve about 215,000 residents. There is a total of seven fire stations with the nearest fire station, Kennedy Park (Station 65) on Indian Street, is approximately 1.9 miles southwest of the Project site. Other nearby stations are Morrison Park Station 99 roughly 2.1 miles east, and Towngate Station 6, about 2.9 miles northeast. As such, the Project would adequately be served by the fire department and no new fire stations would be necessary at this time. Accordingly, the city requires adequate fire suppression water flows to new development projects, in addition to compliance with the fire codes,

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p>current building codes, smoke detectors, automatic fire sprinklers, emergency water supply and emergency access plans. Furthermore, the city assesses a new development impact fee (DIF) through Ordinance No. 695 to cover its fair share for the cost of new fire facilities. Thus, they would comply with all the applicable standards and regulations including fire safety, building codes, and permits which would classify the impact as less than significant.</p>				
<p>ii) Police protection?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> As stated in the City’s Final MoVal 2040 General Plan (June 2021), the City contracts police services from the Riverside County Sheriff’s Department. The Police Department Office is located at 22850 Calle San Juan De Los Lagos, approximately, 1.8 miles southwest of the Project site. The Moreno Valley division provides services for an estimated 215,000 population (ratio of 0.9 officers per 1,000 population) for the City of Moreno Valley with law enforcement, collision investigation and other specialized divisions. An expansion of the police department was already accounted to accommodate the growing population within the city with increasing developments. Similarly, the city created a fee to cover the cost of the expanded police facility and all new development is reviewed by the Police Department to identify risks to security and mitigation as necessary. Additionally, as noted in the Moreno Valley General Plan Safety Element, the desired ratio of 0.9 officers per 1,000 population. As such, utilizing previous projections the proposed development is not intended to substantially increase population growth that would require additional police services. The Project is not forecasted to increase police capacity; however, concern arises with construction phase as the possibility for trespassing, vandalism, and nuisance increases. With a proper fence or enclosure, there can be a less than significant impact. Therefore, with the incorporation of design guidelines set forth by the Moreno Valley Police Department a less than significant impact is expected.</p>				
<p>iii) Schools?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> The Project site is located within the jurisdiction of the Moreno Valley Unified School District (MVUSD). MVUSD serves approximately 31,597 students according to the District Demographics Report (2020), the Project site falls within the following school’s vicinity: Ramona Elementary School, Sunnymead Middle School, and Moreno Valley High School. Since the potential for population increase is likely, based on the Phase I Initial Study, the forecast predicts about 17 new students based on an 81-unit development. The Project proposes 32 dwelling units, and the number of students would be proportionately less than 17. This is a small increase in the number of students that would not be anticipated to substantially impact the demand for school services. The Project would also be subject to all applicable school district development fees that must be paid prior to construction. As such, the proposed Project would have less than a significant impact on school services.</p>				
<p>iv) Parks?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> The City of Moreno Valley Parks and Recreation Department manages park and recreation facilities in the city through partnerships and other public agencies and the private sector. The nearest park facility to the Project site is Sunnymead Park, approximately 1.4 miles northeast. In addition, the Project site would share a community center, tot lot, pool, and basketball courts with Phase I residential development. The shared facilities would reduce the demand for off-site park services in the area. According to the City of Moreno Valley General Plan (Section 4.3.1) the minimum level of service standard for parkland is 3 acres per 1,000 residents as established in the Quimby Act (Government Code Section 66477). As described in the City of Moreno Valley’s Municipal Code, if new development is created then the Project would be subject to adhere to the Dedication of Land for Park Facilities and Payment of In-Lieu Fees and Community/recreation Center Residential Development Impact Fees (Section 3.40). The fees are for design, constructing, improving, providing, and maintaining park and recreational purposes. The implementation of the Project would have less than significant impact.</p>				

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
v) Other public facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p><b>Response:</b> The proposed Project would not significantly increase population growth based on the projections, provided by the Phase I Initial Study/Mitigative Negative Declaration, therefore no new governmental services will be needed at this time. Additionally, the Project development would not generate substantial employment that could increase demand for additional public facilities. A resource that could require services is additional street maintenance on Cottonwood Avenue and Indian Street, however, the design has been adhered to the Local Street standards. No impact is anticipated, and no mitigation measures are necessary at this time.</p>				
<p><b>Sources:</b></p> <ol style="list-style-type: none"> <li>City of Moreno Valley. <i>MoVal 2040 General Plan 2040, June 15, 2021.</i> <ul style="list-style-type: none"> <li>Chapter 5—Parks &amp; Public Services                             <ul style="list-style-type: none"> <li>Map PPS-1: Existing and Planned Parks and Recreation Facilities</li> <li>Table PPS-1: Existing and Planned Parks and Recreation Facilities</li> <li>Map PPS-3: Public Facilities</li> <li>Map PPS-4: Existing and Proposed Storm Drain Facilities</li> </ul> </li> </ul> </li> <li>City of Moreno Valley. <i>Final Environmental Impact Report for the MoVal 2040 General Plan, June 15, 2021.</i> <ul style="list-style-type: none"> <li>Section 4.15 Public Services and Recreation                             <ul style="list-style-type: none"> <li>Table 4.15-1 MVFD Stations, Locations, and Equipment</li> <li>Figure 4.15-1 Public Facilities</li> <li>Table 4.15-2 Capital Improvement Plan- Fire Department Projects</li> <li>Table 4.15-4 Moreno Valley Unified School District</li> <li>Table 4.15-7 Val Verde Unified School District within the Planning Area</li> <li>Table 4.15-8 Existing and Planned Parks and Recreation Facilities</li> <li>Figure 4.15-2 Existing and Planned Parks and Recreation Facilities</li> </ul> </li> </ul> </li> <li>Title 9 – Planning and Zoning of the Moreno Valley Municipal Code</li> <li>Riverside Sheriff Moreno Valley Station, <a href="https://www.riversidesheriff.org/745/Moreno-Valley-Station">https://www.riversidesheriff.org/745/Moreno-Valley-Station</a></li> <li>Moreno Valley Unified School District, District Demographics Report, October 07, 2020, <a href="https://www.mvusd.net/apps/pages/index.jsp?uREC_ID=786774&amp;type=d&amp;pREC_ID=1181757">https://www.mvusd.net/apps/pages/index.jsp?uREC_ID=786774&amp;type=d&amp;pREC_ID=1181757</a></li> <li>SCAG’s 2016 RTP Growth Forecast for the City of Moreno Valley, <a href="https://scag.ca.gov/sites/main/files/file-attachments/f2016rtpscs_demographicsgrowthforecast.pdf?1606073557">https://scag.ca.gov/sites/main/files/file-attachments/f2016rtpscs_demographicsgrowthforecast.pdf?1606073557</a></li> </ol>				
<p><b>XVI. RECREATION – Would the project:</b></p>				
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> The Project would share a community center, outdoor recreational, and open space with residents of the Phase I project, which is adjacent to the immediate south. The proposed community center is approximately 4,840 square feet, the basketball court is about 5,555 square feet, and the pool area is about 2,567 square feet. The recreational component also includes a tot lot next to the basketball courts and a pool for children residents to play. The additional of these facilities on-site will reduce strain for off-site park and recreational facilities in the area. Similarly, the proposed Project development is helping ease the deficiency of parklands, as mentioned in the City’s Final EIR for the MoVal 2040 General Plan (June 2021). As such, the proposed Project would not impose the use of existing neighborhood and regional parks or other recreational facilities that can substantially create physical deterioration or be accelerated. As previously mentioned, municipal code requires a development impact fee ordinance to dedicate parkland and/or pay in-lieu fees to provide 3 acres of parkland per 1,000 new residents. Thus, a less than significant impact is anticipated for the Project.</p>				

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which have an adverse physical effect on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p><b>Response:</b> As mentioned above Response XVI (a), the Project site would include the construction of its on-site recreational facilities and outdoor space for residents with basketball courts, pool, tot lot, and open space. At this time, there will be no additional construction off-site which might have an adverse physical effect on the environment. Additionally, as mentioned in the city municipal code new development is required to provide parkland or fees equal to three acres per 1,000 residents. Therefore, no impact is anticipated for the proposed Project.</p>				
<p><b>Sources:</b></p> <ol style="list-style-type: none"> <li>1. City of Moreno Valley. <i>MoVal 2040 General Plan 2040, June 15, 2021.</i> <ul style="list-style-type: none"> <li>• Chapter 5—Parks &amp; Public Services                             <ul style="list-style-type: none"> <li>- Map PPS-1: Existing and Planned Parks and Recreation Facilities</li> <li>- Table PPS-1: Existing and Planned Parks and Recreation Facilities</li> <li>- Map PPS-3: Public Facilities</li> <li>- Map PPS-4: Existing and Proposed Storm Drain Facilities</li> </ul> </li> <li>• Chapter 10—Open Space &amp; Resource Conservation                             <ul style="list-style-type: none"> <li>- Map OSRC-1: Regional Open Space and Trails</li> </ul> </li> </ul> </li> <li>2. Title 9 – Planning and Zoning of the Moreno Valley Municipal Code</li> <li>4. Derra Design, The Courtyards at Cottonwood Phase II, Northeast Corner of Cottonwood Avenue &amp; Indian Street Site Plan</li> </ol>				
<p><b>XVII. TRANSPORTATION – Would the project:</b></p>				
a) Conflict with program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> Trip generation for the proposed Project is based on trip generation rates from the Institute of Transportation Engineers (ITE) Trip Generation Manual, 10<sup>th</sup> Edition trip rates for the following land use: ITE Land Use 220 – Multi-family House (Low Rise). It is estimated that the proposed Project would generate approximately 234 daily trips with 14 trips in the morning peak hour and 18 trips in the evening peak hour. Based on existing traffic counts for Cottonwood Ave (approximately 10,000 daily trips) and Indian St (approximately 7,400 daily trips) and with the proposed Project creating a total of less than 50 peak hour trips, the Project will not cause an increase in the City’s LOS standard and would create a less than significant impact in this regard. The Project falls below the City’s threshold of 100 peak hour trips and therefore the Project does not require the completion of an LOS study as part of the Traffic Impact Analysis. Additionally, per the City of Moreno Valley Traffic Impact Analysis Guidelines, a project that would generate fewer than 400 daily trips can be screened out and does not require further VMT analysis. The Project will comply with all applicable City design requirements including sidewalks and transit access. While no off-site improvements are to be made as part of the Project, the Project site and future residents will have access to transit facilities such as Class II bike lanes and the nearby transit stops at the intersection of Cottonwood Ave and Perris Blvd. It should also be noted that the site’s current zoning would allow for a variety of potential uses that would likely generate far greater traffic than the proposed Project (as referenced in Response VIII(b), an adult education center use would be estimated to generate approximately 600 daily trips, nearly triple</p>				

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
that of the Project). Therefore, impacts will be less than significant (See <b>Appendix J, Trip Generation Memorandum</b> ).				
b) Conflict or be inconsistent with <a href="#">CEQA Guidelines section 15064.3, subdivision (b)</a> ?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> SCAG has designated the bus transit route along Perris Boulevard in the City of Moreno Valley as a High-Quality Transit area, Route 19. Currently, there is a bus transit stop in the Northeast corner of the intersection of Perris Boulevard and Cottonwood Avenue. The proposed Project location is within one-half mile of this transit stop which would designate the Project site as being within a Transit Priority Area (TPA). The proposed Project is a residential land use project. Per 14 CCR §15064.3(b)(1) a land use project within one-half mile of an existing high-quality transit corridor should be presumed to cause a less than significant transportation impact with respect to CEQA Guidelines §15064.3(b). Additionally, The Project falls below the City’s traffic analysis thresholds for conducting a quantitative VMT analysis and would not cause significant change to the City’s LOS standards due to the Project generating fewer than 400 daily trips and fewer than 100 peak hour trips (see <b>Appendix J, Trip Generation Memo</b>). Impacts would be less than significant in this regard.</p>				
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> Under proposed conditions, access to the Project site is provided via construction in Phase I of the Courtyards at Cottonwood project (See <b>Exhibit 4: Site Plan</b>). As part of the proposed Project, Myrna Street will be extended and terminate in a cul-de-sac. This cul-de-sac does not provide access to the proposed Project and exists to terminate Myrna Street. The construction of this cul-de-sac would extend pedestrian walkways around and eliminate the need for a mid-street crossing. Overall, no hazards due to design or incompatible uses are anticipated to occur with the construction and operation of the proposed Project. Additionally, final design and site access are to be reviewed by the City’s Public Works Department to ensure there are no substantial hazards, therefor this impact would be less than significant.</p>				
d) Result in inadequate emergency access?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> The proposed Project is subject to plan review requirements by the City’s emergency services departments to ensure that any access roads, driveways, and parking areas would remain accessible to all emergency service vehicles. Thus, during operation, there would be less than significant impact to the access of emergency vehicles. Otherwise, during construction, construction activities and staging would primarily be confined to the proposed Project site and access would be provided via construction entrances along Cottonwood Ave, Indian St, and other proposed driveways being constructed in Phase I. Emergency service vehicle access to the proposed Project site and along existing roadways would be impacted in a less than significant way.</p>				
<p><b>Sources:</b></p> <ol style="list-style-type: none"> <li>City of Moreno Valley. <i>MoVal 2040 General Plan 2040, June 15, 2021.</i> <ul style="list-style-type: none"> <li>Chapter 4—Circulation                             <ul style="list-style-type: none"> <li>Map C-1: Circulation Diagram</li> <li>Map C-2: Existing and Planned Bicycle and Pedestrian Network</li> </ul> </li> </ul> </li> <li>City of Moreno Valley. <i>Final Environmental Impact Report for the MoVal 2040 General Plan, June 15, 2021.</i> <ul style="list-style-type: none"> <li>Section 4.16 Transportation                             <ul style="list-style-type: none"> <li>Table 4.16-3 Vehicle Miles Traveled Summary</li> <li>Figure 4.16-1 Existing and Planned Bicycle and Pedestrian Network</li> <li>Table 4.16-5 VMT Summary</li> </ul> </li> </ul> </li> </ol>

<b>XVIII. TRIBAL CULTURAL RESOURCES – Would the project:</b>				
Cause a substantial adverse change in the significance of a tribal cultural resource, defined in <a href="#">Public Resources Code Section 21074</a> as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in <a href="#">Public Resources Code Section 5020.1(k)</a> , or	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> According to the City’s Final EIR for MoVal 2040 General Plan (June 2021), Table 4.5-1: <i>List of Historic Resources and their Eligibility Status</i> there is no historical resource identified on the Project site. Additionally, there are no prehistoric sites (Table 4.5-2: <i>List of Archeological Resources and Their Eligibility</i>) that are currently within the vicinity. Likewise, the Project site is classified as low potential for palaeontologic Resource Sensitive Areas (Figure 5.10-3). Assembly Bill 52 (AB52) establishes a formal consultation process for California Native American Tribes to identify any potential significant impacts to Tribal Cultural Resources (TCR), as defined in Public Resources Code §21074. On July 14, 2021, the City initiated tribal consultation with interested California Native American tribes consistent with AB 52.</p> <p>In addition to AB 52, the City also contacted the Native American Heritage Commission (NAHC) for a sacred lands file (SLF) search and a list of tribes to be consulted with regarding the Project, consistent with State Bill (SB) 18 in accordance with the Government Code §65352.3. On July 14, 2021, the City initiated tribal consultation with interested California Native American tribes consistent with SB 18.</p> <p>The City received consultation request from four Tribes for AB52 and completed the requested AB52 consultation, with two Tribes requesting monitoring during the ground disturbance and grading of the site. Three Tribes initiated SB18 consultation, with the consultation complete when the project is approved by the City. Monitoring from the Pechanga Band of Luiseño Indians and Soboba Band of Luiseño Indians is required; see Mitigation Measure TCR-2.</p> <p>There are Regulatory Compliance Measure adopted by the City, which would protect any potential archaeological resources that are discovered during excavation and which would protect any human remains discovered. To ensure that any unforeseen and inadvertent discovery of TCRs would not result in any potentially significant impact, in the event that objects or artifacts that may be TCRs are encountered during the course of any ground-disturbance activities, all such activities would temporarily cease on the Project site until potential TCRs are properly assessed following specific protocol required by the Community Development Department, Planning Division. Therefore, with the proposed mitigation measures impacts would be less than significant the following Mitigation Measures TCR 1-TCR 6 are proposed.</p> <p><b>Mitigation Measure TCR-1:</b>                      Prior to the issuance of a grading permit, the Developer shall retain a professional archaeologist to conduct monitoring of all mass grading and trenching activities. The Project Archaeologist shall have the authority to temporarily redirect earthmoving activities in the event that suspected archaeological resources are unearthed during Project construction. The Project Archaeologist, in consultation with the Consulting Tribe(s), the contractor, and the City, shall develop a Cultural Resources Management Plan (CRMP) in consultation pursuant to the definition in AB52 to address the details, timing and</p>				

Attachment: Exhibit A to Resolution No. 2022-XX Mitigated Negative Declaration/Initial Study [Revision 1] (5641 : Courtyards at Cottonwood

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p>responsibility of all archaeological and cultural activities that will occur on the project site. A consulting tribe is defined as a tribe that initiated the AB 52 tribal consultation process for the Project, has not opted out of the AB52 consultation process, and has completed AB 52 consultation with the City as provided for in Cal Pub Res Code Section 21080.3.2(b)(1) of AB52.</p> <p>Details in the Plan shall include:</p> <ul style="list-style-type: none"> <li>• Project grading and development scheduling;</li> <li>• The Project archeologist and the Consulting Tribe(s) as defined in CR-1 shall attend the pre-grading meeting with the City, the construction manager and any contractors and will conduct a mandatory Cultural Resources Worker Sensitivity Training to those in attendance. The Training will include a brief review of the cultural sensitivity of the Project and the surrounding area; what resources could potentially be identified during earthmoving activities; the requirements of the monitoring program; the protocols that apply in the event inadvertent discoveries of</li> <li>• cultural resources are identified, including who to contact and appropriate avoidance measures until the find(s) can be properly evaluated; and any other appropriate protocols. All new construction personnel that will conduct earthwork or grading activities that begin work on the Project following the initial Training must take the Cultural Sensitivity Training prior to beginning work and the Project archaeologist and Consulting Tribe(s) shall make themselves available to provide the training on an as-needed basis;</li> <li>• The protocols and stipulations that the contractor, City, Consulting Tribe(s) and Project archaeologist will follow in the event of inadvertent cultural resources discoveries, including any newly discovered cultural resource deposits that shall be subject to a cultural resources evaluation.</li> </ul> <p><b>Mitigation Measure TCR-2:</b> Prior to the issuance of a grading permit, the Developer shall secure agreements with the Pechanga Band of Luiseño Indians and Soboba Band of Luiseño Indians for tribal monitoring. The Developer is also required to provide a minimum of 30 days advance notice to the tribes of all mass grading and trenching activities. The Native American Tribal Representatives shall have the authority to temporarily halt and redirect earth moving activities in the affected area in the event that suspected archaeological resources are unearthed. If the Native American Tribal Representatives suspect that an archaeological resource may have been unearthed, the Project Archaeologist or the Tribal Representatives shall immediately redirect grading operations in a 100-foot radius around the find to allow identification and evaluation of the suspected resource. In consultation with the Native American Tribal Representatives, the Project Archaeologist shall evaluate the suspected resource and make a determination of significance pursuant to California Public Resources Code Section 21083.2.</p> <p><b>Mitigation Measure TCR-3:</b> In the event that Native American cultural resources are discovered during the course of grading (inadvertent discoveries), the following procedures shall be carried out for final disposition of the discoveries:</p> <ul style="list-style-type: none"> <li>• One or more of the following treatments, in order of preference, shall be employed with the tribes. Evidence of such shall be provided to the City of Moreno Valley Planning Department: <ul style="list-style-type: none"> <li>○ Preservation-In-Place of the cultural resources, if feasible. Preservation in place means avoiding the resources, leaving them in the place they were found with no development affecting the integrity of the resources.</li> <li>○ On-site reburial of the discovered items as detailed in the treatment plan required pursuant to Mitigation Measure CR-1. This shall include measures and provisions to protect the future</li> </ul> </li> </ul>				

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p>reburial area from any future impacts in perpetuity. Reburial shall not occur until all legally required cataloging and basic recordation have been completed. No recordation of sacred items is permitted without the written consent of all Consulting Native American Tribal Governments as defined in CR-1.</p> <p><b>Mitigation Measure TCR-4:</b> The City shall verify that the following note is included on the Grading Plan: "If any suspected archaeological resources are discovered during ground-disturbing activities and the Project Archaeologist or Native American Tribal Representatives are not present, the construction supervisor is obligated to halt work in a 100-foot radius around the find and call the Project Archaeologist and the Tribal Representatives to the site to assess the significance of the find. "</p> <p><b>Mitigation Measure TCR-5:</b> If potential historic or cultural resources are uncovered during excavation or construction activities at the project site, work in the affected area must cease immediately and a qualified person meeting the Secretary of the Interior's Standards (36 CFR 61), Tribal Representatives, and all site monitors per the Mitigation Measures, shall be consulted by the City to evaluate the find, and as appropriate recommend alternative measures to avoid, minimize or mitigate negative effects on the historic, or prehistoric resource. Determinations and recommendations by the consultant shall be immediately submitted to the Planning Division for consideration, and implemented as deemed appropriate by the Community Development Director, in consultation with the State Historic Preservation Officer (SHPO) and any and all Consulting Native American Tribes as defined in CR-1 before any further work commences in the affected area.</p> <p><b>Mitigation Measure TR-6:</b> If human remains are discovered, no further disturbance shall occur in the affected area until the County Coroner has made necessary findings as to origin. If the County Coroner determines that the remains are potentially Native American, the California Native American Heritage Commission shall be notified within 24 hours of the published finding to be given a reasonable opportunity to identify the "most likely descendant." The "most likely descendant" shall then make recommendations and engage in consultations concerning the treatment of the remains (California Public Resources Code 5097.98). (GP Objective 23.3, CEQA).</p>				
<p>b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of <a href="#">Public Resources Code section 5024.1</a>. In applying the criteria set forth in subdivision (c) of <a href="#">Public Resources Code section 5024.1</a>, the lead agency shall consider the significance of the resource to a California Native American tribe.</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> As mentioned above in Response XVIII (a), although there are no recorded cultural or historical resources identified on the Project site, there is a potential for TCRs to be accidentally uncovered or exposed during construction. The recommended Mitigation Measures TCR1 – TCR6 would reduce any potential impacts to less than significant level.</p>				
<p><b>Sources:</b></p> <ol style="list-style-type: none"> <li>City of Moreno Valley. <i>MoVal 2040 General Plan 2040, June 15, 2021.</i> <ul style="list-style-type: none"> <li>Chapter 10—Open Space &amp; Resource Conservation                             <ul style="list-style-type: none"> <li>Map OSRC-1: Regional Open Space and Trails</li> </ul> </li> </ul> </li> </ol>

**XIX. UTILITIES AND SERVICE SYSTEMS – Would the project:**

a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
--	--------------------------	--------------------------	-------------------------------------	--------------------------

**Response:** As highlighted in the City’s Final EIR for MoVal 2040 General Plan (June 2021), new development would be anticipated to increase water demand and provide storm water drainage mitigation. For additional water demand, local groundwater and imported water is provided by the Metropolitan Water District of Southern California (MWDSC). This would adhere to MWDSC Sources Plan and the Regional Urban Water Management Plans. As stated in the hydrology report, the project will connect to the city’s existing water and wastewater facilities and is not intended to expand at this time. The Eastern Municipal Water District (EMWD) provides wastewater services and operates over 356 miles of sewer mains and six sewage lift stations for wastewater collection services in the City of Moreno Valley. All wastewater is collected and conveyed to the Moreno Valley Regional Water Reclamation Facility. Additionally, the Project site requires permits for the National Pollutant Discharge Elimination System (NPDES) administered through the Santa Ana Regional Water Quality Control Board (RWQCB) which it will adhere to. Therefore, the proposed Project would have a less than significant impact on the requirement or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage which could cause significant environmental effects.

b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
---	--------------------------	--------------------------	-------------------------------------	--------------------------

**Response:** The Eastern Municipal Water District (EMWD) supplies potable water to the Project site, as previously mentioned water supplies are projected to be available to meet the estimated water demand according to its Urban Water Management Plan. As stated on the EMWD website, the water supplies are prepared for dry periods through diverse water supply. These include expansion of groundwater desalination facilities, recycled water program, groundwater banking program, and water use efficiency programs.

As mentioned, the City’s Final EIR (June 2021), Chapter 10: *Open Space & Resource Conservation Program*, states that the City will work with EMWD to use reclaimed water in Moreno Valley. As such, Policy 7.3.1 requires water conserving landscaping and irrigation systems and Policy 7.3.2 encourages the use of reclaimed water and other legally acceptable sources of irrigation water. The proposed

Attachment: Exhibit A to Resolution No. 2022-XX Mitigated Negative Declaration/Initial Study [Revision 1] (5641 : Courtyards at Cottonwood

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Project would not significantly increase population growth, and therefore would have a less than significant impact on water supplies.				
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> As previously mentioned, the Moreno Valley Regional Water Reclamation Facility has the capacity to serve additional development and continue to serve its existing commitments. In the Urban Water Management Plan, EMWD delineates the Southern California Association of Governments (SCAG) regional growth forecast (2020 Connect SoCal) to generate the expected service area expansion. Therefore, impacts on wastewater treatment would be less than significant and be able to service the Project site development.</p>				
d) Generate solid waste more than State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> Solid waste is deposited in the Riverside County Waste Management Department Badlands Landfill, however, other landfills utilized are Lamb Canyon Landfill and El Sobrante landfill in Riverside County (City's Final EIR for the MoVal 2040 General Plan, June 2021). All landfills are Class III disposal sites permitted to receive non-hazardous municipal solid waste. As part of the goal to reducing dependence on landfills for solid waste disposal source reduction, recycling, and composting were introduced by the California Integrated Waste Management Act of 1989 (AB 939). In 1992, the City of Moreno Valley voted to adopt plans to meet the goals mandated by the act. The service hauler, Waste Management, separates recyclable materials, with and has been complying diverting 50 percent of its solid waste from landfills in 2002. Additionally, RCWMD operates a Hazardous Waste Program for pickup of motor oil, antifreeze, car batteries, latex paint, gasoline, solvents, aerosol cans, cleaners, household batteries, pool and spa chemicals, oil-based paint, pesticide, and fertilizers for free. With the anticipated new development, there will be a generation of an increase in demand for solid waste collection and disposal, however, this will not breach waste management capacity. Also, the Project should contract with a waste disposal service with a company that recycles solid waste to adhere to policy. As such, there is a less than significant impact on generation solid waste more than State or local standards.</p>				
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> As previously mentioned, the City's Final EIR for the MoVal 204 General Plan (June 2021) states its adoption of a "Source Reduction and Recycling Element" of how Moreno Valley plans to meet the goals mandated by the California Integrated Waste Management Act of 1989 (AB 939) which includes strategies to address various components of the solid waste challenge, source reduction, recycling, composting, or special waste. As such, Moreno Valley works with the local waste hauler, Waste Management to separate recyclable materials, including cardboard, paper, tin/metal, aluminum cans, plastics, and glass. As of 2006, the city is in compliance with AB 939 and has diverted 50 of its solid waste. The Project would adhere to current policy and collect solid &amp; recyclable materials with designing adequate areas as laid out in the Site Plan (See <b>Exhibit 3</b>). Additionally, the Project would</p>				

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p>comply with similar permits and regulations. Thus, the impact on complying with federal, state, and local management and reduction statutes and regulations related to solid waste are less than significant.</p>				
<p><b>Sources:</b></p> <ol style="list-style-type: none"> <li>1. City of Moreno Valley. <i>MoVal 2040 General Plan 2040, June 15, 2021.</i> <ul style="list-style-type: none"> <li>• Chapter 6—Safety</li> <li>• Chapter 10 Open Space &amp; Resource Conservation</li> </ul> </li> <li>2. <p><b>XX. WILDFIRE</b> – If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, <b>would the project:</b></p>				
<p>a) Substantially impair an adopted emergency response plan or emergency evacuation plan?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> According to the City’s MoVal 2040 General Plan (June 2021), the Fire Department is very involved in emergency management, as such the Fire Department will be the incident commander or will be working in a unified command with other responding agencies. As depicted in the California Fire and Resource Assessment Program, the Project site is deemed as Non-Very High Fire Hazard Severity Zones (non-VHFHSZ). However, due to its vegetation highly prone to fire it can be at risk to both wildland and urban fires. As such, the City of Moreno Valley uses the Standardized Emergency Management System (SEMS) when responding to emergencies. The system provided an organized systematic approach in responding to disaster events with preparedness, response, recovery, and mitigation. The proposed development would also adhere to City Municipal Building Codes and Permits for emergency and safety plans. Additionally, the City of Moreno Valley Emergency Operations Plan (March 2009) outlines a Threat Assessment 3- Wildfires to plan for any type of emergency relating to wildfires in the area. The proposed Project would adhere to the documents mentioned above. Therefore, there is a less than significant impact that would substantially impair an adopted emergency response plan.</p>				
<p>b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> As mentioned in Response XX (a) above, the Project site is not assigned as a Very High Fire Hazard Severity Zone, however, due to external factors such as prevailing winds pollutant concentrations can be exposed to project occupants. As described in the City’s MoVal 2040 General Plan (June 2021), specifically particulate matter (PM<sub>10</sub>) can be generated by wind blowing dry soils from construction, agriculture, fireplaces, or wildfires. During months when the Santa Ana winds blow throughout the area in dry seasons, the threat for damaging wildfire is increased. Despite this, with mitigation measures outlined in City of Moreno Valley Emergency Operations Plan (March 2009) and the Moreno Valley Hazard Mitigation Plan (May 2017), the impact on pollutant concentration exposure is less than significant.</p>				

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> The Project includes various installations to infrastructure such as drainage channels, paved covered parking, multi-family buildings, landscaping, etc. Despite these new improvements, these are not anticipated to increase wildfire risk that may result in temporary or ongoing impacts to the environment. With roadway improvements on Indian Street (east) and Cottonwood Avenue (south) the emergency evacuation should be improved with new open roadways for emergency vehicle access. No further significant impacts are anticipated. Impacts would be less than significant.</p>				
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p><b>Response:</b> Based on the City’s Final EIR for the MoVal 2040 General Plan, Flood Hazard Areas (Map S-4), the Project area is outside the scope of a 100- year Flood Zones, a flood this size has a one percent chance of occurring in a given year. As previously mentioned, the Project site is on a vacant lot which is relatively flat, therefore any downslope or landslides are not anticipated. Similarly, the nearest dam is Perris Lake Dam located about 8 miles southwest of the Project site and the risk of dam failure is limited to the period during and immediately after major storms and not expected to hit the Project zone. As such, there is no impact to expose people or structure to significant risks.</p>				
<p><b>Sources:</b></p> <ol style="list-style-type: none"> <li>City of Moreno Valley. <i>MoVal 2040 General Plan 2040, June 15, 2021.</i> <ul style="list-style-type: none"> <li>Chapter 5 – Parks &amp; Public Services</li> </ul> </li> <li>City of Moreno Valley. <i>Final Environmental Impact Report for the MoVal 2040 General Plan, June 15, 2021.</i> <ul style="list-style-type: none"> <li>Section 4.15 Public Services and Recreation</li> </ul> </li> <li>Title 9 – Planning and Zoning of the Moreno Valley Municipal Code</li> <li>Local Hazard Mitigation Plan, City of Moreno Valley Fire Department, adopted October 4, 2011, amended 2017, <a href="http://www.moval.org/city_hall/departments/fire/pdfs/haz-mit-plan.pdf">http://www.moval.org/city_hall/departments/fire/pdfs/haz-mit-plan.pdf</a> <ul style="list-style-type: none"> <li>Chapter 5 – Wildland and Urban Fires                             <ul style="list-style-type: none"> <li>Figure 5-2 – Moreno Valley High Fire Area Map 2016</li> </ul> </li> <li>Chapter 8 – Landslide                             <ul style="list-style-type: none"> <li>Figure 8-1 – Moreno Valley Slope Analysis 2016</li> </ul> </li> </ul> </li> <li>Emergency Operations Plan, City of Moreno Valley, March 2009, <a href="http://www.moval.org/city_hall/departments/fire/pdfs/mv-eop-0309.pdf">http://www.moval.org/city_hall/departments/fire/pdfs/mv-eop-0309.pdf</a> <ul style="list-style-type: none"> <li>Threat Assessment 3 – Wildfire</li> </ul> </li> <li>California Office of the State Fire Marshal Fire Hazard Severity Zones Maps, December 21, 2009, <a href="https://osfm.fire.ca.gov/media/5917/moreno_valley.pdf">https://osfm.fire.ca.gov/media/5917/moreno_valley.pdf</a></li> </ol>				
<p><b>XXI. MANDATORY FINDINGS OF SIGNIFICANCE</b></p>				
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
important examples of the major periods of California history or prehistory?				
<p><b>Response:</b> The Project site does not encompass a waterway which sustains fish or wildlife species as the nearest body of water, Lake Perris, is approximately eight miles southwest from the Project site. Due to the Project site residing in a highly urban area, the project has less than a significant impact on the potential to substantially degrade the quality of the environment, substantially reduce the habitat or fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels. As mentioned above, the Project site does not contain any classified historical structures as defined by CEQA guidelines. However, there are mitigation measures if any cultural or historical resources are found during construction phases. As such, the impacts would be less than significant given mitigation measures.</p>				
<p>b) Does the project have impacts that are individually limited, but cumulatively considerable? (“Cumulatively considerable” means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current project, and the effects of probable future projects.)?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> According to the City’s Final EIR for the MoVal 2040 General Plan (June 2021), the CEQA Guidelines define cumulative effects as “two or more individual effects that, when considered together, are considerable or which compound or increase other environmental impacts.” Due to the previously mentioned environmental analysis discussed in earlier sections, impact would be less than significant as several mitigations have been proposed for each corresponding section leaning towards a less than significant level. For sections that have precluded no impact include agricultural resources, mineral resources, and recreation. For the sections that have precluded less than significant impact with mitigation incorporated include: aesthetics, air quality, cultural resources, geology and soils, greenhouse gas emissions, hazards and hazardous materials, hydrology and water quality, land use and planning, noise, population and housing, public services, transportation/traffic, and utilizes and service systems.</p>				
<p>c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?</p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p><b>Response:</b> Based on previous discussions above, the proposed Project could result in environmental effects which would cause substantial adverse effects on human beings, either directly or indirectly. Based on the analysis in this IS/MND, any potential significant impacts would be reduced to less than significant levels when incorporating the recommended mitigation measures.</p>				

## APPENDICES

## CITY OF MORENO VALLEY

NOTICE OF AVAILABILITY AND INTENT TO ADOPT A  
MITIGATED NEGATIVE DECLARATION (MND)

**NOTICE IS HEREBY GIVEN** that the City of Moreno Valley is considering a recommendation that the project herein identified will have no significant environmental impact in compliance with Section 15070 of the CEQA guidelines. A copy of the **MITIGATED NEGATIVE DECLARATION** and the **ENVIRONMENTAL CHECKLIST**, which supports the proposed findings, are on file at the City of Moreno Valley.

**Project:** General Plan Amendment PEN21-0113;  
Change of Zone PEN20-0114; and  
Plot Plan PEN21-0112

**Applicant:** Rancho Belago Developers, Inc.

**Property Owner:** Moreno Valley Housing Authority

**APN:** 482-161-026

**Location:** East side of Indian Street and north of Cottonwood Avenue

**Proposal:** Applicant is requesting approval of the following entitlements for Courtyard at Cottonwood Phase II Affordable Housing Project: 1) a General Plan Amendment (GPA) - amending the City's General Plan from Public (P) to Residential 15 (R15); 2) a Change of Zone from Public (P) District to Residential 15 (R15) District; and 3) a Plot Plan for a 32-unit affordable apartment complex located on a 1.61 acres site.

**Council District:** 1

This Notice of Availability (NOA) has been prepared to notify agencies and interested parties that the City of Moreno Valley as the Lead Agency has prepared an Initial Study and Mitigated Negative Declaration pursuant to requirements of the California Environmental Quality Act (CEQA) to evaluate the potential environmental impacts associated with construction and operation of the Courtyards at Cottonwood Phase II project as described below.

Project Description: The Courtyards at Cottonwood Phase II Gated Affordable Community proposes to construct 32 affordable housing units arranged in 2, two-story multi-family residential buildings. The project will also include a separate laundry building, assigned covered parking, open parking, and outdoor BBQ / Picnic amenities. The development includes 2, 3, and 4-bedroom dwelling units ranging in size from 800 square feet to 1146 square feet. Each 16-unit, two-story building would be approximately 17,772 square feet in building area. The 121-square-foot laundry facility will be situated adjacent to the two apartment buildings. The project will provide 53 total parking spaces as allowed by state density bonus law. Parking will include 32 assigned covered spaces, 16 open spaces, and 5 open electric vehicle charging stations (EVCS) spaces. A percentage of the parking spaces will be accessible in compliance with California Building Code (CBC) Chapter 11B and as required by federal and state laws. The project will be served by a full-time onsite property manager, community building, mail kiosk, community pool, Tot Lot, Basketball Court, and walking paths located in Phase I via reciprocal access agreements.

Project Location: The Project site is located on the northeast corner of Cottonwood Avenue and Indian Street in southwest Moreno Valley, Riverside County, California. (Assessor Parcel Number (APN): 482-161-026). The Project site is not included on any list of hazardous materials sites compiled pursuant to Government Code Section 65962.5.

Potential Environmental Impacts: The City of Moreno Valley has prepared an Initial Study to

determine the environmental effects associated with the above actions and finds the issuance of a Mitigated Negative Declaration is the appropriate level of environmental review. The Initial Study/Mitigated Negative Declaration concludes that all potentially significant impacts of the Project would be mitigated to a less than significant level.

Public Review and Comment Deadline: Copies of the Initial Study/Mitigated Negative Declaration are available at the Planning Division at the address listed below. Pursuant to Section 15105(b) of the CEQA Guidelines, the City has established a 20-day public review period for the Initial Study/Mitigated Negative Declaration which begins November 10, 2021 and ends November 30, 2021. Written comments on the Initial Study/Mitigated Negative Declaration must be received at the City of Moreno Valley Community Development Department by no later than the conclusion of the 20-day review period, 5:30 pm on November 30, 2021. Written comments on the Initial Study/Mitigated Negative Declaration should be addressed to:

Julia Descoteaux, Associate Planner

<p>c) In the event that the pre-construction survey identifies the presence of three (3) or more mating pairs of burrowing owls, the requirements of MSHCP Species-Specific Conservation Objectives 5 for the burrowing owl shall be followed. Objective 5 states that if the site (including adjacent areas) supports three (3) or more pairs of burrowing owls and supports greater than 35 acres of suitable habitat, at least 90 percent of the area with long-term conservation value and burrowing owl pairs will be conserved onsite until it is demonstrated that Objectives 1-4 have been met. A grading permit shall be issued, either:</p> <ul style="list-style-type: none"> <li>• Upon approval and implementation of a property-specific Determination of Biologically Superior Preservation (DBESP) report for the burrowing owl by the CDFW; or</li> <li>• A determination by the biologist that the site is part of an area supporting less than 35 acres of suitable Habitat, and upon passive or active relocation of the species following accepted CDFW protocols. Passive relocation, including the required use of one-way doors to exclude owls from the site and the collapsing of burrows, will occur if the biologist determines that the proximity and availability of alternate habitat is suitable for successful passive relocation. Passive relocation shall follow CDFW relocation protocol and shall only occur between</li> </ul>

Mitigation Measure	Responsible Agency or Party	Action Required	Monitoring Agency or Party	Timing
<p><b>BIO-3:</b> Prior to Grading Permit issuance, the Project Applicant shall demonstrate, to the satisfaction of the Moreno Valley Planning Department that the Project complies with the following:</p> <p>a) Tree Removal— Trees shall not be removed from the site during the avian resting season from February 1 through August 31. If ground disturbance and vegetation removal cannot occur outside of the nesting season, a pre-construction clearance survey for nesting birds should be conducted within three (3) days of the start of any ground disturbing activities to ensure that no nesting birds will be disturbed during construction. The biologist conducting the clearance survey should document a negative survey with avian nest will occur. If an active avian nest is discovered during the pre-construction clearance survey, construction activities should stay outside a 300-foot buffer around the active nest. For raptors and special-status species this buffer will be expanded to 500 feet. It is recommended that a biological monitor be present to delineate the boundaries of the buffer area and to monitor the active best to ensure that nesting behavior is not adversely affected by the construction activity. Once the young have fledged and left the nest, or the best otherwise becomes inactive under natural conditions, normal construction activities can occur.</p>	Project Applicant	Submit tree removal survey for review and approval	City of Moreno Valley Planning Division	Prior to grading permit issuance

Mitigation Measure	Responsible Agency or Party	Action Required	Monitoring Agency or Party	Timing
<b>V. CULTURAL RESOURCES</b>				
<b>CUL-1:</b> Prior to the issuance of a grading permit, the Project Applicant shall provide evidence to the City of Moreno Valley that a qualified paleontologist has been retained by the Project Applicant to conduct monitoring of excavation activities and has the authority to halt and redirect earthmoving activities in the event that suspected paleontological resources are unearthed.	Project Applicant	Hire a qualified paleontologist	City of Moreno Valley Planning Division	Prior to any grading activities or permit issuance
<b>CUL-2:</b> The paleontological monitor shall conduct full- time monitoring during grading and excavation operations in undisturbed, very old alluvial fan sediments at or below four (4) feet below ground surface and shall be equipped to salvage fossils if they are unearthed to avoid construction delays and to remove samples of sediments that are likely to contain the remains of small fossil invertebrates and vertebrates. The paleontological monitor shall be empowered to temporarily halt or divert equipment to allow of removal of abundant and large specimens in a timely manner. Monitoring may be reduced if the potentially fossiliferous units are not present in the subsurface, or if present, are determined upon exposure and examination by qualified paleontological personnel to have a low potential to contain or yield fossil resources.	Project Applicant	Site monitor by qualified paleontologist during grading activities	City of Moreno Valley Planning Division	During site grading activities

Attachment: Exhibit C to Resolution No. 2021-48 Mitigation Monitoring and Reporting Program (5641 :

Mitigation Measure	Responsible Agency or Party	Action Required	Monitoring Agency or Party	Timing
<p><b>CUL-3:</b> Recovered specimens shall be properly prepared to a point of identification and permanent preservation, including screen washing sediments to recover small invertebrates and vertebrates, if necessary. Identification and curation of specimens into a professional, accredited public museum repository with a commitment to archival conservation and permanent retrievable storage, such as the Western Science Museum in Hemet, California, is required for significant discoveries. The paleontologist must have a written repository agreement in hand prior to initiation of mitigation activities.</p>	Project Applicant	Monitor during grading	City of Moreno Valley Planning Division	During grading activities
<p><b>CUL-4:</b> A final monitoring and mitigation report of findings and significance shall be prepared, including lists of all fossils recovered, if any, and necessary maps and graphics to accurately record the original location of the specimens. The report shall be submitted to the City of Moreno Valley prior to building final.</p>	Project Applicant	Submit final report prior to building final	City of Moreno Valley Planning	Prior to Final Building sign off
<b>XII. Noise</b>				
<p><b>NOI-1:</b> Prior to issuance of a grading permit, the developer shall prepare a Construction Noise Control Plan (CNCP) and submit it to the City for review and approval.</p> <p>The plan shall include but will not be limited to the following:</p> <ul style="list-style-type: none"> <li>a) During all project site excavation and grading, contractors shall equip all construction equipment, fixed or mobile, with properly operating and maintained mufflers consistent with manufacturers'</li> </ul>	Project Applicant	Site Monitor during construction	City of Moreno Valley Planning Division	During Building Construction

Mitigation Measure	Responsible Agency or Party	Action Required	Monitoring Agency or Party	Timing
<p>standards.</p> <p>b) The project contractor shall place all stationary construction equipment so that emitted noise is directed away from sensitive receptors nearest the project site.</p> <p>c) The construction contractor shall locate equipment staging in areas that will create the greatest distance between construction-related noise sources and noise-sensitive receptors nearest the project site during all project construction.</p> <p>d) A temporary construction barrier with a minimum height of 8 feet shall be placed along the project's property line during project grading and construction.</p> <p>e) During all project site construction, the construction contractor shall limit all construction-related activities, including maintenance of construction equipment and the staging of haul trucks, to between the hours of 8:00 a.m. to 4:00 p.m. Monday through Friday. Any work to be completed on Saturday shall be by prior appointment only. No construction is permitted on Sundays and government code holidays. Per City Standard Plans MVS1-166A-0 and MSVI-166B-1.</p> <p>f) Prior to issuance of a grading or building permit, the developer shall prepare a haul route and staging plan for any trucks hauling earth or construction materials to or from the project site to where material will be disposed (i.e. export). The plan shall be reviewed and approved by the City</p>				

Attachment: Exhibit C to Resolution No. 2021-48 Mitigation Monitoring and Reporting Program (5641 :

Mitigation Measure	Responsible Agency or Party	Action Required	Monitoring Agency or Party	Timing
before a grading permit is issued by the City. To the extent feasible, haul routes and truck staging areas shall not pass sensitive land uses or residential dwellings not on a direct driving route to the closest freeway.				
<p><b>NOI-2:</b> Prior to issuance of a grading or building permit, the developer shall prepare a haul route and staging plan for any trucks hauling earth or construction materials to or from the project site to where material will be disposed (i.e. export). The plan shall be reviewed and approved by the City before a grading permit is issued by the City. To the extent feasible, haul routes and truck staging areas shall not pass sensitive land uses or residential dwellings not on a direct driving route to the closest freeway.</p> <p>Haul truck and other construction-related trucks traveling to and from the project site shall be restricted to the same hours specified for the operation of construction equipment. To the extent feasible, construction haul routes shall not pass directly by sensitive land uses or residential dwellings.</p>	Project Applicant	Site Monitor during construction	City of Moreno Valley Planning Division	During Building Construction
<b>XVII. Tribal Cultural Resources</b>				
<b>TCR-1:</b> Prior to the issuance of a grading permit, the Developer shall retain a professional archaeologist to conduct monitoring of all mass grading and trenching activities. The Project Archaeologist shall have the authority	Project Applicant	Submit a Cultural Resources Monitoring Agreement	City of Moreno Valley Planning Division	Prior to any grading activities or permit issuance

Attachment: Exhibit C to Resolution No. 2021-48 Mitigation Monitoring and Reporting Program (5641 :

Mitigation Measure	Responsible Agency or Party	Action Required	Monitoring Agency or Party	Timing
<p>to temporarily redirect earthmoving activities in the event that suspected archaeological resources are unearthed during Project construction. The Project Archaeologist, in consultation with the Consulting Tribe(s), the contractor, and the City, shall develop a Cultural Resources Management Plan (CRMP) in consultation pursuant to the definition in AB52 to address the details, timing and responsibility of all archaeological and cultural activities that will occur on the project site. A consulting tribe is defined as a tribe that initiated the AB 52 tribal consultation process for the Project, has not opted out of the AB52 consultation process, and has completed AB 52 consultation with the City as provided for in Cal Pub Res Code Section 21080.3.2(b)(1) of AB52. Details in the Plan shall include:</p> <ul style="list-style-type: none"> <li>• Project grading and development scheduling.</li> <li>• The Project archeologist and the Consulting Tribes(s) as defined in CR-1 shall attend the pre-grading meeting with the City, the construction manager and any contractors and will conduct a mandatory Cultural Resources Worker Sensitivity Training to those in attendance. The Training will include a brief review of the cultural sensitivity of the Project and the surrounding area; what resources could potentially be identified during earthmoving activities; the requirements of the monitoring program; the protocol that apply in the event inadvertent discoveries of cultural resources are identified, including who to</li> </ul>				

Attachment: Exhibit C to Resolution No. 2021-48 Mitigation Monitoring and Reporting Program (5641 :

Mitigation Measure	Responsible Agency or Party	Action Required	Monitoring Agency or Party	Timing
<p>contact and appropriate avoidance measures until the find(s) can be properly evaluated; and any other appropriate protocols. All new construction personnel that will conduct earthwork or grading activities that begin work on the Project following the initial Training must take the Cultural Sensitivity Training prior to beginning work and the Project archaeologist and Consulting Tribe(s) shall make themselves available to provide the training on an as-needed basis;</p> <ul style="list-style-type: none"> <li>The protocols and stipulations that the contractor, City, Consulting Tribe(s) and Project archaeologist will follow in the event of inadvertent cultural resources discoveries, including any newly discovered cultural resource deposits that shall be subject to a cultural resources evaluation.</li> </ul>				
<p><b>TCR-2:</b> Prior to the issuance of a grading permit, the Developer shall secure agreements with the Pechanga Band of Luiseño Indians and Soboba Band of Luiseño Indians for tribal monitoring. The Developer is also required to provide a minimum of 30 days advance notice to the tribes of all mass grading and trenching activities. The Native American Tribal Representatives shall have the authority to temporarily halt and redirect earth moving activities in the affected area in the event that suspected archaeological resources are unearthed. If the Native American Tribal</p>	<p>Project Applicant</p>	<p>Proof that appropriate Native American representative(s), Project Archaeologist and the Tribal representative(s) shall be allowed to monitor and</p>	<p>City of Moreno Valley Planning Division</p>	<p>Prior to grading activities or permit issuance</p>

## RESOLUTION NUMBER 2022-XX

**A RESOLUTION OF CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, APPROVING GENERAL PLAN AMENDMENT (PEN21-0113) TO AMEND THE GENERAL PLAN LAND USE MAP, CHANGING THE LAND USE DESIGNATION FROM PUBLIC (P) TO RESIDENTIAL 15 (R15) FOR THE PROPERTY LOCATED ON THE EAST SIDE OF INDIAN STREET NORTH OF COTTONWOOD AVENUE (APN 482-161-026) AND THE NECESSARY AND CORRESPONDING AMENDMENTS TO THE CITY’S ZONING ATLAS**

**WHEREAS**, the City of Moreno Valley (“City”) is a general law city and a municipal corporation of the State of California, and has the authority to approve amendments to the City’s General Plan and the City’s Zoning Atlas; and

**WHEREAS**, Rancho Belago Developers Inc., (“Applicant”) is seeking approval for the development of the Courtyards at Cottonwood Phase II project which includes the development of a 32-unit affordable housing apartment complex with associated public improvements (“Proposed Project”), located on the east side of Indian Street north of Cottonwood Avenue (APN 482-161-026) (“Project Site”); and

**WHEREAS**, pursuant to the provisions of Section 9.02.200 (Public Hearing and Notification Procedures) of the Moreno Valley Municipal Code and Government Code section 65905, a public hearing was scheduled for January 18, 2022, and notice thereof was duly published and posted, and mailed to all property owners of record within 600 feet of the Site; and

**WHEREAS**, on December 9, 2021, the public hearing to consider the Application was duly conducted by the Planning Commission at which time all interested persons were provided with an opportunity to testify and to present evidence; and

**WHEREAS**, on December 9, 2021, a hearing was conducted by the Planning Commission to consider General Plan Amendment (PEN21-0113), whereby the Planning Commission approved Planning Commission Resolution 2021-49, a recommendation that the City Council approve the General Plan Amendment (PEN21-0113); and

**WHEREAS**, on December 9, 2021, in accordance with the provisions of the California Environmental Quality Act (CEQA) and CEQA Guidelines, the Planning Commission considered and recommended that the City Council approve Resolution 2021-48 recommending that the City Council adopt a Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program for the Courtyards at Cottonwood Phase II located on the east side of Indian Street, north of Cottonwood Avenue (APN 482-161-026); and

**WHEREAS**, on January 18, 2022 the public hearing to consider the Application was duly conducted by the City Council at which time all interested persons were provided with an opportunity to testify and to present evidence; and

**WHEREAS**, on January 18, 2022, in accordance with the provisions of the California Environmental Quality Act (CEQA) and CEQA Guidelines, the City Council considered and approved Resolution 2022-XX adopting a Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program for the Courtyards at Cottonwood Phase II Project located on the east side of Indian Street, north of Cottonwood Avenue (APN 482-161-026).

**NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:**

**Section 1. Recitals and Exhibits**

That the foregoing Recitals and attached exhibits are true and correct and are hereby incorporated by this reference.

**Section 2. Notice**

That pursuant to Government Code section 66020(d)(1), notice is hereby given that the proposed Project is subject to certain fees, dedications, reservations and other exactions as provided herein.

**Section 3. Evidence**

That the City Council has considered all of the evidence submitted into the administrative record for the General Plan Amendment, including, but not limited to, the following:

- (a) Moreno Valley General Plan and all relevant provisions contained therein;
- (b) Title 9 (Planning and Zoning) of the Moreno Valley Municipal Code and all relevant provisions referenced therein;
- (c) The Moreno Valley General Plan amendment changing the land use designation from Public (P) to Residential 15 (R15) and all relevant provisions contained therein as shown on Exhibit A;
- (d) Application for the approval of a General Plan Amendment (PEN21-0113) and all documents, records and references contained therein;
- (e) Staff Report prepared for the City Council's consideration and all documents, records and references related thereto, and Staff's presentation at the public hearing;
- (f) Testimony and/or comments from Applicant and its representatives during the public hearing; and
- (g) Testimony, comments and correspondence from all persons that were provided in written format or correspondence, at, or prior to, the public hearing.

**Section 4. Findings**

That based on the foregoing Recitals and the Evidence contained in the Administrative Record as set forth above, the City Council makes the following findings:

- (a) The proposed General Plan amendment is consistent with the existing goals, objectives, policies and programs of the General Plan; and
- (b) The proposed General Plan amendment will not adversely affect the public health, safety or general welfare.

**Section 5.                    Approval**

That based on the foregoing Recitals, Evidence contained in the Administrative Record and Findings, as set forth herein, the City Council hereby approves General Plan Amendment (PEN21-0113) as depicted in the exhibit attached hereto as Exhibit A, and any necessary and corresponding amendment to the City's Zoning Atlas to reflect the proposed changes in the zoning classification and/or redistricting associated with the General Plan Amendment.

**Section 6.                    Repeal of Conflicting Provisions**

That all the provisions as heretofore adopted by the City Council that are in conflict with the provisions of this Resolution are hereby repealed.

**Section 7.                    Severability**

That the City Council declares that, should any provision, section, paragraph, sentence or word of this Resolution be rendered or declared invalid by any final court action in a court of competent jurisdiction or by reason of any preemptive legislation, the remaining provisions, sections, paragraphs, sentences or words of this Resolution as hereby adopted shall remain in full force and effect.

**Section 8.                    Effective Date**

That this Resolution shall take effect immediately upon the date of adoption.

**Section 9.                    Certification**

That the City Clerk for the City Council shall certify to the passage of this Resolution.

**PASSED AND ADOPTED THIS 18th day of January, 2022**

## General Plan Amendment Land Use Designation Map

Attachment: Resolution No. 2022-XX General Plan Amendment (PEN21-0113) [Revision 3] (5641 : Courtyards at Cottonwood Phase II)

**ORDINANCE NO. XXX**

**AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, APPROVING CHANGE OF ZONE (PEN21-0114) TO AMEND THE CITY ZONING ATLAS FROM PUBLIC (P) DISTRICT TO RESIDENTIAL 15 (R15) DISTRICT, FOR THE PROPERTY LOCATED ON THE EAST SIDE OF INDIAN STREET NORTH OF COTTONWOOD AVENUE (APN 482-161-026)**

**The City Council of the City of Moreno Valley does ordain as follows:**

**SECTION 1 GENERAL:**

1.1 Rancho Belago Developer, Inc., (“Applicant”) has filed an application for the approval of the Courtyards at Cottonwood Phase II, which includes the approval of a Change of Zone (PEN21-0114) (“Application”) a request to amend the City’s Zoning Atlas from Public (P) District to Residential 15 (R15) District for the property located on the east side of Indian Street north of Cottonwood Avenue (APN 482-161-026) (“Project Site”); and

1.2 At its December 9, 2021 meeting, the Planning Commission considered the Change of Zone for Courtyards at Cottonwood Phase II project and recommended approval to the City Council; and

1.3 Pursuant to the provisions of the law, a public hearing was held before the City Council on January 18, 2022, for deliberations and decision; and

1.4 The matter was fully discussed, and the public and other agencies were given opportunity to present testimony and documentation; and

1.5 An Initial Study has been prepared for the Project for the purpose of compliance with the California Environmental Quality Act (CEQA). Based on the Initial Study including all supporting technical evidence, it was determined that the project impacts are expected to be less than significant with mitigation, and approval of a Mitigated Negative Declaration is an appropriate environmental determination for the Project.

**SECTION 2 EVIDENCE:**

That the City Council has considered all of the evidence submitted into the administrative record for Change of Zone (PEN21-0114), including, but not limited to, the following:

- (a) Moreno Valley General Plan and all relevant provisions contained therein;
- (b) Title 9 (Planning and Zoning) of the Moreno Valley Municipal Code and all relevant provisions referenced therein;

1  
Ordinance No. 2022-XX  
Date Adopted: January \_\_, 2022

- (c) The change the zoning designation of the site from Public (P) District to Residential 15 (R15) District, and all other relevant provisions contained therein as shown on Exhibit A;
- (d) Application for the approval of Change of Zone (PEN21-0114) and all documents, records and references contained therein;
- (e) Staff Report prepared for the City Council's consideration and all documents, records and references related thereto, and Staff's presentation at the public hearing;
- (f) Testimony and/or comments from Applicant and its representatives during the public hearing; and
- (g) Testimony comments and/or correspondence from all persons that were provided in written format or correspondence, at, or prior to, the public hearing.

### **SECTION 3 FINDINGS:**

That based on the foregoing Recitals and the Evidence contained in the Administrative Record as set forth above, the City Council hereby finds as follows:

- (a) The proposed amendment is consistent with the existing goals, objectives, policies and programs of the General Plan;
- (b) The proposed amendment will not adversely affect the public health, safety or general welfare; and
- (c) The proposed amendment is consistent with the purposes and intent of Title 9.

### **SECTION 4 AMENDMENT OF THE OFFICIAL ZONING ATLAS:**

4.1 The City of Moreno Valley Official Zoning Atlas, as adopted by Ordinance No. 981, on August 3, 2021, of the City of Moreno Valley, and as amended thereafter from time to time by the City Council of the City of Moreno Valley, is further amended by placing in effect the zone or zone classification to page 96 of the Official Zoning Atlas as shown on the attached map marked "Exhibit A" and included herein by reference and on file in the office of the City Clerk.

### **SECTION 5 EFFECT OF ENACTMENT:**

5.1 Except as specifically provided herein, nothing contained in this ordinance shall be deemed to modify or supersede any prior enactment of the City Council which addresses the same subject addressed herein.

### **SECTION 6 NOTICE OF ADOPTION:**

6.1 Within fifteen days after the date of adoption hereof, the City Clerk shall certify to the adoption of this ordinance and cause it to be posted in three public places within the city.

2  
Ordinance No. 2022-XX  
Date Adopted: January \_\_, 2022

**SECTION 7 EFFECTIVE DATE:**

7.1 This ordinance shall take effect thirty days after the date of its adoption.

**APPROVED AND ADOPTED this 18th day of January, 2022.**

Ordinance No. 2022-XX  
Date Adopted: January \_\_, 2022

**RESOLUTION NUMBER 2022-XX**

**A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, TO APPROVE PLOT PLAN (PEN21-0112) FOR A 32-UNIT AFFORDABLE HOUSING PROJECT LOCATED ON INDIAN STREET NORTH OF COTTONWOOD AVENUE (APN 482-161-026)**

**WHEREAS**, the City of Moreno Valley (“City”) is a general law city and a municipal corporation of the State of California; and

**WHEREAS**, Rancho Belago (“Applicant”) has filed an application for the approval of the Courtyards at Cottonwood – Phase II , which includes the approval of Plot Plan (PEN21-0112) (“Application”) for the development of a 32-unit affordable housing apartment project with associated public improvements (“Project”) located on the east side of Indian Street north of Cottonwood Avenue (APN 482-161-026) (“Project Site”); and

**WHEREAS**, Section 9.02.070 (Plot Plan) of the Moreno Valley Municipal Code acknowledges that the purpose of a plot plan is to provide a mechanism by which all new construction of industrial, commercial or multiple-family residential can be reviewed when not subject to other discretionary review processes which have review authority over project design; and

**WHEREAS**, the Application has been evaluated in accordance with Section 9.02.070 (Plot Plan) of the Municipal Code with consideration given to the City’s General Plan, Zoning Ordinance, and other applicable laws and regulations; and

**WHEREAS**, Section 9.02.070 of the Municipal Code imposes conditions of approval upon projects for which a Plot Plan is required, which conditions may be imposed by the City to address on-site improvements, off-site improvements, the manner in which the site is used and any other conditions as may be deemed necessary to protect the public health, safety and welfare and ensure that the proposed Project will be developed in accordance with the purpose and intent of Title 9 (Planning and Zoning) of the Municipal Code; and

**WHEREAS**, on December 9, 2021, the public hearing to consider the Application was duly conducted by the Planning Commission at which time all interested persons were provided with an opportunity to testify and to present evidence; and

**WHEREAS**, on December 9, 2021, a hearing was conducted by the Planning Commission to consider Plot Plan (PEN21-0112), whereby the Planning Commission approved Planning Commission Resolution 2021-51, a recommendation that the City Council approve the Plot Plan (PEN21-0112); and

**WHEREAS**, on December 9, 2021, in accordance with the provisions of the California Environmental Quality Act (CEQA) and CEQA Guidelines, the Planning Commission considered and recommended that the City Council approve Resolution 2021-48 recommending that the City Council adopt a Mitigated Negative Declaration and

Mitigation Monitoring and Reporting Program for the Courtyards at Cottonwood Phase II located on the east side of Indian Street, north of Cottonwood Avenue (APN 482-161-026); and

**WHEREAS**, Staff has presented for the City Council's consideration Conditions of Approval to be imposed upon Plot Plan (PEN21-0112), which conditions have been deemed necessary to protect the public health, safety and welfare and ensure that the proposed Project will be developed in accordance with the purpose and intent of Title 9 (Planning and Zoning) of the Municipal Code; and

**WHEREAS**, pursuant to the provisions of Section 9.02.200 (Public Hearing and Notification Procedures) of the Municipal Code and Government Code section 65905, a public hearing was scheduled for January 18, 2022 and notice thereof was duly published and posted, and mailed to all property owners of record within 600 feet of the Project Site; and

**WHEREAS**, on January 18, 2022, the public hearing to consider the Applications was duly conducted by the City Council at which time all interested persons were provided with an opportunity to testify and to present evidence; and

**WHEREAS**, consistent with the requirements of Section 9.02.070 (Plot Plan) of the Municipal Code, at the public hearing the City Council considered Conditions of Approval to be imposed upon Plot Plan (PEN21-0112) which conditions were prepared by Planning Division staff who deemed said conditions to be necessary to protect the public health, safety and welfare and to ensure the proposed Project will be developed in accordance with the purpose and intent of Title 9 (Planning and Zoning) of the Municipal Code; and

**WHEREAS**, at the public hearing, the City Council considered whether each of the requisite findings specified in Section 9.02.070 of the Municipal Code and set forth herein could be made with respect to the proposed Project as conditioned by Conditions of Approval; and

**WHEREAS**, on January 18, 2022, in accordance with the provisions of the California Environmental Quality Act (CEQA) and CEQA Guidelines, the City Council approved Resolution 2022-XX adopting a Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program for the Courtyards at Cottonwood Phase II Project located on the east side of Indian Street north of Cottonwood Avenue (APN 482-161-026).

**NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:**

**Section 1. Recitals and Exhibits**

That the foregoing Recitals and attached Exhibits are true and correct and are hereby incorporated by this reference.

## **Section 2. Notice**

That pursuant to Government Code section 66020(d)(1), notice is hereby given that the proposed project is subject to certain fees, dedications, reservations and other exactions as provided herein.

## **Section 3. Evidence**

That the City Council considered all of the evidence submitted into the administrative record for the proposed Plot Plan, including, but not limited to, the following:

- (a) Moreno Valley General Plan and all other relevant provisions contained therein;
- (b) Title 9 (Planning and Zoning) of the Moreno Valley Municipal Code and all other relevant provisions referenced therein;
- (c) Application for the approval of Plot Plan (PEN21-0112) and all documents, records and references contained therein;
- (d) Conditions of Approval for Plot Plan (PEN21-0112), attached hereto as Exhibit A;
- (e) Staff Report prepared for the City Council's consideration and all documents, records and references related thereto, and Staff's presentation at the public hearing;
- (f) Testimony and/or comments from Applicant and its representatives during the public hearing; and
- (g) Testimony and/or comments from all persons that was provided in written format or correspondence, at, or prior to, the public hearing.

## **Section 4. Findings**

That based on the foregoing Recitals and the Evidence contained in the Administrative Record as set forth above, the City Council makes the following findings in approving Plot Plan (PEN21-0112).

- (a) The proposed project is consistent with the goals, objectives, policies and programs of the general plan;
- (b) The proposed project complies with all applicable zoning and other regulations;
- (c) The proposed project will not be detrimental to the public health, safety or welfare or materially injurious to properties or improvements in the vicinity;
- (d) The location, design and operation of the proposed project will be compatible with existing and planned land uses in the vicinity.

## **Section 5. Approval**

That based on the foregoing Recitals, Evidence contained in the Administrative Record and Findings set forth above, the City Council approves Plot Plan (PEN21-0112)

subject to the Conditions of Approval for Plot Plan (PEN21-0112) attached hereto as Exhibit A.

**Section 6. Repeal of Conflicting Provisions**

That all the provisions as heretofore adopted by the City Council that are in conflict with the provisions of this Resolution are hereby repealed.

**Section 7. Severability**

That the City Council declares that, should any provision, section, paragraph, sentence or word of this Resolution be rendered or declared invalid by any final court action in a court of competent jurisdiction or by reason of any preemptive legislation, the remaining provisions, sections, paragraphs, sentences or words of this Resolution as hereby adopted shall remain in full force and effect.

**Section 8. Effective Date**

That this Resolution shall take effect immediately upon the date of adoption.

**Section 9. Certification**

That the City Clerk for the City Council shall certify to the passage of this Resolution.

**PASSED AND ADOPTED THIS 18<sup>th</sup> day of January, 2022**

Page 1

CITY OF MORENO VALLEY  
 CONDITIONS OF APPROVAL  
 Plot Plan (PEN21-0112)

EFFECTIVE DATE:

EXPIRATION DATE:

**COMMUNITY DEVELOPMENT DEPARTMENT**Planning Division

1. A change or modification to the land use or the approved site plans may require a separate approval. Prior to any change or modification, the property owner shall contact the City of Moreno Valley Community Development Department to determine if a separate approval is required.
2. Any expansion to this use or exterior alterations will require the submittal of a separate application(s) and shall be reviewed and approved under separate permit(s). (MC 9.02.080)
3. The developer, or the developer's successor-in-interest, shall be responsible for maintaining any undeveloped portion of the site in a manner that provides for the control of weeds, erosion and dust. (MC 9.02.030)
4. This approval shall expire three years after the approval date of this project unless used or extended as provided for by the City of Moreno Valley Municipal Code; otherwise it shall become null and void and of no effect whatsoever. Use means the beginning of substantial construction contemplated by this approval within the three-year period, which is thereafter pursued to completion, or the beginning of substantial utilization contemplated by this approval. (MC 9.02.230)
5. Applicant/Developer shall defend, indemnify and hold harmless City, city council, commissions, boards, subcommittees and City's elected and appointed officials, commissioners, board members, officers, agents, consultants and employees ("City Parties") from and against any and all liabilities, demands, claims, actions or proceedings and costs and expenses incidental thereto (including costs of defense, settlement and reasonable attorneys' fees), which any or all of them may suffer, incur, be responsible for or pay out as a result of or in connection with any challenge to the legality, validity or adequacy of any of the following items: (i) any agreements by and among City and Developer including without limitation any Development Agreement, (ii) any and all permits, licenses and entitlements approved by City; (iii) any environmental determination made by City in connection with the Project Site or Project; and (iv) any proceedings or other actions undertaken by City in connection with the adoption or approval of any of the above.

**CONDITIONS OF APPROVAL**

Plot Plan (PEN21-0112)

Page 2

6. All landscaped areas shall be maintained in a healthy and thriving condition, free from weeds, trash and debris. (MC 9.02.030)
7. The site shall be developed in accordance with the approved plans on file in the Community Development Department - Planning Division, the Municipal Code regulations, General Plan, and the conditions contained herein. Prior to any use of the project site or business activity being commenced thereon, all Conditions of Approval shall be completed to the satisfaction of the Planning Official. (MC 9.14.020)
8. Any signs indicated on the submitted plans are not included with this approval. Any signs, whether permanent (e.g. wall, monument) or temporary (e.g. banner, flag), require separate application and approval by the Planning Division. No signs are permitted in the public right of way. (MC 9.12)
9. All site plans, grading plans, landscape and irrigation plans, fence/wall plans, lighting plans and street improvement plans shall be coordinated for consistency with this approval.

**Special Conditions**

10. Owners developing density bonus units, as part of an approved affordable housing development, shall enter into a Density Bonus Housing Agreement with the City of Moreno Valley prior to issuance of any Grading or Building permits for a rental project. Upon execution of said agreement, the City shall record the document with the County Recorder's Office. The terms of the Density Bonus Housing Agreement shall run with the property for the life of the affordability period.
11. Prior to the start of any construction, temporary security fencing shall be erected. The fencing shall be a minimum of six (6) feet high with locking, gated access and shall remain through the duration of construction. Security shall remain in place until the project is completed or the above conditions no longer exist. (Security fencing is required if there is: construction, unsecured structures, unenclosed storage of materials and/or equipment, and/or the condition of the site constitutes a public hazard).
12. This site has been approved for Phase II of the Courtyards at Cottonwood for 32 affordable multi-family residential dwelling units contained in two (2) two-story multi-family buildings. The project will connect with Phase 1 on the south side with reciprocal access provided to include ingress and egress from Indian Street and Cottonwood Avenue. Phase II includes a trash enclosure, a laundry building and all amenities constructed in Phase I are provided to the Buildings in Phase II.

**CONDITIONS OF APPROVAL**

Plot Plan (PEN21-0112)

Page 3

13. Prior to issuance of any permits for the subject project, a Resolution shall be adopted for a General Plan Amendment to amend the land use of the 1.61-acre project site from Public (P) District to Residential 15 (15) District.
14. Prior to issuance of any permits for the subject project, a Ordinance shall be adopted for a Change of Zone to rezone the 1.61-acre project site from Public (P) District to Residential 15 (15) District.

Prior to Grading Permit

15. Prior to issuance of any grading permit, all Conditions of Approval and Mitigation Measures shall be printed on the grading plans.
16. Prior to issuance of any grading permits, mitigation measures contained in the Mitigation Monitoring Program approved with this project shall be implemented as provided therein. A mitigation monitoring fee, as provided by City ordinance, shall be paid by the applicant within 30 days of project approval. No City permit or approval shall be issued until such fee is paid. (CEQA)
17. Prior to issuance of grading permits, the developer shall pay the applicable Stephens' Kangaroo Rat (SKR) Habitat Conservation Plan mitigation fee. (Ord)
18. Prior to issuance of grading permits, the developer shall submit wall/fence plans to the Planning Division for review and approval as follows:
  - a. A maximum 6 foot high solid decorative block perimeter wall with pilasters and a cap shall be required adjacent to all residential zoned areas.
  - b. Any proposed retaining walls shall be decorative in nature, while the combination of retaining and other walls on top shall not exceed the height requirement.
  - c. Any proposed retaining walls shall also be decorative in nature, while the combination of retaining and other walls on top shall not exceed the height requirement.
  - d. Walls and fences for visual screening are required when there are adjacent residential uses or residentially zone property. The height, placement and design will be based on a site specific review of the project. All walls are subject to the approval of the Planning Official. (MC 9.08.070)
  - d. Show all trash enclosures on the plans to include a solid roof designed consistent with the proposed development.

**CONDITIONS OF APPROVAL**

Plot Plan (PEN21-0112)

Page 4

19. Prior to the issuance of grading permits, a temporary project identification sign shall be erected on the site in a secure and visible manner. The sign shall be conspicuously posted at the site and remain in place until occupancy of the project. The sign shall include the following:
  - a. The name (if applicable) and address of the development.
  - b. The developer's name, address, and a 24-hour emergency telephone number.

Prior to Building Permit

20. Prior to issuance of any building permit, all Conditions of Approval and Mitigation Measures shall be printed on the building plans.
21. Prior to the issuance of building permits, the developer shall provide documentation that contact was made to the U.S. Postal Service to determine the appropriate type and location of mailboxes.
22. Prior to the issuance of building permits, proposed covered trash enclosures shall be included in the Planning review of the Fence and Wall plan or separate Planning submittal. The trash enclosure(s), including the roof materials, shall be compatible with the architecture, color and materials of the building(s) design. Trash enclosure areas shall include landscaping on three sides. Approved design plans shall be included in a Building submittal (Fence and Wall or building design plans). (GP Objective 43.6, DG)
23. Prior to issuance of any building permits, final landscaping and irrigation plans shall be submitted for review and approved by the Planning Division. After the third plan check review for landscape plans, an additional plan check fee shall apply. The plans shall be prepared in accordance with the City's Landscape Requirements and shall include:
  - a. A three (3) foot high decorative wall, solid hedge or berm shall be placed in any setback areas between a public right of way and a parking lot for screening.
  - b. Finger and end planters with required step outs and curbing shall be provided every 12 parking stalls as well as at the terminus of each aisle.
  - c. Drought tolerant landscape shall be used. Sod shall be limited to gathering areas. (or No sod shall be installed)
  - d. Street trees shall be provided every 40 feet on center in the right of way.
  - e. On-site trees shall be planted at an equivalent of one (1) tree per thirty (30)

**CONDITIONS OF APPROVAL**

Plot Plan (PEN21-0112)

Page 5

linear feet of the perimeter of a parking lot and per thirty linear feet of a building dimension for the portions of the building visible from a parking lot or right of way. Trees may be massed for pleasing aesthetic effects.

f. Enhanced landscaping shall be provided at all driveway entries and street corner locations. The review of all utility boxes, transformers etc. shall be coordinated to provide adequate screening from public view.

g. Landscaping on three sides of any trash enclosure.

h. All site perimeter and parking lot landscape and irrigation shall be installed prior to the release of certificate of any occupancy permits for the site or pad in question (master plot plan).

24. Prior to issuance of building permits, the Planning Division shall review and approve the location and method of enclosure or screening of transformer cabinets, commercial gas meters and back flow preventers as shown on the final working drawings. Location and screening shall comply with the following criteria: transformer cabinets and commercial gas meters shall not be located within required setbacks and shall be screened from public view either by architectural treatment or landscaping; multiple electrical meters shall be fully enclosed and incorporated into the overall architectural design of the building(s); back-flow preventers shall be screened by landscaping. (GP Objective 43.30)
25. Prior to issuance of a building permit, the developer/property owner or developer's successor-in-interest shall pay all applicable impact fees due at permit issuance, including but not limited to Multi-species Habitat Conservation Plan (MSHCP) mitigation fees. (Ord)
26. Prior to building final, the developer/owner or developer's/owner's successor-in-interest shall pay all applicable impact fees, including but not limited to Transportation Uniform Mitigation fees (TUMF), and the City's adopted Development Impact Fees. (Ord)
27. Prior to or at building plan check submittal, the elevation plans shall include decorative lighting sconces on all sides of the buildings of the complex facing a parking lot, courtyard or plaza, or public right of way or open space to provide up-lighting and shadowing on the structures. Include drawings of the sconce details for each building within the elevation plans, approved by the Planning Division prior to building permit issuance.
28. Detailed, on-site, computer generated, point-by-point comparison lighting plan, including exterior building, parking lot, and landscaping lighting, shall be included in the Building Plans for review by the Planning Division. The lighting plan shall be

**CONDITIONS OF APPROVAL**

Plot Plan (PEN21-0112)

Page 6

generated on the plot plan and shall be integrated with the final landscape plan. The plan shall indicate the manufacturer's specifications for light fixtures used, shall include style, illumination, location, height and method of shielding per the City's Municipal Code requirements. After the third plan check review for lighting plans, an additional plan check fee will apply. (MC 9.08.100, 9.16.280)

29. Prior to issuance of building permits, screening details shall be addressed on the building plans for roof top equipment submitted for Planning Division review and approval through the building plan check process. All equipment shall be completely screened so as not to be visible from public view, and the screening shall be an integral part of the building.

Prior to Building Final or Occupancy

30. Prior to building final, all required landscaping and irrigation shall be installed per plan, certified by the Landscape Architect and inspected by the Planning Division. (MC 9.03.040, MC 9.17).
31. Prior to building final, Planning approved/stamped landscape plans shall be provided to the Community Development Department – Planning Division on a CD disk.
32. Prior to building final, all required and proposed fences and walls shall be constructed according to the approved plans on file in the Planning Division. (MC 9.080.070).

**COMMUNITY DEVELOPMENT DEPARTMENT**Building Division

33. Prior to submittal, all new development, including residential second units, are required to obtain a valid property address prior to permit application. Addresses can be obtained by contacting the Building Safety Division at 951.413.3350.
34. Contact the Building Safety Division for permit application submittal requirements.
35. All new buildings 10,000 square feet and over, shall include building commissioning in the design and construction processes of the building project to verify that the building systems and components meet the owner's or owner representative's project requirements (OPR). All requirements in the California Green Building Standards Code, sections 5.410.2 - 5.410.2.6 must be met.
36. Any construction within the city shall only be as follows: Monday through Friday

**CONDITIONS OF APPROVAL**

Plot Plan (PEN21-0112)

Page 7

- seven a.m. to seven p.m.(except for holidays which occur on weekdays), eight a.m. to four p.m.; weekends and holidays (as observed by the city and described in the Moreno Valley Municipal Code Chapter 2.55), unless written approval is first obtained from the Building Official or City Engineer.
37. Building plans submitted shall be signed and sealed by a California licensed design professional as required by the State Business and Professions Code.
  38. The proposed development shall be subject to the payment of required development fees as required by the City's current Fee Ordinance at the time a building application is submitted or prior to the issuance of permits as determined by the City.
  39. The proposed project will be subject to approval by the Eastern Municipal Water District and all applicable fees and charges shall be paid prior to permit issuance. Contact the water district at 951.928.3777 for specific details.
  40. All new structures shall be designed in conformance to the latest design standards adopted by the State of California in the California Building Code, (CBC) Part 2, Title 24, California Code of Regulations including requirements for allowable area, occupancy separations, fire suppression systems, accessibility, etc.
  41. The proposed project's occupancy shall be classified by the Building Official and must comply with exiting, occupancy separation(s) and minimum plumbing fixture requirements. Minimum plumbing fixtures shall be provided per the California Plumbing Code, Table 422.1. The occupant load and occupancy classification shall be determined in accordance with the California Building Code.
  42. Prior to permit issuance, every applicant shall submit a properly completed Waste Management Plan (WMP), as a portion of the building or demolition permit process. (MC 8.80.030)
  43. The proposed residential project (3 or more dwelling units) shall comply with the latest Federal Law, Americans with Disabilities Act, and State Law, California Code of Regulations, Title 24, Chapter 11A for accessibility standards for the disabled including access to the site, exits, kitchens, bathrooms, common spaces, pools/spas, etc.

**FIRE DEPARTMENT****Fire Prevention Bureau**

44. Prior to issuance of Building Permits, the applicant/developer shall provide the Fire Prevention Bureau with an approved site plan for Fire Lanes and signage. (CFC

**CONDITIONS OF APPROVAL**

Plot Plan (PEN21-0112)

Page 8

- 501.3)
45. Prior to issuance of Certificate of Occupancy or Building Final, “Blue Reflective Markers” shall be installed to identify fire hydrant locations in accordance with City specifications. (CFC 509.1 and MVLT 440A-0 through MVLT 440C-0)
  46. Prior to issuance of building permits, plans specifying the required structural materials for building construction in high fire hazard severity zones shall be submitted to the Fire Prevention Bureau for approval. (CFC, 4905)
  47. Prior to issuance of Certificate of Occupancy or Building Final, all commercial buildings shall display street numbers in a prominent location on the street side and rear access locations. The numerals shall be a minimum of twelve inches in height. (CFC 505.1, MVMC 8.36.060[I])
  48. Existing fire hydrants on public streets are allowed to be considered available. Existing fire hydrants on adjacent properties shall not be considered available unless fire apparatus access roads extend between properties and easements are established to prevent obstruction of such roads. (CFC 507, 501.3) a - After the local water company signs the plans, the originals shall be presented to the Fire Prevention Bureau for signatures. The required water system, including fire hydrants, shall be installed, made serviceable, and be accepted by the Moreno Valley Fire Department prior to beginning construction. They shall be maintained accessible.
  49. Final fire and life safety conditions will be addressed when the Fire Prevention Bureau reviews building plans. These conditions will be based on occupancy, use, California Building Code (CBC), California Fire Code (CFC), and related codes, which are in effect at the time of building plan submittal.
  50. The Fire Code Official is authorized to enforce the fire safety during construction requirements of Chapter 33. (CFC Chapter 33 & CBC Chapter 33)
  51. Fire lanes and fire apparatus access roads shall have an unobstructed width of not less than twenty-four (24) feet and an unobstructed vertical clearance of not less than thirteen (13) feet six (6) inches. (CFC 503.2.1 and MVMC 8.36.060[E])
  52. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall install a fire sprinkler system based on square footage and type of construction, occupancy or use. Fire sprinkler plans shall be submitted to the Fire Prevention Bureau for approval prior to installation. (CFC Chapter 9, MVMC 8.36.100[D])
  53. Prior to issuance of a Certificate of Occupancy or Building Final, a “Knox Box Rapid Entry System” shall be provided. The Knox-Box shall be installed in an accessible

**CONDITIONS OF APPROVAL**

Plot Plan (PEN21-0112)

Page 9

location approved by the Fire Code Official. All exterior security emergency access gates shall be electronically operated and be provided with Knox key switches for access by emergency personnel. (CFC 506.1)

54. The minimum number of fire hydrants required, as well as the location and spacing of fire hydrants, shall comply with the C.F.C., MVMC, and NFPA 24. Fire hydrants shall be located no closer than 40 feet to a building. A fire hydrant shall be located within 50 feet of the fire department connection for buildings protected with a fire sprinkler system. The size and number of outlets required for the approved fire hydrants are (6" x 4" x 2 ½" x 2 ½") (CFC 507.5.1, 507.5.7, Appendix C, NFPA 24-7.2.3, MVMC 912.2.1)
55. Prior to issuance of Building Permits, plans for structural protection from vegetation fires shall be submitted to the Fire Prevention Bureau for review and approval. Measures shall include, but are not limited to: noncombustible barriers (cement or block walls), fuel modification zones, etc. (CFC Chapter 49)
56. Plans for private water mains supplying fire sprinkler systems and/or private fire hydrants shall be submitted to the Fire Prevention Bureau for approval. (CFC 105 and CFC 3312.1)
57. The Fire Prevention Bureau is required to set a minimum fire flow for the remodel or construction of all commercial buildings per CFC Appendix B and Table B105.1. The applicant/developer shall provide documentation to show there exists a water system capable of delivering said waterflow for 2 hour(s) duration at 20-PSI residual operating pressure. The required fire flow may be adjusted during the approval process to reflect changes in design, construction type, or automatic fire protection measures as approved by the Fire Prevention Bureau. Specific requirements for the project will be determined at time of submittal. (CFC 507.3, Appendix B)
58. "Fully Sprinkled Per NFPA 13". Per discussion with Fire Marshal Doug Bloom the addition of fire sprinklers in the attic is an acceptable mitigation to address the hose reach/ access alternative.
59. Access gate from Indian (note 34) on sheet A-0 shall be equipped with Knox box and signage indicating FD Access point/ gate.
60. Prior to construction, all traffic calming designs/devices must be approved by the Fire Marshal and City Engineer.

**PUBLIC WORKS DEPARTMENT****Land Development**

**CONDITIONS OF APPROVAL**

Plot Plan (PEN21-0112)

Page 10

61. Aggregate slurry, as defined in Section 203-5 of Standard Specifications for Public Works Construction, shall be required prior to 90% security reduction or the end of the one-year warranty period of the public streets as approved by the City Engineer. If slurry is required, a slurry mix design shall be submitted for review and approved by the City Engineer. The latex additive shall be Ultra Pave 70 (for anionic) or Ultra Pave 65 K (for cationic) or an approved equal per the geotechnical report. The latex shall be added at the emulsion plant after weighing the asphalt and before the addition of mixing water. The latex shall be added at a rate of two to two-and-one-half (2 to 2½) parts to one-hundred (100) parts of emulsion by volume. Any existing striping shall be removed prior to slurry application and replaced per City standards.
62. The developer shall comply with all applicable City ordinances and resolutions including the City's Municipal Code (MC) and if subdividing land, the Government Code (GC) of the State of California, specifically Sections 66410 through 66499.58, said sections also referred to as the Subdivision Map Act (SMA). [MC 9.14.010]
63. The final approved conditions of approval (COAs) issued and any applicable Mitigation Measures by the Planning Division shall be photographically or electronically placed on mylar sheets and included in the Grading and Street Improvement plans.
64. The developer shall monitor, supervise and control all construction related activities, so as to prevent these activities from causing a public nuisance, including but not limited to, insuring strict adherence to the following:
- (a) Removal of dirt, debris, or other construction material deposited on any public street no later than the end of each working day.
  - (b) Observance of working hours as stipulated on permits issued by the Land Development Division.
  - (c) The construction site shall accommodate the parking of all motor vehicles used by persons working at or providing deliveries to the site.
  - (d) All dust control measures per South Coast Air Quality Management District (SCAQMD) requirements during the grading operations.
- Violation of any condition, restriction or prohibition set forth in these conditions shall subject the owner, applicant, developer or contractor(s) to remedy as noted in City Municipal Code 8.14.090. In addition, the City Engineer or Building Official may suspend all construction related activities for violation of any condition, restriction or prohibition set forth in these conditions until such time as it has been determined that all operations and activities are in conformance with these conditions.
65. Drainage facilities (e.g., catch basins, water quality basins, etc.) with sump conditions shall be designed to convey the tributary 100-year storm flows. Secondary emergency escape shall also be provided.

**CONDITIONS OF APPROVAL**

Plot Plan (PEN21-0112)

Page 11

66. In the event right-of-way or offsite easements are required to construct offsite improvements necessary for the orderly development of the surrounding area to meet the public health and safety needs, the developer shall make a good faith effort to acquire the needed right-of-way in accordance with the Land Development Division's administrative policy. If unsuccessful, the Developer shall enter into an agreement with the City to acquire the necessary right-of-way or offsite easements and complete the improvements at such time the City acquires the right-of-way or offsite easements which will permit the improvements to be made. The developer shall be responsible for all costs associated with the right-of-way or easement acquisition. [GC 66462.5]
67. If improvements associated with this project are not initiated within two (2) years of the date of approval of the Public Improvement Agreement (PIA), the City Engineer may require that the engineer's estimate for improvements associated with the project be modified to reflect current City construction costs in effect at the time of request for an extension of time for the PIA or issuance of a permit. [MC 9.14.210(B)(C)]
68. The developer shall protect downstream properties from damage caused by alteration of drainage patterns (i.e. concentration or diversion of flow, etc). Protection shall be provided by constructing adequate drainage facilities, including, but not limited to, modifying existing facilities or by securing a drainage easement. [MC 9.14.110]
69. The maintenance responsibility of the proposed storm drain line shall be clearly identified. Storm drain lines within private property will be privately maintained and those within public streets will be publicly maintained.
70. The proposed private storm drain system shall be designed and constructed in a manner to be consistent with the final drainage study and the grading and improvement plans. As applicable, a storm drain manhole shall be placed at the right of way line to mark the beginning of the publicly maintained portion of this storm drain.
71. This project shall submit civil engineering design plans, reports and/or documents (prepared by a registered/licensed civil engineer) for review and approval by the City Engineer per the current submittal requirements, prior to the indicated threshold or as required by the City Engineer. The submittal consists of, but is not limited to, the following:
  - a. Rough grading w/ erosion control plan (prior to grading permit issuance);
  - b. Precise grading w/ erosion control plan (prior to grading permit issuance);
  - c. Sewer and water plans (prior to encroachment permit issuance);
  - d. Final drainage study (prior to grading plan approval);
  - e. Final WQMP (prior to grading plan approval);

**CONDITIONS OF APPROVAL**

Plot Plan (PEN21-0112)

Page 12

f. As-Built revision for all plans (prior to Occupancy release).

Prior to Grading Plan Approval

72. Resolution of all drainage issues shall be as approved by the City Engineer.
73. A final detailed drainage study (prepared by a registered/licensed civil engineer) shall be submitted for review and approved by the City Engineer. The study shall include, but not be limited to: existing and proposed hydrologic conditions as well as hydraulic calculations for all drainage control devices and storm drain lines. The study shall analyze 1, 3, 6 and 24-hour duration events for the 2, 5, 10 and 100-year storm events [MC 9.14.110(A.1)]. A digital (pdf) copy of the approved drainage study shall be submitted to the Land Development Division.
74. Emergency overflow areas shall be shown at all applicable drainage improvement locations in the event that the drainage improvement fails or exceeds full capacity.
75. The final project-specific Water Quality Management Plan (WQMP) shall be consistent with the approved P-WQMP, as well as in full conformance with the document: "Water Quality Management Plan - A Guidance Document for the Santa Ana Region of Riverside County" dated October 22, 2012. The F-WQMP shall be submitted and approved prior to application for and issuance of grading permits. At a minimum, the F-WQMP shall include the following: Site Design BMPs; Source Control BMPs, Treatment Control BMPs, Operation and Maintenance requirements for BMPs and sources of funding for BMP implementation.
- a. The Applicant has proposed to incorporate the use of a bioretention basin. Final design and sizing details of all BMPs must be provided in the first submittal of the F-WQMP. The Applicant acknowledges that more area than currently shown on the plans may be required to treat site runoff as required by the WQMP guidance document.
- b. The Applicant shall substantiate the applicable Hydrologic Condition of Concerns (HCOC) in Section F of the F-WQMP.
- c. All proposed LID BMP's shall be designed in accordance with the RCFC&WCD's Design Handbook for Low Impact Development Best Management Practices, dated September 2011.
- d. The proposed LID BMP's as identified in the project-specific P-WQMP shall be incorporated into the Final WQMP.
- e. The NPDES notes per City Standard Drawing No. MVFE-350-0 shall be included in the grading plans.
- f. Post-construction treatment control BMPs, once placed into operation for post-construction water quality control, shall not be used to treat runoff from construction sites or unstabilized areas of the site.
- g. Prior to precise grading plan approval, the grading plan shall show any proposed trash enclosure to include a cover (roof) and sufficient size for dual bin (1

**CONDITIONS OF APPROVAL**

Plot Plan (PEN21-0112)

Page 13

- for trash and 1 for recyclables). The architecture shall be approved by the Planning Division and any structural approvals shall be made by the Building and Safety Division.
76. The developer shall ensure compliance with the City Grading ordinance, these Conditions of Approval and the following criteria:
    - a. The project street and lot grading shall be designed in a manner that perpetuates the existing natural drainage patterns with respect to tributary drainage area and outlet points. Unless otherwise approved by the City Engineer, lot lines shall be located at the top of slopes.
    - b. Any grading that creates cut or fill slopes adjacent to the street shall provide erosion control, sight distance control, and slope easements as approved by the City Engineer.
    - c. All improvement plans are substantially complete and appropriate clearance letters are provided to the City.
    - d. A soils/geotechnical report (addressing the soil's stability and geological conditions of the site) shall be submitted to the Land Development Division for review. A digital (pdf) copy of the soils/geotechnical report shall be submitted to the Land Development Division.
  77. Grading plans (prepared by a registered/licensed civil engineer) shall be submitted for review and approved by the City Engineer per the current submittal requirements.
  78. The developer shall select Low Impact Development (LID) Best Management Practices (BMPs) designed per the latest version of the Water Quality Management Plan (WQMP) - a guidance document for the Santa Ana region of Riverside County.
  79. The developer shall pay all remaining plan check fees.
  80. Landscape & Irrigation plans (prepared by a registered/licensed landscape architect) for water quality BMPs shall be submitted for review and approved by the City Engineer per the current submittal requirements, if applicable.
  81. A Storm Water Pollution Prevention Plan (SWPPP) shall be prepared in conformance with the State's current Construction Activities Storm Water General Permit. A copy of the current SWPPP shall be kept at the project site and be available for review upon request.
  82. Any proposed trash enclosure shall include a solid cover (roof) and sufficient size for dual bin (one for trash and one for recyclables). The architecture shall be approved by the Planning Division and any structural approvals shall be made by the Building & Safety Division.
  83. For projects that will result in discharges of storm water associated with construction

**CONDITIONS OF APPROVAL**

Plot Plan (PEN21-0112)

Page 14

with a soil disturbance of one or more acres of land, the developer shall submit a Notice of Intent (NOI) and obtain a Waste Discharger's Identification number (WDID#) from the State Water Quality Control Board (SWQCB) which shall be noted on the grading plans.

Prior to Grading Permit

84. A receipt showing payment of the Area Drainage Plan (ADP) fee to Riverside County Flood Control and Water Conservation District shall be submitted. [MC 9.14.100(O)]
85. For non-subdivision projects, a copy of the Covenants, Conditions and Restrictions (CC&Rs) shall be submitted for review by the City Engineer. The CC&Rs shall include, but not be limited to, access easements, reciprocal access, private and/or public utility easements as may be relevant to the project.
86. If the developer chooses to construct the project in phases, a Construction Phasing Plan for the construction of on-site public or private improvements shall be submitted for review and approved by the City Engineer.
87. Prior to the payment of the Development Impact Fee (DIF), the developer may enter into a DIF Improvement Credit Agreement to secure credit for the construction of applicable improvements. If the developer fails to complete this agreement prior to the timing specified above, credits may not be given. The developer shall pay current DIF fees adopted by the City Council. [Ord. 695 § 1.1 (part), 2005] [MC 3.38.030, 040, 050]
88. A digital (pdf) copy of all approved grading plans shall be submitted to the Land Development Division.
89. Security, in the form of a cash deposit (preferable), bond or letter of credit shall be submitted as a guarantee of the implementation and maintenance of erosion control measures. At least twenty-five (25) percent of the required security shall be in the form of a cash deposit with the City. [MC 8.21.160(H)]
90. Security, in the form of a cash deposit (preferable), bond or letter of credit shall be submitted as a guarantee of the completion of the grading operations for the project. [MC 8.21.070]
91. The developer shall pay all applicable inspection fees.
92. Prior to the payment of the Transportation Uniform Mitigation Fee (TUMF), the developer may enter into a TUMF Improvement Credit Agreement to secure credit for the construction of applicable improvements. If the developer fails to complete

**CONDITIONS OF APPROVAL**

Plot Plan (PEN21-0112)

Page 15

this agreement by the timing specified above, credits may not be given. The developer shall pay current TUMF fees adopted by the City Council. [Ord. 835 § 2.1, 2012] [MC 3.44.060]

Prior to Improvement Plan Approval

93. The developer is required to bring any existing access ramps adjacent to and fronting the project to current ADA (Americans with Disabilities Act) requirements. However, when work is required in an intersection that involves or impacts existing access ramps, all access ramps in that intersection shall be retrofitted to comply with current ADA requirements, unless otherwise approved by the City Engineer.
94. The developer shall submit clearances from all applicable agencies, and pay all applicable plan check fees.
95. The street improvement plans shall comply with current City policies, plans and applicable City standards (i.e. MVS1-160 series, etc.) throughout this project.
96. Drainage facilities (i.e. catch basins, etc.) with sump conditions shall be designed to convey the tributary 100-year storm flows. Secondary emergency escape shall also be provided.
97. The hydrology study shall be designed to accept and properly convey all off-site drainage flowing onto or through the site. In the event that the City Engineer permits the use of streets for drainage purposes, the provisions of current City standards shall apply. Should the quantities exceed the street capacity or the use of streets be prohibited for drainage purposes, as in the case where one travel lane in each direction shall not be used for drainage conveyance for emergency vehicle access on streets classified as minor arterials and greater, the developer shall provide adequate facilities as approved by the City Engineer. [MC 9.14.110 A.2]
98. All public improvement plans (prepared by a licensed/registered civil engineer) shall be submitted for review and approved by the City Engineer per the current submittal requirements.
99. Any missing or deficient existing improvements along the project frontage or related to the project shall be constructed or secured for construction. The City Engineer may require the ultimate structural section for pavement to half-street width plus 18 feet or provide core test results confirming that existing pavement section is per current City Standards; additional signing & striping to accommodate increased traffic imposed by the development, etc.
100. For non-subdivision projects, all street dedications shall be free of encumbrances, irrevocably offered to the public and shall continue in force until the City accepts or

**CONDITIONS OF APPROVAL**

Plot Plan (PEN21-0112)

Page 16

abandons such offers, unless otherwise approved by the City Engineer.

101. The plans shall indicate any restrictions on trench repair pavement cuts to reflect the City's moratorium on disturbing newly-constructed pavement less than three (3) years old and recently slurry sealed streets less than one (1) year old. Pavement cuts may be allowed for emergency repairs or as specifically approved in writing by the City Engineer. Special requirements shall be imposed for repaving, limits to be determined by the City Engineer.
102. All dry and wet utilities shall be shown on the plans and any crossings shall be potholed to determine actual location and elevation. Any conflicts shall be identified and addressed on the plans. The pothole survey data shall be submitted to Land Development with the public improvement plans for reference purposes only. The developer is responsible to coordinate with all affected utility companies and bear all costs of any utility relocation.

Prior to Encroachment Permit

103. A digital (pdf) copy of all approved improvement plans shall be submitted to the Land Development Division.
104. All applicable inspection fees shall be paid.
105. For non-subdivision projects, execution of a Public Improvement Agreement (PIA) and/or security (in the form of a cash deposit or other approved means) may be required as determined by the City Engineer. [MC 9.14.220]
106. The plans shall indicate any restrictions on trench repair pavement cuts to reflect the City's moratorium on disturbing newly-constructed pavement less than three (3) years old and recently slurry sealed streets less than one (1) year old. Pavement cuts may be allowed for emergency repairs or as specifically approved in writing by the City Engineer. Special requirements shall be imposed for repaving, limits to be determined by the City Engineer.
107. Any work performed within public right-of-way requires an encroachment permit.

Prior to Building Permit

108. An engineered-fill certification, rough grade certification and compaction report shall be submitted for review and approved by the City Engineer. A digital (pdf) copy of the approved compaction report shall be submitted to the Land Development Division. All pads shall meet pad elevations per approved grading plans as noted by the setting of "blue-top" markers installed by a registered land surveyor or licensed civil engineer.

**CONDITIONS OF APPROVAL**

Plot Plan (PEN21-0112)

Page 17

109. For Commercial/Industrial projects, the owner may have to secure coverage under the State's General Industrial Activities Storm Water Permit as issued by the State Water Resources Control Board.
110. A walk through with a Land Development Inspector shall be scheduled to inspect existing improvements within public right of way along project frontage. Any missing, damaged or substandard improvements including ADA access ramps that do not meet current City standards shall be required to be installed, replaced and/or repaired. The applicant shall post security to cover the cost of the repairs and complete the repairs within the time allowed in the public improvement agreement used to secure the improvements.
111. Certification to the line, grade, flow test and system invert elevations for the water quality control BMPs shall be submitted for review and approved by the City Engineer.
112. For non-subdivision projects, the developer shall guarantee the completion of all related public improvements required for this project by executing a Public Improvement Agreement (PIA) with the City and posting the required security. [MC 9.14.220]

Prior to Occupancy

113. All outstanding fees shall be paid.
114. All required as-built plans (prepared by a registered/licensed civil engineer) shall be submitted for review and approved by the City Engineer per the current submittal requirements.
115. The final/precise grade certification shall be submitted for review and approved by the City Engineer.
116. For commercial, industrial and multi-family projects, in compliance with Proposition 218, the developer shall agree to approve the City of Moreno Valley NPDES Regulatory Rate Schedule that is in place at the time of certificate of occupancy issuance. Under the current permit for storm water activities required as part of the National Pollutant Discharge Elimination System (NPDES) as mandated by the Federal Clean Water Act, this project is subject to the following requirements:
  - a. Select one of the following options to meet the financial responsibility to provide storm water utilities services for the required continuous operation, maintenance, monitoring system evaluations and enhancements, remediation and/or replacement, all in accordance with Resolution No. 2002-46.
    - i. Participate in the mail ballot proceeding in compliance with Proposition

**CONDITIONS OF APPROVAL**

Plot Plan (PEN21-0112)

Page 18

- 218, for the Common Interest, Commercial, Industrial and Quasi-Public Use NPDES Regulatory Rate Schedule and pay all associated costs with the ballot process; or
- ii. Establish an endowment to cover future City costs as specified in the Common Interest, Commercial, Industrial and Quasi-Public Use NPDES Regulatory Rate Schedule.
    - b. Notify the Special Districts Division of the intent to request building permits 90 days prior to their issuance and the financial option selected. The financial option selected shall be in place prior to the issuance of certificate of occupancy. [California Government Code & Municipal Code]
117. The developer shall complete all public improvements, as applicable, in conformance with current City standards, except as noted in the Special Conditions, including but not limited to the following:
- a. Street improvements including, but not limited to: pavement, base, curb and/or gutter, cross gutters, spandrel, sidewalks, drive approaches, pedestrian ramps, street lights (SCE: LS-2), signing, striping, under sidewalk drains, landscaping and irrigation, medians, pavement tapers/transitions and traffic control devices as appropriate.
  - b. Storm drain facilities including, but not limited to: storm drain pipe, storm drain laterals, open channels, catch basins and local depressions.
  - c. City-owned utilities.
  - d. Sewer and water systems including, but not limited to: sanitary sewer, potable water and recycled water.
  - e. Undergrounding of all existing and proposed utilities adjacent to and on-site. [MC 9.14.130]
  - f. Relocation of overhead electrical utility lines including, but not limited to: electrical, cable and telephone.
118. The applicant shall ensure the following, pursuant to Section XII. I. of the 2010 NPDES Permit:
- a. Field verification that structural Site Design, Source Control and Treatment Control BMPs are designed, constructed and functional in accordance with the approved Final Water Quality Management Plan (WQMP).
  - b. Certification of best management practices (BMPs) from a state licensed civil engineer. An original WQMP BMP Certification shall be submitted for review and approved by the City Engineer.
119. The Developer shall comply with the following water quality related items:
- a. Notify the Land Development Division prior to construction and installation of all structural BMPs so that an inspection can be performed.
  - b. Demonstrate that all structural BMPs described in the approved final project-specific WQMP have been constructed and installed in conformance with the approved plans and specifications;

**CONDITIONS OF APPROVAL**

Plot Plan (PEN21-0112)

Page 19

- c. Demonstrate that Developer is prepared to implement all non-structural BMPs described in the approved final project-specific WQMP; and
- d. Demonstrate that an adequate number of copies of the approved final project-specific WQMP are available for future owners/occupants.
- e. Clean and repair the water quality BMP's, including re-grading to approved civil drawing if necessary.
- f. Obtain approval and complete installation of the irrigation and landscaping.

Special Districts Division

- 120. Maintenance Responsibility. The ongoing maintenance of any landscaping required to be installed behind the curb shall be the responsibility of the property owner.
- 121. Zone A Per Dwelling Unit. The Moreno Valley Community Services District Zone A (Parks & Community Services) tax is levied on the property tax bill on a per parcel or dwelling unit basis. Upon the issuance of building permits, the Zone A tax will be assessed based on 32 dwelling units.
- 122. Zones A and C. The parcel(s) associated with this project is included in Moreno Valley Community Services District Zone A (Parks & Community Services) and Zone C (Arterial Street Lighting). Zone A is levied on the property tax bill on a per parcel or dwelling unit basis. Zone C is levied on the property tax bill on a per parcel basis. Zone A and Zone C are levied against all assessable parcels, and any subdivision thereof.

Prior to Building Permit

- 123. NPDES Funding. Prior to applying for the 1st Building Permit and if the Land Development Division requires this project to provide a funding source for the City's National Pollutant Discharge Elimination System (NPDES) program, the qualified elector (e.g. property owner) must initiate the process (i.e. pay the balloting/annexation fee or fund an endowment) to provide an ongoing funding source for the NPDES program. This condition must be fully satisfied prior to issuance of the 1st Certificate of Occupancy. This condition will be satisfied with the successful special election process into the NPDES program, or other special financing district, and payment of all costs associated with the special election process. Participation in the NPDES program requires an annual payment of the annual special tax, assessment, rate or fee levied against the property tax bill, or other lawful means, of the parcels of the project for such district. At the time of the City Council action to consider the ballot/annexation into or formation of the district, the qualified elector(s) will not protest the ballot/annexation or formation, but will retain the right to object to any eventual tax/assessment/rate/fee that is not equitable should the financial burden of the tax/assessment/rate/fee not be reasonably

**CONDITIONS OF APPROVAL**

Plot Plan (PEN21-0112)

Page 20

proportionate to the benefit the affected property receives from the improvements to be installed and/or maintained or services provided. The special election requires a minimum 90-day process in compliance with the provisions of Article 13C of the California Constitution, Proposition 218, or other applicable legislation, and consistent with the scheduling for City Council meetings. (MC 3.50.050). Alternatively, the condition can be satisfied by the Developer funding an endowment in an amount sufficient to yield an annual revenue stream that meets the annual obligation, as calculated by Special Districts Admin staff. The Developer must contact Special Districts Administration at 951.413.3470 or at SAdmin@moval.org to satisfy this condition.

124. Maintenance Services Funding. Prior to applying for the 1st Building Permit, the qualified elector (e.g. property owner) must initiate the process (i.e. pay the annexation fee or use the alternative identified at the time of the special financing district formation) to provide an ongoing funding source for the operation and maintenance of public improvements and/or services associated with impacts of the development. This condition will only be applicable provided said district is under development at the time this project applies for the 1st Building Permit.

This condition must be fully satisfied prior to issuance of the 1st Certificate of Occupancy. This condition will be satisfied with the successful annexation/formation (i.e. special election process) into a special financing district and payment of all costs associated with the special election process. Annexation into a special financing district requires an annual payment of the annual special tax, assessment, or fee levied against the property tax bill, or other lawful means, of the parcels of the project for such district. At the time of the public hearing to consider annexation into or formation of the district, the qualified elector(s) will not protest the annexation or formation, but will retain the right to object to any eventual tax/assessment/fee that is not equitable should the financial burden of the tax/assessment/fee not be reasonably proportionate to the benefit the affected property receives from the improvements to be installed and/or maintained or services provided. The special election requires a minimum 90-day process in compliance with the provisions of Article 13C of the California Constitution, Proposition 218, or other applicable legislation, and consistent with the scheduling for City Council meetings.

An alternative to satisfying this funding source will be identified at such time as a special financing district has been established. At the time of development, the developer must contact Special Districts Administration at 951.413.3470 or at SAdmin@moval.org to determine if this condition is applicable.

125. Public Safety Funding. Prior to applying for the 1st Building Permit, the qualified elector (e.g. property owner) must initiate the process (i.e. pay the annexation fee or use the alternative identified at the time of the special financing district formation) to provide an ongoing funding source for Public Safety services, which may include

**CONDITIONS OF APPROVAL**

Plot Plan (PEN21-0112)

Page 21

but is not limited to Police, Fire Protection, Paramedic Services, Park Rangers, and Animal Control services. This condition will only be applicable provided said district is under development at the time this project applies for the 1st Building Permit.

This condition must be fully satisfied prior to issuance of the 1st Certificate of Occupancy. This condition will be satisfied with the successful annexation/formation (i.e. special election process) into a special financing district and payment of all costs associated with the special election process. Annexation into a special financing district requires an annual payment of the annual special tax, assessment, or fee levied against the property tax bill, or other lawful means, of the parcels of the project for such district. At the time of the public hearing to consider annexation into or formation of the district, the qualified elector(s) will not protest the annexation or formation, but will retain the right to object to any eventual tax/assessment/fee that is not equitable should the financial burden of the tax/assessment/fee not be reasonably proportionate to the benefit the affected property receives from the improvements to be installed and/or maintained or services provided. The special election requires a minimum 90-day process in compliance with the provisions of Article 13C of the California Constitution, Proposition 218, or other applicable legislation, and consistent with the scheduling for City Council meetings.

An alternative to satisfying this condition will be identified at such time as a special financing district has been established. At the time of development, the developer must contact Special Districts Administration at 951.413.3470 or at [SDAdmin@moval.org](mailto:SDAdmin@moval.org) to determine if this condition is applicable.

126. Major Infrastructure SFD      Major Infrastructure Financing District. Prior to applying for the 1st Building Permit, the qualified elector (e.g. property owner) must initiate the process (i.e. pay the annexation fee or use the alternative identified at the time of the special financing district formation) to provide an ongoing funding source for the construction and maintenance of major infrastructure improvements, which may include but is not limited to thoroughfares, bridges, and certain flood control improvements. This condition will be applicable provided said district is under development at the time this project applies for the 1st Building Permit. This condition must be fully satisfied prior to issuance of the 1st Certificate of Occupancy. This condition will be satisfied with the successful annexation/formation (i.e. special election process) into a special financing district and payment of all costs associated with the special election process. Annexation into a special financing district requires an annual payment of the annual special tax, assessment, or fee levied against the property tax bill, or other lawful means, of the parcels of the project for such district. At the time of the public hearing to consider annexation into or formation of the district, the qualified elector(s) will not protest the annexation or formation, but will retain the right to object to any eventual tax/assessment/fee that is not equitable should the financial burden of the tax/assessment/fee not be reasonably proportionate to the benefit the affected property receives from the

Plot Plan (PEN21-0112)

Page 22

improvements to be installed and/or maintained or services provided. The special election requires a minimum 90-day process in compliance with the provisions of Article 13C of the California Constitution, Proposition 218, or other applicable legislation, and consistent with the scheduling for City Council meetings. An alternative to satisfying this condition will be identified at such time as a special financing district has been established. At the time of development, the developer must contact Special Districts Administration at 951.413.3470 or at SDAdmin@moval.org to determine if this condition is applicable.

**PARKS & COMMUNITY SERVICES DEPARTMENT**

127. This project is subject to current Development Impact Fees.
